14. All of the 12 respondents to the March 1999 ED agreed with the Board's proposal for reporting subsidy reestimates in those two components. The respondents believe that reporting the two reestimate components separately will provide information to reveal the causes of the reestimates. They believe that such information can help program managers improve credit program performance and subsidy estimation methodology.
 15. Although in support for the proposal, one respondent commented on the controllability argument. Since it was discussed in the March 1999 ED that the magnitude of an interest rate reestimate is beyond agencies' control, the respondent pointed out that some default factors, such as changes in economic conditions and natural disasters, are also beyond the control of credit programs. While it was stated in the March 1999 ED that "the assumed rate is determined by the Administration and is beyond the control of the agency," that statement does not imply that credit programs can control changes in economic conditions or all of the other events that would impact default rates. However, the Board believes that a reliable assessment of the economic changes and other risk factors in making default subsidy reestimates, whether or not controllable by the agency, can help credit programs better manage program costs and performance.
 16. Another respondent stated that analyses performed by his agency indicated that in past years, changes in interest rates produced relatively minor changes in that agency's overall subsidy rates. Thus, the respondent suggested that the Board consider whether it is cost-beneficial to separate out the interest rate reestimates.
 17. The interest rate reestimates vary in magnitude from year to year. For some years, the assumed and the actual rates may be fairly close, whereas in other years they differ significantly and could produce a material effect on the overall subsidy rate. For example, the subsidy reestimate data provided USDA Rural Development Water and Waste Direct Loan program indicated that for fiscal years 1992 through 1994, the amounts of interest rate reestimates exceeded the amounts of technical/default reestimates. In 1995, the interest rate reestimate accounted for 84 percent of the total subsidy reestimate. In more recent years, the impact of interest rate reestimates was relatively small. In any case, we do not believe one can rely on the past experience for any particular year to make a conclusion about interest variations in future years.
-

Reconciliation

18. It is prescribed as an accounting standard in this statement that reporting entities display in a note to financial statements a reconciliation between the beginning and ending balances of the subsidy cost allowance for outstanding direct loans and the liability for outstanding loan guarantees reported in the entities' balance sheet.

-
19. During its discussions about the subsidy expense and subsidy reestimates, the Board held the view that it is not adequate or desirable to report annual subsidy expense and reestimates in an isolated fashion. The Board concluded that additional information is needed to provide a full picture about a credit program's performance. The Board believes that the reconciliation can be used as an effective vehicle to provide such information.
 20. As explained in the March 1999 ED, an advantage of displaying the reconciliation is to show in one place the activities that affect the subsidy cost allowance or the loan guarantee liability. In addition to the subsidy expense and reestimates, which are based on projections of future cash flows, the reconciliation schedule also displays data on actual performance, such as fees received, loans written off, claim payments made to lenders, and foreclosed property, loans receivable, or other recoveries acquired during the reporting year. These actual performance data and the data on subsidy cost estimates would be a useful tool to begin assessing the actual performance of a reporting entity's lending or loan guarantee activities against its budget expectations.
 21. The Board noted as another advantage that the reconciliation process would enhance credit agencies' internal control. To comply with the requirement, entities must make the subsidy data elements consistent, accurate, and thus reconcilable. In conjunction with credit agencies' loan monitoring systems, the reconciliation process can serve as a tool to foster a discipline in organizing data related to subsidy costs and performance in a systematic manner.
 22. A majority of the respondents supported the Board's proposal for displaying the reconciliation. They believed that the reconciliation will provide useful information to Congress, program managers, and other users of financial statements. One respondent stated that once required as a part of the financial statements, the reconciliation will be subject to validation through audit and thus will become a reliable source of information for those who make decisions and evaluate results for credit activities.
 23. Several respondents, however, expressed disagreements or reservations about the proposed reconciliation. Some of them commented that compiling the reconciliation data would be a burdensome process. We believe that performing the reconciliation would initially require some staff training and computer programming. However, the effort will be worthwhile because the process will help agencies organize the necessary data in an orderly manner. When properly programmed, the reconciliation process can become a routine and systematic process. In fact the reconciliation requires no more data than those that are necessary in deriving the ending balances of the subsidy cost allowance and loan guarantee liability from their beginning balances of a reporting period. Thus, all the data necessary for the reconciliation should be available and verifiable if the ending balances are accurate.

24. It should be noted that it is not unusual to require reconciliation in credit activities. In its Industry Guide No. 3, the Securities and Exchange Commission (SEC) requires bank holding companies to provide an analysis of the allowance of loan losses in their financial statements.⁴ The analysis is equivalent to the reconciliation of the subsidy cost allowance required in this statement. The SEC Guide requires that the beginning and ending balances of the allowance be reconciled with charge-offs (loans written off), recoveries, and additions charged to operations (equivalent to subsidy reestimates). The charges-offs and recoveries are displayed by type of loans (such as consumer installments, commercial, real estate, and lease financing, as so forth). A similar requirement is prescribed by the Financial Accounting Standards Board (FASB) in paragraph 20, FAS No. 114, as amended by FAS 118, for impaired loans accounted for on a present value basis:

For each period for which results of operations are presented, a creditor also shall disclose the activity in the total allowance for credit losses related to loans, including the balance in the allowance at the beginning and end of each period, additions charged to operations, direct write-downs charged against the allowance, and recoveries of amounts previously charged off. The total allowance for credit losses related to loans includes those amounts that have been determined in accordance with FASB Statement No. 5, Accounting for Contingencies, and with this Statement.

25. Some of those who disagreed with the reconciliation proposal recognized merits in reconciling subsidy cost allowance for direct loans and liability for loan guarantees, but doubted whether the reconciliation on an entity basis would provide useful information. They pointed out that the programs their agencies administer vary in characteristics and subsidy rates, and that the reconciliation at the entity level will aggregate the program data and, as a result, will not reveal the characteristics and operating results of individual programs.
26. The Board was aware that programs administered by an agency often differ in characteristics and subsidy rates. The Board agrees with the view that the entity-wide reconciliation in itself would not reveal variations in program performance. The Board thus decided to issue an exposure draft, soon after issuing this statement, to propose a display of a program-by-program reconciliation for major programs. Nevertheless the Board sees value in the entity-wide reconciliation itself. With respect to the subsidy cost allowance and the loan guarantee liability reported on an entity's balance sheet, the entity-wide reconciliation shows changes in those balances. Those changes indicate the entity's aggregate performance results for all the credit activities under the entity's management.

⁴*SEC Accounting Rules*, ¶ 8303, 1984 Commerce Clearing House, Inc. [Additional reference: Securities Act Guide 3 adopted in Release No. 34-12784, amended by Release Nos 33-6221, 33-6383, FR-11, FR-13 and FR-27]

-
27. The Board considered two primary reasons for adopting the entity-wide reconciliation in this statement, rather than postpone it until the program-by-program reconciliation is proposed and considered. First, by making the entity-wide reconciliation effective as early as possible, agencies can begin to get their personnel and systems resources ready for implementing the requirement without further delay. Second, by requiring the display of the entity-wide reconciliation, it is likely that program-by-program reconciliation data would be available for users. This is based on the rationale that in order to display the entity level reconciliation, the reporting entity would normally first reconcile the balances of individual programs. If they do so, program managers as well as auditors will have access to the program reconciliation data to validate the entity-wide reconciliation and to use the program-based data in program analysis and evaluation. If requested by Congress, special reports for any particular program can also be made available to Congress.
28. One respondent pointed out that loan guarantee programs sometimes acquire guaranteed loans for direct collection upon paying default claims for those loans. He asked whether the subsidy cost allowance of those loans should be reconciled in a separate schedule. Under credit reform accounting, guaranteed loans acquired by the loan guarantee program upon paying default claims are carried at their present value and the present value is reestimated annually before the loans are collected or written off. The amount of those loans and their allowance are reported in Note 7 in OMB Bulletin 97-01, *Form and Content of Agency Financial Statements*. Since the acquired loans do not represent a primary line of business for loan guarantee programs, the Board does not believe that a display of reconciliation for those acquired loans should be required.
29. One respondent asked whether the reconciliation requirement applies to pre-credit reform direct loans and loan guarantees as well as post-credit reform direct loans and loan guarantees. The Board considered the issue and concluded that the reconciliation requirement applies only to post-credit reform direct loans and loan guarantees, i.e., direct loan and loan guarantees obligated or committed after September 30, 1991. One of the principal objectives for the reconciliation requirement is to provide information that can be used to compare initial budget expectations with operating results. This is achievable with direct loans and loan guarantees that were obligated or committed after September 30, 1991, because under credit reform, budgeting and financial reporting for credit activities are performed on the same present value basis. This is not the case with pre-credit reform direct loans and loan guarantees.
30. However, aside from the basic objective discussed above, the other advantages of the reconciliation are valid for both pre and post-credit reform direct loans and loan guarantees. Those advantages include: (a) revealing information on activities that affect the balances, and (b) enhancing accounting integrity and internal control. Agencies are encouraged, but not required, to reconcile the direct loan allowance and loan guarantee liability balances for direct loans and loan guarantees obligated or committed prior to October 1, 1991. Since the

measurement bases differ between pre and post-credit reform direct loans and loan guarantees, agencies should use separate reconciliation schedules for pre and post-credit reform direct loans and loan guarantees.

Disclosing Subsidy Rates

31. A disclosure provision has been prescribed in this statement to require that reporting entities disclose, at the program level, the rates for the total estimated subsidy cost and the subsidy cost components in the current year's budget for the current year's cohorts. Each rate equals the amount of the total subsidy or a subsidy component divided by the amount of direct or guaranteed loans obligated in the cohort for the reporting year. The Board members believed that the budget subsidy rates for the reporting year are highly important because they represent budget expectations that reflect the most recent program characteristics.
32. The standard provides that reporting entities may use trend data to display significant fluctuations in a program's subsidy rates. To avoid excessive and purposeless presentation of historical data, the use of trend data should be limited to the subsidy rate for the total subsidy or for a subsidy component of a particular program that has experienced significant fluctuations in recent years. The presentation of trend data should be accompanied by analysis to explain causes of the fluctuations.
33. A majority of the respondents supported the proposal for disclosing the estimated subsidy rates for cohorts of the current year. The arguments for the proposal they presented include: (a) those subsidy rates estimated in the current year's budget "give the reader the most up-to-date information on cohorts as established by appropriation law," (b) those rates reflect the most recent program characteristics, and (c) the subsidy rates reported for a number of recent years can form a trend for comparison and analysis.
34. One respondent requested clarification for the phrase "in the current year's budget for the current year's cohorts." The required disclosure is for budget subsidy rates for the cohorts of the current reporting year, i.e., the year for which the financial reports are published. For example, in the financial reports for the 2001 fiscal year, the budget subsidy rates in the FY 2001 budget for the FY 2001 cohorts should be compiled and disclosed at the program level. The standard does not require disclosure of subsidy rates for cohorts of previous years, although some of the cohorts may continue to disburse loans during the current reporting year. However, as provided in the standard, entities may use trend data to display significant fluctuations in subsidy rates over a number of the most recent years.
35. Those who were opposed to the disclosure for subsidy rates presented the following arguments: (a) budget subsidy rates for all credit programs are published in the *Federal*

Credit Supplement to the Budget of the U.S. Government, and it is unnecessary to duplicate the same data in financial reports, (b) the inclusion of budget subsidy rates in financial reports would appear to invite calculation of subsidy costs by applying the subsidy rates to disbursements, and such calculation could produce confusing results, and (c) the subsidy rates in the budget are estimated before all the data concerning the reporting year are available, and are subject to changes.

36. The Board was aware that the budget subsidy rates are published in the *Federal Credit Supplement to the Budget of the U.S. Government*. However, the inclusion of those subsidy rates in the financial reports will provide the reader of the financial statements with an easy access to the budget data. The Board was also aware that one cannot calculate the subsidy expense for the current year by applying the estimated subsidy rates of the current year cohorts to the amount of direct or guaranteed loans disbursed during the current year. Such calculation may give erroneous results because some of the loans disbursed during the current year may belong to previous years' cohorts. The disclosure of budget subsidy rates was initially proposed by the AAPC Credit Reform Accounting Task Force. When proposing the disclosure, the AAPC Credit Reform Accounting Task Force suggested that the disclosure be accompanied by a narrative explaining in conceptual terms how the total subsidy rate differs from the total subsidy expense recognized in the financial statements. The Board believes that it is necessary to have such a narrative to avoid confusion between the subsidy rates of the current year cohorts and the subsidy expense recognized for the current reporting year.
37. It is true that the estimated subsidy rates for a program in the current year's budget reflect budget expectations for that program, and do not reflect the program's operating results for the current reporting year. The actual performance of a program can be viewed from such data as subsidy reestimates, loans written off, default claims paid, and fees received. One of the purposes for the disclosure of the budget subsidy rates is to provide an indication of budget expectations of the most recent cohorts.
38. The Board believes that the disclosure for the subsidy rates for the cohorts of the current reporting year will prove beneficial as they are important indicators for management's latest expectations reflecting the programs' current characteristics. The disclosure requirement is adopted because the advantages of the disclosure outweigh its disadvantages.

Disclosure And Discussion

39. The Board holds the view that merely reporting the figures for the subsidy expense and subsidy reestimates would not provide complete and understandable information to users of Federal agency financial reports. The Board believes that to make the figures meaningful, significant events and changes in assumptions underlying the cost estimates should be

disclosed and their impact should be discussed. The disclosure and discussion should help explain the subsidy cost data. In other words, the Board believes that it is necessary to tell the stories behind the figures.

40. Reporting entities are required to provide a description of the programs that they administer and disclose at the program level the amounts of direct or guaranteed loans disbursed during the reporting year. This information would provide the reader with an indication of the programs' characteristics and the magnitude of their credit activities. With the information on amounts disbursed, analysts can calculate the subsidy expense, or one of its components, as a ratio to the amount of the loans disbursed and compare the ratios among programs or over time.
41. Reporting entities are required to disclose events and changes that have had a significant and measurable effect on subsidy costs. These would include changes in economic conditions and risk factors, changes in legislation and policies regarding direct loans or loan guarantees, and changes in methodologies and assumptions used in making subsidy estimates and reestimates. Credit agencies are also required to disclose and discuss events and changes that have occurred and are more likely than not to have a significant impact on subsidy rates, subsidy expense, and subsidy reestimates but the effects of which are not measurable at the reporting date. These include events and changes that have occurred after the reestimation cut off date and will be taken into consideration in making reestimates for the following year. Reporting entities should discuss how those events and changes have or would have impacted the various components of subsidy expense, subsidy rates, and subsidy reestimates.
42. The Board noted in particular that changes in legislation and credit policies could significantly alter a program's characteristics and thus affect its subsidy rates. These changes include, for example, changes in borrowers' eligibility, the level of fees or interest rates charged borrowers, the maturity terms of loans, and the percentage of a private loan that is guaranteed. If such a change occurs during a reporting year, the reporting entity should disclose and explain the nature of the change and discuss its impact on program characteristics and its estimated subsidy rates.
43. Most respondents supported the Board proposal. They believed that to make the reported financial figures meaningful, significant events and changes in assumptions underlying those figures should be disclosed and their effect should be discussed. Some of the respondents provided examples of events that can affect default rates. For example, drought, flood, tornadoes, and other natural disasters may affect some regions or some sectors of the economy, and consequently, affect borrowers' ability to make loan payments. Those respondents also noted that changes in economic conditions, such as interest and employment rates, could also have a significant impact on credit risks and performance. Some of them stated that legislative and policy changes could have a direct impact on the

costs and performance of certain affected programs. They contend that without disclosing those events and changes and discussing their impact, the reader cannot fully understand the financial figures, such as subsidy rates, expenses, and reestimates.

44. One respondent noted that the same type of disclosure and discussion that is now required for credit subsidies is not usually required for many other operating costs, such as employees salary, rent, and computer service costs. The respondent questioned why the disclosure and discussion for credit activities are more critical than other costs reported in the statement of net cost. To address this issue, we can provide at least two reasons for this difference. First, unlike salary, rent, or the costs of other services, the credit subsidy costs are under a greater degree of uncertainty, as they are exposed to many risk factors external to the government. Many factors discussed in the March 1999 ED and by other respondents, such as changes in interest and employment rates and disastrous events, would cause the subsidy costs to vary from their estimates in the budget. Second, unlike most other cost items, the credit subsidy costs are reported in present values of future cash flows projected over the life of the underlying direct loans and loan guarantees. To a large extent, the reliability of the subsidy cost information depends on the factors considered in making the cash flow projections. The reliability is also affected by the quality of the agency's data and its estimation methodology. The narrative disclosure and discussion would help the user to understand the factors that cause significant changes in the subsidy costs during the reporting year, which do not usually occur in salary, rent, or other operating costs.
45. Two respondents, however, were opposed to the narrative disclosure and discussion requirement on the grounds that it would be burdensome for entities with varied programs to present the required information. These respondents may have come under a mis-perception about the disclosure and discussion requirement. They may have perceived that the standard would require an excessively detailed description of all the technical aspects of the subsidy estimation methodologies and assumptions, and an extensive analysis of all risk factors in the programs and even sub-programs administered by the reporting entity. Thus, they concluded the requirement is extremely burdensome. However, such detailed disclosure and discussion were not intended. It was stated in paragraph 50 of the March 1999 ED:

While the Board members believe that the proposed disclosure and discussion are necessary, they prefer that entity financial reports are not overwhelmed with detailed numbers and ratios that may overburden the reader of the financial reports. The Board members believe that to the extent possible, the narrative discussion should be written in non-technical language so that the average reader can understand the data and the explanations.

-
46. The primary emphasis of the disclosure and discussion requirement is on significant changes in subsidy rates and reestimates. The disclosure and discussion should be focused on events that have occurred and have caused those significant changes. In addition, the disclosure and discussion should also include events that have occurred and are more likely than not to have a significant impact on subsidy rates and reestimates but the effects for which are not measurable at the reporting date.
47. Some respondents believed that the narrative disclosure and discussion should more appropriately belong to the Management Discussion and Analysis (MD&A) section of financial reports. The Board disagrees with this view. The narrative disclosure and discussion required in this statement should be specifically tailored to address credit subsidy activities. As such, it differs from the MD&A requirements in breadth, depth, and detail. The Board believes that the disclosure and discussion required in this statement belong in a note to financial statements, such as Note 7 in OMB Bulletin 97-01, *the Form and Content of Agency Financial Statements*, in which all the data on direct loan assets, loan guarantee liabilities, subsidy rates, subsidy expenses, and reestimates are reported. By including the narrative disclosure and discussion in the same note, the reader would find all the information in one place. However, this does not preclude entity management from including a discussion and analysis to highlight credit activities in MD&A, so long as entity management determines that such a discussion and analysis meets the MD&A requirements in SFFAS 15.
48. Audit efforts for information provided in a footnote to financial statements differ from those for information provided in MD&A. MD&A is regarded as required supplementary information (RSI) and is subject to less stringent audit than basic financial statements and their notes.⁵ The Board believes that program subsidy data should be reported in a note to agency financial statements because they are directly related to information reported in the financial statements. Those program subsidy data should be audited as basic financial information. Based on the preceding paragraph, it might appear that including the narrative disclosure and discussion in the same footnote with the subsidy data (instead of in MD&A) would expand the audit burden associated with credit subsidies. However, since the auditor

⁵See Statement of Recommended Accounting Standards No. 15, *Management Discussion and Analysis*, (April 1999) par. 18.

already needs to test the reliability of the estimates and reestimates in the context of auditing the basic program subsidy data⁶, the Board believes that there would be no substantial increase in audit burden from including the narrative disclosure and discussion in a footnote instead of in MD&A. In fact, the process of generating the required disclosure and discussion for the footnote should provide information on risk factors underlying the subsidy estimates and reestimates and thus should facilitate the audit of the basic subsidy data.

49. One respondent commented that there may not be a basis to audit future events and their effect disclosed in the narrative. The required disclosure is for events that have occurred, but does not include events that are anticipated to occur. Also, the provision does not require quantifying the effect of an event that has occurred but whose effects cannot be measured at the reporting date.

The Effective Date

50. In the March 1999 ED, it was proposed that the amendments be made effective for periods beginning after September 30, 1999. Two respondents requested that the effective date be made for periods beginning after September 30, 2000. They argued that many agencies were still having difficulties in implementing existing credit reform requirements and that the new requirements would require revisions in accounting procedures and systems. The CFO Council stated that many agencies are busy with resolving Y2K problems, and would not be able to initiate new systems changes until some time in year 2000.
51. There were arguments against postponing the effective date. First, the requirements prescribed in this statement do not require any new data. For example, the data needed for the reconciliation schedules should be in the system. Without that data, agencies could not report the ending balances of the subsidy cost allowance and the loan guarantee liability at the end of each fiscal year. Second, the proposed effective date, beginning with fiscal year 2000, provides adequate time because financial statements for that year will be issued in early calendar year 2001.
52. On the other hand, the Board recognizes that staff training and computer re-programming may be necessary to implement the new requirements. Therefore, the Board considered

⁶For example, Federal Financial Accounting and Auditing Technical Release No. 3, *Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act* (July 1999), requires auditors to identify significant external and internal factors that may affect the credit subsidy estimates and reestimates. External factors include economic conditions, current political climate, and relevant legislation. Internal factors include the size of the agency's budget and accounting staff qualifications of key personnel, turnover of key personnel, and system capabilities.

and granted a delay for the effective date to periods beginning after September 30, 2000. However, the Board emphasizes that this should not be considered a precedent for postponing implementation of adopted accounting standards. The Board encourages early implementation of the standards.

Vote For Approval

53. The accounting standards prescribed in this statement are approved by the Board unanimously.

Appendix B: Illustrative Reporting Formats

The following two schedules illustrate the reconciliation between beginning and ending balances of the subsidy cost allowance for direct loans and the liability for loan guarantees.

A: Schedule for Reconciling Subsidy Cost Allowance Balances

Dollars in thousands

Beginning Balance, Changes, and Ending Balance	FY 2000	FY 2001
Beginning balance of the subsidy cost allowance	\$	\$
Add: subsidy expense for direct loans disbursed during the reporting years by component:		
(a) Interest subsidy costs		
(b) Default costs (net of recoveries)		
(c) Fees and other collections		
(d) Other subsidy costs		
Total of the above subsidy expense components		
Adjustments:		
(a) Loan modifications		
(b) Fees received		
(c) Foreclosed property acquired		
(d) Loans written off		
(e) Subsidy allowance amortization		
(f) Other		
Ending balance of the subsidy cost allowance before reestimates		
Add or subtract subsidy reestimates by component		
(a) Interest rate reestimate		
(b) Technical/default reestimate		
Total of the above reestimate components		
Ending balance of the subsidy cost allowance		

B: Schedule for Reconciling Loan Guarantee Liability Balances

Dollars in thousands

Beginning Balance, Changes, and Ending Balance	FY 2000	FY 2001
Beginning balance of the loan guarantee liability	\$	\$
Add: subsidy expense for guaranteed loans disbursed during the reporting years by component:		
(a) Interest subsidy costs		
(b) Default costs (net of recoveries)		
(c) Fees and other collections		
(d) Other subsidy costs		
Total of the above subsidy expense components		
Adjustments:		
(a) Loan guarantee modifications		
(b) Fees received		
(c) Interest supplements paid		
(d) Foreclosed property and loans acquired		
(e) Claim payments to lenders		
(f) Interest accumulation on the liability balance		
(g) Other		
Ending balance of the loan guarantee liability before reestimates		
Add or subtract subsidy reestimates by component:		
(a) Interest rate reestimate		
(b) Technical/default reestimate		
Total of the above reestimate components		
Ending balance of the loan guarantee liability

Summary

In this Statement the Board adopts a number of technical amendments to certain portions of the Statement of Federal Financial Accounting Standards 2, *Accounting for Direct Loans and Loan Guarantees* (SFFAS 2), which was issued in August 1993.

The technical amendments serve the following purposes:

- (A) Clarify that the cash flow discount method used in the accounting standards prescribed in SFFAS 2 is consistent with the method required in the Federal Credit Reform Act of 1990, as amended in July 1997.
- (B) Clarify that the effective interest rate of a cohort of direct loans or loan guarantees is the interest rate adjusted for the interest rate re-estimate, as defined in paragraph 9(A), SFFAS 18, *Amendments to Accounting Standards for Direct Loans and Loan Guarantees in SFFAS 2*.
- (C) Clarify the measurement principle for the default costs of direct loans and loan guarantees.

Introduction

Background and Purposes

1. In this Statement the Board adopts a number of technical amendments to certain portions of the Statement of Federal Financial Accounting Standards No. 2, *Accounting for Direct Loans and Loan Guarantees* (SFFAS No. 2), which was issued in August 1993. These amendments were proposed for public comment in an Exposure Draft (ED) issued in May 2000. The title of that ED is “*Credit Program Reconciliation and Technical Amendments to Accounting Standards for Direct Loans and Loan Guarantees in Statements of Federal Financial Accounting Standards No. 2 and No. 18.*” (Hereinafter the ED is referred to as the May 2000 ED.)
2. The technical amendments serve the following purposes:
 - (A) Clarify that the cash flow discount method used in the accounting standards prescribed in SFFAS No. 2 is consistent with the method required in the Federal Credit Reform Act of 1990, as amended in July 1997.
 - (B) Clarify that the effective interest rate of a cohort of direct loans or loan guarantees is the interest rate adjusted for the interest rate re-estimate, as defined in paragraph 9(A), SFFAS No. 18, *Amendments to Accounting Standards for Direct Loans and Loan Guarantees in SFFAS No. 2.*
 - (C) Clarify the measurement principle for the default costs of direct loans and loan guarantees.
3. The Board received nine responses to the ED. All of the respondents were in support for the technical amendments, except for two respondents who commented on the proposed technical amendments related to the measurement of default costs. Based on the comments, the Board made a minor modification to the proposed measurement of default costs for direct loans. This modification is discussed in this Statement’s Appendix A, Basis for Conclusions.
4. In addition to the technical amendments, the Board proposed a standard in the May 2000 ED, requiring that entities display a program-by-program reconciliation for major credit programs between the beginning and ending balances of subsidy cost allowance for direct loans and the liability for loan guarantees. The Board decided not to adopt that proposal based on cost-benefit considerations.

Effective Date

5. The technical amendments adopted in this Statement are effective for periods beginning after September 30, 2002. Early implementation of the amendments is encouraged.

Technical Amendments To SFFAS No. 2

Cash Flow Discount Method

6. The amendments in (a) and (b) below are made to clarify that the accounting standards in SFFAS No. 2 are consistent with the cash flow discount method required by the amendment enacted in July 1997 to the Federal Credit Reform Act of 1990. Sec. 502 (5)(E) of the Act, as amended, provides that “In estimating net present values, the discount rate shall be the average interest rate on marketable Treasury securities of similar maturity to the cash flows of the direct loan or loan guarantee for which the estimate is being made.”
- (a) In paragraph 24, SFFAS No. 2, the phrase “with a similar maturity term” is changed to “with similar maturity to the cash flows.”
- (b) In footnotes 3, 4, 6, and 7, SFFAS No. 2, the phrase “the remaining maturity” is replaced with the phrase “the remaining cash flows.”

Effective Interest Rate

7. The following amendments are made to clarify that the effective interest rate of a cohort of direct loans or loan guarantees is the interest rate adjusted for the interest rate re-estimate, as defined in paragraph 9(A), SFFAS No. 18. The adjusted rate should be used for amortizing subsidy cost allowance, accruing and compounding interest on the liability for loan guarantees, determining the book value of modified direct loans and the book value of the liability for modified loan guarantees, and calculating the present value of assets acquired through foreclosure.
- (a) In paragraph 30, SFFAS No. 2, the first sentence is changed to:
- “The subsidy cost allowance for direct loans is amortized by the interest method using the interest rate that was used to calculate the present value of the direct loans when the direct loans were disbursed, after adjusting for the interest rate re-estimate.”

- (b) In paragraph 31, SFFAS No. 2, the first sentence is changed to:

“Interest is accrued and compounded on the liability for loan guarantees at the interest rate that was used to calculate the present value of the loan guarantee liabilities when the guaranteed loans were disbursed, after adjusting for the interest re-estimate.”

- (c) In paragraph 46, SFFAS No. 2, the phrase in the parentheses is changed to “the rate that was originally used to calculate the present value of the direct loans, when the direct loans were disbursed, after adjusting for the interest rate re-estimate.”
- (d) In paragraph 50, SFFAS No. 2, the phrase in the parentheses is changed to “the rate that was originally used to calculate the present value of the liability, when the guaranteed loans were disbursed, after adjusting for the interest rate re-estimate.”
- (e) In paragraphs 57 and 59, SFFAS No. 2, the words “adjusted for the interest rate re-estimate” are added immediately after the words “the original discount rate.”

Measuring Default Costs

8. Paragraph 27 in SFFAS No. 2 is replaced with the following two paragraphs:

- (a) The default cost of direct loans results from projected deviations by the borrowers from the payment schedules for principal, interest, and fee payments in the loan contracts. However, the measurement of default costs does not include prepayments. The default cost is measured at the present value of projected payment deviations due to defaults minus projected net recoveries. Projected net recoveries include the amounts that would be collected from borrowers at a later date or the proceeds from the sales of acquired assets minus the costs of foreclosing, managing, and selling the assets.
- (b) The default cost of loan guarantees results from paying lenders' claims upon default of the guaranteed loans. The default cost of loan guarantees is measured at the present value of projected payments to lenders required by the guarantee, plus uncollected fees, minus interest supplements not paid as the result of the default, and minus projected net recoveries as defined in paragraph 8(a).

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled Materiality, for a detailed discussion of the materiality concepts.

Appendix A: Basis For Conclusions

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Program-by-Program Reconciliation

9. In the May 2000 ED, the Board proposed a standard requiring that entities display a program-by-program reconciliation for major credit programs between the beginning and ending balances of the subsidy cost allowance for direct loans and the liability for loan guarantees. Nine respondents to the ED commented on the proposal. Five of them supported the proposal and the remaining four were opposed to the proposed standard.
10. Those who supported the proposal believed that the display of a program-by-program reconciliation would enhance disclosure for program costs and performance. One of the respondents said that the program-by-program reconciliation would reveal actual program performance information, such as direct loans written off, default claims paid, fees received, and interest supplements paid. Reporting this kind of information on a program-by-program basis is not required by the existing standards. If the data were reported, they could be useful in analyzing a program's operating results and providing feedback to the program's budget expectations. Another respondent pointed out that when program data are aggregated, increases and decreases in program costs would offset each other. Thus, without a display of program-by-program reconciliation, entity-wide reconciliation alone would not disclose variations in program performance.
11. Among those who were opposed to the proposal, the Chief Financial Officer (CFO) of US Department of Agriculture (USDA) said that the proposed standard was unnecessary because USDA has reported subsidy costs by credit areas. The USDA CFO and several other respondents expressed their concern that the proposed display of program-by-program reconciliation would make the disclosure too lengthy and complex and thus reduce its information value to the users of general-purpose financial reports.
12. After considering the comments, the Board decided not to adopt the proposed standard. The Board concluded that SFFAS No. 2 and SFFAS No. 18 already require sufficient program information. Paragraph 32 in SFFAS No. 2, as amended by SFFAS No. 18, requires that entities disclose each program's interest rate re-estimates and technical/default re-estimates. More extensive disclosure is required in SFFAS No. 18.

Paragraph 11(a) in SFFAS No. 18, for example, requires that entities provide a description of the characteristics of the programs that they administer. It also requires disclosure of the amount of direct or guaranteed loans disbursed for each program during the reporting year as well as each program's subsidy expense, and subsidy re-estimates. Paragraph 11(b) requires disclosure of each program's subsidy rates for direct loans and loan guarantees in the current year's cohort. Furthermore, paragraph 11(c) requires that reporting entities disclose, discuss, and explain events and changes in economic conditions, other risk factors, legislation, credit policies, and subsidy estimation methodologies and assumptions, that have had a significant and measurable effect on subsidy rates, subsidy expense, and subsidy re-estimates. The Board believes that in the process of producing the program-based information required by paragraph 11(c), an entity will naturally describe important changes in the actual performance of its credit programs; e.g., default claims paid, loans written off, etc. Thus, the Board concluded that the program-based disclosure and discussion required by the existing standards should provide sufficient information about credit activities at the program level. In addition, although the incremental cost of producing the program-based reconciliation would be quite small for most agencies, the Board believes that requiring the display of program-based reconciliation would add length and complexity to the financial reports that are already detailed and complex. As a result of these benefit and cost considerations, the Board concluded that requiring the display of a program-by-program reconciliation was not justified.

Technical Amendments

13. The Board adopted three groups of technical amendments to SFFAS No. 2. The first group affects paragraph 24 and footnotes 3, 4, 6, and 7 of SFFAS No. 2. These amendments clarify that the accounting standards are consistent with the cash flow discount method required by the Federal Credit Reform Act of 1990, as amended in July 1997.¹ As required in Section 502 (5)(E) of the Act, the amended standards require using as the discount rate the average interest rate on Treasury securities of similar maturity to the cash flows of a direct loan or loan guarantee. None of the respondents to the ED objected to these amendments.
14. The second group of amendments affects paragraphs 30, 31, 46, 50, 57, and 59 of SFFAS No. 2. These amendments are related to interest rate re-estimates. The amendments clarify that the effective interest rate of a cohort of direct loans and loan guarantees is the interest rate adjusted by the interest rate re-estimate, as defined in paragraph 9(a), SFFAS No. 18. The adjusted rate should be used for amortizing subsidy cost allowance, accruing

¹ Office of Management and Budget (OMB) has implemented the amendment in Circular A-11, Preparation and Submission of Budget Estimates, July 1999 and in its recent release of a new credit subsidy calculator.

and compounding interest on the liability for loan guarantees, determining the book value of modified direct loans and the book value of the liability for modified loan guarantees, and calculating the present value of assets acquired through foreclosure. None of the respondents to the ED objected to these amendments.

15. The third group of amendments, proposed in ED paragraphs 10(A) and 10(B), concerns the measurement of default costs discussed in paragraph 27, SFFAS No. 2. ED paragraph 10(A) addressed the default costs of direct loans. The proposed amendment in that paragraph would include the effect of short-term delinquencies in the “other costs” category, rather than the “default costs” category.
16. The USDA CFO and IG objected to the exclusion of short-term delinquencies from default costs. They said that the Commodity Credit Corporation (an USDA unit) uses the Inter-Agency Country Risk Assessment System (ICRAS) to estimate default costs. The ICRAS, used for lending to foreign countries, includes short-term delinquencies in measuring default costs. Thus, the proposed amendment would create a difference from that practice.
17. The Board understands that practices differ among lending institutions in treating delinquencies. They may or may not regard a payment delay within a certain time frame as default. The Board is of the view that the variation would not distort the measurement of credit subsidy costs, if each practice is followed consistently. In this regard, it is better that the accounting standard leaves some leeway for the agencies that are responsible for developing subsidy estimate models and methodologies. Thus, the Board deleted the words related to “delinquencies” in paragraph 8(a) of this Statement on default costs of direct loans.
18. Paragraph 8(b) of this Statement addressed the measurement of default costs for loan guarantees. The paragraph reads as follows:

The default cost of loan guarantees results from paying lenders’ claims upon default of the guaranteed loans. The default cost of loan guarantees is measured at the present value of projected payments to lenders required by the guarantee, plus uncollected fees, minus interest supplements not paid as the result of the default, and minus projected net recoveries as defined in paragraph 10(A).

19. The USDA CFO commented on the requirement for including uncollected fees and “interest supplements not paid” in measuring default costs. The USDA CFO stated that although those cash flow components are specified in the OMB credit subsidy calculator, OMB would give agencies flexibility in implementation with regard to those cash flow components. The USDA CFO pointed out that realigning those cash flow components might entail substantial changes in agencies’ credit subsidy models. She also indicated problems with private lender restrictions and workload increases. She suggested that agencies be allowed

flexibility to determine whether those cash flow components are to be included in default costs.

20. The Board believes the amended standard provides a sound methodology for measuring the default costs for loan guarantees. Uncollected fees are a direct result of default itself and therefore should be included in measuring the default costs. The interest supplements not paid are also a direct result of defaults. When a guaranteed loan is in default, the government pays the default claim to the lender and stops paying interest supplement for that loan. Thus, the interest supplements that are saved due to default should be subtracted from the default costs. The Board concluded that the categorization of these cash flow components should be uniform across the government so that they can be comparable among programs. However, as discussed in the following paragraph, the Board has decided to delay the implementation of the technical amendments for one year. This delay should help resolve some of the problems raised by the USDA CFO.

Effective Date

21. The proposed effective date for the technical amendments was for periods beginning after September 30, 2001, which means FY 2002. The Board realized that that the subsidy expenses to be reported for FY 2002 would be based on the budget submission for that year. However, there would not be sufficient time to implement the amendments for the FY 2002 budget. Therefore, the Board decided to make the effective date for periods beginning after September 30, 2002, and the Board encourages earlier implementation.

Board Approval

23. This Statement was approved by the Board with a vote of eight members in approval of its issuance. One member submitted a written dissent, which is available for inspection at the FASAB office.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, Objectives of Federal Financial Reporting, chapter 7, titled Materiality, for a detailed discussion of the materiality concepts.</p>
--

Appendix B: The Accounting Standards In SFFAS No. 2

Presented in this Appendix are the standards originally prescribed in SFFAS No. 2. The paragraphs and their numbers reproduced in this Appendix are the same as those that appear in SFFAS No. 2, and are presented here for reference purposes only. The bolded words, paragraphs, and footnotes are those that have been amended by SFFAS No. 18² or by this Statement.

Explanation

21. These standards concern the recognition and measurement of direct loans, the liability associated with loan guarantees, and the cost of direct loans and loan guarantees. The standards apply to direct loans and loan guarantees on a group basis, such as a cohort or a risk category of loans and loan guarantees. Present value accounting does not apply to direct loans or loan guarantees on an individual basis, except for a direct loan or loan guarantee that constitutes a cohort or a risk category.

Accounting Standards Post-1991 Direct Loans

22. Direct loans disbursed and outstanding are recognized as assets at the present value of their estimated net cash inflows. The difference between the outstanding principal of the loans and the present value of their net cash inflows is recognized as a subsidy cost allowance.

Post-1991 Loan Guarantees

23. For guaranteed loans outstanding, the present value of estimated net cash outflows of the loan guarantees is recognized as a liability. Disclosure is made of the face value of guaranteed loans outstanding and the amount guaranteed.

²SFFAS No. 18 amended paragraph 32 in SFFAS No. 2.

Subsidy Costs of Post-1991 Direct Loans and Loan Guarantees

24. For direct or guaranteed loans disbursed during a fiscal year, a subsidy expense is recognized. The amount of the subsidy expense equals the present value of estimated cash outflows over the life of the loans minus the present value of estimated cash inflows, discounted at the interest rate of marketable Treasury securities with **a similar maturity term** applicable to the period during which the loans are disbursed (hereinafter referred to as the applicable Treasury interest rate).
25. For the fiscal year during which new direct or guaranteed loans are disbursed, the components of the subsidy expense of those new direct loans and loan guarantees are recognized separately among interest subsidy costs, default costs, fees and other collections, and other subsidy costs.
26. The interest subsidy cost of direct loans is the excess of the amount of the loans disbursed over the present value of the interest and principal payments required by the loan contracts, discounted at the applicable Treasury rate. The interest subsidy cost of loan guarantees is the present value of estimated interest supplement payments.
27. **The default cost of direct loans or loan guarantees results from any anticipated deviation, other than prepayments, by the borrowers from the payments schedule in the loan contracts. The deviations include delinquencies and omissions in interest and principal payments. The default cost is measured at the present value of the projected payment delinquencies and omissions minus net recoveries. Projected net recoveries include the amounts that would be collected from the borrowers at a later date or the proceeds from the sale of acquired assets minus the costs of foreclosing, managing, and selling those assets.**
28. The present value of fees and other collections is recognized as a deduction from subsidy costs.
29. Other subsidy costs consist of cash flows that are not included in calculating the interest or default subsidy costs, or in fees and other collections. They include the effect of prepayments within contract terms.

Subsidy Amortization and Reestimation

30. **The subsidy cost allowance for direct loans is amortized by the interest method using the interest rate that was originally used to calculate the present value of the**

direct loans when the direct loans were disbursed. The amortized amount is recognized as an increase or decrease in interest income.

31. **Interest is accrued and compounded on the liability of loan guarantees at the interest rate that was originally used to calculate the present value of the loan guarantee liabilities when the guaranteed loans were disbursed.** The accrued interest is recognized as interest expense.
32. **The subsidy cost allowance for direct loans and the liability for loan guarantees are reestimated each year as of the date of the financial statements. Since the allowance or the liability represents the present value of the net cash outflows of the underlying direct loans or loan guarantees, the reestimation should take into account all factors that may have affected the estimate of each component of the cash flows, including prepayments, defaults, delinquencies, and recoveries. Any increase or decrease in the subsidy cost allowance or the loan guarantee liability resulting from the reestimates should be recognized as a subsidy expense (or a reduction in subsidy expense). Reporting the subsidy cost allowance of direct loans (or the liability of loan guarantees) and reestimates by component is not required.**

Criteria for Default Cost Estimates

33. The criteria for default cost estimates provided in this and the following paragraphs apply to both initial estimates and subsequent reestimates. Default costs are estimated and reestimated for each program on the basis of separate cohorts and risk categories. The reestimates take into account the differences in past cash flows between the projected and realized amounts and changes in other factors that can be used to predict the future cash flows of each risk category.
34. In estimating default costs, the following risk factors are considered: (1) loan performance experience; (2) current and forecasted international, national, or regional economic conditions that may affect the performance of the loans; (3) financial and other relevant characteristics of borrowers; (4) the value of collateral to loan balance; (5) changes in recoverable value of collateral; (6) newly developed events that would affect the loans' performance; and (7) improvements in methods to reestimate defaults.
35. Each credit program should use a systematic methodology, such as an econometric model, to project default costs of each risk category. If individual accounts with significant amounts carry a high weight in risk exposure, an analysis of the individual accounts is warranted in making the default cost estimate for that category.

-
36. Actual historical experience of the performance of a risk category is a primary factor upon which an estimation of default cost is based. To document actual experience, a database should be maintained to provide historical information on actual payments, prepayments, late payments, defaults, recoveries, and amounts written off.

Revenues and Expenses

37. Interest accrued on direct loans, including amortized interest, is recognized as interest income. Interest accrued on the liability of loan guarantees is recognized as interest expense. Interest due from Treasury on uninvested funds is recognized as interest income. Interest accrued on debt to Treasury is recognized as interest expense.
38. Costs for administering credit activities, such as salaries, legal fees, and office costs, that are incurred for credit policy evaluation, loan and loan guarantee origination, closing, servicing, monitoring, maintaining accounting and computer systems, and other credit administrative purposes, are recognized as administrative expense. Administrative expenses are not included in calculating the subsidy costs of direct loans and loan guarantees.

Pre-1992 Direct Loans and Loan Guarantees

39. The losses and liabilities of direct loans obligated and loan guarantees committed before October 1, 1992, are recognized when it is more likely than not that the direct loans will not be totally collected or that the loan guarantees will require a future cash outflow to pay default claims. The allowance of the uncollectible amounts and the liability of loan guarantees should be reestimated each year as of the date of the financial statements. In estimating losses and liabilities, the risk factors discussed in the previous section should be considered. Disclosure is made of the face value of guaranteed loans outstanding and the amount guaranteed.
40. Restatement of pre-1992 direct loans and loan guarantees on a present value basis is permitted but not required.

Modification of Direct Loans and Loan Guarantees

41. The term modification means a federal government action, including new legislation or administrative action, that directly or indirectly alters the estimated subsidy cost and the present value of outstanding direct loans, or the liability of loan guarantees.

-
42. Direct modifications are actions that change the subsidy cost by altering the terms of existing contracts or by selling loan assets. Existing contracts may be altered through such means as forbearance, forgiveness, reductions in interest rates, extensions of maturity, and prepayments without penalty. Such actions are modifications unless they are considered reestimates, or workouts as defined below, or are permitted under the terms of existing contracts.
 43. Indirect modifications are actions that change the subsidy cost by legislation that alters the way in which an outstanding portfolio of direct loans or loan guarantees is administered. Examples include a new method of debt collection prescribed by law or a statutory restriction on debt collection.
 44. The term modification does not include subsidy cost reestimates, the routine administrative workouts of troubled loans, and actions that are permitted within the existing contract terms. Workouts are actions taken to maximize repayments of existing direct loans or minimize claims under existing loan guarantees. The expected effects of workouts on cash flows are included in the original estimate of subsidy costs and subsequent reestimates.

A. Modification of Direct Loans

45. With respect to a direct or indirect modification of pre-1992 or post-1991 direct loans, the cost of modification is the excess of the pre-modification value³ of the loans over their post-modification value⁴. The amount of the modification cost is recognized as a modification expense when the loans are modified.
46. When post-1991 direct loans are modified, their existing book value is changed to an amount equal to the present value of the loans' net cash inflows projected under the modified terms from the time of modification to the loans' maturity and discounted at the original discount rate (**the rate that was originally used to calculate the present value of the direct loans, when the direct loans were disbursed**).

³The term "pre-modification value" is the present value of the net cash inflows of direct loans estimated at the time of modification under pre-modification terms and discounted at the interest rate applicable to the time when the modification occurs on marketable Treasury securities that have a comparable maturity to **the remaining maturity** of the direct loans under pre-modification terms (simply stated, the pre-modification terms at the current rate).

⁴The term "post-modification value" is the present value of the net cash inflows of direct loans estimated at the time of modification under post-modification terms and discounted at the interest rate applicable to the time when the modification occurs on marketable Treasury securities that have a comparable maturity to **the remaining maturity** of the direct loans under post-modification terms (simply stated, the post-modification terms at the current rate).

-
47. When pre-1992 direct loans are directly modified, they are transferred to a financing account and their book value is changed to an amount equal to their post-modification value. Any subsequent modification is treated as a modification of post-1991 loans. When pre-1992 direct loans are indirectly modified, they are kept in a liquidating account. Their bad debt allowance is reassessed and adjusted to reflect amounts that would not be collected due to the modification.
 48. The change in book value of both pre-1992 and post-1991 direct loans resulting from a direct or indirect modification and the cost of modification will normally differ, due to the use of different discount rates or the use of different measurement methods. Any difference between the change in book value and the cost of modification is recognized as a gain or loss. For post-1991 direct loans, the modification adjustment transfer⁵ paid or received to offset the gain or loss is recognized as a financing source (or a reduction in financing source).

B. Modification of Loan Guarantees

49. With respect to a direct or indirect modification of pre-1992 or post-1991 loan guarantees, the cost of modification is the excess of the post-modification liability⁶ of the loan guarantees over their pre-modification liability⁷. The modification cost is recognized as modification expense when the loan guarantees are modified.
50. The existing book value of the liability of modified post-1991 loan guarantees is changed to an amount equal to the present value of net cash outflows projected under the modified terms from the time of modification to the loans' maturity, and discounted at the original discount rate (**the rate that was originally used to calculate the present value of the liability when the guaranteed loans were disbursed**).

⁵ OMB instructions provide that if the decrease in book value exceeds the cost of modification, the reporting entity receives from the Treasury an amount of "modification adjustment transfer" equal to the excess; and that if the cost of modification exceeds the decrease in book value, the reporting entity pays to the Treasury an amount of "modification adjustment transfer" to offset the excess. (See OMB Circular A-11.)

⁶ The term "post-modification liability" is the present value of the net cash outflows of the loan guarantees estimated at the time of modification under the post-modification terms, and discounted at the interest rate applicable to the time when the modification occurs on marketable Treasury securities that have a comparable maturity to **the remaining maturity** of the guaranteed loans under post-modification terms (simply stated, the post-modification terms at the current rate).

⁷ The term "pre-modification liability" is the present value of the net cash outflows of loan guarantees estimated at the time of modification under the pre-modification terms and discounted at the interest rate applicable to the time when the modification occurs on marketable Treasury securities that have a comparable maturity to **the remaining maturity** of the guaranteed loans under pre-modification terms (simply stated, the pre-modification terms at the current rate).

51. When pre-1992 loan guarantees are directly modified, they are transferred to a financing account and the existing book value of the liability of the modified loan guarantees is changed to an amount equal to their post-modification liability. Any subsequent modification is treated as a modification of post-1991 loan guarantees. When pre-1992 direct loan guarantees are indirectly modified, they are kept in a liquidating account. The liability of those loan guarantees is reassessed and adjusted to reflect any change in the liability resulting from the modification.
52. The change in the amount of liability of both pre-1992 and post-1991 loan guarantees resulting from a direct or indirect modification and the cost of modification will normally differ, due to the use of different discount rates or the use of different measurement methods. The difference between the change in liability and the cost of modification is recognized as a gain or loss. For post-1991 loan guarantees, the modification adjustment transfer⁸ paid or received to offset the gain or loss is recognized as a financing source (or a reduction in financing source).

C. Sale of Loans

53. The sale of post-1991 and pre-1992 direct loans is a direct modification. The cost of modification is determined on the basis of the pre-modification value of the loans sold. If the pre-modification value of the loans sold exceeds the net proceeds from the sale, the excess is the cost of modification, which is recognized as modification expense.
54. For a loan sale with recourse, potential losses under the recourse or guarantee obligations are estimated, and the present value of the estimated losses from the recourse is recognized as subsidy expense when the sale is made and as a loan guarantee liability.
55. The book value loss (or gain) on a sale of direct loans equals the existing book value of the loans sold minus the net proceeds from the sale. Since the book value loss (or gain) and the cost of modification are calculated on different bases, they will normally differ. Any difference between the book value loss (or gain) and the cost of modification is recognized as a gain or loss.⁹ For sales of post-1991 direct loans, the modification adjustment transfer¹⁰

⁸ OMB instructions provide that if the increase in liability exceeds the cost of modification, the reporting entity receives from the Treasury an amount of "modification adjustment transfer" equal to the excess; and that if the cost of modification exceeds the increase in liability, the reporting entity pays to the Treasury an amount of "modification adjustment transfer" to offset the excess. (See OMB Circular A-11.)

⁹ If there is a book value gain, the gain to be recognized equals the book value gain plus the cost of modification.

¹⁰ See footnote No. 7 for an explanation for "modification adjustment transfer".

paid or received to offset the gain or loss is recognized as a financing source (or a reduction in financing source).

D. Disclosure

56. Disclosure is made in notes to financial statements to explain the nature of the modification of direct loans or loan guarantees, the discount rate used in calculating the modification expense, and the basis for recognizing a gain or loss related to the modification.

Foreclosure of Post-1991 Direct and Guaranteed Loans

57. When property is transferred from borrowers to a federal credit program, through foreclosure or other means, in partial or full settlement of post-1991 direct loans or as a compensation for losses that the government sustained under post-1991 loan guarantees, the foreclosed property is recognized as an asset at the present value of its estimated future net cash inflows discounted **at the original discount rate**.
58. If a legitimate claim exists by a third party or by the borrower to a part of the recognized value of the foreclosed assets, the estimated amount of the claim is recognized as a special contra valuation allowance.
59. At a foreclosure of guaranteed loans, a federal guarantor may acquire the loans involved. The acquired loans are recognized at the present value of their estimated net cash inflows from selling the loans or from collecting payments from the borrowers, discounted **at the original discount rate**.
60. When assets are acquired in full or partial settlement of post-1991 direct loans or guaranteed loans, the present value of the government's claim against the borrowers is reduced by the amount settled as a result of the foreclosure.

Write-off of Direct Loans

61. When post-1991 direct loans are written off, the unpaid principal of the loans is removed from the gross amount of loans receivable. Concurrently, the same amount is charged to the allowance for subsidy costs. Prior to the write-off, the uncollectible amounts should have been fully provided for in the subsidy cost allowance through the subsidy cost estimate or reestimates. Therefore, the write-off would have no effect on expenses.

Statement of Federal Financial Accounting Standards 20: Elimination of Certain Disclosures Related to Tax Revenue Transactions by the Internal Revenue Service, Customs, and Others, Amending SFFAS 7, Accounting for Revenue and Other Financing Sources

Status

Issued	September 29, 2001
Effective Date	For periods beginning after September 30, 2000.
Affects	SFFAS 7
Affected by	None.

Summary

Statement of Federal Financial Accounting Standards (SFFAS) 7, *Accounting for Revenue and Other Financing Sources*, became effective in fiscal year 1998 and included detailed provisions that apply to entities collecting taxes on behalf of the Federal Government. The two entities collecting the vast majority of federal taxes are the Internal Revenue Service (IRS) and the U.S. Customs Service (Customs).

The Board is issuing this standard to rescind paragraph 65.2 of SFFAS 7. Absent very detailed explanations, the provisions of paragraph 65.2 could result in information being given to readers of the financial statements that they might misinterpret. The Board believes that paragraph 65.2 would not accomplish what it purports to accomplish, and would impose costs unnecessarily on both the preparer and auditor without a significant benefit. The Board's reasoning is explained more fully in Appendix A, Basis for Conclusions.

This amendment is effective for periods beginning after September 30, 2000.

Table of Contents

	Page
Summary	1
Introduction	3
Accounting Standard	3
Appendix A: Basis For Conclusions	5
Appendix B: Paragraph 65 of SFFAS 7	11

Introduction

Purpose

1. This standard rescinds paragraph 65.2 of Statement of Federal Financial Accounting Standards (SFFAS) 7 and makes other conforming changes.

Background

2. SFFAS 7 became effective in fiscal year 1998 and included, along with other provisions, detailed provisions that apply to entities collecting taxes on behalf of the Federal Government. Paragraph 65.2 of that standard required disclosure of “revenue-related transactions affecting the beginning and end-of-period balances of accounts receivables, accounts payable for refunds, and the allowance for uncollectible amounts.”
3. Subsequent to the issuance of the standard questions arose as to the usefulness of the information as well as to the practicality of producing it. After discussing the issues and options, the Board issued, in November 1998, an exposure draft of a standard rescinding paragraph 65.2. Ultimately, the Board agreed that more study was needed, and in January 1999 it deferred the effective date of paragraph 65.2 until October 1, 2000 (SFFAS 13, *Deferral of Paragraph 65.2 – Material Revenue-Related Transactions Disclosures*).
4. In November 2000, the Board issued a second exposure draft, *Elimination of Disclosures Related to Tax Revenue Transactions by the Internal Revenue Service, Customs, and Others, Amending SFFAS 7*. Based on comments received and further consideration, the Board is now rescinding paragraph 65.2.

Effective Date

5. This amendment is effective for periods beginning after September 30, 2000.

Accounting Standard

6. Paragraph 65.2 of SFFAS 7 is repealed and rescinded.

7. Other conforming changes:

- a. The last sentence of paragraph 107 of SFFAS 7 is changed to delete “65.2 and” from the parenthesis.
- b. The last sentence of footnote 41, paragraph 187.1 of SFFAS 7 is changed to delete “in its disclosures required by para. 65.2”.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis For Conclusions

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

8. This appendix summarizes some of the considerations deemed significant by the Board in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others.
9. The Board issued an exposure draft in November 1998 proposing to rescind paragraph 65.2. Comments were received during a minimal comment period that ended December 12, 1998. In January 1999, the Board deferred the effective date of paragraph 65.2, SFFAS 7, until October 1, 2000.¹
10. In December 1998, the Board agreed that further study was needed regarding the relevance of the information discussed in paragraph 65.2. Additionally, the Board was concerned about the relatively short exposure period (approximately 30 days) for the ED. The Board decided to defer the effective date for implementing paragraph 65.2 and revisit the issue of eliminating the requirement at a later date.
11. Following the decision to defer the disclosure requirement, the Board did not take up research on the issue immediately. In December 1999, the Board reviewed its agenda and weighed whether it should devote scarce resources to this issue or simply allow the provisions of paragraph 65.2 to take effect for fiscal year 2001 financial statements. To assist in making this decision, the Board sent a letter to the Internal Revenue Service (IRS) asking what additional information might be available to aid the Board in considering the issue.
12. The IRS responded with additional information based on its two additional reporting years' experience with SFFAS 7 requirements. In addition, the IRS provided a briefing to the Board regarding its collections process and systems modernization. The IRS renewed the request that the Board rescind the provisions of paragraph 65.2. Its auditor, the General Accounting Office, supported this rescission.

¹ SFFAS 13, *Deferral of Paragraph 65.2 – Material Revenue-Related Transactions Disclosures, Amending SFFAS 7 Accounting for Revenue and Other Financing Transactions*, January 1999.

13. In November 2000, the Board issued a second exposure draft, *Elimination of Disclosures Related to Tax Revenue Transactions by the Internal Revenue Service, Customs, and Others, Amending SFFAS 7*, that proposed to eliminate paragraph 65.2. Because of the interest in the relevance of this information, the Board mailed copies to potential users, for example, Congresspersons and staff directors of key committees. The Board received comment letters on the exposure draft from the following sources:

	Federal (internal)	Nonfederal (external)
Users, academics, others		2
Auditors	2	1
Preparers and financial managers	4	

Responses to the Exposure Draft

14. The respondents were closely divided with the majority supporting the proposed elimination of paragraph 65.2. It is important to note that the Board did not rely on the number in favor or opposed to a given position. Information about the majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The Board summarizes the respondents' arguments below.

Respondents Supporting the ED

15. Several respondents stated that paragraph 65.2 disclosures would not be useful, and could be misleading, to general purpose readers. A respondent stated that any attempt to reconcile the elements required by paragraph 65.2 could be misleading due to timing differences between assessments and collections and the definitions of revenue receipts and taxes receivable.
16. Some respondents said that the IRS currently provides sufficient detailed information about federal tax revenues, unpaid assessments, and refunds in its annual financial report through footnote disclosures, supplementary information and in its management's discussion and analysis (MD&A). Other respondents said that the disclosure requirements of paragraph 65.2 far exceed what should be required in general purpose financial statements. Another respondent concurring with the elimination of paragraph 65.2 stated that FASAB clearly documented its case in the ED's basis for conclusions.

Respondents Opposing the ED

17. Other respondents had a different view. One respondent stated that the disclosure in SFFAS 7 was intended to overcome some of the practical limitations of the tax collection system and make the tax revenue recognition closer to what would be reported with fuller accrual accounting. He submitted that the information required in paragraph 65.2 is relevant and useful in assessing the efficiency and effectiveness of the tax system, not merely the administrative practices, and can be explained satisfactorily so as not to be misleading.
18. Several respondents stated that insufficient evidence has been offered regarding the lack of relevance and understandability of the information to warrant eliminating the paragraph 65.2 disclosures, and doing so would weaken SFFAS 7. These respondents recommended extending the deferral period for the standard, further research, and a hearing, as necessary, prior to the issuance of a final standard. One respondent stated that the ED did not convincingly explain why the information called for in paragraph 65.2 is so complex that it could not be clearly explained. The respondent stated that SFFAC 1, par. 158, provides that general purpose financial reports should not exclude essential information merely because it is difficult to understand or because some report users choose not to use it.

The Board's Discussion

19. In conjunction with re-deliberating the issues presented in the exposure draft and carefully considering the respondents' comments, the Board notes that SFFAS 7 represents a major accomplishment in establishing federal accounting standards. SFFAS 7 presents standards for classifying, recognizing, and measuring resource inflows as well as concepts for financial reporting and makes other significant contributions. Many provisions of that statement are now fundamental to federal accounting. However, the Board believes that paragraph 65.2 of SFFAS 7 is flawed because the information required therein might be misinterpreted, would not accomplish what it purports to accomplish, and would be difficult to produce.

Information that Could Be Misinterpreted

20. Paragraph 65.2 requires disclosure of information about the beginning and ending balances of accounts receivable and related accounts, as well as material types of revenue transactions that relate to the collecting entity's custodial responsibilities. The minimum information required would include "assessments by the entity," "penalties," "interest," and "abatements." In the two exposure drafts on this issue (November 1998 and November 2000) the Board has discussed the complexity of the assessment and abatement process. The Board has discussed the various IRS-initiated tax collection actions, including compliance assessments; the enforcement work-in-process status of the assessment

database; the possible timing difference between the period to which the tax relates, the eventual assessment of the tax and penalties and interest, and the final collection or abatement of the assessment; and other complicating factors. Many assessments, penalties, and interest are made for enforcement purposes, are often overstated due to incomplete information, and are subject to change based on receipt of additional information from the taxpayer. Thus, they do not always precede a receivable² in an accounting sense. The Board believes that the user could misinterpret assessment reporting because increases or decreases in assessments do not lead necessarily to increases or decreases in receivables or revenue. Further, developing meaningful categories of assessments that would permit a user to analyze whether enforcement assessments are likely to lead to revenues would not be cost-beneficial when one considers the remaining reporting required under SFFAS 7 as amended.

21. The Board also has discussed the complications of the abatement process. Abatement is a reduction or cancellation of an assessed tax. Abatements are made for myriad reasons and in some cases there is no correlation between the original assessment and the final reason for the abatement. For example, taxpayers can carry back losses to prior years and reduce prior year taxes that were correctly assessed by the IRS. Such reductions are classified as abatements but are not the same as abatements where the tax assessment itself was in error.
22. Moreover, taxpayers also file amended returns that can require abatement of the original amount they reported, including taxpayer requests to abate particular types of penalty assessments due to reasonable causes. For example, during 1998 a new law required the IRS to disallow certain dependents and credits claimed if the taxpayer did not include a social security number for a dependent child or a taxpayer identification number for a child-care provider. In each case the IRS posted an assessment, accrued penalties and interest pending provision of the information, and subsequently abated the assessment when the taxpayer provided the required verification. This change in law increased the total assessments, interest, penalties, and abatements to enforce a reporting requirement rather than to collect additional tax revenue. One could be misled since both assessments and abatements were “overstated” in the sense that it was anticipated at the time of assessment that, in the majority of cases, the assessment would be abated.
23. There are many different reasons for abatements with varying transactions potentially covering 10 years of assessments, each affecting the balances to be disclosed under paragraph 65.2. The Board believes that reporting on total assessments, including penalties

²Per SFFAS 7, paragraph 53, accounts receivable should be recognized when a collecting entity establishes a specifically identifiable, legally enforceable claim to cash or other assets through its established assessment process to the extent the amount is measurable.

and interest thereon, and abatements could be misinterpreted in the context of disclosures purporting to be transactions affecting the beginning and ending balances of accounts receivable and related accounts. Moreover, the Board believes that attempts to reconcile the elements required in paragraph 65.2 could be misinterpreted due to timing differences between assessments and collections and the definitions of revenue receipts and taxes receivable.

24. The Board concludes that the paragraph 65.2 information is not relevant for reconciling the beginning and ending balances of accounts receivable and related accounts, which paragraph 65.2 purports to do. Some of the required information is beyond the scope of those accounts since activity does not result in or relate to revenue or receivables, precedes the recognition of taxes receivable, or relates solely to tax administration or enforcement.
25. When considering whether to retain paragraph 65.2, the Board considered the materiality of taxes receivable. The IRS' taxes receivable are not large in relation to annual tax revenue. For FY2000, approximately \$20 billion in IRS receivables represent three days of collections.

Other Information Required

26. The Board calls attention to other SFFAS 7 paragraphs and to other FASAB standards that require disclosures and supplemental information that the Board believes accomplish the objectives of SFFAS 7 as stated in paragraph 187.1 and elsewhere. Paragraph 65.1 requires disclosure of factors affecting collectability and timing of categories of accounts receivable and the amounts involved. Paragraph 65.3 requires disclosure of cumulative cash collections and refunds by tax year and tax type. Paragraph 67 requires supplemental information about the estimated realizable value of compliance assessments and pre-assessment work-in-process; about other claims for tax refunds that are not yet accrued but are likely to be accrued when administrative actions are completed; and, about the amount of assessments that the entity still has statutory authority to collect but that have been written off and thus excluded from accounts receivable. SFFAS 15, *Management's Discussion and Analysis*, requires discussion, among other things, of performance goals, objectives, results, systems, controls, and legal compliance.

Conclusion

27. The Board actively sought comments from potential users. In addition to the FASAB distribution list, the Board sent the ED to all those who had commented on the prior ED of November 1998 and to potential decision-makers, including especially House and Senate committees and sub-committees. Also, in setting February 16, 2001, as the cut-off date for comments, the Board provided an extended period for respondents to submit comments. Despite the Board's efforts to reach users the response to the ED did not demonstrate a

demand from users to have the information. Only one respondent said the information was useful and necessary. Other respondents who oppose eliminating paragraph 65.2 at this time said that the Board did not offer enough evidence regarding relevance and understandability to warrant eliminating paragraph 65.2, not that they themselves found it useful or relevant and for what purposes. Due to the cost of the information, the availability of other information on this topic, the requests from the preparer and auditor communities, and lack of a response from users of the information, the Board does not believe the paragraph should be retained.

28. The Board believes that sufficient evidence has been produced to conclude that the information required by paragraph 65.2 could be misinterpreted by users of general purpose financial statements and that it does not accomplish what it purports to accomplish. The Board does not exclude essential information merely because it is difficult to understand or because some report users choose not to use it. In this instance, however, the complexity of the tax collection process in conjunction with the context of accounts receivable reconciliation renders paragraph 65.2 defective and, therefore, not relevant. The objective of SFFAS 7 is to tell users what is happening at the tax collection entities, and the Board believes the standard is achieving this objective without paragraph 65.2, and that paragraph 65.2 could in fact be misinterpreted. This amendment of SFFAS 7 is limited to the problem of disclosures in paragraph 65.2 being misinterpreted.

Vote for Approval

29. The amendment of SFFAS 7 prescribed in this statement is approved by a vote of seven members in favor and one member dissenting (only eight members voted due to a vacancy on the Board). The dissent is available for review at the FASAB offices.

Appendix B: Paragraph 65 of SFFAS 7

65. Entities that collect taxes and duties should disclose the following relating to future cash flows, revenue-related transactions, and custodial responsibilities:

65.1 Accounts **receivable**. Factors affecting collectibility and timing of categories of accounts receivable and the amounts involved.

65.2 Material **revenue-related transactions**. Revenue-related transactions affecting the beginning and end-of-period balances of accounts receivable, accounts payable for refunds, and the allowance for uncollectible amounts should be disclosed. All material types of revenue transactions which relate to the custodial responsibilities of the collecting entities should be disclosed. The disclosure should be comprehensive enough to include as a minimum: self-assessments by taxpayers (or importers); assessments by the entity; penalties; interest; cash collections applied to taxpayer accounts and unapplied collections; refunds, refund offsets, and drawbacks; abatements; accounts receivable written off during the reporting period as uncollectible; and provisions made to the allowance for uncollectible amounts.

65.3 Cumulative **cash collections and refunds by tax year and type of tax**. Cash collections and refunds by tax year and type of tax should include cash collections and cash refunds for the reporting period and for sufficient prior periods to illustrate (1) the historical timing of tax collections and refunds, and (2) any material trends in collection and refund patterns. Sufficient prior periods for each type of tax are the periods which end when the statutory period for collection ends. Collecting entities may shorten these periods if evidence for prior tax years indicates that a shorter period would reflect at least 99 percent of the collectible taxes.

Statement of Federal Financial Accounting Standards 21: Reporting Corrections of Errors and Changes in Accounting Principles, Amendment of SFFAS 7, Accounting for Revenue and Other Financing Sources

Status

Issued	October 16, 2001
Effective Date	For periods beginning after September 30, 2001.
Affects	SFFAS 7
Affected by	None.

Summary

This Statement amends the standard on Prior Period Adjustments contained in Statement of Federal Financial Accounting Standards 7, *Accounting for Revenue and Other Financing Sources* (SFFAS 7), which was issued in April 1996.

Paragraph 76 of SFFAS 7, entitled Prior Period Adjustments, addresses accounting changes and errors that affect prior period financial statements. It does not permit reporting entities, when presenting prior period financial statements for comparative purposes, to restate prior period financial statements to show the effect of the accounting errors.

The unforeseen result is that reporting entities that have material errors in their prior period financial statements are unable to present them for comparative purposes without creating both a dilemma for auditors and confusion for users. The dilemma for the auditors is that they would have to qualify their opinion on the prior period financial statements whether or not they had been restated. If prior period statements were presented that contained a material error, auditors would have to qualify their opinion. On the other hand, if prior period statements were presented and balances had been corrected for an error, auditors would still have to qualify their opinion because such restatement would not be in accordance with the existing standard. The confusion for the user derives from the difficulty inherent in comparing the financial statements for two or more periods when the effect of the error is not shown in the prior periods' financial statements.

To correct this situation, the amendment requires that when material errors are discovered in prior period financial statements, all statements presented must be restated to correct the error.

The Board has retained the current requirement that prior period financial statements not be restated for changes in accounting principles, unless otherwise specified in the transition instructions section of a new FASAB standard. The language addressing the

requirements, however, has been revised to improve clarity and to require certain disclosures.

	Page
Summary	1
Introduction	4
Accounting Standard	6
Appendix A: Basis For Conclusions	8

Introduction

1. Statement of Federal Financial Accounting Standards No. 7, *Accounting for Revenue and Other Financing Sources*, became effective for fiscal year 1998. It includes a section describing how reporting entities should handle prior period adjustments.
2. The Section on Prior Period Adjustments states:

76. Prior period adjustments should be limited to corrections of errors and accounting changes with retroactive effect, including those occasioned by the adoption of new federal financial accounting standards, and should be recognized and measured under applicable standards. Adjustments should be recognized as a change in cumulative results of operations (rather than as an element of net results of operations for the period). Prior period financial statements should not be restated for prior period adjustments recognized in the current period.
3. When SFFAS No. 7 was issued, the Board believed that having reporting entities restate prior period financial statements for prior period adjustments would create an unnecessary burden at a time when FASAB was still establishing a basic framework of standards.
4. However, disallowing restatement of prior period financial statements has had the effect of preventing reporting entities from presenting comparative financial statements when the prior period financial statements contain a material error that is discovered in the current period.
5. The Board has amended the standard to require that reporting entities restate prior period financial statements for material errors discovered in the current period, if such statements are provided for comparative purposes, and if the effect of the error would be material to the financial statements in either period.
6. The Board has chosen to retain the current methodology that prior period financial statements not be restated for changes in accounting principles, unless otherwise specified in the transition instructions section of a new FASAB standard. The language addressing the requirements, however, has been revised to improve clarity and to require certain disclosures.
7. The language in the standard has also been revised to distinguish between corrections of errors and changes in accounting principles. A change in accounting principle should be identified as such and no longer reported as a prior period adjustment.

Effective Date

8. This amendment would be effective for periods beginning after September 30, 2001, with earlier implementation encouraged.

Accounting Standard

9. Paragraph 76 of SFFAS No. 7, *Accounting for Revenue and Other Financing Sources*, Section Prior Period Adjustments, is superceded and replaced by Paragraphs 10 through 13 below.

Corrections of Errors

10. "Errors in financial statements result from mathematical mistakes, mistakes in the application of accounting principles, or oversight or misuse of facts that existed at the time the financial statements were prepared."¹ When errors are discovered after the issuance of financial statements, and if the financial statements would be materially misstated absent correction of the errors, corrections should be made as follows:
- (a) If only the current period statements are presented, then the cumulative effect of correcting the error should be reported as a prior period adjustment. The adjustment should be made to the beginning balance of cumulative results of operations, in the statement of changes in net position.
 - (b) If comparative financial statements are presented, then the error should be corrected in the earliest affected period presented by correcting any individual amounts on the financial statements. If the earliest period presented is not the period in which the error occurred and the cumulative effect is attributable to prior periods, then the cumulative effect should be reported as a prior period adjustment. The adjustment should be made to the beginning balance of cumulative results of operations, in the statement of changes in net position for the earliest period presented.
 - (c) The nature of an error in previously issued financial statements and the effect of its correction on relevant balances should be disclosed. Financial statements of subsequent periods need not repeat the disclosures.
11. Prior period financial statements should only be restated for corrections of errors that would have caused any statements presented to be materially misstated.

¹ Accounting Principles Board Opinion No. 20, par. 13.

Changes in Accounting Principles

12. A change in accounting principle is a change from one generally accepted accounting principle to another one that can be justified as preferable. For the purposes of this standard, changes in accounting principles also include those occasioned by the adoption of new federal financial accounting standards.
13. Unless otherwise specified in the transition instructions section of a new FASAB standard, for all changes in accounting principles that would have resulted in a change to prior period financial statements:
 - (a) The cumulative effect of the change on prior periods should be reported as a “change in accounting principle.” The adjustment should be made to the beginning balance of cumulative results of operations in the statement of changes in net position for the period that the change is made.
 - (b) Prior period financial statements presented for comparative purposes should be presented as previously reported; and
 - (c) The nature of the changes in accounting principle and its effect on relevant balances should be disclosed in the current period. Financial statements of subsequent periods need not repeat the disclosure.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis For Conclusions

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

14. This appendix summarizes some of the considerations deemed significant by the Board in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others.
15. The Board received sixteen responses to the ED. All but one respondent were in support of the amendment. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondent's majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The respondent's comments are summarized below.

	Federal	Non-federal
Users, academics, others		2
Auditors	2	
Preparers and financial managers	12	

16. Seven respondents approved the amendment without further comment. Four approved the amendment but requested clarifying language, which has been incorporated into the standard. Two approved the amendment but would have preferred that the standard allow restatement for changes in accounting principles.
17. One respondent disapproved of the amendment because they believe the amendment will create additional confusion regarding the closing of prior period accounts and the subsequent issuance of financial statements.

Corrections of Errors

18. When SFFAS No. 7 was issued, the Board believed that having reporting entities restate prior period financial statements for prior period adjustments would create an unnecessary

burden at a time when FASAB was still establishing a basic framework of standards. Changes in the federal accounting environment in the ensuing years have lessened these concerns. With the government's increasing ability to produce accurate and sophisticated financial statements, the Board is more concerned with encouraging reporting entities to produce financial statements that are most useful to managers and other users.

19. Although comparative financial statements are not required by any of the accounting standards setting boards, it is generally held that "the presentation of comparative financial statements in annual and other reports enhances the usefulness of such reports and brings out more clearly the nature and trends of current changes affecting the enterprise."²
20. Reporting entities also recognize that presenting comparative statements greatly enhances the overall usefulness of financial statements. Despite the advantages of providing comparative statements, however, at least one governmental entity has been constrained from presenting its prior year statements because they contain a material error.
21. The Board has deliberated on the effects of the existing standard precluding restatement to correct errors on presentation of comparative financial statements. Although it believes that the considerations in effect at the time the existing standard was issued were valid, it has concluded that potentially losing or delaying the benefit of comparative statements now outweighs these considerations.
22. The Board concluded that the standard for Prior Period Adjustments should be amended to specifically require that prior period financial statements presented for comparative purposes be restated to correct material errors, and that restatement should be limited to only material errors.

Changes in Accounting Principles

23. Although the Board has chosen to retain the current methodology for reporting changes in accounting principle, it has revised the language to improve clarity and to require certain disclosures. The Board may consider exceptions to this decision, if warranted, for accounting standards issued in the future. It may also further examine issues raised by respondents regarding changes in accounting principles.

² Accounting Research Bulletin 43, Chapter 2A, paragraph 101.

Other Accounting Changes

24. Although accounting estimates and changes in reporting entity are identified as accounting changes in other accounting literature, the Board did not address these issues because they require further study and were not addressed in paragraph 76 of SFFAS No. 7.

Board Approval

25. This statement was approved by unanimous vote of the Board.

Statement of Federal Financial Accounting Standards 22: Change in Certain Requirements for Reconciling Obligations and Net Cost of Operations, Amendment of SFFAS 7, Accounting for Revenue and Other Financing Sources (Rescinded)

Issued	May 8, 2003
Effective Date	This Statement is effective for accounting periods beginning after September 30, 2002, with earlier implementation encouraged.
Affects	<ul style="list-style-type: none">• SFFAS 6, <i>Accounting for Property, Plant and Equipment</i> (for additional PP&E discussion and cleanup cost standards)• SFFAS 8, <i>Supplemental Stewardship Reporting</i> (Rescinds the prefatory box preceding paragraph 52 of SFFAS 8 and paragraphs 52 through 70 of SFFAS 8.)
Affected by	<ul style="list-style-type: none">• SFFAS 35 amends paragraphs 10, 12, 13, 15, 16 and footnote 5• SFFAS 35 adds paragraph 13A and footnote 4A• SFFAS 35 rescinds paragraphs 11, 17, 18 and footnote 6• SFFAS 50 amends par. 10 and rescinds par. 11-18.

Summary

Prior to this amendment, the acquisition costs for items classified as national defense (ND) property, plant, and equipment (PP&E) were expensed in the period incurred. In addition, valuation (using either an historical or latest acquisition cost valuation method), condition, and deferred maintenance information for these items was to be presented off-balance sheet.

The amendments in this Statement make the following changes. The term “ND PP&E” is rescinded. All items previously considered ND PP&E are classified as general PP&E. Accordingly, the cost of these items should be capitalized and, with the exception of the cost of land and land improvements that produce permanent benefits, depreciated. This Statement also notes that all entities are permitted to use the composite or group depreciation methodology to calculate depreciation.

The amendments in this Statement take effect for accounting periods beginning after September 30, 2002.

Table of Contents

	Page
Summary	1
Introduction	3
Background	3
Summary Of Amendments	4
Effective Date	4
Accounting Standards	5
Amendments To Existing Standards	5
Implementation Guidance	6
Appendix A: Basis For Conclusions	7

Introduction

1. The purpose of this Statement is to amend certain standards with regard to national defense (ND) property, plant, and equipment (PP&E). The standards being amended are contained in Statement of Federal Financial Accounting Standards (SFFAS) No. 11, *Amendments to Accounting for Property, Plant, and Equipment -- Definitional Changes* (December 1998); SFFAS No. 8, *Supplementary Stewardship Reporting* (June 1996); and, SFFAS No. 6, *Accounting for Property, Plant, and Equipment* (November 1995).

Background

2. Pursuant to SFFAS No. 6, costs to acquire, replace or improve ND PP&E¹ were recognized² as an expense in the period incurred. Consistent with the treatment of the acquisition cost of ND PP&E, SFFAS No. 6 also required that the total estimated cleanup cost be recognized as an expense and a liability established in the period the ND PP&E item is placed in service. A further requirement of SFFAS No. 6, as amended by SFFAS No. 14, is that deferred maintenance amounts be presented as Required Supplementary Information (RSI).³
3. The Supplementary Stewardship Reporting standards in SFFAS No. 8 required presenting a valuation of ND PP&E. The following values were to be presented:
 - a. a beginning value balance for ND PP&E;
 - b. the dollar values for ND PP&E acquired during the reporting period;
 - c. the dollar values for ND PP&E withdrawn during the reporting period;

¹ Originally, ND PP&E was defined in SFFAS No. 6 as Federal mission PP&E. Subsequent to the issuance of SFFAS No. 6, many agencies suggested that the Federal mission PP&E category would be appropriate for agency PP&E not considered by the Board in developing the category. To prevent confusion, inconsistency, and unintended application, the Board replaced the definition of Federal mission PP&E with the definition of ND PP&E currently contained in SFFAS No. 11 to clarify that only DoD and the Maritime Administration's National Defense Reserve Fleet PP&E would be categorized as ND PP&E.

² "Recognize" means to record an amount in entity accounts and to report a dollar amount on the face of the Statement of Net Costs or the Balance Sheet either individually or so that the amounts are aggregated with related amounts.

³ This amendment does not change any requirements for deferred maintenance.

-
- d. the increase or decrease in values resulting from revaluation of assets using the latest acquisition cost (LAC); and,
 - e. the end-of-year values by major type or category of ND PP&E.

The values were to have been determined using either an historical or LAC valuation method.

- 4. In addition to the values, condition information was required. The valuation and condition information was presented as Required Supplementary Stewardship Information (RSSI) – that is, outside of the principal financial statements.
- 5. Current Board members acknowledge that the stewardship approach was adopted, not as a convenience or temporizing expedient, but as a technically desirable approach. However, an increasing government-wide focus on the cost of operations and operating performance in relation to the implications of the Government Performance and Results (GPRA) Act, combined with the Board's and Department of Defense's (DoD) extensive study and greater understanding about National Defense PP&E, provide a clear indication that the operating performance objective is relevant for ND PP&E. Accordingly, the Board rescinds SFFAS No. 11 and amends SFFAS Nos. 6 and 8.

Summary of Amendments

- 6. The amendments in this Statement:
 - a. Rescind the term "ND PP&E" and its definition;
 - b. Classify all assets previously considered to be ND PP&E as general PP&E and, the provisions for general PP&E and associated cleanup costs for general PP&E contained in SFFAS No. 6, as amended, are to be applied; and,
 - c. Continue to permit the composite or group depreciation methodology to depreciate general PP&E.

Effective Date

- 7. This Statement is effective for accounting periods beginning after September 30, 2002, with earlier implementation encouraged.

Accounting Standards

Amendments to Existing Standards

8. The amendments to accounting standards for assets previously identified as national defense (ND) property, plant, and equipment (PP&E) and implementation guidance are presented in paragraphs 9 through 18 that follow.
9. The amendments affect existing standards, for periods beginning after September 30, 2002 or upon early implementation of this Statement, in the following manner:
 - a. SFFAS No. 11 is rescinded in its entirety;
 - b. The prefatory box preceding paragraph 52 of SFFAS No. 8 is rescinded;
 - c. Paragraphs 52 through 70 of SFFAS No. 8 are rescinded;
 - d. Paragraph 21 of SFFAS No. 6 is amended by rescinding the category name "Federal mission property, plant, and equipment;"
 - e. Paragraphs 46 through 56 of SFFAS No. 6 and the accompanying heading "Federal mission property, plant, and equipment;" which precedes these paragraphs, are rescinded;
 - f. SFFAS No. 6 is amended by adding the following sentence to paragraph 35 as a separate bulleted line item:
 - A composite or group depreciation methodology⁴, whereby the costs of PP&E are allocated using the same allocation rate, is permissible.

⁴ The composite methodology is a method of calculating depreciation that applies a single average rate to a number of heterogeneous assets that have dissimilar characteristics and service lives. The group methodology is a method of calculating depreciation that applies a single, average rate to a number of homogeneous assets having similar characteristics and service lives.

Implementation Guidance

Initial Capitalization

10. See SFFAS 6 for implementation guidance applicable to all general PP&E.

[Paragraph 11-18 were rescinded by SFFAS 50.]⁵

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

⁵ Footnote 5 was rescinded by SFFAS 50.

Appendix A: Basis For Conclusions

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

19. This appendix summarizes some of the considerations deemed significant by the Board in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others.

Introduction

20. The Board issued an exposure draft (ED), *Eliminating the Category National Defense Property, Plant, and Equipment*, to rescind SFFAS No. 11, *Amendments to Property, Plant, and Equipment -- Definitional Changes* and to amend SFFAS No. 8, *Supplementary Stewardship Reporting* and SFFAS No. 6, *Accounting for Property, Plant, and Equipment* in March of 2002. Twenty comment letters were received during a comment period that ended May 20, 2002. The majority of respondents supported the proposals presented in the ED. Concerns raised by the respondents dealt mostly with providing additional guidance for the valuation and consumption of items. Two other concerns dealt with the impact of the Statement on contractor costs and the effective date of the Statement. Background information pertaining to the development of this Statement and discussions on the concerns raised by respondents are addressed in the following paragraphs.

Background

21. The Federal Accounting Standards Advisory Board (FASAB) has studied accounting and reporting approaches for Property, Plant, and Equipment (PP&E) for a number of years. FASAB's initial standards for PP&E began with the development of SFFAS No. 6, *Accounting for Property, Plant, and Equipment*, and followed with SFFAS No. 8, *Supplementary Stewardship Reporting*.
22. SFFAS No. 6 requires that general PP&E be recognized as assets in the basic financial statements and, except for land and land improvements that produce permanent benefits, be charged to expense through depreciation over their useful life. SFFAS No. 6, paragraph

122, states that "allocation of the cost of general PP&E, excluding land, among accounting periods was essential to assessing operating performance." The Board's federal financial reporting objectives concept statement, Statement of Federal Financial Accounting Concepts (SFFAC) No. 1, focuses on relating costs to accomplishments in reporting an entity's operating performance. To meet the operating performance objective for general PP&E, the Board sought to provide accounting standards that would result in:

- a. relevant and reliable cost information for decision-making by internal users;
 - b. comprehensive, comparable cost information for decision-making and program evaluation by the public; and,
 - c. information to help assess the efficiency and effectiveness of asset management.
23. The Board, however, found that for some PP&E, the depreciation effect of the asset on operating performance was not the predominant reporting objective. Instead, stewardship was important. Therefore, three categories of assets (i.e., national defense PP&E (ND PP&E),⁶ heritage assets, and stewardship land) are referred to collectively as stewardship PP&E.
24. The purpose of SFFAS No. 8 was to establish standards for reporting on the Federal Government's stewardship over certain resources entrusted to it, and certain responsibilities assumed by it. Among these standards are standards for reporting on stewardship PP&E. "Stewardship PP&E" consists of items whose physical properties resemble those of general PP&E traditionally capitalized in financial statements. However, the nature of these Federal physical assets that are classified as stewardship PP&E differs from general PP&E in that their values may be indeterminable or may have little meaning (e.g., museum collections, monuments, assets acquired in the formation of the nation) or that allocating the cost of such assets (e.g., ND PP&E) to accounting periods that benefit from the ownership of such assets is not meaningful. Specifically, for ND PP&E the majority of the Board did not believe applying depreciation accounting for these assets would contribute to measuring the cost of outputs produced, or to assessing operating performance, in any given accounting period. The Board believed that these assets were developed, used, and retired in a manner that did not lend itself to a "systematic and rational" assignment of costs to accounting periods (i.e., depreciation accounting) and, ultimately, to outputs.

⁶ Prior to the issuance of SFFAS No. 11, *Amendments to Accounting for Property, Plant, and Equipment – Definitional Changes*, (amending SFFAS Nos. 6 and 8) the Board referred to ND PP&E as Federal Mission PP&E. The reasons leading to that change are not relevant to this ED but may be understood by reading SFFAS No. 11. This document uses the amended title and definition in referring to the existing provisions.

-
25. Accordingly, one result of SFFAS Nos. 6 and 8 was to remove the PP&E components of ND PP&E from the balance sheet. To accomplish this, SFFAS No. 6 (as amended) required that the cost to acquire ND PP&E components be expensed when incurred. SFFAS No. 8 (as amended), required presenting ND PP&E as stewardship information and included the following information by major type or category of ND PP&E:
- a. a beginning value balance, using either a historical or latest acquisition cost (LAC) valuation method;
 - b. the dollar value acquired during the reporting period;
 - c. the dollar value withdrawn during the reporting period;
 - d. the increase or decrease in value resulting from revaluation of assets using the LAC; and,
 - e. the end-of-year value.
26. In addition to presenting values, SFFAS No. 8 required that condition information be presented. The presentation of value and condition information was done off-balance sheet as Required Supplementary Stewardship Information (RSSI). In addition to value and condition, SFFAS No. 6, as amended, required deferred maintenance information to be presented as Required Supplemental Information (RSI) for ND PP&E.

February 1998 ED

27. In early 1998, the FASAB issued an exposure draft (ED) to amend SFFAS Nos. 6 and 8. The exposure draft was initiated (1) to refine the definition of ND PP&E, and (2) in recognition of the need to provide a transition plan due to the DoD's inability to comply with the provisions of SFFAS No. 8. During the process, the Board reconsidered whether SFFAS No. 8 was an appropriate end goal. Ultimately, the 1998 exposure draft included, among other suggestions, proposals to replace the requirement to present cumulative cost information in the supplementary stewardship report with a requirement to present ND PP&E annual acquisition costs for each of the previous five years (i.e., annual trend information rather than cumulative costs), quantities, and condition information.
28. Besides considering the written comments in response to this 1998 ED, the Board held a public hearing on these proposals to explore further the concerns expressed by some respondents. Because of the divergent views of both respondents and Board members, the Board did not reach a final conclusion on revisions to the reporting requirements for ND PP&E in SFFAS No. 8. The Board's continued deliberations on the proposed standards highlighted the differences of opinion on this subject among the Board members. Since

neither the standards in SFFAS No.8 nor the proposed amendments were acceptable to a majority of the Board members, the Board decided that the accounting for and reporting on ND PP&E requirements should be revisited. DoD voluntarily undertook a study to address (1) users information needs relative to ND PP&E, (2) the current systems capabilities within DoD, and (3) an assessment of alternative means to meet the reporting objectives set by the Board.

29. The Board acknowledges that the SFFAS No. 8 stewardship approach was adopted, not as a convenience or temporizing expedient, but as a technically desirable approach. However, an increasing government-wide focus on the cost of operations and operating performance in relation to the implications of the Government Performance and Results (GPRA) Act, combined with the Board's and DoD's extensive study and greater understanding about National Defense PP&E, provides a clear indication that the operating performance objective is relevant for ND PP&E.

September 2001 ED

30. In September 2001, the FASAB issued an ED that proposed incremental movement from the stewardship reporting of SFFAS No.8 towards information focused on operating performance. The amendments proposed in that ED would have made the following changes. The definition of ND PP&E would have been amended. ND PP&E would have consisted of 2 separate categories of items within the amended definition: (a) Major End Items and (b) Mission Support Items. Major End Items would have been subject to a presentation of the number of units and condition assessment information by asset type or category. In addition, Major End Items would have been capitalized but not depreciated, while Mission Support Items would have been capitalized and depreciated. Also, data for the ten largest current acquisition programs would have been disclosed.
31. The Board issued the 2001 ED because it believed that the proposals in that ED were the best that could be achieved given the acknowledged shortcomings of DoD accounting and other management information systems, as well as DoD's firm belief that certain information would not be useful for management purposes. The 2001 ED would have achieved one of the current Board's objectives, which was to establish monetary accountability over military assets. However, because the 2001 ED did not require depreciation of some major assets, the September 2001 FASAB ED on NDPP&E fell short of comprehensive PP&E accounting. In addition, it would not have fully achieved the objective of SFFAS No. 4, Managerial Cost Accounting Concepts and Standards for the Federal Government, to account for the full cost of programs with a focus on relating costs to accomplishments in reporting an entity's operating performance.

March 2002 ED

32. While there were divergent views on the proposals in the September 2001 ED, many respondents believed ND PP&E should be capitalized and depreciated as is general PP&E. Many Board members had wanted to make this change for some time. This caused the Board to reconsider the proposals presented in the September 2001 ED. The outcome from the deliberations was a consensus of the Board to make the proposal in the March 2002 ED to classify, capitalize, and depreciate ND PP&E as general PP&E. The Board believed its proposal would put discipline into the asset management process. Many members of the Board believe depreciation, impairment, deferred maintenance, and condition are interrelated judgments that should result jointly from periodic estimation of the remaining useful service potential of assets. The Board believes periodic analysis of the sources of asset diminution is as important, perhaps more so, for national defense assets than for other assets.
33. The Board also notes that a second purpose of depreciation accounting is to provide information for measuring the full cost of producing outputs (e.g., deterrence, readiness, training). Full cost, including the depreciation of ND PP&E, would be available for use in assessing the operating performance of responsibility segments for producing outputs and to meet the goals of SFFAC No. 1 and SFFAS No. 4. In addition, the Board believes that classifying all DoD PP&E as general PP&E would improve the public's understanding of federal accounting, add consistency to the application of standards throughout the Federal government, reduce the DoD's cost of development and operation of accounting systems, and preclude the standard setting costs that would be necessary to resolve on-off balance sheet questions. Accordingly, the Board proposed to rescind SFFAS No.11 and amend SFFAS Nos. 6 and 8.
34. Although the September 2001 ED on ND PP&E proposed three special disclosures for ND PP&E, the Board decided not to include them in the March 2002 ED. The three special disclosures proposed in the September 2001 ED were:
 - a. unit information by type or category of Major End Item⁷;
 - b. condition assessment information for Major End Items; and,

⁷The *Accounting for National Defense PP&E and Associated Cleanup Costs* ED, dated September 2001, defined Major End Items to be: 1) items that launch, release, carry, or fire a particular piece of ordnance, and 2) items that carry weapons systems-related property, equipment, materials, or personnel. Major End Items (a) have an indeterminate or unpredictable useful life due to the manner in which they are used, improved, modified, or maintained and (b) are subject to premature destruction or obsolescence (e.g., aircraft, ships, combat vehicles, etc.) Also, included in this category are vessels held in a preservation status by the Maritime Administration's National Defense Reserve Fleet.

-
- c. actual and planned acquisition program costs and unit information for the ten largest current national defense PP&E⁸ acquisition programs.
35. These proposed information requirements were developed and proposed after years of deliberation and with varying recognition and measurement requirements for the principal financial statements. The Board decided not to propose these three special information requirements as part of the March 2002 ED after reviewing responses to the September 2001 ED. The Board concluded that these areas may deserve further study or development for the following reasons:
- a. Unit information as originally proposed was tied to the Major End Item definition. Respondents questioned the definition's effectiveness.
 - b. Unit and condition information has been determined to be "sensitive" information⁹.
 - c. Many respondents suggested that further research in the area of condition and deferred maintenance presentation is needed to develop consistent and comparable measurement and reporting criteria. However, respondents found condition information to be a useful supplement to deferred maintenance.
 - d. One respondent suggested that the proposed reporting on the ten largest acquisition programs would confuse users since the cost of assets recognized on the balance sheet would be different from budget cost measurements.
36. Given the resources that have been devoted to resolving the fundamental recognition and measurement guidance for ND PP&E and the substantial efforts underway at DoD to modernize its systems, the Board does not believe it would be useful to withhold this Statement while it deliberates on the merits of any further PP&E information.
37. In the meantime, the Board does not believe the absence of the previously proposed special information requirements would outweigh the benefits to be gained through this Statement. With regard to the stewardship objective and the need for unit information, the Board notes that the stewardship objective is being met for general PP&E without this special disclosure.

⁸SFFAS No. 11 defined ND PP&E as being "PP&E [that] are (1) the PP&E components of weapons systems and support PP&E owned by the Department of Defense or its component entities for use in the performance of military missions and (2) vessels held in a preservation status by the Maritime Administration's National Defense Reserve Fleet."

⁹Any information, the loss, misuse, or unauthorized access to which would or could adversely affect the organizational and/or national interest but which does not meet classification criteria specified in DoD 5200.1-R (reference (c)). Source: DoD 5200.1-M; Acquisition Systems Protection Program; 16 March 1994.

Through the course of the audit, existence of PP&E and the completeness of PP&E records are verified. This satisfies the basic stewardship function that the double entry system offers.

38. With regard to condition information, the Board notes that deferred maintenance information is currently required. Further, the assessment of useful life needed to assure depreciation is reasonable would result in greater discipline in information associated with the condition of PP&E.
39. The Board expects to revisit these areas as it considers a project on integrating depreciation, impairment, and deferred maintenance reporting and other fixed asset accounting issues at a future date. The effort would be a government-wide undertaking.

Concerns with March 2002 ED

Valuation and Consumption

40. Various respondents suggested that additional guidance be included in this Statement for the valuation and consumption or use of items previously classified as national defense (ND) property, plant, and equipment. Examples of the types of additional guidance suggested include the following:
- a. The cost elements of research, testing, development, and evaluation (RTD&E) should be described and specific guidance provided on capitalization.
 - b. Definitions for terms such as modifications, modernizations, and improvements are needed.
 - c. More discussion of the desired accounting for the losses of items considered part of a group asset account of ND PP&E during testing, development, or evaluation phases is needed.
 - d. More guidance for determining the capitalized costs to be removed from a group asset account when a unit is destroyed, becomes obsolete, or is otherwise disposed of is needed.
 - e. The role of subordinate systems needs to be addressed, along with a description of how the costs of the subordinate systems would be relieved of costs assigned to the higher level system.

-
- f. A discussion of appropriate treatment for the costs of a discontinued subordinate system is needed.
 - g. The use of depreciation to reflect the full cost of operating ND PP&E items has to be tailored to the unique attributes and uses of ND PP&E.
 - h. The useful lives of certain classes of ND PP&E should be defined and measured in units such as operating hours.
 - i. Additional guidance and criteria is needed regarding the use of composite and group depreciation methodologies.
 - j. Specific reference to abnormal disposition issues should be added to the standard.
41. In response to these issues, the Board members reiterated that the Board is responsible for promulgating accounting standards and that it is the responsibility of individual entities to set policy and provide operating guidance on how to implement the standards. The Board believes these issues can and should be addressed by individual entities in the context of existing basic principles and practices. Composite and group depreciation methodologies are already considered acceptable methods under generally accepted accounting principles. The existing principles and practices are used by many different industries, including the airline, electrical cooperative, railroad, real estate, and cruise line industries.
42. The Board also expects that many of these concerns raised by respondents will be addressed by DoD as the standards are implemented. One example may be on the cost elements of research, testing, development, and evaluation (RTD&E) to be capitalized. Determining whether to include a particular cost in the capitalized cost of PP&E should be guided by general guidance in SFFAS Nos. 4 and 6 regarding the types of costs to be capitalized. In the event, however, that DoD is unable to resolve issues, the Board and its staff will be available to consider implementation guidance.

Contractor Costs

43. Two respondents raised concerns regarding application of existing general PP&E accounting standards to PP&E formerly classified as National Defense PP&E but held by contractors. Since the current PP&E definition explicitly includes PP&E in the hands of others (paragraph 18), SFFAS Nos. 6 and 8 (as amended) created reporting requirements for general PP&E and National Defense PP&E. Both existing standards require cost information.
44. One respondent, apparently unaware of the aforementioned provisions of SFFAS Nos. 6 and 8, encouraged the Board to develop standards that address this property. The

respondent asserted, “accounting control over this property is deplorable.” Information provided by the respondent shows that as early as 1981 issues were raised regarding the need to improve accountability for assets including PP&E provided by the Government at no cost to the contractor for use in contract performance.

45. Another respondent, an industry group including major defense contractors, suggests that the elimination of the National Defense PP&E category “will impose costly accounting change requirements on government contractors that will increase the costs of goods and services acquired by the government.” The respondent raised concerns about (1) application of standards to immaterial items, (2) provisions for accounting for software modifications, (3) requirements for work-in-process reporting, and (4) designation of specific cost elements for capitalization (SFFAS No. 6, para 26). Some aspects of these and other issues raised by the respondent appear to the Board to be based on misinterpretations of the existing standards. Therefore, the Board does not believe there are insurmountable issues raised.
46. Rather, the Board believes that significant efforts are needed to clarify the standards for contractors and to determine specific reasonable policies for providing information. It is clear that, despite the existence of standards for contractor held assets since late 1995, little progress has been made in resolving the issue. The Board does not believe that deferral of standards related to vast amounts of PP&E will facilitate resolution of the contractual and administrative details needed to reasonably comply with generally accepted accounting principles.

Effective Date

47. One respondent commented that the effective date, for periods beginning after September 30, 2002, is unrealistic. The Board acknowledges that full implementation of the standards will require time and commitment. The Board understands that DoD is currently developing systems needed to fully implement any PP&E standards, comprehensive training needs to be provided, policies and procedures need to be revised and contractors may need to modify how they do things. However, the Board believes DoD financial statements will be incomplete without consistent and comparable accounting for PP&E. In addition, a practical issue arises. DoD has not yet identified property as National Defense PP&E. Therefore, it would be problematic to determine which components of general PP&E were not yet subject to the provisions of SFFAS No. 6, which became effective for fiscal year 1998.

Board Approval

48. The Board approved this recommendation by a vote of 6 members approving its issuance and 1 member opposing its issuance. Although the Board is comprised of 9 members, only

7 members cast a vote. This is because the term of two Board members had expired and the appointment of successors had not been finalized. The dissent of the Board member who opposed the issuance of this Statement is presented in paragraphs 49 through 51.

49. Mr. Calder dissents from this standard because (1) more guidance on asset capitalization and use of composite or group depreciation methods is needed and (2) additional disclosures are important to meeting reporting objectives for National Defense PP&E.
50. Mr. Calder believes that deliberations uncovered serious issues regarding identification of costs to be capitalized and application of composite or group depreciation methods to complex weapons systems. Comments showed there is diversity of understanding among financial statement users, preparers and auditors on these issues. He believes additional guidance should have been provided regarding the components of asset cost that should be capitalized; especially the accounting treatment for research, development, testing and evaluation. He does not believe the guidance in this regard in Statement Nos. 4 and 6 is adequate to resolve complex and diverse situations unique to defense assets. He also believes the new statement lacks guidance regarding the appropriate use of composite or group depreciation and could result in unacceptable diversity in its application.
51. In addition, Mr. Calder believes that the statement should have required disclosure of unit information for significant categories of assets and budget/actual data on major acquisitions programs in progress. Unit information has been deliberated at length by the Board over a number of years because some members and commentators believed the unit information is critical to an understanding of whether DoD has assets sufficient to carry out its mission. Information on budget/actual data on major acquisitions programs is considered by many to be vital to assessing performance in acquiring assets through complex and lengthy acquisition programs. In addition, tracking progress against plans would aid in determining the financial status of the programs. These two additional disclosures would enhance users' understanding of the nation's financial condition and future security.

Statement of Federal Financial Accounting Standards 24: Selected Standards for the Consolidated Financial Report of the United States Government

Status

Issued	January 27, 2003
Effective Date	For periods beginning after September 30, 2001.
Affects	None.
Affected by	SFFAS 53 amends paragraph 9

Summary

Most Statements of Federal Financial Accounting Standards (SFFAS) do not state whether they apply to the Government as a whole or components thereof, or both. This standard clarifies that all parts of all SFFAS apply to all Federal entities (including the consolidated entity) unless a standard specifically provides otherwise.

In addition, certain requirements of SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*, are not relevant for the Consolidated Financial Report of the United States Government (CFR). SFFAS 7 requires information on budgetary resources and a reconciliation of obligations and other resources used with the net cost of operations. These requirements, while relevant for agencies executing the budget, are not required for the CFR.

This standard requires that new statements be presented in the CFR, but not agency or departmental financial statements, regarding net operating revenue (or cost), budget surplus (or deficit), and cash. The new statements are principal CFR financial statements, and they are to be presented on a comparative basis.

Glossary	18

Introduction

1. Statements of Federal Financial Accounting Standards (SFFAS) usually do not state explicitly whether they apply to the Government as a whole, its component entities (e.g., departments, agencies, etc.), or both. Statement of Federal Financial Accounting Concepts (SFFAC) 1, *Objectives of Federal Financial Reporting*, uses the term “entity” generically to refer, depending on the context, to the U.S. Government as a whole, organizational component units of the Government, e.g., an agency, or to other kinds of potential reporting units such as programs.
2. Some have assumed that the standards apply to both component entities and the Government as a whole, unless otherwise stated. SFFAS 1, *Accounting for Selected Assets and Liabilities of the Federal Government*, states that it applies to the Government and its departments and agencies, as does SFFAS 8, *Supplementary Stewardship Reporting*. SFFAC 2, *Entity and Display*, states that Federal entities aggregate into the Government entity, which encompasses all the resources and responsibilities existing within the component entities.
3. This standard clarifies that all existing and future standards apply to all federal entities unless a standard specifically provides otherwise.
4. This standard also exempts the CFR from certain provisions of SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*, requiring information about budgetary resources and a reconciliation of budgetary obligations with the cost of operations from the proprietary accounting system. Such information is relevant and meaningful for entities financed with budgetary resources but not for the Government as a whole.
5. In addition, this standard requires new information for the CFR (but not component entity financial statements) that reconciles the annual proprietary net cost with the unified budget surplus (or deficit), and explains the changes in the Government’s cash balance. The information is to be presented in new CFR principal financial statements that are to be presented on a comparative basis.

Materiality

6. The provisions of this accounting standard need not be applied to immaterial items.

Effective Date

7. This amendment is effective for periods beginning after September 30, 2001.

Accounting Standard

Standards for the Consolidated Financial Report of the U.S. Government

8. Statements of Federal Financial Accounting Standards (SFFAS) apply to all federal entities, that is, to the Government as a whole and to **component entities** (terms defined in the glossary appear initially in **boldface**), unless provision is made for different accounting treatment in a current or subsequent SFFAS.

Budgetary Information Not Required for the Government as a Whole

9. Paragraphs 77-82 of SFFAS 7 are not applicable to the consolidated financial report of the U.S. Government as a whole.¹

Reconciliation Information

10. The financial report of the Government as a whole should provide a financial statement reconciling **net operating revenue (or cost)** and the annual **unified budget surplus (or deficit)**. The financial statement should highlight:
 - The components of net operating revenue (or cost) that are not part of the unified budget surplus (or deficit), including the accrued and amortized expenses not included in **budget outlays** and the accrued or other revenue not included in **budget receipts**; and
 - The components of the unified budget surplus (or deficit) that are not part of net operating revenue (or cost), including budget receipts and outlays that are not included in net operating revenue (or cost).
11. Appendix B provides an illustration of how the reconciliation data could be displayed. The illustration is not intended to be prescriptive.

¹Footnote rescinded by SFFAS 53.

Information about the Unified Budget Surplus or Deficit and Cash

12. The Government as a whole should provide a financial statement explaining how the annual unified budget surplus or deficit relates to the change in the Government's cash. The financial statement should highlight:
 - The components of the unified budget surplus or deficit that are not part of the annual change in cash, including non-cash budget outlays; and
 - Items affecting the Government's cash balance that are not included in the budget outlays or receipts. The statement should prominently display the cash inflow and outflow related to the changes in debt held by the public and interest accrued and interest paid on debt held by the public.
13. Appendix C provides an illustration of how this information could be displayed. The illustrations are not intended to be prescriptive.

Principal Financial Statements Presented on a Comparative Basis

14. The financial statements required in paragraphs 10-13 immediately above are **principal financial statements**. These statements and all other principal financial statements in the consolidated financial report of the Government as a whole should be presented on a comparative basis. The current fiscal year amounts should be presented in a column adjacent to the amounts for the previous fiscal year.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

- A1. This appendix summarizes some of the considerations deemed significant by the Board in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

- A2. FASAB published the exposure draft *Selected Standards for the Consolidated Financial Report of the United States Government*, in March 2002. The exposure draft included questions about each of the three areas of interest: (1) whether standards should apply to the Government as a whole as well as to component entities; (2) whether the CFR should be exempt from the requirement for a Statement of Budgetary Resources and a Statement of Financing; and (3) whether new statements should be required for the Government as a whole.
- A3. The Board received 16 responses as follows:

Category	Federal (Civilian)	Federal (Military)	Non-Federal
Users, academics, and others ²			5
Auditors	1	1	
Preparers and financial managers	8	1	

Standards Apply to the Government as a Whole as Well as to Component Entities

- A4. In *Statement of Federal Financial Accounting Concepts (SFFAC) 1 Objectives of Federal Financial Reporting*, the Board uses the term “entity” generically to refer, depending on the context, to the Government as a whole, organizational component units of the Government, e.g., an agency, or to other kinds of potential reporting units such as programs.³ SFFAC 2,

² This category includes professional organizations, academics, and private citizens.

³ SFFAC 1, fn. 2-3, and par. 212.

Entity and Display, states that Federal entities aggregate into the Federal Government entity, which encompasses all the resources and responsibilities existing within the component entities.⁴

- A5. Although Statement of Federal Financial Accounting Standards (SFFAS) 1, *Accounting for Selected Assets and Liabilities of the Federal Government*, states that it is applicable to both the Government as a whole and component entities⁵, other standards have not explicitly addressed the subject unless different treatment was specified. SFFAS 6, *Accounting for Property, Plant, and Equipment*, refers the reader to SFFAC 2, *Entity and Display*, for guidance on the general applicability of federal accounting standards. SFFAS 8, *Supplementary Stewardship Reporting*,⁶ explicitly states that it applies to the Government and its departments and agencies; and sets an effective date for its applicability to component entities but not for the Consolidated Financial Report of the U.S. Government (CFR) because more time is needed to delineate how the stewardship information would be aggregated. SFFAS 8 also requires a “current services assessment” for the CFR but not for individual reports of its component units. Likewise in SFFAS 17, *Social Insurance*, applicability is addressed because certain requirements for component entities are not applicable to, and summarization of certain data is allowed for, the CFR.
- A6. This standard clarifies that SFFAS apply to all Federal entities unless a current or subsequent standard specifically provides otherwise. All of the respondents who addressed the issue agreed that the FASAB standards should apply to the CFR. Several respondents requested more guidance regarding whether the proposed standard affected the FASAB policy whereby “financial statements [prepared] in accordance with accounting standards published by [the Financial Accounting Standards Board (FASB)] also may be regarded as in accordance with GAAP for those entities that have in the past issued such financial statements.”⁷ The Board did not intend to change and is not changing this policy at this time.

Consolidated Financial Report Exemption from Requirements to Report Certain Budgetary Information

- A7. All but one of the respondents who addressed the issue agreed that the CFR should be exempt from certain provisions of SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Budgetary and Financial Accounting*, requiring a Statement of Budgetary Resources (SBR) and the Statement of Financing (SOF). One respondent

⁶ SFFAS 8, par. 38-39.

⁷ FASAB News, Jan.-March 2000, p. 2.

disagreed, saying that the same information, based on one single set of standards, required for components should be required for the CFR, and vice versa. That respondent believes that the CFR should present the SBR and SOF, because such combined budgetary information is relevant and useful to the user of the CFR. Likewise, the component entities should be required to prepare the new statements, the necessary changes being made, as well as the SBR and SOF.

- A8. SFFAS 7 requires entities “whose financing comes wholly or partially from the budget” to provide information on budgetary resources and the status of resources, which is presented in the SBR.⁸ It also calls for a reconciliation of budgetary resources obligated by the entity with the net cost of operations, which is presented in the SOF.⁹
- A9. The Board continues to believe that such information is less relevant or meaningful at the level of the CFR. Resources differ between the Government as a whole and individual component entities. The exchange and non-exchange revenue and borrowing from the public are the main sources of financing for the Government as a whole.¹⁰ For component reporting entities, however, the sources of financing are provided through the budget process and are largely **financing sources** other than revenue. **Appropriations** and other budget authority provide an agency with the authority to incur obligations to acquire goods and services or to provide benefits and grants. Budgetary resources are not earned by an entity’s operations and have a different character than both exchange revenue and non-exchange revenue.¹¹ Federal entities report as an asset their fund balance with Treasury, which is the aggregate amount of funds in the entity’s accounts with Treasury for which the entity is authorized to make expenditures and pay liabilities. This is an intra-government item. From the perspective of the Government as a whole, it is not an asset. It represents a commitment to make resources available to federal departments, agencies, programs, etc.¹²

⁸ SFFAS 7 (pars. 77-79) requires information, which is presented in the SBR, that includes (1) total budgetary resources available, (2) the status of the budgetary resources, including obligations incurred, the available **appropriation, borrowing** and **contract authority** at the end of the period, any restrictions on the use of unobligated balances of **budget authority**, the amount of any capital infusion during the period, etc.; and (3) **outlays**. In addition, the entities are required to provide this information for each of their major budget accounts as supplementary information.

⁹ SFFAS 7 (pars. 80-82) also requires a reconciliation of budgetary obligations and proprietary accounting information, which is presented in the SOF. The reconciliation explains the relationship between (1) budgetary resources obligated by the entity during the period and **other financing sources** such as **imputed financing**, transfers of assets, etc., not included in budget receipts, and (2) the net cost of operations.

¹⁰ “Exchange revenue” arises when an entity provides goods and services for a price. “Non-exchange revenue” arises primarily from the exercise of the government’s sovereign power to demand payment from the public, such as taxes, duties, fines, etc.

¹¹ SFFAS 7, par. 24.

¹² SFFAS 1, par. 31.

A10. The budget process provides the principal basis for planning and controlling obligations and outlays by Government entities. Budget execution tracks the flow of budgetary resources from the congressional authorizing and appropriating process, to **apportionment**, **allotment**, and obligation of the budgetary resources, to the outlay of cash to satisfy those obligations. For the most part, obligations and cash, rather than **accrual accounting**, are the bases for budgeting and reporting on budget execution.¹³

A11. Accrual accounting is the basis for **proprietary accounting** in the Federal Government. Proprietary accounting and **budgetary accounting** are complementary. Proprietary accounting provides an understanding of the entity's net position and cost of operations during a period. Federal Government financial statements have not been used for planning and control as much as they might be. In part, this is because general purpose financial reports have not presented budget information with the financial statements in a way that helped users relate these two important, but different, types of financial information.¹⁴ The Board's objective in requiring new statements in the CFR addresses this issue.

The Government as a Whole Should Provide Information about Net Operating Revenue (or Cost), the Budget Surplus (or Deficit), and Cash

A12. The information now required in two new statements serves the basic objectives of federal accounting. Objective 1¹⁵ provides that federal financial reporting should assist in fulfilling the Federal Government's duty to be publicly accountable for the money raised through taxes and other means, and for their expenditure in accordance with the appropriation laws. Sub-objective 1C provides that federal financial reporting should provide information that helps the reader to determine how information on the use of budgetary resources relates to information on the costs of program operations and whether information on the status of budgetary resources is consistent with other accounting information on assets and liabilities.

A13. In a new statement of concepts issued contemporaneously with this standard, the Board recognizes that the CFR should be understandable to the average citizen. The new statements required in this standard were designed with this objective in mind.

A14. Although budgetary and proprietary accounting information are complementary, both the types of information and the timing of their recognition are different, caused by differences in the basis of accounting.¹⁶

¹³ SFFAS 7, par. 25.

¹⁴ SFFAS 7, par. 26.

¹⁵ SFFAC 1, pars. 112, 119.

¹⁶ SFFAC 7, par. 80.

-
- A15. The new statements required by this standard focus on three important elements: (1) the net operating revenue (or cost) from the proprietary accounting system, (2) the unified budget surplus (or deficit), and (3) the change in the Government's cash during the period. The information is presented in two parts: (1) a reconciliation of the net operating revenue (or cost) to the unified budget surplus (or deficit), and (2) a statement of changes in cash balance from budget and other activities.
- A16. The purpose of the reconciliation information is to report how the proprietary net operating revenue (or cost) and the unified budget surplus (or deficit) relate to each other. The premise of the reconciliation is that the proprietary and budget accounting bases share much data. The reconciliation presents the differences between the two systems as reconciling items while moving from the proprietary amount to the unified budget surplus or deficit.
- A17. The primary purpose of the statement of changes in cash balance from budget and other activities is to report how the annual unified budget surplus/deficit relates to the change in the Government's cash balance and debt held by the public. It explains why the unified budget surplus or deficit normally would not result in an equivalent change in the Government's cash balance.
- A18. All of the respondents who addressed the issue agreed that the new information should be required. Most of these respondents offered some comments on one or both of the proposed illustrations.
- A19. With respect to the terminology used in the statements, several respondents said that the term "budget" was unclear. One respondent noted that the statements use the unified budget concept, i.e., both on- and off-budget activity is included. The respondent noted that there are several other alternatives approaches, including on-budget only, the President's proposed budget, and the enacted budget. Another respondent noted that, in the non-Federal environment, a budget is a plan, but for the illustrative statements it indicates actual results on a budget accounting basis. Also, several respondents objected to the use of the term "budget surplus" as being inaccurate since there is no surplus on hand to finance future activities at the reporting date, as the statement illustrates; and, that the word "surplus" has been eliminated from private sector accounting terminology.
- A20. The Board has modified the terminology based on these comments. The word "unified" now accompanies "budget surplus or deficit" wherever that phrase is used. In addition, the word "actual" has been added to the budget line items in the statements.
- A21. With respect to the term "budget surplus," the Board notes that the term is used pervasively in Federal finance and in the popular media. It is defined comprehensively in budget publications. The Board believes that most users of the CFR have at least a working understanding of the term as an excess of the fiscal year's budget receipts over budget outlays. The statement of changes in cash balance from budget and other activities will

illustrate how the surplus (or deficit) and other activity affected the Government's cash balance. The glossary for this standard will provide the definition.

- A22. With respect to the illustrative statement about changes in the cash balance (Appendix C in the exposure draft of March 2002, Versions A and B therein), most respondents who addressed the question preferred Version B. They said that it would be more understandable to the intended users because its groupings and subtotal were more logical.
- A23. One respondent said the FASAB should provide detailed authoritative guidance regarding the format of the reconciliation and cash statements before requiring them. The respondent was concerned that the reporting requirements are not fully developed, and that the FASAB should not require such information until it develops and prescribes an authoritative format. The Board weighed the benefits of prescribing the format of the statements against the drawbacks of placing constraints on the Treasury Department's future development of the statements. The Board believes that it is better at this time to be flexible so that the most meaningful display can evolve.
- A24. Another respondent asked the Board to clarify that the new statements would be principal financial statements. Additional wording to this effect has been added to the standard.
- A25. Several respondents urged the Board to tie the change in cash on the new statement of changes in cash balance to the balance sheet line item and accompanying note disclosure, and/or to include beginning and ending cash balances on the statement. The Board decided that such information would improve the statement and has included it in the illustration in the standard, but does not believe that it is necessary to require it as part of the standard.
- A26. One respondent said there should be some direct reference to the stewardship information on the balance sheet similar to the reference to the notes because this would inform the reader about important information not included on the balance sheet. Also, this respondent submitted that the term "National Debt" is unclear. Although the Board does not view this standard as a vehicle to address these concerns, it acknowledges the need for additional clarity and user friendliness for the CFR. The Board notes that the Treasury Department continues to improve the CFR, including the presentation of stewardship information.

Implementation Date

- A27. Several respondents said that the FY 2002 implementation date for the statements would afford insufficient time to prepare the new statements. However, since the Treasury Department was a leader in developing the statements and is able to prepare them in FY 2002, and since no additional information is required from component entities, this should not be an issue.

Appendix B: Illustrative Statement: Reconciliation

		(Hypothetical data)		
		RECONCILIATION OF NET OPERATING REVENUE (OR COST)		
		AND UNIFIED BUDGET SURPLUS (OR DEFICIT)		
		for the period ending Sept. 30, 20X2		
		(in billions of dollars)		
		<i>[Footnotes below would be to notes to the financial statements and are not provided for this illustration.]</i>		
			FY 20X2	FY 20X1
		Net operating revenue or (cost)	46.0	(50.0)
		<i>Components of net operating revenue (or cost) not part of the of the budget surplus:</i>		
		Add excess of accrual-basis expenses over budget outlays:		
		Civilian & military employee benefits (Note X1)		
		Pensions and retired pay	75.5	74.0
		Retiree health benefits	14.6	14.7
		Other benefits	4.7	4.6
		Subtotal -- civilian & military employee benefits	94.8	93.3
		Veteran compensation (Note X1)	62.5	59.0
		Environmental clean-up (Note X2)	19.6	18.5
		Other benefit programs (Note X3)	4.0	4.5
		Other	18.5	17.5
		Subtotal -- excess of accrual-basis expenses over budget outlays	199.4	192.8
		Add amortized expenses not included in budget outlays:		
		Depreciation (Note X7)	15.4	15.0
		Add other expenses that are not reported as budget outlays:		
		Premiums paid on buyback of Treasury debt (Note X10)	5.5	1.6
		Subtract excess of accrual-basis revenue over budget receipts:		
		Accrued tax revenue (Note X5)	(0.6)	(0.7)
		Other accrued revenue (Note X8)	-	1.0
		Subtract other revenue and gains that are not budget receipts:		
		Other revenue and gains	(2.3)	(2.2)
		Subtotal: components of net operating revenue (cost) not part of budget surplus	217.4	207.5
		<i>Components of the budget surplus that are not part of net operating revenue (or cost):</i>		
		Add budget receipts not included in net operating revenue (or cost):		
		Principal repayments on pre-credit reform loans	24.0	24.5
		Decrease in accounts receivable (Note X3)	2.7	3.0
		Subtract budget outlays not included in net operating revenue (or cost):		
		Acquisition of capital assets (Note X7)	(31.6)	(43.0)
		Acquisition of inventory (Note X6)	(11.9)	(12.0)
		Acquisition of other assets	(5.4)	(7.0)
		Subtotal -- components of the budget surplus that are not part of net operating revenue (or cost)	(22.2)	(34.5)
		<i>Other:</i>		
		Prior period adjustment (Note X17)	(4.2)	-
		Unified budget surplus (deficit) -- actual	237.0	123.0

Appendix C: Illustrative Statement: Statement of Changes in Cash Balance

STATEMENT OF CHANGES IN CASH BALANCE				
FROM UNIFIED BUDGET AND OTHER ACTIVITIES				
for the Years Ended September 30, 20X2 and 20X1				
(in billions of dollars)				
[Hypothetical Data]				
<i>[Footnotes below would be to notes to the financial statements and are not provided for this illustration.]</i>				
			20X2	20X1
CASH FLOW FROM UNIFIED BUDGETED ACTIVITIES				
Total unified budgetary receipts -- actual			2,025.0	1,827.0
Total unified budgetary outlays -- actual			(1,788.0)	(1,703.0)
Unified budget surplus (or deficit) -- actual			237.0	124.0
Adjustments for non-cash outlays included in the unified budget:				
Interest accrued on Treasury debt held by the public			186.0	185.0
Subsidy expense accrued under direct loan & guarantee programs (Note X1)			3.0	4.0
Subtotal - adjustment for non-cash transactions in unified budget			189.0	189.0
CASH FLOW FROM ACTIVITIES NOT INCLUDED IN UNIFIED BUDGET				
<i>Inflows:</i>				
Repayment of principal on direct loans			19.0	15.0
Decrease/(increase) in miscellaneous assets (Note X2)			1.6	(1.6)
Seignorage			2.3	2.2
<i>Outflows:</i>				
Interest paid by Treasury on debt held by the public			(184.4)	(187.8)
New direct loans disbursed			(40.0)	(34.0)
Other direct loan transactions			(0.7)	(1.0)
Premium on buyback of Treasury debt held by the public (Note X3)			(5.5)	-
Default payments on guaranteed loans			(4.3)	(5.0)
Other guaranteed loan transactions			(0.5)	(0.3)
Increase/(decrease) in deposit fund liability balances (Note X4)			(1.2)	0.1
Increase/(decrease) in miscellaneous liabilities (Note X4)			(0.9)	0.5
Cash flow from non-budget activities			(214.6)	(211.9)
Cash Flow from Monetary Transactions				
Decrease in reserve position in the IMF (Note X5)			6.3	1.2
Decrease in loans to the IMF			-	0.5
Increase in special drawing rights (Note X5)			(4.0)	(2.2)
(Increase)/decrease in other monetary assets (Note X5)			(0.9)	0.4
Cash flow from monetary transactions			1.4	(0.1)
Cash Flow from Financing				
Borrowing from the public (Note X6)			2,010.8	2,002.0
Repayment of debt held by the public (Note X6)			(2,233.5)	(2,090.0)
Cash flow from financing			(222.7)	(88.0)
Increase (decrease) in cash balance			(9.9)	13.0
Beginning cash balance (Note X7)			52.7	39.7
Ending cash balance (Note X7)			42.8	52.7

Statement of Federal Financial Accounting Standards 25: Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment

Status

Issued	July 17, 2003
Effective Date	Reclassifies "Risk Assumed" information and eliminates the "Current Services Assessment" for reporting periods beginning after September 30, 2002. Reclassifies the "Statement of Social Insurance" and other information about social insurance for reporting periods beginning after September 30, 2004.
Affects	<ul style="list-style-type: none">• SFFAS 5, summary, paragraph 106, paragraph 186, paragraph 190• SFFAS 8 summary, paragraph 14-16; appendix B• SFFAS 17 summary, paragraph 27 (3), paragraph 32(3)
Affected by	<ul style="list-style-type: none">• SFFAS 26 rescinded paragraph 6.• SFFAS 28 rescinded parts of paragraph 7.

Summary

This Statement of Federal Financial Accounting Standards (SFFAS) changes the classification of information about stewardship responsibilities required by federal accounting standards. It also eliminates the requirement to present certain information about stewardship responsibilities, known as the "Current Services Assessment," previously required by SFFAS 8.

Scope of this Statement

This Statement deals with

- **Risk Assumed** information required by SFFAS 5, *Accounting for Liabilities of the Federal Government*
- The **Current Services Assessment** (CSA) required by SFFAS 8, *Supplementary Stewardship Reporting*, and
- **Social Insurance** information required by SFFAS 17, *Accounting for Social Insurance*.

Information about stewardship responsibilities is currently designated Required Supplementary Stewardship Information (RSSI), a category unique to federal financial reporting. Pursuant to this SFFAS, information about Risk Assumed will become required supplementary information (RSI). The Statement of Social Insurance (SOSI) will become a basic financial statement, while the remaining information about Social Insurance required by SFFAS 17 is addressed in SFFAS 26 as amended by SFFAS 28.

Reasons for Issuing this Statement

For reasons explained in Appendix A, the Board decided to review the classification of all RSSI required by federal accounting standards. The Board eliminated use of RSSI to report information about weapons systems when it issued SFFAS 23, *Eliminating the Category "National Defense Property, Plant, and Equipment."* Classification of other items of information currently designated RSSI (stewardship land, stewardship investments, and heritage assets) may be dealt with in one or more future exposure drafts. The Board also decided to eliminate the requirement to present the CSA now, because timely issuance of federal financial reports, a practice that was not possible when SFFAS 8 was published, will make it infeasible to present the CSA in the Government's annual financial report. The same information will, however, continue to be publicly available in the Budget of the United States Government.

How the Changes in this Statement Improve Federal Financial Reporting

These changes will improve the clarity and significance of federal financial reporting in two ways: (1) by defining the SOSI as essential to fair presentation and (2) by using reporting categories that are well defined in existing professional literature and familiar to report users.

The Effective Date

The requirement to report the CSA will be eliminated effective for reporting periods beginning after September 30, 2002. Information about Risk Assumed shall be presented as RSI for reporting periods beginning after September 30, 2002.

Introduction

1. Federal accounting standards require the following information to be reported regarding stewardship responsibilities:
 - **Risk Assumed** information required by SFFAS 5, *Accounting for Liabilities of the Federal Government*,
 - The **Current Services Assessment** (CSA) required by SFFAS 8, *Supplementary Stewardship Reporting*, and
 - **Social Insurance** information required by SFFAS 17, *Accounting for Social Insurance*.
2. This information is currently designated Required Supplementary Stewardship Information (RSSI). RSSI is a reporting category unique to federal accounting. Pursuant to this Statement, Risk Assumed information will become required supplementary information (RSI)¹, and the CSA will not be required after FY 2002. For FY 2005 the Statement of Social Insurance (SOSI) will become a basic financial statement, essential for fair presentation in conformity with generally accepted accounting principles (GAAP). Other Social Insurance information required by SFFAS 17 shall be presented as RSI rather than as RSSI, except to the extent that the preparer elects to include some or all of that information in notes that are presented as an integral part of the basic financial statements. Appendix A presents background information and the reasons for these changes.
3. This Statement amends SFFAS 5 and SFFAS 17 by reclassifying Risk Assumed information and Social Insurance information. Those standards would remain unchanged in all other respects. The requirement in SFFAS 8 to report the CSA is rescinded.

¹RSI was added to the accounting literature by Statement of Financial Accounting Standards (SFAS) 25, *Suspension of Certain Accounting Requirements for Oil and Gas Producing Companies*, published by the Financial Accounting Standards Board (FASB) in 1979. That Statement has been amended, but the RSI category continues to be used in a variety of standards published by the FASB, the Governmental Accounting Standards Board (GASB), and the FASAB. The auditor's responsibility for RSI is discussed in section AU 558 of the codification of professional auditing standards published by AICPA.

Standards of Federal Financial Accounting

Risk Assumed

4. Information about Risk Assumed, required by SFFAS 5 and previously designated required supplementary stewardship information (RSSI), shall be designated required supplementary information (RSI).

Current Services Assessment

5. Chapter 8 and paragraphs 14-16 of SFFAS 8 are rescinded, as is the associated illustration of the Current Services Assessment in Appendix B of SFFAS 8.

Social Insurance

6. [Rescinded by SFFAS 26.]

Effective Date

7. Chapter 8 and paragraphs 14-16 of SFFAS 8 are rescinded, as is the associated illustration of the Current Services Assessment in Appendix B of SFFAS 8, effective for reporting periods beginning after September 30, 2002. Information about Risk Assumed shall be presented as RSI for reporting periods beginning after September 30, 2002.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This appendix summarizes the considerations deemed significant by the Board in reaching the conclusions in this Statement. It includes reasons for accepting certain approaches and rejecting others. Individual Board members gave greater weight to some factors than to others.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Background

8. In SFFAS 8, FASAB stated:

A key aspect of the stewardship objective requires that Federal reporting provide information that helps users determine (1) whether the Government's financial condition improved or deteriorated over the period and (2) whether future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due.

Information on 'stewardship responsibilities' will aid in these determinations. It will provide an essential perspective on the Government's commitment to discretionary and mandatory programs.²

These objectives have not changed. However, for reasons discussed below, the Board believes that information about stewardship responsibilities should be reported in the context of the basic financial statements, the associated notes,³ and required supplementary information, rather than as RSSI. The Board eliminated use of RSSI to report information about weapons systems when it issued SFFAS 23, *Eliminating the Category "National Defense Property, Plant, and Equipment."* The Board will consider in other projects the proper classification of other items that are now classified as RSSI.

² SFFAS 8, paragraphs 14 and 15.

³ The notes are regarded as an integral part of the basic financial statements, essential for fair presentation in conformity with GAAP.

9. The Board originally contemplated that GAO and OMB would provide special guidance regarding the audit procedures or “fieldwork” to be performed on RSSI. At the same time, the Board expected that the auditor would report on this information in much the same way as on the basic financial statements, in the sense that the auditor would qualify or disclaim an opinion when the RSSI was omitted or materially misstated. The category was seen as a response to the unique aspects of the federal accounting and reporting environment, and to the broad objectives of federal financial reporting. It was intended to permit flexibility on the part of preparers and auditors that would facilitate reporting relevant, reliable information, including nonfinancial and nonhistorical information.⁴
10. Some members became concerned that users: (1) may pay insufficient attention to some important information because it is called “supplementary,” and (2) may be confused by complicated reports in which information is reported in various places. They believed this might impede users’ understanding and reduce the credibility of federal financial reports. Some members believed that FASAB’s use of the RSSI category invites suspicion of accounting in which items that are as important as the basic financial statements are labeled “supplementary.” Accordingly, in *Preliminary Views on Eliminating the Category “Required Supplementary Stewardship Information”* (December 2000), the Board proposed to eliminate the RSSI category by reviewing and reconsidering the appropriate classification of each item classified as RSSI.
11. In deciding to review the classification of components of RSSI, some members were influenced by the fact that existing audit standards do not discuss RSSI. Therefore, auditors do not know what to do with respect to information in this category without consulting federal publications that provide additional guidance on how to conduct or contract for audits of federal financial statements. Furthermore, as practice evolved, it was not clear that auditors would qualify or disclaim their opinion on the basic financial statements when RSSI was missing or misstated, because it was not clear to everyone that the information was essential to fair presentation in conformity with GAAP. Some FASAB members were concerned that, under these circumstances, even sophisticated users might not understand fully the significance of certain information classified as RSSI. Some members believed that it would be desirable for FASAB to use categories that are widely understood by the broader accounting and auditing professions, particularly now that FASAB has been recognized by AICPA as the body that promulgates generally accepted accounting principles for the federal government.

⁴See the *Implementation Guide to Statement of Federal Financial Accounting Standards No. 7: Accounting for Revenue and Other Financing Sources*, June 1996, paragraphs 22-24, the diagram on page 15, and minutes of associated Board discussions. See also SFFAS 8, *Supplementary Stewardship Reporting*, June 1996, paragraphs 21, 34, 111-115, and minutes of associated Board discussions.

-
12. The Board received 29 written comments on its December 2000 *Preliminary Views* from the following sources:
- 16 preparers (all federal),
 - 8 auditors (three nonfederal, including AICPA),
 - 5 others. (This category includes academics, retired federal employees, and the Association of Government Accountants (AGA), a professional association of federal and nonfederal accountants and auditors.)
13. The comments reflected the views of more than 29 people. Comments from the President's Council on Integrity and Efficiency (PCIE), AGA, federal agencies, and AICPA were the work of numerous individuals. Twenty of the respondents would have retained the RSSI category, at least for some period. Some typical concerns expressed include the following:
- Elimination of the category would provide less stewardship information to users, lead to a qualified opinion that would send a less-clear signal to users than is available with current and potential alternatives, and raise audit costs. The category provides a clear and unique method to prominently display stewardship information essential to meeting taxpayer accountability. The category has been successful in communicating our financial condition.
 - The separate category and section of the report is an effective and practical means of reporting. It is appropriate for the unique environment and objectives of federal financial reporting. Approaches to providing audit assurance over RSSI are evolving. FASAB should work with specialists in the relevant disciplines to define common units of reporting for items not expressed in monetary terms.
 - Unique aspects of the federal financial reporting environment and objectives led the Board to create the new category. If used properly, the category should be a mechanism to provide much-needed information to decision makers, including citizens, when they consider the consequences of decisions relating to public lands, heritage assets, and similar items.
14. In April 2001 the Board held a public hearing to discuss the *Preliminary Views* proposal with interested parties. Fourteen individuals, representing seven organizations, made presentations and discussed issues with the Board. Comments were similar to those expressed in the 29 comment letters.
15. After considering these comments, the Board continued to believe that federal accounting standards may be able to address the objectives of federal financial reporting, including accountability and reporting on stewardship, without a unique category. The Board noted that eliminating the RSSI category need not result in a reduction of information required by existing standards. (The Board subsequently decided to rescind the requirement to present the CSA in the annual consolidated financial report of the U.S. Government (CFR) for other

reasons, which are explained on page, but the information will continue to be available to the public). Furthermore, the Board noted, preparers will continue to have the option of voluntarily presenting supplementary information beyond what is required. This “other accompanying information” would be unaudited, unless special arrangements were made to extend the auditor’s work in the context of a particular audit.

16. The Board continued to believe that avoiding use of the RSSI category where it is not essential would eliminate some potential confusion and ambiguity. In particular, it should clarify the Board’s expectation that when material information that is essential to fair presentation is missing or materially misstated, the auditor should consider whether a qualified or adverse opinion is appropriate regarding whether the basic financial statements are prepared in conformity with GAAP. After consultation with AICPA staff, the Board concluded that this result could best be assured by designating such information as an integral part of the basic financial statements.
17. Accordingly, in February 2002, the Board published an exposure draft entitled *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment*. The exposure draft proposed to eliminate the Current Services Assessment, reclassify information about Risk Assumed as RSI, and reclassify all Social Insurance information as an integral part of the basic financial statements. The Board received 22 comment letters from the following sources:
 - 11 preparers (all federal),
 - 7 auditors (6 federal and AICPA),
 - 4 others. (This category includes an academic, two former Board members, and the AGA.)
18. Some letters reflected the views of an organization, while others were from individuals. Comments generally supported or did not oppose eliminating the CSA and reclassifying Risk Assumed information as RSI. Some letters did express concern about the feasibility of auditing Social Insurance information as an integral part of the basic financial statements and/or questioned whether the benefit of doing so would outweigh the cost. In response to these concerns, the Board consulted with representatives of AICPA, and decided (1) to designate only the SOSI as a basic financial statement, while classifying other Social Insurance information as RSI, and (2) to extend the time allowed to implement this change. More detailed explanation of the basis for the Board’s conclusions follows.

Conclusions Regarding Each Type of Stewardship Responsibility Information

19. Figure 2 on page 19 presents a list of general factors that one or more Board members considered relevant for the classification choices. Specific decisions on each of the three types of stewardship responsibility information are discussed in the remainder of this Appendix.

Risk Assumed

20. The Board agreed that information about Risk Assumed should be RSI rather than an integral part of the basic financial statements, because the amounts are not sufficiently reliable and measurement methods are still experimental. This information is potentially valuable, but it is not yet a suitable basis for recognition or disclosure.⁵ The Office of Management and Budget (OMB), the Government Accountability Office (GAO), and the Congressional Budget Office (CBO) have considered the use of Risk Assumed information as a basis for budgeting for insurance programs. These agencies have concluded that more experience is needed before the measurements can be regarded as sufficiently reliable for budgeting. Similar considerations lead the FASAB to conclude that information about Risk Assumed should be included in financial reports as RSI, at least until agencies and auditors have more experience with this information.
21. The Board believes that analogies with insurance offered by private insurers, (where, for example, an expected premium deficiency on long-duration contracts such as life insurance is recognized), may be misleading due to differences in the length of the policy coverage, nature of insured risk, or other relevant variables. The Board believes that additional guidance from FASAB on definition and measurement of “Risk Assumed” would be necessary before it would be feasible to require recognition or disclosure of this information as an integral part of the basic financial statements. Developing and promulgating such guidance would require a separate project. Before the Board undertakes such a project, it is desirable to encourage continued improvement in agencies’ data systems and modeling capabilities to support reporting Risk Assumed. The RSI requirement has the effect of providing this encouragement in an appropriate, cost-beneficial manner. The Board notes that the “state of the art” for such projections is constantly evolving. Should the Board in the

⁵ FASAB uses the term “disclosure” to refer to information that is not recognized on the face of the basic financial statements but is regarded as an integral part of the basic financial statements, essential for fair presentation in conformity with generally accepted accounting principles (GAAP). Normally such disclosures are presented in footnotes, but federal accounting standards published by FASAB do not currently prescribe the format for presentation of such disclosures. GAAP does not prohibit formatting or combining pieces of information in appropriate ways to direct the reader’s attention, provided that the results are not misleading.

future decide that it would be desirable to develop more specific criteria for reporting Risk Assumed, the Board will be able to learn from this ongoing experience.

Current Services Assessment (CSA)

22. The CSA provides receipt and outlay data on the basis of the President's projections of future activities pursuant to current law. It is relevant for assessing the sustainability of programs established by current law; that is, relevant for assessing the sufficiency of future resources to sustain public services and to meet obligations as they come due. The CSA focuses on the totality of government operations rather than on individual programs. It provides an analytical perspective on the Government because it shows the short- and long-term direction of current programs.
23. SFFAS 8 defines the CSA by reference to what is published in the President's Budget. The Board did not then foresee the possibility that the CFR would be published before the Budget. Because the Board now expects that within a few years the CFR will be published before the President's Budget is available, the requirement to include the CSA in the CFR will expire in FY 2002 (i.e., the CSA will not be required in the CFR after FY 2002). In order to continue to require something comparable to the CSA as part of the CFR when the CFR is published before the Budget, federal accounting standards would need to define the CSA in some way other than by reference to the Budget. Developing the criteria for such a projection is beyond the scope of this project.
24. The Board considered the alternative of including OMB's current services estimates prepared for the "midsession review." The Board concluded that certain technical problems would make this alternative problematic. Furthermore, supplementary reporting on this basis would not add value, because the estimates are publicly available in any event, and because the base year actual data published in the budget would not be subject to review by the auditor.
25. The Board notes that OMB, CBO, and others regularly publish similar projections; therefore, similar information will continue to be available, regardless of whether it is required to be part of the CFR. The Board also notes that the "state of the art" for such projections is constantly evolving. Should the Board in the future decide that it would be desirable to develop criteria for such a projection as a part of federal financial reporting, the Board will be able to learn from this ongoing experience.

Social Insurance

26. The Board believes that the SOSI should be treated as a basic financial statement because it is essential to fair presentation and is important to achieve the objectives of federal financial reporting. The related stewardship objectives include helping users to assess the

impact on the country of the Government's activities, determine whether the Government's financial position improved or deteriorated over the period, and predict whether future budgetary resources will likely be sufficient to sustain public services and meet obligations as they come due. In that regard, the multi-trillion dollar obligations associated with Social Insurance over the next 75 years could significantly exceed the largest liabilities currently recognized in the U.S. Government Balance Sheet.

27. The Board acknowledges that there is great uncertainty inherent in long term projections, but believes that if the uncertainty is suitably disclosed--as is required by SFFAS 17--it need not preclude designating the information as a basic financial statement, essential for fair presentation in conformity with GAAP. The Board rejects the idea that information based on projections cannot be an integral part of the basic financial statements. FASAB has not limited the content of federal financial statements to historical information.
28. Even within the context of historical financial reporting, the Board notes that accrual-basis "historical" financial statements include many measurements that involve assumptions about the future. The distinction between reporting on the financial effects of events that have occurred and the effects of future events depends, obviously, upon the definition of the event. The information required by SFFAS 17 reports on the financial effects of existing law and demographic conditions and assumptions, just as the pension obligation at a point in time is based on existing conditions. In that sense, Social Insurance information can be viewed as reflecting events that have occurred and, therefore, as "historical."
29. Measuring the future effects of existing law and conditions for Social Insurance involves projections of economic and demographic trends, just as measuring the pension benefit obligation at a point in time involves assumptions about future salary progression. It is true that SFFAS 5 specifies a different measurement method for pensions and retiree healthcare than the method SFFAS 17 specifies for Social Insurance. It is also true that Social Insurance measurements are more sensitive to assumptions about the most distant years of the projection period. Nevertheless, the Board believes that it is appropriate to report the SOSI as a basic financial statement, essential for fair presentation in conformity with GAAP.
30. Classifying the SOSI as a basic financial statement will mean that auditors will consider a modification of their opinion if this information is materially misstated. A modification would send a clear and appropriate signal to users in such a circumstance. The Board understands that some added audit expense will be incurred as a result of this change in status for Social Insurance information, and added demands may be made on the accounting and actuarial staff of agencies that report Social Insurance information. The Board believes that the benefits in this case outweigh the expense. The SOSI is important to those who would understand the Government's financial condition and its impact on the financial condition of individual citizens, interesting to the public, and essential to fair presentation.

31. The exposure draft proposed to reclassify all Social Insurance information as an integral part of the basic financial statements. In response to concerns expressed about the cost and feasibility of auditing this information, the Board decided to define only the SOSI as a basic financial statement, and provided additional time for implementation. The impact of the change in audit status for the SOSI should be mitigated by the fact that preparers and users have experience with similar information. Also, much of the actuarial and audit work can be done before the end of the fiscal year, if the preparer and auditor prefer. SFFAS 17 provides for considerable flexibility in selecting the measurement date. Paragraph 26 of SFFAS 17 states:

All projections and estimates required in these standards should be made as of a date (the valuation date) as close to the end of the fiscal year being reported upon ("current year") as possible and no more than one year prior to the end of the current year. This valuation date should be consistently followed from year to year.

Conclusions Regarding Effective Date

32. The standard eliminates the requirement to present the CSA, and does not change the definition, presentation guidelines, or audit status for Risk Assumed information. (RSSI is currently treated as RSI for audit purposes, pursuant to instructions in OMB's *Audit Bulletin*.) No delay is needed as a result of the changes regarding these two items. Accordingly, these changes are effective immediately.
33. Audit status for the SOSI would change; however, as noted above, the information is not new. Most of the relevant agencies have produced similar information for several years, and analysts and public officials have routinely used this information. Also, the impact of the audit requirement on the auditor and preparer should be reduced by the flexibility SFFAS 17 provides in selecting a measurement date for Social Insurance. The Board consulted with AICPA regarding the time needed to develop appropriate audit guidance. The Board also noted that federal agencies will be confronted with a challenging requirement for accelerated financial reporting in FY 2004. As a result, the Board concluded that the SOSI should be presented as a basic financial statement for reporting periods that begin after September 30, 2004, with earlier implementation encouraged.

Distinguishing RSI from the Basic Financial Statements and Associated Notes

34. To help readers understand the Board's deliberations, this section provides more details about some practical and conceptual factors that affected the Board's decision whether to

designate an item as RSI or as an integral part of the basic financial statements. The basic financial statements include the principal financial statements and associated notes on which the auditor expresses an opinion as to whether the information is presented in conformity with GAAP. The terms “basic financial statements” and “principal financial statements” have been used synonymously in federal accounting.

35. FASB tends to use the term “basic financial statements” or simply “financial statements” consistent with the definition in FASB Concepts Statement 5, *Recognition and Measurement in Financial Statements of Business Enterprises*:

. . . a financial statement is a formal tabulation of names and amounts of money derived from accounting records that displays either financial position of an entity at a moment in time or one or more kinds of changes in financial position of the entity during a period of time. Items that are recognized in financial statements are financial representations of certain resources (assets) of an entity, claims to those resources (liabilities and owners’ equity), and the effects of transactions and other events and circumstances that result in changes in those resources and claims. The financial statements of an entity are a fundamentally related set that articulate with each other and derive from the same underlying data. (SFAC 5, paragraph 5, footnote omitted.)

AICPA tends to use the term “basic financial statements” or simply “financial statements” also to encompass footnotes that are regarded as an integral part of the basic financial statements as defined in SFAC 5. Depending on the context, FASAB may use the term either way. The following discussion focuses on the distinction between information on which the auditor expresses an opinion (whether reported on the face of the basic statements or in the notes to the statements) and supplementary information that is also required by GAAP.

Operational Differences Between the Basic Financial Statements and RSI

36. Figure 1 (on page 16) identifies some operational differences under current auditing standards. Given these operational differences between basic financial statements and RSI, the Board must determine whether it would be more appropriate for a given item of required information to be deemed an integral part of the basic financial statements or RSI. The appropriateness depends on the particular benefits (based on various federal financial reporting objectives) and the costs (preparing, auditing, user processing, other) of making it subject to audit (vs. more limited procedures) and varying the potential audit opinion treatment (qualification vs. mere mention in the auditor’s report).

Figure 1

Comparison Dimension	Basic Financial Statements	RSI
Is the information required to be in the financial report ? (That is, it is either an integral part of the basic financial statements or it must accompany them.)	Yes	Usually ^a
Is the information deemed essential if the financial statements are to “present fairly” in conformity with GAAP?	Yes	No
What audit fieldwork is required?	Audit	Limited procedures pursuant to AU 558
Auditor’s report	Positive assurance regarding “fair presentation”	Silent, no explicit assurance unless engaged to audit the RSI. However, if the RSI is financial information that has been subjected to audit procedures in connection with auditing the basic financial statements, the auditor may express assurance “in relation to the financial statements taken as a whole.”
What audit report mention is required if the information is missing or not prepared in conformity with guidelines?	Qualified or adverse opinion	Mention in report; no qualification of opinion on the basic financial statements.

^aIn some cases, RSI need not physically accompany the basic financial statements in the same document; certain GASB standards permit reference to another publicly-available report as an option for specified RSI.

37. It should be noted that the value of information to users and the value added by auditing it are separate, though certainly related, considerations. For example, some information may be valuable to some users, yet auditing it might add little value. On the other hand, some information (e.g., aggregated financial information for a federal agency as a whole) may not be used directly by decision makers as input to a particular “decision model,” but auditing it might provide some degree of valuable assurance about other information (e.g., detailed program cost or budgetary expenditure information) or objectives of interest (e.g., internal accounting control and finance-related legal compliance). Auditing financial statements may also deter fraud and unintentional errors of various sorts in other, more timely reports.

Footnote vs. RSI Section

38. Although not required by auditing standards, RSI has customarily been located in a separate section of the financial report, to aid in distinguishing it from audited information.⁶ This practice has continued with RSSI, evidently in part because federal preparers thought it was necessary, or at least desirable, to report “stewardship” items together. It is possible that placement of information in different sections of the financial report leads some types of readers to pay more (or less) attention to the information. Although the magnitude of these differences is an open question, research has shown that formatting can matter to individual users.

⁶ AU 558.10 states: “Ordinarily, the required supplementary information should be distinct from the audited financial statements and distinguished from other information outside the financial statements that is not required by the FASB, GASB, or FASAB. However, management may choose not to place the required supplementary information outside the basic financial statements. In such circumstances, the information should be clearly marked as unaudited. If the information is not clearly marked as unaudited, the auditor’s report on the audited financial statements should be expanded to include a disclaimer on the supplementary information.”

In practice, notes and RSI generally have not been commingled. Indeed, in discussing the location of RSI it requires, FASB said, “Reporting specialized information on oil and gas producing activities in a single location within a financial report is a desired objective of this Statement so as to make the relationship among the different types of information easier to analyze.” (FAS 69, par. 117)

In theory, RSI might be integrated with related audited information, provided the unaudited information was suitably labeled. Whether this would be feasible and desirable in practice may be debatable. Concern on the part of independent CPAs about litigation risk has been among the factors that encouraged physical separation of audited information from unaudited information.

Another practical consideration may be introduced by recent guidance from AICPA intended to clarify the auditor’s ability to offer some limited assurance “in relation to the financial statements” on certain RSI. This could imply a need to distinguish the RSI for which such assurance is offered from other types of supplementary information, both required and voluntary.

Some comments regarding FASAB’s *Preliminary Views on Eliminating the Category “Required Supplementary Stewardship Information”* suggested that some people believe there are conceptual as well as practical reasons to report different kinds of information separately.

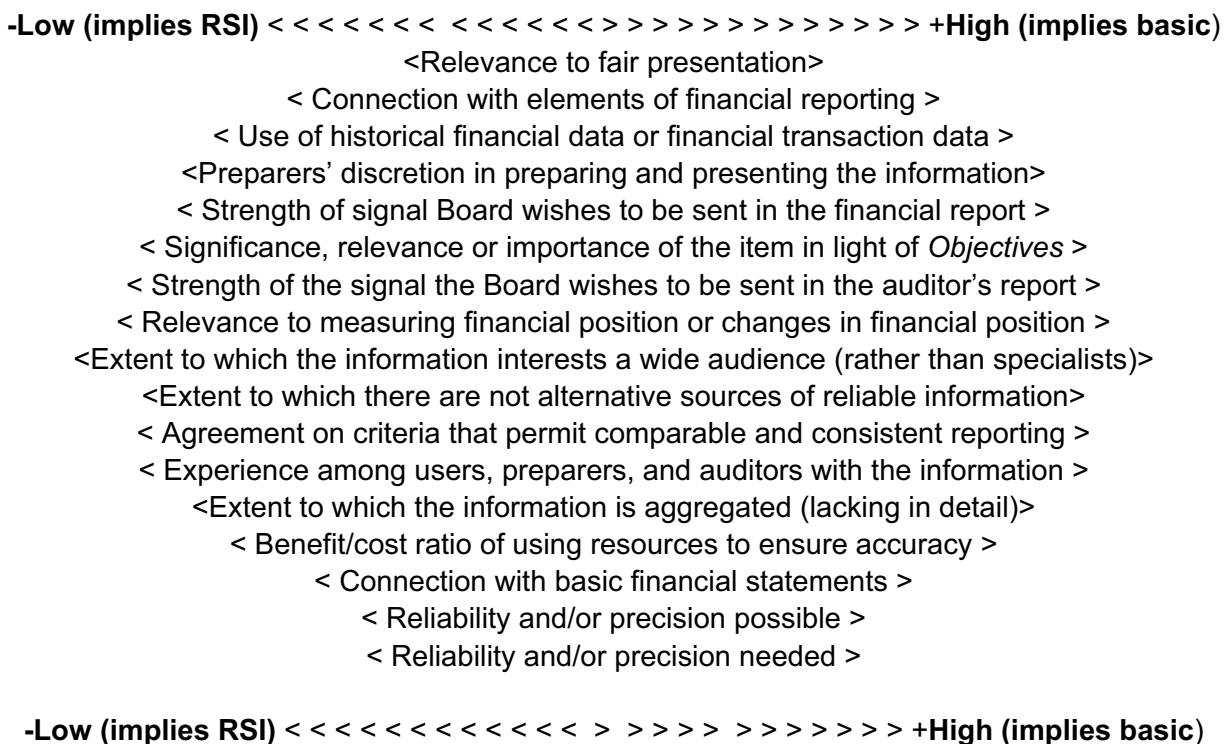

Audit Aspects of Basic vs. RSI

39. Both footnote disclosures and required supplementary information are viewed as being sufficiently relevant to be required to accompany the basic financial statements in financial reports,⁷ though only the notes are regarded as required for fair presentation in conformity with GAAP. As discussed previously, one major difference between the two types of information is the extent and nature of the auditor's scrutiny and responsibility for the information; another is the nature of the auditor's report and the kind of "signal" it sends. Thus, the cost and value added by audit are factors to consider. The main question is: for what types of information, users, and objectives would the benefits of making an item an integral part of the basic financial statements instead of RSI exceed the incremental costs of audit, compared with reviewing pursuant to AU 558's limited procedures?

Factors to Consider

40. In deciding whether a given item should be classified as RSI or as an integral part of the basic financial statements, one might consider a variety of factors, such as those listed in figure 2. They are not listed in any particular order, and some "overlap" or convey similar ideas. Different people assign different weight to each factor. Some people may not consider some of the factors at all, and some people may consider factors that are not listed. Likewise, different people may evaluate each item to be reported differently on each dimension. Therefore, figure 2 is not a decision tree, hierarchy, or precise algorithm for classifying items, but a general framework for each individual's judgment.

⁷ As noted, certain GASB standards permit reference to another publicly-available report as an option for specified RSI.

41. Different people will assign different importance to each factor. However, a consensus did emerge during the Board's deliberations on the proper classification of Social Insurance information that three related factors are particularly important for that decision: (1) The Board agreed that the SOSI is "essential to fair presentation." A set of financial statements could not be said to "present fairly" when the SOSI is missing or materially misstated. For this reason, it is important (2) that this signal clearly be communicated to the reader of the financial report and (3) to the reader of the auditor's report. Other factors listed also were deemed relevant, and were deemed consistent with "basic" status; for example, a wide audience is interested in this information.
42. The Board ultimately decided to rescind the requirement to present the CSA for reasons discussed in paragraph 22-25, but not before it considered the proper classification of the CSA. The amount of discretion available to the preparer was deemed especially important to the decision about how to classify the CSA. If there is very little discretion in preparing the information, the value of auditing may be modest. An example is SFFAS 8's requirement to reprint information as it was presented in the *President's Budget*, without independent criteria for evaluating it. On the other hand, if there is great discretion, questions may arise about whether the resulting information would be sufficiently reliable,

comparable, and consistent without auditing. Another factor, relevant both to the decision initially to classify the information as RSI and to the decision eventually to terminate the requirement, is that there are other, credible sources of similar information. As noted, OMB and CBO routinely publish intermediate and long-term projections that are scrutinized by Congress and by analysts in the private sector.

43. Because SFFAS 5 does not include detailed criteria for defining and measuring Risk Assumed, preparers have considerable discretion in calculating it. This might seem to imply that audit would be desirable. However, auditors may have concerns about expressing positive assurance on information for which specific definitions and measurement criteria have not been defined. In other words, there may not be sufficient agreement on criteria that permit comparable and consistent reporting to permit classifying Risk Assumed as an integral part of the basic financial statements. Another example where this concern has affected classification is information about the condition of stewardship assets and deferred maintenance of property, plant and equipment. Even when auditors do provide assurance, in some cases they may wish to express special qualifications, explanations, or caveats in their report. An example might be an auditor's report on an examination of prospective financial information where there is great inherent uncertainty, or an examination of other assertions by management about matters where management has great discretion.
44. Concerning the "significance" factor: The basic financial statements (including notes that are regarded as an integral part of the financial statements) and RSI are both important enough to be required items in financial reports. With respect to the audit status of the information, it would seem that, by itself, the importance of an item need not automatically imply that the information should be audited. Rather, one would also consider the extent of the information-preparer's discretion as well as the cost of auditing the information item. However, it does seem that the more important the item, the more likely it should be audited, if the information preparer had a significant degree of discretion. One would be willing to incur more audit costs to avoid misstatement of very important information items that could affect users' decisions. Furthermore, the more important the item, the more likely it would be deemed essential to fair presentation, thus implying a need to qualify the auditor's opinion if the information were missing or misstated.
45. Concerning the "reliability and/or precision" factors: These factors are intertwined, and all affect the extent to which one would prefer audited information to RSI. "Reliability and/or precision *needed*" asks one to evaluate the users' tolerance for imprecise measures of a relevant item. Since auditing is likely to increase precision (either through inducing more precise measures by the preparer or by reducing the variance in the measures by audit procedures), the less tolerance for imprecision that users have concerning an information item, the more likely that the Board would want to make the item a required note disclosure instead of RSI.

-
46. “Reliability and/or precision *possible*” deals with the very nature of the information item being reported. Precision about measures of past events seems inherently more possible than precision about estimates of future events. To the extent that there is a fundamental minimum amount of imprecision in certain information items, the cost of increasing audit effort might not be justified. For some Board members, this consideration was among the factors (along with others such as cost/benefit) that imply “Risk Assumed” information should properly be classified as RSI at this time. At the same time, however, uncertainty need not preclude classifying information as an integral part of the basic financial statements when other factors indicate this is appropriate, as is the case with the SOSI. Uncertainty should be disclosed and described to the extent feasible.
 47. Some other listed factors also relate to the nature of the information. For example, some people may define the domain of accounting and/or financial reporting (or categories within that domain) in terms of the nature of information involved (e.g., as limited to “historical” financial information or to certain defined “elements” of financial reporting, or to certain concepts such as “financial position”). FASB has emphasized the role of “elements of financial reporting” in defining the financial statements and notes. FASB and GASB also emphasize the concept of net assets or financial position in defining financial statements and notes.
 48. Other people may define financial reporting, and its component categories, in terms of the comparative advantage unique to reporting based on the information system for processing financial transactions. SFAC 5, *Recognition and Measurement in Financial Statements of Business Enterprises*, says that the “financial statements . . . articulate with each other and derive from the same underlying data (par. 5). Some believe this idea is rooted in the basic “bookkeeping” paradigm of accounting (see SFFAC 1, *Objectives of Federal Financial Reporting*, paragraphs 166-168). Such a definition might be expected to lead to accounting standards that would define the basic financial statements in a narrow or traditional way, with other kinds of information (e.g., performance indicators or management’s assertions about internal control) being reported as RSI.
 49. Others may define the domain of financial reporting, and categories within that domain, more broadly. A broader definition might, for example, be expressed in terms of the objectives of federal financial reporting, or the comparative advantage of the annual reporting and audit cycle, which assures the production and examination of information that GAAP say is essential to fair presentation, where GAAP reporting is mandated by law, contract, or market forces. This kind of broader definition might be expected to lead to standards that would define more types of information (e.g., performance indicators or management’s assertions about internal controls) as a part of the basic financial statements.
 50. More generally, the “benefit/cost ratio of using resources to assure accuracy” asks one to assess the costs of producing auditable information and auditing it versus the benefits that

could be achieved by merely preparing the information as RSI and applying the procedures specified at AU 558. Other things being equal, one would avoid auditing where the cost of auditing is quite high. Similarly, to the extent that alternative, credible sources of information exist, the cost of auditing the information may exceed its benefits.

Board Approval and Dissent

51. This Statement was adopted by the affirmative votes of seven members of the Board. Mr. Anania dissented. Mr. Kull abstained.
52. Mr. Anania dissents from this Statement because he believes the Board's decision to have the information required by Par. 27(3) and 32(3) of SFFAS 17 presented as a basic financial statement is premature and is not supported by a change in circumstances or appropriate technical considerations by the Board.
53. The Board issued SFFAS 17 in August 1999 after more than four years of debate and consideration of many major issues including: (1) definition of a federal liability with weight given to the unique circumstances of the Federal Government, including its sovereign powers, (2) nature of Social Insurance laws and practices, (3) significance of Social Insurance programs to individual taxpayers, and (4) long-term sustainability of the programs as currently constructed.
54. In SFFAS 17, Appendix A - Basis for Conclusions - Section 2, the arguments are presented for (Par. 73-79) and against (Par. 65-72) recognition, disclosure or supplementary reporting of Social Insurance programs. The Board's conclusion (Par. 80-83) acknowledges there were two polarized views. These sentences from SFFAS 17 summarize those views and the Board's decisions related to disclosure and measurement of Social Insurance obligations:

. . . On the one side are those who believe that social insurance programs - especially Social Security and Medicare - constitute a liability of the Federal Government that should be recognized on the consolidated balance sheet and that the closed group is the best measure of it.... At the opposite pole are those who firmly believe that the closed group measure is meaningless or even potentially misleading and should not be disclosed at all in the financial report (Par. 80).

. . . Although both sides make strong arguments, no empirical evidence has been offered that would prove one side right and the other wrong. The Board believes the best approach to resolve this issue is for the closed group data to be reported off the balance sheet as a part of a balanced RSSI package of disclosures about the Social Security and other social insurance programs (Par. 81).

The Board believes that a more complete picture of the financial condition of the government can be provided by a forward-looking assessment of whether it can 'sustain public service and meet obligations as they come due' (Par. 85). . . .

55. Mr. Anania believes the key issues debated by the Board prior to the issuance of SFFAS 17 remain significant and unresolved. He believes the Board should reconsider the technical aspects of the Social Insurance programs from an accounting and reporting perspective before making the change that is called for by this Statement. He cites the following issues as some, but not all, of the issues the Board should deliberate while keeping the original SFFAS 17 requirements in place: (1) whether the distinction between exchange and non-exchange transactions in the Board's concepts is relevant to a liability recognition, (2) whether the closed group (current participants) population is the most meaningful focus for either recording a liability or for disclosure, and (3) whether the notions of a constructive liability or an "in substance" plan concept require consideration.
56. Further, he is concerned that not enough consideration and debate in connection with the issuance of this Statement was focused on the uncertainty inherent in the open group population (current and future participants) actuarial present values required by Par. 27 (3) (c), (f) and (g). While he acknowledges that the use of assumptions and estimates is accepted in the recording and/or disclosure of financial information, he has serious reservations as to whether the open group actuarial projections that include estimates for future participants in the plans can meet the reliability test. Those projections include receipts and outlays for people expected to be born or immigrate to the U.S. during the projection period (currently 75 years), as well as individuals under 15 years of age at the time of the projection. He believes it is imperative that this issue be fully considered before the Statement of Social Insurance (SOSI) is reclassified as a basic financial statement.
57. Mr. Anania also points out that audit coverage of the SOSI and other information required by SFFAS 17 has been discussed with members of the American Institute of Certified Public Accountants (AICPA) FASAB Liaison Taskforce and Social Insurance Taskforce. To date, there is no clear indication from the AICPA as to the nature of the audit coverage and audit report that would be forthcoming from the independent accountants engaged to audit the Social Security Administration (SSA) financial statements, including the SOSI information. He believes there is a direct correlation and linkage between the reliability of measurement for recognition purposes and the independent auditor's ability to render a meaningful report on those elements in financial statements. The links include the use of relevant empirical data, reasonability of and support for assumptions used, and the extent to which the information used can be objectively verified. The reliability of the projection methodology should be further explored before the results of those calculations are made an integral part of the basic financial statements.

58. The open group projection that is used to estimate the future financing shortfall in Social Insurance programs is inherently more sensitive to assumptions about the distant future than is true for the closed group calculations that are used to account for employee pensions and retiree healthcare costs. This is inevitably true, despite the best efforts of actuaries, economists, and other professionals involved in making these projections. This is mainly caused by the fact that a closed group dwindles over time, so that uncertainty about what will happen in the distant future has less impact than is the case for an open group that grows larger during the projection period. Currently, the SOSI is presented in the SSA financial report and in the Consolidated Financial Report of the United States Government (CFR) based on 75-year projections under the intermediate assumptions (sometimes referred to as the “best estimate”) of the Board of Trustees of the Federal Old-Age and Survivors Insurance and Disability Insurance Trust Funds (generally referred to as Social Security) and corresponding assumptions of the other Social Insurance programs for which the SOSI is required.
59. Mr. Anania observes that FASB Statement of Financial Accounting Concepts No. 7 provides a distinction between estimated cash flows and expected cash flows. The latter refers to the sum of probability-weighted amounts in a range of possible estimated amounts; the estimated mean or average. It is believed by some, including Mr. Anania, that a probability-based approach is a more effective measurement tool in many situations. SSA is currently experimenting with methods that might better incorporate and communicate probabilities and uncertainties, as has been recommended by its technical review panels.⁸ Mr. Anania believes that FASAB should study this further in consultation with others, including actuaries from SSA and the Centers for Medicare and Medicaid Services, before elevating the SOSI

⁸ For example, the report of the 1999 Technical Panel includes the following observations (available at http://www.ssab.gov/Rpt99_III.html#pgfld-1005309) under the heading, “Illustrating Uncertainty”:

“The current system of presenting low- and high-cost alternatives to the intermediate assumptions is inadequate. The alternatives are useful in demonstrating the sensitivity of the forecast to the underlying parameters (section II.G of the Trustees Report). However, without any model of the probabilities of the underlying parameters taking on the alternative values, there is no way to use the alternatives to form a distribution of possible outcomes. It is inadequate to show any forecast without an indication of the uncertainty that surrounds it. We follow previous panels in strongly recommending efforts toward stochastic modeling or similar techniques that are better able to capture the interrelationship among assumptions. We are not dogmatic in the recommendation, as we recognize that even stochastic modeling requires some set of assumptions about the variance in future outcomes—for example in fertility rates—that are hard to estimate. However, the assumptions are in some way embedded in current methods of projection in any case.

“Some modeling techniques allow for graphical presentations that are better at displaying the range of uncertainty. What we seek is a method of displaying to policy makers and the public just how uncertain is some average cost outcome or date of exhaustion of the Trust Funds, and what are the probabilities that events will be close to or far from that result. That the system might have a very high probability of being out of balance by 2 or more percent of taxable payroll, for instance, may be worth knowing regardless of whether it has attained actuarial balance under some set of intermediate assumptions.”

as currently defined to the status of a basic financial statement. Mr. Anania believes that the open-group projections that are the basis of the SOSI are more sensitive to assumptions about uncertain future events than is true for most, if not all, long-term liabilities and basic financial statement disclosures in both private and governmental financial reporting today.

60. Mr. Anania believes there is a further, significant issue that requires consideration before the SOSI is reclassified as a basic statement. The concept is articulation of the elements of the required financial statements. Articulation refers to the linkage of an item in one financial statement to an item reported on a different financial statement. Articulation demonstrates the interrelationships of the various financial statements. That linkage is demonstrated in Appendix 1- A thru 1- F of SFFAC 2, *Entity and Display*. The concept of linkage (described therein as “the order and flow of Data in the financial statements”) is also very clearly depicted in a chart on page 43 of the 2001 *Consolidated Financial Report of the United States Government* (CFR). Since the other statements outlined in SFFAC 2 are prepared on an accrual basis, there is no linkage (articulation), as traditionally understood, between the basic financial statements described in SFFAC 2 and the SOSI. While that condition may be tolerable in a compromise standard that requires disclosure as Required Supplementary Stewardship Information (RSSI), Mr. Anania does not believe that condition is technically sound or tolerable in basic financial statements.
61. Finally, Mr. Anania does not believe the users of the SSA and CFR financial reports, particularly citizens and citizen intermediaries, will be better served by the change required by this Statement. He is concerned that the lack of linkage to the other basic statements will not be easily understood by users willing to study the information with reasonable diligence. Elevating the SOSI information to become a basic financial statement without accruing a liability or recognizing an expense based on that information might increase confusion of users of Government reports.
62. Mr. Anania does not dissent to Par. 4 of this statement in which the information about Risk Assumed is reclassified from RSSI to required supplementary information (RSI) or to Par. 5, which rescinds the current requirements for the Current Services Assessment.
63. Mr. Kull will abstain from voting on this statement. He will not dissent, as he believes that social insurance information should be included in the basic financial statements and notes and should be subject to audit. However, he shares Mr. Anania's concerns, and further believes these and other concerns need to be resolved before full implementation takes effect, including the development of appropriate audit standards, and the need for items in the financial statements to be grounded in appropriate definitions of the elements of financial reporting. His abstention from voting is intended as an expression of his assessment that the Board has not completed work on this matter.

Statement of Federal Financial Accounting Standards 26: Presentation of Significant Assumptions for the Statement of Social Insurance: Amending SFFAS 25

Status

Issued	November 1, 2004
Effective Date	For periods beginning after September 30, 2008.
Affects	• SFFAS 25, par. 6.
Affected by	• SFFAS 28 amended the effective date presented in par. 6.

Summary

This standard amends Statement of Federal Financial Accounting Standards 25, *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment*, to require disclosure of significant assumptions underlying the Statement of Social Insurance (SOSI). “Disclosure” means “reporting information in notes or narrative regarded as an integral part of the basic financial statements.” Thus, this amendment reclassifies significant assumptions as basic information rather than as required supplementary information (RSI).

Appendix B: Abbreviations	8

Introduction

1. In July of 2003, the Board issued SFFAS 25, *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment*, and included changes addressing many of the issues identified in responses to the exposure draft (ED) preceding it. One change to the proposal in the exposure draft preceding SFFAS 25 shifted information other than the SOSI from disclosure to RSI status “Disclosure” means “reporting information in notes or narrative regarded as an integral part of the basic financial statements.”¹ RSI is not part of the basic financial statements and is customarily presented as a separate section accompanying the financial statements. Another change to the proposal in the exposure draft preceding SFFAS 25 delayed the effective date to permit the development of audit guidance.
2. The task force of the American Institute of CPAs (AICPA) charged with developing that audit guidance takes exception to the fact that SFFAS 25 permits the preparer to present the significant assumptions underlying SOSI, a basic financial statement, as RSI.² The task force concluded that disclosure related to SOSI would be inadequate if management elects not to disclose significant assumptions in the notes to the financial statements. The task force believes that inadequate disclosure should result in a qualification of the audit opinion. The task force has proposed audit guidance that would require a qualification in the event significant assumptions are not disclosed.
3. The Board believes that generally accepted accounting principles (GAAP) should be clear with respect to adequate disclosure. In this instance, the Board agrees that disclosure of the significant assumptions underlying the SOSI is necessary to an understanding of the SOSI and through this statement amends SFFAS 25.

¹In accounting literature “disclosures” also may be referred to as “notes” or “footnotes.” This statement presents excerpts from other documents with these terms. There is no difference in meaning - rather different authors used different terms with the same meaning.

²SFFAS 25 affords management the option of disclosing the significant assumptions. Par. 6 of SFFAS 25 provides that “Other information required by SFFAS 17 shall be presented as RSI, **except to the extent that the preparer elects to include some or all of that information in notes that are presented as an integral part of the basic financial statements.**” (Emphasis added.)

Standards

Amendment of SFFAS 25

4. Paragraph 6 of SFFAS 25 is rescinded.
5. The information required by paragraphs 27(3) and 32(3) of SFFAS 17 shall be presented as a basic financial statement rather than as required supplementary stewardship information (RSSI). The underlying significant assumptions shall be included in notes that are presented as an integral part of the basic financial statement. Other information required by SFFAS 17- including the sensitivity analysis required in par. 27(4) and 32(4)-- shall be presented as required supplementary information, except to the extent that the preparer elects to include some or all of that information in notes that are presented as an integral part of the basic financial statements.

Effective Date

6. This standard is effective for periods beginning after September 30, 2005.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses factors considered significant by Board members in reaching the conclusions in this standard. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this proposed statement---not the material in this appendix---would govern the accounting for specific transactions, events or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

- A1. The Board issued this standard to ensure that significant assumptions are presented as note disclosures to the Statement of Social Insurance so that well established expectations regarding adequate disclosure would be met. Concepts statements from many standard setters explain the requirement for adequate disclosure as follows:
- a. Financial reporting should include explanations and interpretations to help users understand financial information provided. ... Moreover, financial reporting often provides information that depends on, or is affected by, management's estimates and judgment. Investors, creditors, and others are aided in evaluating estimates and judgmental information by explanations of underlying assumptions or methods used, including disclosure of significant uncertainties about principal underlying assumptions or estimates. Financial reporting may, of course, provide information in addition to that specified by financial accounting standards, regulatory rules, or custom. (Financial Accounting Standards Board, CON 1, *Objectives of Financial Reporting by Business Enterprises*, par. 54)
 - b. Information disclosed in notes or parenthetically on the face of financial statements, such as significant accounting policies or alternative measures for assets or liabilities, amplifies or explains information recognized in the financial statements.⁴ That sort of information is essential to understanding the information recognized in financial statements and has long been viewed as an integral part of financial statements prepared in accordance with generally accepted accounting principles. [⁴For example, notes provide essential descriptive information for long-term obligations, including what amounts are due, what interest they bear, and whether important restrictions are imposed by related covenants. For inventory, notes provide information on the measurement method used-FIFO cost, LIFO cost, current market value, etc. For an estimated litigation liability, an extended discussion of the circumstances, counsel's opinions, and the basis for management's judgments may all be

provided in the notes. For sales, useful information about revenue recognition policies may appear only in the notes. (FASB Statement No. 47, *Disclosure of Long-term Obligations*; ARB No. 43, Chapter 4 - Inventory Pricing, Statement 8; FASB Statement No. 5, *Accounting for Contingencies*, par. 10; and APB Statement 4, par. 199)] (CON 5, *Recognition and Measurement in Financial Statements of Business Enterprises*, par. 7a)

c. Financial information is also conveyed with accompanying footnotes, which are an integral part of the financial statements. Footnotes typically provide additional disclosures that are necessary to make the financial statements more informative and not misleading. (FASAB, SFFAC 2, *Entity and Display*, par. 68)

d. Financial reporting should be reliable; that is, the information presented should be verifiable and free from bias and should faithfully represent what it purports to represent. To be reliable, financial reporting needs to be comprehensive. Nothing material should be omitted from the information necessary to faithfully represent the underlying events and conditions, nor should anything be included that would cause the information to be misleading. Reliability does not imply precision or certainty. Reliability is affected by the degree of estimation in the measurement process and by uncertainties inherent in what is being measured; financial reporting may need to include narrative explanations about the underlying assumptions and uncertainties inherent in this process. Under certain circumstances some financial information is based on reasonable estimates. A properly explained estimate provides more meaningful information than no estimate at all. (Governmental Accounting Standards Board, *Concept Statement 1*, par. 64)

- A2. The Board believes that the underlying significant assumptions are essential to fair presentation. The Board believes that generally accepted accounting principles should result in disclosure of the significant assumptions upon which SOSI is based. Disclosures are an integral part of the basic financial statements while RSI is not an integral part of the basic financial statements. RSI accompanies the basic financial statements. Placing the significant assumptions in the disclosures associated with the SOSI serves two purposes. First, the significant assumptions inform the reader about the basis for the projections presented in the SOSI. Second, the reader has ready access to the significant assumptions through association with a principal financial statement.
- A3. The Board received 8 responses to its March 12, 2004 exposure draft on this subject. Of the responses, 5 were from federal respondents and 3 were from non-federal respondents. Seven of the eight respondents supported the proposal. However, two supported the proposal contingent on suggested changes.
- A4. One recommended that the Board also include in the note disclosure an explanation of the uncertainty inherent in the process. The recommendation is not without merit but cannot be adopted absent an exposure draft proposing the change. The Board is not actively pursuing

this additional amendment to SFFAS 25. The Board believes the nature of the information is adequately explained by the:

- a. required summary of significant accounting policies,
 - b. disclosure of the significant assumptions,
 - c. language in the auditor's report on SOSI explaining that there will be differences between the forecasts and actual results, and
 - d. presentation of the sensitivity analysis as required supplementary information.
- A5. Another respondent requested that the Board defer the effective date of this amendment and SFFAS 25. Occasionally, the Board has deviated from the proposed effective date when finalizing standards proposed in an exposure draft and this is not considered a deviation significant enough to warrant re-exposure of the proposal. However, to alter the effective date of a previously issued standard - in this case SFFAS 25 - due process requires that the Board seek input on that change through an exposure draft proposing such a change. One example of this is the deferral of SFFAS 4, *Managerial Cost Accounting Standards for the Federal Government*.
- A6. Since the Board is unable to alter the effective date of SFFAS 25 through this amendment, the Board is proceeding with the earlier effective date for this amendment to ensure consistency with SFFAS 25. The Board is considering the request for deferral of SFFAS 25. An exposure draft was issued on July 20, 2004 proposing a one-year deferral of both SFFAS 25 and this standard. The Board will consider comments on the exposure draft and may issue a statement amending the effective dates.

Board Approval

- A7. This statement was approved for issuance by all members of the Board.

Affected by	SFFAS 43 amends paragraphs 11-39. Par. 39 was superseded by SFFAC 10, par. 7, which rescinded SFFAC 3 in its entirety.

Summary

This statement defines and addresses “earmarked funds.” Note that this statement uses the term “earmarked” only as it is defined below. This statement does not use the term “earmarked” as it is sometimes used to refer to set-asides of appropriations for specific purposes.

Scope of this Statement

The Board’s proposed standard for “Fiduciary Activities” and this standard on “Earmarked Funds” together address all activities or funds considered “dedicated collections” by Statement of Federal Financial Accounting Standards (SFFAS) 7. When finalized, the fiduciary activities standard will rescind the “dedicated collections” provisions in SFFAS 7. This standard supersedes the “dedicated collections” provisions in SFFAS 7 (paragraphs 83-87) for earmarked funds.

Earmarked funds are financed by specifically identified revenues, often supplemented by other financing sources, which remain available over time. These specifically identified revenues and other financing sources are required by statute to be used for designated activities, benefits or purposes, and must be accounted for separately from the Government’s general revenues. The three required criteria for an earmarked fund are:

- A statute committing the Federal Government to use specifically identified revenues and other financing sources only for designated activities, benefits or purposes;
- Explicit authority for the earmarked fund to retain revenues and other financing sources not used in the current period for future use to finance the designated activities, benefits, or purposes; and

-
- A requirement to account for and report on the receipt, use, and retention of the revenues and other financing sources that distinguishes the earmarked fund from the Government's general revenues.

An earmarked fund may be classified in the unified budget as a trust, special, or public enterprise fund. Application of this standard, however, should not be based on whether a statute or the unified budget labels an earmarked fund as a certain type of fund. Rather, the Board intends that the term earmarked fund be applied based on the substance of the statute and consistent with the three criteria set forth in the standard.

Reporting Requirements

The component entity will show earmarked nonexchange revenue and other financing sources, including appropriations, and net cost of operations separately on the Statement of Changes in Net Position. The component entity also will show the portion of cumulative results of operations attributable to earmarked funds on the Statement of Changes in Net Position and on the Balance Sheet.

At the Government-wide level, earmarked revenue, other financing sources and net cost of operations will be shown separately on the U.S. Government Statement of Operations and Changes in Net Position. The U.S. Government Balance Sheet will show separately the portion of net position attributable to earmarked funds.

This standard requires that every component entity disclose the earmarked fund(s) for which it has program management responsibility. It also requires condensed information on assets, liabilities and cost for all earmarked funds, although it permits information on funds not presented individually to be aggregated. In addition, it requires disclosure of any legislation that changed the purpose of or redirected a significant portion of an earmarked fund.

Required note disclosures at the component entity level will clarify the fact that investments in Treasury securities held by the component entity are not assets for the Government as a whole. That is, the investments in Treasury securities are available for authorized expenditures and are thus assets of the managing component entity. However, financing will be needed by the Government as a whole when those investments in Treasury securities are redeemed to make expenditures.

In addition, this standard addresses those situations where several component entities each have program management responsibility for separate, identifiable portions of the earmarked fund. By requiring each component entity to report on only its portion of the earmarked fund, the standard assists report users in evaluating the service efforts, costs and accomplishments of the component entity.

Effective Date

The provisions of this standard are effective for periods beginning after September 30, 2005. Early adoption is not permitted. In the year this standard becomes effective, entities should not restate the prior period columns of the basic financial statements and related disclosures.

Introduction

1. This statement defines and addresses “**earmarked funds**.”¹ Note that this statement uses the term “earmarked” only as it is defined below. This statement does not use the term “earmarked” as it is sometimes used to refer to set-asides of appropriations for specific purposes.
2. This statement amends Statement of Federal Financial Accounting Standards (SFFAS) 7, *Accounting for Revenue and Other Financing Sources*. This statement defines and addresses earmarked funds and differentiates between earmarked funds and **fiduciary activity**. This statement requires that earmarked funds be identified and shown separately on the Statement of Changes in Net Position (for U.S. Government-wide, the Statement of Operations and Changes in Net Position) and the Balance Sheet. It also requires the component entity to identify all earmarked funds for which it has management responsibility, by either a list by official title or a statement indicating where the information can be obtained and to provide specific information on earmarked funds including revenue sources, assets and liabilities, and changes in net position.
3. Earmarked revenue and other financing sources are accounted for in earmarked funds with widely disparate characteristics. In a 2001 report, the Government Accountability Office (GAO) identified three hundred and ninety-two possible earmarked funds.² Annual revenues and other financing sources for those earmarked funds range from negligible amounts to over half a trillion dollars. Accumulated balances range from zero to over a trillion dollars.
4. Earmarked funds are financed by specifically identified revenues and other financing sources (such as appropriations) and serve a variety of purposes. Revenue sources may be exchange or nonexchange and include but are not limited to payroll taxes, excise taxes, customs duties, fees, user charges, sales of goods and services and interest earned. In addition, although earmarked funds are usually the responsibility of a single entity, management responsibility for some earmarked funds is shared by two or more entities.
5. The purpose of earmarked funds ranges from the long-term commitments financed by social insurance taxes, such as Social Security, to business-type activities financed mainly by

¹Words first appearing in **boldface** are defined in Appendix B: Glossary.

² GAO, *Federal Trust and Other Earmarked Funds*, January 2001, [GAO-01-199SP](#), p. 12. The term “earmarked funds” used by GAO in its survey differs from that established by this standard and was not intended to reflect standards for financial reporting. The term “earmarked funds” as used in either the GAO report or other governmental issuances shall not govern the application of this standard.

exchange transactions, such as the Employees Life Insurance Fund. Every department and many independent agencies have at least one earmarked fund. Therefore, earmarked funds affect a wide array of programs, including commerce, income security, natural resources, administration of justice, agriculture, education, science and technology, the environment, healthcare, housing credit and insurance.

6. Despite the differences among earmarked funds they do share certain characteristics. Earmarked funds are financed by specifically identified revenues, often supplemented by other financing sources, which remain available over time, are required by statute to be used for designated activities, benefits or purposes, and must be accounted for separately from the government's general revenues.
7. The following chart shows fund types used in reporting to the Treasury Financial Management Service (FMS) and the Office of Management and Budget (OMB). It is intended only to show the general relationship between fund groups and earmarked funds as classified in this statement. Regardless of classification for reporting to the Treasury FMS or the OMB, funds meeting the definition of earmarked funds promulgated in this standard should be so classified and funds not meeting the definition should not be so classified.

Table 1. Fund Groups Used in Federal Reporting to the Treasury FMS and the OMB

Fund Groups and Major Classes	Generally Are Subject to the Reporting Requirements of this Standard	Generally Are Not Subject to the Reporting Requirements of this Standard
General Funds0000-3999		X
Revolving Funds.....4000-4999		
Intra-governmental Revolving Funds		X
Public Enterprise Funds:		
Credit Reform Financing Funds		X
All Other Public Enterprise Funds	X	
Special Funds 5000-5999	X	
Deposit Funds6000-6999		X
Trust Funds8000-8999	X	

-
8. Funds that receive earmarked revenue and other financing sources include special funds, trust funds -- both revolving and non-revolving -- and public enterprise funds. The **general fund** is used to carry out the general purposes of Government rather than being restricted by law to a specific program. It consists of all collections not earmarked by law to finance other funds, including virtually all income taxes and many excise taxes, and all expenditures financed by these collections and by general U.S. Treasury borrowing.³ While **intragovernmental funds**, which are revolving funds that conduct business-type operations primarily within and between Government agencies, share the characteristics of an earmarked fund, they are excluded from the reporting requirements of this standard. Credit financing accounts and fiduciary funds are also excluded.
-

Scope

9. This statement provides accounting and reporting standards for earmarked funds in the general purpose financial statements of reporting entities and the U.S. Government-wide Financial Report. This statement does not affect reporting in the *Budget of the United States Government* or any other special purpose type of report.
-

Effective Date

10. This statement is effective for periods beginning after September 30, 2005. Early adoption is not permitted. In the year this standard becomes effective, entities should not restate the prior period columns of the basic financial statements and related disclosures.
-

Accounting Standards

Definition of Funds from Dedicated Collections

11. Generally, funds from dedicated collections are financed by specifically identified revenues^{3a}, provided to the government by non-federal sources, often supplemented by other financing sources, which remain available over time. These specifically identified

³Analytical Perspectives, Budget of the United States Government, Fiscal Year 2005, p. 339.

^{3a}Such specifically identified revenue can be either exchange or nonexchange.

revenues and other financing sources are required by statute to be used for designated activities, benefits or purposes, and must be accounted for separately from the Government's general revenues. The three required criteria for a fund from dedicated collections are:

1. A statute committing the Federal Government to use specifically identified revenues and/or other financing sources that are originally provided to the federal government by a non-federal source^{3b} only for designated activities, benefits or purposes;
2. Explicit authority for the fund to retain revenues and/or other financing sources not used in the current period for future use to finance the designated activities, benefits, or purposes; and
3. A requirement to account for and report⁴ on the receipt, use, and retention of the revenues and/or other financing sources that distinguishes the fund from the federal government's general revenues.

Application of the Definition

12. The requirement to account for revenues and other financing sources that are statutorily available only for designated activities, benefits or purposes is usually created by statute. A fund from dedicated collections may be classified in the statute, the unified budget, or both, as a trust, special, or public enterprise fund. Application of this standard, however, shall not be based on how a statute or the unified budget labels the fund. Rather, the Board intends that the term "funds from dedicated collections" be applied based on the substance of the statute and consistent with the three criteria described above.
13. **Fund** in this statement's definition of funds from dedicated collections refers to a "fiscal and accounting entity with a self-balancing set of accounts recording cash and other financial resources, together with all related liabilities and residual equities or balances, and changes therein, which are segregated for the purpose of carrying on specific activities or attaining

^{3b}In some cases, specifically identified revenues or other financing sources are collected from a non-federal source by one agency and transferred or appropriated to another. For example, Social Security taxes are collected from non-federal entities (employees and employers) by the Internal Revenue Service. Those amounts are subsequently appropriated and transferred to the Social Security Administration. This internal process does not change the nature of the revenue or other financing source (i.e., specifically identified revenues or other financing sources originally collected from a non-federal source).

⁴A "report" may be something other than stand-alone financial statements for the fund from dedicated collections.

certain objectives in accordance with special regulations, restrictions, or limitations.”⁵

Classification and reporting should be made at the level of an individual fund. A fund should be classified as a “fund from dedicated collections” if it meets the criteria in paragraphs 11.2 and 11.3 and either:

1. its predominant sources of revenue and other financing sources are non-federal sources meeting the paragraph 11.1 criterion, or
2. it has non-federal sources of revenue and other financing sources meeting the paragraph 11.1 criterion^{5a} that are material to the reporting entity.

For example, as currently funded, Medicare Parts B and D do not have non-federal sources as described in paragraph 11 as their predominant revenue and other financing sources. However, Medicare Parts B and D do have revenue and other financing sources material to the reporting entity that meet the criteria in paragraph 11. Therefore, Medicare Parts B and D should be classified as funds from dedicated collections.

Distinct from the General Fund

14. Whereas funds from dedicated collections are financed by specifically identified revenues and other financing sources, the general fund is financed by receipts not dedicated by law for a specific purpose and the proceeds of general borrowing. Although there are exceptions, funding decisions regarding activity financed from general receipts usually govern one fiscal year and are made as part of the process of enacting one of the annual appropriations acts. In contrast, legislation establishing funds from dedicated collections reflects a longer (if not indefinite) Government commitment to collect, hold and spend identified revenues for a designated activity, benefit or purpose. Funds from dedicated collections may be given authority to make expenditures by means of a permanent indefinite appropriation, often enacted by authorizing legislation. If not, an appropriation provided in annual appropriation acts is necessary to make expenditures. Whether the budget authority is provided by authorizing legislation or annual appropriations acts, the funds are reserved or restricted to the designated activity, benefit or purpose.

⁵ National Council on Governmental Accounting Statement 1, par. 16.

^{5a} In situations where there is a mixed source of funding (so that not all of the revenue and other financing sources meet the criteria in paragraph 11) and the proportion and/or amounts vary from year to year so that it is difficult to determine a predominant source and/or assess materiality, acceptable options for classification include but are not limited to:

1. long-term expectations rather than periodic results that may fluctuate
2. 36-month averages

Changes in classification of funds from year to year should be disclosed.

Distinct from Fiduciary Activities

15. The activity of funds from dedicated collections differs from fiduciary activities primarily in that in funds from dedicated collections assets are Government-owned. A fiduciary activity is the collection or receipt, management, protection, accounting, investment and disposition by the Federal Government of cash or other assets in which non-Federal individuals or entities have an ownership interest that the Federal Government must uphold.⁶ Therefore, even though a fund from dedicated collections is designated exclusively for a specific activity, benefit or purpose, the Federal Government does not have a fiduciary relationship with the individuals or groups who potentially will benefit from the fund.

Distinct from Private Sector Trust Funds

16. Although funds from dedicated collections are predominantly in funds that are designated by law as trust funds, the meaning of the term “trust” in the Federal Government differs significantly from its meaning in the private sector. Whereas funds from dedicated collections in the Federal Government are distinct from fiduciary activities, a trust in the private sector necessarily involves a fiduciary relationship.
17. A fund from dedicated collections should not be characterized as a “trust” in general purpose external financial reports of Federal entities. (The use of the term “trust fund” is acceptable only in the fund’s official title.)

Exclusions from Reporting Requirements

18. Certain categories of funds are excluded from the reporting requirements of this standard. Intragovernmental funds are excluded because they are revolving funds that conduct business primarily within and between Government agencies. Credit financing accounts are also excluded. Credit financing accounts are nonbudgetary funds that do not accumulate results of operations; they primarily serve as clearing accounts for cash activity relating to Federal credit programs. Fiduciary funds, which are not Government-owned, are also excluded. Funds established to account for pensions, other retirement benefits, other postemployment benefits, and other employee benefits provided to federal employees (civilian or military) should not be classified as funds from dedicated collections because such funds account for employer-employee transactions and requirements tailored to those transactions are provided by SFFAS 5, *Accounting for Liabilities of the Federal Government*, paragraphs 56-96.^{6a} In addition, because these funds recognize significant long-term liabilities, the large negative net position offsets much of the generally positive net position

⁶See SFFAS 31, *Accounting for Fiduciary Activities*, for more on fiduciary activity in the Federal Government and the differences between private trust funds and Federal government trust funds.

^{6a}Because classification and reporting should be made at the level of an individual fund, portions of funds, such as the Federal Employees Compensation Account portion of the Unemployment Trust Fund, should not be excluded because of this provision.

of other funds from dedicated collections. The result at the government-wide level is that the large negative net position of these funds obscures the large cumulative amount that needs to be repaid by the general fund in order for the dedicated collections to be used for their intended purposes.

Reporting for Funds from Dedicated Collections

Financial Statement Presentation and Disclosures for Component Entities

Financial Statement Presentation

19. The portion of cumulative results of operations and unexpended appropriations attributable to funds from dedicated collections should be shown separately on the Balance Sheet. This standard does not require funds from dedicated collections to be separately shown on the Statement of Net Cost. Non-exchange revenue and other financing sources, including appropriations, and net cost of operations for funds from dedicated collections should be shown separately on the statement of changes in net position if:
 1. dedicated collections are the predominant source of revenue and other financing sources for the component entity, or
 2. one or more of the entity's funds from dedicated collections
 - a. is of immediate concern to constituents of the fund,
 - b. is politically sensitive or controversial,
 - c. is accumulating large balances, or
 - d. the information provided in the financial statements would be a primary source of financial information for the public

For example, the Social Security and Medicare programs are of immediate concern to their constituents; both programs have a direct current or future impact on the majority of the general public.

- 19a. Entities may present combined or consolidated amounts and the presentation must be labeled accordingly.

- 19b. Component entities that do not separately show amounts from dedicated collections on the statement of changes in net position should refer on the face of the statement of changes in net position to the note on funds from dedicated collections.
20. Most revenues and other financing sources that are dedicated collections are reported in the basic financial statements of the entity carrying out the program and responsible for administration of the fund. If more than one component entity is responsible for carrying out the program financed with revenues and other financing sources that are dedicated collections, and the separate portions of the program can be clearly identified with a responsible component entity, then each component entity should report its portion in accordance with the requirements of this standard. If separate portions cannot be identified, the component entity with program management responsibility should report the fund.⁷

Disclosure

21. A component entity should disclose⁸ all funds from dedicated collections for which it has program management responsibility by either a list (by official title), or a statement indicating where the list can be obtained (e.g., a website reference or contact information). A fund from dedicated collections should not be characterized as a “trust” in general purpose external financial reports of Federal entities. (The use of the term “trust fund” is acceptable only in the fund’s official title.)
22. Information should be disclosed for each individual fund from dedicated collections. An exception is provided for component entities having numerous individual funds from dedicated collections. Paragraph 24 discusses criteria to consider in selecting individual funds for disaggregated disclosure. The following information should be disclosed for selected individual funds from dedicated collections, in aggregate for all remaining funds from dedicated collections, and in total for all the entity’s funds from dedicated collections:
1. Condensed information about assets and liabilities showing investments in Treasury securities, other assets, liabilities due and payable, other liabilities, cumulative results of operations and net position.
 2. Condensed information providing gross cost, exchange revenue, net cost of operations, nonexchange revenues by major type and all other, other financing sources by major type and all other, and change in net position.

⁷ To determine program management/accounting responsibility, agencies should consider the legislation authorizing the program; the Memorandum of Understanding that establishes responsibilities; and the provisions of SFFAC 2, *Entity and Display*, as amended by this standard.

⁸ Disclosure is reporting information in notes or narrative regarded as an integral part of the basic financial statements.

Entities may present combined or consolidated amounts and the presentation must be labeled accordingly. The information required by this paragraph may be presented separately on the face of the entity's basic financial statements or disclosed in the accompanying notes. The information must be in sufficient detail to support reporting requirements for the U.S. government-wide financial statements in paragraphs 29 and 30. Information for funds not presented individually may be aggregated. The total net position shown in the note disclosure should agree with the total net position for funds from dedicated collections shown on the face of the component entity's balance sheet.⁹

23. The following information should be disclosed for each individually reported fund from dedicated collections, or portion thereof, for which a component entity has program management responsibility (see paragraph 24.).
 1. A description of each fund's purpose, how the entity accounts for and reports the fund, and its authority to use those revenues and other financing sources.
 2. The sources of revenue or other financing for the period and an explanation of the extent to which they are inflows of resources to the Government or the result of intragovernmental flows.
 3. Any change in legislation during or subsequent to the reporting period and before the issuance of the financial statements that significantly changes the purpose of the fund or that redirects a material portion of the accumulated balance.
24. Selecting funds from dedicated collections to be presented individually requires judgment. The preparer should consider both quantitative and qualitative criteria. Acceptable criteria include but are not limited to:
 - a. quantitative factors such as
 1. the percentage of the reporting entity's revenues from dedicated collections or
 2. cumulative results of operations from such funds; and
 - b. qualitative factors such as
 1. whether a fund from dedicated collections is of immediate concern to constituents of the fund,

⁹ Footnote 9 was rescinded by SFFAS 43, *Dedicated Collections: Amending SFFAS 27, Identifying and Reporting Earmarked Funds*.

-
2. whether it is politically sensitive or controversial,
 3. whether it is accumulating large balances, or
 4. whether the information provided in the financial statements would be the primary source of financial information for the public.
25. The total net position of all funds from dedicated collections shown in the note disclosure should agree with the net portion of funds from dedicated collections shown on the face of the component entity's Balance Sheet.
 26. In accordance with the provisions of paragraph 20 or footnote 5a of paragraph 13, if a component entity reports a different portion of a program funded by dedicated collections than it reported in prior years, it should not restate its prior year financial statements. It should disclose the change. This applies if a component entity does not report a fund from dedicated collections that it reported in the previous year. It also applies if a component entity reports a fund from dedicated collections that it did not report in the previous year.

Note on Investments

27. Investments in Treasury securities for funds from dedicated collections should be accompanied by a note that explains the following issues:
 - The U.S. Treasury does not set aside assets to pay future expenditures associated with funds from dedicated collections. Instead, the cash generated from such funds is used by the U.S. Treasury for general Government purposes.
 - Treasury securities are issued to the fund as evidence of dedicated collections and provide the fund with the authority to draw upon the U.S. Treasury for future authorized expenditures (although for some funds, this is subject to future appropriation).
 - Treasury securities held by a fund from dedicated collections are an asset of the fund and a liability of the U.S. Treasury, so they are eliminated in consolidation for the U.S. Government-wide financial statements.
 - When the fund from dedicated collections redeems its Treasury securities to make expenditures, the U.S. Treasury will finance those expenditures in the same manner that it finances all other expenditures.
28. Below is one example of a note that addresses the points in paragraph 27 above.

Intra-governmental Investments in Treasury Securities

The Federal Government does not set aside assets to pay future benefits or other expenditures associated with funds from dedicated collections (or name/s of fund/s). The

dedicated cash receipts collected from the public into the fund are deposited in the U.S. Treasury, which uses the cash for general Government purposes. Treasury securities are issued to the (component entity) as evidence of its receipts. Treasury securities are an asset to the (component entity) and a liability to the U.S. Treasury. Because the (component entity) and the U.S. Treasury are both parts of the Government, these assets and liabilities offset each other from the standpoint of the Government as a whole. For this reason, they do not represent an asset or a liability in the U.S. Government-wide financial statements.

Treasury securities provide the (component entity) with authority to draw upon the U.S. Treasury to make future benefit payments or other expenditures. When the (component entity) requires redemption of these securities to make expenditures, the Government finances those expenditures out of accumulated cash balances, by raising taxes or other receipts, by borrowing from the public or repaying less debt, or by curtailing other expenditures. This is the same way that the Government finances all other expenditures.

Financial Statement Presentation and Disclosures for the U.S. Government-wide Financial Statements

Financial Statement Presentation

29. Funds from dedicated collections should be shown separately on the U.S. Government Statement of Operations and Changes in Net Position. The portion of Net Position attributable to funds from dedicated collections should be shown separately on the U.S. Government Balance Sheet.¹⁰ (See Appendix C: Pro Forma Illustrations for examples of accounting entries and financial reporting.)

Disclosure

30. Specific information should be disclosed for selected funds from dedicated collections. Paragraph 24 discusses criteria to consider in selecting individual funds for disaggregated disclosure. The following information should be provided for selected individual funds from dedicated collections, in aggregate for all remaining funds from dedicated collections, and in total for all funds from dedicated collections:
 1. Condensed information about assets, liabilities and net position.

¹⁰ Net Position is composed of unexpended appropriations and cumulative results of operations for component entities. Since unexpended appropriations are not applicable at the U. S. Government-wide level, net position equals cumulative results of operations.

-
2. Condensed information on gross cost, exchange revenue, net cost, nonexchange revenues and other financing sources, and change in net position.

The disclosure may present combined or consolidated amounts and the presentation must be labeled accordingly.

31. The information for funds from dedicated collections should be disclosed in the notes accompanying the basic financial statements. Information for funds not shown individually may be aggregated (see paragraph 24). A total column should be presented that relates the disaggregated data to the data on the face of the principal financial statements. The net position shown in the note disclosure should agree with the portion of net position attributable to funds from dedicated collections shown on the face of the balance sheet.
32. A note disclosure should provide a reference to component reports for additional information about individual funds from dedicated collections.
33. A note disclosure should provide a general description of funds from dedicated collections and an explanation of how the Federal Government as a whole could provide the resources represented by the balance in Treasury securities held by funds from dedicated collections.
34. A fund from dedicated collections should not be characterized as a “trust” in general purpose external financial reports of Federal entities. (The use of the term “trust fund” is acceptable only in the fund’s official title.)

Basis of Accounting

35. All amounts reported and disclosed in the reporting entity’s basic financial statements or the notes thereto, as required in paragraphs 19 through 34, should be recognized and measured using the standards provided in generally accepted accounting principles applicable to the Federal Government.

Effective Date and Implementation

36. This standard is effective for periods beginning after September 30, 2005. Early adoption is not permitted. In the year this standard becomes effective, entities should not restate the prior period columns of the basic financial statements and related disclosures.

Effect on Existing Standards

37. [Paragraph 37 was superseded by paragraph 34 of SFFAS 31, which rescinded paragraphs 83 through 87 of SFFAS 7.]
38. This standard amends Statement of Federal Financial Accounting Concepts (SFFAC) 2, *Entity and Display* footnote 3, as follows:

For some trust funds, the collection of the revenues is performed by an organizational entity acting in a custodial capacity that differs from the organizational entity that administers the trust fund. In those instances, the organizational entity that collects the revenue would be responsible for reporting only the collection and subsequent disposition of the funds. The organizational entity responsible for carrying out the program(s) financed by a trust fund, ~~or in the case of multiple responsible entities, the entity with the preponderance of fund activity,~~ will report all assets, liabilities, revenues and expenses of the fund, notwithstanding the fact that another entity has custodial responsibility for the assets. In the case of multiple responsible entities, if the separate portions of the program can be clearly identified with a responsible component entity, then each component entity should report its portion in accordance with the requirements of SFFAS 27, *Identifying and Reporting Earmarked Funds*. If separate portions cannot be identified, the component entity with program management responsibility should report the fund.

39. This standard amends SFFAC 3, *Management's Discussion and Analysis*- Concepts, paragraph 26 as follows:

Financial Results, Position and Condition-MD&A should help those who read it to understand the entity's financial results and financial position and the entity's effect on the financial position and condition of the Government. It should give readers the benefit of management's understanding of the significance and potential effect from both a short- and a long-term perspective of:

- the variations discussed in paragraph 14 in terms of major changes in types or amounts of assets, liabilities, costs, revenues, obligations and outlays;
- particular balances and amounts shown in the basic financial statements, including the notes, such as those dealing with ~~dedicated collections or trust funds~~ earmarked funds, if relevant to important financial management issues and concerns; and
- the entity's required supplementary stewardship information (because RSSI describes economic conditions that cannot be expressed in the basic financial statements).

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Appendix A: Basis for Conclusions

This appendix discusses factors considered significant by Board members in reaching the conclusions in this statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this statement – not the material in this or other appendices– should govern the accounting for specific transactions, events or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

- A1. FASAB published the exposure draft *Identifying and Reporting Earmarked Funds* on October 16, 2003. Upon release of the exposure draft, notices and/or press releases were provided to: the Federal Register; the *FASAB News*, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, *Government Accounting and Auditing Update*, and *JFMIP News*; the CFO Council, the Presidents Council on Integrity and Efficiency, the Financial Statement Audit Network, the Federal Financial Managers Council; and committees of professional associations generally commenting on exposure drafts in the past. A public hearing was held on March 4, 2004. Sixteen letters were received from the following sources; three respondents supplemented their written responses with oral testimony at the public hearing.

Comment letters and/or oral testimony provided by:	Federal (Internal)	Non-Federal (External)
Users, academics, others		3
Auditors	1	2
Preparers and financial managers	10	

Response to Comments Received

- A2. The majority of the respondents concurred with most of the provisions of the proposed standard. Several sources expressed the opinion that all of the disclosures should be placed in the notes to the financial statements. The Board's reasons for requiring some reporting on the face of the financial statements is provided in the section, "Reporting Treatment," which begins at paragraph 59 of this Appendix.

- A3. Several respondents requested guidance regarding criteria to consider in selecting earmarked funds for disaggregated disclosure; additional guidance has been included in this standard.
- A4. Several respondents questioned the term, “accounting mechanism,” and asked why this term was used instead of a more specific term, such as Treasury account fund symbol. This standard eliminates references to accounting mechanisms and states that the Board’s intent is to establish a principle-based standard that is not dependent upon funding terminology that is subject to change.
- A5. Two respondents requested that the examples in Appendix C differentiate between the Treasury General Fund and the Treasury Bureau of Public Debt. The examples in Appendix C now include that distinction.
- A6. Two respondents asked for more detail regarding mixed-activity funds and the word “primarily.” However, the Board considers the definition criteria and the term “primarily” to be sufficiently clear regarding the classification of mixed-activity funds.
- A7. One respondent identified credit financing accounts as a category of funds that would be covered by the standard, based upon definition criteria, that should not be included. Credit financing accounts are nonbudgetary funds that do not accumulate results of operations; they primarily serve as clearing accounts for cash activity relating to Federal credit programs. The standard includes an “Exclusions” paragraph (paragraph 18) which excludes credit financing accounts from the reporting requirements of this standard.
- A8. Three respondents had questions about earmarked funds that have exchange revenue. Appendix C has been expanded to include both exchange and nonexchange revenue.
- A9. Two respondents had questions about the reporting requirements for earmarked funds managed by multiple agencies. Footnote 7, which provides factors to consider in determining program management, has been added. Paragraph 38, which amends SFFAC 2, “*Entity and Display*,” has also been added.

Existing Accounting Standard Needs Clarification

- A10. The objective of this standard is to define earmarked funds and provide accounting and reporting guidance for them. In the existing standard, SFFAS 7, *Revenue and Other Financing Sources*, paragraphs 83 through 87, the term “dedicated collections” includes revenue earmarked or dedicated to finance or help finance specific Federal programs as

well as revenue being held for the exclusive benefit of specific, identifiable non-Federal parties.¹¹

- A11. SFFAS 7 did not differentiate between (a) Government-owned revenue and other financing sources earmarked to finance or help finance specific Federal programs (earmarked funds) and (b) cash and other assets being held for the exclusive benefit of specific, identifiable non-Federal parties who have ownership interest in the assets (fiduciary activities). The Board believes separate standards based on the unique characteristics of these two types of “dedicated collections” are needed. In April 2003 the Board issued an exposure draft of a proposed standard, *Accounting for Fiduciary Activities*, to address those activities relating to the collection or receipt, management, protection, accounting, investment and disposition by the Federal Government of cash or assets in which non-Federal individuals or entities have an ownership interest that the Federal Government must uphold.
- A12. The Board's proposed standard for "Fiduciary Activities" and this standard on "Earmarked Funds" together address all activities or funds considered "dedicated collections" by SFFAS 7. When finalized, the fiduciary activities standard will rescind the "dedicated collections" provisions in SFFAS 7. This standard supersedes the “dedicated collections” provisions in SFFAS 7 (paragraphs 83-87) for earmarked funds.
- A13. SFFAS 7 classifies funds as “dedicated collections” based on the term “trust” as used in the U.S. Government Budget. It states that the standard covered “all funds within the budget classified as trust funds,” and “those funds within the budget that are classified as "special funds" but that are similar in nature to trust funds.”¹² The Board found this definition was insufficiently precise to ensure that all earmarked funds were reported as intended. The definition in this standard provides a substantive basis for classifying funds instead of relying on terms used in the budget.¹³

Special Accountability

- A14. Although the Federal Government does not have a fiduciary relationship (as defined by the proposed standard, *Accounting for Fiduciary Activities*¹⁴) with the potential beneficiaries of earmarked funds, the unique nature of earmarked funds necessitates additional explanation and disclosure in the basic financial statements. In SFFAS 7, *Accounting for Revenue and*

¹¹ SFFAS 7, par. 83.

¹² Ibid.

¹³ The exposure draft, *Accounting for Fiduciary Activities*, discusses the differences between private trust funds, Federal government trust funds designated as trusts by Congress, and fiduciary funds.

¹⁴ The exposure draft, *Accounting for Fiduciary Activities*, was issued in March 2003.

Other Financing Sources, special accountability reporting provisions were applied to all “dedicated collections” regardless of whether or not they involved Government-owned funds or private funds. The concept of special accountability applies to earmarked funds.

- A15. All earmarked funds have characteristics that justify special accountability. While many Government programs raise implied commitments for the future, there is a more explicit commitment associated with the statutory establishment of earmarked funds. The Government raises an expectation on the part of the public that the Government will use the amounts collected from specific sources and accumulated in earmarked funds for their stated purpose. There is often a direct link between the source of fund revenues and designated activities, benefits or purposes in an effort to charge beneficiaries or users for benefits received. Resource inflow is accounted for separately from general tax receipts, allowing the program’s status to be more easily examined. Many earmarked funds receive permanent appropriations in an amount equal to these inflows that become available without recurrent action by Congress through annual appropriations.
- A16. Earmarked funds are of interest to a universe of contributors, taxpayers and recipients, who have an expectation that earmarked revenues will be used for the purposes specified in the law authorizing the collection of the revenues. For example, current contributors to Social Security programs may assume that their earmarked taxes in excess of payments to current recipients will be available to fund future social security benefits. The likelihood of the public making this assumption may reasonably be expected when the Federal Government issues projections of the availability of accumulated balances for future payments.

Identifying Earmarked Funds

- A17. The Board considered whether any substantive difference exists between earmarked funds that are designated as “trusts” and those that are not. It also considered whether any substantive difference exists between earmarked funds that conduct business-type operations and those that do not. The Board did not find a substantive difference in either case. Therefore, all earmarked funds that meet the special accountability criteria in paragraph 11 of the standard are subject to the provisions of the standard, regardless of whether they are labeled as “trusts” or not and regardless of whether they conduct business-type operations or not.
- A18. The Board also considered whether intragovernmental funds should be included in the reporting requirements for earmarked funds. Although intragovernmental funds may meet the criteria of the definition of an earmarked fund, the Board does not believe intragovernmental funds warrant special accountability to the public because these funds conduct business-type operations primarily within and between Government agencies.

Intragovernmental balances are eliminated in the consolidation process in the preparation of the U.S. Government-wide financial statements.

- A19. The Board also decided to exclude credit financing accounts from the reporting requirements for earmarked funds. Although credit financing accounts may meet the criteria of the definition for earmarked funds, they primarily serve as clearing accounts for cash activity relating to Federal credit programs and do not accumulate results of operations. Fiduciary funds, which are not Government-owned, are also excluded.

Reporting Treatment

Effect on Net Position

- A20. Special accountability for earmarked funds is of increasing importance because the amount of revenue directed to earmarked funds has increased dramatically over the past two decades. It now constitutes a much greater proportion of the Federal budget. Just those earmarked funds designated as "Federal trust funds" by Congress alone accounted for over fifty percent of receipts from the public in 2003.
- A21. In addition, the invested balances of earmarked funds have grown significantly over the past two decades. Debt held by Government accounts was approximately \$2.85 trillion in 2003, a twelve-fold increase from 1983.¹⁵
- A22. Most of these balances are invested in Treasury securities. The Federal Government does not set aside assets to pay future benefits or other expenditures associated with earmarked funds. The cash receipts collected from the public for an earmarked fund are deposited in the U.S. Treasury, which uses the cash for general government purposes. Treasury securities are issued to the earmarked fund as evidence of its receipts. Treasury securities are an asset to the component entity and a liability to the U.S. Treasury. Because the component entity and the U.S. Treasury are both parts of the Government, these assets and liabilities offset each other from the standpoint of the Government as a whole. For this reason, they do not represent an asset or a liability in the U.S. Government-wide financial statements.
- A23. Treasury securities provide the component entity with authority to draw upon the U.S. Treasury to make future benefit payments or other expenditures. When the component entity requires redemption of these securities to make expenditures, the Government

¹⁵ Fiscal Year 2005 Historical Tables, Budget of the U.S. Government, pp. 118-119.

finances those expenditures out of accumulated cash balances, by raising taxes or other receipts, by borrowing from the public or repaying less debt, or by curtailing other expenditures. This is the same way that the Government finances all other expenditures. The investments in Treasury securities (an asset) held by the various earmarked funds and the liability of the U.S. Treasury to redeem the securities are treated as intragovernmental eliminations when the consolidated U.S. Government-wide financial statements are prepared. Therefore, the consolidated net position of the Federal Government reported on the U.S. Government-wide financial statements does not include the effect of the claim on the U.S. Treasury that the various funds hold, just as the consolidated net position does not include the effect of other intragovernmental claims. Instead, the U.S. Government-wide financial statements include the cumulative results of operations of earmarked funds – currently a large positive balance – as an offset against the cumulative results of operations of the general fund – currently a large negative balance. The result is that the financing provided by earmarked fund operations to general fund operations – which would otherwise be financed through the issuance of debt to the public, tax increases or other financing sources – is not shown on the face of the U.S. Government Balance Sheet.

- A24. This standard requires component entities to show the total amount of cumulative results of operations attributable to earmarked funds on the Statement of Changes in Net Position and on the Balance Sheet. The U.S. Government-wide financial statements are subject to the same requirement, except that the U.S. Government-wide financial statements include the U.S. Government Statement of Operations and Changes in Net Position instead of the Statement of Changes in Net Position. Net position at the component level is composed of unexpended appropriations and cumulative results of operations. Since unexpended appropriations are not applicable at the Government-wide level, net position equals cumulative results of operations. Under this standard the financial statements would thus present – in a transparent manner – the cumulative financing provided by earmarked funds to the general fund that will need to be repaid in order to use earmarked funds for the designated activities, purposes or benefits.
- A25. This standard also requires that component level financial statements include an explanation of earmarked fund investments in Treasury securities similar to the one given in paragraphs 27 and 28. The U.S. Government-wide financial statements are required to include an explanation of how the Government as a whole could provide the resources represented by the earmarked funds' balance in Treasury securities.
- A26. Several respondents to the exposure draft recommended that all reporting requirements relating to earmarked funds should be limited to the financial statement notes. Due to the impact of earmarked funds upon the financial position of the U.S. Government as a whole, as discussed in this section, the Board decided that certain basic disclosures, such as the impact upon net position, should appear on the face of the financial statements.

Effect on Flows

A27. For component entities, earmarked nonexchange revenue and other financing sources and net cost of operations are required to be shown separately in the Statement of Changes in Net Position. For the U.S. Government-wide financial statements, the components of earmarked funds activity should be shown separately on the U.S. Government Statement of Operations and Changes in Net Position. The Board believes that it is equally as important to show the earmarked funds activity during the period as it is to show the cumulative results of operations. Each gives a different and complementary perspective on the proportion of activity financed by general versus earmarked resources: the cumulative results of operations show the effect of all reporting periods up to a single point in time, whereas reporting of the earmarked funds activity shows the inflows and outflows during the reporting period. The relative importance indicated by each measure may differ because of trends in financing or special timing needs.

Disclosure

- A28. The Board determined that a number of earmarked funds were not being reported as intended under the existing standard. Therefore, in addition to clarifying the definition of earmarked funds, the standard requires that each component provide either a list of all earmarked funds for which it has program management responsibility or a statement as to where the information can be obtained. This requirement would ensure that no earmarked fund is omitted from the financial statements and that users could more easily locate information on a specific earmarked fund and determine its status. This information would not be required at the Government-wide level since program management responsibility does not reside at that level.
- A29. This standard requires condensed information on selected earmarked funds to be disclosed individually, with aggregate condensed information required for all others. In response to several requests from respondents to the exposure draft, the Board included, in paragraph 24 of this Statement, examples of quantitative and qualitative factors to be considered in selecting earmarked funds to be presented individually.
- A30. A component entity is required to disclose any change in legislation that significantly changes the purpose of the fund or that redirects a significant portion of the accumulated balance. In the opinion of the Board, the characteristic of special accountability requires that any significant change in the legislation governing the earmarked fund be disclosed in order to provide greater accountability for the earmarked revenues.

Other Changes

A31. If more than one component entity is responsible for carrying out the program financed with earmarked revenues and other financing sources, and the separate portions of the program can be clearly identified with the responsible component entity, then each component entity should report its portion in accordance with this standard. In the existing standard, SFFAS 7, paragraph 87, requires that “If more than one component entity is responsible for carrying out the program financed with the dedicated collections, then the entity with the largest share of the activity should be responsible for reporting all revenues, other financing sources, assets, liabilities, and costs of the fund.”¹⁶ The Board believes that this revision will assist users to evaluate the service efforts, costs and accomplishments of the component entity with actual program management responsibility, by relating relevant costs directly to the associated mission and performance.

A32. For funds meeting the definition criteria of earmarked funds, paragraph 86 of SFFAS 7 is replaced by this standard. In the opinion of the Board, the necessary guidance is provided in this standard in paragraph 35.

Implementation

A33. Early implementation of this standard is not permitted because of the difficulties that might arise when component financial statements are consolidated into the Government-wide financial statements. For example, a problem might arise if a component entity, which had previously reported all of the activity of an earmarked fund based on the requirements of the existing standard, decided upon early implementation of the standard, which allows it to report only that portion of the earmarked fund for which it has program management responsibility. This choice would cause portions of the earmarked fund not to be reported in the consolidated financial statements unless the component entities with management responsibility for the other portions of the earmarked fund also chose early implementation of the standard. For the same reason, restatement of the prior period columns in the initial year of implementation is not permitted.

Board Approval

A34. This statement was approved for issuance by all members of the Board.

Transactions– Component Entity Receives Revenue and Purchases Securities
1. A. Entries recording receipt of earmarked revenue collected by the Component Entity:

	DR	CR
Component Entity		
Fund Balance with Treasury (FBWT)	1,000	
Nonexchange revenue		600
Exchange revenue ¹⁸		400
To record receipts credited to earmarked fund.		

Treasury General Fund Entity		
Treasury General Fund Cash	1,000	
General Fund's Liability for FBWT		1,000
To record earmarked revenue collected by Component Entity.		

1.B. Entries recording the Component Entity purchase of Treasury securities:

	DR	CR
Component Entity		
Investments in Treasury Securities	1,000	
Fund Balance with Treasury		1,000
To record Treasury securities purchased.		

¹⁸This standard does not require exchange revenue for earmarked funds to be separately shown on the Statement of Net Cost.

Treasury General Fund Entity

General Fund's Liability for FBWT (Component Entity)	1,000	
General Fund's Liability for FBWT (Treasury BPD)		1,000
To record payment to Treasury Bureau of Public Debt for securities purchased.		

Treasury Bureau of Public Debt Entity

Fund Balance with Treasury	1,000	
Liability for Intragovernmental Debt- Treasury Securities		1,000
To record sale of securities to Component Entity earmarked fund.		

1.C. Entries recording interest earned on Treasury securities**Component Entity**

Fund Balance with Treasury (FBWT)	10	
Interest Revenue- Exchange		4
Interest Revenue- Nonexchange ¹⁹		6
To record interest income on Treasury securities.		

Treasury Bureau of Public Debt Entity

Interest Expense	10	
Fund Balance with Treasury (FBWT)		10
To record interest expense.		

Treasury General Fund Entity

General Fund's Liability for FBWT (Treasury BPD)	10	
General Fund's Liability for FBWT (Component Entity)		10
To record payment of interest to Component Entity by Treasury BPD.		

¹⁹For classification of exchange and nonexchange interest revenue, see SFFAS 7, Appendix B, paragraphs 306-308.

Statement of Federal Financial Accounting Standards 28: Deferral of the Effective Date of Reclassification of the Statement of Social Insurance: Amending SFFAS 25 and 26

Status

Issued	January 6, 2005
Effective Date	Effective upon issuance.
Affects	<ul style="list-style-type: none">• SFFAS 25, par. 7• SFFAC 26, par. 6
Affected by	None.

Summary

This standard defers for one year the effective dates of Statement of Federal Financial Accounting Standards (SFFAS) 25, *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment*, as well as SFFAS 26, *Presentation of Significant Assumptions for the Statement of Social Insurance: Amending SFFAS 25*. The provisions of these standards will be effective for periods beginning after September 30, 2005.

Table of Contents

Summary	1
Introduction	3
Standards	4
Appendix A: Basis for Conclusions	5
Appendix B: SFFAS 26	7
Appendix C: Abbreviations	8

Introduction

1. In July of 2003, the Board issued SFFAS 25, *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment*. SFFAS 25 requires that the Statement of Social Insurance (SOSI) be presented as a basic financial statement. SFFAS 26¹, *Presentation of Significant Assumptions for the Statement of Social Insurance: Amending SFFAS 25*, requires disclosure of significant assumptions underlying the SOSI. Both statements were to be effective for periods beginning after September 30, 2004.
2. Three federal agencies – the Office of Management and Budget (OMB), the Social Security Administration (SSA) and the Department of Health and Human Services (HHS) -- requested that the implementation of SFFAS 25 and 26 be deferred for one year. Each agency cites the fact that audit guidance was not finalized in time to support the original implementation date.
3. While noting the importance of reclassifying SOSI and related disclosures, the Board agrees that the current effective date is not feasible in light of the delayed audit guidance. Therefore, the effective date is deferred for one year. For ease of reference, Appendix B presents the text of SFFAS 26 as amended by this standard.

¹The relevant text of SFFAS 26 marked with amendments is presented as Appendix B.

Standards

Amendment of SFFAS 25

4. Par. 7 of Statement of Federal Financial Accounting Standards (SFFAS) 25 is amended as follows:

Chapter 8 and paragraphs 14-16 of SFFAS 8 are rescinded, as is the associated illustration of the Current Services Assessment in Appendix B of SFFAS 8, effective for reporting periods beginning after September 30, 2002. Information about Risk Assumed shall be presented as RSI for reporting periods beginning after September 30, 2002. The information required by paragraphs 27(3) and 32(3) of SFFAS 17 shall be presented as a basic financial statement for periods beginning after September 30, 2004, with earlier implementation encouraged. Other information required by SFFAS 17 shall be presented as RSI, except to the extent that the preparer elects to include some or all of that information in notes that are presented as an integral part of the basic financial statements, for periods beginning after September 30, 2004.

Amendment of SFFAS 26

5. Par. 6 of SFFAS 26 is amended as follows:

~~Consistent with the effective date of SFFAS 25, this~~ This standard is effective for periods beginning after September 30, 2004 2005.

Effective Date

6. This standard is effective upon issuance.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses factors considered significant by Board members in reaching the conclusions in this standard. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this statement---not the material in this appendix---govern the accounting for specific transactions, events or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

- A1. The Board conferred with the AICPA regarding the need for audit guidance prior to issuing SFFAS 25. In late 2003, a task force of the AICPA was formed to develop audit guidance. An exposure draft of the guidance was issued by the AICPA in March 2004. The final guidance was not issued in sufficient time to prepare for the initial implementation date despite the extensive efforts of the AICPA.
- A2. The Board issued an exposure draft proposing this deferral on July 21, 2004. Comments were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		2
Auditors	2	1
Preparers and financial managers	5	

- A3. All ten respondents supported the proposed deferral.

Structure of the Amendment

- A4. SFFAS 25, par. 7 contained provisions concerning the SOSI as well as an effective date for the provisions. SFFAS 26 replaces the reclassification provisions of SFFAS 25 related to the SOSI and provides an effective date for the revised provisions. The amendments in this standard replace the prior effective dates concerning the SOSI reclassification and

information in the prior statements with a new effective date of "periods beginning after September 30, 2005." Appendix B presents SFFAS 26 as amended by this standard.

Reasons for the Deferral

- A5. Agencies requesting the deferred implementation identified the following consequences of the delayed audit guidance:
- a. Agency staff was not able to prepare for the audit process due to the uncertainty absent final audit guidance on the process.
 - b. Agency staff was engaged in deliberations with the AICPA task force and unable to begin tentative preparations for the audit.
 - c. Contracts for audit engagements have not been expanded to encompass the audit process to be required relative to the SOSI.
 - d. Funding for the expanded audit engagements could not be included in fiscal year 2005 budget submissions.
- A6. The Board believes that a one-year delay is reasonable, necessary and appropriate in light of the delayed audit guidance.

Board Approval

- A7. This statement was approved for issuance by all members of the Board.

Appendix B: SFFAS 26

Paragraphs 4 through 6 of SFFAS 26 are presented with the revisions included for ease of reference.

Amendment of SFFAS 25

4. Paragraph 6 of SFFAS 25 is rescinded.
5. The information required by paragraphs 27(3) and 32(3) of SFFAS 17 shall be presented as a basic financial statement rather than as required supplementary stewardship information (RSSI). The underlying significant assumptions shall be included in notes that are presented as an integral part of the basic financial statement. Other information required by SFFAS 17— including the sensitivity analysis required in par. 27(4) and 32(4)-- shall be presented as required supplementary information, except to the extent that the preparer elects to include some or all of that information in notes that are presented as an integral part of the basic financial statements.

Effective Date

6. ~~Consistent with the effective date of SFFAS 25, this~~ This standard is effective for periods beginning after September 30, 2004 2005.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Summary

This standard changes the classification of information reported for heritage assets and stewardship land provided by Statement of Federal Financial Accounting Standards 8. This standard reclassifies all heritage assets and stewardship land information as basic information. This standard requires that entities reference a note on the balance sheet that discloses information about heritage assets and stewardship land, but no asset dollar amount should be shown. Instead, the note disclosure provides minimum reporting requirements consistent with the previous standards for heritage assets and stewardship land. These requirements include a description of major categories, physical unit information for the end of the reporting period, physical units added and withdrawn during the year, and a description of the methods of acquisition and withdrawal.

This standard also requires two new disclosures for heritage assets and stewardship land. Specifically, this standard requires additional reporting disclosures about entity stewardship policies and an explanation of how heritage assets and stewardship land relate to the mission of the entity.

This standard also includes the requirements for the U.S. Government-wide Financial Statement. It provides for a general discussion and directs users to the applicable entities' financial statements for more detailed information on heritage assets and stewardship land.

This standard amends several existing standards. The amendments rescind certain standards or parts of certain standards due to the classification change, as well as serve as a means to incorporate all standards specific to heritage assets and stewardship land into one document.

Table of Contents

Summary	1
Introduction	4
Standards of Federal Financial Accounting	5
Heritage Assets (including Multi-use Heritage Assets)	5
Stewardship Land	10
Effective Date	16
Appendix A: Basis for Conclusions	18

Introduction

1. The required supplementary stewardship information (RSSI) category, as described in Statement of Federal Financial Accounting Standards (SFFAS) 8, was a response to the unique aspects of the Federal accounting and reporting environment, and to the broad objectives of Federal financial reporting. It was intended to permit flexibility on the part of preparers and auditors that would facilitate reporting relevant, reliable information, including nonfinancial and nonhistorical information.¹
2. Although some stewardship information may not link directly with the basic financial statements because the data to be reported may be other than in dollar terms, the Federal Accounting Standards Advisory Board (the Board or FASAB) intended that RSSI information would augment the basic financial statements and would receive commensurate audit scrutiny.
3. The Board found, however, that in many cases the word “supplementary” in the RSSI title caused certain readers to assume that the information was of secondary importance. Since this was contrary to its intentions, the Board decided to eliminate the RSSI category and re-categorize the stewardship elements within the reporting categories that are well defined in existing professional literature and familiar to report users. Additionally, this standard clarifies the Board’s expectation that information essential to fair presentation will be subject to audit.
4. The main focus of this standard is the reclassification of heritage assets and stewardship land information. This standard reclassifies heritage assets and stewardship land information as basic information. Specifically, this standard requires that entities reference a note on the balance sheet that discloses information about heritage assets and stewardship land, but no asset dollar amount should be shown. The note disclosure provides minimum reporting requirements consistent with the previous standards for heritage assets and stewardship land, which includes a description of major categories, physical unit information for the end of the reporting period, physical units added and withdrawn during the year, and a description of the methods of acquisition and withdrawal.

¹ See the *Implementation Guide to Statement of Federal Financial Accounting Standards 7: Accounting for Revenue and Other Financing Sources*, par. 22-24, the diagram on page 15, and minutes of associated Board discussions. See also SFFAS 8, *Supplementary Stewardship Reporting*, par. 21, 34, 111-115, and minutes of associated Board discussions.

² [Footnote 2 rescinded by SFFAS 42, *Deferred Maintenance and Repairs: Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32.*]

-
5. Although the most significant change within this standard is this reclassification, it also introduces certain changes to the disclosure requirements for heritage assets and stewardship land. Specifically, the standard requires additional reporting disclosures about entity stewardship policies and an explanation of how heritage assets and stewardship land relate to the mission of the entity.
 6. This standard also includes disclosure requirements applicable to the U.S. Government-wide Financial Statement. This financial statement must provide a general discussion of heritage assets and stewardship land and direct users to the applicable entities' financial statements for more detailed information on these assets.
 7. This standard also amends several existing standards. The amendments rescind certain standards or parts of certain standards due to the classification change, as well as serve as a means to incorporate all standards specific to heritage assets and stewardship land into one document.
 8. The Board believes by fully incorporating into this standard all requirements for heritage assets (including multi-use heritage assets) and stewardship land, readers will better understand all reporting requirements. However, the main issues deliberated by the Board were the reclassification and presentation of heritage assets and stewardship land information. The Board has not reconsidered the definition, recognition and measurement provisions of the existing standards. These provisions have been brought forward from those standards that were based on prior Boards' conclusions.
 9. The Board developed this standard for heritage assets and stewardship land based on the importance of the data in meeting the stewardship reporting objective as described in Statement of Federal Financial Accounting Concepts (SFFAC) 1, *Objectives of Federal Financial Reporting*. Further information on the Board's considerations regarding this reclassification is included in the Basis for Conclusions.

Standards of Federal Financial Accounting

Heritage Assets (including Multi-use Heritage Assets)

Amendments to Existing Standards

10. SFFAS 6 par. 21 is amended as follows:

The following paragraphs provide recognition and measurement principles, and disclosure requirements for general PP&E. For standards relating to heritage assets, multi-use heritage-assets and stewardship land, see SFFAS 29, *Heritage Assets and Stewardship Land*. ~~each category of PP&E. The categories identified are:~~

- ~~general PP&E (including land acquired for or in connection with other general PP&E),~~
- ~~National Defense PP&E,~~
- ~~heritage assets, and~~
- ~~stewardship land (i.e., land not included in general PP&E).~~

11. SFFAS 6 par. 57 through 65 are rescinded.
12. SFFAS 8 Chapter 2 (Heritage Assets) is rescinded in its entirety.
13. SFFAS 14 par. 10 and 11 are rescinded.
14. SFFAS 16 is rescinded in its entirety.

Definitions

15. Heritage assets are property, plant and equipment (PP&E) that are unique for one or more of the following reasons:
 - historical or natural significance,
 - cultural, educational, or artistic (e.g., aesthetic) importance; or
 - significant architectural characteristics.

Heritage assets consist of (1) collection type heritage assets, such as objects gathered and maintained for exhibition, for example, museum collections, art collections, and library collections; and (2) non-collection-type heritage assets, such as parks, memorials, monuments, and buildings.

16. Heritage assets are generally expected to be preserved indefinitely. One example of evidence that a particular asset is heritage in nature is that it is listed on the National Register of Historic Places.
17. Some investments in heritage assets (e.g., national parks) will meet the definitions and be considered and reported as both heritage assets and stewardship land (see Stewardship Land below). Such reporting would not be considered duplication, as the type of information reported for the physical unit would be different for each category of stewardship asset.

-
18. Heritage assets may in some cases be used to serve two purposes—a heritage function and general government operations. In cases where a heritage asset serves two purposes, the heritage asset should be considered a **multi-use heritage** asset if the predominant use of the asset is in general government operations (e.g., the main Treasury building used as an office building). Heritage assets having an incidental use in government operations are not multi-use heritage assets; they are simply heritage assets.

Recognition and Measurement

Heritage Assets

19. With the exception of multi-use heritage assets (addressed in par. 22) the cost of acquisition, improvement, reconstruction, or renovation of heritage assets should be recognized on the statement of net cost for the period in which the cost is incurred. The cost³ should include all costs incurred during the period to bring the item to its current condition (See par. 26 of SFFAS 6 for examples of the costs to be considered).
20. With the exception of multi-use heritage assets (addressed in par. 23) no amounts for heritage assets acquired through donation or devise⁴ should be recognized in the cost of heritage assets.⁵
21. With the exception of multi-use heritage assets (addressed in par. 24) transfers of heritage assets from one Federal entity to another do not affect the net cost of operations or net position of either entity. However, in some cases, assets included in general PP&E may be transferred to an entity for use as heritage assets. In this instance, the transferring entity should recognize a transfer-out of capitalized assets.⁶

Multi-use Heritage Assets

22. The cost of acquisition, improvement, reconstruction, or renovation of multi-use heritage assets should be capitalized as general PP&E and depreciated over its estimated useful life.

³ For a full discussion of cost, including full cost, direct cost and indirect cost, see SFFAS 4, *Managerial Cost Accounting Concepts and Standards for the Federal Government*. Also, see par. 94-95, SFFAC 2, *Entity and Display*.

⁴ A will or clause of a will disposing of property.

⁵ SFFAS 7, *Accounting for Revenue and Other Financing Sources*, par. 258-259 explains that stewardship PP&E is “expensed if purchased, but no amount is recognized if it is received as a donation.”

⁶ SFFAS 7, *Accounting for Revenue and Other Financing Sources*, par. 74 and par. 345-346.

-
23. Multi-use heritage assets acquired through donation or devise should be recognized as general PP&E at the assets' fair value at the time received, and the amount should also be recognized as "nonexchange revenues" as defined in SFFAS 7, *Accounting for Revenue and Other Financing Sources*.
 24. Transfers of multi-use heritage assets from one Federal entity to another are transfers of capitalized assets. The receiving entity should recognize a transfer-in as an additional financing source and the transferring entity should recognize a transfer-out. The value recorded should be the transferring entity's book value of the multi-use heritage asset. If the receiving entity is not provided the book value, the multi-use heritage asset should be recorded at its estimated fair value⁷.

Disclosures and Required Supplementary Information

25. Entities with heritage assets should reference a note⁸ on the balance sheet that discloses information about heritage assets, but no asset dollar amount should be shown⁹. The note disclosure related to heritage assets should provide the following:
 - a. A concise statement explaining how they relate to the mission of the entity.
 - b. A brief description of the entity's stewardship policies for heritage assets. Stewardship policies for heritage assets are the goals and principles the entity established to guide its acquisition, maintenance, use, and disposal of heritage assets consistent with statutory requirements, prohibitions, and limitations governing the entity and the heritage assets.
 - c. A concise description of each major category of heritage asset. The appropriate level of categorization of heritage assets should be meaningful and determined by the preparer based on the entity's mission, types of heritage assets, and how it manages the assets.
 - d. Heritage assets should be quantified in terms of physical units. The appropriate level of aggregation and physical units¹⁰ of measure for each major category should be meaningful

⁷ See SFFAS 7, *Accounting for Revenue and Other Financing Sources*, par. 74 for a discussion of transfers of assets.

⁸ This standard does not prescribe a specific reference or line item entitled "Heritage Assets" as it may be included with other items for which no dollar amounts are recognized (such as stewardship land and other items that in the future may require similar non-financial disclosure) for presentation. Instead, the standard allows entities flexibility in determining the best presentation.

⁹ No asset dollar amount is shown, except for multi-use heritage assets, which are capitalized and reported as part of general PP&E. See par. 22 through 24 and par. 27 for additional explanation.

¹⁰ Defining physical units as individual items to be counted is neither required nor prohibited. Particularly for collection-type heritage assets, it may be more appropriate to define the physical unit as a collection, or a group of assets located at one facility, and then count the number of collections or facilities.

and determined by the preparer based on the entity's mission, types of heritage assets, and how it manages the assets. For each major category of heritage asset (identified in c. above) the following should be reported:

1. The number of physical units by major category; major categories should be classified by collection or non-collection type heritage assets for which the entity is the steward as of the end of the reporting period;
 2. The number of physical units by major category that were acquired and the number of physical units by major category that were withdrawn during the reporting period; and
 3. A description of the major methods of acquisition and withdrawal of heritage assets during the reporting period. This should include disclosure of the number of physical units (by major category) of transfers of heritage assets between Federal entities and the number of physical units (by major category) of heritage assets acquired through donation or devise, if material. In addition, the fair value of heritage assets acquired through donation or devise during the reporting period should be disclosed, if known and material.
26. ^{11,12} Entities should include a reference to deferred maintenance and repairs information¹³ reported in required supplementary information.
27. Entities should disclose that multi-use heritage assets are recognized and presented with general PP&E in the basic financial statements and that additional information for the multi-use heritage assets is included with the heritage assets information.

U.S. Government-wide Financial Statement Disclosures¹⁴

28. The U.S. Government-wide financial statement should reference a note on the balance sheet that discloses information about heritage assets, but no asset dollar amount should be shown. The note disclosure related to heritage assets should provide the following:

¹¹Footnote deleted by SFFAS 42.

¹² Footnote deleted by SFFAS 42.

¹³ See SFFAS 42, *Deferred Maintenance and Repairs, Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32* for information regarding definition, measurement and required supplementary information.

¹⁴ SFFAS 24, *Selected Standards for the Consolidated Financial Report of the United States Government*, clarified that all existing and future standards apply to all Federal entities, including the U.S. Government-wide Financial Statement, unless a standard specifically provides otherwise.

-
- a. A concise statement explaining how they relate to the mission of the Federal Government.
 - b. A description of the broad categories of heritage assets of the Federal Government.
 - c. A general reference to agency reports for additional information about heritage assets, such as agency stewardship policies for heritage assets, physical units by major categories of heritage assets.
29. The U.S. Government-wide financial statement should disclose that multi-use heritage assets are recognized and presented with general PP&E in the basic financial statements and that additional information for the multi-use heritage assets is included with the heritage assets information.

Stewardship Land

Amendments to Existing Standards

30. SFFAS 6 par. 66 through 76 are rescinded.
31. SFFAS 8 Chapter 4 (Stewardship Land) is rescinded in its entirety.
32. SFFAS 14 par. 10 and 11 are rescinded.

Definitions

33. Stewardship Land includes both public domain^{14.1} and acquired land and land rights¹⁵ owned by the Federal Government intended to be held indefinitely. Examples of stewardship land include land reserved, managed, planned, used, or acquired for¹⁶

^{14.1} Public domain land is land that was originally ceded to the United States by treaty, purchase, or conquest in contrast to acquired lands, which have been purchased by, given to, exchanged with, or transferred through condemnation proceedings to the federal government.

¹⁵ Land rights are interests and privileges held by the entity in land owned by others, such as leaseholds, easements, water and water power rights, diversion rights, submersion rights, rights-of-way, mineral rights, and other like interests in land. Land rights such as easements or rights-of-way that are for an unspecified period of time or unlimited duration are considered permanent land rights. Temporary land rights are those land rights that are for a specified period of time or limited duration.

¹⁶ Land used or acquired for or in connection with items of general PP&E but meeting the definition of stewardship land should be classified as stewardship land.

-
- a. forests and parks;
 - b. recreation and conservation;
 - c. wildlife habitat and grazing;
 - d. historic landmarks and/or the preservation of pre-historic and historic structures (those listed on or eligible for listing on the National Register of Historic Places);
 - e. multiple purpose ancillary revenue generating activity (for example, special use permits, mineral development activities, and timber production); and/or
 - f. buffer zones for security, flood management, and noise and view sheds.
34. "Land" is defined as the solid part of the surface of the earth. Excluded from the definition are the natural resources (that is, depletable resources, such as mineral deposits and petroleum; renewable resources, such as timber; and the outer-continental shelf resources) related to land.¹⁷
35. Land and land rights meeting the definition of general PP&E established in SFFAS 6, as amended, should be accounted for in accordance with SFFAS 6, as amended.
36. Land and land rights owned by the Federal Government and not acquired for or in connection with items of general PP&E should be reported as stewardship land.
- 36A. Acres of land held for disposal or exchange include land for which the entity has satisfied the statutory disposal authority requirements specific to the land in question.^{17.1} Disposal includes conveyances of federal land to non-federal entities not limited to sale, transfer, exchange, lease, public-private partnership, and donation, or any combination thereof.
- 36B. Commercial use land sub-category includes land or land rights that are predominantly used to generate inflows of resources (such inflows may be derived from the land itself or activities performed on the land and regardless of whether the use or activity is intended to produce a profit) from non-federal third parties, usually through special use permits, right-of-

¹⁷ The Board presently has an active project to address standards for natural resources, for which the Board is considering developing individual standards for each type of natural resource separately. To begin the project, the Board will be addressing oil and gas resources. The framework for the oil and gas resource phase of the project will be used as a model when addressing the other types or logical sets of natural resources (e.g., timber, grazing land, solid leasable minerals) in subsequent phases of the project.

^{17.1} Entity decisions to identify and classify land as held for disposal or exchange often require public participation and diverse clearances, such as environmental and economic impact studies, surveys, and appraisals.

way grants, and leases. Such inflows may arise from exchange or non-exchange activities and may or may not be considered dedicated collections. Examples include revenue or inflows derived from

- a. concession arrangements;
- b. grants for a specific project such as electric transmission lines, communication sites, roads, trails, fiber optic lines, canals, air rights, flumes, pipelines, reservoirs and dams;
- c. land sales or land exchanges;
- d. leases;
- e. permits for public use such as commercial filming and photography, advertising displays, agriculture, recreation residences and camping, recreation facilities, temporary use permits for construction equipment storage and assembly yards, well pumps, and other such uses;
- f. forest product sales such as timber, or sales arising from national forests and grasslands; and/or
- g. public-private partnerships.

36C. Conservation and preservation land sub-category includes land or land rights that are predominantly used for conservation or preservation purposes. Conservation and preservation, although closely linked, are distinct terms. Each term involves a certain type or degree of protection. Specifically, conservation is generally associated with the protection and proper use of natural resources, whereas preservation is associated with the protection of buildings, objects, and landscapes from use. Examples of land conserved or preserved for significant natural, historic, scenic, cultural, and recreational resources include the following:

- National parks
- Geological resource sites
- Wildlife and plant life refuges
- Archeological resource sites
- Local Native American or ethnic cultural sites

36D. Operational land sub-category includes land or land rights predominantly used for general or administrative purposes. For example, the following functions performed by entities would be included in this sub-category:

- a. Military functions include preparing for the effective pursuit of war and military operations short of war; conducting combat, peacekeeping, and humanitarian military operations; and supporting civilian authorities during civil emergencies.
- b. Scientific functions include conducting and managing research, experimentation, exploration, and operations (including the development of commercial capabilities). Broad scientific fields of study generally include (1) physical sciences (physics, astronomy, chemistry, geology, metallurgy), (2) biological sciences (zoology, botany, genetics, paleontology, molecular biology, physiology), and (3) social sciences (psychology, sociology, anthropology, economics).
- c. Nuclear functions include managing or regulating the use of nuclear energy, power plants, radioactive materials, radioactive material shipments, nuclear storage, and nuclear reactor decommissioning.
- d. Other related functions include those that are administrative or other mission related in nature. For example, land used for readiness and training, office building locations, storage, or vacant properties fall under this category.

Recognition and Measurement

37. The cost of acquisition of stewardship land should be recognized on the statement of net cost for the period in which the cost is incurred. The cost should include all costs to prepare stewardship land for its intended use (e.g., razing a building). In some cases, land may be acquired along with existing structures. The following treatments should apply:
- a. if the structure would be deemed a heritage asset and is significant in and of itself, the entity should use its judgment as to whether the acquisition cost should be treated as the cost of stewardship land, heritage asset, or both;
 - b. if the structure is to be used in operations (for example, as general PP&E) but 1) the value of the structure is insignificant, or 2) its acquisition is merely a byproduct of the acquisition of the land, the cost in its entirety should be treated as an acquisition of stewardship land; or
 - c. significant structures that have an operating use (e.g., a constructed hotel or employee housing block) should be treated as general PP&E by identifying the cost attributable to general PP&E and segregating it from the cost of the stewardship land acquired.

-
38. No amounts for stewardship land acquired through donation or devise¹⁸ should be recognized in the cost of stewardship land.¹⁹
39. Transfers of stewardship land from one Federal entity to another, does not affect the net cost of operations or net position of either entity. The transferring and recipient entities should properly adjust for estimated acres of land information.²⁰

Disclosures and Required Supplementary Information

40. The following disclosures^{21-21.1} should be provided for stewardship land and permanent land rights:
- a. A concise statement defining an entity's federal land, and explaining how stewardship land relates to the mission of the entity.
 - b. A brief description of the entity's policies for stewardship land. Policies for land are the goals and principles the entity established to guide its acquisition, maintenance, use, and disposal of land consistent with statutory requirements, prohibitions, and limitations governing the entity and the land.
 - c. Information of land use by sub-category. Stewardship land and permanent land rights should be assigned to one of three sub-categories based on predominant use^{21.1a} and reported in estimated acres of land. The three sub-categories are commercial use land; conservation and preservation land; and operational land.

¹⁸ A will or clause of a will disposing of property.

¹⁹ SFFAS 7, *Accounting for Revenue and Other Financing Sources*, par. 258-259 explains that stewardship PP&E is "expensed if purchased, but no amount is recognized if it is received as a donation."

²⁰ Footnote rescinded by SFFAS 59.

²¹ This standard does not prescribe a specific reference or line item entitled "Stewardship Land" as it may be included with other items for which no dollar amounts are recognized (such as heritage assets and other items that in the future may require similar non-financial disclosure) for presentation. Instead, the standard allows entities flexibility in determining the best presentation.

^{21.1} Unless otherwise noted, disclosure requirements are limited to the stewardship land category and are not required for each of the three sub-categories of conservation and preservation land; operational land; and commercial use land.

^{21.1a} Predominant Use of land. Predominant use is the major or primary current use of an asset during the reporting period and does not include incidental or infrequent uses of the asset. Moreover, predominant use can change between reporting periods. An asset's predominant use should be consistent with the entity's authorizing legislation but may not always be consistent with the original intent or reason why the asset was initially acquired.

Where stewardship land and permanent land rights have more than one use, the predominant use of the land should be used to sub-categorize the land.^{21.1b}

- i. Acres of land. The estimated number of acres at the beginning of each reporting period among the three sub-categories and the estimated number of acres at the end of each reporting period for land and permanent land rights.
 - d. If applicable, the amount of estimated acres of land held for disposal or exchange and their predominant use. For purposes of this Statement, stewardship land is considered held for disposal or exchange when the entity has satisfied the statutory disposal authority requirements specific to the land in question.
 - e. Stewardship land rights information should include a general description of the different types of rights acquired by the entity, whether such rights are permanent or temporary, and amounts paid during the year to maintain such rights.
- 40A. The financial statement balance sheet should reference a note that discloses information required at paragraph 40 (a through e) about Stewardship land and permanent land rights but no asset dollar amount should be shown. Existing disclosures^{21.2} should continue during the transition period through fiscal year 2025 and cease in fiscal year 2026 when superseded by the transition of the RSI information to note disclosures. If stewardship land and general PP&E land are presented in separate notes to the financial statements, include cross references between the notes.
41. ^{22, 23} Entities should include a reference to the deferred maintenance and repairs information²⁴ reported in required supplementary information.

^{21.1b} Aggregation and assignment of land. The level of aggregation of land and permanent land rights used to determine predominant use should be determined by the preparer considering the entity's mission, types of land use and how it manages the assets.

^{21.2} For stewardship land, existing disclosures are those required by paragraph 40, titled "Disclosures and Required Supplementary Information" that are being rescinded (40.a through 40.d.3) effective fiscal year 2026. To the extent practical, duplication of information, such as statements explaining how stewardship land relates to the entity's mission or its SL policies and procedures, should be avoided and should remain as basic (note disclosure) during the transitional period.

²² Footnote deleted by SFFAS 42.

²³ Footnote deleted by SFFAS 42.

²⁴ See SFFAS 42, *Deferred Maintenance and Repairs, Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32* for information regarding definition, measurement and required supplementary information.

U.S. Government-wide Financial Statement Disclosures²⁵

42. The U.S. Government-wide financial statement should include the following information:

- a. A concise statement including a general description of the federal government's land explaining how its federal land relates to the mission of the Federal Government.
- b. A disclosure of the estimated acres of land by predominant use sub-categories and estimated acres of land held for disposal or exchange by the Federal Government.
- c. A general reference to agency reports for additional information about stewardship land, such as agency policies and estimated acres of land.

42A. The U.S. Government-wide financial statement balance sheet should reference a note that discloses the information about stewardship land and land rights required by paragraph 42, but no asset dollar amounts should be shown. Existing disclosures^{25.1} should continue during the transition period through fiscal year 2025 and cease in fiscal year 2026 when superseded by the transition of the RSI information to note disclosures. If stewardship land and general PP&E land are presented in separate notes to the financial statements, include cross references between the notes.

Effective Date

43. These standards are effective for reporting periods beginning after September 30, 2005 with the exception of the specific paragraphs listed below. These exceptions provide for a phase-in of disclosure requirements being reported as basic information such that these standards will be fully implemented for reporting periods beginning after September 30, 2008.

- a. Section c and section d1 in par. 25 and 40 are effective for reporting periods beginning after September 30, 2007;

²⁵ SFFAS 24, *Selected Standards for the Consolidated Financial Report of the United States Government*, clarified that all existing and future standards apply to all Federal entities, including the U.S. Governmentwide Financial Statement, unless a standard specifically provides otherwise.

^{25.1} Existing disclosures at paragraph 42 are those which are in effect for reporting entities prior to the amendments contained at paragraphs 42 and 42A. To the extent practical, duplication of information, such as statements explaining how stewardship land relates to the entity's mission or its SL policies and procedures, should be avoided and should remain as basic (note disclosure) during the transitional period.

-
- b. Section d2 and section d3 in par. 25 and 40 are effective for reporting periods beginning after September 30, 2008; and
 - c. Information that is provided an exception (described in par. a. and b. above) to being reported as basic information during the phase-in period is still required, but should be reported as RSI until the exceptions expire.
44. Full implementation of the standards is effective for reporting periods beginning after September 30, 2008. Earlier implementation is encouraged.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this statement---not the material in this appendix---should govern the accounting for specific transactions, events or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Introduction

45. In SFFAS 8, *Supplementary Stewardship Reporting*, the Board described stewardship information and required the reporting of that information. When the Board established the RSSI category, it believed that the new category was needed to highlight the unique nature of the reported items, to accommodate non-financial data, and to allow for reporting experimental information, such as condition. The Board believed that as agencies gained experience in reporting stewardship information that the reporting would evolve to a level where there was consistency within categories and at the government-wide consolidated reporting level. The Board has found that this evolution is, in fact, happening.
46. Consequently, the Board also has considered entities' improved accounting and reporting methods in deciding how to categorize the stewardship elements. The Board has found that, in many cases, entities have adopted the stewardship standards with a sense of responsible creativity. There are many instances where entities have developed imaginative, informative, and meaningful displays of stewardship information. The Board commends the efforts of these entities and supports their continued efforts to report on the Nation's stewardship resources and responsibilities in a responsible and informative manner.
47. The Board believes that avoiding the use of the RSSI category will eliminate some potential confusion and ambiguity. In particular, it should clarify the Board's expectation that significant information essential to fair presentation will be subject to audit.
48. The Board eliminated the use of RSSI to report information about weapons systems when it issued SFFAS 23, *Eliminating the Category "National Defense Property, Plant, and Equipment."* Additionally, SFFAS 25, *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment*, eliminated the use of RSSI for reporting stewardship responsibilities. Classification of other items of information currently designated RSSI (stewardship investments) may be dealt with in one or more future standards.

-
49. This standard eliminates the use of RSSI for reporting Stewardship PP&E. Stewardship PP&E consists of items whose physical properties resemble those of general PP&E traditionally capitalized in basic financial statements. However, the nature of Federal physical assets classified as stewardship PP&E (e.g., museum collections, monuments, assets acquired in the formation of the nation, etc.) differ from general PP&E. Stewardship PP&E includes heritage assets (e.g., Federal monuments and memorials and historically or culturally significant property) and stewardship land (i.e., land not acquired for or in connection with general property, plant, and equipment).²⁶

Amendments to Standards

50. This standard amends several existing standards. The amendments rescind certain standards or parts of certain standards due to the classification change, as well as serves as a means to incorporate all standards specific to heritage assets and stewardship land into one standard.
51. This standard amends SFFAS 8 by rescinding chapters 2 and 4 of that standard. This change eliminates the use of the RSSI category to report information about heritage assets and stewardship land. This standard also incorporates the revised multi-use heritage asset standards of SFFAS 16, *Amendments to Accounting for Property, Plant, and Equipment: Measurement and Reporting for Multi-use Heritage Assets*.²⁷ Accordingly, SFFAS 16 is rescinded in its entirety. Additionally, par. 57 through 76 of SFFAS 6, *Accounting for Property, Plant and Equipment* also is rescinded because they relate to heritage assets and stewardship land.
52. SFFAS 14, *Amendments to Deferred Maintenance Reporting*, also amended certain paragraphs within Chapters 2 and 4 of SFFAS 8 that related to deferred maintenance and condition reporting. This standard also incorporates those revisions. Accordingly, the portion of SFFAS 14 entitled 'Amendments to SFFAS 8' (SFFAS 14 par. 10 and 11) is rescinded.²⁸
53. As a result, this standard incorporates all standards for heritage assets and stewardship land into one document. The Board believes by fully incorporating all requirements for heritage assets (including multi-use heritage assets) and stewardship land, readers will

²⁶ SFFAS 8, par. 11

²⁷ SFFAS 16 has been incorporated into the current standard for ease in understanding because SFFAS 16 amended Chapter 2 Heritage Assets of SFFAS 8 and portions of SFFAS 6.

²⁸ SFFAS 14 did amend the status of deferred maintenance by classifying it as RSI, however, SFFAS 6, *Accounting for Property, Plant and Equipment*, provides for the information to be reported. See SFFAS 6, Chapter 3, Deferred Maintenance (par. 77-84) for information regarding definition, measurement and disclosures specific to deferred maintenance.

better understand all existing reporting requirements. However, the main issues deliberated by the Board were the reclassification and presentation of heritage assets and stewardship land information. The Board has not reconsidered the definition, recognition and measurement provisions of the current standards at this time. These provisions have been brought forward from previous standards that were based on prior Boards' conclusions. In the future, the Board may reconsider the recognition and measurement issues for heritage assets and stewardship land.

Basic vs. RSI

54. The Board believes that information on heritage assets and stewardship land (except for condition) should be basic information for the following reasons:
 - a. Information on these assets is essential to fair presentation and may be crucial to understanding the entirety of an entity's financial condition.
 - b. Accountability for heritage assets and stewardship land requires more audit scrutiny than would be afforded if they were considered RSI.²⁹
 - c. This classification is consistent with existing standards issued by the Governmental Accounting Standards Board (GASB) that is specific to reporting on art and historical treasures; and the Financial Accounting Standards Board (FASB) that is specific to collections, and other works of art and historical treasures. There is also existing audit guidance available in this area.³⁰
55. It should be noted that during Board discussions and deliberations related to SFFAS 25, *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment*, and the reclassification of the stewardship responsibilities, the Board developed a detailed list of practical and conceptual factors for consideration in determining RSI versus basic information classification. This structure was also considered in the decisions relating to the appropriate classification of heritage assets and stewardship land information and will be invoked in any future classification decisions by the Board.³¹

²⁹ See SFFAS 8, par. 114 which details the fact the Board believed "that certain stewardship information, should receive more audit scrutiny than it would if it were RSI..."

³⁰ For additional information on these existing standards and guidance see Statement of Financial Accounting Standards 116, Accounting for Contributions Received and Contributions Made, GASB 34 par. 27-29 (*Reporting Works of Art and Historical Treasures*), and AICPA Audit and Accounting Guide, *Not-for-Profit Organizations*.

³¹ See SFFAS 25, Appendix A paragraphs 34-50 for detail on the factors. To help readers understand the Board's deliberations, those paragraphs provide more details about some practical and conceptual factors that affected the Board's decision whether to designate an item as RSI or as an integral part of the basic financial statements.

-
56. Specifically, the Board agreed that heritage assets and stewardship land information was essential and relevant to fair presentation. Additionally, the Board believed that it was important that this be clearly communicated to the readers of the financial statements and auditor reports. The Board also noted the importance and relevance of the information in light of the *Objectives of Federal Financial Reporting*.³²
 57. Condition reporting for heritage assets and stewardship land should be reported as required supplementary information because this information is experimental in nature and there is inconsistency in the manner of assessing and reporting this information.
-

U.S. Government-wide Financial Statement

58. In determining the required disclosures for the U.S. Government-wide Financial Statement, the Board considered SFFAC 4, *Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government*, which designated the intended or primary audience of the U.S. Government-wide Financial Statement and qualitative characteristics for the U.S. Government-wide Financial Statement that would be most useful for that audience.³³
59. Par. 6 of SFFAC 4 explains that the U.S. Government-wide Financial Statement “is a general purpose report that is aggregated from agency reports and tells users where to find information in other formats, both aggregated and disaggregated, such as individual agency reports, agency websites, and the President’s Budget.”
60. The Board considered the nature and the variety of the data that would be aggregated from the various entities in preparing the heritage assets and stewardship land disclosures for the U.S. Government-wide Financial Statement. The Board determined that the standards for the U.S. Government-wide Financial Statement should provide for a general discussion and direct users to the applicable entities’ financial statements for more detailed information on heritage assets and stewardship land.

³² See Stewardship (Objective 3) as described in SFFAC 1, *Objectives of Federal Financial Reporting*.

³³ See SFFAC 4, *Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government* par. 5

Exposure Draft

61. FASAB published the exposure draft (ED) *Heritage Assets and Stewardship Land: Reclassification from Required Supplementary Stewardship Information* on August 20, 2003. Upon release of the ED, notices and/or press releases were provided to: the Federal Register; the *FASAB News*, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, *Government Accounting and Auditing Update*, and *JFMIP News*; the CFO Council, the Presidents Council on Integrity and Efficiency, the Financial Statement Audit Network, the Federal Financial Managers Council; and committees of professional associations generally commenting on exposure drafts in the past.
62. Twelve letters were received from the following sources:

	FEDERAL (internal)	NONFEDERAL (external)
Users, academics, others	1	3
Auditors	1	1
Preparers and financial managers	6	

63. A public hearing was held on March 4, 2004. Individuals from the Library of Congress, U.S. Department of Agriculture, Department of Interior (including representatives from the CFO, OIG and IPA currently performing the DOI audit), and a representative from the Institute for Truth in Accounting testified at the public hearing. The participants reiterated issues included in the comment letters to the ED.

Responses to the ED

64. A majority of the respondents did not agree with heritage assets and stewardship land information being reported as basic. Key issues raised by respondents included the following:
- a. A need for more specific guidance on categorization and unitization for reporting heritage assets and stewardship land information;
 - b. The audit implications of the standard, including the additional audit costs by classifying the information as basic; and
 - c. Less useful information being presented by agencies with the reclassification.

65. Most respondents that did not agree with heritage assets and stewardship land information being reported as basic, recommended that it be classified as RSI (or remain as RSSI).
66. Most respondents agreed with the Board's new disclosure requirements and did not foresee any problems with the new disclosure requirements
67. Most respondents did not agree with the proposed effective date for periods beginning after September 30, 2004 in the ED. Key reasons cited for the delay of the effective date included the need for additional time to address implementation issues and time for including funding in their budgets to cover the additional costs for implementation and audit.

Board Consideration of Comments

68. Considering that the majority of respondents did not agree with the ED, the Board directed staff to research various issues that would assist the Board in addressing the comments raised by respondents. For example, the Board considered the current FASB and GASB standards in this area. The Board also considered results of a review of private museum reporting practices.
69. The Board also considered several recent government-wide initiatives that promote accountability and stewardship over real property assets and heritage assets such as the Federal Real Property Asset Management Initiative, Executive Order 13327 Federal Real Property Asset Management, and Executive Order 13287 Preserve America. The Board believes these initiatives provide further support for the decision to classify the heritage assets and stewardship land as basic information and the importance of accountability for these types of assets.
70. The Board also considered the issue of unitization and categorization further by reviewing draft guidance prepared by the Heritage Assets Categorization Project Team and the Accounting and Auditing Policy Committee (AAPC) Stewardship Guidance Workgroup. The Board believes that the draft products from these workgroups are excellent starting points for developing comprehensive guidance on many of the issues raised by respondents.
71. In response to the audit concerns, FASAB held a roundtable meeting with representatives from the Office of Inspector General (OIG) and CPA firms responsible for financial statement audits to solicit their views on specific issues raised by respondents as well as potential audit costs involved with implementing the standard.
72. As a result of the comments received and testimony provided at the public hearing, as well as the above actions, the Board did make certain revisions, which are detailed in the

following paragraphs. Additionally, reasons for not making revisions on specific issues are detailed below.

Importance to Mission

73. The ED contained the new disclosure that required a statement explaining how heritage assets and stewardship land are “important to the overall mission of the entity.” A respondent explained that agencies may have significant stewardship assets as a result of their compliance with cultural resource protection laws and regulations or because Congress has determined that certain classes of assets to be nationally significant, regardless of the agency mission. The respondent believed that showing the link between the agency mission and the assets may result in less disclosure by agencies that lack a direct link to their mission.
74. The Board understands that some agencies may have heritage assets because of the facts described by the respondent and it is possible that the assets may not be important to the overall mission of the agency. However, the Board considered the new requirement to be explanatory in nature by offering more information about the assets. The Board did not envision the importance to the mission to be considered in determining which heritage assets and stewardship land should be included.
75. The Board revised the language of the new requirement to read “A concise statement explaining how they relate to the mission of the entity.” The Board believes with this language, the requirement is flexible enough that if the assets are not related to the mission of the entity, the entity may state that and provide additional explanation, if they so choose.

Limiting Information Presented

76. Several respondents commented that agencies would present less information in their annual reports because the heritage assets information and stewardship land information would be subject to audit since it is classified as basic information. The classification of heritage assets and stewardship land information as basic should not limit the information entities choose to present or prevent the continuation of informative and meaningful displays of information.
77. This standard does not eliminate any information that was previously required for heritage assets and stewardship land. In drafting the standard, the Board envisioned the required disclosures to be presented in a concise format similar to the format that most entities present for general property, plant and equipment.

-
78. The Board notes that preparers continue to have the option of voluntarily presenting information beyond the minimum reporting requirements as other accompanying information.
-

Categorization and Unitization

79. The standard does not define asset categories or physical units for reporting. The Board recognizes that there may be difficulties for agencies in determining the appropriate level of aggregation for reporting categories of heritage assets. However, the Board believes that the agencies are in the best position to determine the most meaningful level of presentation. The Board believes that ultimately the presentation depends upon the specifics of the entity—its mission, the types of heritage assets, how it manages, and materiality considerations. It would be difficult for the standard to define such specific reporting requirements, as they may be unique to each entity.
80. The Board also has avoided detailed illustrations and limited specific examples in the standard because preparers and auditors may attempt to strictly adhere to the illustrations.
81. The standard emphasizes reporting on asset categories, rather than individual assets. Based on comments to the ED, it appeared that this may not have been clear to the readers. Therefore, additional language was added to the final standard to clarify that the appropriate level of categorization of stewardship assets and the associated physical units should be determined by the preparer based on the entity's mission, types of use, and how it manages the assets.
82. Entities should designate asset reporting categories that allow inclusion and aggregation of their heritage assets and stewardship land. Entities should determine the appropriate level of detail for their categorization. It is helpful if entities designate asset categories that are meaningful and reflect how the entity views the assets for management purposes. It would also be helpful for entities to document the reasoning for the categorization.
83. The Board recognizes that the information that is appropriate for reporting heritage assets and stewardship land can vary from one entity to another. The amount and level of detail of the information presented depends, in part, on the mission of the entity and the materiality of the assets in question. For example, categories reported by an agency that has a stewardship mission, might be more disaggregated than is appropriate for one that does not.
84. Defining physical units as individual items to be counted is neither required nor prohibited. Particularly for collection-type heritage assets, it may be more appropriate to define the

physical unit as a collection, or a group of assets located at one facility, and then count the number of collections or facilities. The level of detail may differ by entity.

85. It is the intent of the Board to provide entities with considerable latitude and flexibility in designating categories, determining a meaningful level of aggregation for reporting, and selecting physical units aligned with those categories. For example, should a library report that it has a collection of papers or that it has 10,000 pieces of paper in that collection? Further, should a museum report that has 10 dinosaur skeletons or 10,000 dinosaur bones, or a single collection of skeletons in one facility? Ultimately, the answer is influenced by how the entity manages as well as materiality considerations. Agencies may be required to count the number of individual items for control purposes. But due to materiality considerations, entities may choose to report a higher level of aggregation such as the number of collections or facilities in which individual items are located. Although individual item counts may not be necessary to support the reporting requirements in the standard, this does not mean that item counts for management control and safeguarding purposes are not necessary to fulfill mandates required by other public laws and regulations.

Supporting Documentation

86. The Board has recognized in previous standards that historical records for items acquired long ago may not have been retained.³⁴ Based on responses to the ED, testimony provided at the public hearing, and discussions with the auditors at the roundtable meeting, the Board believes this may be an issue in implementing this standard.
87. The Board understands that with the heritage assets and stewardship land information being classified as basic, auditors may require certain supporting documentation to fulfill audit assertions. There may be instances where the historical documents are not available for items acquired many years ago, prior to the effective date of this standard, in an environment in which the historical records were not required to be retained and may therefore be inadequate.
88. Therefore, the Board encourages preparers, program offices, and auditors to develop other reasonable approaches and methods for satisfying the specific audit assertions that would rely on historical documents as evidence and support. In addition, the Board plans to

³⁴SFFAS 23 *Eliminating the Category National Defense PP&E*, par. 11 provided implementation guidance as follows: "This standard recognizes that determining initial historical cost may not be practical for items acquired many years prior to the effective date of this standard in an environment in which the historical records were not required to be retained and may therefore be inadequate."

suggest that this issue be addressed further in the forthcoming AAPC Guidance (discussed below).

Additional Guidance

89. The Board notes that there has been work by certain government-wide task forces (such as the AAPC Stewardship Guidance Work Group and the Heritage Assets Categorization Team) to address issues identified such as standardized categories, definitions of units of measurements, and other areas where prescriptive guidance has been requested. The task forces contained representatives from pertinent agencies and experts in the field, which most likely provided for a comprehensive assessment.
90. Considering the extensive research performed by the task forces, their draft proposals or guides which address areas such as categories and subcategories and related physical units should be a good starting point for additional guidance that could be included in a Technical Release from the AAPC.
91. The Board will request that the AAPC revitalize the efforts of the Stewardship Guidance Work Group and work towards finalization of their draft guidance, which may ultimately be published as a Technical Release. The guidance will be expanded where necessary to cover the issues identified by respondents in the comment letters. For example, the Board will suggest that the AAPC review case studies where supporting documentation may not be available and determine other reasonable approaches, methods, and best practices for satisfying specific assertions that would rely on historical documents as evidence and support.
92. The Board will suggest that the AAPC also consider the work done by the Heritage Assets Categorization Team. FASAB staff will work closely with the task force with the goal of finalizing the guide within one year of the issuance of this standard.

Effective Date/Phased-In Implementation

93. Most respondents to the ED and participants at the public hearing did not agree with the proposed effective date in the ED for periods beginning after September 30, 2004. Key reasons cited for the delay of the effective date were the need for additional time to address issues noted in their arguments against classifying the information as basic and time for including funding in their budgets for the additional work and audit costs to be incurred.
94. The Board believed the reasons provided for the delay of the effective date were valid and justified some delay. Therefore, the Board believed a phased implementation would provide

time for entities to address some of the issues identified and for consideration of the strained resources facing most agencies.

95. The Board also believed that the effective date for certain disclosures to be classified as basic should be delayed to allow time for the issuance of the additional guidance by the AAPC. Therefore, the standard was revised to allow for a phase-in of required reporting disclosures as basic.
96. The standards are effective for reporting periods beginning after September 30, 2005, with the exception of the section c (category descriptions) and section d1 (physical units by major category for the end of the reporting period) in par. 25 and 40 that are effective for reporting periods beginning after September 30, 2007; and section d2 (physical units by major category that were acquired and withdrawn during the reporting period) and section d3 (major methods of acquisition and withdrawal during the reporting period) in par. 25 and 40 that are effective for reporting periods beginning after September 30, 2008.
97. These exceptions provide for a phase-in of disclosure requirements being reported as basic information such that the standard will be fully implemented for reporting periods beginning after September 30, 2008. Information that is provided an exception (see par. above) to being reported as basic information during the phase-in period is still required, but should be reported as RSI until the exceptions expire. It may be appropriate for entities to include a reference to the information reported as RSI during the phase-in period.
98. The phased-in implementation offers additional time for agencies to determine the proper level of aggregation for major categories, as well as determining the appropriate physical unit of measure and documenting their reasoning for such. This additional time will also allow for the AAPC to issue its guidance in time for consideration before implementation. It is anticipated that the AAPC will finalize the guide prior to the implementation of the required reporting by major categories.

Materiality

99. In the ED, the disclosure requirements language read "Entities with significant heritage assets/stewardship land should reference a note..." The Board used the term "significant" to emphasize that some entities may not be subject to the disclosure requirements due to certain entities having only immaterial amounts of heritage assets and stewardship land covered by this standard.
100. Although most respondents to the ED agreed that the preparer should have flexibility in determining appropriate categories for aggregation and that the preparer should be allowed to exercise professional judgment in determining which assets are significant, there was

some concern raised by respondents that these judgments may be difficult to make. Certain respondents noted that “significant” is difficult to apply in the case of heritage assets and stewardship land because there are no financial dollar amounts required to be reported.

101. The term “significant” was removed from the language establishing disclosure requirements in the final standard because the Board has stated within this standard “The provisions of this Statement need not be applied to immaterial items.” Therefore, entities may omit heritage asset and stewardship land information if they are immaterial.
102. In SFFAS 3, *Accounting for Inventory and Related Property*, the introduction included a discussion on “materiality”.³⁵ It explained that materiality has not been strictly defined in the accounting community; rather, it has been a matter of judgment on the part of preparers of financial statements and the auditors who attest to them. It further explained that the determination of whether an item is immaterial requires the exercise of considerable judgment, based on consideration of specific facts and circumstances.
103. In its discussion in SFFAS 3, the Board relied on the FASB’s concept as modified by certain concepts expressed in governmental auditing standards.³⁶ Par. 9 of SFFAS 3 discussed FASB’s Statement of Financial Accounting Concepts No. 2, “Qualitative Characteristics of Accounting Information,” that provides for materiality as the magnitude of an omission or misstatement of accounting information that, in the light of surrounding circumstances, makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or misstatement.
104. Par. 9 of SFFAS 3 also explains that this concept includes both qualitative and quantitative considerations. An item that is not considered material from a quantitative standpoint may be considered qualitatively material if it would influence or change the judgment of the financial statement user. The Board believes that preparers should consider both quantitative and qualitative characteristics when applying materiality to this standard.

Board Approval

105. This statement was approved for issuance by all members of the Board.

³⁵See SFFAS 3, *Accounting for Inventory and Related Property*, par. 7-15.

³⁶Par. 12 of SFFAS 3 explains that the Government Auditing Standards provide “In government audits the materiality level and/or threshold of acceptable risk may be lower than in similar-type audits in the private-sector because of the public accountability of the entity, the various legal and regulatory requirements, and the visibility and sensitivity of government programs, activities, and functions.”

Summary

This statement defines “fiduciary activities” as those Federal Government activities that relate to the collection or receipt, and the subsequent management, protection, accounting, investment and disposition of cash or other assets in which non-Federal individuals or entities (“non-Federal parties”) have an ownership interest that the Federal Government must uphold. The fiduciary relationship must be based on statutory or other legal authority and the fiduciary activity must be in furtherance of that relationship.

This statement requires Federal entities to distinguish the information relating to fiduciary activities of the Federal entity from all other activities of that Federal entity. Fiduciary assets will not be recognized on the balance sheet of any Federal entity. The Federal entity is required to include in its own audited financial statements a note disclosure providing the following information about its fiduciary activities:

- An explanation of the nature of the fiduciary relationship,
- A schedule of fiduciary net assets, and
- A schedule of fiduciary activity.

This requirement applies even if the Federal entity issues stand-alone audited financial statements for the fiduciary activity. For entities managing several distinct fiduciary activities, disaggregated information is required by activity.

The Financial Report of the United States Government (FR) will include a note disclosure describing the nature of the fiduciary activities of the Federal Government. The FR note disclosure will provide a list of component entities responsible for fiduciary activities and the total amount of fiduciary net assets for each responsible component entity. The FR note disclosure will refer the reader to the component entity financial statements for additional information about each component’s fiduciary activity.

This statement is effective for periods beginning after September 30, 2008. Early adoption is not permitted. In the year this statement becomes effective, entities should not restate the prior period amounts presented in the basic financial statements and notes.

Introduction

1. This statement defines **fiduciary activity**¹ and provides accounting and reporting guidance for fiduciary activities. Fiduciary activities should be distinguished from Federal programs designated as “trust funds” in the budget and in reporting to the Office of Management and Budget (OMB) and to the Treasury Financial Management Service (FMS). “Trust funds” included in the Federal budget are often established to carry out Federal programs, and their activity differs from the common understanding of trust **fund** activity outside of government. Most of the **revenue** received by Federal “trust funds” represents Government-owned collections “earmarked” or dedicated to finance or help to finance specific Federal programs rather than being held for the exclusive benefit of **non-Federal parties**. Non-fiduciary “trust funds” are addressed by Statement of Federal Financial Accounting Standards 27, *Identifying and Reporting Earmarked Funds*. This standard addresses activities that are fiduciary in nature.
2. Fiduciary activities involve **ownership interests** described in this statement (see paragraph 10). The Federal employees’ Thrift Savings Fund and the Indian tribal and individual Indian trust funds are examples of fiduciary activities.
3. In order to clarify financial reporting in general purpose Federal financial reports, this standard defines fiduciary activity and provides financial reporting guidance for fiduciary activity and for fiduciary assets and liabilities.
4. This standard requires that the terms “**fiduciary**,” “**fiduciary assets**,” “fiduciary fund,” and “fiduciary activity” be used in general purpose Federal financial reports to characterize only fiduciary activity as defined in this standard. Non-fiduciary “trust fund” assets and activity related thereto should not be characterized as “fiduciary” or “trust” activity in general purpose financial reports of Federal **entities**. Such reporting would obscure an essential fact: that the Federal Government uses the non-fiduciary assets in support of its programs.
5. This standard requires that Federal entities disclose fiduciary assets, liabilities and flows in a note **disclosure**. Fiduciary assets and liabilities should not be recognized on the balance sheet of the Federal entity.
6. This standard also clarifies the definition and reporting for fiduciary cash that is on deposit in the U.S. Treasury. Fiduciary cash deposits are referred to as **Fiduciary Fund Balance with Treasury** (Fiduciary FBWT). This deposit activity is not fully addressed in Statement of Federal Financial Accounting Standards 1, *Accounting for Selected Assets and Liabilities*.

¹ Words first appearing in boldface are defined in Appendix B: Glossary

SFFAS 1 explains that “in some circumstances, the entity deposits cash in its accounts in a fiduciary capacity for the U.S. Treasury or other entities.”² However, some unique aspects of Fiduciary FBWT are not included in SFFAS 1. For example, SFFAS 1 defines FBWT as “the aggregate amount of funds in the entity’s accounts with Treasury for which the entity is authorized to make expenditures and pay liabilities.” SFFAS 1 further explains that “Fund Balance with Treasury is an intragovernmental item.” However, Fiduciary FBWT is not an intragovernmental item; the owner of Fiduciary FBWT is a non-Federal party. This standard amends SFFAS 1 to distinguish fiduciary FBWT from Federal component entities’ FBWT.

7. Numerous “fund groups”³ are used in reporting to the Treasury FMS and the OMB. For example, “**deposit funds**” may be used for monies that do not belong to the Federal Government. Regardless of how a fund group may be classified in reporting to the Treasury FMS or to the OMB, only those activities that meet the definition of fiduciary activity promulgated in this standard are subject to the reporting requirements of this standard. Activities that do not meet the definition of fiduciary activities promulgated in this standard are not subject to the reporting requirements of this standard. Deposit funds that do not meet the definition of fiduciary activities, and therefore are not disclosed in the fiduciary note disclosure, should be recognized in the principal financial statements.

Scope

8. This statement provides financial reporting standards for fiduciary activities in the general purpose financial statements for Federal entities. The standard does not affect reporting in the *Budget of the United States* or special-purpose reports.

Effective Date

9. This standard is effective for periods beginning after September 30, 2008. In the initial year of implementation, comparative information should not be restated. Earlier adoption is prohibited.

²SFFAS 1, paragraph 29.

³ For a description of “fund groups” used in reporting to the Treasury FMS and the OMB, see the Treasury Financial Manual, Part 2, Chapter 1500.

Accounting Standard

Definition and Characteristics of Fiduciary Activities

Definition

10. In a fiduciary activity a Federal entity collects or receives and subsequently manages, protects, accounts for, invests, and/or disposes of cash or other assets in which **non-Federal individuals or entities** (or “non-Federal parties”) have an ownership interest that the Federal Government must uphold. Non-Federal parties must have an ownership interest in cash or other assets held by the Federal entity under provision of law, regulation, or other fiduciary arrangement. The ownership interest must be enforceable against the Federal Government. Judicial remedies must be available for the breach of the fiduciary obligation.

Characteristics

11. Fiduciary activities are initiated by **fiduciary collections**. Fiduciary collections are an inflow to a Federal entity or its non-Federal designee (such as a commercial bank) of cash or other assets that are and remain the property of non-Federal parties. Fiduciary collections may be preceded by the recognition of fiduciary accounts receivable.
12. Fiduciary activities may involve a variety of fiduciary assets, liabilities and transactions. Examples include but are not limited to:

Cash:

Fiduciary cash may be held in a variety of ways. Cash may be represented by balances on deposit with the U.S. Treasury⁴ or commercial banks.

⁴ The U.S. Treasury is in the Treasury Department, which is the primary fiscal agent for the Federal Government. The Treasury Department collects money due to the United States, makes payments, manages borrowings, performs central accounting functions, and produces coins and currency sufficient to meet demand. The Treasury Department manages the Government’s daily cash position and borrowing as well as the investment of funds in its custody. The Treasury Department provides Central Accounting System (CAS) services to Federal agencies. CAS transactions involve appropriation credits, transfers-in and transfers-out, collections, disbursements and related adjustments. Such transactions increase or decrease Federal entities’ **Fund Balance with Treasury** (FBWT) maintained with the Treasury Department.

Investments:

Fiduciary assets may include investments in Treasury securities or in non-Treasury securities.

Other Assets:

Fiduciary assets may include assets other than cash, e.g., real or personal property held temporarily pending disposition, or held long-term in a fiduciary capacity.

Liabilities:

A fiduciary activity may include expenses that will be paid with fiduciary assets. This may result in fiduciary liabilities that will be settled with fiduciary assets.

Inflows:

A fiduciary activity may include collections of cash or other assets that represent contributions from or for beneficiaries or revenue derived from fiduciary assets.

Outflows:

A fiduciary activity may include expenses that will be paid with fiduciary assets and distributions of assets to the beneficiaries.

Exclusions

13. The following are excluded from the reporting requirements for fiduciary activities, and should be recognized in the principal financial statements of the Federal component entity and not in the fiduciary note disclosure:
 - Amounts related to unpaid⁵ **payroll withholdings** and **garnishments**⁶ are excluded from the reporting requirements of this standard. Liabilities for unpaid payroll withholdings and garnishments should be recognized as accounts payable in

⁵“Unpaid” means that amounts withheld or garnished have not been paid to the designated recipient of the amounts withheld or garnished.

⁶ Examples of garnishments include amounts withheld from an individual's salary or tax refund for payments of child support or to another third party in compliance with a statute or court order.

accordance with existing standards.⁷

- **Unearned revenue** should not be reported as fiduciary activity and should be recognized as a liability in accordance with existing standards.⁸ Assets collected or received by a Federal entity that represent prepayments or advance payments for which the Federal component entity is expected to provide goods or services should not be classified as fiduciary activity. This exclusion applies broadly and applies to amounts a customer advances for orders that may be placed in the future or deposits made as part of a bid or settlement process, even if these amounts are not specifically classified as “unearned revenue” by the entity due to uncertainty about the ultimate realization of the revenue.
14. Amounts related to operating revenues and expenses in ways that are consistent with the above exclusions also may be excluded.
 15. **Seized property**, including seized monetary instruments, is not subject to the reporting requirements for fiduciary activities because it does not meet the definition of a fiduciary activity. Seized assets, including seized monetary instruments, should continue to be reported in accordance with existing standards.⁹

Basis of Accounting

16. Fiduciary activities reported in the Federal entity’s notes to the financial statements, as required in paragraphs 17-24, should be disclosed in the required schedules and measured using the standards provided in generally accepted accounting principles.¹⁰

⁷ See SFFAS 1, *Accounting for Selected Assets and Liabilities*, paragraphs 74-86.

⁸ See SFFAS 1, paragraph 85 and SFFAS 7, *Accounting for Revenue and Other Financing Sources*, paragraph 37.

⁹ See SFFAS 3, *Inventory and Related Property*, paragraphs 61 and 69.

¹⁰ For the definition of generally accepted accounting principles see the American Institute of Certified Public Accountants *Professional Standards*, U.S. Auditing Standards (AU) Section 411, “The Meaning of Present Fairly in Conformity With Generally Accepted Accounting Principles.”

Accounting and Reporting for Fiduciary Activities for Component Entities

Reporting of Fiduciary Activities

17. Reporting on fiduciary activities is required in two notes to the financial statements. The note disclosing significant accounting policies¹¹ should include, at a minimum, a statement that: “Fiduciary assets are not assets of the [Federal component entity] and are not recognized on the balance sheet. See Note xx, Fiduciary Activities.”
18. A separate note to the financial statements should include the following information for individual fiduciary activities:
 - a. A description of the fiduciary relationship, e.g., the applicable legal authority, the objectives of the fiduciary activity, and a general description of the beneficial owners or class of owners.
 - b. A Schedule of Fiduciary Activity displaying, for all periods presented:
 - The beginning balance of net assets,
 - The inflows from the fiduciary activities by category (e.g., contributions, investment earnings) and outflows by category (e.g., benefit payments, refunds, administrative expenses),
 - The change in net assets, and
 - The ending balance of net assets.
 - c. A Schedule of Fiduciary Net Assets displaying the current and prior period ending balances of cash and any other assets by category (e.g., receivables, investments), and liabilities by category (e.g., accounts payable, refunds payable), and a variance analysis addressing significant changes from the prior period. The disclosure for non-monetary fiduciary assets should include a description of the composition of the assets, the method(s) of valuation, and changes (if any) from prior period accounting methods.
 - d. Component entities also may have **non-valued fiduciary assets**. Non-valued fiduciary assets are fiduciary assets for which required disclosure does not include dollar values. Non-valued fiduciary assets may include land held in trust. Component entities holding non-valued fiduciary assets should disclose them in a Schedule of Changes in Non-Valued

¹¹ A note disclosing “Significant Accounting Policies” is a requirement of the Office of Management and Budget (OMB). This disclosure is currently listed as Note 1 in “Form and Content of the Performance and Accountability Report” issued as Part A of OMB Circular A-136.

Fiduciary Assets, which should include a description of non-valued fiduciary assets, beginning quantity, quantity received, quantity disposed of, net increase/decrease in non-valued fiduciary assets, and ending total quantity.

- e. If separate audited financial statements are issued for an individual fiduciary activity, additional disclosures listed in paragraph 22 should be provided. If the separate audited financial statements for an individual fiduciary activity are prepared with a fiscal year-end other than September 30, the information required in this paragraph may be provided for the fiduciary activity's most recent fiscal year, provided that the information is clearly labeled.
19. Most fiduciary activities are disclosed by the Federal component entity responsible for administering the fiduciary activity on behalf of the beneficiaries. If more than one Federal component entity is responsible for administering a fiduciary activity, and the separate portions of the activity can be clearly identified with a responsible component entity, then each component entity should disclose its portion in accordance with the requirements of this standard. In such cases, each component entity should identify the other component entities that are involved in managing the activity. If separate portions cannot be identified, the component entity with program management responsibility should disclose the fiduciary activity.¹²
 20. For component entities with several distinct fiduciary activities, summary financial information required in paragraph 18 should be provided for each fiduciary activity presented individually. Information for fiduciary activities not presented individually (see paragraph 21) may be aggregated.
 21. Selecting fiduciary activities to be presented individually requires judgment. The preparer should consider both quantitative and qualitative criteria. Acceptable criteria include but are not limited to: quantitative factors such as the percentage of the reporting entity's fiduciary net assets or inflows; and qualitative factors such as whether a fiduciary activity is of immediate concern to **beneficiaries**, whether it is politically sensitive or controversial, whether it is accumulating large balances, or whether the information provided in the fiduciary note disclosure would be the primary source of financial information for the public.
 22. If separate audited financial statements are issued for an individual fiduciary activity that is presented individually in accordance with the criteria described in the preceding paragraph,

¹² To determine program management responsibility, Federal component entities should consider the legislation authorizing the activity; the Memorandum of Understanding that establishes responsibilities; and the provisions of SFFAC 2, *Entity and Display*.

-
- a. The fiduciary note should disclose the basis of accounting used and auditor's opinion on the current or most recent financial statements. If the auditor's opinion was not unqualified, the fiduciary note also should disclose the reason(s) stated by the auditors and refer the reader to the audit opinion for further information.
 - b. The note disclosure should provide information on how the reader can obtain a copy of the financial statements and the audit opinion thereon.
- 23. In the initial year of implementation, prior year information should not be displayed. In the reporting periods following the initial year of implementation, prior period amounts should be displayed.
 - 24. Notes to the financial statements are an integral part of the basic financial statements, essential for complete and fair presentation in conformity with generally accepted accounting principles for the Federal Government.

Financial Report of the United States Government

- 25. Reporting on fiduciary activities is required in two notes to the financial statements. The note disclosing significant accounting policies¹³ should include, at a minimum, a statement that: "Fiduciary assets are not assets of the Federal Government and are not recognized on the balance sheet of the U.S. Government. See Note xx, Fiduciary Activities."
- 26. In the consolidation process, a distinction must be made between Federal component entities' Fund Balance with Treasury (FBWT) recognized on the balance sheet at the component entity level and the FBWT attributable to fiduciary activities (fiduciary FBWT) reported by Federal component entities in a note disclosure. The liability for fiduciary cash held as FBWT should be recognized as a liability on the Government-wide balance sheet. The liability for fiduciary investments in Treasury securities should be recognized on the Government-wide balance sheet as debt held by the public.
- 27. The fiduciary note disclosure should include a definition of fiduciary activities, a description of the nature of the Federal Government's fiduciary activities, a list of component entities responsible for fiduciary assets, and the total amount of fiduciary net assets for each responsible component entity. Aggregation of component entities with immaterial amounts of fiduciary net assets is permitted.

¹³ A note disclosing "Significant Accounting Policies" is a requirement of the Office of Management and Budget (OMB). This disclosure is currently listed as Note 1 in "Form and Content of the Performance and Accountability Report issued as Part A of OMB Circular A-136.

-
28. In the initial year of implementation, prior year information should not be displayed. In the reporting periods following the initial year of implementation, prior period amounts should be displayed.
 29. The note disclosure should refer the reader to component entity financial statements for additional information.
 30. Notes to the financial statements are an integral part of the basic financial statements, essential for complete and fair presentation in conformity with generally accepted accounting principles for the Federal Government.
-

Effect on Current Standards

31. This standard affects current standards for reporting non-entity assets. Paragraphs 26 and 29 of SFFAS 1, *Accounting for Selected Assets and Liabilities*, are amended as follows:

[26] Both entity assets and non-entity assets under an entity's custody or management should be reported in the entity's financial statements, **except for non-entity assets meeting the definition of fiduciary assets, which should not be recognized on the balance sheet, but should be disclosed in accordance with the provisions of SFFAS 31, Accounting for Fiduciary Activities.** Non-entity assets reported in **recognized on** an entity's financial statements **balance sheet** should be segregated from entity assets. An amount equal to non-entity assets **recognized on the balance sheet** should be recognized as a liability (due to Treasury or other entities) ~~in the entity's financial statements.~~

[29] **Non-entity cash.** Non-entity cash is cash that a federal entity collects and holds on behalf of the U.S. Government or other entities. In some circumstances, the entity deposits cash in its accounts in a fiduciary **custodial** capacity for the U.S. Treasury or other **federal component** entities, **or in a fiduciary capacity for non-federal parties.**

(a) Non-entity cash recognized on the balance sheet should be reported separately from entity cash.

(b) Non-entity cash meeting the definition of a fiduciary asset should not be recognized on the balance sheet, but should be disclosed in accordance with the provisions of SFFAS 31, Accounting for Fiduciary Activities.

32. This standard affects current standards that define Fund Balance with Treasury. Paragraph 31 of SFFAS 1 is amended as follows:

[31] A federal entity's fund balance with the Treasury (**FBWT**) is the aggregate amount of funds in the entity's accounts with Treasury for which the entity is authorized to make expenditures and pay liabilities. ~~Fund balance with Treasury~~ **FBWT** is an intragovernmental item, **except for fiduciary or other non-federal non-entity FBWT**. From the reporting entity's perspective, **the reporting entity's** ~~a fund balance with Treasury~~ **FBWT** is an asset because it represents the entity's claim to the federal government's resources. However, from the perspective of the federal government as a whole, it is not an asset; and while it represents a commitment to make resources available to federal departments, agencies, programs and other entities, it is not a liability. **In contrast, fiduciary and other non-federal non-entity FBWT is not intragovernmental, and it represents a liability of the appropriate Treasury component and of the federal government as a whole to the non-federal beneficiaries.**

33. Paragraphs 37 and 38 of SFFAS 1 are amended, and a new paragraph is added, as follows:

[37] Disclosure should be made to distinguish ~~two~~ **three** categories of funds within ~~the entity's fund balance with Treasury~~ **FBWT reported on the entity's balance sheet**: the obligated balance not yet disbursed, ~~and the unobligated balance,~~ **and non-budgetary FBWT**. The obligated balance not yet disbursed is the amount of funds against which budgetary obligations have been incurred, but disbursements have not been made.

[38] The unobligated balance is the amount of funds available to an entity against which no claims have been recorded. Unobligated balances are generally available to a federal entity for specific purposes stipulated by law. Unobligated balances may also include balances in expired/canceled accounts that are available only for approved adjustments to prior obligations. Certain unobligated balances may be restricted to future use and are not apportioned for current use. Disclosure should be provided on such restrictions. **Non-budgetary FBWT includes unavailable receipt accounts, clearing accounts and other accounts that do not represent budget authority, as well as non-entity FBWT that is recognized on the balance sheet.**

[New Paragraph] In addition to entity and non-entity FBWT that is recognized on the balance sheet, a federal entity may also administer fiduciary FBWT on behalf of non-federal entities or individuals. Fiduciary FBWT is not recognized on the balance sheet, but is subject to separate disclosure requirements. For disclosure requirements for fiduciary FBWT, see SFFAS 31, *Accounting for Fiduciary Activities*.

34. This standard affects current standards dealing with fiduciary activity and fiduciary relationships in SFFAS 7, *Accounting for Revenue and Other Financing Sources*. Paragraphs 83-87 and 370 of SFFAS 7 are rescinded. In addition, paragraphs 142 and 276 of SFFAS 7 are amended as follows:

[142] MMS collects this revenue ~~acting as an agent for and distributes it to~~ the recipients designated by law: the Treasury, certain entities within the Government to which amounts are earmarked, the states, and Indian tribes and allottees. ~~Therefore, MMS should account for the exchange revenue~~ it collects as an agent for the U.S. Treasury or other federal component entities as a custodial activity, which is an amount collected or to be collected for others federal entities, in the same way as the Internal Revenue Service accounts for the nonexchange revenue that it collects. MMS collection activity for non-federal entities may meet the definition of fiduciary activity and, if so, should be accounted for in accordance with the requirements of SFFAS 31, Accounting for Fiduciary Activities. Because the revenue collected by MMS is exchange revenue, it should be recognized and measured under the exchange revenue standards when the rents, royalties, and bonuses are due pursuant to the contractual agreements.

[276] ~~MMS should instead account for the exchange revenue as a custodial activity.~~ MMS collects rents, royalties, and bonuses ~~acting as an agent on behalf of~~ and distributes the collections to the recipients designated by law: the General Fund, certain entities within the Government to which amounts are earmarked, the states, and Indian tribes and Allottees. MMS collection activity for non-federal entities may meet the definition of fiduciary activity and, if so, should be accounted for in accordance with the requirements of SFFAS 31, Accounting for Fiduciary Activities. The amounts of revenue should be recognized and measured under the exchange revenue standards when they are due pursuant to the contractual agreement.

35. This standard also amends paragraphs 84 and 102 of SFFAC 2, *Entity and Display*, as follows:

[84] The elements most likely to be presented in the balance sheet of a Federal suborganization/organization, program, or the entire government would be as follows:

- **Fund Balance with Treasury.** This represents the amount in the entity's accounts with the U.S. Treasury that is available only for the purpose for which the funds were appropriated. It ~~would~~ may also include balances held by the entity in the capacity of a banker or agent for others. However, Fund Balance with Treasury (FBWT) meeting the definition of fiduciary FBWT should not be recognized on the balance sheet, but should be disclosed in accordance with the provisions of SFFAS 31, Accounting for Fiduciary Activities. ~~This classification would not be included in the financial statements of the U.S. Government.)~~

[102] Custodial collections do not include deposit funds, i.e., amounts held temporarily by the government (e.g., bidders' earnest money or guarantees for performance) or amounts held by the Government as an agent for others; (e.g., state income taxes withheld from

Federal employees' salaries that are to be transferred to the states-). Both of these types of collections can be considered assets and liabilities until they are returned to the depositor or forwarded to the organization entitled to the funds **should be reported in accordance with the provisions of SFFAS 31, Accounting for Fiduciary Activities.**

36. Interpretation No. 1, *Reporting on Indian Trust Funds in General Purpose Financial Reports of the Department of the Interior and in the Consolidated Financial Statements of the United States Government: An Interpretation of SFFAS 7*, is rescinded.

Effective Date

37. This standard is effective for periods beginning after September 30, 2008. In the initial year of implementation, comparative information should not be restated. Earlier adoption is prohibited.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by the Board in reaching the conclusions in this standard. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors.

The guidance enunciated in the standards - not the material in this or other appendices - should govern the accounting for specific transactions, events or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Outreach activities

38. FASAB published the revised¹⁴ exposure draft (ED), *Accounting for Fiduciary Activities*, on June 27, 2005. Upon release of the ED, notices and/or press releases were provided to: the Federal Register; the FASAB News, the Journal of Accountancy, AGA Today, the CPA Journal, Government Executive, the CPA Letter, Government Accounting and Auditing Update, the CFO Council, the Financial Statement Audit Network, the Federal Financial Managers Council, and committees of professional associations generally commenting on exposure drafts in the past. Copies of the ED and letters requesting comments were also sent to individuals who spoke at the October 2003 public hearing for the original ED, as well as to the Federal Retirement Thrift Investment Board.
39. During the comment period, FASAB staff also gave informational presentations at the 15th Annual Government Financial Management Conference sponsored by Treasury Agency Services, and at July 2005 meetings of the Financial Statement Audit Network, the OMB

¹⁴ The first exposure draft was issued on April 23, 2003. Issues raised by respondents to that exposure draft caused the Board to revise its proposal.

Form and Content Work Group, the Greater Washington Society of CPAs, and the U.S. Standard General Ledger Board's Issues Resolution Committee. A public hearing was also held on August 17, 2005.

Comments Received

40. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The respondents' comments are summarized below.

41. Fourteen written responses were received from the following sources:

Comment letters and/or oral testimony provided by:	Federal (Internal)	Non-Federal (External)
Users, academics, others		3
Auditors	3	
Preparers and financial managers	8	

42. Note: The response from one Federal agency's Office of the Inspector General listed above under "auditors," noted that the response represented the consensus expressed by the agency's Office of the Chief Financial Officer as well as the agency's auditors.

43. Also, one Federal agency wrote that it had no comments because the agency's funds are primarily earmarked funds rather than fiduciary.

44. At the public hearing held on August 17, 2005, representatives from two Federal agencies provided oral statements and answered questions from the Board.

Summary of Comments

45. The majority of respondents agreed with the definition of fiduciary activities, the proposed reporting requirements, and the exclusions from the reporting requirements. Other issues raised by respondents included how to report on fiduciary activities that issue separate audited financial statements; the ownership interest(s) for seized assets; the appropriate basis of accounting for fiduciary activities and the effective date of the standard.

Definition

46. The Board believes that the substance of a transaction, rather than its form, should be the determining factor in how it is reported. Accordingly, this standard provides a definition and

characteristics for fiduciary activity and does not provide lists of specific funds or fund groups. Some respondents have noted that often fiduciary activities are managed through the establishment of a deposit fund. Therefore, the following section is intended to assist Federal financial managers in understanding the role of deposit funds.

The Role of Deposit Funds

47. Federal component entities report budgetary and proprietary transactions to the OMB and the Treasury FMS using “fund account symbols,” which are sub-components of Federal reporting entities. Fund account symbols are assigned by the Treasury FMS in collaboration with the OMB. Based upon certain characteristics, fund account symbols are classified into “fund groups.” For example, “deposit funds” are a fund group for monies that do not belong to the Federal Government.¹⁵ The OMB classifies deposit funds as non-budgetary activities and excludes deposit funds from the Federal budget.¹⁶ Within the “deposit fund” group established by the Treasury FMS, there are three distinct types: (a) monies withheld from Government payments for goods and services received, including payroll withholdings and garnishments; (b) monies the Government is holding awaiting distribution based on a legal determination or investigation; and (c) deposits received from outside sources for which the Government is acting solely as a banker, fiscal agent or custodian.¹⁷ Although some fiduciary activities may be recorded and reported in deposit funds, the use of a deposit fund for an activity does not automatically indicate that the activity meets the definition of fiduciary in this standard. The activity in each deposit fund should be reviewed to determine whether it meets the definition and characteristics of a fiduciary activity in this standard. Also, if an activity is not reported in a deposit fund, that fact does not necessarily mean that the activity does not meet the definition of fiduciary in this standard. Each activity must be evaluated based upon whether or not it meets the definition of a fiduciary activity in this standard.

Exclusions

48. Payroll withholdings and garnishments appear to meet the definition of fiduciary activities. When an employer withholds an amount from an employee’s wages, the employer has a responsibility to forward those amounts to the required recipient. However, this standard excludes payroll withholdings and garnishments from the reporting requirements for

¹⁵ Treasury Financial Manual (TFM) Volume 1, Part 2, Section 1535, available on the Internet at <http://www.fms.treas.gov/tfm/vol1/index.html>

¹⁶ See FY 2006 U.S. Budget, *Analytical Perspectives*, pp. 372, 377 and 378-379.

¹⁷ TFM, Section 1535.

fiduciary activities because payroll withholdings and garnishments are similar to other unpaid costs of operations and do not warrant special reporting. Because of the routine operational nature and short duration of the activity, the Board does not believe that fiduciary reporting of payroll withholdings and garnishments would produce useful information.

49. Similarly, Federal component entities may hold advances received from customers for future sales of goods or services. Such advances represent unearned revenue. One Federal agency, in its written response and oral testimony, noted that certain advances received appear to meet the definition of fiduciary activity. However, this standard excludes unearned revenue from the fiduciary reporting requirements because unearned revenue is a routine operational activity and the Board believes that fiduciary reporting of unearned revenue is not warranted.
50. The standard clarifies the fact that seized property is not subject to the fiduciary reporting requirements because seized assets do not meet the definition of fiduciary activities. In seizure-for-forfeiture the Government is asserting its right to the property, and is taking action to eliminate, rather than to uphold, the ownership interest of the non-Federal party.

Reporting Standards

51. The Board discussed the implications of recognizing fiduciary assets on the balance sheet or on a separate principal statement. The Board considered whether recognizing fiduciary assets on the balance sheet might imply not only managerial control over the assets, but also that the benefit of the assets accrue to the Federal component entity. The Board decided that fiduciary assets should not be recognized on the balance sheet of the Federal component entity because they are not assets of either the Federal component entity or the Federal Government as a whole. The Board considered whether fiduciary activity should be recognized in a separate principal financial statement, but decided that a note disclosure would be preferable, provided that the note disclosure contains adequate information regarding fiduciary assets and activities.

Basis of Accounting

52. Some members of the Board have dissented to the standard and their reasons are presented at paragraph 63. These members oppose requiring the disclosures to be measured in accordance with generally accepted accounting principles. Two reasons are offered in the written dissent.
53. Some of the members dissenting stated that the Board should not impose requirements on reporting information related to “non-Federal entities.” However, a majority of the Board believe that fiduciary activities as defined in this standard are Federal program activities,

carried out by Federal employees often with federal funding of administrative expenses. The amount and sources of financing fiduciary activities are determined by Congress. The assenting Board members believe that although the assets in fiduciary funds are non-federal assets, the responsibility for managing the assets is a federal responsibility and the funds holding the assets are federal accounting entities established to carry out that responsibility.

54. A major objective of general purpose financial reporting in accordance with generally accepted accounting principles is to meet the needs of users who have limited access to internal documents or statements and lack the ability to demand that desired information be provided. Most citizens and beneficiaries of fiduciary funds lack such ability.
55. Some of the members dissenting stated that the cost-benefit of the requirement to disclose information in conformity with generally accepted accounting principles has not been demonstrated. However, a majority of the Board believes that the need for accountability by public officials is sufficient in its own right to justify the requirement to conform to generally accepted accounting principles. Further, the Board notes that:
 - a. Current standards (SFFAS 7, paragraphs 83-87) already require accrual accounting for fiduciary activities; therefore, this standard is merely carrying forward existing requirements and is not introducing new costs.
 - b. This standard requires the same basis of accounting that is required for Federal assets, liabilities and flows. Accounting systems on that basis are routinely in operation throughout the government and pose no unusual costs for fiduciary activities.
 - c. The Board is permitting generally accepted accounting principles for any domain (FASAB, Governmental Accounting Standards Board, or Financial Accounting Standards Board) to be used. This should mitigate any costs for fiduciary activities currently reporting with a different source of generally accepted accounting principles.
 - d. The Board is permitting the use of information based on a fiscal year-end other than the fiscal year-end used by the Federal Government. This will mitigate the cost for fiduciary activities currently producing audited financial statements on a different fiscal year.

Custodial Activity Differs from Fiduciary Activity

56. The Statement of Custodial Activity is not amended by this standard. The Statement of Custodial Activity is appropriate for custodial collections, which are amounts collected by one Federal component entity on behalf of another Federal component entity and associated with that other entity in the Federal budget. For example, the Internal Revenue Service (IRS) and the Bureau of Customs and Border Protection (Customs) make

collections of income taxes and customs duties, respectively, and they are deposited into designated accounts of the Treasury, which are unavailable to either for use in their operations.¹⁸ The IRS and Customs would report such collections on a Statement of Custodial Activity and the responsible program entity would recognize revenue and the related assets. Thus, the Statement of Custodial Activity is appropriate for those Federal component entities whose primary mission is collecting taxes or other Federal revenues, particularly sovereign revenues that are intended to finance the entire Government's operation, or at least the programs of other Federal component entities, rather than their own activities.¹⁹ Guidance with respect to the Statement of Custodial Activity is provided in Statement of Federal Financial Accounting Concepts (SFFAC) 2 and SFFAS 7.

57. Reporting requirements for fiduciary activities are different from reporting requirements for custodial activities. Although the inflows and assets reported on the Statement of Custodial Activity are not inflows or assets of the Federal component entity, they are inflows and assets of the Federal Government as a whole. In contrast, fiduciary inflows and assets are not inflows of net assets to the Federal Government. Accordingly, fiduciary activities are disclosed in a note and are not recognized on the Statement of Custodial Activity or any other principal financial statement.
58. Because fiduciary assets are not recognized on the balance sheet of the reporting entity, there is no offsetting liability, as there is for custodial assets. The fiduciary note discloses the beneficiaries' equity as "fiduciary net assets."

Effective Date

59. This standard requires that fiduciary assets and liabilities be disclosed in a note, and should not be recognized on the face of the balance sheet. In order to facilitate the preparation of the Financial Report of the U.S. Government, a uniform implementation date for all Federal component entities is necessary. Accordingly, early implementation of this standard is prohibited, and Federal component entities should not restate prior periods in the initial year of implementation. The effective date is intended to allow Federal agencies adequate time to comply with the reporting requirements.

¹⁸ Implementation Guide to Statement of Financing in Statement of Federal Financial Accounting Standards 7, *Accounting for Revenue and Other Financing Sources*: Detailed Information on the Statement of Financing, par. 25.

¹⁹ SFFAC 2, par. 101.

Effect on Existing Standards

60. The Board promulgates standards for activities that are defined by specific characteristics, and not by how an activity may be labeled in the budget or reported to the Treasury Financial Management Service. Paragraph 370 of SFFAS 7 addressed the group of funds designated as “deposit funds” as follows:

[370] Deposit funds are accounts outside the budget that record amounts that the Government (a) holds temporarily until ownership is determined or (b) holds as an agent for others. The standards and guidance in this Statement do not apply to deposit funds except insofar as a particular deposit fund may be classified as part of a Federal reporting entity or a disclosure may be required due to a fiduciary relationship on the part of a Federal reporting entity toward a deposit fund.

61. The Board decided that this paragraph was not sufficiently clear that all deposit funds that are not disclosed in the fiduciary note should be recognized in the principal financial statements of the Federal component entity. Accordingly, paragraph 370 of SFFAS 7 is rescinded by this standard and an explanatory sentence was added to paragraph 7 in the introduction section of this standard. All deposit funds that do not meet the definition of fiduciary activities and therefore are not disclosed in the fiduciary note must be recognized on the face of the financial statements.

Board Approval

62. This statement was approved by the Board with a vote of six members in favor of its issuance and four members, Messrs. Dacey, Patton, Reid and Zavada, opposing its issuance.

Dissents

63. Messrs. Dacey, Patton, Reid and Zavada dissented to this standard. Their dissent is presented below. Some members who voted to issue the standard agree with certain of the arguments posed by the dissenters but believe that, on balance, the standard is an improvement in Federal financial reporting.

Dissent of Messrs. Dacey, Patton, Reid and Zavada

- 63a. Paragraph 16 of the proposed standard requires that information disclosed about fiduciary activities be presented on the basis of generally accepted accounting principles. Board members Robert Dacey, James Patton, Robert Reid, and David Zavada support disclosure of information on fiduciary activities, but disagree with this requirement. These members believe that, at a minimum, the words “and measured using the standards provided in

generally accepted accounting principles” should be deleted from paragraph 16 and replaced with words such as “and measured on the basis of accounting used to maintain or report the information.” While these members do not disagree that generally accepted accounting principles (GAAP) financial reporting enhances the quality of reported financial information, they nonetheless disagree that the Board should require information related to fiduciary activities to be presented on a GAAP basis. The reasons for these views and the members supporting each of these reasons are as follows:

The Board Should Not Impose Requirements on Reporting Information Related to Non-Federal Entities

64. Board members James Patton and Robert Reid believe that the Board should not impose requirements on reporting information related to non-Federal entities, including the basis of accounting to be used in disclosures related to such non-Federal entities. Fiduciary activities, as defined in the proposed standard, represent activities of non-Federal entities. All entities are obligated to choose the basis of accounting that will be used to prepare financial information and whether such information will be audited, consistent with any legal and regulatory requirements. In some known instances and likely in others, information related to these non-Federal entities is not maintained or reported on a GAAP basis and/or are not audited.
65. Other organizations are positioned to require the basis of accounting to be used by the non-Federal entities that represent fiduciary activities to the Federal government, as well as require the information to be audited. The beneficiaries/owners that have an interest in the non-Federal entities’ activities and oversight bodies that represent them and the respective Federal entities are best positioned to determine the basis of accounting and reporting and audit assurance that best meets their needs. For example, the beneficiaries/owners of the non-Federal entities may have agreements in place covering the basis of accounting used or the audit assurance to be provided. In addition, the basis of reporting and audit assurance can be determined by the courts, by statute or by policy.
66. In summary, the Board should not mandate disclosure of financial information on a basis of accounting that is different from the basis used to maintain or report information related to these non-Federal entities nor require that such information be audited on an individual fiduciary activity basis. However, as part of the current Federal entity project, the Board can reconsider whether certain or all entities representing fiduciary activities should be considered to be Federal entities, and therefore be required to follow Federal GAAP and be audited.

The Cost-Benefit of the Requirement Has Not Been Demonstrated

67. Board members Robert Dacey, Robert Reid, and David Zavada do not believe that it has been demonstrated that the requirement to disclose information in conformity with GAAP is cost-beneficial (i.e., benefits clearly exceed the additional costs that would be incurred.) As noted above, in some known instances and likely in others, information related to non-Federal entities that represent fiduciary activities to the Federal Government is not maintained or reported on a GAAP basis and/or are not audited.
68. In their response to the exposure draft, the Department of the Interior indicated that they were maintaining the Indian Trust Fund information on a basis of accounting that was consistent with trust activity of commercial banks and institutions and they questioned the benefit of converting the information to a Federal GAAP basis of accounting.
69. Requiring the Federal entities to report financial information on these non-Federal entities in their footnotes on a GAAP basis will incur additional costs, which could be substantial. Furthermore, requiring such disclosure will not require the non-Federal entity to maintain or report financial information on a GAAP basis of accounting. Financial information disclosed in the Federal entity financial statements that is different from information provided to fiduciary owners/beneficiaries and oversight bodies could result in confusion. Such confusion further decreases the benefit of the requirement to report fiduciary activities on a GAAP basis.
70. The disclosure of fiduciary activities in Federal financial statements is not designed to be the primary source of information to owners/beneficiaries of these non-Federal entities. Rather, such beneficiaries should receive information directly from the non-Federal entity or related Federal entity. In the case of the larger fiduciary activities, such information is provided or available, both at an aggregate and individual account holder level.
71. A primary purpose of disclosing fiduciary activities in a Federal entity's financial statements is to demonstrate the nature and extent of the Federal Government's fiduciary responsibilities and whether the Federal entity is adequately carrying out its fiduciary responsibilities. Therefore, disclosure of (1) information prepared on the basis of accounting used to maintain or report the financial information to beneficiaries/oversight bodies, (2) the basis of accounting used (including whether or not it was prepared on a Federal GAAP basis), (3) whether the information was audited, and (4) the type of opinion issued, provides sufficient information that users and oversight bodies (e.g., Congress, OMB) may use to determine the adequacy of Federal actions to discharge their fiduciary responsibilities. It has not been demonstrated that incurring additional costs to develop disclosures beyond these would provide significant benefits relative to the additional costs.

-
72. The nature and extent of all fiduciary activities have not been identified nor have the related costs to meet the requirements of the proposed standard. In addition to the major fiduciary activities discussed by the Board, there may be many other fiduciary activities for which Federal GAAP-based information is not maintained or reported and/or are not audited. Also, the cost of developing accrual-based information, if available, is unknown. In addition, an Interior official indicated that certain accruals, such as for royalties on the thousands of oil and gas leases held and for timber sales on behalf of the Indian trust funds are not readily determinable, and if estimated, would not be reliable. Therefore the relative magnitude of the ultimate cost of adopting this requirement is not known.
73. While a precise estimate of costs and a formal cost benefit analysis is not expected, the Board should consider the relative magnitude of costs before deciding whether a standard is cost beneficial. As part of this consideration, the Board should also consider the expected utility of the requirement (a disclosure in this instance), and alternatives for achieving the related objectives. In this instance, it has not been clearly demonstrated that the increased benefits exceed the related costs.

Appendix B: Glossary

[See consolidated Glossary in Appendix E of this document.]

Appendix C: Examples of Fiduciary Note Disclosure

1. Example of Fiduciary Note Disclosure for Federal Component Entity

The following illustrates the summary financial information required in paragraph 18.

Fiduciary Activities

Fiduciary activities are the collection or receipt, and the management, protection, accounting, investment and disposition by the Federal Government of cash or other assets in which non-Federal individuals or entities have an ownership interest that the Federal Government must uphold.

Fiduciary cash and other assets are not assets of the Federal Government and accordingly are not recognized on the balance sheet.

[Fiduciary Fund A] was authorized by the [legislation], which authorized [the component entity] to collect [type of collections] on behalf of [beneficiaries]. Other fiduciary activities by [the component entity] include but are not limited to [examples of fiduciary activities included in "other."]

Department XYZ

2. Example of Note Disclosure for the Government-wide Financial Report

The following illustrates the summary information required in paragraph 27.

Fiduciary Activities

Fiduciary activities are the collection or receipt, and the management, protection, accounting, investment and disposition by the Federal Government of cash or other assets in which non-Federal individuals or entities have an ownership interest that the Federal Government must uphold.

Fiduciary cash and other assets are not assets of the Federal Government and accordingly are not recognized on the balance sheet. Examples of the Federal Government's fiduciary activities include the Indian tribal and individual Indian trust funds, which are administered by the Department of the Interior, and the Thrift Savings Fund, which is administered by the Federal Retirement Thrift Investment Board.

The following Federal component entities were responsible for fiduciary net assets at September 30, 2010 and 2009. Detailed information is available in the financial statements of the Federal component entities. The Federal component entity websites are listed on page ## of this document.

Schedule of Fiduciary Net Assets

	FY 2010	FY 2009
Department A	\$ xxxxx	\$ xxxxx
Department B	xxx	xx
Department C	xxxxx	xxxxx
Department D	xxxxxxx	xxxxxxx
All Other	x	x
Total	\$ xxxxxxxxxxxxxx	\$ xxxxxxxxxxxxxx

Appendix D: Pro Forma Transactions

Note: The following pro forma transactions illustrate how the information for the fiduciary note disclosure can be recorded in a component Federal entity's financial system utilizing the U.S. Government Standard General Ledger.²⁰ The approach illustrated utilizes several general ledger accounts that are linked to a note disclosure and not to line items in the principal financial statements. Component entities are also permitted to utilize a separate financial system for fiduciary activities. Transactions and balances that crosswalk to the fiduciary note disclosure are shaded.

Table of Illustrations

Illustration #1 – Federal component entity receives and holds non-Federal party's cash as Fund Balance with Treasury (FBWT).

Illustration #2 – Federal component entity invests non-Federal party's FBWT in Treasury securities.

2A – Federal entity's purchase of Treasury securities on behalf of non-Federal party

2B – Receipt of appropriation by Bureau of Public Debt to pay interest on non-Federal party's Treasury securities

Summary

This standard amends standards issued prior to January 2003 to specify disclosure requirements appropriate for the Financial Report of the United States Government (CFR) based on the guidance contained in Statement of Federal Financial Accounting Concepts (SFFAC) 4, *Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government*.

Introduction

1. Statement of Federal Financial Accounting Standards 24, *Selected Standards for the Consolidated Financial Report of the United States Government*, issued in January 2003 clarified that all existing and future standards apply to all federal entities unless a standard specifically provides otherwise.
2. This standard amends standards issued prior to January 2003 to specify disclosure requirements appropriate for the Financial Report of the United States Government (CFR) based on the guidance contained in Statement of Federal Financial Accounting Concepts (SFFAC) 4, *Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government*.
3. Some disclosure requirements contained in previously issued standards have been modified to allow aggregation and reduce detail for government-wide reporting while other disclosure requirements have been eliminated because of excessive detailed information required that is inappropriate for a government-wide report consistent with the guidance contained in SFFAC 4.
4. Appendix B provides a non-authoritative summary of the effect of these changes on disclosure requirements. It presents amended text of existing standards and related new requirements in a table format.
5. This standard also contains CFR disclosure requirements for Note 1 Significant Accounting Policies.

Scope

6. This statement provides financial accounting standards for the CFR. It does not change financial accounting standards for component entity reports.

Effective Date

7. This standard is effective for periods beginning after September 30, 2005.

Accounting Standard

Amendments to Existing Standards

8. Statement of Federal Financial Accounting Standards (SFFAS) 1, *Accounting for Selected Assets and Liabilities*, is amended by inserting in par. 86 the following final sentence – “The U. S. government-wide financial statements need not include this disclosure.”
9. SFFAS 2, *Accounting for Direct Loans and Loan Guarantees*, par. 56 is amended by inserting the following final sentence – “The U. S. government-wide financial statements need not include this disclosure.”
10. SFFAS 3, *Accounting for Inventory and Related Property*, is amended as follows:
 - a. The text “The above listed disclosure requirements are not applicable to the U. S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities.” is added following the existing text of these paragraphs: Par. 28, 35, 50, 56, 66, 78, 91, and 109.
 - b. The text “The U.S. government-wide financial statements need not separately report or disclose the difference between the carrying amount of the inventory and its expected net realizable value.” is added to par. 30 as the final sentence.
 - c. The text “The U.S. government-wide financial statements need not separately report or disclose any difference between the carrying amount of the stockpile materials held for sale and their estimated selling price.” is added to par. 55 as the final sentence.
 - d. The text “The U.S. government-wide financial statements are not subject to the disclosure requirements for forfeited property that cannot be sold due to legal restrictions.” is added to par. 71 as the final sentence.
11. SFFAS 5, *Accounting for Liabilities of the Federal Government*, is amended as follows:
 - a. The text “The U.S government-wide financial statements need not follow the required disclosures described below.” is added to par. 117 as the final sentence.
 - b. The text “The U.S. government-wide financial statements need not separately report or disclose all components of the liability for future policy benefits with a description of each amount and an explanation of its projected use and any other potential uses.” is added to par. 121 as the final sentence.

12. SFFAS 6, *Accounting for Property, Plant, and Equipment*, is amended as follows:

- a. The text “The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities.” is added following the existing text for par. 45.
- b. [Rescinded by SFFAS 42.]
- c. [Rescinded by SFFAS 42.]
- d. The text “The U.S. government-wide financial statements need not disclose the sources of cleanup requirements.” is added to par. 107 as the final sentence.
- e. The text “The U.S. government-wide financial statements need not disclose the method for assigning estimated cleanup costs to current operating periods.” is added to par. 108 as the final sentence.
- f. The text “SFFAS 32 provides for disclosure requirements for the U.S. government-wide financial statements regarding the unrecognized portion of estimated total cleanup cost associated with general PP&E.” is added to par. 109 as the final sentence.
- g. The text “The U.S. government-wide financial statements need not disclose material changes in total estimated cleanup costs due to changes in laws, technology, plans, or the portion of the change in estimate that relates to prior period operations.” is added to par. 110 as the final sentence.
- h. The text “The U.S. government-wide financial statements need not disclose the nature of estimates and information regarding possible changes due to inflation, deflation, technology, or applicable laws and regulations.” is added to par. 111 as the final sentence.

13. SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*, is amended as follows:

- a. The text “The U.S. government-wide financial statements need not break out gross costs of providing goods, services, benefit payments, or grants that did not earn exchange revenue, separately from those programs that earned exchange revenue.” is added to par. 43 as the final sentence.
- b. The text “The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements.” is added following the existing text for par. 46.

-
- c. The text “The U.S. government-wide financial statements need not disclose factors affecting collectibility and timing of categories of accounts receivable and the amounts involved.” is added to par. 65.1 as the final sentence.
 - d. The text “The U.S. government-wide financial statements need not disclose cumulative cash collections and refunds by tax year and type of tax for the reporting period and for sufficient prior periods to illustrate (1) the historical timing of tax collections and refunds, and (2) any material trends in collection and refund patterns. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements.” is added to par. 65.3 as the final sentences.
- 14. SFFAS 10, *Accounting for Internal Use Software*, par. 35 is amended by inserting the text “The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities.” is added following the existing text for par. 35.
 - 15. SFFAS 18, *Amendments to Accounting Standards for Direct Loans and Loan Guarantees*, is amended as follows:
 - a. The text “The U.S. government-wide financial statements need not disclose a reconciliation between the beginning and ending balances of the subsidy cost allowance for the outstanding direct loans and the liability for outstanding loan guarantees reported in the U.S. government-wide financial statements.” is added to par. 10 as the final sentence.
 - b. The text “The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities.” is added following the existing text for par. 11.
-

Disclosure Requirements Applicable to the U. S. Government-wide Financial Statements

Inventory

- 16. The U.S. government-wide financial statements should include the following disclosures¹:

¹ Disclosure is “Reporting information in notes or narrative regarded as an integral part of the basic financial statement.”

-
- a. broad descriptions of inventory categories,
 - b. a general reference to component entity² reports, and
 - c. balances for each of the following categories of inventory:
 - 1. inventory held for current sale,
 - 2. inventory held in reserve for future sale,
 - 3. excess, obsolete, and unserviceable inventory; and
 - 4. inventory held for repair.

Operating Materials and Supplies

17. The U.S. government-wide financial statements should include the following disclosures:
- a. broad descriptions of operating materials and supplies categories,
 - b. a general reference to component entity reports, and
 - c. balances for each of the following categories of operating materials and supplies:
 - 1. operating materials and supplies held for use,
 - 2. operating materials and supplies held in reserve for future use, and
 - 3. excess, obsolete, and unserviceable operating materials and supplies.

Stockpile Materials

18. The U.S. government-wide financial statements should include the following disclosures:
- a. broad descriptions of stockpile material categories,

² The term "component entity" is used to distinguish between the U.S. Federal government and its components. The U.S. Federal government is composed of organizations that manage resources and are responsible for operations, i.e., delivering services. These include major departments and independent agencies, which are generally divided into sub organizations, i.e., smaller organizational units with a wide variety of titles, including bureaus, administrations, agencies, and corporations. (SFFAC No. 2, *Entity and Display*, paragraphs 11-12)

-
- b. a general reference to component entity reports, and
 - c. balances for each of the following categories of stockpile materials:
 - 1. stockpile materials, and
 - 2. stockpile materials held for sale.

Seized Property

19. The U.S. government-wide financial statements should include the following disclosures:
- a. a broad description of seized property, and
 - b. a general reference to component entity reports.

Forfeited Property

20. The U.S. government-wide financial statements should include the following disclosures:
- a. a broad description of forfeited property, and
 - b. a general reference to component entity reports.

Foreclosed Property

21. The U.S. government-wide financial statements should include the following disclosures:
- a. a broad description of foreclosed property, and
 - b. a general reference to component entity reports.

Commodities

22. The U.S. government-wide financial statements should include the following disclosures:
- a. a broad description of commodities, and
 - b. a general reference to component entity reports.

Property, Plant, and Equipment

23. The U.S. government-wide financial statements should include the following disclosures:
- a. A broad description of PP&E
 - b. For general PP&E land
 - i. A note on the balance sheet that discloses information about general PP&E land and permanent land rights which includes:
 - 1. A concise statement including a general description of the federal government's land explaining how its federal land relates to the mission of the Federal government.
 - 2. A disclosure of estimated acres by predominant use sub-categories and estimated acres of land held for disposal or exchange by the Federal government.
 - c. The cost (excluding land and permanent land rights), associated accumulated depreciation, and book value by major class.
 - d. A general reference to agency reports for additional information about general PP&E and general PP&E land.
- 23A. The balance sheet should reference a note that discloses the information^{2.1} about general PP&E land and permanent land rights required by paragraph 23, but no asset dollar amounts should be shown. Existing display and disclosures^{2.2} should continue during the transition period through fiscal year 2025 and cease in fiscal year 2026 when superseded by the transition of the RSI information to note disclosures. If general PP&E land and information to note disclosures. If general PP&E land and stewardship land are presented in separate notes to the financial statements, include cross references between the notes.

^{2.1} Additionally, such information may include a description of the different uses of land managed by the entity, its predominant activities, condition information, and policy initiatives in effect during the reporting period.

^{2.2} Existing disclosures at paragraph 23 are those which are in effect for government-wide reporting prior to the amendments contained at paragraph 23A.

Deferred Maintenance

24. [Rescinded by SFFAS 42.]

Cleanup Cost

25. The U.S. government-wide financial statements should include the following disclosures:
- a. a broad description of cleanup cost,
 - b. the unrecognized portion of estimated total cleanup costs associated with general PP&E, and
 - c. a general reference to component entity reports.

Taxes

26. The U.S. government-wide financial statements should disclose the cumulative cash collections and refunds by tax year and type of tax for the reporting periods.

Direct Loans and Loan Guarantees

27. The U.S. government-wide financial statements should include the following disclosures:
- a. a broad description of direct loan and loan guarantee programs,
 - b. the face value of loans outstanding for direct loan and loan guarantee programs,
 - c. the long term cost³ of loans and guarantees outstanding for direct loan and loan guarantee programs,
 - d. net loans receivable for direct loan programs,
 - e. the amount guaranteed by the Government for guaranteed loan programs,
 - f. the subsidy expense for the reporting year for direct loan and loan guarantee programs, and

³“Long-term cost of direct loans and loan guarantees” is the sum of (1) the subsidy cost allowance for post-1991 direct loans, (2) the liability for post-1991 and pre-1992 loan guarantees, and (3) allowance for uncollectible amounts for post-1991 direct loans and loan guarantees.

-
- g. a general reference to component entity reports.
-

References to Component Entity Reports

28. For each “general reference to component entity reports” required in par. 16 through 27 above, it is required that the preparer indicate, in the relevant note, agencies that are disclosing significant detailed information about the item. Selecting individual agencies to refer readers to requires judgment. The preparer should consider both quantitative and qualitative criteria in selecting such agencies.

Required Note 1 on Significant Accounting Policies Disclosures

29. Describe the reporting entity and identify its major components. Summarize the accounting principles and methods of applying those principles that management has concluded are appropriate for presenting fairly the entity’s assets, liabilities, net cost of operations, and changes in net position. Disclosure of accounting policies should identify and describe the accounting principles followed by the reporting entity and the methods of applying those principles. In general, the disclosure should encompass important judgments as to the valuation, recognition, and allocation of assets, liabilities, expenses, revenues and other financing sources. Disclosures of accounting policies should not duplicate details presented elsewhere as part of the notes to the financial statements.
30. In addition, the summary of significant accounting policies should disclose any significant changes in the composition of the reporting entity or significant changes in the manner in which the reporting entity aggregates information for financial reporting purposes. These changes, in effect, result in a new reporting entity, and their impact should be reported by restating the financial statements for all prior periods presented in order to show the new reporting entity for all periods presented.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this standard. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this statement---not the material in this appendix---should govern the accounting for specific transactions, events or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Background

31. The fiscal year 2003 CFR was discussed by the Board members at the April 2004 FASAB meeting. During the discussion of the FY 2003 CFR, several board members indicated a desire for the CFR to be more accessible to the intended audience identified in SFFAC 4: citizens and citizen intermediaries. The members believed this would require a concise presentation. The member representing the Department of the Treasury (Treasury) agreed and explained that the current CFR omitted certain required disclosures for a variety of reasons. Had these disclosure requirements been included the FY 2003 CFR it would have been much less accessible. The member noted that earlier FASAB standards made no distinction between component entity disclosure requirements and CFR disclosure requirements and to fully comply with all disclosure requirements would further lengthen the CFR.
32. Members agreed that it would be appropriate to review disclosure requirements established prior to the issuance of SFFAC 4 and tailor CFR disclosure requirements to meet the current concepts. This approach has been adopted for standards developed since SFFAC 4 was issued and the Board indicated a willingness to review past standards if resources were not diverted from ongoing projects. Chairman David Mosso asked Treasury to prepare a list of items it does not consider appropriate to the CFR in light of SFFAC 4.
33. At the October 2004 FASAB meeting, the Board considered a proposal prepared by Treasury's Financial Management Service (FMS). The project proposal included a table of items identified for amendment. Based on Treasury's offer to staff the project, the Board agreed to go forward with the project.

Objectives of the Standard

34. At the May 4-5, 2005 FASAB meeting, Board members held a general discussion of the issues associated with the project. SFFAC 4 notes that the CFR has grown in size and complexity and some have questioned whether the CFR is trying to satisfy too many audiences with different needs in one format. SFFAC 4 provides that citizens and citizen intermediaries should be the audience to whom the CFR is primarily directed and it is particularly fundamental that the CFR be timely and understandable to the primary audience.
35. FASAB has been diligent in ensuring that its requirements are consistent with the guidance contained in SFFAC 4 since the January 2003 issuance of SFFAS 24. SFFAS 24 clarified that SFFAS's apply to all federal entities unless a current or subsequent standard specifically provides otherwise. Many earlier SFFAS's were issued without considering the need for less detailed disclosures for the CFR.
36. This SFFAS revisits standards issued before January 2003 and amends many of those standards to specify substitute disclosure requirements for the CFR or eliminate certain requirements. In its deliberations the Board assumed that the disclosures being amended were material disclosures but understood that SFFAC 4 was issued to provide guidance in addressing material items since immaterial items are not required to be reported or disclosed by FASAB standards.
37. The basis for the Board's actions with respect to this SFFAS emanates entirely from the need to implement SFFAC 4 and do retroactively what the Board has done prospectively since January 2003. However, the Board has indicated that disclosure requirements eliminated or modified for the CFR should not result in allowing the preparer to exclude significant unusual items needed to explain changes in balances between years.
38. This standard eliminates or modifies disclosure requirements that are useful for assessing operating performance for a particular program within an agency. For example, disclosures of restrictions on the use of foreclosed property and average holding period for foreclosed property have been eliminated. Also, disclosures of the gross cost associated with exchange revenue and certain pricing policies have been eliminated. If information relevant to assessing operating performance for individual programs were included in the CFR it would not be concise. A concise CFR will be more appealing and therefore more accessible to citizens and citizen intermediaries. The Board believes that including references to other sources of information appropriately balances the appeal of a concise CFR with the disaggregated information necessary to assess operating performance.
39. In general, the specific changes reduce the level of detail provided regarding specific assets and liabilities. Such disaggregated information is inconsistent with SFFAC 4. For readers

seeking additional detail for particular items, the Board proposes to substitute a reference to component entity reports disclosing significant detailed information about the item.

40. Significant accounting policies disclosures are required by this Statement to ensure that the preparer of the CFR informs readers about management's conclusions regarding fair presentation and the basis of such conclusions. This is intended to address concerns about the sufficiency of disclosures in view of the elimination or modification of disclosures that are required for agency level reporting.

Exposure Draft

41. FASAB published the exposure draft (ED) *Consolidated Financial Report of the United States Government Requirements: Implementing SFFAC 4 "Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government"*, on October 27, 2005. Upon release of the ED, notices and/or press releases were provided to: The Federal Register, the *FASAB News*, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, *Government Accounting and Auditing Update*, *JFMIP News*, the Financial Statement Audit Network, the Federal Financial Managers Council, and committees of professional associations commenting on past exposure drafts.
42. Twelve letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others	0	6
Auditors	2	1
Preparers and financial managers	3	0

Responses to the ED

43. The majority of the respondents agreed with the proposed changes to the disclosure requirements for the CFR. Additionally, a majority of respondents felt disclosure requirements for component entity reports should be the same as those required in the CFR.
44. Many respondents believed it would be useful to (a) provide a summary report designed for citizen users, (b) develop a central link to agency reports on the website, and (c) study the

needs of citizen users. The Board agrees that these are useful ideas and will consider these suggestions as it prioritizes future work.

45. Specific concerns raised by respondents related to the omission of disclosures of liabilities not covered by budgetary resources, forfeited property not available for sale due to legal restrictions, details regarding modifications to loans and loan guarantees, and the process used by the Financial Management Service to prepare the CFR. The Board did not believe that the concerns outweighed the benefits derived from reducing the disclosures required for the CFR.

Board Approval and Dissent

46. This Statement was approved for issuance by nine members of the Board. Mr. Dacey dissented.
47. Mr. Dacey believes differences in reporting between the CFR and other federal entities should be limited to unique or unusual reporting issues present in the federal reporting environment.
48. Mr. Dacey noted that other accounting standard setters do not differentiate reporting requirements between consolidated and component entities. However, based on materiality, the information presented in consolidated financial statements typically is aggregated and in less detail than in component entity financial statements. Mr. Dacey also noted that FASAB standards reinforce that the standards need not be applied to immaterial items.
49. Mr. Dacey believes that certain information that is (1) required in component entity reports, (2) generally consistent with requirements of other accounting standard setters, and (3) material to the CFR, should be required to be presented in the CFR. Such information, some of which is currently reported in the CFR, relates to disclosure of:
- a. the general composition of and the basis for determining values for inventory, operating materials and supplies, and stockpile materials,
 - b. estimated useful lives and depreciation methods for each major class of property, plant, and equipment, and related capitalization thresholds, and
 - c. certain credit reform information for material programs, currently reported in the CFR.
50. Based on the Government Accountability Office's analysis, Mr. Dacey believes that the incremental information necessary to report the above information and conform with existing

FASAB standards would likely be nominal in relation to the current CFR (i.e., less than one page).

51. Mr. Dacey notes the “Basis for Conclusions” indicates that if the currently required information was included in the CFR, the CFR would be less accessible to users. In other words, it would lengthen the CFR and make it less appealing to users. However, Mr. Dacey does not believe that the length would be significantly affected. Also, requiring users to locate and read individual entity financial statements to obtain such information would increase the burden on users of the CFR and likely result in the information being less easily accessible to users. While Mr. Dacey strongly supports the notion that financial information about the federal government as a whole should be presented in a manner that appeals to the broadest range of potential users, he feels there are other means to meet this objective. For example, Mr. Dacey noted that several agencies publish brief summary annual reports, in addition to their financial statements, that are intended for broader distribution and are written to be more understandable to a non-financial user.

Appendix B: Relationship of Amendments to New Requirements

The disclosure items addressed by this statement have either been modified to allow aggregation or rescinded to reduce detail for government-wide reporting consistent with guidance contained in Statement of Federal Financial Accounting Concepts 4 “Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government.” (SFFAC 4) For purposes of understanding the impacts of the provisions of this statement, this appendix presents the text of amendments to existing standards along with the text of the new requirements applicable to the CFR.

Relationship of Amendments to New Requirements			
See Par.	Text of Amendment to Existing Standards	See Par.	Summary of Changes
8	The reporting entity should disclose the amount of current liabilities not covered by budgetary resources. <u>The U. S. government-wide financial statements need not include this disclosure.</u> (SFFAS 1.86)		No CFR disclosure would be required.
9	Disclosure is made in notes to financial statements to explain the nature of the modification of direct loans or loan guarantees, the discount rate used in calculating the modification expense, and the basis for recognizing a gain or loss related to the modification. <u>The U. S. government-wide financial statements need not include this disclosure.</u> (SFFAS 2.56)	27 and 28	No CFR disclosure would be required regarding modifications of direct loans or loan guarantees. A general reference to agency reports would be provided.

10	<p>The criteria considered by management in identifying inventory held in reserve for future sale shall be disclosed. Examples of factors to be considered in developing the criteria are (1) all relevant costs associated with holding these items (including the storage and handling costs), (2) the expected replacement cost when needed, (3) the time required to replenish inventory, (4) the potential for deterioration or pilferage; and, (5) the likelihood that a supply of items will be available in the future. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities.</u> (SFFAS 3.28)</p> <p>The difference between the carrying amount of the inventory before identification as excess, obsolete, or unserviceable and its net realizable value shall be recognized as a loss (or gain) and either separately reported or disclosed. <u>The U.S. government-wide financial statements need not separately report or disclose the difference between the carrying amount of the inventory and its expected net realizable value.</u> (SFFAS 3.30)</p> <p>Disclosures of (1) general composition of inventory; (2) basis for determining inventory values including the valuation method and any cost flow assumptions; (3) changes from prior year's accounting methods if any; (4) balances for each of the following categories of inventory – inventory held for current sale, inventory held in reserve for future sale, excess, obsolete and unserviceable inventory, and inventory held for repair unless otherwise presented on the financial statements; (5) restrictions on the sale of material; (6) the decision criteria for identifying the category to which inventory is assigned; and, (7) changes in the criteria for identifying the category to which inventory is assigned. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities.</u></p> <p>(SFFAS 3.35)</p>	16, 28, 29 and 30	<p>The CFR should provide:</p> <p>(1) broad descriptions of inventory categories; (2) a general reference to agency reports that disclose significant detailed information about inventory; and, (3) balances for each of the following categories of inventory – inventory held for current sale, inventory held in reserve for future sale, excess, obsolete and unserviceable inventory, and inventory held for repair.</p> <p>In addition, the CFR should disclose significant accounting principles used and the methods of applying those principles.</p>
----	---	-------------------	---

10	<p>Disclosures of: (1) general composition of operating materials and supplies; (2) basis for determining operating materials and supplies values (including valuation method and any cost flow assumptions); (3) changes from prior year's accounting methods, if any; (4) balances for operating materials and supplies held for use, operating materials and supplies held in reserve for future use, and excess, obsolete and unserviceable operating materials and supplies; (5) restrictions on the use of material; (6) decision criteria for identifying the category to which operating materials and supplies are assigned; and, (7) changes in the criteria for identifying the category to which operating materials and supplies are assigned. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities.</u> (SFFAS 3.50)</p>	17, 28, 29 and 30	<p>The CFR should provide: (1) broad descriptions of operating materials and supplies categories; (2) a general reference to agency reports that disclose significant detailed information about operating materials and supplies; and, (3) balances for each of the following categories of operating materials and supplies – operating materials and supplies held for use, operating materials and supplies held in reserve for future use, and excess, obsolete and unserviceable operating materials and supplies.</p> <p>In addition, the CFR should disclose significant accounting principles used and the methods of applying those principles.</p>
----	---	-------------------	---

10	<p>For stockpile materials held for sale, any difference between the carrying amount and their estimated selling price shall be disclosed. <u>The U.S. government-wide financial statements need not separately report or disclose any difference between the carrying amount of the stockpile materials held for sale and their estimated selling price.</u> (SFFAS 3.55)</p> <p>Disclosures of: (1) general composition of stockpile materials; (2) basis for valuing stockpile materials including valuation method and any cost flow assumptions; (3) changes from prior year's accounting methods if any; (4) restrictions on the use of materials; (5) balances for stockpile materials and stockpile materials held for sale; (6) decision criteria for categorizing stockpile materials as held for sale; and, (7) changes in criteria for categorizing stockpile materials as held for sale. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S government-wide financial statements for these activities.</u> (SFFAS 3.56)</p>	18, 28, 29 and 30	<p>The CFR should provide: (1) broad descriptions of stockpile material categories; (2) a general reference to agency reports that disclose significant detailed information about stockpile materials; and, (3) balances for each of the following categories of stockpile materials – stockpile materials and stockpile materials held for sale.</p> <p>In addition, the CFR should disclose significant accounting principles used and the methods of applying those principles.</p>
10	<p>Disclosures about seized property: (1) explanation of what constitutes a seizure and a general description of the composition of seized property; (2) method(s) of valuing seizures; (3) changes from prior year's accounting methods if any; (4) analysis of change in seized property including the dollar value and number of seized properties that are (a) on hand at the beginning of the year, (b) seized during the year, (c) disposed of during the year, and (d) on hand at the end of the year as well as known liens or other claims against the property. This information should be presented by type of seized property and method of disposition where material. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S government-wide financial statements for these activities.</u> (SFFAS 3.66)</p>	19, 28, 29 and 30	<p>The CFR should provide a broad description of seized property and a general reference to agency reports that disclose significant detailed information about seized property.</p>

10	<p>Forfeited property that cannot be sold due to legal restrictions but which may be either donated or destroyed shall be subject to the disclosure requirements described below (see paragraph 78). However, no financial value shall be recognized for these items. <u>The U.S. government-wide financial statements are not subject to the disclosure requirements for forfeited property that cannot be sold due to legal restrictions.</u> (SFFAS 3.71)</p> <p>Disclosures for forfeited property: (1) composition of forfeited property; (2) method(s) of valuing forfeited property; (3) restrictions on use or disposition of forfeited property; (4) changes from prior year's accounting method if any; (5) analysis of change in forfeited property providing the dollar value and number of forfeitures that (a) are on hand at the beginning of the year, (b) are made during the year, (c) are disposed of during the year and the method of disposition, and (d) are on hand at the end of the year (This information would be presented by type of property forfeited where material.); (6) if available an estimate of the value of property or funds to be distributed to federal state and local agencies in future reporting periods. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S government-wide financial statements for these activities.</u></p> <p>(SFFAS 3.78)</p>	20, 28, 29 and 30	The CFR should provide a broad description of forfeited property and a general reference to agency reports that disclose significant detailed information about forfeited property.
10	<p>Disclosures when the government acquires foreclosed assets in full or partial settlement of a direct or guaranteed loan: (1) valuation basis used for foreclosed property, (2) changes from prior year's accounting methods, if any, (3) restrictions on the use/disposal of the property, (4) balances in the categories described above (i.e., pre-1992 foreclosed property and post-1991 foreclosed property), (5) number of properties held and average holding period by type or category, (6) number of properties for which foreclosure proceedings are in process at the end of the period. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S government-wide financial statements for these activities.</u> (SFFAS 3.91)</p>	21, 28, 29 and 30	The CFR should provide a broad description of foreclosed property and a general reference to agency reports that disclose significant detailed information about foreclosed property.

10	Disclosures for goods held under price support and stabilization programs (commodities): (1) basis for valuing commodities including the valuation method and any cost flow assumptions; (2) changes from prior year's accounting method if any; (3) restrictions on the use, disposal, or sale of commodities; (4) an analysis of change in the dollar value and volume of commodities, including those (a) on hand at the beginning of the year, (b) acquired during the year, (c) disposed of during the year by method of disposition, (d) on hand at the end of the year, (e) on hand at year's end and estimated to be donated or transferred during the coming period, and (f) that may be received as a result of surrender of collateral related to non-recourse loans outstanding. The analysis should also show the dollar value and volume of purchase agreement commitments. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S government-wide financial statements for these activities.</u> (SFFAS 3.109)	22, 28, 29 and 30	The CFR should provide a broad description of commodities and a general reference to agency reports that disclose significant detailed information about commodities.
11	<u>The U.S. government-wide financial statements need not follow the required disclosures described below.</u> Disclosures required by applicable private sector standards: FASB SFAS 60 Accounting and Reporting by Insurance Enterprises, FASB SFAS 97 Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments, and FASB SFAS 120 Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long-Duration Participating Contracts and AICPA Statement of Position (SOP) 95-1 Accounting for Certain Insurance Activities of Mutual Life Insurance Enterprises. (SFFAS 5.117)		No CFR disclosure would be required.

11	Additional whole life insurance disclosure required by FASAB: All components of the liability for future policy benefits (i.e., the net level premium reserve for death and endowment policy and the liability for terminal dividends) should be separately disclosed in a footnote with a description of each amount and an explanation of its projected use and any other potential uses (e.g., reducing premiums, determining and declaring dividends available, and/or reducing federal support in the form of appropriations related to administrative cost or subsidies). <u>The U.S. government-wide financial statements need not separately report or disclose all components of the liability for future policy benefits with a description of each amount and an explanation of its projected use and any other potential uses.</u> (SFFAS 5.121)		No CFR disclosure would be required.
12	The following are minimum general PP&E disclosure requirements: (1) the cost, associated accumulated depreciation, and book value by major class; (2) the estimated useful lives for each major class; (3) the method(s) of depreciation for each major class; (4) capitalization threshold(s) including any changes in threshold(s) during the period; and, (5) restrictions on the use or convertibility of general PP&E. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S government-wide financial statements for these activities.</u> (SFFAS 6.45)	23, 28, 29 and 30	The CFR should provide: (1) a broad description of PP&E; (2) the cost, associated accumulated depreciation, and book value by major class; and, (3) a general reference to agency reports that disclose significant detailed information about PP&E. In addition, the CFR should disclose significant accounting principles used and the methods of applying those principles.

12	<p>At a minimum, the following required supplementary information shall be presented for all PP&E: identification of each major class of asset for which maintenance has been deferred and the method of measuring deferred maintenance for each major class of PP&E. If the condition assessment survey method of measuring deferred maintenance is used, the following should be presented for each major class of PP&E: (1) description of requirements or standards for acceptable operating condition; (2) any changes in the condition requirements or standards; and, (3) asset condition and a range estimate of the dollar amount of maintenance needed to return it to its acceptable operating condition. If the total life-cycle cost method is used, the following should be presented for each major class of PP&E: (1) the original date of maintenance forecast and explanation for any changes to the forecast; (2) prior year balance of cumulative deferred maintenance amount; (3) the dollar amount of maintenance that was defined by professionals who designed, built, or manage (sic) the PP&E as required maintenance for the period; (4) the dollar amount of maintenance actually performed during the period; (5) the difference between forecast and actual maintenance; (6) any adjustments to scheduled amounts deemed necessary by PP&E managers; and, (7) the ending cumulative balance for the period for each major class of asset experiencing deferred maintenance. <u>The above listed required supplementary information is not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for required supplementary information applicable to the U.S government-wide financial statements for these activities. (SFFAS 6.83)</u></p> <p>Optional RSI reporting – Stratification between critical and non-critical amounts of maintenance needed to return each major class of asset category to its acceptable operating condition. If management elects to report critical and non-critical amounts, the report shall include management's definition of these categories. <u>The U.S. government-wide financial statements need not separately report stratification between critical and non-critical amounts of maintenance needed to return each major class of asset to its acceptable operating condition as well as management's definition of these categories. SFFAS 32 provides for optional information applicable to the U.S. government-wide financial statements for these activities. (SFFAS 6.84)</u></p>	24, 28, 29 and 30	<p>The CFR should provide: (1) a broad description of deferred maintenance; (2) amounts for each major asset category (i.e., general property, plant, and equipment, heritage assets, and stewardship land) for which maintenance has been deferred; (3) a general reference to agency reports that report significant detailed information about deferred maintenance; and, (4) optional reporting of the stratification between critical and non-critical amounts of maintenance needed to return each major asset category to its acceptable operating condition.</p> <p>In addition, the CFR should disclose significant accounting principles used and the methods of applying those principles.</p>
----	---	-------------------------------	---

12	<p>Disclosures of:</p> <p>The sources (applicable laws and regulations) of cleanup requirements. <u>The U.S. government-wide financial statements need not disclose the sources of cleanup requirements.</u> (SFFAS 6.107)</p> <p>The method for assigning estimated cleanup cost to current operating periods (e.g., physical capacity versus passage of time). <u>The U.S. government-wide financial statements need not disclose the method for assigning estimated cleanup costs to current operating periods.</u> (SFFAS 6.108)</p> <p>For cleanup costs associated with general PP&E, the unrecognized portion of estimated total cleanup costs (e.g., the estimated total cleanup costs less the cumulative amounts charged to expense at the balance sheet date). <u>SFFAS 32 provides for disclosure requirements for the U.S. government-wide financial statements regarding the unrecognized portion of estimated total cleanup cost associated with general PP&E.</u> (SFFAS 6.109)</p> <p>Material changes in total estimated cleanup costs due to changes in laws, technology, or plans and the portion of the change relating to prior periods. <u>The U.S. government-wide financial statements need not disclose material changes in total estimated cleanup costs due to changes in laws, technology, plans, or the portion of the change in estimate that relates to prior period operations.</u> (SFFAS 6.110)</p> <p>The nature of estimates and information regarding possible changes due to inflation, deflation, technology, or applicable laws and regulations. <u>The U.S. government-wide financial statements need not disclose the nature of estimates and information regarding possible changes due to inflation, deflation, technology, or applicable laws and regulations.</u> (SFFAS 6.111)</p>	25, 28, 29 and 30	<p>The CFR should provide:</p> <p>(1) a broad description of cleanup cost; (2) the unrecognized portion of estimated total cleanup costs associated with general PP&E; and, (3) a general reference to agency reports that disclose significant detailed information about cleanup cost.</p> <p>In addition, the CFR should disclose significant accounting principles used and the methods of applying those principles.</p>
----	--	-------------------------------	---

13	Exchange revenue should be recognized in determining the net cost of operations of the reporting entity during the period. The exchange revenue should be recognized regardless of whether the entity retains the revenue for its own use or transfers it to other entities. Gross and net cost should be calculated as appropriate to determine the cost of outputs and the total net cost of operations of the reporting entity. The components of the net cost calculation should separately include the gross cost of providing goods or services that earned exchange revenue, less the exchange revenue earned, and the resulting difference. The components of net cost should also include separately the gross cost of providing goods, services, benefit payments, or grants that did not earn exchange revenue. <u>The U.S. government-wide financial statements need not break-out gross costs of providing goods, services, benefit payments, or grants that did not earn exchange revenue, separately from those programs that earned exchange revenue.</u> (SFFAS 7.43)		No CFR reporting would be required.
13	Each reporting entity that provides goods or services to the public or another Government entity should disclose the following: (1) differences in pricing policy from the full cost or marketing pricing guidance for exchange transactions with the public as set forth in OMB Circular No. A-25, User Charges (July 8, 1993) or in subsequent amendments in circulars that set forth pricing guidance; (2) exchange transactions with the public in which prices are set by law or executive order and are not based on full cost or on market price; (3) the nature of intra-governmental exchange transactions in which the entity provides goods or services at a price less than the full cost or does not charge a price at all, for disparities between the billing (if any) and full cost; and, (4) the full amount of the expected loss when specific goods are made to order under a contract, or specific services are produced to order under a contract and a loss on the contract is probable (more likely than not) and measurable (reasonably estimable). <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements.</u> (SFFAS 7.46)		No CFR disclosure would be required.
13	Disclosure of factors affecting collectibility and timing of categories of accounts (taxes) receivable and amounts involved. <u>The U.S. government-wide financial statements need not disclose factors affecting collectibility and timing of categories of accounts receivable and the amounts involved.</u> (SFFAS 7.65.1)		No CFR disclosure would be required.

	Disclosure of cumulative cash collections and refunds by tax year and type of tax. Cash collections and refunds by tax year and type of tax should include cash collections and cash refunds for the reporting period and for sufficient prior periods to illustrate (1) the historical timing of tax collections and refunds, and (2) any material trends in collection and refund patterns. Sufficient prior periods for each type of tax are the periods which end when the statutory period for collection ends. Collecting entities may shorten these periods if evidence for prior tax years indicates that a shorter period would reflect at least 99 percent of the collectible taxes. <u>The U.S. government-wide financial statements need not disclose cumulative cash collections and refunds by tax year and type of tax for the reporting period and for sufficient prior periods to illustrate (1) the historical timing of tax collections and refunds, and (2) any material trends in collection and refund patterns. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements.</u> (SFFAS 7.65.3)	26	The CFR should disclose cumulative cash collections and refunds by tax year and type of tax for the reporting periods.
14	The disclosures required by SFFAS No. 6, paragraph 45, for general PP&E are applicable to general PP&E software. Thus, for material amounts, the following should be disclosed in the financial statements regarding the software: (1) the cost, associated amortization, and book value; (2) the estimated useful life for each major class of software; and (3) the method(s) of amortization. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities.</u> (SFFAS 10.35)	23, 28, 29 and 30	<p>The CFR should provide:</p> <p>(1) the cost, associated accumulated depreciation, and book value; and, (2) a general reference to agency reports that disclose significant detailed information about PP&E.</p> <p>In addition, the CFR should disclose significant accounting principles used and the methods of applying those principles.</p>

15a	<p>In a note to the financial statements, reporting entities should display a reconciliation between the beginning and ending balances of the subsidy cost allowance for outstanding direct loans and the liability for outstanding loan guarantees reported in the entities' balance sheet. The reconciliation is accomplished by adding to or subtracting from the beginning balance the dollar amounts of the following items: (a) the subsidy expense recognized in the four components as defined in paragraphs 25 through 29 (interest subsidy cost, the default cost, the present value of fees and other collections, and other subsidy costs) for direct or guaranteed loans disbursed during the reporting year, (b) the two types of subsidy re-estimates as defined in paragraph 32 (i.e., the subsidy cost allowance for direct loans and the liability for loan guarantees), and (c) other adjustments. For direct loans, the other adjustments include loan modifications, fees received, loans written off, foreclosed property or other recoveries acquired, and subsidy allowance amortization. For loan guarantees, the other adjustments include loan guarantee modifications, fees received, interest supplements paid, claim payments made to lenders, foreclosed property or other recoveries acquired, and interest accumulated on the loan guarantee liability. The requirement to display reconciliation applies to direct loans and loan guarantees obligated or committed on or after October 1, 1991, the effective date of the Federal Credit Reform Act of 1990. Reporting entities are encouraged but not required to display reconciliations for direct loans and loan guarantees obligated or committed prior to October 1, 1991, in schedules separate from the direct loans and loan guarantees obligated or committed after September 30, 1991. <u>The U.S. government-wide financial statements need not disclose a reconciliation between the beginning and ending balances of the subsidy cost allowance for the outstanding direct loans and the liability for outstanding loan guarantees reported in the U.S. government-wide financial statements.</u> (SFFAS 18.10)</p>	28	<p>No reconciliation is required in the CFR. A general reference to agency reports would be provided.</p>
-----	--	----	---

15b	<p>Disclosure and Discussion Requirements: (A) Reporting entities should provide a description of the characteristics of programs and disclose for each program: (a) the total amount of direct or guaranteed loans disbursed for the current reporting year and the preceding reporting year, (b) the subsidy expense by components recognized for the direct or guaranteed loans disbursed in those years, and (c) the subsidy re-estimates by components for those years.</p> <p>(B) Reporting entities should also disclose at the program level the subsidy rates for the total subsidy cost and its components for the interest subsidy costs, default costs (net of recoveries), fees and other collections, and other costs, estimated for direct loans and loan guarantees in the current year's budget for the current year's cohorts. Each subsidy rate is the dollar amount of the total subsidy or a subsidy component as a percentage of the direct or guaranteed loans obligated in the cohort. Entities may use trend data to display significant fluctuations in subsidy rates. Such trend data, if used, should be accompanied with analysis to explain the underlying causes for the fluctuations.</p> <p>(C) Reporting entities should disclose, discuss, and explain events and changes in economic conditions, other risk factors, legislation, credit policies, and subsidy estimation methodologies and assumptions, that have had a significant and measurable effect on subsidy rates, subsidy expense, and subsidy re-estimates. The disclosure and discussion should also include events and changes that have occurred and are more likely than not to have a significant impact but the effects of which are not measurable at the reporting date. Changes in legislation or credit policies include, for example, changes in borrowers' eligibility, the levels of fees or interest rates charged to borrowers, the maturity terms of loans, and the percentage of a private loan that is guaranteed.</p> <p><u>(D) The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities. Statement of Federal Financial Accounting Standards 33: Pensions, Other Retirement Benefits, and Other Postemployment Benefits: Reporting the Gains and Losses from Changes in Assumptions and Selecting Discount Rates and Valuation Dates

Status

Issued	October 14, 2008
Effective Date	For fiscal years beginning after September 30, 2009.
Affects	<ul style="list-style-type: none">• SFFAS 5, pars. 65, 66, 83, 95, and 157.• SFFAS 7, par. 67.1 and 67.2.• SFFAS 17, pars. 25, 27(2), and 27(4).• Interpretation 3 was rescinded by par. 36.
Affected by	None.

Summary

During its consideration of long-term obligations, the Board discussed the need to highlight gains and losses from changes in assumptions in federal financial reports. Some of the most significant changes in amounts on the statement of net cost for the consolidated Financial Report of the United States Government (CFR) and for certain component entities can result from gains and losses from changes in assumptions. This Statement addresses that need.

This Statement applies to federal entities that report liabilities and expenses for federal employee pensions, other retirement benefits (ORB), and other postemployment benefits (OPEB) in general purpose financial reports prepared pursuant to Federal Accounting Standard Advisory Board standards.

This Statement requires gains and losses from changes in long-term assumptions used to estimate federal employee pension, ORB, and OPEB liabilities to be displayed on the statement of net cost separately from other costs. Separate display will provide more transparent information regarding the underlying costs associated with these liabilities.

This Statement also requires disclosure of the components of the expense associated with federal employee pension, ORB, and OPEB liabilities in notes to the financial statements. Such disclosure will provide useful information for analysis. The information will be comparable across agencies and between postemployment and retirement programs.

This Statement also provides a standard for selecting the discount rate assumption for present value estimates of federal employee pension, ORB, and OPEB liabilities. There is currently uncertainty in practice in this regard.

This Statement also provides a standard for selecting the valuation date for estimates of federal employee pension, ORB, and OPEB liabilities, which will establish a consistent method for such measurements.

Introduction

Purpose

1. This statement requires the following:
 - a. Gains and losses from changes in **long-term assumptions**¹ used to estimate federal employee pension, **other retirement benefit** (ORB), and **other postemployment benefit** (OPEB) liabilities should be displayed on the statement of net cost separately from other costs. This display will provide more transparent information regarding the underlying costs associated with certain liabilities.
 - b. Components of the expense associated with federal employee pension, ORB, and OPEB liabilities should be disclosed in notes to the financial statements. Such disclosure will provide information useful for analysis. The information will be comparable across agencies and between postemployment and retirement programs.
2. This statement also provides standards for selecting:
 - a. The discount rate assumption for pension, ORB, and OPEB liabilities. There is currently uncertainty in practice regarding the selection of discount rates in some situations.
 - b. The valuation date for measuring pension, ORB, and OPEB liabilities, which will establish a consistent method for such measurements.

Background

Reporting Gains and Losses from Changes in Assumptions

3. During its discussions of long-term obligations the Board addressed the need to highlight certain gains and losses from changes in assumptions in federal financial reports. Some of the most significant changes in amounts on the statement of net cost for the consolidated Financial Report of the United States Government (CFR)² and for certain **component entities** can result from gains and losses from changes in assumptions. The Board is now

¹ Terms in the Glossary are shown in **boldface** the first time they appear in this document.

²See Appendix D containing Note 11, "Federal Employee and Veterans Benefits Payable," from the FY 2006 CFR.

requiring that such gains and losses be reported as a discrete line item on the statement of net cost.

Selecting the Discount Rates

4. SFFAS 5 provides standards for several types of liabilities, some of which require present value valuations. Federal accounting standards requiring present valuations usually specify U. S. Treasury borrowing rates as the discount rates, although the terminology used differs.
5. With respect to the selection of assumptions for pension, ORB, and OPEB liabilities, including the discount rate assumption, SFFAS 5 emphasizes expected long-term future trends rather than recent past experience. For the discount rate, SFFAS 5 required either the entity's long-term investment yield on assets, if the benefit plan is being funded, or other long-term assumptions such as Treasury borrowing rates for securities of similar maturity to the period over which the payments are to be made.³
6. Some entities interpreted the SFFAS 5 standard with respect to **other postemployment benefits** (OPEB) to require the use of single-day Treasury rates for the discount rates. Single-day rates render liability projections susceptible to more volatility than, for example, rates based on long-term expectations or historical experience.
7. Liabilities for postemployment and retirement benefits can be very large. The combination of the magnitude of these liabilities and volatility of the projections has resulted in large variations in annual cost from year to year that reduces the usefulness of reported operating results.
8. FASAB standards that require the use of Treasury borrowing rates for discounting do not specify a precise method for selecting such rates. There were a number of options for the discount rate. However, the discount rate generally required in FASAB standards is the rate on **marketable Treasury securities** of similar maturity to the cash flows of the obligation in question.
9. This Statement provides a standard for selecting discount rates for present value measurements of federal employee pension, ORB, and OPEB liabilities.

³SFFAS 5, pars. 66, 83, and 95.

Selecting the Valuation Date

10. This Statement provides a standard regarding selecting valuation dates for present valuations of federal employee pension, ORB, and OPEB liabilities. Few FASAB standards currently address the valuation date *per se*.
11. In Interpretation 3, *Measurement Date for Pension and Retirement Health Care Liabilities* (August 1997), the Board addressed the valuation date issue with respect to measuring federal civilian and military employee pension and retirement health care liabilities in general purpose financial reports prepared pursuant to SFFAS 5. Interpretation 3 requires that pension and retirement health care liabilities in general purpose federal financial reports prepared pursuant to SFFAS 5 be measured as of the end of the reporting period. However, a full actuarial valuation as of the end of the reporting period is not required. The Interpretation allows the measurement to be based on an actuarial valuation performed as of an earlier date during the fiscal year, including the beginning-of-year, adjusted or "rolled forward" for the effects of changes during the year in major factors such as pay raises and cost of living adjustments.
12. In this Statement the Board is extending the Interpretation 3 approach to expense and liability measurement for OPEB liabilities.
13. This Statement is effective for fiscal years beginning after September 30, 2009.

Accounting Standard

Scope

14. This Statement applies exclusively to entities that report liabilities for federal employee pensions, other retirement benefits (ORB), and other postemployment benefits (OPEB), including veterans' compensation,⁴ in general purpose financial reports prepared pursuant to Federal Accounting Standard Advisory Board (FASAB) standards. This Statement does not apply to the Federal Employees Compensation Act (FECA) program.
15. This Statement requires the display of gains and losses from changes in long-term assumptions used to estimate liabilities for federal employee pensions, ORB, and OPEB, including a discount rate assumption. For the purpose of this Statement, assumptions are considered long-term if the underlying event about which the assumption is made will not occur for five years or more. If the event is one of a series of events, the entire series should be considered the event and, thus, projected payments may commence within one year but would be required to extend at least five years. Otherwise, assumptions would be considered short-term.
16. This Statement does not preclude entities from displaying or disclosing any information about the effect of changes in any assumptions with regard to other types of activities.
17. In addition, except for the change in terminology to characterize the preparer's "best estimate" as "reasonable estimate," this Statement does not apply to social insurance programs for which the FASAB has specifically provided standards in SFFAS 17, *Accounting for Social Insurance*. The preparation and display of the expense and liability, related disclosures, and the statement of social insurance follows the standards promulgated in SFFASs 17, 25,⁵ and 26.⁶

⁴ The pension program for veterans of the Department of Veterans' Affairs (DVA) is not accounted for as a "federal employee pension plan" under SFFAS 5 and the obligation therefore is not recorded as a liability due to differences between its eligibility conditions and those of federal employee pensions. The veterans' pension obligation is currently measured internally by the DVA in a manner consistent with the DVA's compensation program.

⁵ *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessments*, July 17, 2003.

⁶ *Presentation of Significant Assumptions for the Statement of Social Insurance: Amending SFFAS 25*, November 1, 2004.

-
18. This Statement applies to information provided in general purpose federal financial reports. It does not affect statutory or other special-purpose reports, such as pension or ORB reports.
-

Display

Component Entities

19. Component entities should display gains and losses from changes in long-term assumptions used to measure liabilities for federal civilian and military employee pensions, ORB, and OPEB, including veterans' compensation, as a separate line item or line items on the statement of net costs. See the pro forma illustration in Appendix B.
20. Selecting the gains and losses to display from changes in individual pension, ORB, and OPEB liability assumptions to be displayed on the statement of net cost requires judgment. The preparer should consider quantitative and qualitative criteria. Acceptable criteria include but are not limited to quantitative factors such as the percentage of the reporting entity's cost that resulted from the gain or loss and the size of the gain or loss relative to the liability; and qualitative factors including whether the gain or loss would be of interest to decision-makers and other users. Nothing in this standard should be construed to preclude an entity from displaying gains or losses from changes in short-term assumptions.
21. Pursuant to SFFAS 5, some component entities report the liability and expense for pensions, ORB, or OPEB, while other component entities report only **normal (or service) cost**.⁷ The Office of Personal Management is an example of the former with respect to the Federal Employees Retirement System (FERS), and federal component entities with employees participating in FERS are examples of the latter. Component entities that report pension, ORB, or OPEB liabilities should display a discrete line item for gains and losses from changes in assumptions on its statement of net cost when the conditions in paragraphs 19-20 above are met. Component entities reporting only the normal or service cost should not display such gains and losses.

⁷The terms "employer entity" and "administrative entity" are used in SFFAS 5 to distinguish between entities that employ federal workers and thereby incur the employee costs, including pension cost, and those that are responsible for managing and/or accounting for the pension or the other employee plan. For example, entities that receive "salaries and expense" appropriations are employer entities, while the Office of Personnel Management (OPM) is an administrative entity because it administers the civilian retirement benefit plans. See especially SFFAS 5, pars. 71-2 and 88. An entity may be both an employer entity and an administrative entity, for example, when it, rather than OPM, administers a pension plan for its employees. In such instances, that entity would be responsible for reporting gains and losses from changes in assumptions if the conditions in paragraph 19-20 are satisfied.

22. Component entities should disclose in notes to the financial statements the following reconciliation of beginning and ending pension, ORB, and OPEB liability balances:

Beginning liability balance	\$X,XXX
Expense:	
Normal cost ^a	XX
Interest on the liability balance	XX
Actuarial (gain)/loss:	
From experience	XX
From assumption changes	XX
Prior service costs [*]	X
Other	(X)
Total expense	XXX
Less amounts paid	(XX)
Ending liability balance	\$X,XXX

^a See the glossary for this standard's definition of "normal cost."

23. This reconciliation must provide all material components of pension, ORB, or OPEB expense consistent with the components identified in the table immediately above, if applicable. Additional sub-components may be presented. The line item for **actuarial gains and losses** should be broken out into the sub-components "from experience" and "from assumptions changes." Significant pension, ORB, and OPEB programs should be presented individually in a separate column along with an "all other" column, if applicable, and a "total" column for each line item.
24. Component entities that report pension, ORB, or OPEB liabilities should disclose the information required in paragraph 22. Component entities reporting only the normal or service cost should not disclose the information required in paragraph 22.
25. Component entities holding non-Treasury securities as assets to fund their pension, ORB, or OPEB programs should disclose the rates of return, specific maturities, and allocation by type (stocks, bonds, etc.) of such assets.

Governmentwide Entity

26. The governmentwide entity should display gains and losses from changes in assumptions as a separate line item or line items on the statement of net cost after a subtotal for all other costs and before total cost. See the pro forma illustration in Appendix B.

-
27. The governmentwide entity should disclose in the notes to the financial statements a reconciliation consistent with information required in paragraph 22 above for pension, ORB, and OPEB liabilities. At a minimum, reconciliations for liabilities classified as civilian, military, and veterans compensation must be presented. See Appendix C for an example.
-

Selecting Discount Rates

28. Discount rates as of the reporting date for present value measurements of pension, ORB, and OPEB liabilities should be based on interest rates on **marketable Treasury securities** with maturities consistent with the cash flows being discounted. The discount rates should be matched with the expected timing of the associated expected cash flow. Thus, cash flows projected in each period should have a discount rate associated with them. However, one discount rate may be used for all projected future cash flows if the resulting present value is not materially different than the resulting present value using multiple rates. A change to or from multiple rates from or to a single rate should be disclosed.
29. The discount rates as of the reporting date should reflect average historical rates on marketable Treasury securities rather than giving undue weight to the current or very recent past experience of such rates. Historical experience should be the basis for expectations about future trends in marketable Treasury securities. The discount rate, the underlying inflation rate, and the other economic assumptions should be consistent with one another.
30. In developing average historical Treasury rates, a minimum of five historical rates as of the reporting date (e.g., at the current and four prior fiscal year ends) should be used for each maturity. The historical rates used to calculate the average should be sequential (e.g., 2003-2007). For example, for an average historical Treasury rate to be used as the discount rate as of the end of fiscal year 2007 for a payment due in 10 years (i.e., in fiscal 2017), a minimum of the five most recent fiscal year-end historical rates on 10-year Treasury securities should be used. Thus, the rate on 10-year Treasury securities as of the end of fiscal year 2007 would be one of the five historical rates used in the average, the rate on 10-year Treasury securities as of the end of fiscal year 2006 would be another rate, etc., until, at a minimum, the rates on 10-year Treasury securities as of the end of fiscal years 2003 through 2007 would be included in the average.
31. The number of historical rates used in the calculation of the average as explained in paragraph 30, e.g., five fiscal year-end rates, should be consistent from period to period. The entity's accounting policy disclosures should include its policy regarding consistency from one reporting period to the next.
32. In the determination of the historical Treasury rates used, for cash flows that are projected to occur in future years for which Treasury securities are or were not available or that are

expected beyond the maturities at which Treasury securities are available, e.g., beyond the 30-year security, the preparer should incorporate into the determination of the discount rate interest rates interpolated or extrapolated from historical Treasury rates.

Selecting Valuation Date

33. Estimates of pension, ORB, and OPEB liability and expense in general purpose federal financial reports should be measured as of the end of the fiscal year (or other reporting period if applicable). Measurements based on an actuarial valuation may be performed as of an earlier date during the fiscal year, including the beginning of the year, with adjustments for the effects of changes during the year in major factors such as the pay raise and cost of living adjustment. A full actuarial valuation as of the end of the reporting period is not required. Measurements should reflect the entity's assumptions about the major factors that would be reflected in a full actuarial valuation, such as the actual pay raise, the actual cost of living adjustment, and material known changes in the number of participants covered (enrollment) that cause a change in the liability.
34. The valuation date in the full actuarial valuation utilized by the entity should be consistently followed from year to year.

Reasonable Estimates

35. The entity's estimates should reflect its judgment about the outcome of events based on past experience and expectations about the future. Estimates should reflect what is reasonable to assume under the circumstances. The entity's own assumptions about future cash flows may be used. However, the entity should review assumptions used generally in the federal government as evidenced by sources independent of the reporting entity, for example, those used by the Bureau of Economic Analysis for the National Income and Product Accounts and, if its assumptions do not reflect such data, explain why it is inappropriate to do so.

Effect on Prior Standards

36. This Statement provides additional requirements for display, disclosure, discount rates, and valuation dates for federal civilian and military employee pensions, ORB, and OPEB in SFFAS 5. Interpretation 3 is rescinded. In addition, this Statement replaces "best estimate" with "reasonable estimate" in SFFAS 5, SFFAS 7, and SFFAS 17.

SFFAS 5

37. This Statement also affects current standards for selecting discount rates. SFFAS 5, *Accounting for Federal Liabilities*, is amended as follows:

65. Assumptions—*For financial reports prepared for the three primary federal plans (CSRS, FERS, and MRS), ~~the best available~~ actuarial estimates of assumptions should be used to calculate the pension expense and liability. The selection of all actuarial assumptions should be guided by Actuarial Standards of Practice No. 4, Measuring Pension Obligations, as revised from time to time by the Actuarial Standards Board. Accordingly, actuarial assumptions should be on the basis of the actual experience of the covered group, to the extent that credible experience data are available, but should emphasize expected long term future trends rather than give undue weight to recent past experience. Although emphasis should be given to the combined effect of all assumptions, the reasonableness of each actuarial assumption should be considered independently on the basis of its own merits and its consistency with each other assumption. [footnote omitted]*

66. In addition to complying with the guidance in the preceding paragraph, the discount rate assumption for present value measurements of pension liabilities should be the interest rate on marketable Treasury securities of similar maturities to the cash flows of the payments for which the estimate is being made. The discount rates should be matched with the expected timing of the associated expected cash outflow. Thus, each year for which cash flows are projected should have a separate discount rate associated with it. However, a single average discount rate may be used for all projected future payments if the resulting present value is not materially different than the resulting present value using multiple-rates. ~~the interest rate assumption should be based on an estimated long-term investment yield for the plan, giving consideration to the nature and the mix of current and expected plan investments and the basis used to determine the actuarial value of assets; or if the plan is not being funded, other long-term assumptions (for example, the long-term Federal government borrowing rate). The underlying inflation rate and the other economic assumptions should be consistent. The rate used to discount the pension obligation should be equal to the long-term expected return on plan assets.~~ The discount rates should reflect average historical rates on marketable Treasury securities rather than give undue weight to recent past experience with such rates. Historical experience should be the basis for expectations about future trends in marketable Treasury securities. In developing the average historical Treasury rates, a minimum of five historical rates as of the appropriate reporting dates should be used for each maturity. The historical rates used to calculate the average should be sequential (e.g. 2003-2007). For example, for an average historical Treasury rate to be used as the discount rate as of the end of the fiscal year 2007 for a payment due in 10 years, i.e., in 2017, a minimum of five 10-year Treasury rates should be used. Thus, the rate on 10-year Treasury securities as of the end of fiscal year 2007 would be one rate, the rate on 10-year Treasury securities as of the end of fiscal year 2006 would be another rate, etc., until, at a minimum, the rates on 10-year Treasury securities for the years 2003 through 2007 were included in the average. The number of historical rates used for the average, e.g., five yearly rates, should be consistent from period to period. The entity should explain that its accounting policy is to be consistent in this regard from period to period. For cash flows that are projected to occur in future years for which Treasury securities are not available or that extend beyond the maturities for which Treasury securities are available, e.g., beyond the 30-year security, the preparer should incorporate in the assumed discount rate expected re-financing rates extrapolated from historical Treasury borrowing rates.

83. **Assumptions**—Amounts calculated for financial reports prepared for ORB plans should reflect (1) general actuarial and economic assumptions that are consistent with those used for federal employee pensions and (2) a long-term health care cost trend assumption that is consistent with Medicare projections or other authoritative sources appropriate for the population covered by the plan. The discount rate assumption for present value measurements of ORB liabilities should be developed in accordance with paragraph 66 of this standard. ~~be equal to the long-term expected return on plan assets if the plan is being funded or on other long-term assumptions (for example, the long-term Federal government borrowing rate) for unfunded plans.~~ The administrative entity should disclose the assumptions used.

95. The employer entity should recognize an expense and a liability for OPEB when a future outflow or other sacrifice of resources is probable and measurable on the basis of events occurring on or before the reporting date. For example, a reduction in force may require an employer entity to make severance payments, unemployment reimbursements, or other payments in future periods. Similarly, an injury on the job may require the employer entity to make short- or long-term reimbursements to the federal workers' compensation program. A long-term OPEB liability should be measured at the present value of future payments. This will require the employer entities to estimate the amount and timing of future payments, and to discount the future outflow using the interest rate on marketable Treasury borrowing rate for securities of similar maturities to the period over which the payments are to be made. The discount rate assumption for present value measurements of OPEB liabilities should be developed in accordance with paragraph 66 of this standard.

157. Second, assumptions ought to be consistent across federal employee pension, other retirement benefit, and other postemployment benefit systems. Assumptions need not be identical because the conditions facing each plan may objectively differ, but they should be rationally related (thus, the standard calls for financial reports to be prepared on the basis of ~~the best available~~ reasonable estimates for actuarial assumptions). Also, the standard allows the smaller plans to use the assumptions provided by any of the three primary plans or to use their own assumptions if they explain how and why they are different from one of the major plans.

SFFAS 7

38. This Statement also affects current standards that use the term “best estimate.” SFFAS 7, *Accounting for Revenue and Other Financing Sources ...*, is amended as follows:

67.1 Entities that collect taxes and duties should provide the following supplementary information relating to their potential revenue and custodial responsibilities:

*67.1 The estimated realizable value, as of the end of the reporting period, of compliance assessments and, if reasonably estimable, preassessment work in process. The amounts furnished should represent management’s best estimate of additional revenues **reasonably expected** ~~likely~~ to be collected from compliance assessments and from pre-assessment work in process, appropriately qualified as to their reliability. A range of amounts may be provided for pre-assessment work in process if estimable. The change in the total(s) of compliance assessments and of pre-assessment work in process during the reporting period also should be provided.*

*67.2 If reasonably estimable, other claims for refunds that are not yet accrued but are likely to be paid when administrative actions are completed. If estimated, unasserted claims for refunds should be provided separately from claims filed and may be expressed as a range of amounts. The amounts furnished should represent management’s best **reasonable** estimates, appropriately qualified as to their reliability. The change in the total of these amounts during the reporting period also should be provided.*

SFFAS 17

39. Paragraphs 24-27 and 32-33 of SFFAS 17 provide the standard for required supplementary information (sub-paragraph 27(3) and 32(3) were re-classified as basic information by

SFFAS 26, *Presentation of Significant Assumptions for the Statement of Social Insurance: Amending SFFAS 25*). Paragraph 25 of SFFAS 17 is changed as follows:

*25. The projections and estimates used should be based on the entity's ~~best~~ **reasonable** estimates of demographic and economic assumptions, taking each factor individually and incorporating future changes mandated by current law. Significant assumptions should be disclosed.*

40. Paragraph 27(2) of SFFAS 17 requires the ratio of contributors to beneficiaries as supplementary information. Paragraph 27(2) is changed as follows:

27(2) Ratio of Contributors to Beneficiaries - With respect to the OASDI and HI programs, the ratio of the number of contributors to the number of beneficiaries (commonly called the "dependency ratio") during the same projection period as for cashflow projections (e.g., 75 years), using the program managers' ~~best~~ estimate. At a minimum, the ratio should be reported for the beginning and end of the projection period. [footnote omitted]

41. Paragraph 27(4) (a) of SFFAS 17 requires sensitivity analysis as supplementary information. The phrase "best estimate cost" before the word "assumptions" is changed as follows:

*27(4) (a) For all programs except UI illustrate the sensitivity of the projections and present values required by paragraphs 27(1) and 27(3) to changes in the most significant individual assumptions. For example, using the entity's "~~best estimate~~" **reasonable** cost assumptions as a baseline, show the effect of varying several significant assumptions*

Effective Date

42. This Statement is effective for fiscal years beginning after September 30, 2009.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Appendix A: Basis for Conclusions

This appendix discusses factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement---not the material in this appendix---should govern the accounting for specific transactions, events or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Comments Received

- A1. The Board did not rely on the number in favor or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The respondents' comments are summarized below.
- A2. Eight written responses were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		2
Auditors	1	
Preparers and financial managers	5	

Summary of Comments

Display

What the Exposure Draft Proposed regarding Display

- A3. During its consideration of long-term obligations the Board discussed how financial statement display might be modified to show the fluctuations in cost caused by changes in assumptions. Some of the most significant changes in amounts on the operating statement for the Financial Report of the United States Government (CFR) and on the statement of net cost for some component entities often result from gains and losses from changes in assumptions. Note 11⁸ to the FY 2006 CFR disclosed that the expense for military employee

⁸ See Appendix D for Note 11.

pension benefits was \$112.2 billion. Of this amount \$20.1 billion was for changes in assumptions, and \$6.1 billion was from differences between actual experience and what was assumed. And even more dramatically, Note 11 in the CFR for FY 2005 disclosed that of the \$123 billion expense for post-retirement healthcare benefit for military personnel, \$53 billion was attributed to changes in assumptions and \$5 billion was from differences between actual experience and what was assumed.

- A4. The issue of volatility in reported annual expense was first brought to the Board's attention with respect to year-to-year volatility in veterans' compensation expense amounts reported by Department of Veteran's Affairs (DVA). Large percentage changes in net cost resulted from DVA's need to estimate future outflow for veteran's compensation benefits based on complex assumptions and cost models. Other agencies need to make similar estimates. Small changes in the discount rate assumption, for example, produce large fluctuations.
- A5. The Board decided to propose a general standard rather than focus solely on DVA and other employee compensation liabilities because many programs are affected by changes in long-term assumptions. Although pension, ORB, and OPEB programs employ long-range assumptions to estimate liabilities and periodic expense, other programs also involve long-term assumptions for liability and cost estimates the dollar amounts of which are very large relative to other financial statement items. For example, environmental liabilities require the use of long-term assumptions.
- A6. The exposure draft proposed that gains or losses from changes in assumptions, if any, should be presented as discrete line items not assigned to programs on the statement of net cost (SNC). The Board believed that this disaggregation would enhance the usefulness of the information provided on the statement of net cost. Separate display highlights the effects of changes in assumptions, which can be significant. Expenses assigned to programs would be distinguished from the gains and losses from changes in assumptions. The user would be better able to understand the operating performance of the entity as well as the role of gains and losses from changes in assumptions.
- A7. The Board believed that the discrete display of such gains and losses would enhance users' understanding of liabilities and periodic expense. Users, including entity managers, would understand more about how liabilities and expense are measured; about the uncertainty of the measurement of individual liabilities; and about what causes changes in liabilities. Managers would benefit from having information about the volatility of assumptions in their programs. Extreme volatility might indicate the assumptions chosen and/or the assumption-selection process needs re-evaluation. Volatility may affect the entity's funding requests and long-term planning. It will at least raise a flag for further investigation.
- A8. The proposed Statement provided certain exceptions to the display requirement. Assumptions used to estimate receivables, payables, inventory and related property and

other short-term assumptions were excepted because they will be proved or disproved within a relatively short period of time. Also, those assumptions used for direct loans and loan guarantees were excepted because the FASAB has already provided accounting procedures.

Respondents' Comments regarding Display

- A9. Most respondents agreed that the separate display of gains and losses from changes in assumptions on the SNC would be informative and useful. One respondent recommended displaying more detail about assumption changes on the face of the SNC, for example, the nature of the assumption change, within a category of assumptions (i.e., economic, demographic, etc.) and the amount of change.
- A10. Most of the respondents who commented on the question about the criteria for short – and long-term assumptions found the 5-year criteria useful. One respondent commented that there is some ambiguity in the wording and suggested the following three improvements: (1) explicitly allow display of gains/losses from assumption changes involving estimates for less than five years, (2) include the size of the gain/loss relative to the actuarial liability as part of the guidance in the proposed standard (ED paragraph 21) as another criterion for deciding what to display, and (3) include a discussion of the need to distinguish between benefit changes and assumption changes in the basis for conclusions. Another respondent commented that the glossary should be clearer regarding what is meant by long-term assumptions.
- A11. One respondent did not believe the 5-year division is appropriate “to define liabilities.” In addition, this respondent thought there would be situations where changes in short-term assumptions could result in material gains and losses.
- A12. Another respondent commented that the proposed standard did not provide satisfactory guidance based on their belief that it (1) would apply to a very limited federal audience, (2) uses high-level generalities, and (3) should be directed to the administrative entities for the primary federal employee benefit programs.
- A13. Several respondents commented that the proposed standard is not clear with respect to how it applies to non-actuarially prepared liability estimates. For example, one respondent thought that it may not be feasible to identify separate components of an annual change in non-actuarial liabilities. Another respondent asked for more guidance with respect to paragraph 21 in the exposure draft, which directed the preparer to use judgment in selecting the long-term assumptions for which gains and losses from changes are to be displayed individually on the statement of net cost.

The Board's Conclusions regarding Display

- A14. The Board decided to limit the standard to federal employee pension, ORB, and OPEB liabilities. This decision is based on the Board's desire to address more immediately its primary concern, which is to display the effect of assumption changes on employee compensation liabilities. The Board considered the requests from some respondents for more guidance regarding how the standard would apply to other than pension, ORB, and OPEB activities. Although in principle a broader application is desirable, the Board believes that developing additional guidance would significantly delay implementation of a broad standard. Therefore, the Board concluded that limiting the scope to pension, ORB, and OPEB liabilities would address the specific issue presented at this time. In addition, the need for information about the effect of assumption changes is more acute for pension, ORB, and OPEB liabilities than for other liabilities where the combination of factors that the preparer would have to consider is more complex. Legal contingencies, for example, involve an array of considerations that are not as clear-cut as for employee benefits.
- A15. This decision effectively renders moot several of the respondents' concerns. First, it addresses the concern of some respondents that the guidance was not specific enough with respect to which assumptions are subject to the standard. Second, it addresses the concern that the disclosure requirement of ED paragraphs 22-23 were too pension-oriented and preparers may be confused regarding how to classify annual changes in, for example, environmental cleanup liabilities or contingent liabilities.
- A16. Narrowing the scope of the standard also meant that the examples of liabilities to which the standard does not apply were not necessary. Paragraph 14 now explicitly states that the standard applies exclusively to pensions, ORB, and OPEB. The Board decided that the ED paragraphs containing examples of other liabilities to which the standard would not apply (e.g., liabilities that employ long-term assumptions where the FASAB has specifically provided standards such as loans and loan guarantees, or to assumptions that are short-term in nature, including estimates or receivables, payables inventory, and claims incurred but not reported) were redundant and potentially confusing, and they have been removed.
- A17. With respect to concern that the proposed standard did not provide satisfactory guidance regarding how it applies to administrative and employer entities as defined in SFFAS 5, specific guidance has been added. The standard now states that, in cases where an entity does not report the pension, ORB, or OPEB liability, that entity is not responsible for reporting gains and losses from changes in assumptions. For example, most civilian federal employees participate in either the Civil Service Retirement System (CSRS) or the Federal Employee Retirement System (FERS) pension plans, which are administered by the Office of Personal Management (OPM). Federal reporting entities whose employees participate in CSRS and FERS (other than OPM itself) report only a portion of the annual cost of the employee benefits. This portion is called the "normal cost" (or, "service cost"). The OPM

reports the liability and all costs components, as described in SFFAS 5. Thus, the OPM, which is called the “administrative agency” in SFFAS 5, is responsible for reporting the gains and losses from changes in assumptions as a discrete line item on its SNC.

- A18. An entity may function both as an employer and an administrator entity. For example, it may administer a pension benefit for its employees rather than participate in CSRS or FERS. In such instances, that entity would report the liability and all costs. Thus, that entity would report gains and losses from changes in assumptions, if the conditions in paragraphs 19-20 are satisfied. The Board believes that the display of the effect of changes in assumptions will be meaningful for all entities that report a pension, ORB, or OPEB liability.
- A19. The Board considered the applicability of this standard to the Federal Employees Compensation Act program. The Board concluded that it was not appropriate or necessary for the Department of Labor to provide the information concerning gains and losses from changes in assumptions to the employer agencies, nor for the employer agencies to separately report or disclose such information. Under the particular circumstances of FECA accounting and reporting, the Board decided that the value of the FECA information provided pursuant to this standard would not offset the burden and cost of providing it.
- A20. Regarding the distinction between “short-term assumptions” and “long-term assumptions,” the Board believes the standard provides sufficient guidance. Assumptions are considered long-term if the underlying event about which the assumption is made will not occur for five years or more. If the event is one of a series of events, the entire series should be considered the event and, thus, projected payments may commence within one year but would be required to extend at least five years. Otherwise, assumptions would be considered short-term. The Board believes that limiting the scope of the standard to federal employee pensions, ORB, and OPEB will reduce the potential for misunderstanding.
- A21. Regarding the comment that information about changes in short-term assumptions might be informative, the Board agrees that there might be instances where the display of gains and losses from changes in assumptions that are by definition “short-term” in nature might be informative. Although it does not require such display, the final standard does not preclude displaying the effect of changes in short-term assumptions (see paragraph 16).
- A22. Regarding the comment about the propriety of the 5-year criteria for distinguishing long-term liabilities, the proposed standard did not define “long-term liabilities.” It used that term generally to describe the types of liabilities for which components of expense should be disclosed and for which estimates are undertaken using “long-term assumptions.” The proposed standard defined long-term assumptions as those where the underlying event about which the assumption is made will not occur for five years or more. The Board understands the respondent’s comment to involve a question about the sufficiency of the general usage of “long-term liability” in the standard. The Board believes that the usage of

“long-term liability”, along with the specific focus on assumptions involving events of 5 years or more, is sufficient. However, in order to make the standard as clear as possible, in the final standard the Board uses the word “long-term” primarily to modify the word “assumption” and does not apply it to the word “liability.” Rather, the standard refers to liabilities and/or estimated liabilities that involve long-term assumptions.

Note Disclosures

What the Exposure Draft Proposed regarding Disclosure

A23. The proposed standard required certain note disclosures. First, the components of expense associated with liabilities involving long-term assumptions were to be disclosed. The Treasury Department and other users advocated a disclosure that will allow increased comparability between federal civilian and military employee and veteran benefits programs. The Board believed that disclosing the components of expense will provide information about the government’s annual accrued costs and about increases and decreases in the associated liability that will be useful for decision-making. The Treasury Department prepares the CFR and must explain any wide swings in certain liabilities. For some time Treasury has sought to improve the disclosure for federal employee and veteran benefits payable and currently discloses the information shown in Appendix D. The desire for more transparency in this regard is not only the goal of the Treasury Department but also apparent in comments from other CFR users, most notably the Federal Reserve. Most of the information required in this Statement is already presented in the CFR but some data is missing. The proposed standard was intended to fill these gaps.

A24. In addition to the components of expense, the exposure draft proposed disclosure of market rates for Treasury securities with 10-, 20-, and 30-year maturities. The Board believed that market rates would be a useful benchmark for comparison with the discount rate(s) the entity is using. The discount rate affects expense and liability amounts and a comparison with market rates would provide useful context. The Board considered but decided not to require the note disclosure to include the entity’s analysis of the effect on expense and liability amounts of using current market rates. The burden of such a requirement on some preparers was deemed to outweigh the benefits of the information provided. However, the proposed note disclosure would allow interested parties to begin such an analysis.

Respondents Comments regarding Disclosure

A25. Most respondents commented that the note disclosure would be informative. One respondent recommended more detailed information about gains and losses from assumption changes. For example, display the type of assumption within a category of assumptions (i.e., categories are economic, demographic, discount rates, etc.) and the amount of each change. Another respondent recommended disclosure of (1) the assumed

rate of return on the plan assets, if the reporting entity has such assets – that is, not just the return on Treasury securities, (2) the specific maturities for the Treasury securities, and (3) the allocation of the fund's assets by asset general category. Another respondent recommended requiring the reporting entity to determine its financial position using both the discount rate on Treasury securities and the discount rate on the actual assets of the fund, if any, to show the actual impact of these different rates.

A26. Another respondent commented that the disclosure would be neither meaningful nor informative. They found the standard too vague to determine whether long-term construction contracts or procurements would be included. They cited issues involving their Standard General Ledger accounts and accounting system.

A27. One respondent commented that the disclosure of market rates would be informative and provide transparency. However, another respondent found the benchmark comparisons unnecessary and potentially confusing. This respondent favored merely stating the basis for selecting assumptions in the notes; for example, that a board of experts decided the rates are appropriate.

A28. One respondent commented that the proposed standard appeared to eliminate the requirement in SFFAS 5, par. 88, for disclosure of gains and losses due to changes in the medical trend assumptions as a separate item because it could be included in disclosure of all other such gains and losses. The Board notes that this is not the case; the requirement in par. 88 is not affected by this standard.

The Board's Conclusions regarding Disclosure

A29. With respect to the suggestion that more detail be disclosed, the proposal in the exposure draft did not require as much detail on the face of the financial statement or as much disclosure as recommended by some respondents. The Board's decision to limit the scope of the final standard to pensions, ORB, and OPEB reduces the need for additional detail. At the same time the Board added a requirement for disclosure of information about non-Treasury assets, if any. As noted above, the exposure draft did not and the standard does not preclude display or disclosure of short-term gains and losses or other material components.

A30. Regarding the comments about disclosing current market rates for certain Treasury securities, the Board decided to eliminate this requirement. Some believe that this disclosure would be a useful benchmark for comparison with the discount rate used by the entity. They note that current market rates are used in many other contexts. Moreover, others believe that the current market rate for Treasury securities is the best indicator of the government's borrowing cost. However, others question the usefulness of the disclosure for several reasons. First, they note that the exposure draft did not require the entity to provide

an analysis of the effect of using current market rates on the entity's liability and periodic cost, because the Board concluded that the benefit of such an analysis was outweighed by the burden of producing it. Second, the entity was not required to disclose the average historical Treasury rates it was using for discounting and therefore a direct comparison would not be possible. Finally, some believe that the disclosure is not a good benchmark because the Board is requiring another discount rate; and, if a benchmark were to be disclosed, it should be closer to what the Board is requiring. The Board decided that, given the lack of unanimity on its information value, the disclosure should not be required.

A31. Similarly, a respondent recommended using both the discount rate on Treasury securities and the discount rate on the actual assets of the fund, if any, to show the impact of these different rates. The Board believes this disclosure would be informative but concluded that its informational value did not clearly overcome the burden that preparing two calculations would have imposed on the preparer, and therefore reporting such information should be optional.

A32. Regarding the request for more guidance about administrative and employer entities, the standard now explains that, as indicated in paragraphs A17-A18 above, the entity that reports the pension, ORB, or OPEB liability should display the gains or losses from changes in assumptions and disclose the relevant liability components.

Selecting Discount Rates

What the Exposure Draft Proposed regarding Discount Rates

A33. The Board became aware of an issue affecting preparers with respect to the selection of discount rates for present value measurements of expense and liability amounts. A preparer noted that, with respect to OPEB accounting, SFFAS 5 requires that the liability be estimated using as the discount rate the U. S. Treasury borrowing rate for securities of similar maturity to the period over which the payments are to be made.⁹ The preparer asked whether the discount rates should be based on a single day's interest rates, or were other alternatives acceptable, such as an average of interest rates over a period of time. The preparer currently uses one-day Treasury "spot" rates consistent with the expected timing of future cash flows relating to the program, believing that that is what the Board intended by the standard in SFFAS 5, paragraph 95. As a result, its liabilities have been susceptible to extreme volatility.

A34. Several current FASAB standards require present valuations and discounting. For example, federal civilian and military employee pensions, ORB, OPEB, including veterans' compensation, require discounting. Federal activities that incur such liabilities typically involve similar types of demographic and economic assumptions.

⁹ SFFAS 5, par. 95.

A35. The FASAB standard for federal civilian and military employee pensions and ORB includes general guidance with respect to assumptions.¹⁰ These standards state that federal pension plans should be guided by Actuarial Standards of Practice (ASOP), e.g., ASOP 4, *Measuring Pension Obligations*, and ASOP 27, *Selection of Assumptions for Measuring Pension Obligations*, as revised from time to time by the Actuarial Standards Board (ASB). The ASB is a board associated with the American Academy of Actuaries that sets professional standards of actuarial practice in the United States. The Board referenced ASB standards because it considers them accepted actuarial practice.

A36. Consistent with ASOPs, SFFAS 5, paragraph 65 requires actuarial assumptions to be based on the actual experience of the covered group and to emphasize expected long-range future trends rather than give undue weight to recent past experience. Although emphasis should be given to the combined effect of all assumptions, the standard requires that the reasonableness of each actuarial assumption should be considered independently on the basis of its own merits and its consistency with each other assumption.

A37. With respect to discount rates for pension and ORB accounting, SFFAS 5 requires the interest rate used for discounting to be based on

an estimated long-term investment yield for the plan, giving consideration to the nature and the mix of current and expected plan investments and the basis used to determine the actuarial value of assets; or if the plan is not being funded, other long-term assumptions (for example, the long-term federal government borrowing rate). ...¹¹

A38. The FASAB standard for OPEB differs somewhat from that for pensions and ORB. For OPEB, SFFAS 5 requires employer entities to estimate the amount and timing of future payments and to discount the future cash flows using the Treasury borrowing rate for securities of similar maturity to the period over which the payments are to be made.¹² This difference is attributable to the fact that, unlike most federal civilian and military employee pension and ORB plans, the federal employee OPEB generally are not funded and thus the long-term yield on investments was not thought to be relevant. For plans that are not funded the standards have been essentially the same: the objective is an expected long-term rate that reflects the government's expected borrowing costs.

A39. The Board concluded in SFFAS 5 that the discount rate for pensions and ORB, which are funded, should reflect the long-term expected return on plan assets. The Board explained

¹⁰ See SFFAS 5, pars. 65 and 83, respectively, for pensions and ORB.

¹¹ SFFAS 5, par. 66.

¹² SFFAS 5, par. 95.

that the expected long-term rate reduces volatility, reflects the actual experience and expectations of the primary federal plans, and is consistent with the assumptions used in the budget.¹³

- A40. As previously stated, current FASAB standards provide two approaches for selecting discount rates. The first approach is the expected long-term return on plan assets. The second approach involves unfunded plans where an expected long-term return on plan assets is not available and a Treasury borrowing rate is required. The proposed standard employed one approach for all instances not otherwise expressly provided in FASAB standards: discount rates for present value measurements of estimated liabilities that involve long-term assumptions should be the interest rate on marketable Treasury securities of similar maturities to the cash flows of the benefit payment for which the estimate is being made.
- A41. The Board believed that discount rates for present value measurements of expense and liability amounts should be average historical rates for marketable Treasury securities because they reflect the government's borrowing cost with the public. Also, expected long-term rates reduce volatility, reflect the actual experience and expectations of the primary federal plans, and are consistent with the assumptions used in the budget.
- A42. The proposed standard eliminated the plan's investment yield as an option for discount rates for present value measurements of expense and liability amounts. The discount rate assumption for liabilities is used most significantly to calculate the present value of the obligation and the **annual cost increments** of net periodic cost, for example, the normal cost component of pension expense. Both of those uses are conceptually independent of a plan's assets, if any. If two employers have made the same benefit promise, the FASAB believes the annual cost increments and the present value of the obligation should be the same even if one expected to earn an annual return of 6 percent on its plan assets and the other had an unfunded plan.
- A43. The Board noted that the Pension Protection Act of 2006¹⁴ requires fund managers to focus on long-term interest rates instead of their particular asset holdings. The Act requires them to calculate pension liabilities based on current bond rates rather than the expected rate or return from an asset portfolio. Thus, high expected gains from stock holdings will no longer be able to help diminish benefit liabilities since they will no longer be part of the calculation.

¹³ SFFAS 5, par. 159.

¹⁴ PL No. 109-280.

-
- A44. The FASAB believes that the objective of discount rates is to reflect **the time value of money**. The time value of money should reflect the single amount that, if invested at the measurement date in risk-free investments with maturities like those of the future benefit payments being measured, would generate the necessary cash flows to pay the benefits when due. Marketable U.S. Treasury securities are deemed risk free because they pose neither uncertainty in timing nor risk of default to the holder. This single amount is the gross liability. It would equal, conceptually, the current market value of a portfolio of Treasury zero coupon bonds whose maturity dates and amounts would be the same as the timing and amount of the expected future benefit payments. In the absence of a portfolio of such zero coupon Treasury securities, however, the federal preparer should incorporate in assumed discount rates the re-financing rates expected to be available on marketable Treasury securities in the future, which should be extrapolated from historical experience.
- A45. With respect to Treasury rates the Board considered average historical rates as well as current market rates as of the reporting date. Some prefer current market rates, arguing that interest rates can move significantly from year to year and the use of interest rates from a prior year (or smoothing this year's rates with those from prior years) can therefore result in significant misstatements about the current value of future cash flows. They argue further that changing interest rate assumptions annually would result in more accurate but also more volatile estimates of liabilities and changes in net cost than the current actuarial practice in the federal government of revisiting interest rate assumptions every 3 to 5 years. They argue that the proposed display standard is the best way to deal with volatility, i.e., by reporting on a separate line changes in net cost due to changes in actuarial assumptions.
- A46. The FASAB decided to propose average historical rates rather than single-day or market rates on the reporting date. The Board believed that single-day rates would not reflect the long-term orientation of most federal programs.
- A47. The proposed standard was not intended to change the Board's preference, expressed in SFFAS 5 and elsewhere, for expected future trends rather than giving undue weight to recent past experience. With respect to assumptions in general, FASAB standards have emphasized expected future trends.
- A48. Regarding the method of discounting cash flow in future years, the FASAB believed that discount rates used to measure the present value of the annual cost increments of expense should be selected that are applicable to the various benefit periods in question. The Board believed that annual cost increments will be more representationally faithful if individual discount rates applicable to various benefit deferral periods are selected. For future years extending beyond the last for which Treasury rates are available, e.g., beyond 30-year maturities, the proposed standard required the preparer to incorporate in the assumed discount rate expected re-financing rates extrapolated from historical Treasury borrowing rates. However, the proposed standard allowed that a single average discount rate may be

used for all projected future payments if the resulting present value is not materially different than the resulting present value using multiple-rates, or for cases in which discount rates have limited influence on current liability estimates.

A49. The proposed standard provided for the discount rates to be reviewed at each annual reporting date and changed if materially different from the existing rate. However, the Board preferred a stable discount rate that would result from applying historical averages, rather than current market rates. The Board stated that current market rates produce a degree of volatility that is not a faithful representation of the time value of money in long-term federal programs. The Board also stated that implicit in the notion of stable rates is the fact that the discount rate normally would not change every year. The preparer would change the rate based on a significant change in the historical average Treasury rate, as determined by the preparer, which would reflect long-term expectations rather than the current market rate. Thus, the proposed standard neither required nor precluded annual changes in the discount rate. Current Office of Personnel Management practice is to maintain a constant discount rate for civilian pensions and other retirement benefits for five years. The Board does not anticipate that the proposed standard would necessarily affect that practice because Treasury borrowing rates normally change very slowly.

A50. The discount rate standard in the proposed Statement did not apply to instances where the FASAB has required or permitted a discount rate to capture risk, i.e., to be other than the risk-free Treasury borrowing rate. However, the proposed standard did apply to all instances where risk-free Treasury borrowing rates are appropriate.

Respondents Comments regarding Discount Rates

A51. The majority of respondents commented that long-term Treasury rates are appropriate for discounting liabilities the estimates for which involve long-term assumptions. One respondent favored current market rates over average historical Treasury rates, believing them to be a better reflection of the cost of issuing Treasury securities to extinguish liabilities at the financial statement date. In addition, this respondent believes current market rates would provide more comparability and would be consistent with fair value accounting; but if average historical rates are used, this respondent believes the time period allowed for average historical Treasury rates should be limited to 5 years, which would better reflect the current market than longer horizons.

A52. One respondent commented that it uses statutory rates and that such rates supersede SFFASs.

A53. One respondent found the requirement (ED paragraphs 27 and A33) to use year-specific discount rate “fundamentally” inconsistent with the Aggregate Entry Age Normal (AEAN) cost method required by SFFAS 5. The current FASAB pension and ORB standards for

selecting cost attribution methods (paragraphs 63 and 82, SFFAS 5, respectively) direct the preparer to use AEAN (or other actuarial cost methods if the results are not materially different). The AEAN method is one of several cost attribution methods available. The private sector pension standard, SFAS 87, used another approach called “projected unit credit” (PUC). The primary reason given in SFFAS 5 for directing the use of AEAN was that the major federal pension plans at OPM and DoD were using it, and the Board was advised by actuaries that the results would not be substantially different than the unit benefit approach required by SFAS 87 (see SFFAS 5, par. 153).

- A54. In addition, the respondent did not believe that allowing a single rate if the “result” is not materially different, as was done in the ED paragraph 27, would sufficiently address the cost attribution method issue. This respondent did not believe that year-specific discount rates should be required, even if the Board wants to allow them.
- A55. This respondent also commented that the perspective of the government’s borrowing cost with the public is not necessarily relevant from the point of view of the employer entity in the case of a funded plan. Although this respondent’s plan is a federal plan holding federal securities, from this respondent’s perspective, the plan is funded. Therefore, this respondent believes the investment yield perspective for the discount rate has relevance. From the employers’ perspective, this respondent did not believe the statement in paragraph A25 of the exposure draft about the equivalence of two plans with the same benefit provisions (one funded and one not), is necessarily correct.
- A56. This respondent stated that, from the overall federal government perspective, it is not clear what constitutes the best basis for the discount rate assumption. This respondent believes the statement in paragraph A24 of the exposure draft that the rationale for using marketable Treasury securities for the discount rate is that they reflect the government’s borrowing cost with the public is questionable. This respondent asserted that a private company would not value a given future obligation at its own borrowing cost.
- A57. This respondent acknowledged that, in the sense that Treasury securities represent risk-free investments (as described in paragraph A27, of the exposure draft) arguments can be made for their use as the discount rate basis. However, this respondent asserted that two circumstances make an investment yield approach preferable. First, when the entity employs an independent actuarial board, the respondent believes that board’s assumptions for the financial statement valuations make the most sense, especially when Congress has created the independent expert for setting the assumptions. Second, an investment yield approach is preferable when the funding in a trust fund is comprised entirely of investments that mirror marketable US Treasury securities. This respondent states that arguments that the discount rate should not be impacted by the particular portfolio of securities in a trust fund at a given time are not valid in the context of an alternative involving “a vague, undefined ‘historical’ average.”

A58. Another respondent commented that the phrase “average historical Treasury rates” is unclear but consistent with ED paragraph 28 with respect to the need for the reporting entity to use judgment, and with the notion of Congressionally-established expert Boards for trust funds restricted to investing in securities that mirror marketable US Treasury securities.

A59. Other respondents prefer more guidance regarding the time-period for and meaning of average historical rates. Several respondents recommended limiting the time-period to 5 years, if average historical rates are used, feeling it would better reflect the current market than longer horizon and that that would be a sufficiently long period.

A60. One respondent asked for more explanation and guidance with respect to the phrase “extrapolated from historical Treasury borrowing rates.” It is possible for projected cash flows to extend beyond the maturities for which Treasury securities are available, e.g., beyond the 30-year security. The proposed standard required the preparer to incorporate in the assumed discount rate expected re-financing rates extrapolated from historical Treasury borrowing rates, that is, use the historical rates as indicative of what future rates will be.

The Board’s Conclusions regarding Discount Rates

A61. The Board decided to retain the average historical Treasury rate approach proposed in the exposure draft. Thus, the entity should employ Treasury borrowing rates associated with each future year involving relevant cash flow. This is sometimes called the “yield curve” approach.

A62. With respect to the attribution methods, the Board does not believe the standard is inconsistent with the Aggregate Entry Age Normal (AEAN) attribution method required in SFFAS 5. The change in the discount rate applied to a particular future cash flow would be a function of (1) the passage of time and (2) the market rate for each maturity, as evidenced by historical rates. It would not represent a change in assumption per se. In other words, the discount rate does not necessarily change, the period changes. There would be a one-year rate, a two-year rate, a 5-year rate, etc., that would not (necessarily) change each year. The average historical rate would change only when the data dictated. The mere fact that a payment that was due in 5 years is now due in 4 years would not constitute an assumption change. The Board does not believe that the requirement is conceptually inconsistent with the AEAN or other provisions of SFFAS 5, paragraphs 63 and 82.

A63. Regarding whether to use the entity’s investment return for determining a discount rate, the Board continues to believe that discount rates for present value measurements of federal pension, ORB, and OPEB liabilities should be average historical rates for marketable Treasury securities because it reflects the government’s borrowing cost with the public and therefore the time value of money for the government. The Board also believes that there should be consistency among federal entities. The discount rate is used to calculate the

present value of the obligation and annual cost increments and should be the same, everything else being equal, between funded and unfunded pension, ORB, and OPEB programs. Moreover, overly optimistic assumptions about investment returns have provided inaccurate financial information about public and private sector pensions.

- A64. The Board believes that the average historical Treasury rate standard is clear and well defined. The objective is a principle-based requirement where the reporting entity would use its judgment when developing the rate.
- A65. The Board considered the request for more guidance regarding the number of instances to include in an average historical rate. The Board decided to establish a minimum number of five historical Treasury rates to include for the average. The exposure draft did not specify a minimum or maximum number of historical Treasury rates for developing an average. The Board believes that setting a minimum number of historical rates to include in the average would ensure that the discount rate captures richer experience and avoids undue focus on the current market rate. In addition, a standard requiring a minimum of five periodic rates for the average would not encourage the use of so many historical rates as to render the average rate antiquated.
- A66. The Board was concerned regarding the possibility that the entity would frequently change the number of Treasury rates included in the average rate. The Board's believes that the reporting entity should be consistent from period to period with respect to the number of rates included in the average. SFFAC 1, *Objectives of Federal Financial Reporting*, and SFFAC 2, *Entity and Display*, states that consistency is one of the qualitative characteristic of accounting information.¹⁵ The Board concluded that the standard should require the entity's accounting policy disclosure to include the policy of consistency in this regard, which is the intent of paragraph 31.
- A67. The Board notes that a respondent criticized as vague the exception provided in the exposure draft allowing entities to use a single rate for discounting if the resulting present value is "not materially different" than the resulting present value using the approach in the standard. The respondent commented that the single rate would need to be compared to the various components of expense to not materially differ. Nonetheless, the Board believes that this exception may be useful to preparers. If the result of applying a single composite discount rate to the cash flows vs. individual rates is not materially different, then the preparer may use the single rate. This exception is a continuation of one currently in FASAB pension and ORB standards and has been in effect since October 1996. However, the standard now specifies that the resulting present value of the entity's single rate should not be materially different than the resulting present value using the approach in the standard.

¹⁵ See SFFAC 1, par. 163, and SFFAC 2, par. 109.

A68. With respect to a respondent's comment about the use of expert actuarial boards, the Board notes that such boards provide assumptions for funding and other purposes and presumably also would provide assumptions for general-purpose financial statements. However, for the latter, under the standard, they would look at the broader historical market for Treasury securities for context. Actuaries work with requirements appropriate to specific objectives. The Board concludes that the general requirement for average historical rates should be retained.

A69. With respect to the request for additional guidance regarding the phrase "extrapolate from historical Treasury borrowing rates" where projected cash flows extend beyond the maturities for which Treasury securities are available, e.g., beyond the 30-year maturity, the Board notes that there are several methods that can be applied to extend a yield curve for terms beyond the last available rate in the market. The International Actuarial Association's Risk Margin Working Group's (RMWG) recent exposure draft¹⁶ on measuring liabilities for insurance contracts mentions that the simplest approach is to use the last available rate (for example the 20-year rate for a 30-year cash flow), and that a more advanced method would be to extrapolate the yield curve with a constant slope assuming that the forward rate observed between the last two market rates stays constant. In addition, the RMWG ED states that a model can be applied to extend the yield curve and cites several examples. The Board believes these approaches are reasonable.¹⁷

Selecting Valuation Date

What the Exposure Draft Proposed regarding Valuation Dates

A70. The FASAB has addressed the issue of valuation dates for present valuations in various ways. The sections of SFFAS 5 dealing with pensions, ORB, and OPEB do not mention valuation dates, but the Board did address it in Interpretation 3, *Measurement Date for Pension and Retirement Health Care Liabilities* (August 1997). In Interpretation 3 the Board decided that pension and retirement health care liabilities should be measured for general purpose federal financial reports as of the end of the reporting period, and that such measurement should be based on an actuarial valuation within a year of the end of the reporting period.

A71. In Interpretation 3 the Board had been asked to endorse use of an actuarial valuation date as of the beginning of the fiscal year, which had been the practice in some of special

¹⁶Risk Margin Working Group, *Measurement of Liabilities for Insurance Contracts: Current Estimate and Risk Margins*, March 24, 2008 ("RMWG ED").

¹⁷ RMWG ED, page 31.

purpose financial reports on pension plans prepared pursuant to statutory provisions. Some actuaries were concerned that differences between actuarial measurements used in different reports would cause problems and confusion. Some people who supported using a beginning-of-year valuation also were concerned about the potential for disagreements between auditors and preparers if projections or estimates were used instead of a full actuarial valuation. However, other people believed that liability measurements in financial statements prepared pursuant to SFFAS 5 should be as of the end of the reporting period, and that a measurement based on a projection or "roll forward" of a full actuarial valuation would be appropriate if it were not feasible to perform a full actuarial valuation as of year end.

A72. SFFAS 17, *Accounting for Social Insurance*, does address the valuation date, specifying that it should be as of any time within a year of the reporting date.

A73. Although it does not explicitly discuss the valuation date, SFFAS 5 implicitly calls for measurement at the reporting date for pension, ORB, and OPEB liabilities, which are reported as of the balance sheet date.

A74. FASB's Statements 87 and 106 allowed preparers to use a valuation date for measuring pension and other postretirement liabilities up to three months earlier than the reporting date. However, FAS 158 published under Phase I of FASB's pension project requires the measurement of plan assets and benefit obligations to be as of the date of the sponsoring employer's statement of financial position. The FASB concluded that this will more accurately reflect the economic status of defined benefit plans and further improve the understandability of the financial statements.¹⁸

A75. In Statement 27 and Statement 45, the GASB did not require the valuation date to be the employer's balance sheet date. Statement 27 requires the expense/expenditure amount to be based on the results of an actuarial valuation performed in accordance with the parameters as of a date not more than 24 months before the beginning of the employer's fiscal year. Statement 45 requires that the actuarial valuation date generally should be the same date each year (or other applicable interval). However, in both instances a new valuation would be required if, since the previous valuation, significant changes occurred that affect the results of the valuation, including significant changes in benefit provisions, the size or composition of the population covered by the plan, or other factors that impact long-term assumptions.

A76. The Board believes that the approach in Interpretation 3 is preferable. Pension, ORB, and OPEB liabilities should be measured as of the end of the reporting period based on a full

¹⁸ FAS 158, par. B16.

actuarial valuation within a year of the end of the reporting period. Thus, “full actuarial valuations,” as that term is used by actuaries, can be performed as of an earlier date during the fiscal year than year end, including a beginning-of-year date, with suitable adjustments for the effects of changes during the year in major factors such as the pay raise and cost of living adjustment. Such adjustments are sometimes referred to as a measurement based on a “projection” or “roll-forward.”

Respondents Comments regarding the Valuation Date

A77. Most of the respondents who commented on the proposed valuation date standard commented that it was appropriate. One respondent asserted that its valuation dates are based on statutory requirements.

The Board’s Conclusions regarding Valuation Date

A78. The Board continues to believe that pension, ORB, and OPEB liabilities should be measured as of the end of the reporting period based on a full actuarial valuation within a year of the end of the reporting period.

Reasonable Estimates

What the Exposure Draft Proposed regarding Reasonable Estimates

A79. The proposed Statement also addressed an issue with respect to the meaning of “best estimate.” The proposed Statement provided that estimates should be reasonable under the circumstances (see paragraph 31). The notion of “best estimate” has been used in several FASAB standards, for example, in SFFAS 5, paragraph 65, SFFAS 7, *Accounting for Revenue and Other Financing Sources* ..., paragraph 67.1, and in various instances in SFFAS 17. However, preparers and auditors have reported disagreements regarding the meaning of the word “best,” which is sometimes defined as “excelling all others.” Thus, the Board proposed to replace the term “best estimate” in FASAB standards with “reasonable estimate.”

A80. Actuarial Standards of Practice (ASOP) provide guidance regarding the meaning of “best estimate” in ASOP 10, *Methods and Assumptions for Use in Life Insurance Financial Statements Prepared in Accordance with GAAP*, and ASOP 27, *Selection of Economic Assumptions for Measuring Pension Obligations*. ASOP 27 instructs actuaries to select a specific economic assumption from within his or her “best estimate range” with respect to that assumption, which it defines as “the narrowest range within which the actuary reasonably anticipates that the actual results ... are more likely than not to fall”¹⁹ [emphasis added]. ASOP 27 provides, generally, that

¹⁹ ASOP 27, Section 2.1.

“[b]ecause no one knows what the future holds with respect to economic and other contingencies, the best an actuary can do is to use professional judgment to estimate possible future economic outcomes based on past experience and future expectations, and to select assumptions based upon that application of professional judgment. Therefore, an actuary’s best-estimate assumption is generally represented by a *range* rather than one specific assumption. The actuary should determine the best-estimate range for each economic assumption, and select a specific point from within that range. In some instances, the actuary may present alternative results by selecting different points within the best-estimate range” [emphasis added].²⁰

A81. The Board concluded that ASOP 10 and 27 apply a standard of reasonableness regarding “best estimate,” and that that is an appropriate approach. Therefore, paragraph 31 of the exposure draft called for the preparer’s estimate to reflect what is reasonable to assume under the circumstances, rather than the preparer’s “best estimate.”

Respondents Comments regarding Reasonable Estimates

A82. One respondent objected to the proposed requirement that the preparer compare assumptions used for the liability estimate with assumptions generally used in the federal government as evidenced by independent sources, unless their actuarial board is considered an “independent source.” Another respondent was concerned that the proposed standard may prove inconsistent with the historical rates used in setting discount rates, because it permits the use of the entity’s own assumptions as long as they can be justified if they deviate from independent sources. They suggest this possible inconsistency be discussed in the guidance. Another respondent commented that the requirement is not clear regarding whether it applies to pension and actuarial valuations or other estimated liabilities that employ long-term assumptions such as environmental liabilities and, if so, as to what independent source should be used.

The Board’s Conclusions regarding Reasonable Estimates

A83. Paragraph 35 of the standard requires the preparer to compare its assumptions with assumptions used generally in the federal government as evidenced by sources independent of the reporting entity and, if its assumptions do not reflect such data, explain why it is inappropriate to do so. A respondent suggested that the Board consider specifying a set of federal assumptions for this purpose. Some assumptions will involve general economic parameters while others will be particular to the entity.

²⁰ ASOP 27, Section 3.1.

A84. The Board's objective in this regard is for the entity to inform the reader about the reasonableness of the assumptions used in the preparation of its financial reports. With respect to sources for assumptions generally in use in the federal government, the standard offers the example of Bureau of Economic Analysis' assumptions but does not require the use of these or other particular sets of federal assumptions. The Board decided not to change the standard in this regard. The Board believes a comparison with a benchmark is likely to be meaningful to users. The preparer should use its judgment to select assumptions used generally in the federal government that are relevant to its activities and estimates. In addition, the narrowing of the scope of the standard to pensions, ORB, and OPEB will narrow the comparison as well.

Board Approval

A85. This Statement was approved for issuance by all members of the Board.

Appendix B: Pro Forma Statement of Net Cost Displaying Separate Line Item for Gains and Losses Due to Changes in Assumptions

Component Entity: Pro forma *Statement of Net Cost for the Year Ended September 30, 2007*

	2007 (billions)

Appendix D: Note 11 from FY 2006 Financial Report of the United States

Note 11. Federal Employee and Veteran Benefits Payable

The Government offers its employees life and health insurance, as well as retirement and other benefits. These benefits, which include actuarial and amounts due and payable to beneficiaries and health care carriers, apply to civilian and military employees.

The Federal Government administers more than 40 pension plans. OPM administers the largest civilian plan. DOD, meanwhile, administers the largest military plan. Other significant pension plans with more than \$10 billion in accrued benefits payable include those of the Coast Guard and the Foreign Service. The changes in the accrued post-retirement pension and health benefit liability and components of related expense for the years ended September 30, 2006, and 2005, respectively, are presented below.

Federal Employee and Veteran Benefits Payable as of September 30

(In billions of dollars)	Civilian		Military		Total	
	2006	2005	2006	2005	2006	2005
Pension and accrued benefits	1,349.0	1,273.8	967.1	895.4	2,316.1	2,169.2
Post-retirement health and accrued benefits	295.2	290.7	837.2	833.9	1,132.4	1,124.6
Veterans compensation and burial benefits	N/A	N/A	1,153.8	1,122.6	1,153.8	1,122.6
Life insurance and accrued benefits	34.2	32.9	-	-	34.2	32.9
FECA benefits	14.4	14.3	22.2	22.7	36.6	37.0
Liability for other benefits	1.5	1.3	4.4	4.2	5.9	5.5
Total Federal employee and veteran benefits payable	<u>1,694.3</u>	<u>1,613.0</u>	<u>2,984.7</u>	<u>2,878.8</u>	<u>4,679.0</u>	<u>4,491.8</u>

Change in Pension and Accrued Benefits

(In billions of dollars)	Civilian	Military	Total
Actuarial accrued pension liability as of September 30, 2005	1,273.8	895.4	2,169.2
Pension Expense:			
Normal costs	26.8	15.6	42.4
Plan amendment changes	-	0.1	0.1
Assumption changes	1.0	35.4	36.4
Interest on liability	78.0	55.0	133.0
Prior (and past) service cost	-	-	-
Actuarial (gains)/losses	29.7	6.1	35.8
Total pension expense	135.5	112.2	247.7
Less benefits paid	60.3	40.5	100.8
Actuarial accrued pension liability as of September 30, 2006	<u>1,349.0</u>	<u>967.1</u>	<u>2,316.1</u>

Significant Long-Term Economic Assumptions Used in Determining Pension Liability and the Related Expense

(In percentages)	Civilian		Military	
	2006	2005	2006	2005
Rate of interest	6.25%	6.25%	6.00%	6.25%
Rate of inflation	3.50%	3.25%	3.00%	3.00%
Projected salary increases	4.25%	4.00%	3.75%	3.75%

Change in Post-Retirement Health and Accrued Benefits

(In billions of dollars)	Civilian	Military	Total
Actuarial accrued post-retirement health benefits liability, as of September 30, 2005.....	290.7	833.9	1,124.6
Post-Retirement Health Benefits Expense:			
Normal costs.....	11.2	21.0	32.2
Interest on liability.....	17.1	52.9	70.0
Other actuarial (gains)/losses.....	(12.5)	(53.8)	(66.3)
Total post-retirement health benefits expense	15.8	20.1	35.9
Less claims paid	11.3	16.8	28.1
Actuarial accrued post-retirement health benefits liability, as of September 30, 2006.....	<u>295.2</u>	<u>837.2</u>	<u>1,132.4</u>

Significant Long-Term Economic Assumptions Used in Determining Post-Retirement Health Benefits and the Related Expense

(In percentages)	Civilian		Military	
	2006	2005	2006	2005
Rate of interest.....	6.25%	6.25%	6.25%	6.25%
Rate of health care cost inflation.....	7.00%	7.00%	6.25%	6.25%

Separate boards of actuaries for OPM and DOD determine the actuarial assumptions used in calculating the pension liability and the post-retirement health benefit liability for the civilian and military personnel. Both boards use generally accepted actuarial methodologies. The board for OPM uses a fixed rate of inflation and projected salary increases over all years for both the pension and post-retirement health benefit liabilities. These rates are shown in the tables above. The board for DOD uses a range of rates for the inflation and the projected salary increases, with an ultimate rate for the long term. The board for DOD also uses different health care cost inflation rates for inpatient, outpatient, and prescription drugs. The long-term ultimate rate is shown in the tables above.

The long-term ultimate rate for fiscal year 2006 of 6.25 percent is shown in the tables above. For disclosure and comparison purposes, DOD's estimate of a single equivalent fixed rate of health care cost inflation for fiscal year 2006 is 7.20 percent, which is an approximation of the single equivalent rate that would produce that same actuarial liability as the actual rates used.

Statement of Federal Financial Accounting Standards 34: The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board

Status

Issued	July 28, 2009
Effective Date	Upon issuance.
Affects	None.
Affected by	None.

Summary

The Federal Accounting Standards Advisory Board (FASAB) is the body designated by the American Institute of Certified Public Accountants (AICPA) as the source of generally accepted accounting principles (GAAP) for federal reporting entities.¹ As such, the FASAB is responsible for identifying the **GAAP hierarchy** for federal reporting entities. The GAAP hierarchy consists of the sources of accounting principles and the framework for selecting the principles used in the preparation of general purpose financial reports² of federal reporting entities that are presented in conformity with generally accepted accounting principles. However, the hierarchy for selecting the principles used in the preparation of general purpose financial reports by federal reporting entities was set forth in the AICPA Statement on Auditing Standards (SAS) No. 91, *Federal GAAP Hierarchy*, rather than in the authoritative literature of the FASAB. This Statement incorporates the hierarchy into the FASAB's authoritative literature.

Incorporating the GAAP hierarchy into the authoritative literature of the FASAB is not intended to cause a sudden and dramatic change in practice for federal entities. This Statement permits those federal entities currently applying financial accounting and reporting standards issued by the Financial Accounting Standards Board (FASB) to continue to do so. In addition, given that the FASAB is the source of GAAP for federal entities, the Statement clarifies that a federal entity that is preparing GAAP-based general purpose financial reports for the first time is required to implement FASAB standards unless, in consultation with its auditors and bodies with oversight authority, the entity clearly demonstrates that the needs of its primary users would be best met through the application of FASB standards.

¹ Statement of Federal Financial Accounting Concepts (SFFAC) 2, *Entity and Display*, discusses the criteria for defining federal reporting entities. Also, the terms federal reporting entity and federal entity are used interchangeably throughout this Statement.

² The term general purpose financial report is used throughout this Statement as a generic term to refer to the report that contains the entity's financial statements that are prepared pursuant to generally accepted accounting principles. In the federal government, the report is known as the Performance and Accountability Report or the Agency Financial Report.

Introduction

Purpose

1. The objective of this Statement is to identify the sources of accounting principles and the framework for selecting the principles used in the preparation of general purpose financial reports of federal reporting entities³ that are presented in conformity with generally accepted accounting principles (the GAAP hierarchy).
 - a. This Statement responds to a request from the American Institute of Certified Public Accountants (AICPA) that FASAB incorporate the GAAP hierarchy, which currently resides in the professional auditing literature, into the accounting literature.
 - b. This Statement also addresses (1) whether federal entities currently applying standards issued by the Financial Accounting Standards Board (FASB) may continue that practice, and (2) whether federal entities that are preparing GAAP-based general purpose financial reports for the first time may also apply FASB standards.

Materiality

2. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Effective Date

3. The requirements in this standard are effective upon its issuance.

³Statement of Federal Financial Accounting Concepts 2, *Entity and Display*, provides criteria for identifying federal reporting entities. In addition, the Board is currently developing standards defining the federal reporting entity.

Accounting Standards

Scope

4. This Statement applies to the general purpose financial reports of all federal reporting entities that are presented in conformity with generally accepted accounting principles (GAAP).⁴

The Hierarchy of Generally Accepted Accounting Principles

5. The hierarchy of generally accepted accounting principles, hereafter referred to as the GAAP hierarchy, governs what constitutes GAAP for federal reporting entities. It lists the priority sequence of pronouncements that a federal reporting entity should look to for accounting and financial reporting authoritative guidance. The sources of accounting principles that are generally accepted are categorized in descending order of authority as follows:
 - a. Officially established accounting principles consist of FASAB Statements of Federal Financial Accounting Standards (Standards) and Interpretations. FASAB Standards and Interpretations will be periodically incorporated in a publication by the FASAB.
 - b. FASAB Technical Bulletins and, if specifically made applicable to federal reporting entities by the AICPA and cleared⁵ by the FASAB, AICPA Industry Audit and Accounting Guides.⁶
 - c. Technical Releases of the Accounting and Auditing Policy Committee of the FASAB.
 - d. Implementation guides published by the FASAB staff, as well as practices that are widely recognized and prevalent in the federal government.

⁴The AICPA has designated the FASAB as the source of GAAP for federal reporting entities. Therefore, FASAB GAAP would be the appropriate accounting standards for federal reporting entities in the executive, legislative, and judicial branches.

⁵ For purposes of interpreting category (b), the word *cleared* means that the FASAB does not object to the pronouncement's issuance.

⁶Such pronouncements specifically made applicable to federal reporting entities are presumed to have been cleared by the FASAB, unless the pronouncement indicates otherwise.

-
6. If the accounting treatment for a transaction or event is not specified by a pronouncement in category (a), a federal reporting entity should consider whether the accounting treatment is specified by an accounting principle from a source in another category. In such cases, if categories (b)–(d) contain accounting principles that specify accounting treatments for a transaction or event, the federal reporting entity should follow the accounting treatment specified by the accounting principle from the source in the highest category—for example, follow category (b) treatment over category (c) treatment.
 7. If the accounting treatment for a transaction or event is not specified by a pronouncement or established in practice as described in categories (a)–(d), a federal reporting entity should then consider accounting principles for similar transactions or events within categories (a)–(d) before considering Other Accounting Literature discussed in paragraph 8. For example, it might be appropriate to report the event or transaction by applying, in a similar manner, an accounting principle established within categories (a)–(d) for an analogous transaction or event on the basis of its substance.⁷ A federal reporting entity should not follow the accounting treatment specified in accounting principles for similar transactions or events in cases in which those accounting principles either (a) specifically prohibit the application of the accounting treatment to the particular transaction or event or (b) indicate that the accounting treatment should not be applied to other transactions or events by analogy.

Other Accounting Literature

8. Other Accounting Literature includes, for example, FASAB Concepts Statements; the pronouncements referred to in category (b) of paragraph 5 when not specifically made applicable to federal reporting entities by the FASAB; pronouncements of other accounting and financial reporting standards-setting bodies, such as the FASB, Governmental Accounting Standards Board, International Accounting Standards Board, and International Public Sector Accounting Standards Board; professional associations or regulatory agencies; and accounting textbooks, handbooks, and articles. The appropriateness of other accounting literature depends on its relevance to particular circumstances, the specificity of the guidance, and the general recognition of the issuer or author as an authority. For example, FASAB Concepts Statements would normally be more influential than other sources in this category.

⁷Generally accepted accounting principles recognize the importance of reporting transactions and events in accordance with their substance. Consideration should be given to whether the substance of transactions or events differs materially from their form.

Application of Standards Issued by the Financial Accounting Standards Board

9. Some federal entities, including government corporations listed in the Government Corporation Control Act and certain others, such as the United States Postal Service, continue to publish financial reports pursuant to the accounting and reporting standards issued by the FASB. Some entities also may be required to prepare statements pursuant to standards set by a regulatory agency (e.g., the Federal Energy Regulatory Commission (FERC)). General purpose financial reports prepared in conformity with accounting standards issued by the FASB also may be regarded as in conformity with GAAP for those entities that have in the past issued such reports.⁸
10. Except as provided in paragraph 11, a federal entity that is preparing GAAP-based general purpose financial reports for the first time should implement FASAB standards as FASAB is the preferred method of reporting for federal entities.
11. In rare instances, a federal entity that is preparing GAAP-based general purpose financial reports for the first time may, in consultation with its auditors and bodies with oversight authority, elect to apply standards issued by the FASB if the entity clearly demonstrates that the needs of its primary users would be best met through the application of FASB standards. Unique user needs can arise from various sources that include, but are not limited to, investors, SEC requirements, bondholders, and customers. Entities may determine that the application of standards issued by the FASB more appropriately meets these unique user needs. This determination should involve a number of considerations. Examples of factors to consider include but are not limited to:
 - a. The entity's primary funding is derived from a source other than through annual federal appropriations.
 - b. The entity has been delegated the financial and operational authority to carry on its activities in a manner similar to private business enterprises.
 - c. The entity sells goods and/or services to individuals outside of the government reporting entity as its principal activity.

⁸The FASAB has an existing project underway that will assist the Board in determining whether certain federal entities should be permitted to continue applying FASB GAAP and, if so, whether additional reporting should be required. This project will also consider whether federal entities should be permitted to convert from FASB standards to International Financial Reporting Standards published by the International Accounting Standards Board.

-
- d. The entity is intended to, in the normal course of its operations, maintain its operations and meet its liabilities from revenues received from sources outside of the federal government reporting entity.
 - e. It is desirable to compare general purpose financial reports of the federal entity that is preparing GAAP-based general purpose financial reports for the first time with an existing entity that is already following FASB GAAP.
12. While the application of standards issued by the FASB may be acceptable for a limited number of federal entities as noted above, entities that have already implemented standards issued by the FASAB should continue to apply the federal standards, as FASAB is the preferred method of reporting for federal entities.

Effective Date

13. The requirements in this standard are effective upon its issuance.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting and reporting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

- A1. Representatives of the American Institute of Certified Public Accountants (AICPA) requested that the U.S. accounting standards-setters consider adopting certain guidance for accounting and financial reporting issues that now reside in the professional auditing literature. In July 2008, the FASAB joined the Governmental Accounting Standards Board in responding to this request.
- A2. In October 1999, The AICPA designated the FASAB as the standards-setting body for federal entities. As such, the FASAB is responsible for identifying the sources of accounting principles and providing federal entities with a framework for selecting the principles used in the preparation of general purpose financial reports that are presented in conformity with GAAP (GAAP hierarchy). The Board believes that incorporation of the GAAP hierarchy into the FASAB's authoritative literature would more clearly convey that financial statement preparers are responsible for selecting the sources of the principles to be used in the preparation of general purpose financial reports that are presented in conformity with GAAP. The structure presented in this Statement generally carries forward the hierarchy as set forth in SAS 91 and the Office of Management and Budget (OMB) Circular A-136, Financial Reporting Requirements.

Application of Standards Issued by the Financial Accounting Standards Board

- A3. Although the FASAB's standards have been recognized as GAAP for federal entities (FASAB GAAP) since October 1999, some federal entities follow GAAP for nongovernmental entities promulgated by the private sector Financial Accounting Standards Board (FASB GAAP). For example, federal government corporations, the U.S. Postal Service, certain component entities of the U.S. Department of the Treasury, and some smaller entities in the executive and legislative branches have historically applied FASB GAAP and continue to do so.
- A4. In early 2000, the FASAB recognized this practice as acceptable for those entities that had been following FASB GAAP to avoid an immediate and unanticipated requirement that these federal entities follow federal GAAP after the FASAB was recognized as the Rule 203 standards-setting body for the federal government. This guidance was published in the January – March 2000 issue of *FASAB News*⁹ and was intended as a temporary measure in light of the unanticipated consequences of Rule 203 recognition. The existence of the issue has also been acknowledged in Statement of Federal Financial Accounting Concepts (SFFAC) 2, *Entity and Display* (paragraph 78); Statement of Federal Financial Accounting Standards (SFFAS) 5, *Accounting for Liabilities of the Federal Government* (inside front cover and Appendix A, paragraph 142); SFFAS 8, *Supplementary Stewardship Reporting* (Introduction paragraph 40); and, SFFAS 24, *Selected Standards for the Consolidated Financial Report of the United States Government* (Appendix A, paragraph 20).
- A5. Providing interim guidance on the application of standards issued by the FASB serves to proactively address entity concerns that moving the hierarchy of generally accepted accounting principles into the accounting literature without addressing the use of FASB GAAP would require a sudden and dramatic change in practice.

Application to Legislative and Judicial Branches

- A6. The FASAB's sponsors do not prescribe accounting standards for the legislative and judicial branches. The legislative and judicial branches, and most entities within those branches, are not currently required to prepare general purpose financial reports and those that do prepare statements are not subject to any requirements by the FASAB's sponsors to follow FASAB GAAP or prepare a reconciliation between FASAB GAAP and FASB GAAP. However, as the source of GAAP for federal reporting entities, FASAB GAAP would be the

⁹ FASAB News, Jan.-March 2000, p. 2.

appropriate accounting standards for these entities to adopt if they prepare GAAP-based general purpose financial reports.

Exposure Draft

- A7. The Board published the exposure draft (ED), *The Hierarchy of Generally Accepted Accounting Principles for Federal Entities, Including the Application of Standards Issued by the Financial Accounting Standards Board*, on December 2, 2008, with comments requested by February 3, 2009. Upon release of the ED, notices and press releases were provided to: The Federal Register, *FASAB News*, *The Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, and *Government Accounting and Auditing Update*, The CFO Council, the Presidents Council on Integrity and Efficiency, Financial Statement Audit Network, and the Federal Financial Managers Council, and committees of professional associations generally commenting on EDs in the past.
- A8. This broad announcement was followed by direct mailings of the ED to the Subcommittee on Federal Financial Management, Government Information, and International Security, Committee on Homeland Security and Governmental Affairs, United States Senate; and the Subcommittee on Government Management, Organization, and Procurement, Committee on Oversight and Government Reform, House of Representatives.
- A9. The Board received 31 response letters from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		3
Auditors	5	1
Preparers and financial managers	22	
Totals	27	4

- A10. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The respondents' comments are summarized below.
- A11. Respondents generally agreed that the hierarchy of GAAP that currently resides in the professional auditing literature should be incorporated into the FASAB's authoritative literature. Also, respondents generally agreed that: 1) general purpose financial reports prepared in conformity with accounting standards issued by the FASB should be regarded as being in conformity with GAAP for those federal entities that have in the past issued such

reports, and 2) a federal reporting entity that is preparing GAAP-based general purpose financial reports for the first time should implement FASAB standards unless the entity clearly demonstrates that the needs of its primary users would be best met through the application of FASB standards.

A12. However, some respondents believed it would be useful to clarify certain aspects of the Statement. Some respondents believed it would be useful to clarify where administrative directives (e.g. OMB, Government Accountability Office, and Department of the Treasury guidance) would be considered in the hierarchy. Some respondents questioned if “Other Accounting Literature” was a part of or separate from the hierarchy.

A13. In addition, some respondents believed that those federal entities following FASB standards could be required to reconsider their practices. For example, if they receive federal appropriations, they should follow FASAB standards.

Clarifying the GAAP Hierarchy and Other Accounting Literature

A14. Paragraph 5 of the Statement presents the GAAP hierarchy for federal entities, and the Board expects practice to be governed by this hierarchy. The hierarchy presented in the ED referred to AICPA Statements of Position (SOP) and Practice Bulletins specifically made applicable to federal reporting entities and cleared by the FASAB. However, the FASB is codifying its accounting standards and SOPs and Practice Bulletins will generally be incorporated into the codification and have no continued authority. Because of this matter and because no SOPs and Practice Bulletins have been specifically made applicable to federal reporting entities and cleared by the FASAB, these sources were removed from the hierarchy.

A15. In addition, while some respondents believed that it would be useful to discuss the location of administrative directives within the hierarchy, the FASAB believes that incorporating the GAAP hierarchy in the accounting standards should be accomplished expeditiously due to the AICPA’s planned removal of the hierarchy from the auditing standards. Since FASAB is unaware of any practice problems arising due to the absence of explicit guidance placing each type of administrative directive within the hierarchy, immediate action on this request is not warranted.¹⁰ FASAB also notes that there are multiple sources of administrative directives, many types of directives, and varying processes for developing directives. Resolving placement for all administrative directives may require significant study.

¹⁰ This request will be considered when the Board reviews its technical agenda to select new projects.

Therefore, the Board is acting to adopt the GAAP hierarchy essentially as it currently exists in the AICPA audit literature and does not intend to change current practices.

- A16. Paragraphs 6 and 7 of the Statement provide guidance to assist readers in understanding how the hierarchy should be considered when preparing general purpose financial reports in conformity with GAAP.
- A17. Paragraph 7 also discusses when to consider literature not discussed in the GAAP hierarchy - Other Accounting Literature. The phrase "Other Accounting Literature" is capitalized in the Statement and included under a separate heading to indicate its distinction from the GAAP literature. Other Accounting Literature is presented separately from the hierarchy because the items in this category do not establish GAAP and cannot amend existing FASAB standards, interpretations, technical bulletins or releases, or staff implementation guidance. Other Accounting Literature may only be relied upon by financial statement preparers and auditors to resolve specific accounting issues in the absence of literature in paragraph 5 of the Statement.
- A18. The Board also recognizes that other standards-setting bodies are currently considering codifying their pronouncements. As a result, listing the titles of specific pronouncements in Other Accounting Literature may cause difficulty in referencing those documents in the future. Thus, paragraph 8 of the Statement refers to pronouncements of other standards-setting bodies rather than listing specific pronouncements.

Entities Following FASB GAAP

- A19. As noted above, the Board primarily intended to incorporate the GAAP hierarchy into the FASAB's accounting literature and did not intend to change existing practices at this time. The Board is continuing a separate project on reporting by federal entities that primarily apply standards issued by the FASB. The project intends to determine whether certain federal entities should be permitted to continue following FASB GAAP and what additional reporting, if any, is needed for stand-alone financial reports of federal entities that are permitted to continue applying FASB accounting standards.
- A20. Paragraph 9 of the Statement states that those federal entities preparing general purpose financial reports in conformity with FASB accounting and reporting standards are permitted to continue current practices. The Statement does not preclude those entities from reconsidering those practices.

Board Approval

A21. This statement was approved for issuance by all members of the Board. The written ballots are available for public inspection at the FASAB's offices.

Statement of Federal Financial Accounting Standards 36: Comprehensive Long-Term Projections for the U.S. Government

Status

Issued	September 28, 2009
Effective Date	The following phase-in of reporting requirements as basic information provides for full implementation for reporting periods beginning after September 30, 2013.
Affects	None.
Affected by	SFFAS 45 amends paragraph 45.

Summary

This standard requires:

- A basic financial statement in the consolidated financial report of the U.S. Government (CFR) presenting for all the activities of the federal government:
 - the present value of projected receipts and non-interest spending under current policy without change,
 - the relationship of these amounts to projected Gross Domestic Product (GDP), and
 - changes in the present value of projected receipts and non-interest spending from the prior year.
- Required Supplementary Information (RSI) that explains and illustrates
 - the projected trends in:
 - the relationship between receipts and spending,
 - deficits or surpluses,
 - Treasury debt held by the public as a share of GDP,
 - possible results using alternative scenarios, and
 - the likely impact of delaying corrective action when a fiscal gap exists.

-
- Disclosures that explain and illustrate:
 - the assumptions underlying the projections,
 - factors influencing trends, and
 - significant changes in the projections from period to period.

These requirements will be implemented following a three-year transition period beginning in fiscal year (FY) 2010 during which all information may be presented as RSI. Beginning in FY 2013, the required information will be presented as a basic financial statement, disclosures and RSI as designated within the standards.

The required information will help readers of the CFR assess “whether future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due.” [Statement of Federal Financial Accounting Concepts (SFFAC) 1, paragraphs 135 and 139.] Such an assessment is an important objective of federal financial reporting requiring prospective information about receipts and spending, the resulting debt, and how these amounts relate to the economy.

Introduction

Purpose

1. In Statement of Federal Financial Accounting Concepts (SFFAC) 1, the Board established four objectives of federal financial reporting. These objectives provide a framework for assessing the existing accountability and financial reporting systems of the federal government and for considering new accounting standards.¹ The objectives address (1) Budgetary Integrity, (2) Operating Performance, (3) Stewardship, and (4) Systems and Controls.
2. Objective 3, Stewardship, is the primary focus for this Statement. Objective 3 states that:

Federal financial reporting should assist report users in assessing the impact on the country of the government's operations and investments for the period and how, as a result, the government's and the nation's financial condition has changed and may change in the future.²
3. Sub-objective 3B states that:

Federal financial reporting should provide information that helps the reader to determine whether future budgetary resources will likely be sufficient to sustain public services³ and to meet obligations as they come due.⁴
4. While federal financial reporting is not expected by itself to accomplish the stewardship reporting objective, it can contribute to meeting the objective.⁵ This Statement's contribution relates primarily to the federal government's operations and financial condition; it does not extend to an assessment of the nation's financial condition.

¹SFFAC 1, par. 109.

²SFFAC 1, par. 134.

³ In this standard, "public services" refers to all goods, benefits and services provided by the government. Federal public services include but are not limited to the provision of goods, transfer payments (such as Social Security benefits) or other financial benefits (such as loan guarantees), as well as national defense, transportation safety and national parks.

⁴ SFFAC 1, par. 139.

⁵ SFFAC 1, par. 235.

-
5. The Board believes that comprehensive long-term fiscal **projections**⁶ make an essential contribution to meeting the stewardship objective and especially sub-objective 3B because it is concerned with the future and the resources needed in the future.
 6. Long-term fiscal projections serve as the basis for key measures presented in the basic financial statement as well as narrative and illustrations required in the consolidated financial report of the U.S. Government (CFR). The more detailed objectives presented below were developed as one means of guiding the Board in developing the basic financial statement and in identifying the most important areas to be addressed through narrative, tables and/or graphics.
-

Objectives of Basic Financial Statement (Comprehensive Long-Term Fiscal Projections for the U.S. Government) and Accompanying Disclosures and Required Supplementary Information

7. In this Statement, “**Fiscal Sustainability Reporting**” is the short term for the basic financial statement, disclosures, and **Required Supplementary Information** (RSI) required in the CFR. Fiscal Sustainability Reporting should provide information to assist readers of the CFR in assessing whether future budgetary resources of the U.S. Government will likely be sufficient to sustain public services and to meet obligations as they come due,⁷ assuming that current policy for federal government public services and taxation is continued without change (hereafter referred to as “**current policy without change**”).⁸
8. Such an assessment is important not only because of its financial implications but also because it has social and political implications. For example, users of financial reports should be provided with information that is helpful in assessing the likelihood that the government will continue to provide public services to constituent groups and to assess whether financial burdens without related benefits were passed on by current-year taxpayers to future-year taxpayers.⁹ Fiscal Sustainability Reporting should assist the reader in understanding these financial, social and political implications.

⁶ Terms defined in the Glossary are shown in **bold-face** the first time they appear.

⁷ SFFAC 1, par. 139.

⁸ Note that fiscal sustainability reporting does not extend to supporting a detailed assessment of whether current policy without change regarding federal public services and taxation is optimal; rather, it addresses the fiscal outlook if current policy is continued without change.

⁹ The latter notion is sometimes referred to as “interperiod equity.”

-
9. Fiscal Sustainability Reporting should be understandable to the intended users of the CFR. The primary intended users of this report are citizens and citizen intermediaries (for example, the media, public interest and advocacy groups, and others). The CFR should be easily understandable to the “average citizen” who has a reasonable understanding of federal government activities and is willing to study the information with reasonable diligence.

Materiality

10. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Effective Date

11. This Statement provides for a phased-in implementation, but earlier implementation is encouraged. All information will be reported as RSI for the first five years of implementation (fiscal years 2010, 2011, 2012, 2013, and 2014). Beginning in fiscal year 2015, the required information will be presented as a basic financial statement, disclosures, and RSI as designated within the standard.

Accounting Standards

Scope

12. The reporting requirements in this Statement apply to the consolidated financial report of the U.S. Government (CFR). They do not apply to financial statements prepared at the component entity level. They also do not affect the reporting in the *Budget of the U.S. Government* or any other special purpose report.

Definitions

13. **Fiscal Gap**
 The **fiscal gap** is the change in non-interest spending and/or receipts that would be necessary to maintain public debt at or below a target percentage of **gross domestic product** (GDP).¹⁰ More specifically, the fiscal gap is the net **present value** of projected spending¹¹ minus projected receipts, adjusted by the decrease (or increase) in public debt required to maintain public debt at or below the target percentage of GDP for the stated projection period. The fiscal gap may be expressed as:
- a. a summary amount in present value dollars,
 - b. a share of the present value of the GDP for the projection period, and/or
 - c. a share of the present value of projected receipts or projected non-interest spending.
14. **Policy Assumptions**
Policy assumptions address the factors under the direct control of the federal government concerning the taxes and other receipts to be received by the federal government and the public services to be provided by the federal government. Policy assumptions address

¹⁰ GDP is the total market value of all final goods and services produced domestically during a given period of time. The components of GDP are: private sector consumption and investment, government consumption and investment, and net exports (exports-imports).

¹¹ Since interest is factored into the present value calculation, the fiscal gap as a share of spending is expressed as a share of spending excluding interest ("non-interest spending").

projected spending rules for both **mandatory** and **discretionary spending**¹² as well as the framework for assessing taxes and fees.

15. **Current Policy Without Change**
In this standard, “current policy without change” refers to the continuation of policies in place as of the valuation date (in other words, no policy change).
16. **Economic Assumptions**
Economic assumptions address the economic factors that are not under the direct legislative control of the federal government (for example, inflation and growth in GDP).
17. **Demographic Assumptions**
Demographic assumptions address projected population trends (for example, birth rates, mortality rates, and net immigration).
18. **Public Services**
In federal financial reporting, “**public services**” refers to all goods, benefits and services provided by the government. Federal public services include but are not limited to the provision of goods, cash (such as Social Security benefits) or other financial benefits (such as loan guarantees), or services such as national defense, transportation safety, and the operation of national parks.

Policy, Economic, and Demographic Assumptions

19. **Fiscal Sustainability Reporting for the U.S. Government** should provide information that helps the reader to determine whether current policy without change is likely to produce future budgetary resources sufficient to sustain public services and to meet obligations as they come due. Long-term projections should help the reader to understand the fiscal implications of continuing current policy without change regarding public services and taxation along with other factors such as projected economic and demographic trends.
20. **Projections of deficits, surpluses, and debt are a central feature of Fiscal Sustainability Reporting.** Projections are not forecasts or predictions; they are designed to depict result

¹²In the federal budget process, “discretionary spending” refers to outlays from budget authority that is controlled by annual appropriation acts. Annual appropriation acts are required to fund the continuing operation of all federal programs that are not “mandatory.” “Mandatory spending” includes entitlement authority such as Social Security and Medicare and payment of interest on the national debt. Congress controls mandatory spending by controlling eligibility and setting benefit and payment rules, rather than by annual appropriation acts. For additional information, see *A Glossary of Terms Used in the Federal Budget Process*, GAO-05-734SP. Available at: <http://gaoweb.gao.gov> (accessed May 7, 2009)

that may occur under various conditions—for example, what if current policy without change regarding federal government public services and taxation are continued in the future? Projections are useful to display alternative future scenarios, but it is important to clearly explain the nature of the information being presented.

21. Long-term projections are derived from models that rely heavily on assumptions. There is an expectation that such models will evolve over time. Therefore, this Statement provides guiding principles for selecting assumptions. The guiding principles address three types of assumptions: policy, economic, and demographic.
22. Policy assumptions address the factors under the direct control of the federal government concerning the taxes and other receipts to be received by the federal government and the public services to be provided by the federal government.
23. Economic assumptions address the economic factors that are not under the direct legislative control of the federal government (for example, inflation and growth in GDP).
24. Demographic assumptions address projected population trends (for example, birth rates, mortality rates, and net immigration).
25. When combined, policy, economic, and demographic assumptions determine the future projected receipts and spending.
26. To illustrate the distinction between policy, economic and demographic assumptions: consider the application of policy, economic and demographic assumptions to the Social Security program. Assumptions relating to future Social Security eligibility and benefit formulas represent policy assumptions. Assumptions about productivity growth and inflation represent economic assumptions. Assumptions about the future population represent demographic assumptions.
27. Policy assumptions should reflect reasonable assumptions about the future course of receipts and spending assuming the continuation of current policy without change. The guiding principle for selecting policy assumptions is to base selections on assumptions consistent with the continuation of policies in place as of the valuation date.
28. Current law is the best place to start when identifying “current policy without change.” However, a simple projection of “current law” would not always reflect current policy without change.
 - a. Cases where a departure from current law may be appropriate include but are not limited to those in which current law

-
- (1) expires almost immediately,
 - (2) contains provisions that are internally inconsistent, or
 - (3) has been changed in a consistent direction over time (i.e., there is a recurring history of change).
- b. The following examples demonstrate how a simple projection of current law may be inconsistent with the guiding principle:
- (1) Legislation providing for discretionary spending provides funding that extends at most a few years into the future. A current-law policy assumption would show discretionary spending falling to zero within a few years. In this situation a simple projection of “current law” would not reflect the implicit “current policy without change.”
 - (2) Current law may contain inconsistent provisions in certain situations. For example, current law may contain provisions for scheduled social insurance benefit payments as well as provisions that restrict spending on certain social insurance programs, for example, Social Security and Part A of Medicare, to the amounts available in the Social Security or Medicare **trust fund accounts**, respectively, plus inflows of **earmarked revenues**. A current law policy assumption would not be feasible in this case since both requirements can not be met simultaneously. Thus, an interpretation of “current policy without change” will be necessary.
 - (3) Current law may include provisions that have been changed in a consistent direction over a period of time. For example, the statutory limit on federal debt has been consistently raised. A current-law policy assumption would be that Treasury borrowing will never increase beyond the dollar amount of the current statutory limit. In such situations a simple projection of current law would not reflect the implicit “current policy without change.”
29. Assumption of a uniform growth rate for all types of receipts and spending is not required. Assumptions may be based on, but are not limited to, the notion that non-interest spending or receipts are likely to:

-
- a. maintain a constant share of GDP,
 - b. grow with inflation,¹³ or
 - c. maintain a constant real¹⁴ per capita level.¹⁵
- 30. Judgment should be applied in selecting assumptions. Policy assumptions representing the worst case scenario are not required. The preparer's objective should be to produce unbiased projections.
 - 31. The same economic and demographic assumptions generally should be used for the basic financial statement for Fiscal Sustainability Reporting and for Social Security and/or Medicare in the Statement of Social Insurance (SOSI) although exceptions may be necessary when considering all projected receipts and spending. For example, an appropriate unified discount rate for all projected receipts and spending in the basic financial statement may differ from either the Social Security or Medicare discount rate. (See paragraph 40c)
 - 32. The projection of current policy without change is intended to show the long-term results of current policy without change. The projection of current policy without change is not a forecast or prediction. This distinction must be clearly explained in the narrative accompanying the principal financial statement, the disclosures and the RSI.
-

Valuation Date

- 33. All projections and estimates required in this Statement should be made as of a date (the valuation date) as close to the end of the fiscal year being reported on ("current year") as possible and no more than one year prior to the end of the current year. This valuation date should be consistently followed from year to year.
- 34. If, after the valuation date, but prior to the end of the fiscal year, policy changes are enacted that could materially affect the basic statement, the projections should be adjusted, if feasible,¹⁶ as if the policy changes took place as of the valuation date. If not feasible, the entity should disclose an estimate of the magnitude of the effect of the policy change on the projection or, if not possible, disclose that it was not possible to reasonably estimate the effect. In any case, the nature of the policy change should be disclosed. If policy changes

¹³ Inflation is growth in a general measure of prices, usually expressed as an annual rate of change.

¹⁴ In economic terms, "real" means adjusted to remove the effects of inflation.

¹⁵ As applicable, the characteristics of the population should be considered for expenditures that benefit identifiable subgroups.

¹⁶ Factors affecting feasibility include but are not limited to the timing of the enactment of legislation and the ability of the preparers to revise the financial statements and/or the ability of the auditors to audit the revised information prior to the issuance of the financial statements and/or the audit opinion.

are enacted after the end of the fiscal year, but prior to the issuance of the financial statements, the financial statements should disclose the nature of the policy change and, if known, the estimated effect on the projections.

Projection Periods

35. Projections in the basic financial statement should be for a finite projection period sufficient to illustrate long-term sustainability. If the projection period in the basic financial statement is not consistent with the projection period used for Social Security and Medicare in the SOSI, the disclosures should display the subtotal and total line items of the basic financial statement calculated for the projection period that was used for Social Security and Medicare in the SOSI.¹⁷

Basic Financial Statement

36. The basic financial statement, Long-Term Fiscal Projections for the U.S. Government, should state the projection period and display the following projected amounts as both present value dollars and as a percentage of the present value of GDP for the projection period indicated:
- a. receipts, disaggregated by major programs such as Medicare, Social Security, and all other receipts, and total receipts;¹⁸
 - b. non-interest spending, disaggregated by major programs such as Medicare, Medicaid, Social Security, and all other non-interest spending, total non-interest spending; and
 - c. the difference between projected receipts and projected non-interest spending.
37. After the initial year of implementation, the basic financial statement should also present comparative amounts for the current year and prior year, and the net change for each line item from the prior year as both present value dollars and as a percentage of the present value of GDP for the projection period indicated.

¹⁷ The SOSI projection period is required to be "sufficient to illustrate long-term sustainability (for example, traditionally the "Social Security" or OASDI, program has used a projection period of 75 years for long-term projections)." See SFFAS 17, paragraph 27.

¹⁸ Full payment of amounts due to Social Security and Medicare HI Trust Funds must be included as receipts for Medicare and Social Security, and outlays for "rest of government."

-
38. Fiscal gap information should be provided, either on the face of the financial statement or in the disclosures.
-

Disclosures

39. Disclosures should include an explanation of the following limitations:
- a. Forward-looking projections require assumptions and estimates relating to future events, conditions, and trends; actual results may differ materially from those that are projected.
 - b. Forward-looking projections focus on future cash flows, and do not reflect either the accrual or modified-cash basis of accounting.
 - c. Projections are not forecasts or predictions; they are designed to answer the question “what if?” – for example, what would be the impact on federal borrowing if current policies without change were continued for a long period of time?
 - d. Forward-looking projections may also encompass hypothetical future trends or events that are not necessarily deemed probable (for example, the assumed ability to continue issuing new public debt indefinitely).
 - e. Fiscal Sustainability Reporting is limited to the activity of the federal government, and does not include activities of state and local governments or the activities of the private sector.
 - f. The summary measures cover a finite period and consideration should be given to trends following the end of the projection period. Disclosures should refer the readers to the RSI for a further discussion of this limitation.¹⁹
40. Disclosures should also include:
- a. a “plain English” explanation of present value and interest rates used to calculate present value.
 - b. significant policy assumptions used in making the projections.

¹⁹ See paragraph 42.

-
- c. any significant differences in economic and demographic assumptions from those used for Social Security and/or Medicare in the preparation of the SOSI and a reference to the note presenting assumptions used in the SOSI.
 - d. an explanation of the most significant departures from current law—for example, allowing for exceeding the statutory limit on federal debt.
 - e. the significant reasons for the changes when year-by-year comparisons are displayed. For example, significant changes may be attributable to the following broad causes:
 - (1) valuation period (for example, the beginning of the projection period is one year later);
 - (2) changes in policies (legislation); and
 - (3) changes in assumptions or estimates.
 - f. The net excess of non-interest spending over receipts disaggregated between (1) programs funded by the government's general revenues (which would currently²⁰ include Federal Supplementary Medical Insurance (Medicare Parts B and D), as well as other programs), and (2) major programs that are funded by payroll and self-employment taxes and that are not financed in any material respect by the government's general revenues (which would currently consist of Social Security (Old Age, Survivors and Disability Insurance (OASDI)) and Medicare Part A), accompanied by a discussion of the different funding mechanisms for the two types of programs.
-

Required Supplementary Information

41. RSI should explain and illustrate:

- a. trends in:
 - (1) historical and projected Treasury debt held by the public as a share of GDP,
 - (2) historical and projected receipts and spending, and

²⁰ "Currently" means as of the date of Board approval of this SFFAS in June 2009.

-
- (3) historical and projected deficits and surpluses for a progression of years beginning at least 20 years before the current year and, at a minimum, extending to the end of the projection period used in the basic financial statement. These amounts should be presented at regular time intervals (for example, every five years or ten years).
- b. the major factors that are expected to have a significant impact upon projected receipts and spending, and how such factors are expected to change over time. For example, two such factors may be (1) the rising cost of health care and (2) demographic trends. Information about how such factors have changed and are expected to change over time is necessary to assist the reader in understanding the factors that influence fiscal projections.
 - c. if an excess of projected non-interest spending over projected receipts is indicated by the projections, the likely impact of delaying action. For example, graphics could illustrate the progressive increase in the change that would be needed to close the fiscal gap by (1) reducing non-interest spending, or (2) increasing receipts.
 - d. the results of alternative scenarios that are consistent with current policy without change. Alternative scenarios are projections in which one or more significant assumptions is varied from the assumptions used in the projections presented in the basic financial statement. The choice of alternative scenarios presented should consider both those that result in larger as well as those that result in smaller net differences between the present value of projected receipts and non-interest spending. Projections for alternative scenarios may be displayed in a table format. The major causes of the differences between the results of the alternative scenarios and the basic financial statement should be explained.
42. RSI should also include an explanation of the significance of the data presented or other information that puts the data into context. Options for context may include but are not limited to:
- a. comparison of the data/trend with past U.S. trends and trends in other developed nations,
 - b. where to find information about outside organizations that use similar data to assess the long-term implications for an entity or sovereign government, for example, the role of rating organizations and/or European Union rules for member nations, and/or
 - c. information that may be helpful to readers in assessing whether financial burdens without related benefits were passed on by current-year taxpayers to future-year taxpayers.
43. RSI should discuss the implications of the trends in receipts and spending for periods following the end of the projection period. This requirement may be met by providing projections for an infinite horizon or a narrative discussion.

Supporting Data (Other Accompanying Information)

44. The quantitative data supporting the basic financial statement, disclosures and RSI may be provided in or referenced as other accompanying information.²¹

Effective Date

45. The following phase-in of reporting requirements as basic information provides for full implementation for reporting periods beginning after September 30, 2014.
- a. These standards are effective for periods beginning after September 30, 2009.
 - b. Information should be reported as RSI for the first five years of implementation (fiscal years 2010, 2011, 2012, 2013, and 2014).
 - c. Beginning in fiscal year 2015, the required information should be presented as specified in paragraphs 12 - 42.
 - d. Earlier implementation is encouraged.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

²¹ For example, a link to a more detailed report such as the President's Budget, a Congressional Budget Office report, or the Trustees Report (*Status of the Social Security and Medicare Program*) may be provided. Note that the Trustees Report is available at: <http://www.ssa.gov/OACT/TR/> (accessed May 7, 2009).

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

- A1. This project was initiated to address the Board's Reporting Objective 3, in particular sub-objective 3b, below:

Objective 3: Stewardship

Federal financial reporting should assist report users in assessing the impact on the country of the government's operations and investments for the period and how, as a result, the government's and the nation's financial condition has changed and may change in the future. Federal financial reporting should provide information that helps the reader to determine whether

- a. the government's financial position improved or deteriorated over the period,
 - b. future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due, and
 - c. government operations have contributed to the nation's current and future well-being.²²
- A2. The FASAB considered what information would most likely help readers of the consolidated financial report of the U.S. Government (CFR) assess whether future budgetary resources will likely be sufficient to sustain public services and meet obligations as they come due.

²²Statement of Federal Financial Accounting Concepts (SFFAC) 1, pars. 134-145, available at <http://www.fasab.gov/codifica.html> (accessed May 7, 2009).

-
- A3. Discussion of such long-term fiscal issues has been described in terms such as “fiscal sustainability.” In the exposure draft (ED), the Board’s working definition of “fiscal sustainability” was the federal government’s ability to continue, both now and in the future, current policy without change regarding public services and taxation without causing debt to rise continuously as a share of GDP.²³
- A4. Throughout this project, the Board considered expert comments from a Fiscal Sustainability Reporting Task Force (“task force”) whose participants have technical knowledge relevant to the issues and/or communication expertise relevant to the challenge of how to effectively communicate complex information on long-term fiscal issues.
- A5. The task force participants included representatives from the American Enterprise Institute, the Cato Institute, the Brookings Institution, and the Urban Institute; the Chief Actuaries for Social Security and Medicare; technical experts from the Treasury Department, the Office of Management and Budget (OMB), the Government Accountability Office (GAO), and the Congressional Budget Office (CBO); members of Congress; and academics in the areas of public policy and communication.
- A6. FASAB staff also researched existing reporting on comprehensive government-wide long-term projections published in English by other countries (for example, the United Kingdom, Australia, New Zealand, and Canada) and studies by the European Commission, and conferred with staff of the International Public Sector Accounting Standards Board (IPSASB).
- A7. The ED, *Reporting Comprehensive Long-Term Fiscal Projections for the U.S. Government*, was issued on September 5, 2008 with comments requested by January 5, 2009. The ED proposed standards for reporting comprehensive long-term fiscal projections for the U.S. Government via a basic financial statement and disclosures. The ED proposed that the reporting requirements would be subject to a phased implementation as Required Supplementary Information (RSI) for fiscal years 2010, 2011 and 2012, and as a basic financial statement and related disclosures beginning in fiscal year 2013. Based upon public comments and Board deliberations, the final Statement provides for all information to be reported as RSI for the first three years (FY 2010, 2011, and 2012). Beginning in fiscal year 2013, the required information will be presented as a basic financial statement, disclosures and RSI as designated within the accounting standards (paragraphs 12 - 42).²⁴

²³ Determining how much a government can depart—in magnitude and/or duration—from this general notion of fiscal sustainability is beyond the scope of the Board’s efforts.

²⁴ See paragraph A38 for a discussion of the effective date for basic information.

A8. Upon release of the ED, notices and press releases were provided to:

- a. the Federal Register;
- b. *FASAB News*;
- c. the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, and *Government Accounting and Auditing Update*;
- d. the CFO Council, the Presidents Council on Integrity and Efficiency, Financial Statement Audit Network, and the Federal Financial Managers Council; and
- e. committees of professional associations generally commenting on exposure drafts in the past.

A9. This broad announcement was followed by direct mailings of the ED to majority and minority staff directors of relevant congressional committees, over 300 think tanks and public interest groups, and past respondents on similar issues, such as the FASAB's *Preliminary Views: Accounting for Social Insurance* (issued in October 2006).

A10. There were 22 responses from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		14
Auditors	3	
Preparers and financial managers	5	

A11. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The respondents' comments are summarized for each major issue addressed below.

A12. In addition, a public hearing was held on February 25, 2009. The public hearing addressed two EDs: this ED and another ED, *Accounting for Social Insurance, Revised*. Seven speakers addressed this ED:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		5
Auditors	1	
Preparers and financial managers	1	

Assumptions: Limitations of “Current Law” Assumptions

- A13. Projections are the central feature of Fiscal Sustainability Reporting and require that assumptions be made. The Board believes that the most useful projections will reflect current policy without change regarding federal public services and taxation.
- A14. Although current law is a reasonable starting point in selecting policy assumptions, a simple projection of “current law” would not always reflect current policy without change regarding public services or taxation. The Board’s proposal includes a guiding principle for selecting policy assumptions but acknowledges the role of judgment in filling voids in current law (for example, when current law expires almost immediately) or departing from current law provisions.
- A15. Major provisions of current law often do not extend far enough into the future to be used as a basis for a long-range projection. Discretionary spending is primarily based upon annual appropriation acts, and even some mandatory spending programs are subject to authorizing legislation that expires in the near future. For example, the legislation authorizing several mandatory programs (such as Food Stamps, student assistance for higher education, and agricultural price supports) expires and legislative action would be required for the programs to continue past the expiration date.
- A16. Current law may contain provisions for scheduled social insurance benefit payments as well as provisions that restrict spending on certain social insurance programs, for example, Social Security and Part A of Medicare, to the amounts available in the Social Security or Medicare trust fund accounts, respectively, plus inflows of earmarked receipts. A current law policy assumption would not be feasible in this case since both requirements can not be met simultaneously. Thus, an interpretation of “current policy without change” will be necessary.
- A17. Current law also may include tax provisions that expire within several years, along with a historical trend of extending those tax provisions before they expire—but only for a short period, such as one year. In such situations, current law would indicate that the tax provisions will expire on schedule, while a projection based upon current policy without change for taxation together with reasonable expectations based on recent historical trends may indicate that the tax provisions will be extended.

Fiscal Sustainability Task Force Input Regarding Policy Assumptions

- A18. A majority of the task force technical experts agreed that policy assumptions for the basic financial statement that are consistent with current policy without change²⁵ regarding federal public services and taxation would be useful for readers of the CFR in assessing whether

²⁵ “Current policy without change” as defined in this Statement is not equivalent to constant dollar amounts. Current policy without change is to be considered with respect to the service or benefit being provided (or scheduled to be provided) and the general relationship of taxation to the economy (for example, taxable income, GDP, or some other base).

future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due.

- A19. A majority of the task force technical experts believe that for mandatory spending on social insurance programs, a modified version of current law (ignoring the exhaustion of the Social Security and Medicare Hospital Insurance trust fund accounts — see paragraph A16), which might also be termed “current services,” represents the most useful assumption for projecting spending for social insurance programs. However, a minority believe that any deviation from current law requires a subjective judgment that can be biased.
- A20. The technical experts also acknowledged that projections for discretionary spending are more uncertain than projections for mandatory spending, since current law often only addresses the next one or two years. However, there was some agreement among the group that projecting discretionary spending growth at the same rate as assumed GDP per capita would be an example of a reasonable option for some programs.
- A21. A report issued by the GAO²⁶ illustrates the tension between choosing current law versus current policy without change regarding federal public services and taxes. The report’s primary display contains two different projections in a single graphic presentation: the 10-year CBO baseline, which is then projected into the future (called “baseline extended”) and a different projection (called an “alternative simulation”), which includes modifications that are described in the narrative. The “baseline extended” projection is based on assumptions that focus on current law. Those assumptions are changed in the GAO’s “alternative simulation” to reflect historical trends and recent policy preferences.
- A22. The GAO’s approach of showing two different sets of numbers provides a more complete picture than selecting one or the other. However, this approach does not achieve one of the most important characteristics of effective communication. All of the communication experts and many of the technical experts on the task force strongly emphasized the importance of simplicity of presentation. The Board noted that one of the greatest challenges inherent in Fiscal Sustainability Reporting is the tension between technical rigor and simplicity of presentation.

Policy Assumptions

- A23. The Board believes that the most useful reporting on fiscal sustainability would illustrate the long-term effects of current policy without change regarding public services and taxation. However, there are numerous ways of projecting current policy into the future. For example, it could be assumed that discretionary spending will continue as a constant share of GDP.

²⁶ *The Nation’s Long-Term Fiscal Outlook, August 2007 Update* ([GAO-07-1261R](#)).

Another alternative would be to assume constant real spending per capita (which could give a different result from assuming growth at a constant share of GDP). Yet another alternative would be to assume constant growth at the rate of inflation, which may be different than the growth of GDP.²⁷ (Historically, nondefense discretionary spending has grown roughly with GDP while defense discretionary spending has grown slightly faster than inflation but less than GDP, often in a nonlinear pattern.)

- A24. The Board believes that the details of the assumptions for projecting current policy without change should be left to the judgment of the preparer, subject to review by the auditor. Regardless of which assumptions are used for the basic financial statement, the disclosures should include an explanation of the assumptions used and alternative scenarios, as well as the reasons for and the effect of changes in assumptions that result in significant changes from amounts reported in the prior period financial statement. Readers will have access to important explanatory material.
- A25. Current law may contain inconsistent provisions in certain situations (for example, regarding the impact on benefit payments upon the exhaustion of the balances in the Medicare Hospital Insurance trust fund account). As noted previously, although current law limits spending to the amounts available in the trust fund account and current earmarked revenue, current law provides for benefits that would exceed such a limit. Thus, current law contains inconsistent provisions and does not provide an answer.
- A26. When current law contains inconsistent provisions, the Board believes that in selecting assumptions, the projections should reflect current policy regarding federal government public services and taxation, and should answer the question “what if current policy without change were continued over time?” The resulting projection should be accompanied by a narrative that explains what would happen if an alternative event occurs (in the example in paragraph A25, the narrative could explain what percentage of Medicare reimbursements could not be paid if legislation does not provide for maintaining current reimbursement rates).
- A27. In drafting the final Statement, the Board also improved the clarity of the requirements for policy assumptions by re-ordering the content of this section. The guiding principles for when a departure from current law may be appropriate are stated first, followed by specific examples.

²⁷ For example, the CBO projects that the rate of inflation will be lower than the rate of GDP growth for 2007-2017. See page xi, *The Budget and Economic Outlook: Fiscal Years 2008 to 2017* (January 2007). Available at: <http://www.cbo.gov> (accessed May 7, 2009).

Economic and Demographic Assumptions

- A28. Economic and demographic assumptions are different in scope from policy assumptions. Economic and demographic assumptions include such factors as economic growth, inflation, birth rates, net immigration, and longevity. The elements of economic and demographic assumptions are generally influenced more by a variety of external factors than by direct legislative impact.
- A29. The ED proposed that the reporting requirements for Fiscal Sustainability Reporting should not dictate specific economic and demographic assumptions, but should require that the primary displays for Fiscal Sustainability Reporting should use economic and demographic assumptions that are consistent with the economic and demographic assumptions for Social Security and Medicare in the SOSI.
- A30. Although a majority of respondents concurred with the ED's proposed broad and general guidance on economic and demographic assumptions, the GAO noted that in some cases, the assumptions, particularly the economic assumptions, may need to differ. For example, an appropriate unified discount rate for all projected receipts and non-interest spending in the basic financial statement may differ from either the Social Security or Medicare discount rates. Increasing the flexibility in the requirement would allow the use of the most appropriate discount rate and permit changes to other assumptions as appropriate. The GAO noted that such differences in assumptions used in the basic financial statement and those in the SOSI for Social Security and Medicare should be appropriately disclosed.
- A31. The Board decided to allow the flexibility recommended by the GAO and to require disclosure for significant differences. (See paragraphs 31 and 40c.)

Basic Financial Statement

- A32. The basic financial statement will report amounts in (a) present value dollars and (b) as a percentage of the present value of GDP for the projection period. The basic financial statement will be presented as RSI for a period of three years and will then become a basic financial statement.
- A33. Elements considered for inclusion as mandatory requirements for the basic financial statement were:
- a. total projected non-interest spending and receipts, disaggregated by major programs such as Medicare and Social Security
 - b. the net total of all projected receipts and non-interest spending

-
- c. amounts displayed as both (present value) dollars and percent of GDP
 - d. year-to-year (for example, side-by-side) comparison with prior year
 - e. net change from year-to-year as a separate column
 - f. alternative scenario information

A34. A majority of the members decided that (a) through (e) above should be included as minimum requirements for the basic financial statement, with the format of the elements left to the discretion of the preparer. An illustrative statement is included in Appendix B. In addition, the Board concluded that the concept of fiscal gap should be explained and reported, either on the face of the financial statement or in the disclosures. An illustrative example is shown in Appendix B on the face of the illustrative basic financial statement.

A35. The Board concluded that disaggregation of specific major programs would be left to the discretion of the preparer.

A36. A majority of respondents agreed with the general guidance proposed in the ED: that major programs should be shown separately. However, respondents' suggestions that named specific examples of major programs indicated that many respondents interpreted the illustrative financial statement in Appendix B as authoritative and inferred that social insurance programs are the federal government's only "major programs."

A37. The Board decided to edit the illustrative basic financial statement in Appendix B by adding two additional lines, "Major Program A" and "Major Program B" to clarify the fact that social insurance programs are not the only major programs of the federal government.

Effective Date for Basic Information

A38. The ED proposed that the financial statement and disclosures be designated as basic information rather than continue as RSI beginning in fiscal year 2013. For three years prior to fiscal year 2013, the information in the basic financial statement and disclosures would be presented as RSI. A majority of respondents addressing this issue, including the GAO, which will have the responsibility of auditing the basic information, agreed that the proposed implementation schedule is reasonable and appropriate. The GAO did identify several requirements that should remain RSI permanently, and the Board incorporated that recommendation into the requirements of the final Statement.

A39. Given the potential for flexibility (within and between years) of policy assumptions underlying the projections, one member believes that significant disagreements between preparer and auditor are likely when the information becomes basic in fiscal year 2013. For

example, paragraph 28b(3) provides an example of a situation where departure from current law may be appropriate if historically consistent changes have been made. That member notes that it remains to be seen how historically consistent the changes must be to qualify and how departures from previously consistent patterns in policy will be addressed. In addition, based on its “but not limited to” language, paragraph 28 allows for an open-ended set of exceptions which have yet to be specified and defended. He believes, therefore, that the projection information should remain RSI until such time as preparation and audit procedures concerning exceptions to the “current law” approach to “current policy without change” can be developed and agreed upon.

- A40. The majority Board member view is that the preparer and auditor will resolve such disagreements by reference to the guiding principle – current policy without change. The Board is aware that significant judgment will be required. If any irreconcilable issues arise during the three-year transition period, the Board would be called upon to (1) offer implementation guidance or (2) defer the transition from RSI to basic information.

Summary Measures

- A41. The Fiscal Sustainability Task Force technical experts did not agree on the usefulness of summary measures such as the present value amounts intended to be presented on the basic financial statement. Although some of the technical experts believe that summary measures convey important information, others believe that due to the inherent weakness of summary measures, they should be de-emphasized.
- A42. The inherent weaknesses of summary measures that were identified by the Fiscal Sustainability Task Force and considered by the Board include but are not limited to the following:
- a. A specific time horizon must be used in order to calculate any summary measure. There are no potential time horizons that do not have inherent weaknesses. Those weaknesses are discussed in paragraphs A50 - A57 below.
 - b. Summary measures for long-term fiscal projections for the U.S. government are likely to produce very large numbers that readers find difficult to relate to. One potential remedy for this would be to report the numbers on a per capita basis, but that approach has weaknesses. Those weaknesses are discussed in paragraphs A46 - A49 below.
 - c. Potential “bottom-line” summary measures include fiscal imbalance and fiscal gap, both of which have inherent weaknesses. Those weaknesses are discussed in paragraphs A58 - A61 below.

A43. In spite of the inherent weaknesses of summary measures, many of the technical experts and all of the communication experts recommended that summary measures, including a “bottom line” summary measure, are important and should be required. Among other reasons, summary measures are valuable for evaluating proposals and also for comparison of the prior reporting year to the current reporting year. For example, one technical expert said that highlighting changes resulting from such actions as the passage of new entitlement programs should be the “acid test” for any proposed reporting on fiscal sustainability. Such reporting (on whether a projected shortfall increased or decreased during the reporting period) can best be accomplished through the use of summary measures. Furthermore, a study by the Organisation for Economic Co-Operation and Development (OECD) found that 10 of 12 nations producing fiscal sustainability analyses included summary measures.²⁸

A44. In order to address the difficulty that some readers may have with summary amounts that are expressed as very large present-value dollar amounts, the Board decided that each line item in the basic financial statement that is displayed in present-value dollar amounts should also be displayed as a percentage of the present value of GDP for the projection period.

A45. A majority of respondents agreed that the Board’s proposed basic financial statement, which requires summary measures, would be understandable and meaningful to readers. However, some respondents expressed the view that trend information is more understandable than summary measures. The Board decided to retain the basic financial statement as proposed in the exposure draft.²⁹ While users’ preferences among individual items in the fiscal sustainability reporting package will vary, the Board believes that each requirement in the Statement is meaningful and necessary.

Per Capita Measures

A46. The Board considered whether to include per capita measures in the summary display. The technical experts serving on the Fiscal Sustainability Task Force did not come to agreement regarding the display of summary numbers on a per capita, per worker, and/or per household basis.

A47. A majority of the technical experts on the task force recommended against per capita measures, for the following reasons:

²⁸ OECD draft report, *Fiscal Futures, Institutional Budget Reforms, and Their Effects: What Can Be Learned?*, to be published in OECD Journal on Budgeting in 2009.

²⁹ See additional discussion of the basic financial statement in paragraphs A32 through A37.

-
- a. Several technical experts strongly objected to the use of per capita summary numbers using current-year population for the denominator. They said that such measures would imply that the current-year population is solely responsible for funding program shortfalls into the distant future. They believe that any changes needed to address the shortfalls projected through, for example, the next 75 years, should be spread across the population throughout that 75-year period.
 - b. Other technical experts noted that per capita measures may be useful in conveying the magnitude of projected fiscal imbalances and could be displayed if summary amounts are divided by the population that parallels the horizon indicated and a narrative is included that explains present value and the nature of the numerator and denominator.
 - c. Per capita measures for infinite-horizon projection periods present special problems. It is uncertain how a reasonable per capita denominator for an infinite horizon ratio would be selected and explained, especially if the denominator includes an estimate of all individuals that enter the population during the projection period.
 - d. Two technical experts believe that even present value per capita amounts can be misinterpreted, because the reader will compare the amount with current salary levels and not understand the role of potential future productivity increases.
 - e. One technical expert objects to per capita amounts because they represent amounts distributed equally among individuals with widely different abilities to pay.

A48. After a discussion of the above issues, the Board decided not to include per capita measures in the proposed reporting requirements. Several of the respondents to the ED indicated strong support for per capita amounts. Three respondents recommended per capita amounts on the face of the financial statement. One respondent specifically recommended a detailed per capita format titled "U.S. Taxpayer Personal Credit Card Statement."

A49. The Board decided that the technical arguments described in paragraph A47 were compelling and that the standard should not require per capita information.

Time Horizon for Projections

A50. There was strong disagreement among the task force participants regarding the selection of a time horizon for projections, in particular a finite horizon (for example, 75-year) versus an infinite horizon. One task force participant believes that only infinite-horizon projections should be displayed but others believe that infinite-horizon projections should not be shown. Some participants suggested that information using both finite and infinite-horizon projections be included.

A51. A majority of the communication experts believe that information for both finite and infinite-horizon projections should be provided to readers, but not necessarily both within a primary display.

A52. Arguments in favor of a finite horizon:

- a. A finite period would be sufficient to cover essentially all of the working and retirement years for current participants.
- b. A finite period is subject to less uncertainty than an infinite horizon.
- c. A finite period is meaningful to readers. For example, readers can relate to a time period that will include the retirement of the youngest members of the current workforce. An infinite horizon is less meaningful to readers. Readers are less likely to relate to or be concerned about the U.S. Government's fiscal condition in 200, 500, or 1,000 years in the future.
- d. Infinite-horizon projections are no more informative to policymakers than 75-year projections, in part because projections beyond the 75-year horizon are subject to significant uncertainty. A more detailed version of this argument is made in an article in the National Tax Journal:

...many people already believe that the 75-year horizon is too distant to be meaningful, and that detailed projections over longer horizons suggest a false precision. A simpler projection assumption is that after 75 years (or some other interval, T), the system will have settled into a steady state in which rates of growth of costs and tax revenues are thereafter constant, although not necessarily equal.³⁰

A53. Arguments in favor of an infinite horizon:

- a. Unless trends are level towards the end of the period, projections may be subject to the "moving window" effect, where shortfalls (or surpluses) increase significantly from one reporting year to the next due to the change in the projection period. For example, if a projection period is 75 years, the activity in "year 76" is outside the projection period for that year, but will be included in the projection period for the following year. An infinite horizon would avoid the "moving window" effect that occurs when there are significant

³⁰ *Sustainable Social Security- What Would It Cost?* National Tax Journal, Vol. LVI, No. 1, Part 1, March 2003, page 34. Available at [http://ntj.tax.org/wwwtax/ntjrec.nsf/5DC000487120304885256D8E0054C858/\\$FILE/Lee.pdf](http://ntj.tax.org/wwwtax/ntjrec.nsf/5DC000487120304885256D8E0054C858/$FILE/Lee.pdf) (accessed May 7, 2009).

changes to an estimate from one year to the next that are caused by the passage of time.

- b. Some have argued that a finite projection period essentially assumes zero for years beyond the projection period. Infinite-horizon projections would not assume zero for years beyond the cutoff point for projections.

A54. The Board believed that the advantages of both finite and infinite horizons were sufficiently compelling to propose in the ED that both finite and infinite-horizon information should be provided, although only one projection period should be used for the basic financial statement. The ED proposed that whichever type of projection period is selected for the primary display, the other type of projection period would have been presented with the disclosures.

A55. The Board also believed that one of the projection periods used (in either the basic financial statement or the narrative section) should be consistent with that used for the SOSI. This would ensure consistency between major line items in the SOSI (for example, projected earmarked receipts and spending for Social Security and Medicare) and corresponding line items in the basic financial statement or the disclosures.

A56. A majority of respondents disagreed with the Board's proposal to require reporting projected data for both finite and infinite time horizons. Respondents said that requiring projected data for an infinite time horizon would be: too much information, irrelevant, and unacceptably uncertain due to many major events that are very difficult or impossible to predict, such as depressions, natural disasters, and wars. A majority of respondents disagreed with the Board's proposal not to specify a time horizon for projected data. Several respondents recommended a specific time horizon of 75 years.

A57. The Board decided not to require reporting on the infinite horizon and to explicitly require a finite horizon for the basic financial statement. The Board addressed the issue of trends beyond the end of the projection horizon by adding a requirement that the RSI should discuss the implications of the sustainability information, particularly the information in the basic financial statement, after the end of the projection period. This requirement may be met by providing projections for an infinite horizon. (See paragraph 42.)

The Concepts of Fiscal Gap and Fiscal Imbalance

A58. The Board considered two potential summary measures for presentation below the other required elements on the basic financial statement or separate disclosure: fiscal gap and fiscal imbalance.

-
- a. The fiscal gap is the change in non-interest spending or receipts that would be necessary to maintain public debt at or below a target percentage of GDP.
 - b. The fiscal imbalance is the net present value of existing federal debt plus projected non-interest spending,³¹ minus projected receipts. In other words, it is the fiscal gap when the target level of federal debt at the end of the projection period is zero. The fiscal imbalance illustrates the amount that would be necessary to balance projected receipts, projected non-interest spending, and repayment of debt for a stated projection period.

A59. Several of the Task Force technical experts indicated that the fiscal imbalance, as defined above, overstates the size of the problem over any finite time period such as 75 years. The fiscal imbalance is defined as the existing federal debt plus projected non-interest spending less projected receipts. If projected receipts are large enough to set the fiscal imbalance to zero after 75 years (or any other fixed time period), this would imply the debt was paid off at the end of the period. Many of the technical experts argued that this is not necessary for continued solvency provided the economy is expected to last longer than 75 years. A positive level of debt is viewed by many to be fiscally acceptable at the end of the projection period, provided it is not too large or growing too fast.

A60. The fiscal gap measure does not require a target debt level of zero; instead, it allows for a positive level of debt at the end of the forecast horizon. In order to report the fiscal gap as a single amount (in present value dollars or as a percentage of GDP, projected receipts or projected non-interest spending), a target debt level relative to GDP must be selected. Such a measure would show the magnitude of increases in receipts or cuts in non-interest spending that would be needed to achieve that target. However, any specific limit selected may be considered arbitrary. In the United States, there is currently no legislated goal for debt as a share of GDP or a legislated limit on borrowing other than the statutory debt limit, which has been frequently raised.

A61. Since the Board has no objective basis for selecting a debt-to-GDP limit or goal, the requirements for information about the fiscal gap do not include a specific debt-to-GDP limit or goal. Fiscal gap should be explained and reported, either on the face of the financial statement or in the disclosures.

³¹ Since interest is factored into the present value calculation, the fiscal gap as a share of spending is expressed as a share of spending excluding interest.

Foreign Holdings of U.S. Treasury Debt

A62. A significant minority of members supported a proposal that the proportion of U.S. Treasury debt held by foreign investors is also important information and should be reported as RSI. They point out that while it is important to report the large and growing gap between receipts and spending, the extent to which deficits are being financed by foreign lenders is also significant information, particularly in light of the large and growing increase in that proportion.

A63. The members supporting this additional requirement pointed out that foreign lenders cannot be counted on to be always willing to finance the government's deficits; that the magnitude of this indebtedness to foreign lenders has national security implications, including threatening our international standing and influence and limiting our foreign policy options; and it results in the interest payments on the debt going abroad instead of providing income to U. S. residents and feeding into our economy.

A64. The members supporting this additional requirement therefore proposed that RSI should include an illustration and/or explanation of the trend in foreign holdings of U.S. Treasury debt for a minimum of 15 years through the most recent date for which data are available.

A65. A majority of members believed that there should not be a requirement to report foreign holdings of U.S. Treasury debt, for reasons that included the following:

- a. It is unclear how the information relates to the fiscal sustainability of current policy without change.
- b. Information on foreign holdings of U.S. Treasury debt is based upon unaudited, unverifiable surveys rather than transaction records and is not available on a timely basis.
- c. A reporting requirement for existing foreign holdings would repeat information readily available in other places.

A66. A majority of respondents agreed with the minority proposal to require reporting of foreign holdings of U.S. Treasury debt. Among the reasons given were:

- a. This information would show the reader the impact foreign countries could have on the U.S. economy.
- b. Trends in the proportion of U.S. Treasury debt held by foreign investors are a fundamental user consideration.

-
- c. This is a very important financial issue that can have significant economic, fiscal, foreign relations and even national security implications over time.
 - d. Graphic information (like the pie chart in #10, Appendix B of the ED) regarding trends in the proportion of U.S. Treasury debt held by foreign investors (especially foreign countries) should be made part of RSI *and* be subject to the phased-in implementation. The respondent feels strongly about this because of our increasing reliance on foreign countries to fund our operating deficits at a time when the global economy is under great strain and these funds may not be available to us in the future as countries like China, Japan, and Germany are forced to shore up their own economies, especially with further global economic deterioration.

A67. The Board decided not to include a requirement to report on foreign holdings of U.S. Treasury debt for reasons described in paragraph A65.

Alternative Policy Proposals

A68. A minority of members supported a proposal for additional RSI (not subject to the phased-in implementation in paragraph 45) that they believed would increase the likelihood that the financial statement and disclosures will result in important and necessary decisions. These members proposed that if the Comprehensive Long-Term Fiscal Projections for the U.S. Government indicate a significant imbalance, the basic financial statement should be accompanied by an identification of one or more policy alternatives that would close the fiscal gap. The identification, explanation, and fiscal impact of the policy alternative(s) would be presented as RSI.

A69. A majority of members believed that there should not be a requirement to describe policy alternatives because a statement of accounting standards is not the proper venue for requiring policy proposals.

A70. A majority of respondents agreed with the Board majority view.

Inter-period or Inter-generational Equity

A71. The Board also considered information that may be helpful to readers in assessing whether financial burdens without related benefits were passed on by current year taxpayers to future year taxpayers (sometimes referred to as “inter-generational equity” or “inter-period equity”).

A72. In addition to measuring whether projected future receipts are sufficient to support projected future spending, it is important to understand how the financing of future spending affects current and future-year taxpayers. For example, even if projected receipts equal projected

spending over the time horizon of the projections, policy may be such that future-year taxpayers assume a higher burden of taxes or lesser public services than current-year taxpayers.

A73. To present such information, a narrative could explain how measures such as debt to GDP over the time horizon of the projection indicate the extent that current deficits are left to be financed by future-year taxpayers either through increased taxes or decreased benefits.

A74. While a minority of the Board believed that such disclosures should be required, the majority of the Board decided to provide that such information is an optional way to meet the disclosure requirement to provide information that puts the data into context (see paragraph 42).

A75. A majority of respondents agreed with the Board majority view.

Other comments

A76. Several respondents raised fundamental questions regarding the project. One respondent said that unlike private entities, the government is sovereign; it has the power to tax and issue money; accordingly, the federal government is unlikely to lack sufficient budgetary resources to sustain public services and to meet obligations as they come due. However, even that respondent noted that government spending can indeed become excessive.

A77. Another respondent said that the concept of sustainability should not require assumptions about what the American people want to do. For example, if 40 years from now citizens decide that 30 percent of GDP may be appropriate to address a large elderly and/or disabled population, the Board should not assume that this would be impossible or unsustainable. That respondent also said that to show income taxes as a flat percentage of GDP while we show the cost of entitlements rising with the law is inconsistent and shows an unintended bias. That respondent indicated that even a very small adjustment would put Social Security into balance.

A78. The Board decided that the proposed standard may not have made it sufficiently clear that the reporting consists of projections and not predictions and that the final Statement of Federal Financial Accounting Standards (SFFAS) should explicitly explain the difference between projections and predictions. The following language was added to paragraph 39c:

[39] Disclosures should include an explanation of the following limitations:

[c] Projections are not forecasts or predictions; they are designed to answer the question “what if?” – for example, what would be the impact on federal borrowing if current policies without change were continued for a long period of time?

Board Approval

A79. This statement was approved for issuance by all members of the Board. The written ballots are available for public inspection at the FASAB office.

Appendix B: Example Formats and Illustrations

The examples in this Appendix are illustrative only; they do not represent authoritative guidance.

Basic Financial Statement

Long-Term Fiscal Projections for the U.S. Government

Amounts projected to 75 years

	As of XXXX XX , 20XX (Current Year)		As of XXXX XX, 20XX (Prior Year)		Change from Prior Year	
	PV Dollars <i>in</i> <i>trillions</i>	% of the PV of GDP*	PV Dollars <i>in</i> <i>trillions</i>	% of the PV of GDP*	PV Dollars <i>in</i> <i>trillions</i>	% of the PV of GDP*
Receipts						
Medicare	\$ XX.X	X.X%	\$ XX.X	X.X%	\$ X.X	X.X%
Social Security	XX.X	X.X%	XX.X	X.X%	X.X	X.X%
All Other Receipts	<u>XX.X</u>	<u>X.X%</u>	<u>XX.X</u>	<u>X.X%</u>	<u>X.X</u>	<u>X.X%</u>
Total Receipts	\$ XXX.X	X.X%	\$ XX.X	X.X%	\$ X.X	X.X%
Non-Interest Spending						
Medicare	\$ XX.X	X.X%	\$ XX.X	X.X%	\$ X.X	X.X%
Medicaid	XX.X	X.X%	XX.X	X.X%	X.X	X.X%
Social Security	XX.X	X.X%	XX.X	X.X%	X.X	X.X%
Major Program A	X.X	X.X%	XX.X	X.X%	X.X	X.X%
Major Program B	X.X	X.X%	XX.X	X.X%	X.X	X.X%
Rest of Federal Government**	<u>XX.X</u>	<u>X.X%</u>	<u>XX.X</u>	<u>X.X%</u>	<u>X.X</u>	<u>X.X%</u>
Total Non-Interest Spending	\$ XXX.X	X.X%	\$ XX.X	X.X%	\$ X.X	X.X%
Non-Interest Spending in Excess of Receipts	<u>\$ XX.X</u>	<u>X.X%</u>	<u>\$ XX.X</u>	<u>X.X%</u>	<u>\$ X.X</u>	<u>X.X%</u>

* GDP (Gross domestic product) can be roughly defined as all of the nation's income or everything the country produces.

** Rest of government: The repayment of borrowings by the general fund from the trust fund accounts for Social Security and Medicare are included in Receipts for Social Security and Medicare, and Non-Interest Spending for Rest of government.

To maintain the current [or date] level of U.S. Treasury debt held by the public to GDP, actions would need to be taken to increase receipts or decrease non-interest spending by a net present value of \$XX.X trillion or X% of GDP. To accomplish this reduction, annual receipts would need to increase by XX.X% or annual non-interest spending would have to decrease by XX.X% (or some combination of these two options).

Note: Amounts are estimated based upon guidance for selecting assumptions provided in this Statement. Receipts and non-interest spending include repayment of borrowings from the trust fund accounts for Social Security and Medicare (estimated as 0.X percent of GDP).

Examples of Selected Narrative and Graphics

The following examples display and/or describe narrative and graphics that might supplement the basic financial statement in a manner consistent with the standard.

These illustrations are illustrative only and do not represent authoritative guidance. Illustrations are not provided for all requirements.

Examples are provided in this appendix for the following:

1. Rising Cost of Health Care	37
2. Demographic Trends	40
3. Relationship of Projected Receipts and Spending	42
4. Trends in Deficit Spending	43
5. Trends in Treasury Debt Held by the Public	44
6. Impact of Delaying Action	45
7. Alternative Scenarios (Range Information)	47
8. Fiscal Gap	47
9. Disclosure on Funding Mechanisms	48
10. Other Required Information	48

1. Rising Cost of Health Care

Paragraph 41b provides that RSI should explain and illustrate major factors that are expected to have a significant impact upon future receipts and spending. For example, if rising federal spending on health care is a major factor in the long-term spending projections, the disclosure might include the following:

- a. If the growth in health care spending exceeds the growth in GDP, a narrative might explain that the growth in any spending program cannot continue indefinitely to exceed the growth in the economy, because at some point, the spending would exceed the resources that can be extracted from the economy.
- b. A range encompassing projections for major factors affecting future spending such as the rising cost of health care might be presented in a graphic as a percentage of GDP. The graphic could use the example format in Illustration 1a or other formats

Illustration 1a: Major Cost Drivers for Federal Spending

Federal Spending for Medicare and Medicaid as a Percentage of Gross Domestic Product Under Different Assumptions About Excess Cost Growth

Source: Congressional Budget Office, *The Long-Term Outlook for Health Care Spending* (November 2007) Figure 5, page 15. Available at: <http://www.cbo.gov/> (accessed May 7, 2009)

“Excess Cost Growth” refers to the number of percentage points by which the growth of annual health care spending per beneficiary is assumed to exceed the growth of nominal gross domestic product per capita.

In addition, a graphic might display the relative contribution of two or more major cost drivers. For example, Illustration 1b displays the effect of the aging of the population, excess cost growth, and the interaction of those two factors on federal spending on Medicare and Medicaid.

Illustration 1b: Relative Contribution of Two Major Cost Drivers

Allocation of Projected Growth in Federal Spending on Medicare and Medicaid, by Source
(Percentage of gross domestic product)

“Excess Cost Growth” refers to the number of percentage points by which the growth of annual health care spending per beneficiary is assumed to exceed the growth of nominal gross domestic product per capita.

“Interaction” is the interaction of the aging of the population combined with projected excess cost growth. In other words, both conditions (excess cost growth and aging of the population) are necessary for the cost growth labeled “Interaction” to occur.

“Aging” is the projected increase in federal spending on Medicare and Medicaid that is attributable solely to the aging of the population.

Source: Adapted from Figure 1 of “Accounting for Sources of Projected Growth in Federal Spending on Medicare and Medicaid,” Economic and Policy Issue Brief, May 28, 2008. Available at: <http://www.cbo.gov> (accessed June 1, 2009).

2. Demographic Trends

Paragraph 41b requires that RSI explain and illustrate the major factors that are expected to have a significant impact upon future receipts and spending of the federal government, one example of which may be demographic trends. The narrative might describe demographic trends and briefly explain the major drivers of change in demographic trends, for example, trends in longevity and birth rates, and refer the reader to more extensive coverage of the topic in other existing reports, for example, the Social Security and Medicare Trustees Reports. The narrative could describe the change in the ratio of workers to retirees and how this change relates to long-term fiscal outlook for social insurance programs. Alternatively, simple age demographics rather than workforce participation could be used (in other words, “over 64” instead of “retired”) provided that they are used consistently.

A simple graphic to accompany and illustrate the narrative may follow the format of the example shown below. The illustrative sample format below is called an “age/gender pyramid.” The graphic could display two or three age/gender pyramids side-by-side, for example:

1. the current (or other baseline) year minus 50 years;
2. the current year (or other baseline year, for example, 2000); and
3. a projection of the current (or other baseline) year plus 50 years.

Illustration 2: Age-Gender Pyramid

The Changing Shape of the United States' Population

Source: *Social Security Administration, Area Population Statistics.*

The narrative could also discuss the “total dependency” ratio (dependent children plus retirees per worker) for each “worker-to-retiree” ratio that is provided in the narrative.³²

The narrative also could provide perspective by explaining that similar demographic trends are occurring in other developed countries, and provide examples of developed nation(s) projected to have a greater number of retirees per worker than the United States, and developed nation(s) projected to have fewer retirees per worker.

³² The European Commission defines the total dependency ratio as the “Population under 15 and over 64 as a percentage of the population aged 15-64.” *European Economy: Special Report 1/2006*, page 313.

Paragraph 41a requires that RSI explain and illustrate the historical and projected trends for a progression of years. Illustrations 3, 4 and 5 display how this might be accomplished.

3. Relationship of Projected Receipts and Spending

The RSI section could include a graphic of the relationship between projected receipts and spending for a progression of years, for example beginning 20 years before the current year and extending to all future years projected in the basic financial statements. Below is an example.

Illustration 3: Projected U.S. Government Receipts and Spending

Projected U.S. Government Receipts and Spending (As a percent of GDP)

Source: FY 2007 *Financial Report of the U.S. Government*, Chart H, page 18. Available at <http://fms.treas.gov/fr/index.html> (accessed May 7, 2009).

4. Trends in Deficit Spending

The trends in deficit spending could be graphically displayed as a percentage of GDP for a progression of years, for example beginning at least 20 years before the current year and extending to all future years projected in the basic financial statement.

Illustration 4: Projected Deficit/Surplus as a Percentage of GDP

Data sources:

Historical: Office of Management and Budget, Table 13-2, Chapter 13, "Stewardship," *Analytical Perspectives*, FY 2008 Budget

Projections: Government Accountability Office, Long-Term Fiscal Simulation Data, Alternative Scenario. Available at: <http://www.gao.gov/special.pubs/longterm/data.html> (accessed May 7, 2009)

5. Trends in Treasury Debt Held by the Public

A graphic could display the projected trends in Treasury debt held by the public as a percentage of GDP, for a progression of years beginning at least 20 years before the current year and extending to all future years projected in the basic financial statement. This graphic could illustrate the assumption that increased borrowing would occur to finance the difference between projected receipts and spending.

Illustration 5: Increase in Federal Debt Held by the Public

Data sources:

Historical: Office of Management and Budget, Table 13-2, Chapter 13, "Stewardship," *Analytical Perspectives*, FY 2008 Budget

Projections: Government Accountability Office, Long-Term Fiscal Simulation Data, Alternative Scenario. Available at: <http://www.gao.gov/special.pubs/longterm/data.html> (accessed May 7, 2009).

6. Impact of Delaying Action

Paragraph 41c provides that if the projections indicate an excess of projected non-interest spending over projected receipts, RSI should explain and illustrate the likely impact of delaying action. A graphic could display the progressive increase in the change that would be needed to close the fiscal gap by (a) reducing non-interest spending or alternatively (b) by increasing taxes.

Illustration 6: Impact of Delaying Action

What are the Costs of Delaying Action?

How soon action is taken will affect how much the government would have available to spend on various priorities. The measures below show, for each of the years presented, how much the government would have to immediately and permanently either raise receipts or cut non-interest spending – or some combination of the two – to close the fiscal gap* if action begins in that year. For example, if action does not begin until 2040, non-interest spending would have to be permanently reduced by 59.7% or receipts increased by 92.9% (or some combination of the two) relative to 2009 levels of spending and receipts.

*In this projection, “closing the fiscal gap” means to maintain the government’s debt at the same size (in relation to the economy) as it was at the beginning of the projection period.

7. Alternative Scenarios (Range Information)

Paragraph 41d provides for the explanation and illustration of alternative scenarios consistent with current policy without change. It indicates that a table may be used to display alternative scenarios. The following illustration is an example of how such a table might be displayed.

Illustration 7: Alternative Scenarios

	Statement	Alternative 1	Alternative 2
Receipts:			
Medicare			
Social Security			
All Other			
Total Receipts			
Spending:			
Medicare			
Medicaid			
Social Security			
Major Program A			
Major Program B			
Rest of Government			
Total Non-Interest Spending			
Non-Interest Spending in Excess of Receipts			

8. Fiscal Gap

Paragraph 38 requires that information about fiscal gap be included on the face of the basic financial statement or in the disclosures. The fiscal gap is the change in non-interest spending or receipts that would be necessary to maintain public debt at or below a target percentage of GDP. An illustrative narrative disclosure on the face of the basic financial statement for the change in non-interest spending or receipts necessary is shown on page 32.

The following is an example of an explanation of the concept of fiscal gap that may be useful in putting the information required by paragraph 38 into context:

How much public debt is sustainable? While many experts agree that some level of public debt is reasonable and acceptable, there is no universally agreed-upon “sustainable” percentage of debt to GDP. However, all experts agree that a continually

increasing level of debt to GDP is not sustainable. The chart in Note X³³ displays how the debt as a percentage of GDP has varied over time. Debt was 36.8% of GDP as of September 30, 2007, but has risen as high as 109% of GDP (during World War II). Many economists believe that persistent debt-to-GDP levels over 100% are unhealthy.

9. Disclosure on Funding Mechanisms

Paragraph 40f requires a discussion of the different funding mechanisms for major programs that are not primarily funded by the government's general revenues. Below is an illustrative disclosure.

Of the \$XX of the net excess of non-interest spending over receipts, \$YY relates to programs funded by the government's general revenues and \$ZZ relates to Social Security (OASDI) and Medicare Part A programs, which are funded by payroll taxes and which are not funded in any material respects by the government's general revenues. If payroll and self-employment taxes and related assets in the Federal Old-Age and Survivors and Disability Insurance (OASDI) Trust Funds or Federal Hospital Insurance Trust Fund (Medicare Part A) become insufficient to cover related benefits, as indicated by projections, additional funding for each of these two programs would be necessary or scheduled benefits would need to be reduced. If the government's general revenues are insufficient to cover both mandated transfers to Medicare Parts B and D and spending for other general government programs funded by the government's general revenues, as indicated by the projections, either the government's general revenues or Medicare Parts B and D revenues (premiums and state transfers) would need to be increased, spending for Medicare Parts B and D and/or other general government spending would need to be reduced, and/or additional amounts borrowed from the public.

10. Other Required Information

The illustrations in the appendix are not all-inclusive. Additional information is required by paragraphs 39 - 42 but is not explicitly described or illustrated in this appendix. For example, paragraph 39 requires an explanation of the nature and limitations of projections. Paragraph 42 requires that the narrative should explain the significance of the data presented and put the information into context.

³³See *Illustration 5: Trends in Treasury Debt Held by the Public on page 1414*.

Appendix C: Frequently Asked Questions (FAQs)

These FAQs were included in the exposure draft to aid respondents. They are not required in the CFR.

FAQ 1. What is “Fiscal Sustainability Reporting”?

“Fiscal Sustainability Reporting” is the short term for “Comprehensive Long-Term Fiscal Projections and Accompanying Narrative and Graphics in the Financial Report of the U.S. Government.”

FAQ 2. What is GDP?

A nation’s gross domestic product, or GDP, is one of the ways for measuring the size of its economy. The GDP of a nation is defined as the market value of all final goods and services produced within a country in a given period of time. The most common approach to measuring and understanding GDP is the expenditure method:

$$GDP = consumption + investment + government spending + (exports - imports)$$

FAQ 3. a. What is the debt-to-GDP ratio?

b. Why does the debt-to-GDP ratio matter?

- a. The debt-to-GDP ratio, for the purposes of federal financial reporting, is the amount of federal (Treasury) debt held by the public divided by GDP. [An alternative ratio would be the amount of total public debt (federal, state, and local) divided by GDP.]
- b. The debt-to-GDP ratio provides an indication of a nation’s ability to repay its public debt by comparing the size of its debt to the size of its economy. For example, during the formation of the European Union (EU), one of the conditions for initial membership in the EU, which included eligibility to convert its currency to the Euro, was that each nation had to meet certain conditions, including debt-to-GDP ratio. Generally, higher debt-to-GDP ratios are believed to result in lower economic growth and private investment as well as higher interest costs. Many economists believe that persistent debt-to-GDP levels over 100% are unhealthy. In addition, the debt-to-GDP ratio cannot continue to rise indefinitely, because at some point (although the precise point at which this would occur is unknown) the world’s financial markets would likely cease lending to the U.S. government.

FAQ 4. What is present value?

Present value represents the amount of money that if invested today would grow to a specified amount in the future. Present value is an adjusted amount that takes the “time value of money” into consideration. The “time value of money” is illustrated by a question such as: “At ten percent interest (compounded annually), how much do I need to put into the bank today in order to have \$110 one year from today?” The amount you would need today would be \$100. Therefore, the present value of \$110 in this example would be \$100.

In present value calculations, the further out in the future the needed amount, the smaller the amount you would need today. In the first year, you earn interest on the amount that you deposit (the “principal” amount). In the second year, you earn interest on both the original principal amount and the amount of interest that was earned in year one. In year three, you would earn interest on:

- the original principal amount, plus
- the interest earned in year one on the principal amount,
- the interest earned in year two on the principal amount, and
- the interest earned in year two on year one’s interest earnings.

This is colloquially called “the magic of compounding.” If inflation is less than the rate of interest earned (in this example, ten percent per year), the “magic of compounding” is an advantage to the party that is earning the interest.

FAQ 5. What are projections?

A projection is the calculation of future data based upon the application of trends to present data. Projections of deficits, or surpluses, and debt are a central feature of Fiscal Sustainability Reporting. Projections are not forecasts or predictions; they are designed to depict results that may occur under various conditions—for example, what if current policy without change regarding federal government public services and taxation are continued in the future? Projections are useful in order to display alternative future scenarios, but it is important to clearly explain the nature of the information being presented.

FAQ 6. What factors affect projections?

Projections are affected by three kinds of assumptions: policy assumptions, economic assumptions, and demographic assumptions.

- Policy assumptions address the factors under the direct control of the federal government concerning the taxes and other receipts to be received by the federal government and the public services to be provided by the federal government. Policy assumptions address

projected spending rules for both mandatory and discretionary spending as well as the framework for assessing taxes and fees.

- Economic assumptions address the economic factors that are not under the direct legislative control of the federal government (for example, inflation and growth in GDP).
- Demographic assumptions address projected population trends (for example, birth rates, mortality rates, and net immigration).

Projections are also affected by uncertainty. The uncertainty may be demonstrated by providing alternative scenarios consistent with current policy without change.

FAQ 7. What is the nature of accounts designated as “trust funds” in the budget of the federal government?

A trust fund account, as the term is used in the budget of the federal government, is a type of account designated by law as a trust fund, for receipts earmarked for specific purposes and the expenditure of those receipts. Hence the meaning of the term differs significantly from its meaning in the private sector. For example, a trust in the private sector necessarily involves a fiduciary relationship. In the Federal government, despite the legislative requirement that the funds be earmarked, earmarked funds (often titled “trust funds” in the federal budget) are distinct from fiduciary activities.³⁴

Moreover, in order to reduce confusion between accounts designated as “trust funds” in the budget of the federal government (such as the trust fund accounts for Social Security and Medicare) and private-sector trust funds, FASAB’s Statement of Federal Financial Accounting Standards (SFFAS) 27, *Identifying and Reporting Earmarked Funds*, prohibits the use of the term “trust fund” for earmarked funds (federal “trust funds”) except when referring to the legal title of the fund. SFFAS 27 also requires the following note disclosure when accounts designated as “trust funds” in the budget of the federal government use their excess funds to buy Treasury securities:

- The U.S. Treasury does not set aside assets to pay future expenditures associated with earmarked funds. Instead, the cash generated from earmarked funds is used by the U.S. Treasury for general government purposes.
- Treasury securities are issued to the earmarked fund as evidence of earmarked receipts and provide the fund with the authority to draw upon the U.S. Treasury for future authorized expenditures. (For some funds, the drawdown is subject to future appropriation).
- Treasury securities held by an earmarked fund are an asset of the fund and a liability of the U.S. Treasury, so they are eliminated in consolidation for the U.S. government-wide financial statements.

³⁴ Fiduciary Activities are defined in SFFAS 31, *Accounting for Fiduciary Activities*.

-
- When the earmarked fund's Treasury securities are redeemed to make expenditures, the U.S. Treasury will finance those expenditures in the same manner that it finances all other expenditures.³⁵

³⁵See SFFAS 27, *Identifying and Reporting Earmarked Funds*, paragraphs 16 and 27.

Statement of Federal Financial Accounting Standards 37: Social Insurance: Additional Requirements for Management's Discussion and Analysis and Basic Financial Statements

Status

Issued	April 5, 2010
Effective Date	For periods beginning after September 30, 2010.
Affects	• SFFAS 17, paragraphs 26, 27, and 32.
Affected by	None.

Summary

For federal financial reporting, social insurance comprises five programs – Social Security, Medicare, Railroad Retirement, Black Lung, and Unemployment Insurance. However, two programs, Social Security and Medicare, are of special significance because of the high rate of participation among citizens, the fiscal challenges related to the programs, and the challenges associated with incorporating estimates of future cash flows of this magnitude in financial statements. Therefore, the Federal Accounting Standards Advisory Board (FASAB or “the Board”) has devoted substantial resources to considering how fundamental questions about social insurance programs should be addressed through federal financial reporting. These questions include whether the government can sustain these programs as currently constructed, whether the government’s financial condition improved or deteriorated as a result of its efforts to provide these and other programs, and how long these programs will be able to provide benefits at current levels.

From the outset of this project, members have agreed on the objectives of financial reporting for social insurance programs and yet have had different views about how best to achieve the objectives. For example, all members have agreed that it is extremely important to provide useful financial information about the sustainability of social insurance programs, and that such information should be presented for the government as a whole in the consolidated *Financial Report of the United States Government*.¹ Members have agreed that social insurance information should be included in the basic financial statements and should be “transparent” – that is, readily understandable to an interested, non expert reader. Members also have agreed that the financial report should highlight any long-range fiscal imbalances anticipated in social insurance programs. All members have supported several innovations, including a new basic financial statement presenting changes in the amounts presented on the statement of social insurance. However, members have had different views about what should be reported on certain financial statements.

¹To that end the Board recently issued Statement of Federal Financial Accounting Standards 36, *Reporting Comprehensive Long-Term Fiscal Projections for the U. S. Government*.

The key difference among members is in regard to the timing of the recognition of expense and liability for social insurance programs. Some members believe that an expense is incurred and a liability arises for social insurance programs during the working lives of participants, and that some portion of the benefits accumulated at the balance sheet date should be recognized as a liability. Other members agree with Statement of Federal Financial Accounting Standards (SFFAS) 17, *Accounting for Social Insurance*, that an expense is incurred and a liability arises for social insurance programs when the participants have met all eligibility requirements and the amount is “due and payable.”

This Statement of Federal Financial Accounting Standards represents a compromise. It provides enhanced reporting but does not resolve the two strongly held views regarding when the obligating event occurs for social insurance programs and, thus, when the liability and expense definitions are met within those programs. Therefore, this Statement does not change the liability and expense recognition and measurement from that required in SFFAS 17.²

SFFAS 17 requires certain information about social insurance programs, and this Statement requires the following:

- Critical information about costs, assets and liabilities, social insurance commitments, budget flows, and the long-term fiscal projections together in one section in management’s discussion and analysis (MD&A).³
- A table or other singular presentation of key measures in MD&A.
- A new summary section for the statement of social insurance.
- A new basic financial statement to present the reasons for changes during the reporting period in the open group measure reported on the statement of social insurance.

Although opinions continue to differ regarding when the obligating event occurs for social insurance programs, and thus the question of when the liability and expense occur within those programs continues to be discussed, this Statement fulfills a desire held by all the members to present other information that will significantly improve readers’ understanding of the status and results of the government’s social insurance programs.

²SFFAS 17 established a “due and payable” liability standard for social insurance programs. Under that standard the expense recognized for the reporting period is the benefits paid during the period plus any increase (or less any decrease) in the liability from the end of the prior period to the end of the current period. The liability is the social insurance benefits due to be paid to or on behalf of beneficiaries at the end of the reporting period but not disbursed until after the end of the period, including claims incurred but not reported.

³This Statement applies only to the government-wide entity and to component entities that prepare a statement of social insurance.

Introduction

Purpose

1. Federal financial reporting should provide accurate and transparent information to citizens so that they can make well-informed decisions for themselves and their government. In this regard, such reporting must include information on the government's long-term commitments for social insurance as well as all other government programs. This Statement of Federal Financial Accounting Standards (SFFAS or Statement) supports that objective.
2. This Statement amends sections of SFFAS 17, *Accounting for Social Insurance*. In addition to the current requirements in SFFAS 17, the standard requires the government-wide entity as well as entities that present a statement of social insurance (SOSI) to:
 - a. include in one section of management's discussion and analysis (MD&A) information⁴ about costs, assets and liabilities, social insurance commitments, budget flows, and long-term fiscal **projections**;⁵
 - b. include in MD&A a table or other singular presentation of key measures drawn from the basic financial statements;
 - c. add a section within the SOSI that summarizes the net **present values** of cash flows and presents certain subtotals and totals (see Appendix C: Illustrative Statement of Social Insurance, Part I, Government-wide SOSI); and
 - d. present a statement of changes in social insurance amounts (SCSIA) that indicates the reasons for changes in the open group measure from the end of the previous reporting period (see Appendix D: Illustrative Statement of Changes in Social Insurance Amounts).
3. The federal financial reporting model is unique. The model includes, in addition to a balance sheet and statements of net cost and changes in net position, unique financial statements designed specifically for the federal government, including a statement of budgetary resources, a SOSI, and a statement of long-term fiscal projections for the U.S. government.

⁴This Statement applies only to the government-wide entity and to component entities that prepare a statement of social insurance.

⁵Terms defined in the Glossary are shown in **bold-face** the first time they appear.

In addition, MD&A is a required component in federal financial reports. This Statement provides for additional reporting within this model.

Background

4. As noted in Statement of Federal Financial Accounting Concepts (SFFAC) 1, *Objectives of Federal Financial Reporting*, the federal government is unique when compared with any other entity in the country. In SFFAC 1, the Board established four major reporting objectives for federal accounting standards. The objectives deal with (1) budgetary integrity, (2) operating performance, (3) stewardship, and (4) systems and control.
5. Although all four of the objectives are equally important, Objectives 2 and 3 guided the development of the social insurance standard. Objective 2 states that federal financial reporting should assist report users in evaluating the service efforts, costs, and accomplishments of the reporting entity; the manner in which these efforts and accomplishments have been financed; and the management of the entity's assets and liabilities.
6. Objective 3 states that federal financial reporting should assist users in assessing the impact of the government's operations and investments for the period and how the government's and the nation's financial condition has changed and may change in the future. This objective is based on the government's responsibility for the general welfare of the nation in perpetuity. It focuses not on the provision of specific services, but on the requirement that the government report the broad outcomes of its actions.
7. In light of Objective 3, fundamental questions about social insurance programs should be addressed by accounting standards, including whether the government can sustain these programs as currently constructed, whether the government's financial condition improved or deteriorated as a result of its efforts to provide these and other programs, and how long these programs will be able to provide benefits at current levels. The information that is proposed will help users address these questions.
8. The SOSI was a first step in the process of developing information for an assessment of sustainability of specific programs in government-wide financial reports and in the financial reports of component entities that administer social insurance programs. The SOSI is based on long-range actuarial estimates of future costs. SFFAS 17 requires certain supplementary information as well, including presentations of future cash flow as a percentage of taxable payroll and Gross Domestic Product (GDP). The SOSI and required supplementary information (RSI) provide information that helps users analyze the effect of benefit payments to different participants under current law, as well as economic and demographic changes (e.g., in the cost of health care and in life expectancies).

-
9. Social insurance involves major programs. They are not only a component of federal operations, but an essential part of the national economy. This Statement requires information that is not currently provided. Specifically, it requires management to discuss and analyze in MD&A measures of social insurance in the context of other measures presented in the basic financial statements. In addition, it requires a table or other singular presentation of measures in MD&A; a new summary section for the SOSI; and a new statement of changes in social insurance amounts.

Materiality

10. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Effective Date

11. The provisions of this Statement will be effective beginning in fiscal year 2011.

Accounting Standard

Scope

12. This Statement of Federal Financial Accounting Standards (SFFAS or Statement) is applicable to the consolidated financial report of the U.S. government as well as to the financial reports of component entities that present a Statement of Social Insurance (SOSI). Social insurance standards for these entities are provided in SFFAS 17.
13. This Statement amends sections of SFFAS 17. It does not affect provisions of SFFAS 17 that are not explicitly described and illustrated in paragraph 40 of this standard. For the government-wide entity and entities that present a SOSI, the Statement supplements SFFAS 15, *Management's Discussion and Analysis*; it does not affect the MD&A requirements of other entities.
14. The following five programs are the sole programs subject to social insurance amendments adopted through this Statement:

-
- (a) Old-age, Survivors, and Disability Insurance (OASDI or Social Security);
 - (b) Medicare Hospital Insurance (Medicare HI) (Part A) and Medicare Supplementary Medical Insurance (Medicare SMI) (Part B and Part D);⁶
 - (c) Railroad Retirement benefits (RRB);⁷
 - (d) Unemployment Insurance for the general public (UI);⁸ and
 - (e) Black Lung benefits.
-

Definitions

15. Closed group population

Those persons who, as of a **valuation date**, are participants in a social insurance program as beneficiaries, covered workers, or payers of earmarked taxes or premiums.

16. Closed group measure

The closed group measure is the net present value of all expenditures to or on behalf of the closed group population (see above) participating in a social insurance program and all contributions or other income from or on behalf of those participants over a given projection period.

⁶ Medicare also includes a "Part C." The Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) created the Medicare Advantage (MA) program that is sometimes referred to officially as Part C. MA provides Parts A, B, and now D through private health insurance plans. Those who are entitled to Part A and enrolled in Part B may choose to join a MA plan, if there is a plan available in their area. MA plans have their own providers or a network of contracting health care providers. All MA plans are currently paid a per capita premium, assume full financial risk for all care provided to beneficiaries, and must provide all Medicare-covered services. Many MA plans offer additional Medicare services such as prescription drugs and vision and dental benefits to beneficiaries. The federal government's commitment for components of Part C (i.e., hospital, physician, drugs) would be the same as for Parts A, B, and D and would be accounted for accordingly.

⁷ Legislation enacted in 1974 restructured railroad retirement benefits into two tiers, so as to coordinate them more fully with Social Security benefits. The first tier is based on combined railroad retirement and Social Security credits, using Social Security benefit formulas. The second tier is based on railroad service only and is comparable to the pensions paid over and above Social Security benefits in other industries.

⁸ Pursuant to SFFAS 17, a statement of social insurance is not prepared for the UI program; SFFAS 17 specifies other reporting for the UI program. Thus, for the purposes of this Statement, the UI program is not a "component entity that presents a SOSI."

17. Closed group unfunded obligation

The closed group unfunded obligation is the closed group measure (see above) minus the value of the assets held by the program at the beginning of the reporting period.

18. Current participants

All individuals currently participating in a social insurance program, e.g., for Social Security, those who are 15 years and older and are working or have worked in covered employment and retirees as of the valuation date. An entry age for work in covered employment of 15 years is assumed.

19. Future participants

Individuals who are not currently participating in a social insurance program but who are projected to participate in the future over a given projection period as contributors or beneficiaries or both. For example, for Social Security, future workers and beneficiaries who are under age 15, not yet born, or not yet immigrated as of the valuation date.

20. Open group population

Those persons who, as of a valuation date, are or will be during the projection period participants in a social insurance program as beneficiaries, covered workers, or payers of earmarked taxes or premiums.

21. Open group measure

The open group measure is the net present value of all expenditures to or on behalf of the open group population (see above) and all contributions or other income from or on behalf of the open group population over a given projection period, e.g., 75 years.

22. Open group unfunded obligation

The open group measure (see above) minus the value of assets held by the program at the beginning of the reporting period.

Management's Discussion and Analysis

23. Component entities that present a SOSI and the government-wide entity should discuss critical measures from their basic statements in a separate section of their management's discussion and analysis (MD&A). They should explain the significance of key amounts, the

major changes in those amounts during the reporting period, and the causes thereof. In particular, the entity should explain why the changes occurred and what they imply for the program's operation. The entity should explain how costs and commitments incurred during the period were or will be financed. The entity should describe important existing and currently-known demands, risks, uncertainties, events, and conditions—both favorable and unfavorable—that affect the amounts reported in the basic financial statements. The discussion should go beyond a mere description of existing conditions and should encompass the possible future effects of anticipated future events, conditions, and trends regarding social insurance programs. Where appropriate, the description of possible future effects of both existing and anticipated factors should include quantitative forecasts or projections.

24. At a minimum, component entities that present a SOSI and the government-wide entity should present and explain, as described in paragraph 23, the following measures except as noted:
 - a. From the statement of net cost and the statement of changes in net position (component entities) or statement of operations and changes in net position (government-wide entity):
 - i. Net costs
 - ii. Total financing sources and net change of cumulative results of operations (for component entities only) and
 - iii. Total revenue and net operating costs (for the government-wide entity only)
 - b. From the statement of financial position (balance sheet):
 - i. Total assets
 - ii. Total liabilities
 - iii. Net position
 - c. From the statement of social insurance and the statement of changes in social insurance amounts (SCSIA):
 - i. The open group measure; the entity should discuss the closed group measure in the narrative and explain how it differs from the open group measure⁹ and the significance of the difference
 - ii. The change in the open group measure during the reporting period(s)

⁹ See the definitions of "closed group" and "open group" in pars. 15-22. The Black Lung benefits program serves a population that is closed to new entrants; therefore, for that program, the open and closed groups would be the same.

-
- d. From the reconciliation of net operating cost and unified budget deficit (for the government-wide entity only): total unified budget deficit or surplus
 - e. From the statement of long-term fiscal projections (for the government-wide entity only): the net present value of the excess of spending over receipts.
25. In addition, MD&A should present the above measures in a table or other singular presentation (see the illustration for the government-wide entity at Appendix B: Illustrative Table of Key Measures). The closed group measure is not required to be presented in the table or other singular presentation. The table in Appendix B is for purposes of illustration only. The preparer should determine the most effective format for communicating the critical financial information and the reasons for changes during the prior period.
26. Each critical measure above (costs, net position, etc., see paragraph 24) may be disaggregated into sub-measures. For example, regarding assets, component entities may separately present Treasury securities held, and liabilities may be disaggregated into major items, i.e., into line items for employee pension liabilities and other liabilities.
27. The amounts discussed in MD&A for the open group measure should be the same as the amount in the summary section of the SOSI (discussed below and in Appendix C: Illustrative Statement of Social Insurance, Part I, Government-wide SOSI), and the SCSIA (discussed below and in Appendix D: Illustrative Statement of Changes in Social Insurance Amounts).
-

Statement of Social Insurance

[See Appendix C: Illustrative Statement of Social Insurance, Part I, Government-wide SOSI. There are two illustrations, one for the government-wide entity (Part I) and another for the component entity (Part II).]

28. The government-wide entity and component entities that present a SOSI pursuant to SFFAS 17¹⁰ should conclude the SOSI with a summary section that presents the closed group measure and open group measure (see Appendix C). The open group measure line item should be the same as lines on the beginning-of-year and end-of-year amounts on the SCSIA (see below and Appendix D).

¹⁰ Currently, these component entities are the Social Security Administration, the Department of Health and Human Services, the Centers for Medicare and Medicaid Services, the Railroad Retirement Board, and the Department of Labor.

-
29. The summary section of the component entity SOSI should include the assets held by the programs, if any, and totals for the open group unfunded obligation (see Appendix C, Part II, summary section for component entities).
30. This Statement should not be construed to preclude presenting subtotals by age cohort.
-

Statement of Changes in Social Insurance Amounts

[See Appendix D: Illustrative Statement of Changes in Social Insurance Amounts.]

31. The government-wide entity and component entities that present a SOSI should present a SCSIA. The SCSIA will reconcile beginning and ending open group measures and present the components of the changes in the open group measure from the end of the previous reporting period. It should present the significant components of the change, e.g., the change due to the change in valuation period; the interest on the obligation due to present valuation; the changes in demographic, economic, and health care assumptions; the changes in law, regulation, and policy; and the amounts associated with each type of change.
32. The SCSIA should disclose in notes on the face of the statement and/or in notes to the financial statements the reasons for the changes. The reasons should be explained as briefly and simply as possible. The most significant changes should be explained in the entity's MD&A as well as in disclosures associated directly with the SCSIA.
-

Required Supplementary Information other than MD&A

33. This Statement does not eliminate or otherwise affect the SFFAS 17 requirements for supplementary information¹¹ except that actuarial projections of annual cash-flow in nominal dollars are no longer required for either component entities that present a SOSI or the government-wide entity.
-

Valuation Date

34. All projections and estimates required in this Statement should be made as of a date (the valuation date) as close to the end of the fiscal year being reported on ("current year") as

¹¹ SFFAS 17, paragraph 27(1) requires certain long-range projections of social insurance cash-flow.

possible and no more than one year prior to the end of the current year. This valuation date should be consistently followed from year to year. If, after the valuation date, but prior to the end of the fiscal year, policy changes are enacted that could materially affect the basic statement, the projections should be adjusted, if feasible, as if the policy reforms had taken place as of the valuation date. If not feasible, the entity should disclose an estimate of the magnitude of the effect of the policy change on the projection or, if not possible, disclose that it was not possible to reasonably estimate the effect. In any case, the nature of the policy change should be disclosed. If policy changes are enacted after the end of the fiscal year, but prior to the issuance of the financial statements, the financial statements should disclose the nature of the policy change and, if known, the estimated effect on the projections.

35. The entity should provide a brief statement explaining that the SOSI amounts are estimates based on current conditions, that such conditions may change in the future, and that actual cost may vary, sometimes greatly, from the estimated cost. For example:

APPLICATION OF CRITICAL ACCOUNTING ESTIMATES

The financial statements are based on the selection of accounting policies and the application of significant accounting estimates, some of which require management to make significant assumptions. Further, the estimates are based on current conditions that may change in the future. Actual results could differ materially from the estimated amounts. The financial statements include information to assist in understanding the effect of changes in assumptions to the related information.

Sensitivity Analysis

36. The component entity should provide, as required supplementary information, **sensitivity analysis** of the closed and open group measures appropriate for their circumstances.¹² The objective of sensitivity analysis is to illustrate how an estimate or projection would change if assumptions, data, methodologies or other inputs change. The Social Security Administration (SSA), Medicare and Railroad Retirement programs should provide sensitivity analysis of the open group measure in the SOSI summary. The entity should state that the amounts of the open (and closed) group measures depend on the assumptions used and that actual experience is likely to differ from the estimate.

¹² See Actuarial Standards of Practice 32, paragraph 3.5.

-
37. When choosing an approach for sensitivity analysis, the entity should consider future trends, the utility of the information to the users and policy-makers, and the relative burden on the component entity resources. Providing analysis or disclosure for one or more periods will not imply that such analysis or disclosure is appropriate in the future, although the reasons for discontinuing a particular sensitivity analysis should be addressed in the annual report.
38. The government-wide entity should provide a summary of the sensitivity analyses required for component entities.

Government-wide Entity Accounting and Reporting

39. The standard for government-wide accounting and reporting for social insurance programs is the same as that for component entities that present a SOSI unless otherwise indicated. However, the level of detail at the government-wide level should be less than at the component level.

Effect on SFFAS 17

40. The Statement provides additional requirements for presentation, disclosure, and supplementary reporting for social insurance programs. SFFAS 17 is amended as follows to conform to the changes in this Statement:

26. ~~All projections and estimates required in these standards should be made as of a date (the valuation date) as close to the end of the fiscal year being reported upon ("current year") as possible and no more than one year prior to the end of the current year. This valuation date should be consistently followed from year to year.~~

All projections and estimates required by this Statement should be made as of a date (the valuation date) as close to the end of the fiscal year being reported on ("current year") as possible and no more than one year prior to the end of the current year. This valuation date should be consistently followed from year to year. If, after the valuation date, but prior to the end of the fiscal year, policy changes are enacted that could materially affect the basic statement, the projections should be adjusted, if feasible, as if the policy changes took place as of the valuation date. If not feasible, the entity should disclose an estimate of the magnitude of the effect of the policy change on the projection or, if not possible, disclose that it was not possible to reasonably estimate the effect. In any case, the nature of the policy change should be disclosed. If policy changes are enacted after the end of the fiscal year, but prior to the issuance of the financial statements, the financial statements should disclose the nature of the policy change and, if known, the estimated effect on the projections.

26A. The entity should provide a brief statement explaining that the SOSI amounts are estimates based on current conditions, that such conditions may change in the future, and that actual cost may vary, sometimes greatly, from the estimated cost. The entity should state that the amounts of the open (and closed) group measures depend on the assumptions used and that actual experience is likely to differ from the estimate. For example:

APPLICATION OF CRITICAL ACCOUNTING ESTIMATES

The financial statements are based on the selection of accounting policies and the application of significant accounting estimates, some of which require management to make significant assumptions. Further, the estimates are based on current conditions that may change in the future. Actual results could differ materially from the estimated amounts. The financial statements include information to assist in understanding the effect of changes in assumptions to the related information.

27 (1) *Cash-flow Projections – ...*

- (a) Actuarial projections of the annual cash-flow, ~~in nominal dollars~~, with amounts reported for at least every fifth year in the projection period. The cash-flow information should show

- i. total cash inflow from:
 - a. all sources and
 - b. excluding net interest on intra governmental borrowing/lending and
- ii. total cash outflow

~~b) The actuarial estimate provided in 27(1)(a)(i)2) and 27(1)(a)(ii) immediately above as a percentage of~~
~~(i) taxable payroll⁷ and~~
~~(ii) Gross Domestic Product (GDP).⁸~~

For the OASDI and HI programs, the actuarial projections of the annual cash-flows should be expressed as a percentage of taxable payroll and gross domestic product (GDP). For the SMI program, the actuarial projections should be expressed as a percentage of GDP. For the RRB program, the actuarial projections should be expressed as a percentage of taxable payroll. For the Black Lung and UI programs, the actuarial projections should be expressed in constant (or inflation-adjusted) dollars.

⁷ ~~Certain social insurance programs (i. e., SMI, Black Lung benefits, and UI) are either not financed by earmarked payroll taxes or are financed by state determined payroll taxes on employers that can vary by state and by employer; therefore these programs are not required to provide this estimate.~~

⁸ ~~This requirement does not apply to the RRB, Black Lung, and UI programs.~~

...

(4) *Sensitivity Analysis* –

- (a) For all programs except UI, illustrate the sensitivity of the projections and present values required by paragraph 27(1) and 27(3) to change in the most significant individual assumptions. For example, using the entity's "best estimates" cost assumptions as a baseline, show the effect of varying several significant assumptions one at a time to show the effect on the projection. At a minimum, the OASDI and Medicare programs should analyze assumptions regarding the birth and death rates, net immigration, the real wage differential, and the real interest rate. The real wage differential is the difference between the annual percentage increase in wages in covered employment and the inflation rate, as measured by the CPI. The Medicare program should also analyze the health care cost factors and their trend. should provide sensitivity analysis appropriate for their particular circumstances. The objective of sensitivity analysis is to illustrate how an estimate or projection would change if assumptions, data, methodologies or other inputs change. The OASDI, Medicare and Railroad Retirement programs should provide sensitivity analysis of the open group measure presented in the SOSI summary. Appropriate considerations include future trends, the utility of the information to the users and policy-makers, and the relative burden on the component entity resources. Providing analysis or disclosure for one or more periods will not imply that such analysis or disclosure is appropriate in the future, although the reasons for discontinuing a particular sensitivity analysis should be addressed in the annual report. The entity should state that the amounts of the closed and open group measures depend on the assumptions used and that actual experience is likely to differ from the estimate.
- (b) For UI, illustrate the sensitivity of the projections required by paragraph 27(1) to changes in the unemployment rate assumption. The illustrations should reflect the effect of increasing the unemployment rate (1) by approximately one percentage point and (2) to a level sufficient to put stress on the system (e.g., to simulate the largest recession occurring within the last 25 years).

32. ... (4) *Sensitivity Analysis* – For all social insurance programs, provide a summary of the sensitivity analysis required under the standard for component entities (see par. 27(4)). At a minimum, the summary should present the OASDI, HI, SMI, and UI separately.

Effective Date

41. This Statement is effective for periods beginning after September 30, 2010.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This Appendix discusses factors considered significant by Board members in reaching the conclusions in this Statement of Federal Financial Accounting Standards (SFFAS or “Statement”). It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this statement – not the material in this Appendix – should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Background

A1. Expense and liability recognition for social insurance programs (as well as potential expense and liability recognition for other non-exchange transactions and government-acknowledged events) has been a long-standing source of controversy. In its 19 years of operation the Board has issued several exposure drafts, a standard, and a preliminary views document related to social insurance reporting as follows:

- A 1995 exposure draft entitled *Accounting for Liabilities of the Federal Government*
- A 1998 exposure draft entitled *Accounting for Social Insurance*
- SFFAS 17, *Accounting for Social Insurance*, in August 1999
- A 2002 exposure draft entitled *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment*, which resulted, in 2003, in SFFAS 25 of the same title
- A 2004 exposure draft entitled *Presentation of Significant Assumptions for the Statement of Social Insurance: Amending SFFAS 25*, which resulted, in 2004, in SFFAS 26 of the same title
- A 2006 preliminary views document entitled *Accounting for Social Insurance, Revised and*
- A 2008 exposure draft entitled *Accounting for Social Insurance, Revised*

A2. For SFFAS 17 the Board identified five programs as social insurance programs.

- Old-Age, Survivors, and Disability Insurance (OASDI or Social Security)

-
- Hospital Insurance (HI) and Supplementary Medical Insurance (SMI); known collectively as "Medicare"
 - Railroad Retirement benefits
 - Black Lung benefits and
 - Unemployment Insurance (UI)
- A3. The issue of social insurance accounting was addressed in SFFAS 17 through compromise between strongly opposing views. The compromise featured:
- a. liability recognition at the point when social insurance benefit payments are due and payable and with revenue and expenses on a cash-flow basis, plus or minus the change in the due and payable liability during the reporting period;
 - b. a SOSI and accompanying disclosures; and
 - c. other narrative and trend information, e.g., graphs of long-term cash flow projections using nominal dollars and as percentages of taxable payroll and GDP, the "dependency ratio," and sensitivity analysis.
- A4. Through SFFAS 25 and 26, the Board re-classified the SOSI from "required supplementary stewardship information" to basic information. The SOSI became subject to a full audit in fiscal year 2006 and significant assumptions were required to be disclosed.
- A5. SFFAS 17, 25, and 26 substantially improved the information presented in general-purpose external financial reports of the U.S. government and its component entities. However, in 2004 the Board decided to reconsider the question of liability and expense recognition. A majority of members serving at that time concluded that the compromise that produced SFFAS 17 did not recognize the accruing cost of social insurance programs in each reporting period and the accumulated liability for benefits payable at a determinable date under current law. Nor did it fully explain the change in the net present value of program-related cash flows. Hence, in 2004, the Board initiated a new social insurance project, and a *Preliminary Views* document was issued in October 2006.

What the *Preliminary Views* Document Proposed

- A6. In the *Preliminary Views* document, the Board presented two views – a Primary View and an Alternative View – of proposed changes in the information provided about the effect of social insurance programs. Under the Primary View proposal, social insurance expense would have been recognized on the statement of net cost when participants become **fully insured** and thus substantially meet the eligibility conditions for future benefits and as scheduled benefits increase due to additional work in covered employment by fully insured individuals.

- A7. In addition to changing the expense and liability recognition points, the Primary View would have linked the SOSI amounts with amounts reported for social insurance on the balance sheet and statement of net cost. For the Primary View members, such linkage or “articulation” would have illustrated how the amounts reported on other basic financial statements relate to the present values of the cash inflow and outflow over the next 75 years reported on the SOSI.
- A8. The Alternative View in the Preliminary Views document proposed to maintain the recognition and measurement of expense and liability for Social Security, Medicare, and Railroad Retirement programs currently required in SFFAS 17. That is, the entity would recognize a liability and a related expense for social insurance benefits when all eligibility criteria are met such that an individual beneficiary is entitled to receive a benefit (e.g., a cash payment, goods, or services), which includes the point when benefit payments are “due and payable.” Thus, under the Alternative View the amounts reported on the balance sheet, statement of net cost, and statement of social insurance presentation would not have changed from what is currently reported under SFFAS 17.
- A9. The Alternative View in the *Preliminary Views* document would have added a new basic financial statement entitled the “statement of changes in social insurance amounts,” that would show the reasons for all changes during the period in the amounts (net benefits less receipts) presented in the statement of social insurance. The Primary View members agreed in principle that such a statement should be required.
- A10. In addition, the Alternative View in the *Preliminary Views* proposed to break new ground. It proposed a new statement of “fiscal sustainability”¹³ for the consolidated *Financial Report of the United States Government (CFR)* that would provide sustainability information on the entire government, including information necessary to assess the sustainability of social insurance programs and information on **intergenerational equity**, as required supplementary information.
- A11. The members supporting the Primary View welcomed and encouraged the development of additional supplementary sustainability information. However, they believed it should be the subject of a separate project because it has implications for a wide variety of issues.
- A12. The FASAB subsequently undertook a project on sustainability that resulted in SFFAS 36, *Reporting Comprehensive Long-Term Fiscal Projections for the U. S. Government*.

¹³ SFFAS 36, *Reporting Comprehensive Long-Term Fiscal Projections for the U. S. Government*, paragraph A3, notes that discussion of long-term fiscal issues has been described in terms of “fiscal sustainability,” and that in the exposure draft on that subject the Board’s working definition of fiscal sustainability was “the federal government’s ability to continue, both now and in the future, current policy without change regarding public services and taxation without causing debt to rise continuously as a share of GDP.”

Different Views Regarding the Obligating Event

- A13. Supporters of the Primary and Alternative Views differed as to the event or transaction that would trigger an expense and a liability for social insurance programs. The members supporting the Primary View believed that conditions for receiving a future benefit are *substantially met* when the participants become fully insured, and the omission of the effects of these events results in an incomplete reporting of costs and liabilities.
- A14. Members supporting the Alternative View in the *Preliminary Views* document saw a fundamental distinction in financial reporting of exchange transactions, which are voluntary market exchanges of goods and services for a price, and nonexchange transactions resulting from decisions made collectively by the Congress and the President to levy taxes and to authorize programs. They noted that this distinction is made in FASAB concepts, standards, and financial statements, e.g., the statement of net cost, as well as by other standard setters, including the Governmental Accounting Standards Board (GASB) and the International Public Sector Accounting Standards Board (IPSASB); and that it is also the difference between offsetting collections or offsetting receipts, on the one hand, and governmental receipts on the other hand.
- A15. Members who supported the Alternative View in the *Preliminary Views* document believed that although the basis for recognition of a liability and cost for social insurance established in SFFAS 17 (e.g., due and payable) remains appropriate, the set of information required by SFFAS 17 was inadequate. They argued that SFFAS 17 does not (1) recognize important information concerning the fiscal sustainability of social insurance programs, or (2) fully explain the change in the net present value of program related cash flows. They believed that the fundamental nature of social insurance is more complex than the federal government's current accounting model could accommodate.
- A16. It is extremely important to note that both the Primary View and the Alternative View in the *Preliminary Views* document called for sustainability reporting. Those members who supported the Primary View believed that the Board should consider additional sustainability reporting in a future project. As noted above, the FASAB subsequently undertook a project on the subject that resulted in SFFAS 36.

Fiscal Sustainability Reporting

- A17. After the public hearing on the *Preliminary Views* on social insurance on May 23, 2007 and initial discussions in the summer of 2007, the Board decided to suspend work on the social insurance standard briefly while it developed fiscal sustainability reporting further. The *Preliminary Views* document mentioned the Board's unanimous interest in fiscal

sustainability reporting and the Alternative View presented examples of what it might look like.

A18. The Board issued an exposure draft on fiscal sustainability¹⁴ in August 2008, and subsequently a final standard, SFFAS 36, in September 2009.¹⁵ SFFAS 36 requires that the CFR present information that will help readers assess whether future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due, including social insurance. The Board concluded that this requires presenting current and projected levels of all federal spending, federal receipts, and federal debt in relation to the economy.

A19. The fiscal sustainability standard is comprehensive. It requires:

- a. A statement of long-term fiscal projections for the U.S. government, a basic financial statement, in the CFR presenting the present value of projected receipts and non-interest spending under current policy without change for all activities of the federal government, including social insurance; how those amounts relate to projected GDP; and changes in the present value of projected receipts and non-interest spending from the prior year.
- b. Supplementary information explaining and illustrating the projected trends in:
 - i. The relationship between all federal government receipts and spending,
 - ii. Deficits or surpluses, and
 - iii. Treasury debt as a share of GDP.
- c. Disclosures explaining and illustrating:
 - i. The assumptions underlying the projections,
 - ii. Factors influencing trends, and
 - iii. Significant changes in the projections from period to period.

¹⁴*Reporting Comprehensive Long-Term Fiscal Projections for the U.S. Government*, Issued August 29, 2008.

¹⁵September 28, 2009.

A20. The Board believes that these projections will provide meaningful information essential to assessing whether future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due, including social insurance obligations.

Social Insurance Revisited: The Exposure Draft of November 2008

A21. Having developed the proposed fiscal sustainability standard, the Board returned to social insurance. In November 2008, the Board issued the exposure draft *Accounting for Social Insurance, Revised* (SI ED). The Board noted in the SI ED that the fundamental difference of opinion on the question of liability and expense recognition for social insurance was reflected in the views of the respondents to the *Preliminary Views* document itself. Indeed, the difference of opinion has persisted since the Board's initial consideration of the social insurance liability question during the development of SFFAS 5 and especially during the development of SFFAS 17.

A22. SFFAS 17 presented a compromise between two strongly held views regarding liability and expense recognition for social insurance programs. For SFFAS 17, the Board concluded that the best approach was to recognize the annual cash flow effects of the social insurance programs in the basic financial statements; that is, revenue is the cash inflow during the reporting period from payroll tax contributions and income tax on social insurance benefits and expenses are the cash outflow during the year plus or minus the change in a "due and payable" liability. However, the Board also required a package of information that it characterized as required supplementary stewardship information (RSSI).

A23. For the RSSI section, the Board required an array of present values by age cohort in what became the statement of social insurance (SOSI). In addition, the Board required other information, e.g., projections of cash flows over long-term projection periods using nominal dollars and as percentages of taxable payroll and GDP.

A24. The Board decided that the "bottom line" of the SOSI should be an open group measure. That bottom line represents the total excess of actuarial present values of future benefit payments over future contributions and tax income for current and future participants over a period sufficient to illustrate long-term sustainability. There had been much debate during the development of the standard over whether to present the open group measure or the closed group measure.

History of the Closed Group Measure

A25. The term "group" simply refers to the participants included in a measure. The "closed group" includes current participants only, e.g., for Social Security, current retirees and covered

workers. It does not include future participants; those projected to become participants during the projection period but after the valuation date. It contrasts with the “open group” that does include those who are currently participating and those who will participate in the future during the projection period. The open and closed group measures include all future flows related to the specified group. These measures contrast with an accrued benefit obligation measure which includes only future benefits attributed to past work in covered employment by current participants as of the reporting date.

- A26. The closed group measure has been an option for federal financial reporting for a long time. From 1985 through 1994, the closed group measure was disclosed in a footnote in the “prototype” *Consolidated Financial Statements of the United States* (prototype CFS). Before that, from 1976 to 1985, a liability had been recognized for Social Security in the prototype CFS, using a calculation similar to that called for by private sector accounting standards.
- A27. Ultimately, for SFFAS 17, the Board decided to develop the SOSI to provide actuarial present values of future contributions and benefits for the open group of participants but not the closed group per se. The Board concluded that the SOSI as constituted would be useful for analysis of sustainability and financial position of social insurance programs.
- A28. The vote for SFFAS 17 was not unanimous. Three members dissented. Their dissents focused primarily on the switch from the closed to the open group bottom line. One of the dissenting members said the closed group deficit was a very important measure in evaluating alternative proposals for social insurance financing. Even though SFFAS 17 required instructions in a footnote on how to calculate the closed group measure, the member felt that, if the Board truly wished to establish standards that meet the information needs of citizens, elected officials, and program managers, the standard should require the prominent presentation and explanation of the closed group measure rather than a footnote explaining how to calculate the closed group measure. The member did not see how that could possibly be interpreted as satisfying the mission of the Board.
- A29. Another member dissented because he felt SFFAS 17 did not require a clear unambiguous disclosure of a reasonable estimate of the government’s social insurance liability/obligation. That member argued that the due and payable liability would result in a reported financial position that would appear to many as significantly misleading, at best, and clearly not commensurate with the significant financial implications of this critical national issue. The member noted that SFFAS 17 required the net present value of future benefits related to the open group but not the closed group, and that the absence of the specified closed group measure was significant because some suggest that the closed group measure represents an appropriate estimate of the social insurance liability.
- A30. Lastly, a third dissenter argued that the removal of the closed group number from the published financial statements removed any forthright indication of the existence of any

obligations to participants. He asked what the government's repeated promises meant if there is no obligation to the participating public. He argued that the closed group number is an important indicator of financial stress to be faced by the next generation of Americans, and is a proxy for an economic liability or an "implicit" liability. He mentioned that proposals to add social insurance benefits or increase social insurance taxes or to make other changes in the program should be evaluated by Congress and the public against these absolute numbers and the strength of the government's commitment to honor the indicated obligations. Finally, he argued that the SOSI should be a basic financial statement, which it later became with SFFAS 25 and SFFAS 26.

- A31. Some current Board members believe that the closed group measure is the best measure of the social insurance obligation and that the effect of the change in this measure during the reporting period is an economic cost that should be reported on the statement of net cost. However, other members agree that the closed group measure is the best measure of the obligation but do not believe the effect of the change in this measure during the reporting period is appropriate for the statement of net cost. They view future revenues that are included in the measure as contingent revenues, and they believe all other future inflows and/or revenues included in the balance sheet and the statement of net cost relate to earned revenues.
- A32. The Board notes that federal credit accounting, insurance accounting, and accounting for which fair value measures are utilized currently incorporate future inflows and outflows in the measure of liability and expense, and that the basis for including future revenue in current year cost and liability measures depends on the obligating event to which they relate. If they relate to a past event, e.g., an insured event, then they are appropriate measures of cost. If they relate solely to a future event, e.g., future insurance policies in the program, then they should be excluded from current costs and from liability measurement. The key is the event not the fact that the cash flow is in the future. They cite current FASAB insurance standards in SFFAS 5¹⁶ that include future revenue when calculating the net liability.
- A33. Since the two views regarding liability and expense recognition persisted and the likelihood of achieving a satisfactory majority one way or the other was remote, and since the Board wished to further improve social insurance reporting, the Board concluded that a

¹⁶ SFFAS 5, par. 113: The liability for life insurance includes both the liability for unpaid claims ... and a liability for net future policy benefit outflows.... The [latter] represents the expected present value of future outflows to be paid to, or on behalf of, existing policyholders, less the expected present value of future net premiums to be collected from those policyholders. The liability is estimated using appropriate financial or actuarial methods that include assumptions ... applicable at the time the insurance contracts are made and in accordance with existing law and related policy Changes in the liability for future net policy benefit outflows that result from periodic re-estimations would be recognized as expense in the period in which the changes occur. ...

compromise was necessary. In developing the exposure draft of November 2008 (SI ED), the Board believed that a fair presentation of the financial position, condition, and results of operations requires that the closed group measure be provided as part of a balanced package of information. The Board believed that the closed group measure represents a reasonably good estimate of the net responsibility of future taxpayers, under current laws, to pay benefits to current participants. Although this amount is subject to change due to changing long-range demographics and other factors, it is not as volatile as the computation under the open group measure that includes all current and future participants over a projection period, e.g., the next 75 years. It relates only to individuals who already are participating in the program.

- A34. The open group measure represents the net present value of all expenditures to or on behalf of the open group population and all contributions or other income from or on behalf of the open group population over a given projection period, e.g., 75 years. It is used to estimate the future financing shortfall in social insurance programs. The closed group measure involves only those participating in the social insurance program at the reporting date. It represents the same measurement methodology as for the open group, applied to a closed population; that is, it is the net present value of all expenditures to or on behalf of the current participants and all contributions or other income from or on behalf of the current participants over a given projection period.
- A35. The open group measure is inherently more sensitive to assumptions about the distant future than the closed group measure. The greater sensitivity is inevitably true, despite the best efforts of actuaries, economists, and other professionals involved in making these projections. It is mainly caused by the fact that a closed group decreases over time, so that uncertainty about what will happen in the distant future has less impact than is the case for an open group that grows larger during the projection period.
- A36. For the SI ED, the Board proposed changes to highlight the closed group number. The SI ED would have required:
- a. a discussion and analysis by management of the closed group measure of social insurance along with other critical measures in MD&A;
 - b. a separate line presenting the closed group measure that would be presented on the balance sheet below assets, liabilities, and net position and not included in the totals for these classifications;
 - c. new summary presentations on the SOSI for closed and open group measures;
 - d. a new statement of changes in social insurance using the closed group measure;

- e. note disclosure of an accrued benefit obligation; and
- f. continuation of the projections and other supplementary reporting currently required by SFFAS 17 but with amendments to the display of cash flow information, the valuation date, and the sensitivity analysis.

Again, the SI ED did not propose to change the SFFAS 17 liability and expense recognition standard.¹⁷

Respondent's Comments on the Exposure Draft

A37. The SI ED received 20 responses as follows:

	FEDERAL (Internal)	NONFEDERAL (External)
Users, academics, others		14
Auditors	1	
Preparers and financial managers	5	

What the Exposure Draft Proposed Regarding the Balance Sheet

A38. Balance sheet presentation raised difficult issues for the Board with respect to the SI ED. In the *Preliminary Views* document of October 2006, the Board had discussed its differing views of liability and expense recognition, views which have been and remain divergent.

A39. For the SI ED the Board proposed a compromise. Instead of changing the “due and payable” liability measure of SFFAS 17, the Board proposed new reporting featuring the

¹⁷ SFFAS 17, paragraphs 22-23 and 30 state that, except for Unemployment Insurance, the government-wide and component entities should recognize a liability (and a related expense) for those social insurance benefits that are due and payable to or on behalf of beneficiaries at the end of the reporting period, including claims incurred but not reported. For UI, a liability (and related expense) would be recognized for (1) amounts due to states and territories for benefits they have paid to beneficiaries but for which the states and territories have not withdrawn funds from the federal unemployment trust fund (UTF) as of fiscal year end, and (2) estimated amounts to be withdrawn from UTF and benefits paid by states and territories after fiscal year end for compensable days occurring prior to fiscal year end. A UI expense will also be recognized for the reporting period for amounts withdrawn from the Federal UTF by states and territories to pay benefits to beneficiaries that pertain solely to the current reporting period. Such costs would be recognized as a component of expense and not as a reduction of the recognized liability. Amounts paid that pertain to and reduce the liability recognized in the prior reporting period pursuant to this paragraph, items (1) and (2), would not be recognized as an expense of the current reporting period.

closed group measure of the social insurance commitment as the link or common thread among MD&A, the balance sheet, the SOSI, and the new statement of changes in social insurance amounts. Thus, the closed group measure would have been presented, among other places, as a line item on the balance sheet below assets, liabilities, and net position. It would not have been included in the totals for these classifications, but would have been part of a package of information.

- A40. In the SI ED, the members who supported this proposal stated their belief that the closed group measure is important for analysis of social insurance. The closed group measure represents the net present value as of the reporting date of the commitment of future social insurance participants and future general taxpayers to provide benefits to current participants over the latter's lifetime, based on the current participants' past and future work in covered employment. The closed group measure also provides a perspective on the financing challenges for the program. It would be relevant to those who are assessing options for dealing with those challenges. The measure would not only draw attention to the challenge but would also quantify it in a way that can support further analysis and decision-making.
- A41. The proposed balance sheet reporting would have affected the reporting model. Again, the proposal was to present the closed group measure as a line item on the balance sheet below assets, liabilities, and net position and not included in the totals for these classifications. The line item was not presented formally as a new element of financial statements within the context of the SFFAC 5¹⁸ definitions, e.g., a "commitment." The Board explained that it was not formally proposing a new definition or concepts underlying a new reporting model at that time. In order to offer improvements in a timely manner, the Board left open certain questions regarding the reporting model and the elements of federal financial reporting. However, the Board indicated there were areas where additional conceptual work would be undertaken.
- A42. Members believe that the current concepts need to do a better job of explaining unique federal accounting issues. Concepts need to explain, for example, why the power to tax is not an asset but nonetheless is relevant to assessing the sustainability or the financial condition of the federal government; why current deficits are indeed bad but that the problem is actually long-range rather than short-range; why the timing of a cash flow problem is important, and why the point estimates on the balance sheet have limitations for assessing financial condition. Members believe that the fiscal sustainability reporting established in SFFAS 36 substantially improves the information communicated regarding financial condition. The Board plans to continue to consider reporting concepts in the Financial Reporting Model Phase of its Conceptual Framework Project.

¹⁸ SFFAC 5, *Definitions of Elements and Basic Recognition Criteria for Accrual-Basis Financial Statements*.

A43. The subjects of the balance sheet and the open vs. closed group measures of the social insurance commitment raise fundamental issues. Over the years, some members and others have asked why social insurance should be treated differently than other programs that are funded by annual appropriations, and why social insurance should be selected for the balance sheet but not other programs, e.g., food stamps, school lunches. They do not believe that a strong basis has been established for saying social insurance programs are the ones to highlight through liability recognition and others can be excluded. In this regard some members believed one of the drawbacks of the SOSI is that it does not provide a comprehensive view of government liabilities-commitments-expectations. They note that the information provided pursuant to SFFAS 36 will provide that view.

Respondents' Comments Regarding the Balance Sheet

A44. Respondents opposed a line item on the balance sheet by a margin of more than 2 to 1. Various objections were raised. Some cited the SI ED's Alternative View position that the lack of a clear definition of a "commitment" on the balance sheet makes the line item a source of confusion. Others objected that the closed group measure was misleading regarding the commitment to social insurance participants.

A45. Some objected from the opposite perspective. They objected to the absence of a liability on the balance sheet beyond "due and payable" and found the new line item an unacceptable substitute.

A46. Some respondents who favored a line item on the balance sheet agreed with the Board's argument that it was a compromise between opposing positions.

The Board's Conclusions Regarding the Balance Sheet

A47. The Board was of two views on the question of displaying the closed group measure (or any similar measure) on the balance sheet below assets, liabilities, and net position and not included in the totals for these classifications. Some members favored the compromise approach and wished to alter the presentation – either through changes to the balance sheet or development of a new basic financial statement. Those who opposed the new line item on the balance sheet argued that readers would not have a basis for understanding the new element on the balance sheet, and/or that the closed group measure is not comparable to amounts reported on the balance sheet, and/or other significant long-term commitments should be presented, and/or the SOSI is adequate. Further, these members were not persuaded that the proposals presented to alter the presentation on the balance sheet by presenting the open group instead of the closed group or to instead create a new basic financial statement were necessary. Thus, since the Board could not establish a clear

majority in favor of the new line item, it decided not to go forward with the proposed balance sheet presentation of the closed group measure as a commitment.

A48. The Board then discussed developing a new basic financial statement that would present the key measures from the financial statements in one place. Ultimately, the Board agreed to require the key measures in a table or other singular MD&A presentation, and integrate the work on a new basic financial statement with the Reporting Model Project.

What the Exposure Draft Proposed Regarding the Statement of Social Insurance and the Statement of Changes in Social Insurance Amounts

A49. Regarding the statement of social insurance (SOSI), in the SI ED the Board proposed to require the closed and open group measures in a new SOSI summary section of the CFR which the FY 2008 and 2007 CFR provided even though SFFAS 17 does not currently require it. The SOSI summary section provides information about all age cohorts and about the components of the closed and open group measures. For example, the open group measure equals the closed group measure plus the contributions and the benefits of future participants over the 75-year (or other) projection period.

A50. The Board also proposed a new basic statement, the SCSIA that would have presented the changes during the reporting period for the closed group measure. Heretofore the social insurance reporting had not required an analysis of the changes in the social insurance present values. The Board decided that a financial statement illustrating the components of the change would greatly enhance the value of the presentation. The examples of line items/components for the SCSIA in the exposure draft were consistent with the Social Security Trustees' Report (see, for example, the 2007 Trustees' Report, Table IV.B9, page 66).

Respondents' Comments Regarding the Statement of Social Insurance and the Statement of Changes in Social Insurance Amounts

A51. A majority of respondents supported a summary section for the SOSI as described in the SI ED. Those that did not support it objected mainly to the presence of the closed group measure as a component of that summary. Their objections to the closed group measure are noted above regarding other issues. Some respondents objected to requiring a SOSI summary section, although they did not disapprove of it in concept. They preferred to allow the preparer to decide whether to include it. Most respondents supported the SCSIA.

The Board's Conclusions Regarding the Statement of Social Insurance and the Statement of Changes in Social Insurance Amounts

- A52. The Board concludes that the SOSI should have a summary section as described in the SI ED. Although it decided not to go forward with a line item on the balance sheet for the closed group measure, as explained above, the Board is going forward with the MD&A discussion and associated table or other singular presentation of key measures and with the SCSIA. Thus, the closed group measure and the open group measure continue to be fundamental information. The summary section of the SOSI will illustrate the components of these measures and how the closed group measure relates to the open group measure.
- A53. The summary will present both the net present value of the commitment to the current participants (the closed group measure) and to all participants (the open group measure) over the projection period. The Board decided that the closed group measure should be presented on the SOSI – and addressed in MD&A – to enrich the discussion of the open group measure and to give the reader a better understanding of the generational implications of financing social insurance programs.
- A54. The Board concludes that the SCSIA will greatly enhance the value of the presentation and should be required since it has substantial support in the community as well as among Board members.

What the Exposure Draft Proposed Regarding Management's Discussion and Analysis

- A55. As stated above, the Board provided MD&A standards and guidance in SFFAC 3, *Concepts for Management's Discussion and Analysis* and SFFAS 15. SFFAC 3 provides concepts and a foundation for the standards presented in SFFAS 15.
- A56. The MD&A standards in SFFAS 15 are brief. SFFAS 15 requires the entity's financial report to include MD&A, which it categorizes as RSI. SFFAS 15 requires the entity's MD&A to contain sections that address the entity's mission and organization structure, performance goals and results, financial statements, and systems, controls, and legal compliance.¹⁹ It also requires MD&A to include forward-looking information regarding the possible future effects of the most important existing, currently-known demands, risks, uncertainties, events, conditions, and trends, while encouraging forward-looking information about the possible effects of anticipated future demands, events, conditions, and trends.²⁰ SFFAS 15

¹⁹SFFAS 15, par. 2.

²⁰SFFAS 15, par. 3 and 21.

does not specify the contents for each section. SFFAC 3 provides some concepts in that regard.

A57. For the SI ED, the Board proposed to provide additional specific standards for the financial statement analysis section of MD&A for the government-wide entity and for component entities that present a SOSI. Based on SFFAC 3,²¹ the Board proposed that, in the section devoted to financial statement analysis, management should explain critical measures and key amounts and why changes occurred and what the change indicates or implies for the program; and, how the costs and commitments incurred will be financed.

A58. In addition, in the SI ED the Board proposed to require forwarding-looking information about anticipated future demands, events, conditions, and trends related to social insurance. In SFFAC 3, the Board had said management should include information about anticipated future demands and events “to the extent feasible and appropriate.”²² In the SI ED, the Board proposed to require discussion of anticipated events, demands, etc.

Respondents’ Comments Regarding MD&A

A59. The respondents favored the MD&A requirement by a margin of about 2 to 1. Those who favored the standard mentioned the benefits of management’s analysis of key measures and of greater transparency. Almost all agreed that key or critical measures should be discussed in MD&A.

A60. Some respondents objected to aspects of the MD&A requirement. Some objected to the focus on the closed group measure which, as noted elsewhere, many assert is misleading. Some argue that the open group measure is essential to an assessment of financial sustainability, that the closed group measure does not reflect what they describe as the program’s pay-as-you-go financing, and that the Social Security and Medicare Trustees’ Reports emphasize almost exclusively the open group measure. Other respondents noted that those who object to the closed group measure on the grounds that it does not reflect social insurance financing misunderstand accrual accounting, which seeks to capture economic events, not necessarily financing.

A61. Some said the proposed MD&A standard would be too prescriptive or that it would require too much detail or repeat information that is already in the notes or RSI. Some objected to a

²¹ See SI ED, pars. 23-27.

²² SFFAC 3, par. 33.

standard on social insurance that would require additional MD&A discussion beyond what SFFAS 15 requires or that, in their view, would be unrelated to social insurance.

The Board's Conclusions Regarding MD&A

- A62. The Board concludes that the MD&A provisions of the social insurance standard provide flexibility and are not overly prescriptive; nor will they result in redundancy. The Statement incorporates MD&A concepts from SFFAC 3 that currently are not being adequately addressed. Moreover, the Board believes that the long-term nature of social insurance programs requires that management discuss anticipated future demands, events, conditions, and trends as well as those currently existing.
- A63. However, the Board did make significant changes to the proposed standard after considering respondents' comments and the views of Board members. First, the Board decided that MD&A should emphasize the open group measure rather than the closed group measure.
- A64. In addition, the Board decided to require a table or other singular presentation of key measures in MD&A rather than make it optional, as proposed in the SI ED (see paragraph 25). In the SI ED, the Board had required – and continues to require – a narrative discussion of key measures in MD&A of the government-wide entity and component entities that present a SOSI, as described in paragraphs 23-27, and provided an option whereby the entity could array the key measures in a table or schedule. The Board decided to require a table or other singular presentation because it will significantly enhance the presentation by helping users grasp the relationship between social insurance amounts and other costs, assets and liabilities, budget deficits, and sustainability projections, and therefore the table or other singular presentation should not be optional.
- A65. In addition, a table or other singular presentation will relate the basic financial statements to each other. The basic financial statements in the federal reporting model do not all “articulate” with one another. Amounts reported on the balance sheet or statement of net cost, for example, do not tie directly to the present values of the cash flows over the next 75 years that are presented in the SOSI and now the SCSIA, which are also basic statements. A table or other singular presentation will bring all of the pieces of the unique federal reporting model together in a single place. To make this function of the table or other singular presentation explicit, the Board changed the wording of the standard (see paragraph 24) so that the preparer is directed to certain basic financial statements to obtain the key measures.
- A66. Lastly, the Board decided not to require the discussion and the table or other singular presentation to be in the section of the MD&A devoted to financial statement analysis. The Board had designated the financial statement analysis section of MD&A, which is one of the

sections required by SFFAS 15, because the key measures to be discussed come from the financial statements. Instead, the Board decided to allow it to be wherever in MD&A the preparer thinks will be effective, as long as the specified information is presented together. However, the Board believes that the information should be presented in a single section of MD&A, and that the preparer is best positioned to decide where in MD&A the presentation will be the most effective.

What the Exposure Draft Proposed Regarding the Statement of Net Cost

- A67. The proposed standard did not affect the statements of net cost of social insurance entities and the government-wide entity. Some argued that the change in the social insurance closed group measure or other net present value during the reporting period is an economic cost. The economic cost of social insurance programs has been debated by the Board over the years. Some current Board members believed that the change in the closed group measure is an economic cost and were concerned that it is not highlighted on the statement of net cost in the SI ED's compromise proposal.
- A68. These members noted that SFFAC 5 defines expense as an outflow of or other decrease in assets, an increase in liabilities, or a combination of both that results in a decrease in the government's net position during the reporting period.²³ SFFAC 5 defines liabilities as a present obligation of the federal government to provide assets or services to another entity at a determinable date, when a specified event occurs, or on demand.²⁴ A present obligation requires a past transaction or other event.²⁵ These members believed that a past transaction or other event occurs when social insurance participants work in covered employment and pay payroll taxes, that an economic cost is being incurred.
- A69. Some members noted that accrual accounting has a universal definition: expenses are recognized when incurred. They believed that only through accrual accounting can cost or financial position of an entity be measured, which is why generally accepted accounting principles primarily require accrual accounting. They believe the current focus on cash flow – or on “pay-as-you-go” financing with payroll taxes matched against current benefit payments – is misleading. They believe that payroll taxes received from those currently working in covered employment should be matched not against benefits payments to current retirees but against the economic cost being incurred, in order for accrual accounting to provide a decision-useful additional perspective.

²³ SFFAC 5, par. 53.

²⁴ SFFAC 5, par. 39.

²⁵ SFFAC 5, par. 42.

-
- A70. As is discussed above and in the *Preliminary Views* document, Board members, respondents to the *Preliminary Views* document, and, historically, all groups who considered the question have disagreed over the past transaction or event that creates a liability and expense for social insurance programs.
- A71. Those FASAB members who were concerned that the economic cost of social insurance is not being highlighted note that FASAB expectations regarding objectives of federal financial reporting in general and social insurance in particular are most clearly set forth in SFFAC 1, *Objectives*. The FASAB's *Strategic Directions* report, issued November 2006, focused on the objectives in SFFAC 1, and established Objective 2, "Operating Performance," and Objective 3, "Stewardship," as FASAB's most important focus. With respect to social insurance, these members note especially sub-objectives 2A, 2B, and 3A regarding the need for information about costs.
- A72. These three sub-objectives speak most clearly about financial statements showing costs associated with a specific period and the impact these costs have on an entity's financial position.
- A73. Other FASAB Objectives speak about financial statements showing other elements of financial position. The members who are concerned about economic costs believed that SOSI and the new SCSIA adequately satisfy SFFAC 1, *Objectives*, Objective 3B, "Whether future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due." These statements would also contribute to meeting Objective 3C, "Whether government operations have contributed to the nation's current and future well being."
- A74. In addition, these members noted that information from the SOSI, if combined with other financial statement information, could help meet Objective 3A, which relates to changes in the government's financial position. Moreover, they believed that the proposed SCSIA, which all members support, will help meet Objective 3A.
- A75. However, these members believed that the proposed standard can be criticized for failing to address Objective 2A and 2B, noted above, unless something is reported on the operating statement. For the SI ED, they suggested adding a line item to the statement of net cost to show the change in the social insurance commitment during the period in close proximity to other costs, an approach similar to the new line item that was proposed in the SI ED for the balance sheet.
- A76. Other members disagreed that the change in the social insurance commitment should be on the statement of net cost. They believed that cost should represent the goods and services provided during the period. They argued that the change in social insurance, although meaningful, is not a good or service provided, and should not be associated with such costs.

They argued that presenting the change in the social insurance commitment on the statement of net cost would be misleading, that the SOSI amounts are purporting to represent something entirely different from what is on the balance sheet and statement of net cost, and that people expect customary elements on the operating statement for which SOSI amounts are too uncertain.

A77. They noted that the Board made the SOSI a basic statement and proposed that the SCSIA be a basic statement, and that the SOSI and SCSIA are to be presented in close proximity to the balance sheet and operating statement. They believed that that approach is appropriate. For them, the change in the social insurance commitment during the reporting period should be presented apart from the costs of the period and clearly labeled as, for example, “social insurance exposures.” They concluded that associating the change with period costs is inappropriate because it does not represent the complete change in the government’s financial condition, and that proposed fiscal sustainability reporting, which is now required pursuant to SFFAS 36, provides context and focuses on the government’s financial condition.

A78. The SI ED did not require that the change in the closed group measure be recognized as an operating cost of the government on the statement of net cost and the statement of changes in net position. The Board decided to continue the SFFAS 17 approach with respect to expense recognition for social insurance. However, the Board did ask respondents to comment on the issue raised by members regarding the statement of net cost.

Respondents’ Comments Regarding the Statement of Net Cost

A79. The respondents overwhelmingly favored the Board’s decision not to include a line item for the change during the period in the closed group measure on the statement of net cost. Many of these respondents asserted that they agreed with the position that the change in this measure is not a period cost, and that position is consistent with the view that the closed group measure should not be presented on the balance sheet.

The Board’s Conclusions Regarding the Statement of Net Cost

A80. The Board concludes that there is substantial support in the community for the majority position not to include a new line item on the statement of net cost regarding the statement of net cost as presented in the SI ED.

What the Exposure Draft Proposed Regarding Note Disclosure

A81. The SI ED required note disclosure of an accrued benefit obligation. The objective of the disclosure was to provide information for the many users who are interested in knowing what such an amount would be and in evaluating the obligation in this way. An accrued benefit obligation is a measure of the present value of future benefits scheduled to be paid to or on behalf of current participants based on past transactions or events as of the

valuation date. For example, for Social Security and Medicare Hospital Insurance (Part A), past work in covered employment; or Medicare Supplementary Medical Insurance (Parts B and D), insurance coverage in force. Because it is based on past events, the accrued benefit obligation applies only to current participants in the programs as of the valuation date.

A82. Several methods for calculating an accrued benefit obligation were acceptable.²⁶ For example, the Social Security Administration provides, through its Office of the Actuary, an accrued benefit obligation for Social Security in a periodically updated Actuarial Note.²⁷

A83. Other approaches for calculating an accrued benefit obligation were acceptable. For example, the Primary View in the FASAB's *Preliminary View: Accounting for Social Insurance, Revised*, provided methodology for calculating a liability amount for social insurance programs.

A84. The SI ED stated that the accrued benefit obligation would give interested users a generally understood frame of reference. The accrued benefit obligation is intended to provide a perspective on social insurance programs from the point of view of a deferred benefit or an insurance obligation for those users who value such information. It is equivalent to the measure that the Board members who then held the Primary View believed should be recognized as a liability. The amount thus provided can be compared to the other measures and provide a full array of information. This number is not currently available in federal financial reports.

Respondents' Comments Regarding Note Disclosure

A85. Respondents were nearly evenly dividing regarding the note disclosure. Some said the accrued benefit obligation did not reflect the realities of the program; they argue that it represents a termination valuation and would not be meaningful for social insurance. Some respondents asserted that it would require yet another number and this constitutes "information overload." They and/or others objected to the use of the term "obligation" because they believe it implies the government has an obligation to participants, and they do not think there is any more of an obligation to social insurance participants than to other types of entitlement programs, such as those funded entirely by annual appropriations."

²⁶ See <http://www.ssa.gov/OACT/NOTES/actnote.html>.

²⁷ Actuarial Note: Unfunded Obligation and Transition Cost for OASDI.

A86. Those supporting the disclosure of the accrued benefit obligation mentioned several rationales. Some noted that comprehensive financial reporting requires the accrued benefit obligation perspective, which they say is the only measure of financial status of social insurance programs that can be thought of as a liability because it only involves past transactions and events. They say the accrued benefit obligation provides valuable information to the public about programs upon which participants depend for retirement income and benefits. Another respondent felt that the disclosure would help the reader relate social insurance obligations to federal employee pensions and other retirement benefits. Others felt that the “due and payable” liability measure was simply not based on the proper accounting theory and concepts.

The Board’s Conclusions Regarding Note Disclosure

A87. The Board believes that the accrued benefit obligation would give interested readers a generally understood frame of reference and another perspective on social insurance programs. However, the Board decided not to require it in this standard. The Board is persuaded that, given that several measures of the social insurance obligation are already reported in the financial statements, disclosing another number would likely be overwhelming or confusing, rather than enhancing the reader’s understanding of the government’s social insurance obligations. In addition, the Board is persuaded that, although the SSA provides the amount for Social Security, the accrued benefit obligation is not calculated for Medicare, and there was significant reluctance among members to apply the concept to Medicare or to develop it further for that purpose.

What the Exposure Draft Proposed regarding Sensitivity Analysis

A88. The SI ED proposed to amend the SFFAS 17 sensitivity analysis provisions to allow the preparer more flexibility. The objective of sensitivity analysis is to illustrate how much an estimate or projection would change if the assumptions, data, methodologies, or other inputs change. The Board believes that the SFFAS 17 requirements result in too much narrative and graphs and not enough easy-to-use information.

A89. Although they call for illustrations of the sensitivity of projections and present values,²⁸ the SFFAS 17 requirements for sensitivity analysis have led preparers to focus on projections that usually are depicted graphically rather than on present values. The latter have increased in importance since the Board elevated the statement of social insurance to a

²⁸ SFFAS 17, par. 27(4)(a).

basic financial statement in SFFAS 26.²⁹ The result has been a daunting array of narrative, charts, and graphs. The standard also simplifies the social insurance presentations by eliminating the SFFAS 17 requirement for nominal dollar projections. The projections now will be as percentages of the GDP and taxable payroll.

A90. The Board sought to make the analysis more concise and therefore communicate better with users. The SI ED proposal focused analysis on the sensitivity of the open and closed group measures presented in the basic financial statements –specifically, on the balance sheet, where the closed group measure would have been presented; on the statement of social insurance, where both the closed and open group measures will be presented; and on the proposed new statement of changes in the social insurance amounts, where the closed group measure would have been presented.³⁰

A91. Thus, the SI ED proposal was intended to reduce the volume of sensitivity analysis information while increasing its usefulness. It provided flexibility for preparers to develop their own sensitivity analysis and decide what is appropriate based on trends, the utility of the information to the users and policy-makers, and the relative burden of producing it. Entities could continue to vary key assumptions or pursue other methods, including stochastic modeling.

Respondents' Comments Regarding Sensitivity Analysis

A92. A majority of respondents agreed with the proposed new flexibility. However, some respondents asserted that sensitivity analysis should continue to include estimates of the effects of changes in individual assumptions. In addition, they or others noted that stochastic modeling, which the proposal encouraged, is useful for illustrating uncertainty but was fundamentally different than illustrating the sensitivity of individual assumptions. They discouraged suggesting that the preparer may consider stochastic analysis since it is a science still under development and including it would require much explanatory detail and complexity. Some respondents mentioned that sensitivity analysis should be undertaken only for the open group measure.

²⁹ *Presentation of Significant Assumptions for the Statement of Social Insurance: Amending SFFAS 25*, November 1, 2004.

³⁰ For the final standard, this is now the open group measure.

The Board's Conclusions Regarding Sensitivity Analysis

A93. The Board continues to believe that a flexible yet focused approach to sensitivity analysis is best. Thus, the standard continues to require sensitivity analysis of the closed and open group measures that in the preparer's best judgment effectively communicates with the users. Thus, the preparer would consider future trends, the utility of the information to the users and policy-makers, and the relative burden on its resources.

A94. The Board decided not to include a statement that preparers may consider stochastic modeling. The Board weighed the cautionary responses in that regard from the American Academy of Actuaries and the Chief Actuary of the Social Security Administration. The Board believes that the flexibility of the standard will allow the preparers and their advisors to illustrate sensitivity of the open and closed group measures by varying individual assumptions or by other means they believe are meaningful and comprehensible.

Valuation Date

A95. The SI ED proposed to amend SFFAS 17's valuation date provision by requiring that projections be adjusted, if feasible, after the valuation date but prior to the end of the fiscal year, if changes in policy or other major factors materially affect it. This provision is identical to that in the Board's recently issued SFFAS 36. It addresses the need for projections to reflect recent data.

A96. One respondent found the term "if feasible" problematic. The respondent asserted that, if information comes to the attention of the preparer that impacts the projection after the valuation date, the feasibility of using it to adjust the projection should not be a consideration. The respondent also thought it would be a problem from an audit perspective.

A97. The Board concludes that the additional requirement to consider changes in major factors occurring after the valuation date will enhance the usefulness of social insurance information. In addition, feasibility is a consideration in the context of federal financial reporting. The benefit of financial information must be weighed against its cost.

Board Approval

A98. This Statement was approved for issuance by all members of the Board. The written ballots are available for public inspection at the FASAB office.

Appendix B: Illustrative Table of Key Measures

Table of Key Measures			
	billions of dollars		
	2008	2007	2006
Costs			
Net costs	(\$3,671)	(\$2,903)	(\$2,890)
Total taxes and other revenues	2,661	2,627	2,441
Net operating cost	(1,010)	(276)	(449)
Net Position			
Assets	\$1,975	\$1,581	\$1,497
Less: liabilities, comprising			
Federal debt held by the public	5,836	5,078	4,868
Federal employee & veterans benefits	5,319	4,769	4,679
Other liabilities	1,023	940	866
Total liabilities	12,178	10,787	10,413
Net position (assets net of liabilities)	(\$10,203)	(\$9,206)	(\$8,916)
Social Insurance Commitments			
Net present value (NPV) of future cash flows for all participants over the next 75 years (open group), end of fiscal year	(\$42,970)	(\$40,948)	(\$38,851)
NPV of future cash flow for all participants over the next 75 years (open group), beginning of fiscal year	(40,948)	(\$38,851)	(\$35,689)
Change in NPV	(2,022)	(2,097)	(3,162)
Budget Results			
Unified budget deficit	(\$455)	(\$163)	(\$248)
Spending in Excess of Receipts			
Spending in excess of receipts (see long-term projections statement)	(\$XX,XXX)	(\$XX,XXX)	(\$XX,XXX)

Appendix D: Illustrative Statement of Changes in Social Insurance Amounts

The following is an illustrative statement of changes in social insurance amounts.

Illustrative Statement of Changes in Social Insurance Amounts
Open Group Measure
For the Year Ended September 30, 2008
(in billions of dollars)

	Social Insurance, Open Group Measure				Total
	Social Security	Medicare HI	Medicare SMI	Other (e.g., Railroad Retirement)	
Net present value (NPV) of future revenue less future expenditures for current and future participants (the "open group") over the next 75 years, beginning of the year	<u>\$(6,763)</u>	<u>\$(12,292)</u>	<u>\$(21,793)</u>	<u>\$ (100)</u>	<u>\$(40,948)</u>
Reasons for changes in the NPV during the year:					
Changes in valuation period	XXX	XXX	XXX	XXX	XXX
Changes in demographic data and assumptions ¹	XXX	XXX	XXX	XXX	XXX
Changes in economic data and assumptions ²	XXX	XXX	XXX	XXX	XXX
Changes in law or policy ³	XXX	XXX	XXX	XXX	XXX
Changes in methodology and programmatic data ⁴	XXX	XXX	XXX	XXX	XXX
Changes in Medicare healthcare and other healthcare assumptions	XXX	XXX	XXX	XXX	XXX
Other changes	XXX	XXX	XXX	XXX	XXX
Net change in open group measure	<u>208</u>	<u>(443)</u>	<u>(1,783)</u>	<u>(4)</u>	<u>(2,022)</u>
Open group measure, end of year	<u>\$(6,555)</u>	<u>\$(12,735)</u>	<u>\$(23,576)</u>	<u>\$(104)</u>	<u>\$(42,970)</u>

The following note examples are adapted from the Social Security Trustees' Report. The explanations of the changes will depend on the social insurance program in question.

- Changes in demographic assumptions affect the open group measure. Final mortality data for 2008 result in slightly lower starting death rates and faster near-term declines in death rates than in last year's report. Also, slightly faster rates of decline in death rates are assumed ultimately for ages 15-64 in this year's report. These changes in ultimate rates are based on the continuing strong declines in mortality recently experienced by men at these

ages and a belief that the lower rates of decline experienced by women since 1982 will not continue in the future. All of the mortality changes result in a decrease (worsening) in the open group measure of about \$200 billion.

2. Ultimate economic assumptions are unchanged from last year's report. Changes in starting values for the economic assumptions and in the near-term transition to the ultimate economic assumptions have a negligible effect on the social insurance closed group measure.
3. There were no legislative changes since the last report that are projected to have a significant effect on the long-range OASDI actuarial balance.
4. Several methodological improvements and updates of program-specific data are included in the 2008 measures. These changes to programmatic data and methods result in a combined increase (improvement) in the open group measure of about \$171 billion.

Statement of Federal Financial Accounting Standards 38: Accounting for Federal Oil and Gas Resources

Status

Issued	April 13, 2010
Effective Date	For periods beginning after September 30, 2012.
Affects	None.
Affected by	<ul style="list-style-type: none">• SFFAS 41, par. 2, amended the effective date in par. 5 and 30.• SFFAS 63, par. 3, rescinded par. 6 and 31.

Summary

This standard requires the value of the federal government's estimated petroleum royalties from the production of federal oil and gas proved reserves to be reported in a schedule of estimated federal oil and gas petroleum royalties. In addition, this standard requires the value of estimated petroleum royalty revenue designated for others to be reported in a schedule of estimated federal oil and gas petroleum royalties to be distributed to others. These schedules are to be presented in required supplementary information (RSI) as part of a discussion of all significant federal oil and gas resources under management by the entity.

This Statement is effective as RSI for periods beginning after September 30, 2012. Earlier implementation is encouraged. It is the Board's intent that the information required by this Statement transition to basic information after being reported as RSI for a period of three years. Prior to the conclusion of the three-year RSI period, the Board plans to make a determination as to whether the information will transition to basic information as financial statement recognition or note disclosure. This Statement will remain in effect until such time a determination is made.

Introduction

Purpose

1. Statements of Federal Financial Accounting Standards (SFFAS) 6, *Accounting for Property, Plant, and Equipment*; 8, *Supplementary Stewardship Reporting*; and 29, *Heritage Assets and Stewardship Land*, establish standards related to federal lands, but specifically exclude natural resources from the scope of those standards. Extensive **federal oil and gas resources**¹ exist on public lands throughout the country and on the **Outer Continental Shelf** (OCS). Currently, federal financial reporting does not provide information about the quantity or value of these assets.
2. The Board believes that federal oil and gas resources represent federal assets and accounting for and reporting information about these assets would enhance accountability for and stewardship over assets of the federal government.
3. This Statement provides for a more complete accounting for oil and gas resources available to the federal government. Accounting for the federal government's **royalty** share of **proved reserves** as an asset and reporting information on that asset as required supplementary information (RSI) would provide transparency regarding the value and changes in value of these significant assets and result in information that contributes to meeting federal financial reporting objectives.

Materiality

4. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

¹ Terms defined in Appendix D: Technical Terms or the Glossary are shown in **bold-face** the first time they appear.

Effective Date

5. The standards are effective as RSI for periods beginning after September 30, 2012. Earlier implementation is encouraged.
6. [Paragraph 6 was rescinded by SFFAS 63, Omnibus Amendments 2024-1, paragraph 3.]

Standards

Scope

7. This Statement applies to federal entities that report information about federal oil and gas resources in general purpose federal financial reports, including the consolidated financial report of the U.S. Government (CFR), in conformance with SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board* (FASB).
8. This Statement articulates a general principle that should guide preparers of general purpose federal financial reports in accounting for federal oil and gas resources.
9. Federal lands contain a variety of natural resources other than oil and gas proved reserves that are not specifically addressed by this Statement. This Statement does not require or preclude entities from reporting information about other types of federally-owned natural resources; however, this Statement should be considered in conjunction with SFFAS 7, *Accounting for Revenue and Other Financing Sources*, when applying SFFAS 34 to other types of federally-owned natural resources.²

Definitions

10. Definitions in paragraphs 11 and 12 are presented first in the accounting standards because they are new technical terms not previously defined in federal accounting standards.

² SFFAS 7, par. 45, requires, in instances where there are virtually no costs incurred in earning exchange revenue, that federal entities recognize the revenue as a financing source on the statement of changes in net position, rather than the statement of net cost.

-
11. **Federal oil and gas resources:** Oil and gas resources over which the federal government may exercise sovereign rights with respect to exploration and exploitation and from which the federal government has the authority to derive revenues for its use. Federal oil and gas resources do not include resources over which the federal government acts as a fiduciary for the benefit of a non-federal party.
 12. **Regional estimated petroleum royalties:** Regional **estimated petroleum royalties** means the estimated end-of-period value of the federal government's royalty share of proved oil and gas reserves from federal oil and gas resources in each **region**.
-

Accounting and Reporting of Federal Oil and Gas Resources by Component Entities

Schedule of Estimated Federal Oil and Gas Petroleum Royalties

13. Extensive federal oil and gas resources exist on public lands throughout the country and on the Outer Continental Shelf (OCS). These resources will provide economic benefits to the federal government through revenue from leasing activities and the collection of royalties on production. The federal government controls access to these resources.
14. Federal oil and gas resources are made up of two primary components – reserves and **undiscovered resources**. Reserves can be further defined as either proved or unproved while undiscovered resources can be further defined as either recoverable or non-recoverable. See *Figure 1 – Components of Federal Oil and Gas Resources* in the basis for conclusions for an illustration of the universe of federal oil and gas resources and a further breakdown of its components.
15. The value of the federal government's estimated petroleum royalties from the production of federal oil and gas proved reserves should be reported in a schedule of estimated federal oil and gas petroleum royalties by the component entity that is responsible for collecting royalties. This schedule should be presented in RSI as part of a discussion of all significant federal oil and gas resources under management by the entity.
16. The Board believes that the detailed estimation methodology for valuing federal oil and gas resources should be developed by federal entities. In an environment heavily affected by changes in prices, technological advancements, economic and operating conditions, and known geological, engineering, and economic data, estimation methodologies may need to be regularly updated to reflect these changing conditions.
17. The estimates that are developed should approximate the **present value** of future federal royalty receipts on proved reserves known to exist as of the reporting date. The estimates should be based on the best information available at fiscal year-end, or as close to the fiscal year-end as possible.

-
18. Discount rates as of the reporting date for present value measurements of federal oil and gas resources should be based on interest rates on **marketable Treasury securities** with maturities consistent with the cash flows being discounted.
 19. The entity's estimates should reflect its judgment about the outcome of events based on past experience and expectations about the future. Estimates should reflect what is reasonable to assume under the circumstances. While the entity's own assumptions about future cash flows may be used, the entity should review assumptions used generally in the federal government as evidenced by sources independent of the reporting entity, for example, those used by the Bureau of Economic Analysis for the National Income and Product Accounts. If the entity's own assumptions do not reflect data that are consistent with sources independent of the reporting entity, an explanation of why the entity's own assumptions are preferred should be provided.
 20. The value of the federal government's estimated petroleum royalties should be computed based on the calculation of federal oil and gas proved reserves on a regional basis. For purposes of these standards, the regions used in determining and reporting regional amounts or factors should be collaboratively developed by all the component entities involved in federal oil and gas resource activities. Regions used in calculating regional estimated petroleum royalties and in applying these standards should be consistent and aligned with regions used internally by the component entities in administering federal oil and gas resource activities.
 21. The estimates of future federal royalty receipts on proved reserves known to exist as of the reporting date should be divided further by commodity and type (e.g., wet gas, **dry gas**, oil and **lease condensate**, onshore, offshore, etc.) and calculated separately if material differences would otherwise result. Each of the individual calculations should be reported separately and summed together to arrive at the federal government's total estimated petroleum royalties.
 22. The preferred measurement method for valuing the federal government's estimated petroleum royalties is the present value of future federal royalty receipts on proved reserves using a risk-free discount rate as described in paragraph 17; however, alternative methods for measuring **fair value** or current price may be acceptable if it is not reasonably possible to estimate present value of future federal royalty receipts on proved reserves using the methodology described in paragraphs 17 through 19.³

³ Calculating the present value of future federal royalty receipts employs the use of a number of estimates including estimating when the proved reserves will be produced over time, future oil and gas prices, and the possibility and extent of royalty-free production. Unforeseen circumstances may result in situations where it is not possible for the entity to reasonably estimate the present value of future federal royalty receipts. In these situations, it may be possible to estimate current price. Current price, sometimes referred to as a "fresh-start" or "remeasured" price, is a general term for various attributes measured as of a financial statement date subsequent to the period of initial recognition, including replacement price, market price, and settlement price.

-
23. Once established, the estimation methodology should be consistently followed and explained in the financial reports. If environmental or other changes would provide for the development of an improved methodology, the nature and reason for the change in methodology, as well as the effect of the change, should be explained.

Schedule of Estimated Federal Oil and Gas Petroleum Royalties to be Distributed to Others

24. The majority of the federal government's estimated petroleum royalties from the production of federal oil and gas proved reserves are distributed to state governments, other federal agencies, and the general fund of the U.S. Treasury in accordance with legislated allocation formulas. The legislated allocation formulas constitute a present obligation⁴ of the component entity that is responsible for collecting royalties to provide assets to another entity, and the underlying legislation identifies the conditions under which these distributions will be made.
25. The value of estimated federal oil and gas petroleum royalty revenue designated for others should be reported in a schedule of estimated petroleum royalties to be distributed to others by the component entity that is responsible for collecting royalties. This schedule should be presented in RSI by type of entity as part of a discussion of all significant federal oil and gas resources under management by the entity.
26. The value of the revenue to be distributed to others should be estimated based on the portion of the royalty share of the federal proved oil and gas reserves designated to be distributed to others. For example, the average annual share of the revenue distributed to others over the preceding twelve (12) months may be an acceptable basis for estimating petroleum royalties to be distributed. Other methodologies may also be acceptable.

Annual Valuation of Estimated Petroleum Royalties and Petroleum Royalties to be Distributed to Others

27. The estimated petroleum royalties asset value and petroleum royalties to be distributed to others should be valued at the end of each fiscal year.

⁴ The term obligation is used in this Statement with its general meaning of a duty or responsibility to act in a certain way. It does not mean that an obligation of budgetary resources is required for a liability to exist in accounting or financial reporting or that a liability in accounting or financial reporting is required to exist for budgetary resources to be obligated.

Component Entity Reporting Requirements

28. The component entity responsible for collecting royalties should provide the following as narrative to the schedules presented as RSI:
- a. A concise statement explaining how the management of federal oil and gas resources is important to the overall mission of the entity.
 - b. A brief description of the entity's stewardship policies for federal oil and gas resources. The stewardship policies for federal oil and gas resources should describe the guiding principles established to: assess the oil and gas resource areas; offer those resources to interested developers; sell and assign **leases** to winning bidders; administer the leases; collect bonuses, **rents**, royalties, and **royalty-in-kind**; and distribute the collections consistent with statutory requirements, prohibitions, and limitations governing the entity.
 - c. A narrative describing future royalty rights identified for sale, if applicable. The narrative should provide the value of the rights identified for future sale, the location of the **field(s)** involved in the future sale, and the best estimate of when the rights would be sold. The calculated value reported for future royalty rights identified for sale should be based on the specific field to be sold and consistent with the valuation requirements of paragraph 22.
 - d. A narrative describing and a display showing revenue reported by category for the reporting period should be presented for offshore and onshore revenues for the following categories: royalty revenue for oil and gas; rent revenue; **bonus bid** revenue for leases; and total revenue from all the above categories.
 - e. A narrative describing and a display showing:
 - (1) the quantity of oil and gas proved reserves at the end of the reporting period;
 - (2) the average of the Regional Average **First Purchase Prices** for oil and the average of the Regional Average **Wellhead Prices** for gas for the reporting period; and,
 - (3) the average **royalty rate** for oil and gas for the reporting period.
 - f. A narrative describing the estimation methodology used to calculate the value of the federal government's estimated petroleum royalties. At a minimum, the narrative explanation should include a "plain English" explanation of the measurement method (e.g., present value), the significant assumptions incorporated into the estimate (e.g.,

discount rates used to calculate present value, production decline curve, portion of proved reserves under federal lands, future oil and gas prices, inflation rates, etc), and any significant changes in the estimation methodology, including the underlying assumptions, from the prior year. As required by paragraph 23, the nature and reason for any changes, as well as the effect of the changes, should be explained.

- g. A reference to the source reports used to calculate the value of the federal government's estimated petroleum royalties.
- h. A narrative describing and a display showing the **sales volume**, the **sales value**, the royalty revenue, and the **estimated value for royalty relief** produced from federal oil and gas resources for the reporting period. To the extent that regional information is available and would contribute to understanding, the information for each region should be provided.
- i. A narrative describing other significant federal oil and gas resources under management by the entity that are not addressed by this Statement because they are not currently under lease (e.g., coastal plain of the Arctic National Wildlife Refuge). The narrative should be sufficient to enable the financial statement reader to gain an understanding of the full extent of federal oil and gas resources under management by the entity.

Consolidated Financial Report (CFR) of the United States Government Reporting Requirements

29. The governmentwide entity should provide the following information related to federal oil and gas resources in RSI as part of a discussion of all significant federal oil and gas resources under management by the federal government:
- a. A concise statement explaining the nature and valuation of federal oil and gas resources.
 - b. A narrative describing and a display showing:
 - (1) the quantity of oil and gas proved reserves at the end of the reporting period;
 - (2) the average of the Regional Average First Purchase Prices for oil and the average of the Regional Average First Wellhead Prices for gas for the reporting period;
 - (3) the average royalty rate for oil and gas for the reporting period;

-
- (4) the asset value for oil and gas by the commodities and types identified for use in calculating the federal government's total estimated petroleum royalties for the reporting period (see paragraph 21); and,
 - (5) the value of estimated petroleum royalties at the end of the reporting period.
- c. A reference to specific agency reports for additional information about federal oil and gas resources.

Effective Date

30. The standards are effective as RSI for periods beginning after September 30, 2012. Earlier implementation is encouraged.
31. [Paragraph 31 was rescinded by SFFAS 63, Omnibus Amendments 2024-1, paragraph 3.]

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

- A1. The project began with the formation of a task force to conduct research. The task force produced a discussion paper in June 2000 entitled *Accounting for the Natural Resources of the Federal Government* (see <http://www.fasab.gov/pdf/files/natresrpt.pdf> to access the report). In 2002, the Board resumed active consideration of the issues raised by the task force after a deferral to address other issues.
- A2. The Board was interested in determining whether values for federal natural resources, or some surrogate, should be capitalized and reported on the balance sheet. The Board members believed that capitalizing federal natural resources could increase accountability for their management and improve the comprehensiveness, relevance, and consistency of federal financial statements. The Board members agreed to address each type of natural resource (e.g., fluid leasable minerals such as oil and gas, solid leasable minerals such as coal and timber, etc.) in separate phases. Federal oil and gas resources were addressed first because of the literature available in other domains, the extensive historical information on federal lease programs and royalty collections, and the large amount of revenue received in exchange for federal oil and gas resources.
- A3. The Board indicated that the pertinent questions were (1) what, if anything, should be recognized as an asset; and, (2) what is the source and reliability of quantity information. They believed the source and the reliability of the information would have a bearing on where information should be reported.
- A4. The extractive industries' activities for oil and gas can be divided into two categories—upstream activities (exploration and production activities) and downstream activities

(transportation, refining, and marketing activities). Upstream activities can be divided into the following phases:

- a. Prospecting⁵
- b. Acquisition of mineral rights
- c. Exploration
- d. Appraisal and evaluation
- e. Development
- f. Production

A5. Downstream activities take place after the production phase of the upstream activities through to the point of sale and can be divided into the following phases:

- a. Supply and trading
- b. Shipping
- c. Refining
- d. Storage and distribution
- e. Marketing and retail

A6. The national assessment of federal oil and gas resources performed by the federal government is similar to the prospecting phase of the extractive industries' upstream activities. It is the only activity performed by the federal government that is similar to the extractive industries' activities.

A7. The Board noted that, based on discussions about oil and gas lease activities in the private sector, new models for accounting and reporting on the federal government's oil and gas activities would be needed because the current federal model is incomplete and federal activities are not similar to private sector activities.

⁵Prospecting usually involves researching and analyzing an area's historic geologic data and carrying out topographical, geological, and geophysical studies.

-
- A8. The Board released two exposure drafts (EDs) to solicit comments on its proposed requirements for accounting for federal oil and gas resources. The original ED, *Accounting for Federal Oil and Gas Resources*, was released on May 21, 2007. A revised ED by the same name was released on July 6, 2009. The board considered the comments received on the two EDs and related field testing in reaching its current position.

Accounting for Other Types of Natural Resources

- A9. Federal lands contain a variety of natural resources that are not specifically addressed by this Statement, including coal, gold, and silver, as well as timber and grazing rights. Originally, the Board intended to address each category of resources in separate phases as noted in paragraph A2. Although in principle a broader application was desirable to several Board members, the majority believes that the Board has already devoted a substantial amount of time to the oil and gas standard and developing additional guidance for the other types of resources would significantly delay implementation of a broad standard. Therefore, because federal oil and gas resources represent the most significant portion of all federal natural resources, the majority of members felt it was important to begin recognizing them as soon as possible.
- A10. Nonetheless, the majority of the members believe that the substance of the standards developed for federal oil and gas resources may serve as a good analogy for other categories of federal natural resources.⁶ Therefore, while this Statement does not specifically address other types of federal natural resources, the Board believes that this Statement should be considered when applying SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*, to other types of federal natural resources. As a result, while not explicitly encouraging agencies to recognize other categories of natural resources, the Board included paragraph 9 to explicitly state that this Statement does not require or preclude entities from reporting information about other types of federally-owned natural resources; however, members believe this Statement should be considered in conjunction with SFFAS 7, *Accounting for Revenue and Other Financing Sources*, when applying SFFAS 34 to other types of federally-owned natural resources.
- A11. The Board directed staff to apply the requirements of this Statement to other types of natural resources through the issuance in the future of a technical bulletin.

Fiduciary Oil and Gas Resources

- A12. SFFAS 31, *Accounting for Fiduciary Activities*, par. 12, states that “Fiduciary assets may include assets other than cash, e.g., real or personal property held temporarily pending

⁶ SFFAS 34, Paragraph 7.

disposition, or held long-term in a fiduciary capacity.” Both the original and revised EDs included a paragraph on fiduciary oil and gas resources that required similar reporting for fiduciary proved oil and gas reserves. However, one of the respondents to the revised ED raised a question of whether fiduciaries are required to value non-monetary assets. In addition, the Board discussed whether there are currently any oil and gas reserve activities that would meet the definition of fiduciary activity.⁷ Since this Statement requires RSI reporting for federal oil and gas proved reserves and would not trigger reporting under SFFAS 31, the Board is deferring the issue of whether reporting should be required for fiduciary proved oil and gas reserves. No reporting on fiduciary oil and gas resources is required as a result of this Statement. The Board will revisit the issue of reporting on fiduciary oil and gas resources either through the issuance of the technical bulletin mentioned in paragraph A11 or when the Board revisits accounting and reporting for federal oil and gas resources in three years as discussed in paragraph A38.

Overview of Federal Oil and Gas Resources

A13. *Figure 1, Components of Federal Oil and Gas Resources*, presented after paragraph A27 identifies the universe of federal oil and gas resources (total resources). Total resources incorporate “original in-place” resources, that is, resources in the earth before human intervention. The components are those used in the industry. Information is available in varying degrees and with varying reliability for each component. The components are first separated into “undiscovered resources” and “reserves.” Generally, undiscovered resources are not under lease, while reserves are under lease.

Undiscovered Resources

A14. The first major component of total resources is undiscovered resources. The undiscovered resources component is divided into the following subcomponents:

- a. **undiscovered non-recoverable resources**
- b. **undiscovered recoverable resources**
 - (1) **undiscovered conventionally recoverable resources**
 - (2) **undiscovered economically recoverable resources.**

⁷ Members questioned whether the federal government currently assumes any fiduciary responsibility for non-federal oil and gas leases beyond the collection of royalties.

-
- A15. Each component and subcomponent can be further divided between onshore and offshore resources. Onshore resources consist of resources on federal lands. Offshore resources consist of resources on the Outer Continental Shelf (OCS). This division between onshore and offshore resources is important operationally because the source and volume of information varies.
- A16. There is no information available on undiscovered non-recoverable resources. These resources are not addressed or included in any type of assessment. Undiscovered non-recoverable resources are referred to as resources that are beyond conventional technologies to be estimated and are not assessed. However, in the realm of “original in-place” resources they may exist.
- A17. Information on the two subcomponents of undiscovered recoverable resources is available for offshore oil and gas resources. This information is based on national assessments performed by the Minerals Management Service (MMS) approximately every five years, with updates on a yearly basis for certain geographic locations. The assessment considers recent geophysical, geological, technological, and economic information and uses a geologic **play** analysis approach for resource appraisal. Information on undiscovered conventionally recoverable resources and undiscovered economically recoverable resources is provided in the MMS assessment.
- A18. For the onshore portion of undiscovered recoverable resources, the U.S. Geological Survey (USGS) formerly conducted national assessments. The last comprehensive national assessment was completed by the USGS in 1995, and since 2000 the USGS has been re-assessing **basins** of the U.S. that are considered to be priorities for the new assessment rather than assessing all of the basins of the U.S. As each basin is re-assessed, the assessment results are added to the assessment tables, and these new values replace the assessment results from 1995. The USGS assessment provides information on undiscovered conventionally recoverable resources but not on undiscovered economically recoverable resources like the MMS does.
- A19. Under existing Federal Accounting Standards Advisory Board (FASAB) accounting standards, there are no requirements to provide or present information about the undiscovered resource components in the financial statements. Information about **technically recoverable resources** was gathered and maintained by the Energy Information Administration (EIA) in the past. However, EIA no longer reports on the technically recoverable resources under federal lands. Therefore, as there is no reliable source for this type of information, federal reporting on onshore and offshore undiscovered recoverable resources is not required.

Reserves

A20. The second major component of total resources is **reserves**. The reserves component is divided into the following subcomponents as follows:

- a. **unproved reserves**
 - (1) **unproved possible reserves**
 - (2) **unproved probable reserves**
- b. **proved reserves**
 - (1) **proved undeveloped reserves**
 - (2) **proved developed reserves**
 - (a) **proved developed non-producing reserves**
 - (b) **proved developed producing reserves**

A21. Under existing FASAB accounting standards, there are no requirements to provide or present information about the unproved reserves components in the financial statements.

A22. Under the accounting standards proposed in the original ED, information about onshore and offshore unproved reserves would be included in the technically recoverable resources and reported as RSI. However, as noted in par. A19, although information about technically recoverable resources was gathered and maintained by the EIA in the past, EIA no longer reports on the technically recoverable resources under federal lands. Therefore, as there is no reliable source for this type of information, federal reporting on unproved reserves is not required.

A23. Quantitative information in relation to onshore and offshore proved reserves, including new discoveries, production, and **adjustments** is submitted to the EIA by oil and gas well operators once a year. The due date for operators to submit the information is April 15 for activities from the preceding calendar year.

A24. Under existing accounting standards, the bonus bid, rent (collected on the lease until oil and gas production begins), and royalty revenue (collected on production) are accounted for as a custodial activity (i.e., an amount collected for others) by MMS, the collecting entity. The collections and their distribution are reported on MMS's statement of custodial activities. Component entities receiving a distribution and the CFR of the United States government

recognize the revenue as a financing source in their respective statement of changes in net position or statement of operations and changes in net position.

A25. In addition to the above existing accounting standards, this Statement requires that the estimated federal royalty share of proved reserves be reported in RSI as estimated petroleum royalties by the component entity that is responsible for collecting royalties. The portion of the estimated petroleum royalty revenue designated to be distributed to others should also be reported in RSI.

A26. This Statement also requires that information on the quantity and consumption of proved reserves, including the sales volume, the sales value, the amount of royalty revenue, and the estimated value for royalty relief be provided as RSI.

A27. On the following page, *Figure 1 – Components of Federal Oil and Gas Resources* provides a summary of the information presented in the preceding paragraphs. The shaded boxes in the figure represent the availability of information as follows:

No quantity information available	
Technically recoverable resources quantity information provided by EIA at the national level ⁸	
Proved reserves quantity information provided by EIA at the national level ⁹	

The terms in Figure 1 are defined in Appendix D: Technical Terms under the subheading Definitions of Resource and Reserve Components and Subcomponents.

⁸Quantity information is currently only published at the national level; segregated information on the quantity of oil and gas resources under federal lands is not available.

⁹See footnote 8.

Figure 1 – Components of Federal Oil and Gas Resources

Accounting Standards	Components of Federal Oil and Gas Resources							
	Undiscovered Resources				Reserves			
	Undiscovered Non-Recoverable Resources	Technically Recoverable Resources				Proved Reserves		
		Undiscovered Recoverable Resources		Unproved Reserves				
			Undiscovered Conventionally Recoverable Resources	Undiscovered Economically Recoverable Resources	Unproved Possible Reserves	Unproved Probable Reserves	Proved Undeveloped Reserves	Proved Developed Reserves
						Proved Developed Non-Producing Reserves	Proved Developed Producing Reserves

New Accounting Standards			<ul style="list-style-type: none">Bonus bid, rent, royalty revenue accounted for as custodial activity by the component entity and recognized as a financing source on the CFR and component entity statement of operations and changes in net position<ul style="list-style-type: none">Asset value and revenue designated to be distributed to others reported as required supplementary information (RSI)Information on the quantity and consumption of proved reserves, including the sales volume, sales value, the amount of royalty revenue, and the estimated value for royalty relief reported as RSI					

Conceptual Aspects of Federal Oil and Gas Resources as an Asset for Estimated Petroleum Royalties and a Liability for the Portion of Revenue to be Distributed to Non-Federal Entities

Recognition Criteria

A28. Statement of Federal Financial Accounting Concepts (SFFAC) 5, *Definitions of Elements and Basic Recognition Criteria for Accrual-Basis Financial Statements*, states that to be recognized as an element of the financial statements, an item must (a) meet the definition of an element of the financial statements and (b) be measurable. The term measurable means that a monetary amount can be determined with reasonable certainty or is reasonably estimable.¹⁰

A29. Measurement may require the use of estimates and approximations as well as an assessment, in a manner consistent with the attribute being measured, of the probability that future inflows or outflows of economic benefits or services will result from the item. Recognition decisions also incorporate the results of assessments of the materiality and benefit versus cost of recognizing the item measured. Thus, it is possible that an item that meets the basic recognition criteria would not be recognized due to measurement, materiality, or cost-benefit considerations.¹¹

Consideration of Asset Recognition or Disclosure

A30. Recognition of the federal government's estimated petroleum royalties from the production of federal oil and gas proved reserves as an asset was considered by the Board based on SFFAC 5, paragraphs 18 through 35.

A31. An asset for federal accounting purposes is a resource that embodies economic benefits or services that the federal government controls.¹²

A32. To meet the definition of an asset of the federal government, a resource must possess two characteristics. First, it must embody economic benefits or services that can be used in the

¹⁰SFFAC 5, par. 5.

¹¹ SFFAC 5, par. 7.

¹²SFFAC 5, par. 18.

future. Second, the government must control access to the economic benefits or services and, therefore, can obtain them and deny or regulate the access of other entities.¹³

- A33. First, the Board established which federal oil and gas resources were being considered. *Figure 1 – Components of Federal Oil and Gas Resources* presents the federal oil and gas resources that were considered. The two major components are “undiscovered resources” and “reserves.” All of the federal oil and gas resources qualify as federal government assets because the government can obtain economic benefits and regulate the access of other entities as provided under federal law.
- A34. Since all federal oil and gas resources controlled by the federal government are assets, the Board’s next step was to decide whether the federal oil and gas resources “asset” should be recognized on a federal component entity balance sheet. As noted in paragraph A28 above, the second criterion for recognition is that the asset “...be measurable.”
- A35. Estimates of the quantity of technically recoverable oil and gas resources were available through EIA in the past. With this quantity information, a monetary measure was technically feasible and, therefore, the asset qualified for consideration for recognition. However, the Board does not believe that the information is sufficiently reliable to be recognized in a cost-beneficial manner.
- A36. The EIA information on other than proved reserves is derived from sporadic and incomplete national assessments and annual submissions by oil and gas producers. This makes it particularly uncertain. In addition, since these reserves are not currently under lease, determining the royalty share may be misleading since it is a current value measure but the underlying asset may be restricted and production may never occur. For those resources that are not restricted, production may occur but the timing and amount of royalties are very uncertain. Thus, applying the same measurement technique to other than proved reserves may not result in a value that represents what it purports to represent. Therefore, federal oil and gas resources not yet in the “proved reserves” category would not be recognized on the federal balance sheet due to concerns regarding reliability of the proposed measure.
- A37. SFFAC 1, *Objectives of Federal Financial Reporting*, provides the following with respect to reliability:
160. Financial reporting should be reliable; that is, the information presented should be verifiable and free from bias and should faithfully represent what it purports to represent. To be reliable, financial reporting needs to be comprehensive. Nothing material should be omitted from the information necessary to represent faithfully the

¹³ SFFAC 5, par. 22.

underlying events and conditions, nor should anything be included that would likely cause the information to be misleading to the intended report user. Reliability does not imply precision or certainty, but reliability is affected by the degree of estimation in the measurement process and by uncertainties inherent in what is being measured. Financial reporting may need to include narrative explanations about the underlying assumptions and uncertainties inherent in this process. Under certain circumstances, a properly explained estimate provides more meaningful information than no estimate at all.

- A38. Concerning the proved oil and gas reserves from federal oil and gas resources, the Board believes that both the quantity and the estimated federal royalty share would be reliable. Thus, in this case, since the quantity of the estimated federal proved oil and gas reserves can be reliably estimated and converted to monetary terms (estimated federal royalty share), the Board believes the estimated federal royalty share of proved oil and gas reserves should be presented as basic information. However, members would like to have more information on the reliability of the valuation methodology before it makes a final decision on whether the information should be recognized on the face of the financial statements or disclosed in the notes to the financial statements. Therefore, the Board has decided to require the information to be reported in a schedule of estimated federal oil and gas petroleum royalties in RSI for three years. Before the end of the three-year period, the Board will make a determination as to whether the information will transition to basic information as financial statement recognition or note disclosure.
- A39. The Board acknowledges that royalties received from federal oil and gas leases will continue to be recognized on the statement of changes in net position with non-exchange revenue rather than on the statement of net cost with other exchange revenue as long as the asset value is reported as RSI and not recognized in the financial statements with a corresponding depletion expense. However, as noted above, the Board would like to have more information before it makes a final decision regarding changes to revenue recognition.
- A40. While the Board intends to require that the information transition to basic information as financial statement recognition or note disclosure, the Board acknowledges that new information might become available that would warrant continued reporting as RSI. The Board will consider its reporting options after additional information becomes available.

Measurement Attributes and Methods Considered

- A41. The FASAB's projects to reexamine and expand its conceptual framework include a project on measurement attributes (i.e., the aspect of an item that is measured, such as, for example, its historical cost or replacement cost) for reporting purposes. This project follows logically from SFFAC 5, which states that an item's being measurable is a criterion for

recognition in the financial statements but does not address measurement attributes or measurement methods.

- A42. As is true of other components of an expanded conceptual framework, the project on measurement attributes is expected to result in a concepts statement for the future guidance of, primarily, the Board itself. The statement may include definitions and a discussion of the features of different measurement attributes and methods as well as other concepts that should assist the Board in developing future standards. While the project on measurement attributes is underway, the Board will select the measurement attributes for each standard under deliberation based on available definitions.
- A43. Concerning the dollar amount to be reported for the estimated federal royalty share of proved reserves, the Board considered various measurement attributes and methods, including the following:
- a. Historical cost (historical proceeds) – The amount of cash, or its equivalent, paid to acquire an asset, commonly adjusted after acquisition for amortization or other allocations.
 - b. Fair value – The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.
 - c. Net realizable (settlement) value – The total non-discounted amount of cash, or its equivalent, into which an asset is expected to be converted in due course of business less direct costs, if any, necessary to make that conversion. The net realizable value requires a reasonable estimate of future flows (receipts and costs) associated with converting assets to cash.
 - d. Present (or discounted) value of future cash flows – The present or discounted value of future cash inflows into which an asset is expected to be converted in due course of business less present values of cash outflows necessary to obtain those inflows.
- A44. After deliberating on the above attributes and methods, the Board decided that defining a measurement attribute in terms that are common to the oil and gas industry would be the best approach. Therefore, the Board proposed to use a regional average first purchase price for oil and lease condensate, a regional average first purchase price for **natural gas plant liquids** (NGPLs), and a regional average wellhead price for gas to value federal estimated petroleum royalties. This measurement approach was included in the May 2007 ED.

- A45. Also included in the May 2007 ED was an alternative view from the Board member representing the Congressional Budget Office, expressing the view that fair value is the appropriate basis for valuing federal oil and gas resources. At the time, the other Board members had rejected fair value because of the lack of current transactions between market participants involving the sale of the federal royalty share for proved oil and gas reserves.
- A46. In conjunction with the comment period on the May 2007 ED, the Board requested that the proposal be field tested by the U.S. Department of the Interior (DOI). After reviewing the results of the field testing performed by DOI (see paragraphs A61 through A68) and talking with DOI representatives (see paragraphs A69 and A70) about the alternative methodology that it developed, the Board determined that the estimates that are developed should approximate the present value of future federal royalty receipts on proved reserves known to exist as of the reporting date. The estimates should be based on the best information available at fiscal year-end, or as close to the fiscal year-end as possible. In addition, discount rates as of the reporting date for present value measurements of federal oil and gas assets and liabilities should be based on interest rates on marketable Treasury securities with maturities consistent with the cash flows being discounted.
- A47. While present value is typically considered to be a method for measuring fair value, the present value measurement approach required by this standard is based on an entity-specific discount rate, specifically the interest rates on marketable Treasury securities, and does not consider the price that market participants demand for bearing the uncertainty inherent in the cash flows (i.e., neither the cash flows nor the discount rate is adjusted for a market risk premium). A typical fair value measurement (e.g., Statement of Financial Accounting Standards (SFAS) 157, *Fair Value Measurements*¹⁴) is determined based on the assumptions that market participants would use in pricing the asset. A measurement that does not include an adjustment for the market risk premium would not represent a fair value measurement since market participants would include one in pricing the petroleum royalties. Therefore, the present value measurement approach required by this standard is not a market-based fair value measure.
- A48. There is some concern that DOI may not be able to implement and/or obtain a favorable audit opinion on the present value methodology that it proposed as a result of its field testing. To permit additional flexibility in the measurement methods for valuing federal estimated petroleum royalties, the Board has also determined that market-based methods for measuring fair value or other methods for measuring current price will be acceptable. Fair value incorporates the effects of uncertainty that are inherent in the cash flows expected in the future from oil and gas activities, including the effects of the additional return demanded by market participants to assume the risk of that uncertainty. Therefore, the

¹⁴ FASB Accounting Standards Codification™ (ASC) 820-10.

standard provides for a measurement method that is based on either (1) the present value of future federal royalty receipts on proved reserves known to exist as of the reporting date using a risk-free discount rate without incorporating market risk, (2) market-based methods for measuring fair value, or (3) other methods for measuring current price.

Asset Valuation Methodology

A49. The Board believes that the detailed estimation methodology for valuing federal oil and gas resources should be developed by federal entities. In an environment heavily affected by changes in prices, technological advancements, economic and operating conditions, and known geological, engineering, and economic data, estimation methodologies may need to be regularly updated to reflect these changing conditions. Sources of information that were once available to preparers may be replaced or become obsolete. On the other hand, new and more reliable data sources may become available. Permitting the preparers flexibility in developing an estimation methodology that keeps pace with the environment will prevent the accounting standards from becoming outdated.

A50. EIA has been used as the source of information on proved reserves data in the past and may prove to continue to be the appropriate source for such information in the future. However, the Board has chosen not to explicitly designate EIA as the source of information; an explicit designation of the source of information would prevent the preparer from fully complying with the standards if the source were no longer available at some point in the future.

Use of Regional Data to Value the Federal Asset “Estimated Petroleum Royalties”

A51. The Board believes that the most relevant, reliable, and cost-beneficial measurement of “estimated petroleum royalties” would be obtained by using regional information. The Board believes this approach would provide conservative, representative regional values of estimated petroleum royalties without having to calculate the value on a field-by-field basis. The Board believes it would not be practicable to make calculations on a field-by-field basis. There are more than 60,000 leases maintained by DOI with approximately 115,000 producing wells.

Consideration of Liability Recognition or Disclosure

A52. Recognition of royalty distributions to non-federal entities as a liability was considered by the Board based on SFFAC 5 paragraphs 36 through 48.

A53. A liability is a present obligation¹⁵ of the federal government to provide assets or services to another entity at a determinable date, when a specified event occurs, or on demand.¹⁶

A54. A liability of the federal government has two essential characteristics. First, a liability constitutes a present obligation to provide assets or services to another entity. Second, either a law or an agreement or understanding between the government and another entity identifies conditions or events that will determine when the obligation will be settled.¹⁷

A55. Paragraph 15 requires that the component entity responsible for collecting royalties report the value of the federal government's estimated petroleum royalties in a schedule of estimated federal oil and gas petroleum royalties. The value of the estimated petroleum royalties would be based on the royalty share of the federal oil and gas resources classified as "proved reserves." In addition to the royalties that the component entity collects on proved reserves that are produced, it also collects lease sale and rent revenue from federal government oil and gas leases. The component entity distributes nearly all of these proceeds to others (e.g., the general fund of the U.S. Treasury, other federal agencies, and state governments) in accordance with legislated allocation formulas. The component entity also receives a very small portion of the revenue collected to fund its operations. The amount used to fund its operations is legislated by Congress as part of the component entity's annual appropriation. For example, the amount received by the component entity was approximately one percent (1%) of annual revenues collected in 2006.¹⁸

A56. The Board believes that in addition to presenting a schedule of the estimated petroleum royalties to be received, the component entity responsible for collecting royalties should also present a schedule of the estimated petroleum royalties to be distributed to others because nearly all of the revenue from royalties, lease sales, and rent are ultimately distributed to others (e.g., the general fund of the U.S. Treasury, other federal agencies, and state governments).

¹⁵ The term obligation is used in this Statement with its general meaning of a duty or responsibility to act in a certain way. It does not mean that an obligation of budgetary resources is required for a liability to exist in accounting or financial reporting or that a liability in accounting or financial reporting is required to exist for budgetary resources to be obligated.

¹⁶ SFFAC 5, par. 39.

¹⁷ SFFAC 5, pars. 41 through 48.

¹⁸ The one percent was derived by dividing [Note 23. Custodial Distributions to MMS, Revenues to Fund Operations] by [Total Revenue on the Statement of Custodial Activity] for 2006.

Future Rights to Royalty Streams Identified for Sale

A57. When rights to a future royalty stream are identified to be sold, the value of those rights should be reported in RSI as “future royalty rights identified for sale.” Reporting the approximate value at the balance sheet date alerts the reader to the pending sale and the potential value of the asset to be sold.

A58. The value of the future royalty rights identified for sale is based on the specific field identified for sale. Because the fields are known, this provides a more field specific value for the rights identified to be sold.

Original Exposure Draft

A59. The original ED, *Accounting for Federal Oil and Gas Resources*, was issued May 21, 2007 with comments requested by September 21, 2007. However, because the Board received a request for the comment period to be extended and because few responses had been received, the Board agreed to extend the comment period until January 11, 2008.

Comment Letters

A60. Eight comment letters were received on the original ED. The following points present a high-level summary of the comments received:

- a. The majority of respondents agreed with the overall concept of recognizing an asset for the federal government’s natural resources and a liability for the related royalty revenues designated to be distributed to others.
- b. Two of the eight respondents stated that standards on federal natural resources should include all federal natural resources and not be limited to only oil and gas resources.
- c. One of the eight respondents commented on the complex nature of the original ED.
- d. No respondents supported the use of the probabilistic method of estimation as proposed in the alternative view of the original ED.
- e. Two respondents supported the use of present value or fair value with discounting (similar to the alternative view proposal) instead of the valuation method as proposed in the original ED that utilizes the average first purchase or wellhead price.

-
- f. The majority of respondents agreed that the numerous disclosures proposed in the original ED appeared excessive and might not pass a cost/benefit test.
 - g. There was general support for royalty relief disclosures.
 - h. Of the five respondents that directly addressed the question on fiduciary disclosures, four stated that the cost of such disclosures would outweigh any perceived benefits.
 - i. The majority of respondents supported the recommendation for more limited disclosures in the CFR. However, one respondent stated that because natural resources are sovereign assets, the major disclosures would more appropriately appear in the CFR and not agency financial statements.

Field Testing

A61. In addition to the comment letters received on the original ED, the Board also considered the results of a field test of the proposed standards performed by a DOI field test team. The field test team consisted of MMS Offshore Minerals Management Economics and Resource Evaluation experts and petroleum engineers; Bureau of Land Management petroleum engineers and resource evaluation experts; and MMS Custodial Reporting Branch senior accountants with expertise in financial reporting.

A62. Field tests are part of FASAB's due process and help FASAB to establish effective standards. Participating federal entities volunteer to go through the exercise of "implementing" the proposed standards as if they were in place and then provide feedback to FASAB regarding the process. Field tests can proactively identify potential problems related to the implementation of proposed standards and allow FASAB to gather valuable information about implementation costs.

A63. The field test team presented the Board with a number of significant considerations, including the lack of availability of quantity information on proved reserves under federal lands. The original ED had proposed that the valuation of federal oil and gas resources be based on information to be provided by EIA on quantity of proved reserves under federal lands. However, this information has not been made available as of the date of the revised ED, and does not appear to be forthcoming.

A64. In addition to the reliance on proved reserves data required to be provided by EIA, the field test team noted a number of other concerns, including:

- a. the desire to divide proved reserves by type of commodity (e.g., **crude oil**, lease condensate, and natural gas) and compute the asset value separately;

-
- b. the need to develop a methodology for determining what portion of all proved reserves fall under federal domain;
 - c. the need to exclude royalty relief volumes and estimate the value of commodities received in kind and delivered to the Department of Energy to fill the Strategic Petroleum Reserve;
 - d. the effect of intermediate production between the effective date of the reserves estimate and the effective date of the booked value;
 - e. the effect of estimates such as the royalty accrual and prior year production adjustments made in the current year;
 - f. how to distinguish between long and short-term liabilities for the associated liability for revenue distributions to others;
 - g. appropriate treatment of interest payments related to oil and gas or commodities other than oil and gas once the custodial provisions are deleted from SFFAS 7 (paragraphs 45, 275, and 277);
 - h. the impact of material intragovernmental transactions and eliminations on the year-end reporting process; and,
 - i. the need to revise all, or almost all, of the existing posting models in the accounting system.

A65. The field test team also completed a field test questionnaire using a present value approach. This questionnaire included many of the same concerns as noted in paragraphs A63 and A64 above. In addition, the present value approach also incorporated present value calculations for factors such as the present value of royalties received over time, estimates of future gas prices, transportation allowances, and discount and inflation rates.

A66. In both estimates (the ED view as well as the present value view), the field test team used share of production as a proxy for share of proved reserves. One of the members expressed concerns about the use of production as a proxy for underlying reserves because it assumes (1) the same percentage of reserves are brought to market each year from all locations (or at least, on average between federal and non-federal) and (2) too much year to year variance in production patterns makes underlying reserve estimates fluctuate by an equal amount.

A67. Staff asked an oil and gas analyst at the Congressional Budget Office for his thoughts on the methodology. He responded that he understands the concern with the first assumption

because it is likely that not the same fraction of reserves will be accessed in each year. However, he stated that averaging between federal and non-federal would control for some of that variance, though it is not possible to know just how much. He stated that this simplifying assumption is fairly reasonable given the approximate nature of the analysis. The analyst noted that with the second assumption, the variance might be eliminated or reduced by using a moving average rather than a year-to-year measure. For example, a 5-year or 10-year moving average of total federal production over total production would control some of the yearly differences between federal and non-federal.

A68. The field test questionnaires were extremely useful in helping the Board develop the standards proposed in the revised ED.

Discussion with DOI Representatives

A69. In addition to the Board's consideration of the comment letters received and the field test questionnaires, three members of the field test team and two representatives from DOI's Office of the Secretary met with the Board at the October 23, 2008, meeting to discuss issues raised in its comment letter on the original ED and the related field test questionnaires.

A70. At that meeting, DOI representatives indicated that they would be open to having less detailed implementation guidance in the standards if they were given a longer implementation period (two to three years) with a phase-in from RSI to basic information, and the ability to return to FASAB for implementation guidance if a reasonable methodology could not be agreed to by the auditors.

Revised Exposure Draft

A71. The revised ED, *Accounting for Federal Oil and Gas Resources*, was issued July 6, 2009, with comments requested by September 8, 2009.

A72. Upon release of the revised ED, notices and press releases were provided to The Federal Register, *FASAB News*, *The Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, *the CPA Letter*, *Government Accounting and Auditing Update*, the CFO Council, the Council of Inspectors General on Integrity and Efficiency, the Financial Statement Audit Network, and committees of professional associations generally commenting on exposure drafts in the past.

A73. This broad announcement was followed by direct mailings or e-mails of the revised ED to:

- a. Relevant congressional committees: Senate Committee on Energy and Natural Resources, Senate Committee on Finance, Senate Committee on Indian Affairs, House Committee on Financial Services, and House Committee on Natural Resources;
- b. Public interest groups and think tanks: National Congress of American Indians (NCAI), national and regional; Alliance to Save Energy; Brookings Institution; Cato Institute; Center on Budget and Policy Priorities; Citizens Against Government Waste; The Concord Coalition; The Heritage Foundation; National Parks Conservation Association (NPCA); Natural Resources Defense Council (NRDC); OMB Watch; Resources for the Future (RFF); Sierra Club; Urban Institute; and World Resources Institute (WRI);
- c. Respondents to the prior ED (or their successors);
- d. Agencies that manage and/or account for federal natural resources: DOI; Department of Agriculture (USDA), Deputy CFO; USDA Forest Service; and DOI Bureau of Land Management;
- e. The Oil and Gas Industry: World Petroleum Council (WPC), American Petroleum Institute (API), Society of Petroleum Engineers (SPE), and Ryder Scott Company; and,
- f. Other: DOI, Office of the Special Trustee (OST); Energy Information Administration (EIA); Department of Energy, Deputy CFO; Securities and Exchange Commission; U.S. Geological Service (USGS); and KPMG (DOI's financial statement audit partner).

A74. In addition, the ED was publicized during the FASAB Update session at the Financial Statement Audit Network monthly meeting on July 21, 2009, and at the Department of the Treasury's 19th Annual Government Financial Management Conference on August 5, 2009.

A75. To encourage responses, reminder notices were sent to the FASAB Listserv and each of the above individuals/organizations on August 20, 2009.

Comment Letters

A76. Nine comment letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		2
Auditors	1	
Preparers and financial managers	6	

A77. The following provides a high-level summary of the comments received on the revised ED:

- a. The majority of respondents agreed that federal entities should be provided with flexibility in developing the asset valuation estimation methodology. DOI also agreed with the provision of flexibility with the caveat that a more detailed implementation guide be developed.
- b. The majority of respondents agreed with the board's selection of present value of future federal royalty receipts on proved reserves known to exist as of the reporting date as the preferred measurement method. DOI also agreed with the preferred measurement method but noted that the proposed valuation from their field test questionnaire was based upon OMB's economic assumptions about future Treasury marketable security rates.
- c. Half of the respondents agreed with the board's proposal to permit an alternative market-based fair value measurement consistent with FASB SFAS 157, *Fair Value Measurement*, if it is not reasonably possible to estimate using present value. One of the respondents disagreed with the use of fair value based on SFAS 157 because the oil and gas market is so volatile. DOI also agreed with the provision of an alternative measurement method but disagreed with the use of fair value based on SFAS 157 because they do not think the asset should be measured at a market exit price¹⁹ since it is extremely unlikely that the asset would ever be sold.
- d. The majority of respondents agreed that federal entities should be permitted to change their methodology for valuing the federal government's estimated petroleum royalties if environmental or other changes would provide for the development of an improved methodology. One respondent disagreed on the basis that it could impair the government's ability to prepare consolidated financial statements for the federal government.
- e. The majority of respondents agreed that it would be appropriate to provide guidance regarding reporting gains and losses from changes in assumptions and selecting the discount rates similar to that provided in SFFAS 33. DOI also agreed with the provision of guidance on reporting gains and losses with the caveat that a more detailed implementation guide be developed.
- f. Half of the respondents agreed with the disclosure requirements for oil and gas fiduciary activities. Two respondents disagreed because they have cost/benefit concerns. One respondent disagreed partly because of cost/benefit concerns and

¹⁹ Exit price is the price that would be received to sell an asset or paid to transfer a liability (FASB ASC 820-10-20).

partly because fiduciaries are generally not required by other standards-setters to value non-cash assets. DOI agreed with the disclosures and indicated that the information could be fairly readily reported.

- g. All of the respondents agreed with the three-year phase-in of information from RSI to basic information. However, as discussed more in number A77i below, the majority of respondents would prefer that, following the three-year phase-in period, the information be presented as basic information in the notes rather than recognized on the face of the financial statements.
- h. There was not a consistent view among respondents regarding application of the standard to other types of natural resources. Two of the respondents agreed with the inclusion of paragraph 9 relating to other types of natural resources. One respondent did not believe that the ED provided enough detail to form a response. Another respondent preferred that FASAB explicitly require agencies to use valuation, accounting, and financial reporting methods consistent with the provisions of the final standard for all types of natural resources. Another respondent—DOI—provided some clarifying language that they believed would help fill a void in guidance that could lead to potentially inaccurate or inconsistent reporting.
- i. The majority of respondents agreed with the alternative view contained in the July 2009 revised ED, which proposed that, following the three-year transition period as RSI, the value of federal oil and gas resources and annual changes be disclosed as basic information in the notes, rather than recognized on the face of the financial statements. One respondent disagreed with the alternative view in the revised ED because they supported the eventual presentation of all natural resources on the face of federal financial statements. Another respondent disagreed with the alternative view in the revised ED on the basis that the quantity and value of oil and gas resources and related revenues and depletion expenses would be material to the financial statements of the entities reporting those items; therefore, the omission or misstatement of that information makes it probable that the judgment of a reasonable person relying on the information would be changed or influenced.

A78. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised.

A79. After deliberating the comments received on the revised exposure draft, the majority of the Board voted to require the information as RSI for three years and then put the project back on the agenda after two years to decide whether the asset would be recognized in the financial statements or disclosed in the notes. The Board plans to utilize the experience

gained by DOI and others during the RSI period to inform their decision regarding financial statement recognition versus note disclosure.

A80. After considering respondents' views on applying the standard on accounting for federal oil and gas resources to other types of natural resources, the Board directed staff to apply the requirements of this Statement to other types of natural resources through the issuance of a technical bulletin. A technical bulletin will provide another opportunity for respondents to directly comment on the standards as they relate to other types of natural resources.

A81. After debating the advantages and disadvantages of limiting the alternative measurement method to SFAS 157 fair value, as had been proposed in the revised ED, the Board unanimously agreed to broaden the acceptable alternative measurement methods during the RSI phase to allow for greater flexibility in development of a valuation methodology.

Board Approval

A82. This statement was approved for issuance by all members of the Board. The written ballots are available for public inspection at the FASAB's offices.

Appendix B: Illustrations

PLEASE NOTE: The examples in this Appendix are illustrative only; they are populated with *hypothetical* amounts and do not represent authoritative guidance. Illustrations are not provided for all requirements.

REQUIRED SUPPLEMENTARY INFORMATION

Schedule of Estimated Federal Oil and Gas Petroleum Royalties Asset Value as of September 30, 20X3 (in thousands)						
Offshore	Region 1	Region 2	Region 3	Region 4	Region 5	Total
Dry Gas	\$4,500,000	\$3,960,000	\$2,880,000	\$3,240,000	\$3,420,000	\$18,000,000
Wet Gas	500,000	440,000	320,000	360,000	380,000	2,000,000
NGPLs	500,000	440,000	320,000	360,000	380,000	2,000,000
Oil	5,500,000	4,840,000	3,520,000	3,960,000	4,180,000	22,000,000
Condensate	250,000	220,000	160,000	180,000	190,000	1,000,000
Total Offshore	<u>\$11,250,000</u>	<u>\$9,900,000</u>	<u>\$7,200,000</u>	<u>\$8,100,000</u>	<u>\$8,550,000</u>	<u>\$45,000,000</u>
Onshore	Region 1	Region 2	Region 3	Region 4	Region 5	Total
Dry Gas	\$2,625,000	\$2,310,000	\$1,680,000	\$1,890,000	\$1,995,000	\$10,500,000
Wet Gas	250,000	220,000	160,000	180,000	190,000	1,000,000
NGPLs	250,000	220,000	160,000	180,000	190,000	1,000,000
Oil	3,000,000	2,640,000	1,920,000	2,160,000	2,280,000	12,000,000
Condensate	125,000	110,000	80,000	90,000	95,000	500,000

Management of Federal Oil and Gas Resources

The Minerals Management Service (MMS) plays an integral part in the implementation of the President's national energy policy (NEP). The NEP is a comprehensive strategy designed to secure America's energy future by reducing dependence on foreign sources, increasing domestic fossil fuel production, improving energy conservation efforts, and developing alternative and renewable energy sources. The MMS is responsible for managing the nation's oil and natural gas resources on the Outer Continental Shelf (OCS) and the mineral revenues from the OCS and federal lands. The MMS management process can be broken down into six essential analysis components: pre-leasing, post-leasing and pre-production, production and post-production, revenue collection, fund disbursement, and revenue compliance.

Stewardship Policies for Federal Oil and Gas Resources

The MMS's responsibilities as stewards of the physical oil and gas resources on the OCS begin when the MMS conducts pre-leasing analysis activities, which include the assessment of oil and gas resources that may be offered for lease. Following the pre-leasing assessment, the MMS develops a plan for offering those resources to developers. In the case of oil and gas development, this planning process is designed to consider both the environmental and economic concerns of the nation by providing opportunities for input from the public, the private

²⁰Material distributions should be listed separately by entity.

sector, states, and Congress. The MMS conducts public planning processes for each individual lease sale.

Once a sale is completed, the MMS evaluates the bids to ensure that the government will receive fair market value. The evaluation determines whether the bid can be accepted and a lease issued. Once a lease is assigned to a winning bidder, the MMS begins post-leasing and pre-production activities. These activities include a permitting and approval process for all exploration, development, and production activities proposed by the lease operators. MMS staff inspects each operation in order to confirm that all activities are conducted in an environmentally and physically safe manner. Similar inspections also occur during the production and post-production activities to help ensure the federal government is receiving accurate royalties from production and facilities are decommissioned in a manner that protects the environment.

Once a lease is in place, the federal government's share of production from both offshore and onshore operations may be recovered as royalty-in-value (RIV) or royalty-in-kind (RIK). Federal oil and gas leasing laws and lease terms provide the government with the option of receiving production royalty payments either in money ("in value") or oil and gas production ("in kind"). Through royalty revenue collection and fund disbursement, the MMS achieves optimal value by ensuring that all revenues from federal oil and gas leases are efficiently, effectively, and accurately collected, accounted for, and disbursed to states, other federal component entities, and the U.S. Treasury. The MMS also performs revenue compliance activities to ensure the federal government has received fair market value and that companies comply with applicable laws, regulations, and lease terms.

Through this mineral asset management process, the MMS serves as a leading mineral asset manager for the federal government, the states, and the American people.

Future Royalty Streams Identified for Sale

Future royalty streams from two specific oil fields have been identified to be sold.

The estimated value of the future royalty stream identified to be sold from field number one in the Gulf of Mexico is \$4.8 million based on the following calculation: The royalty stream from one million barrels are to be sold at a \$40.00 sale price per barrel per field number one first purchase price for oil with a 12 percent royalty rate for field number one.

The estimated value of the future royalty stream identified to be sold from field number two in the Gulf of Mexico is \$2.7 million based on the following calculation: The royalty stream from 750 thousand barrels are to be sold at a \$30.00 sale price per barrel per field number two first purchase price for oil with a 12 percent royalty rate for field number two.

The future royalty streams are expected to be sold sometime during the next fiscal year.

The above tables of revenue reported by category presents royalty revenue for dry gas, wet gas, natural gas plant liquids (NGPLs), oil and lease condensate, as well as rent revenue and bonus bid revenue, by offshore leases and by onshore leases for the current and prior reporting periods. In addition, totals for the dry and wet gas royalty revenue categories, NGPLs royalty revenue category, oil and lease condensate royalty revenue categories, the rent revenue category, and the bonus bid revenue category are reported, with a total for all revenue reported.

**Estimated Petroleum Royalties
End of Fiscal Year 20X3**

	Quantity (in thousands)	Purchase Price (\$)	Royalty Rate (%)
Dry Gas (Mcf)	60,100,000,000	\$4.00/Mcf	14.0%
Wet Gas (Mcf)	40,000,000,000	\$4.00/Mcf	15.0%
NGPLs (Bbl)	2,000,000	\$23.00/Bbl	9.0%
Oil (Bbl)	11,000,000	\$40.00/Bbl	13.0%
Lease Condensate (Bbl)	2,100,000	\$29.00/Bbl	15.0%

**Estimated Petroleum Royalties
End of Fiscal Year 20X2**

	Quantity (in thousands)	Purchase Price (\$)	Royalty Rate (%)
Dry Gas (Mcf)	58,100,000,000	\$5.00/Mcf	12.0%
Wet Gas (Mcf)	36,800,000,000	\$5.00/Mcf	13.0%
NGPLs (Bbl)	1,900,000	\$24.00/Bbl	8.0%
Oil (Bbl)	10,000,000	\$42.00/Bbl	11.0%
Lease Condensate (Bbl)	2,000,000	\$30.00/Bbl	13.0%

The tables above provide the quantity, purchase price, and royalty rate by category of estimated petroleum royalties at the end of the current and prior reporting periods.

Federal Regional Oil and Gas Sales Information

The tables on the following pages reflect sales volume, sales value, royalty revenue earned, and estimated value for royalty relief information for fiscal year 20XX.

Sales volume represents the quantity of a mineral commodity sold during the reporting period. Sales value represents the dollar value of the mineral commodity sold during the reporting period. Royalty revenue earned represents a stated share or percentage of the value of the mineral commodity produced.

Royalty relief is the reduction, modification, or elimination of any royalty payment due to promote development, increase production, or encourage production of marginal resources on certain leases or categories of leases. The estimated value for royalty relief is an approximated calculation of royalty relief. The estimated value for royalty relief is calculated based on a formula developed by the Department of the Interior.

The sales volume, sales value, royalty revenue earned, and the estimated value for royalty relief are presented on a regional basis. The information is presented on a regional basis to provide users of the financial statements with the regional variances in the prices of oil and gas for decision-making purposes, to reflect the amount of royalty relief granted and to forecast future royalty revenue.

Appendix D: Technical Terms

The terms explained in Appendix D have specific technical meanings within the oil and gas industry and may be useful in applying the requirements of this Statement.

Definitions of Resource and Reserve Components and Subcomponents

Provided below are definitions used by federal entities to describe oil and gas resource and reserve components and subcomponents.²¹ This section of Appendix D defines the terms used in *Figure 1 – Components of Federal Oil and Gas Resources*.

Undiscovered Resources

Resources estimated from broad geologic knowledge or theory and existing outside of known fields or known accumulations are undiscovered resources. Undiscovered resources can exist in untested prospects on unleased acreage, or on undrilled lease acreage, or in known fields. In known fields, undiscovered resources occur in undiscovered **pools** that are controlled by distinctly separate structural features or stratigraphic conditions.

The Mineral Management Service (MMS) and the U.S. Geological Survey (USGS) formerly conducted national assessments of undiscovered oil and gas resources together. The former was responsible for the offshore while the latter was responsible for onshore and state waters. The last such assessment was in 1995. MMS updates their assessment approximately every five years in accordance with DOI's five-year leasing program, with the last update in 2006.²² Since 1995, the USGS has not conducted an overall update for onshore and state waters, but has conducted assessments updates on a basin or area level.

The assessment considers recent geophysical, geological, technological, and economic information and uses a geologic play analysis approach for resource appraisal.

²¹ Unless otherwise noted, the definitions in this section were adapted from (1) the OCS Report, Estimated Oil and Gas Reserves, Gulf of Mexico, December 31, 2000, MMS 2003-050; available online at <https://www.gomr.mms.gov/PDFs/2003/2003-050.pdf>; last accessed December 2, 2009 and (2) the OCS Report, Estimated Oil and Gas Reserves Pacific Outer Continental Shelf as of December 31, 1997, MMS 99-0023; available online at <http://www.mms.gov/omm/pacific/offshore/oil-gaspdfs/99-0023.pdf>; last accessed December 2, 2009.

²² MMS Assessment of Undiscovered Technically Recoverable Oil and Gas Resources of the Nation's Outer Continental Shelf, 2006 (MMS 2006 Assessment); available online at <http://www.mms.gov/revaldiv/PDFs/2006NationalAssessmentBrochure.pdf>; last accessed December 2, 2009.

Undiscovered resources are **hydrocarbons** estimated on the basis of geologic knowledge and theory to exist outside of known accumulations. They are presumed to occur in unmapped and unexplored areas. The speculative and hypothetical resource categories comprise undiscovered resources. Undiscovered resources are classified as either undiscovered non-recoverable resources or undiscovered recoverable resources.

- Undiscovered Non-Recoverable Resources

The portion of undiscovered petroleum-initially-in-place quantities not currently considered to be recoverable. A portion of these quantities may become recoverable in the future as commercial circumstances change, technological developments occur, or additional data are acquired.

- Undiscovered Recoverable Resources

An assessment provides estimates of undiscovered recoverable resources in two categories for federal offshore oil and gas resources. However assessments for federal onshore oil and gas resources provide information for only one, the undiscovered, conventionally recoverable resources. Both are described below:

1. Undiscovered, conventionally recoverable resources: The portion of the hydrocarbon potential that is producible, using present or reasonably foreseeable technology, without any consideration of economic feasibility.²³
2. Undiscovered, economically recoverable resources: The portion of the undiscovered conventionally recoverable resources that is economically recoverable under imposed economic scenarios.

Reserves

In accordance with the Society of Petroleum Engineers (SPE), the World Petroleum Congresses (WPC), and the American Association of Petroleum Geologists (AAPG), the definition for “reserves” and the following explanatory paragraphs are presented as follows:²⁴

Reserves are those quantities of petroleum which are anticipated to be commercially recovered from known accumulations from a given date forward. All reserve estimates

²³MMS Assessment of Undiscovered Technically Recoverable Oil and Gas Resources of the Nation's Outer Continental Shelf, 2003 Update; available online at <http://www.mms.gov/revaldiv/PDFs/2003NationalAssessmentUpdate.pdf>; last accessed December 2, 2009.

²⁴ WPC/SPE/AAPG Petroleum Reserves Definitions – 1997; available online at http://www.spe.org/spe-site/spe/spe/industry/reserves/Petroleum_Reserves; last accessed December 2, 2009.

involve some degree of uncertainty. The uncertainty depends chiefly on the amount of reliable geologic and engineering data available at the time of the estimate and the interpretation of these data.

The relative degree of uncertainty may be conveyed by placing reserves into one of two principal classifications, either 1) unproved or 2) proved.

Unproved Reserves

After a lease qualifies under Title 30, Section 250.115/116 of the Code of Federal Regulations, the MMS Field Naming Committee reviews the new producible lease to assign it to an existing field or, if the lease is not associated with an established geologic structure, to a new field. Regardless of where the lease is assigned, the reserves associated with the lease are initially considered to be unproved reserves. Unproved reserves are based on geologic or engineering information similar to that used in estimates of proved reserves, but, technical, contractual, economic, or regulatory uncertainties preclude such reserves from being classified as proved.

Unproved reserves may be divided into two subclassifications, possible and probable, which are similarly based on the level of uncertainty.

Unproved possible reserves are less certain than unproved probable reserves and can be estimated with a low degree of certainty, which is insufficient to indicate whether they are more likely to be recovered than not. **Reservoir** characteristics are such that a reasonable doubt exists that the project will be commercial. After a lease qualifies under Title 30, Section 250.115/116 of the Code of Federal Regulations, the reserves associated with the lease are initially classified as unproved possible.

Unproved probable reserves are less certain than proved reserves and can be estimated with a degree of certainty sufficient to indicate they are more likely to be recovered than not. Reserves in fields for which a schedule leading to a Development and Production Plan (DPP) has been submitted to the MMS have been classified as unproved probable.

Proved Reserves

Proved reserves can be estimated with reasonable certainty to be recoverable under current economic conditions, such as prices and costs prevailing at the time of the estimate. Proved reserves must either have facilities that are operational at the time of the estimate to process and transport those reserves to market or a commitment or reasonable expectation to install such facilities in the future. Proved reserves can be subdivided into undeveloped and developed.

Proved undeveloped reserves are classified proved undeveloped when a relatively large expenditure is required to install production and/or transportation facilities, a commitment by the operator is made, and a timeframe to begin production is established. Proved undeveloped reserves are reserves expected to be recovered from (1) yet undrilled wells, (2) deepening existing wells, or (3) existing wells for which a relatively large expenditure is required for recompletion.

Proved developed reserves are classified as proved developed when the reserves are expected to be recovered from existing wells (including reserves behind pipe). Reserves are considered developed only after necessary production and transportation equipment have been installed or when the installation costs are relatively minor. Proved developed reserves are subcategorized as producing or non-producing. This distinction is made at the reservoir level and not at the field level.

- Any developed reservoir in a developed field that has not produced or has not had sustained production during the past year is considered to contain proved developed non-producing reserves. This category includes reserves contained in non-producing reservoirs, reserves contained behind-pipe, and reservoirs awaiting well workovers or transportation facilities.
- Once the first reservoir in a field begins production, the reservoir is considered to contain proved developed producing reserves, and the field is considered on production. If a reservoir had sustained production during the last year, it is considered to contain proved developed producing reserves.

End of the terms in Figure 1 that are defined under the subheading **Definitions of Resource and Reserve Components and Subcomponents**

Other Definitions

Adjustments: The quantity which preserves an exact annual reserves balance within each State or State subdivision. These adjustments are the yearly changes in the published reserve estimates that cannot be attributed to the estimates for other reserve change categories because of the survey and statistical estimation methods employed. For example, variations as a result of changes in the operator frame, different random samples or imputations for missing or unreported reserve changes, could contribute to adjustments.²⁵

²⁵ Energy Information Administration, U.S. Crude Oil, Natural Gas, and Natural Gas Liquids Reserves 2007 Annual Report, Glossary (EIA 2007 Annual Report Glossary); available online at http://www.eia.doe.gov/oil_gas/natural_gas/data_publications/crude_oil_natural_gas_reserves/cr.html; last accessed December 2, 2009.

Basin: A depression in the Earth's surface that collects sediment (loose, uncemented pieces of rock or minerals).²⁶

Bonus Bid: Leases issued in areas known to contain minerals are awarded through a competitive bidding process. A bonus bid, as used in this Statement, represents the cash consideration paid to the United States by the successful bidder for a mineral lease. The payment is made in addition to the rent and royalty obligations specified in the lease.²⁷

Crude Oil: A mixture of hydrocarbons that exists in the liquid phase in natural underground reservoirs and remains liquid at atmospheric pressure after passing through surface separating facilities. Crude oil may also include: 1) small amounts of hydrocarbons that exist in the gaseous phase in natural underground reservoirs but are liquid at atmospheric pressure after being recovered from oil well gas in lease separators, and that subsequently are commingled with the crude oil stream²⁸ without being separately measured; and, 2) small amounts of nonhydrocarbons produced with the oil.²⁹

Dry Gas: The actual or calculated volumes of natural gas which remain after: 1. The liquefiable hydrocarbon portion has been removed from the gas stream (i.e., gas after lease, field, and/or plant separation) 2. Any volumes of nonhydrocarbon gases have been removed where they occur in sufficient quantity to render the gas unmarketable.³⁰

Estimated Petroleum Royalties: The estimated end-of-period value of the federal government's royalty share of proved oil and gas reserves from federal oil and gas resources.

Estimated Production: The volumes of oil and gas that are extracted or withdrawn from reservoirs during the report year.

Estimated Value for Royalty Relief: The estimated value for royalty relief is the calculated approximation of royalty relief based on a formula developed by DOI.

²⁸ A crude oil stream is crude oil produced in a particular field or a collection of crude oils with similar qualities from fields in close proximity, which the petroleum industry usually describes with a specific name, such as West Texas Intermediate (EIA-182 Domestic Crude Oil First Purchase Report Instructions; available online at http://www.eia.doe.gov/pub/oil_gas/petroleum/survey_forms/eia182i.pdf; last accessed December 2, 2009).

²⁹ EIA 2007 Annual Report Glossary.

³⁰ EIA Glossary, available at <http://www.eia.doe.gov/glossary/>; last accessed December 1, 2009.

Extensions: The reserves credited to a reservoir because of enlargement of its proved area. Normally the ultimate size of newly discovered fields, or newly discovered reservoirs in old fields, is determined by wells drilled in years subsequent to discovery. When such wells add to the proved area of a previously discovered reservoir, the increase in proved reserves is classified as an extension.³¹

Federal Oil and Gas Resources: Oil and gas resources over which the federal government may exercise sovereign rights with respect to exploration and exploitation and from which the federal government has the authority to derive revenues for its use. Federal oil and gas resources do not include resources over which the federal government acts as a fiduciary for the benefit of a non-federal party.

Field: An area consisting of a single reservoir or multiple reservoirs all grouped on, or related to, the same general geological structural feature and/or stratigraphic trapping condition. There may be two or more reservoirs in a field that are separated vertically by impervious strata, laterally by local geologic barriers, or by both. The area may include one lease, a portion of a lease, or a group of leases with one or more wells that have been approved as producible.³²

First Purchase Price: The actual amount paid by the first purchaser for crude oil as it leaves the lease on which it was produced.³³ A “first purchase” constitutes a transfer of ownership of crude oil during or immediately after the physical removal of the crude oil from a production property for the first time.

Gas: A mixture of hydrocarbon compounds and small quantities of various nonhydrocarbons existing in the gaseous phase or in solution with crude oil in natural underground reservoirs at reservoir conditions.³⁴

Hydrocarbon: An organic chemical compound of hydrogen and carbon in the gaseous, liquid, or solid phase. The molecular structure of hydrocarbon compounds varies from the simplest (methane, a constituent of natural gas) to the very heavy and very complex.³⁵

Lease: Any contract, profit-share arrangement, joint venture, or other agreement issued or approved by the United States under a mineral leasing law that authorizes exploration for, extraction of, or removal of oil or gas.³⁶

³³ Adapted from Form EIA-182 Domestic Crude Oil First Purchase Report Instructions.

³⁴ EIA 2007 Annual Report Glossary.

³⁵ EIA Glossary.

³⁶ 30 U.S.C. §1702 (5).

Lease Condensate: A mixture consisting primarily of pentanes and heavier hydrocarbons which is recovered as a liquid from natural gas in lease or field separation facilities. This category excludes natural gas plant liquids, such as butane and propane, which are recovered at downstream natural gas processing plants or facilities.³⁷

Natural Gas Plant Liquids (NGPLs): Those hydrocarbons in natural gas that are separated as liquids at natural gas processing plants, fractionating and cycling plants, and, in some instances, field facilities. Lease condensate is excluded. Products obtained include ethane; liquefied petroleum gases (propane, butanes, propane-butane mixtures, ethane-propane mixtures); isopentane; and other small quantities of finished products, such as motor gasoline, special naphthas, jet fuel, kerosene, and distillate fuel oil.³⁸

Net of Sales and Acquisitions³⁹: The net change in the quantity of reserve estimates, either positive or negative, as a result of reserves gained through purchase and deducted through sale during the report year.

New Discoveries in Old Fields: The volumes of proved reserves of crude oil, natural gas, and/or natural gas liquids discovered during the report year in new reservoir(s) located in old fields.⁴⁰

New Field Discoveries: The volumes of proved reserves of crude oil, natural gas and/or natural gas liquids discovered in new fields during the report year.⁴¹

³⁷ EIA 2007 Annual Report Glossary.

³⁸ EIA Glossary.

³⁹ Acquisitions are the volume of proved reserves gained by the purchase of existing fields or properties, from the date of purchase or transfer (EIA 2007 Annual Report Glossary).

⁴⁰ EIA 2007 Annual Report Glossary.

⁴¹ Ibid.

Oil: See Crude Oil.

Outer Continental Shelf (OCS): All submerged lands seaward and outside the area of lands beneath navigable waters. Lands beneath navigable waters are interpreted as extending from the coastline 3 nautical miles into the Arctic Ocean, the Atlantic Ocean, the Pacific Ocean, and the Gulf of Mexico, excluding the coastal waters off Texas and western Florida. Lands beneath navigable waters are interpreted as extending from the coastline 3 marine leagues into the Gulf of Mexico off Texas and western Florida.⁴²

Play: A group of pools that share a common history of hydrocarbon generation, migration, reservoir development, and entrapment.⁴³

Pool: A discovered or undiscovered accumulation of hydrocarbons, typically within a single stratigraphic interval.⁴⁴

Proved Reserves: For crude oil and gas, proved reserves are the estimated quantities that geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions. For lease condensate and natural gas plant liquids, proved reserves are the estimated quantities demonstrated with reasonable certainty to be recoverable in future years in conjunction with the production of proved gas reserves, under existing economic and operating conditions.⁴⁵ The total quantity of proved reserves is calculated by adding the quantity of reserves reported as **revisions and adjustments, net of sales and acquisitions**, total recoveries and deducting **estimated production** during the report year.⁴⁶

⁴² MRM Glossary of Mineral Terms.

⁴³ MMS 2006 Assessment.

⁴⁴ Ibid.

⁴⁵ EIA 2007 Annual Report Glossary.

⁴⁶ For a more detailed explanation of proved reserves and its components, see the section of Appendix D titled Definitions of Resource and Reserve Components and Subcomponents.

Region: *The term region or regional refers to the geographic area or areas for which estimated petroleum royalties are calculated.*⁴⁷

Regional Estimated Petroleum Royalties: Regional estimated petroleum royalties means the estimated end-of-period value of the federal government's royalty share of proved oil and gas reserves from federal oil and gas resources in each region.

Rent: Annual payments, normally a fixed dollar amount per acre, required to preserve the rights to a lease while the lease is not in production. A rent schedule is established at the time a lease is issued.⁴⁸

⁴⁷For example, offshore federal oil and gas resources have typically been classified into regions such as: Alaska Region – the Federal Outer Continental Shelf Alaska; Pacific Region – the Federal OCS Pacific (Washington, Oregon, and California); Gulf of Mexico (GOM) Region – the Federal OCS Gulf of Mexico (Texas, Louisiana, Mississippi, Alabama, and GOM portion of Florida); and Atlantic Region – the Federal OCS Atlantic portion of all East Coast States.

For onshore federal oil and gas resources, the U.S. Department of Energy typically divides the United States into regions, which are referred to as Petroleum Administration for Defense Districts (PADD), for planning purposes. The result is a geographic aggregation of the 50 States and the District of Columbia into five Districts, with PADD I further split into three sub-districts, as follows:

PADD I (East Coast): PADD IA (New England) – Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont; PADD IB (Central Atlantic) – Delaware, District of Columbia, Maryland, New Jersey, New York, and Pennsylvania; and, PADD IC (Lower Atlantic) – Florida, Georgia, North Carolina, South Carolina, Virginia, and West Virginia.

PADD II (Midwest) – Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, Oklahoma, South Dakota, Tennessee, and Wisconsin.

PADD III (Gulf Coast) – Alabama, Arkansas, Louisiana, Mississippi, New Mexico, and Texas.

PADD IV (Rocky Mountain) – Colorado, Idaho, Montana, Utah, and Wyoming.

PADD V (West Coast) – Alaska, Arizona, California, Hawaii, Nevada, Oregon, and Washington.

⁴⁸MRM Glossary of Mineral Terms.

Reservoir: A porous and permeable underground formation containing an individual and separate natural accumulation of producible hydrocarbons (oil and/or gas) which is confined by impermeable rock or water barriers and is characterized by a single natural pressure system.⁴⁹

Revisions: Changes to prior year-end proved reserves estimates, either positive or negative, resulting from new information other than an increase in proved acreage (extension). Revisions include increases of proved reserves associated with the installation of improved recovery techniques or equipment. They also include correction of prior report year arithmetical or clerical errors and adjustments to prior year-end production volumes to the extent that these alter reported prior year reserves estimates.⁵⁰

Revisions and Adjustments: The net change in the quantity of reserve estimates, either positive or negative, as a result of adding changes reported as revisions and adjustments during the report year.

Royalty: Any payment based on the value or volume of production which is due to the United States on production of oil or gas from the Outer Continental Shelf or federal lands, or any minimum royalty owed to the United States under any provision of a lease.⁵¹

Royalty-In-Kind: A program operated under the provisions of the Mineral Leasing Act of 1920 and the Outer Continental Shelf Lands Act of 1953. The federal government, as lessor, may take part or all of its oil and gas royalties “in kind” (a volume of the commodity) as opposed to “in value” (money). Under the oil royalty-in-kind program, the government sells oil at fair market value to eligible refiners who do not have access to an adequate supply of crude oil at equitable prices.⁵²

Royalty Rate: A proportionate interest in the production value of mineral deposits due the lessor from the lessee in accordance with a lease agreement.⁵³

Royalty Relief: Existing statutes authorize MMS to grant royalty relief to operators on the production of oil and gas resources from federal oil and gas leases. Royalty relief is the reduction, modification, or elimination of any royalty to operators to promote development, increase production, or encourage production of marginal resources on certain leases or categories of leases.⁵⁴

⁵⁰ Ibid.

⁵¹ Adapted from 30 U.S.C. § 1702 (14).

⁵² MRM Glossary of Mineral Terms.

⁵³ Ibid.

⁵⁴ 43 U.S.C. § 1337(a).

Sales Value: The proceeds received for the sale of a product. Sales value is calculated by multiplying the sales volume by unit price.

Sales Volume: The volume, or quantity, of the product that is sold. The sales volume is measured in thousand cubic feet (Mcf) for gas and in barrels (Bbl) for oil.

Technically Recoverable Resources: The term used to describe the total quantity of undiscovered recoverable resources and unproved reserves. Proved reserves are not included in the estimated quantity of technically recoverable resources.

Wellhead Price: The value of the purchased natural gas at the mouth of the well. In general, the wellhead price is considered to be the sales price obtainable from a third party in an arm's length transaction. Posted prices, requested prices, or prices as defined by lease agreements, contracts, or tax regulations should be used where applicable.⁵⁵

Statement of Federal Financial Accounting Standards 39: Subsequent Events: Codification of Accounting and Financial Reporting Standards Contained in the AICPA Statements on Auditing Standards

Status

Issued	August 4, 2010
Effective Date	Effective upon issuance.
Affects	Amends SFFAS 5, footnote 17.
Affected by	None.

Summary

The American Institute of Certified Public Accountants' (AICPA) Statements on Auditing Standards (SAS) AU section 560, *Subsequent Events*, includes accounting and financial reporting guidance that is not discussed in the authoritative literature that establishes accounting principles. The objective of this Statement is to incorporate that guidance into the authoritative literature of the FASAB. Insofar as AU Section 560 established principles pertaining to the preparation of basic information and required supplementary information (RSI)¹ it would be more appropriately included in the accounting and financial reporting standards of the FASAB than in the auditing literature. Accordingly, this Statement does not establish new accounting guidance but rather incorporates the existing guidance (to the extent appropriate in the federal government environment) into the FASAB standards. In developing this Statement, the FASAB also considered incorporating existing AICPA guidance regarding an entity's ability to continue as a going concern and related party transactions. However, for reasons presented in the basis for conclusions (Appendix A), the FASAB does not provide accounting standards in these areas at this time.

The requirements in this Statement will improve financial reporting by incorporating authoritative accounting and financial reporting literature into a single source and thereby better enabling entities to prepare basic information and RSI in conformity with generally accepted accounting principles (GAAP). The Statement addresses the circumstances under which an entity should recognize or disclose events or transactions occurring after the end of the reporting period but before issuance of the financial report.

¹ [Footnote 1 rescinded by SFFAS 57, *Omnibus Amendments 2019*.]

Introduction

Purpose

1. Accounting and financial reporting guidance regarding **subsequent events**² has been included in SASs of the AICPA. The objective of this Statement is to incorporate that guidance into the Statements of Federal Financial Accounting Standards.

Materiality

2. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Effective Date

3. The requirements in this Statement are effective upon its issuance.

Accounting Standards

Scope

4. This Statement establishes accounting and financial reporting standards for subsequent events and applies to the accounting for, and disclosure of, subsequent events not addressed in other applicable GAAP.
5. Other applicable GAAP may address the accounting treatment of events or transactions that occur after the end of the reporting period but before the financial statements are issued. If an event or transaction is within the scope of other applicable GAAP, then an entity should

² Glossary terms are in boldface type the first time they appear in this Statement.

follow the guidance in that applicable GAAP, rather than the guidance in this standard. The following are examples of other applicable GAAP that prescribe the accounting and disclosures for specific subsequent events. Note that this is not meant to be an exhaustive list.

- Statement of Federal Financial Accounting Standards (SFFAS) 17, *Accounting for Social Insurance*, par. 24.
 - SFFAS 27, *Identifying and Reporting Earmarked Funds*, par. 23.
 - SFFAS 36, *Reporting Comprehensive Long-Term Fiscal Projections for the U.S. Government*, par. 33.
6. Also, this Statement amends SFFAS 5, *Accounting for Liabilities of the Federal Government*, footnote 17.
 7. This Statement applies to the basic information and required supplementary information (RSI)³ of all federal reporting entities that are presented in conformity with GAAP.⁴

Definitions

8. **Subsequent events**: Events or transactions that affect the basic information or RSI that occur subsequent to the end of the reporting period but before the financial report is issued.
9. **Recognized events**: Subsequent events that provide additional evidence with respect to conditions that existed at the end of the reporting period and affect the estimates inherent in the process of preparing basic information and RSI.
10. **Nonrecognized events**: Subsequent events that provide evidence with respect to conditions that did not exist at the end of the reporting period but arose subsequent to that date.

³ Basic information and RSI are required components of a financial report prepared in conformity with GAAP. In the federal government environment, a financial report is known as a Performance and Accountability Report or an Agency Financial Report and may include other components required by legislation or administrative directives.

⁴ [Footnote 4 rescinded by SFFAS 57, Omnibus Amendments 2019.]

Subsequent Events

11. Events or transactions that affect the basic information or RSI sometimes occur subsequent to the end of the reporting period but before the financial report is issued. Some of those transactions and events (referred to as recognized events) require adjustments while others (referred to as nonrecognized events) may require disclosure in the basic information or RSI.
12. Recognized events consist of those events that provide additional evidence with respect to conditions that existed at the end of the reporting period and affect the estimates inherent in the process of preparing basic information and RSI. In evaluating the conditions on which the estimates were based, all information that becomes available prior to the issuance of the financial report should be used. The basic information or RSI as applicable should be adjusted for any changes in estimates resulting from the use of such evidence.
13. Identifying recognized events calls for the exercise of professional judgment and knowledge of the facts and circumstances. The receipt of information regarding the impairment of an asset or the incurrence of a liability subsequent to the end of the reporting period may be indicative of conditions existing at the end of the reporting period, thereby calling for adjustment of the basic information or RSI before the issuance of the financial report. For example, the settlement of litigation for an amount different from the liability recorded in the accounts would require adjustment of the basic information if the event that gave rise to the litigation, such as a personal injury occurring on government property, had taken place prior to the end of the reporting period. In this example, the resolution of an uncertainty may confirm the impairment of an asset or incurrence of a liability as of the end of the reporting period.
14. Subsequent events affecting the realization of assets such as receivables and inventories or the settlement of estimated liabilities will ordinarily require adjustment of the basic information or RSI because such events typically represent the culmination of conditions that existed over a relatively long period of time.
15. Nonrecognized events consist of those events that provide evidence with respect to conditions that did not exist at the end of the reporting period, but arose subsequent to that date. These events should not result in adjustment of the basic information or RSI. Some of these events, however, may be of such a nature that their disclosure in basic information or RSI is required to keep the basic information or RSI from being misleading. Subsequent events such as changes in the quoted market prices of securities ordinarily should not result in adjustment of the basic information or RSI because such changes typically reflect a concurrent evaluation of new conditions.

-
16. Examples of nonrecognized events that may require disclosure in basic information or RSI, but should not result in adjustment, include the enactment of legislation, after the end of the reporting period, to establish a major federal program or an appropriation to provide benefits or services to protect the public's health and safety during a major disaster that occurred after the end of the reporting period but before the financial report is issued. The disclosures should concern matters that will probably affect the judgments and decisions of those relying on the financial report.
 17. When a financial report is reissued, certain events may have occurred subsequent to the original issuance that requires disclosure in the reissued financial report. Events requiring disclosure in the reissued financial report are those that are considered important to a user's understanding of the reissued financial report. These events, occurring between the time of original issuance and reissuance of the financial report, should not result in adjustment of the basic information or RSI unless the adjustment meets the criteria for the correction of an error or the criteria for prior-period adjustments as set forth in SFFAS 21, *Reporting Correction of Errors and Changes in Accounting Principles, Amendment of SFFAS 7, Accounting for Revenue and Other Financing Sources*. This also applies for events occurring subsequent to the original issuance when a financial report is reissued in comparative form with a financial report of subsequent periods.
-

Effect on Current Standards

18. In addition, SFFAS 5, footnote 17 is amended as follows to conform to the above requirements:

~~Contingencies are different from "subsequent events," as used in the accounting/audit literature. Subsequent events are events or transactions that affect the basic information or required supplementary information (RSI) and occur subsequent to the end of the reporting period but before the financial report is issued. Balance Sheet date, but prior to the issuance of the financial statements and auditor's report, that have a material effect on the financial statements and therefore require adjustment or disclosure in the statements. Some of those transactions and events (referred to as recognized events) require adjustments to the basic information or RSI while others (referred to as nonrecognized events) may require disclosure in the basic information or RSI. A subsequent event may affect a contingency by providing information that resolves an uncertainty related to a contingent liability and confirm the impairment of an asset or incurrence of a liability as of the end of the reporting period.~~

Effective Date

19. The requirements in this Statement are effective upon its issuance.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by FASAB members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

- A1. Representatives of the AICPA requested that the U.S. accounting standards-setters consider adopting certain guidance for accounting and financial reporting issues that now reside in the professional auditing literature. In July 2008, the FASAB joined the Governmental Accounting Standards Board in responding to this request.
- A2. The AICPA SASs address certain accounting and financial reporting issues not included in the FASAB's authoritative literature that establishes accounting principles. Those initially-identified issues concerned subsequent events, an entity's ability to continue as a going concern (going concern), and related parties. The FASAB believes that the presentation of principles used in the preparation of a financial report is more appropriately included in accounting and financial reporting standards rather than in the auditing literature.

Subsequent Events

- A3. AU Section 560, *Subsequent Events*, discusses events or transactions that occur subsequent to the end of the reporting period but prior to the issuance of the financial report. Such events require either adjustment or disclosure in the basic information or RSI and the auditing literature discusses the two types of events for consideration.
- A4. The FASAB believes that incorporating the accounting and financial reporting guidance essentially as it exists in the AICPA literature would only change the source of the guidance and not significantly affect practice. Upon evaluating the auditing literature for subsequent events, the FASAB decided that the guidance is readily adaptable to the federal government environment with only minor terminology enhancements.

Going Concern

- A5. AU Section 341, *The Auditor's Consideration of an Entity's Ability to Continue as a Going Concern*, identifies certain factors that could indicate that there may be substantial doubt about a non-governmental entity's ability to continue as a going concern and provides examples of information that an entity might disclose if the conditions warrant such disclosures. However, the FASAB considered the nature of the federal government and determined that going-concern as contemplated in the commercial sense is not applicable to federal government financial reporting. Additionally, the FASAB considered that related guidance has been developed as discussed below and, as a result, decided to exclude the going concern standard from the Statement.
- A6. On September 28, 2009, the FASAB issued SFFAS 36, *Reporting Comprehensive Long-Term Fiscal Projections for the U.S. Government*. This standard concerns the consolidated financial report (CFR) of the federal government and requires the reporting of information to help users determine whether future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due. It will thereby facilitate assessments of the extent to which financial burdens without related benefits were passed on by current year taxpayers to future year taxpayers.
- A7. On the other hand, the FASAB noted that some federal government component units may experience fiscal challenges and may need to seek additional funding from Congress to continue their missions. In such instances and because SFFAS 36 only applies to the CFR, the FASAB expects that the entity would address the matter in the Management's Discussion and Analysis (MD&A) section of its financial report. SFFAS 15, *Management's Discussion and Analysis*, paragraph 3 provides guidance for reporting information in an entity's MD&A.

Related Parties

- A8. AU Section 334, *Related Parties*, attributes the requirement for related party disclosures to the Financial Accounting Standards Board's (FASB) Accounting Standards Codification (ASC) 850 (Statement of Financial Accounting Standards 57), *Related Party Disclosures*, and provides indicators of related party transactions. The FASAB determined that the related party guidance was not readily adaptable to the federal government and discussed the applicability of related FASAB projects and current federal financial reporting practices to the issue of related party transactions.
- A9. The FASAB has an on-going Federal Entity project that is intended to define and characterize federal reporting entities and to establish criteria for including various

organizational units in a reporting entity. Also, the project will involve research on the various types of relationships that the federal government has established to carry out its public policy functions. The FASAB believes that it would be premature to incorporate the related party guidance before it completes its Federal Entity project. Consequently, the FASAB decided to conduct research on related parties as part of the Federal Entity project and use the research results to develop related party guidance applicable to the federal government environment.

A10. In addition, the FASAB noted that federal agencies typically purchase goods and services from other federal agencies or organizational units within the same agency and the FASAB has provided guidance to assist in reporting this activity. The guidance includes, but is not limited to:

- a. SFFAS 4, *Managerial Cost Accounting Standards and Concepts*;
- b. SFFAS 5, *Accounting for Liabilities of the Federal Government*;
- c. SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*; and
- d. SFFAS 30, *Inter-Entity Cost Implementation: Amending SFFAS 4, Managerial Cost Accounting Standards and Concepts*.

A11. The FASAB expects that this statement will not alter current reporting practices. However, some are concerned that reporting practices may change if the auditing guidance changes before the Federal Entity project is completed. If so, the FASAB would issue a Technical Bulletin to assist the federal financial reporting community.

Exposure Draft

A12. The Board published the exposure draft (ED), *Subsequent Events: Codification of Accounting and Financial Reporting Standards Contained in the AICPA Statements on Auditing Standards*, on October 20, 2009, with comments requested by December 28, 2009. Upon release of the ED, notices and press releases were provided to: the Federal Register, FASAB News, the Journal of Accountancy, AGA Today, the CPA Journal, Government Executive, the CPA Letter, and Government Accounting and Auditing Update, the CFO Council, the Council of Inspectors General on Integrity and Efficiency, the Financial Statement Audit Network, and committees of professional associations generally commenting on EDs in the past.

A13. This broad announcement was followed by direct mailings of the exposure draft to the Subcommittee on Federal Financial Management, Government Information, and International Security, Committee on Homeland Security and Governmental Affairs, United States Senate, and the Subcommittee on Government Management, Organization, and Procurement, Committee on Oversight and Government Reform, House of Representatives.

A14. The Board received 17 responses from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		2
Auditors	3	1
Preparers and financial managers	11	
Totals	14	3

A15. Respondents agreed that accounting principles regarding subsequent events should be incorporated into the FASAB's authoritative literature and they generally agreed that the going concern and related party guidance were not readily adaptable to the federal government environment. While some respondents believed that it would be helpful to consider providing additional guidance, such as FASB requirements for subsequent events, the objective of the Board's project was to incorporate the guidance presented in the audit literature rather than developing additional guidance or requiring changes in current practices.

A16. In addition, some respondents believed that it would be helpful to clarify aspects of the statement. Particularly, a respondent noted that in federal financial reporting, the term *financial statements* may refer to a *financial report*. A financial report includes basic information, required supplementary information (RSI), and required supplementary stewardship information (RSSI),⁵ and may include other accompanying information (OAI). The respondent believed that the Statement should be clarified to state that it applies to *basic statements* and disclosures. However, if the Statement applies to a financial report, it should clarify the components or categories of the report and how it applies to those categories. The Board clarified this concern by clearly indicating that the Statement applies to basic information and RSI. The Board's standards are authoritative for only the basic information and RSI and do not apply to the other portions of a document (e. g., Performance and Accountability Report, Agency Financial Report) in which basic information and RSI are included. Further, auditors of the financial statements have certain

⁵ [Footnote 5 rescinded by SFFAS 57, Omnibus Amendments 2019.]

responsibilities to read OAI. Any identified material inconsistencies between OAI and the basic information and RSI and any identified material misstatements of fact in OAI would affect the audit and/or the auditor's report.

- A17. Another respondent believed that the definition of subsequent events should explicitly state that subsequent events pertain to *material* events and transactions and the term *material* should be used throughout the Statement as applicable. Also, one respondent believed that the term *material* should be included in the definition of subsequent events presented in SFFAS 5, footnote 17. The Forward to the FASAB's *Pronouncements as Amended*, June 30, 2009, discusses the term *materiality*. It states,

The Board intends that application of authoritative guidance be limited to items that are material. "Materiality" has not been strictly defined in the accounting community; rather, it has been a matter of judgment on the part of preparers of financial statements and the auditors who attest to them.

Consequently, paragraph 2 of the Statement provides the Board's position on the matter of materiality regarding this Statement.

- A18. An additional respondent believed that the examples in paragraph 16 should be clarified to help readers understand what type of events should be considered nonrecognized events. The Board revised the examples of nonrecognized events in paragraph 16 to clarify that such events provide evidence with respect to conditions that did not exist at the end of the reporting period but arose subsequent to that date. The examples include legislative enactments occurring subsequent to the end of the reporting period. Also, additional guidance was added to assist readers in determining nonrecognized events that should be disclosed.

Board Approval

- A19. This statement was approved for issuance by all members of the Board. The written ballots are available for public inspection at the FASAB's offices.

Statement of Federal Financial Accounting Standards 40: Definitional Changes Related to Deferred Maintenance and Repairs: Amending Statement of Federal Financial Accounting Standards 6, Accounting for Property, Plant, and Equipment

Status

Issued	May 11, 2011
Effective Date	For periods beginning after September 30, 2011. Earlier implementation encouraged.
Affects	SFFAS 6, par. 77, 78, 80, 82, 83, and 84.
Affected by	None.

Summary

Deferred maintenance and repairs (DM&R) is maintenance and repair activity that was not performed when it should have been or was scheduled to be and which is put off or delayed to a future period. Although DM&R is not sufficiently measurable to support recognition or disclosure as basic information, it is nonetheless a deferred cost and has been reported as required supplementary information (RSI). Information about DM&R has been required because the information is important to help financial statement users assess the efficiency and effectiveness of the federal government's management of property, plant, and equipment. The Board believes reliable government-wide data are needed to assist users in making assessments related to property, plant, and equipment.

This Statement amends Statement of Federal Financial Accounting Standards (SFFAS) 6, *Accounting for Property, Plant, and Equipment* (PP&E). The amendments (1) clarify that "deferred maintenance" reporting includes deferred repairs, (2) revise the examples of maintenance and repair activities to better reflect current practices and encompass activities associated with heritage assets, multi-use heritage assets and stewardship land as well as equipment and other personal property, and (3) address issues related to the distinction between maintenance, repairs, and new capital expenditures.

These amendments represent a first step toward improving reporting on deferred maintenance and repairs. The Board is working, and will continue to work, closely with stakeholders interested in improving management of and reporting on federal PP&E and related deferred maintenance. By addressing definitional issues as a first step, the Board will facilitate continued cooperation with stakeholders toward improved financial reporting especially as it plans to address measurement and reporting issues.

Introduction

Purpose

1. Issues regarding both federal real property management and DM&R are currently being addressed by stakeholders including members of Congress,¹ federal agencies² as well as federal and non-federal councils.³ As part of a coordinated effort among key federal stakeholders, the Board is committed to providing timely guidance on issues currently being addressed. The Board believes clarifying the definition of maintenance and repairs is an important first step in improving the accounting and reporting of DM&R.
2. The objective of this Statement is to incorporate definitional changes in response to concerns raised by the financial and technical⁴ communities. The Board also considered the findings of a Federal Facilities Council (FFC) Committee on Operations & Maintenance review of SFFAS 6. The major SFFAS 6 concerns it identified include: (a) different interpretations among agencies and auditors regarding what to report and how to report, (b) introduction of terms not used in the technical community, (c) terms in the maintenance definition loosely defined, and (d) terms in the maintenance definition not reflective of actual practice.
3. Additionally, the Board desires to improve and, where needed, develop accounting and reporting guidance relative to DM&R that best reflects or enhances current federal practices. SFFAS 14, *Amendments to Deferred Maintenance Reporting Amending SFFAS no. 6, Accounting for Property, Plant, and Equipment and SFFAS 8, Supplementary Stewardship Reporting*, issued in April 1999, reclassified deferred maintenance (DM) to RSI

¹ Federal Real Property Disposal Enhancement Act of 2009. H.R. 2495, 111th Congress, 1st Session. Federal Real Property Disposal Pilot Program. S. 1667, 110th Congress, 2nd Session.

² Presidential Executive Order 13327, Federal Real Property Asset Management signed February 4th, 2004 established the following policy in Section 1, "It is the policy of the United States to promote the efficient and economical use of America's real property assets and to assure management accountability for implementing Federal real property management reforms. Based on this policy, executive branch departments and agencies shall recognize the importance of real property resources through increased management attention, the establishment of clear goals and objectives, improved policies and levels of accountability, and other appropriate action."

³ National Research Council (NRC) Study on Predicting Outcomes of Investments in Maintenance and Repair for Federal Facilities. This study will be conducted by a panel of experts. The committee plans to finish its report by December 31, 2010.

⁴ This Statement uses the phrase "technical community" to refer to agency personnel responsible for the management of property, plant, and equipment including technical issues such as maintenance and repair.

primarily as a result of auditor concerns. Since then, asset assessment methodologies have matured and Administration initiatives⁵ have prompted agencies to develop condition assessment, measurement, and reporting systems. However, these methodologies and systems are not uniform throughout government, resulting in a lack of comparability.

Materiality

4. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Standards

Scope

5. This Statement revises maintenance and repair (M&R) terminology in Statement of Federal Financial Accounting Standards (SFFAS) 6, as amended, by modifying the definition of maintenance and by replacing the term “deferred maintenance” with “deferred maintenance and repairs.”

Effect on Existing Standards - SFFAS 6

6. SFFAS 6, paragraph 78 is replaced with the following text:

Maintenance and repairs are activities directed toward keeping fixed assets in an acceptable condition.¹ Activities include preventive maintenance; replacement of parts, systems,^{1a} or components; and other activities needed to preserve or maintain the asset. Maintenance and repairs, as distinguished from capital improvements, exclude activities directed towards expanding the capacity of an asset or otherwise upgrading it to serve needs different from, or significantly greater than, its current use.

⁵ Presidential Executive Order 13327.

[Footnote 1 – ¹ The determination of acceptable condition may vary both between entities and among sites within the same entity. Management shall determine what level of condition is acceptable.]

[Footnote 1a – ^{1a} The term “systems” can refer to either (1) information technology assets (e.g., hardware, internal use software, data communication devices, etc.) or (2) groupings (assemblages) of component parts belonging to a building, equipment or other personal property.]

7. The term “maintenance” is replaced with “maintenance and repairs” and conforming grammatical changes are made in the following paragraphs of SFFAS 6:
 - a. Paragraph 77 – “Deferred maintenance and repairs” ~~are~~ is maintenance and repairs...
 - b. Paragraph 80 – ...for deferred maintenance and repairs may...
 - c. Paragraph 82 – ...in a forecast of maintenance and repairs expense, these forecasts may serve as a basis against which to compare actual maintenance and repairs expense and estimate deferred maintenance and repairs.
 - d. Paragraph 83 –

At a minimum, the following information shall be presented as required supplementary information for all PP&E (each of the four categoryies established in SFFAS 6 the PP&E standard should be included).

- Identification of each major class ^[footnote 6 to remain; omitted here for brevity] of asset for which maintenance and repairs ~~have~~ been deferred.
- Method of measuring deferred maintenance and repairs for each major class of PP&E.
- If the condition assessment survey method of measuring deferred maintenance and repairs is used, the following should be presented for each major class of PP&E:
 - description of requirements or standards for acceptable operating condition,
 - any changes in the condition requirements or standards, and asset condition ^[footnote 7 to remain; omitted here for brevity] and a range or a point estimate of the dollar amount of maintenance and repairs needed to return assets to their ~~it to its~~ acceptable operating condition.

• If the total life-cycle cost method is used, the following should be presented for each major class of PP&E:

- the original date of the maintenance and repairs forecast and an explanation for any changes to the forecast,
- prior year balance of the cumulative deferred maintenance and repairs amount,
- the dollar amount of maintenance and repairs that was defined by the professionals who designed, built or manage the PP&E as required maintenance and repairs for the reporting period,
- the dollar amount of maintenance and repairs actually performed during the period,
- the difference between the forecast and actual maintenance and repairs,
- any adjustments to the scheduled amounts deemed necessary by the managers of the PP&E, ^[footnote 8 revised] and
- the ending cumulative balance for the reporting period for each major class of asset experiencing deferred maintenance and repairs.

[Footnote 8 - ⁸Adjustments may be necessary because the cost of maintenance and repairs foregone may not be cumulative. For example, if periodic painting is skipped twice it is not necessarily true that the cost would be double the scheduled amount.]

• The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32, *Consolidated Financial Report of the United States Government Requirements: Implementing Statement of Federal Financial Accounting Concepts 4 “Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government,”* provides for required supplementary information applicable to the U.S. government-wide financial statements for these activities.

- e. Paragraph 84 – ...noncritical amounts of maintenance and repairs needed.....noncritical amounts of maintenance and repairs needed...

Effective Date

8. This Statement is effective for periods beginning after September 30, 2011. Earlier implementation is encouraged.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the Statement—not the material in this or other appendices—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

- A1. In late 2008 the Board reviewed its technical agenda and initiated a DM project. The DM project was highly ranked by constituents who provided input on the Board's technical agenda. A FASAB task force was convened to study the findings of a past review and recent federal and industry developments. The task force is addressing issues in two phases – (1) definitions and (2) measurement and reporting. This Statement is the result of the definitions phase. It addresses areas the task force identified as needing clarification. The task force developed definitional options for the Board's consideration and the amendments in this Statement are intended to clarify important matters. The Board notes that the minimum required supplementary information currently required at paragraph 83 of SFFAS 6 may be further modified as a result of the outcome of subsequent work related to the measurement and reporting phase of this project.

Primary Goals of the Proposed Amendments

Goal of DM&R Reporting

- A2. Concerning the goal of DM&R reporting, the Board believes there is confusion regarding what is required in the financial reports under the current definitions. The Board's ultimate goal for DM&R information is that it serves as a useful tool for all decision makers, including Congress, oversight bodies, management, and citizens. To be useful, it must provide information about needed M&R that has yet to be performed. Therefore, management should present a reasonable estimate(s) of the cost of maintenance and repair activities that

it would have performed in support of its mission if resources had been available in the past. In addition, management should provide explanatory material.

- A3. Achieving the goal of DM&R reporting requires many judgments regarding what is needed in each situation. These definitional changes are a first step in improving the usefulness of DM&R reporting. Several definitional issues were discussed by the task force. For some issues, changes were proposed and in others they were not. The primary issue for which a change was not proposed in the exposure draft was a definition of acceptable condition. The rationale for that decision is provided below. Issues addressed by the exposure draft and the Board's decisions are discussed following a summary of the exposure draft outreach and responses.

Acceptable Condition and Judgment

- A4. M&R planning requires decisions about the level of condition to which an asset should be maintained – for example, “as new” condition or “fair” condition. When management elects to use the condition assessment survey method, SFFAS 6 also requires that information concerning requirements or standards for acceptable condition be reported; assisting users in understanding what condition the agency judges to be “acceptable.” The Board acknowledges that a view exists among certain practitioners and users of DM&R information that because SFFAS 6 guidance allows decisions about acceptable levels of condition it is too flexible. Further, it requires agencies to rely heavily on unspecified human judgment in the area of “acceptable” condition.
- A5. Preparers and users who hold this view opine that unless FASAB includes guidance defining “acceptable condition” in the DM&R standards, agencies will continue to have disparate goals regarding DM&R. In their opinion, this could lead to (a) inaccurate DM&R reporting because of inconsistent definitions of “acceptable condition,” (b) flawed M&R planning, and (c) DM&R reporting that is not informative to readers. After careful consideration of this view, the Board believes that the guidance these preparers/users seek would be management policies. Providing such guidance is not an appropriate role for an accounting standards setting body. The Board believes that the standards provide general guidance to be coupled with managerial judgment based on such factors as agency mission and asset use. In the next phase of the project, the Board will ask the task force to consider factors that management might appropriately consider in determining acceptable condition.

Summary of Outreach Efforts

- A6. The Exposure Draft was issued May 4, 2010 with comments requested by June 25, 2010. Upon release of the exposure draft, notices and press releases went to *The Federal Register*, *FASAB News*, *the Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, the CFO Council, the Council of Inspectors General on Integrity and

Efficiency, the Financial Statement Audit Network; and members of both the Federal Real Property Council and the Federal Facilities Council and committees of professional associations generally commenting on exposure drafts in the past.

- A7. This broad announcement was followed by direct mailings of the exposure draft to the House Committee on Oversight and Government Reform, the Senate Committee on Homeland Security and Governmental Affairs, and the American Association of State Highway and Transportation Officials.
- A8. A reminder notice was provided on June 14th and professional associations were contacted via telephone on or about that date.

Responses to the Exposure Draft

- A9. Thirty-four responses were received. Table 1.0 summarizes received responses by respondent type.

Table 1.0

Summary of Respondent Types to DM&R Maintenance Definition Exposure Draft

RESPONDENT TYPE	FEDERAL (Internal)	NON-FEDERAL (External)	TOTAL
Preparers and financial managers	28	1	29
Users, academics, others	1	2	3
Auditors	2	0	2
Total	31	3	34

- A10. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The following paragraphs discuss respondent comments and Board decisions.

Adding “Repairs” to Title and Body of Definition

- A11. The task force reported much confusion regarding the proper treatment of repairs. Due to this confusion, some agencies may not be reporting deferred repairs. As a result, the Board proposed that the term “deferred maintenance” should be revised to “deferred maintenance and repairs.” The majority of respondents agreed with the Board’s proposal to add “repairs” to the title and body of the revised definition in order to clarify that deferred “repairs” as well as deferred “maintenance” need to be reported.
- A12. Two respondents objected based on the assumption that “repairs” cannot be planned. However, this is not always nor usually the case. There are in fact many repairs that can be planned for based on historical and statistical analyses such as a study of failure rates. Also, not all repairs are of an emergency or corrective nature as some repairs are adaptive which lend themselves to planning. Some agencies have programs in-place that attempt to predict repairs and in some cases these predictions can cover over 90% of the repair activity over a two year time horizon. For example, roof maintenance plans include an analysis of the condition assessment which can forecast when a roof (or portion thereof) might fail and require repair.
- A13. The remaining respondent who disagreed believes including repairs will cause continued confusion due to the lack of definition for this term. However, based on both the task force’s recommendation as well as the majority of respondents who are in favor of this change, it is apparent that the community-at-large believes that including this term helps to clarify conflicting interpretations and divergent practices. Although the Board does not believe that from an accounting point of view, maintenance and repairs should be distinguished from each other, it does recognize that some within the technical community do make a distinction. Accordingly, the original definition⁶ by virtue of excluding other than “normal” repairs” contributes to the underreporting of deferred maintenance and repairs as well as the lack of consistency both within and among agencies. While it is the Board’s intention that for financial reporting purposes M&R not be treated separately, the Board acknowledges the view that maintenance generally retains an asset’s functionality whereas repair generally restores an asset’s functionality.
- A14. It should be noted that although the Board believes that “repairs” should be added to the definition, it does acknowledge that various interpretations surrounding unique circumstances may warrant future guidance.

⁶ SFFAS 6, paragraph 78.

Illustrative List of Activities

A15. The second sentence of the definition provides an illustrative list of activities which is not meant to be all inclusive. The Board believes that the list of activities contained in the second sentence of the existing definition should be changed to better reflect current federal and industry practices as well as encompass M&R activities related to heritage assets, multi-use heritage assets, stewardship land, equipment and other personal property in addition to buildings.

A16. In reviewing the reasons cited by the minority of respondents who disagreed with the proposed changes to the illustrative list of activities, it is clear that some of the issues raised should be dealt with via implementation guidance while others require Board clarification. Specifically:

- a. Systems – One respondent objected to adding “systems” since it appeared confusing to include a term which relates to equipment along with terms associated with buildings. Another respondent objected to adding “systems” since it referenced information technology assets which are already included by virtue of being an asset class within property, plant, and equipment. The Board desires to clarify that the term “systems” can refer to either (1) information technology assets (e.g., hardware, internal use software, data communication devices, etc.) which are in fact covered by SFFAS 6 as amended or (2) groupings (assemblages) of component parts belonging to a building, equipment or other personal property. Furthermore, depending on an agency’s capitalization criteria, systems and/or their replacements may or may not be capitalized. Because the maintenance and repair definition is an umbrella definition covering many categories and classes of assets, it would be both impractical and inappropriate to limit the meaning of terms such as “systems” that cut across such a broad spectrum of assets.
- b. Greater Clarity of Terms – Two respondents sought greater clarity in each of the proposed terms. One respondent preferred retaining “normal repairs” since it distinguishes itself from major and extraordinary repairs. The Board believes that standards should be general. If needed, detailed guidance can be provided through implementation guidance. However, the Board will work with the task force to consider examples in the next phase of the project. In addition, agencies are encouraged to seek implementation guidance as needed before the effective date.
- c. Eliminate entire list - One respondent preferred eliminating the entire list or at least excluding preventative maintenance entirely stating that maintenance work is routine, recurring, repetitive, and periodic in nature and as such is never deferred but rather extended. Thus, according to this respondent deferred maintenance is minor in magnitude and too difficult to measure and report. The Board does not subscribe to

the notion that deferred maintenance and repair activities are immaterial in nature at all agencies. Furthermore, the Board's research and overall respondent support (from the community-at-large) for the proposed changes reflect that greater clarity and not less is needed in the definition.

- d. Audit misapplication - One respondent was concerned that auditors will treat the list as all-inclusive. The Board desires to make it clear that the list is illustrative only and does not purport to identify all activities that an agency might consider to be either maintenance or repair.
- e. Accounting for disposal costs - One respondent sought guidance on disposal activities. Disposal activities are beyond the scope of this project.
- f. Information technology assets - One respondent sought inclusion of internal use software. As previously stated, this SFFAS 6 as amended in fact applies to all categories and classes of PP&E including internal-use software.
- g. Impact on capitalization - One respondent was concerned that systems might be capitalized even though capacity increases or upgrades are not accomplished. The Board notes two points in this matter: (1) depending on an agency's capitalization criteria, systems and/or their replacements may or may not be capitalized and (2) it does not intend at this time making any definitional changes that would require an agency to change its capitalization policies or criteria.

Phrase Elimination:Acceptable Services and Expected life

A17. The majority of respondents agreed with the Board's proposal to eliminate the phrase, "*so that it continues to provide acceptable services and achieves its expected life.*" Of the three respondents who disagreed, the following issues were raised:

- a. One objected to removing the "useful [sic] life" reference since it takes away a key quantitative factor for the evaluation of management's determination of the relative length of time in which an asset's acceptable condition would be expected to be maintained, and undermines the concept of useful life recognition in the basic financial statements and notes.
- b. One objected to deleting "acceptable services" since the term "acceptable condition" does not encompass "acceptable services." According to this respondent the term "acceptable services" seems more measurable and indicative of adequate functionality and support of mission than "acceptable condition."

-
- c. One objected to both phrases being removed since the phrase “acceptable services” helps convey the meaning of “acceptable condition” and the phrase “expected life” is also useful as it helps set the boundaries of the FASAB definition - subsequent acquisitions that extend an asset’s “useful life” are capitalized and outside the scope of “deferred maintenance.”

A18. The Board considered each of the arguments presented and decided eliminating this phrase helps to eliminate ambiguity and reflect actual asset management practices.

- a. First, the Board notes that the changes made to the maintenance and repairs definition are limited to the application of this standard in regards to presenting DM&R information in RSI. Therefore, elimination of the “expected life” reference does not infringe on management’s determination of an asset’s acceptable condition. Furthermore, because the definition is limited to DM&R, the Board does not believe the “expected life” concept used for capitalization and depreciation is impacted in any meaningful way.
- b. To help eliminate confusion and clarify the intent regarding DM&R reporting, the Board desires to simplify the definition wherever practicable. Notwithstanding health and/or safety implications, the Board believes that the most basic function for an adequate M&R program is to keep an asset in an acceptable condition consistent with management’s expectations. Therefore, management is in the best position to first define and then assess whether or not a nexus exists between asset condition and “acceptable services.” Although the term “acceptable condition” may not always encompass “acceptable services,” management is responsible for that determination. Accordingly, undefined terms such as “acceptable services” that might have multiple meanings within an agency, let alone among agencies, run counter to the Board’s intent of clarification.
- c. The Board believes that linking DM&R to an “expected life” estimate is not useful. From an operational perspective, M&R activities may not solely be performed for the purpose of allowing PP&E to achieve its expected life because health and safety considerations may be paramount. Furthermore, estimates of expected life may change over time due to operating conditions, actual maintenance practices, or technical changes. As an asset’s expected life changes, the life assigned in the accounting records should be appropriately updated. However, this presents practical problems if M&R is tied to meeting an expected life – for example, which expected life is to be used and what happens when the expected life is exceeded. Therefore, the Board believes that linking M&R to attainment of an expected life is not appropriate.

Originally intended vs. current use.

A19. Two issues were raised by respondents who did not agree with the proposed change from “originally intended” to “current use.” First, it was noted that “current use” will be misunderstood and misapplied and instead the Board should adopt the phrase “the use for which it is currently configured.” Second, it was noted that “current use” would be a poor benchmark for definitional purposes and that the original intent could in fact be ascertained via reviewing various agency documents. The Board notes that the task force considered the term proposed by the respondent and found it to be problematic because it introduces a new term without a consistent meaning. For example, the term “configure” raises questions as to definition. Specifically, “configured” when and by whom? Does this imply a purely technical configuration based on schematic drawings or operational configuration based on logistics? The Board does not wish to introduce new terms that could cause further confusion or create any additional ambiguity. Concerning the second issue, the Board notes that the task force found the opposite to be true: current use is the most appropriate benchmark especially when one considers changes in mission or code (i.e., construction, health, and/or safety) requirements over the years and that original intent cannot always be readily ascertained via a review of agency documents.

Other Comments

Capital Improvements

A20. One respondent raised a concern regarding the exclusion of capital improvements from DM&R reporting. Additionally, the Board has been made aware of several other concerns over this matter. The concerns include:

- a. failure to include “Total Correction Costs” in the definition would significantly under report all costs to correct existing capitalized assets; e.g., maintenance, repairs and estimated capital improvements
- b. some special purpose reports include unfunded capital needs along with DM&R information and this is beneficial to users
- c. some repair activities may incidentally improve assets (e.g., damaged lighting fixtures may be replaced with more energy efficient lighting fixtures) and there is uncertainty regarding treatment of such projects

- d. there is uncertainty regarding planned M&R activities relating to fully depreciated fixed assets and fixed assets that are not recognized in the accounting records due to capitalization thresholds

A21. The Board believes that the existing goal of differentiating those activities that might be considered capital improvements (or new assets) from M&R should be maintained. DM&R reporting addresses concerns about management of existing assets. While unmet capital needs (i.e., capital improvements and new acquisitions) are relevant to decision makers, they do not as clearly relate to reporting on past transactions and events as DM&R does. As such, unmet capital needs should not be included in the calculation of DM&R. DM&R arises because an asset exists that is not maintained in accordance with an agency's established M&R policy; DM&R have financial consequences apart from unmet capital needs which are relevant to decision makers.

A22. The Board is mindful that the distinction between M&R activities and improvements to existing assets is often not clear. Some M&R activities that could enhance an asset may not generally be considered by accountants as "capital improvements" and recognized as additions to the agency's assets. In addition, there will be uncertainty regarding the unit of analysis – whether an entire facility is "the asset" or its individual components are "assets." Therefore, depending on the unit of analysis, an activity might be considered M&R or replacement of an old asset with a new one. It is not the Board's intention that a precise distinction be attained in every case. Rather, agencies should not include new asset, capital improvement, and/or enhancement needs in DM&R and should treat like circumstances similarly over time since a consistently followed practice that is well described will assist decision makers.

A23. By reaffirming that M&R excludes capital improvements, the Board is striving to ensure the definition of DM&R for purposes of financial reporting will be one and the same as in the condition index⁷ calculation of the Federal Real Property Profile (FRPP). This should result in agencies having to develop only one estimate of DM&R for both purposes.

A24. In the exposure draft, the Board sought not only input on the proposed changes, but also other changes, points, issues and/or considerations which may not have been specifically addressed in the exposure draft. Twenty-two respondents provided additional comments that covered a broad array of issues ranging from editorial notes to acknowledging the

⁷ It should be noted that the revised maintenance and repair definition as contained in this standard is intended to be the basis for the numerator so that a uniform reporting requirement definition exists throughout federal government. **Condition Index (CI)** is a general measure of the constructed asset's condition at a specific point in time. CI is calculated as the ratio of Repair Needs to Plant Replacement Value (PRV). *Formula: $CI = (1 - \text{\$repair needs}/\text{\$PRV}) \times 100$* . Source: 2009 GSA's Guidance For Real Property Inventory Reporting dated July 14, 2009.

positive effects of revising the definition as well as the ambitious nature of this project. In summary the comments received include:

- a. One respondent suggested that the Board should not be overly prescriptive because one size does not fit all.
- b. One respondent said the difficulty will be in transferring accounting requirements into the operations and maintenance arena.
- c. One respondent suggested that the Board should consider distinguishing between types of repairs.
- d. One respondent recommends that the Federal Real Property Council (FRPC) and the General Services Administration require agencies to report Active and Inactive DM.
- e. One respondent suggested that guidance could be enhanced that DM&R applies to all classifications and classes of PP&E (i.e., in addition to real property). The Board notes that SFFAS 6, paragraph 83 requires DM&R information for each category of PP&E by major class.
- f. One respondent stated that acceptable condition differs between equipment and facilities. For equipment it may be defined as mission-capable or serviceable.
- g. One respondent suggested adding guidance on using GSA's FRPP information for the annual data calls. Replacement costs or ranges of such costs are needed to determine whether or not funding DM&R is economically advantageous compared to asset replacement.
- h. One respondent stated that there is a borderline between financial reporting of DM&R and technical or project completion of M&R. In their opinion, M&R should be viewed over an asset's life-cycle and not by a financial reporting period.

DM&R on Non-capitalized General PP&E

A25. While views were sought on this issue, no changes in practice relating to DM&R on non-capitalized general PP&E should result from this Statement. SFFAS 6, paragraph 83, provides minimum reporting requirements. The Board will clarify these requirements during the next phase of this project.

A26. The Board asked if the respondents believed that DM&R reporting should be limited to DM&R related to capitalized general PP&E as well as non-capitalized stewardship PP&E or directed broadly to fixed assets. Sixteen respondents were in favor of reporting DM&R

broadly to fixed assets whereas fourteen respondents were in favor of limiting DM&R reporting to capitalized general PP&E as well as stewardship PP&E.

- a. Respondents in favor of reporting DM&R broadly to fixed assets provided the following comments:
 - i. DM&R should apply to all assets because capitalization thresholds are not recognized in asset management practices and should be consistent with GSA's Real Property profile (all assets).
 - ii. DM&R on all fixed assets is a better indication of risk to the Government's varied missions.
 - iii. Fixed assets relate better to M&R since all or most assets require maintenance.
 - iv. Since there is confusion between what a capital asset is versus PP&E, DM&R should be reported under fixed assets.
 - v. If an agency has a significant number of fully depreciated assets for which DM&R is reported, a reevaluation of useful life estimates is in order.
 - vi. If an agency has a significant number of assets that do not meet its capitalization threshold for which the agency believes DM&R should be reported, a reevaluation of the capitalization threshold is in order.
 - vii. Consideration should be given to allowing a threshold for DM&R reporting purposes that may or may not be different from the threshold used for capitalizing PP&E.
 - viii. DM&R is more pertinent to users than depreciation or historical cost information inasmuch as it represents future costs to be incurred.
 - ix. Limitations to DM&R reporting could cause potential data conflicts with other sources of information used by program and congressional offices.
- b. Respondents in favor of reporting DM&R limited to capitalized general PP&E and stewardship PP&E provided the following comments:
 - i. DM&R should retain association to PP&E. Adding DM&R for non-capitalized assets skews any resultant analysis to PP&E. DM&R should trace and be auditable to PP&E.

-
- ii. Capitalization thresholds reflect cost/benefit considerations balancing the cost of precision versus the costs to compile data.
 - iii. If an asset is expensed, it has been deemed immaterial and DM&R should follow suit.
 - iv. A (separate) threshold for DM&R on non-capitalized assets should be allowed to encourage such reporting.
 - v. Apply a uniform DM&R threshold applicable only for government-wide reporting purposes.
 - vi. Reporting DM&R for fixed assets in essence undervalues the PP&E reflected on the balance sheet.
 - vii. Establishing limits (definitions) for “fixed assets” will be very difficult in practice adding additional costs.
 - viii. Agencies should use judgment in determining whether DM&R be limited or applied broadly; user benefits should exceed costs of preparing said information.

Board Deliberations

A27. The Board discussed respondent input but has made a decision only regarding the proposed amendments to SFFAS 6 relating to the definition of DM&R. Input and suggestions regarding other topics will be considered in the next phase of the project – measurement, reporting and asset impairment. The basis for conclusions primarily addresses Board deliberations on definitional issues.

Board Approval

A28. This statement was approved for issuance by all members of the Board. The written ballots are available for public inspection at the FASAB's offices.

Issued	July 6, 2011
Effective Date	Effective upon issuance.
Affects	SFFAS 38, pars. 5 and 30
Affected by	None.

Summary

This Statement defers the effective date of Statement of Federal Financial Accounting Standards (SFFAS) 38, *Accounting for Federal Oil and Gas Resources*, for one year. The standards contained in SFFAS 38 will become effective as required supplementary information for periods beginning after September 30, 2012, with earlier implementation encouraged.

Summary	1
Standards	3
Scope	3
Amendment to SFFAS 38	3
Effective Date	3
Appendix A: Basis for Conclusions	4
Appendix B: Abbreviations	8

Standards

Scope

1. This Statement applies to federal entities that report information about federal oil and gas resources in general purpose federal financial reports, including the consolidated financial report of the U.S. Government (CFR), in conformance with SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.

Amendment to SFFAS 38

2. Paragraphs 5 and 30 of SFFAS 38, *Accounting for Federal Oil and Gas Resources*, are amended as follows:

The standards are effective as RSI for periods beginning after September 30, ~~2011~~2012. Earlier implementation is encouraged.

Effective Date

3. This standard is effective upon issuance.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

- A1. FASAB issued Statement of Federal Financial Accounting Standards (SFFAS) 38, *Accounting for Federal Oil and Gas Resources*, on April 13, 2010. This standard requires the value of the federal government's estimated petroleum royalties from the production of federal oil and gas proved reserves be reported in a schedule of estimated federal oil and gas petroleum royalties. In addition, this standard requires the value of estimated petroleum royalty revenue designated for others be reported in a schedule of estimated federal oil and gas petroleum royalties to be distributed to others. These schedules are to be presented as required supplementary information (RSI) as part of a discussion of all significant federal oil and gas resources under management by the entity. SFFAS 38 is effective as RSI for periods beginning after September 30, 2011 with earlier implementation encouraged.
- A2. It is the Board's intent that the information required by SFFAS 38 transitions to basic information after being reported as RSI for a period of three years. Prior to the conclusion of the three-year RSI period, the Board plans to make a determination as to whether the information will transition to basic information as financial statement recognition or note disclosure. SFFAS 38 will remain in effect until such time as a determination is made.
- A3. On September 30, 2010, FASAB staff was informed that the Department of the Interior (DOI) was considering requesting a one-year deferral of the effective date of SFFAS 38 due to the recent reorganization of the Minerals Management Service (MMS) into several different bureaus under the newly created Bureau of Ocean Energy Management, Regulation and Enforcement (BOEMRE). MMS had been the component entity responsible for collecting royalties and charged with preparing the information to be reported under SFFAS 38.

-
- A4. On October 7, 2010, FASAB staff notified a BOEMRE representative that in order to issue an amendment to the standard by September 2011, staff would need to receive DOI's formal deferral request in time to prepare a draft exposure draft (ED) for the December 2010 board meeting.

Request for Deferral

- A5. The formal request was received from BOEMRE on November 18, 2010. The request explained that MMS's successor organization will be divided into three new entities. First, the BOEMRE and the Bureau of Safety and Environment Enforcement will divide the duties of the former Offshore Energy and Minerals Management organization, with the former managing the development of conventional and renewable resources and minerals on the Outer Continental Shelf, and the latter providing safety and environmental oversight. These new bureaus will report to the Assistant Secretary of Land and Minerals Management. Second, the Office of Natural Resources Revenue (ONRR) will perform the roles of the former Minerals Revenue Management organization and report to the Assistant Secretary for Policy, Management and Budget.
- A6. BOEMRE's request stated that many issues and challenges have arisen as a direct result of these organizational changes that will greatly complicate the implementation of SFFAS 38 for fiscal year 2012. Accordingly, a one-year deferral of SFFAS 38 was requested.
- A7. While a reorganization in and of itself would not normally be a justification for deferring a standard, the Board members noted that the nature and extent of the MMS reorganization goes above and beyond what would be considered within the normal course of operations. The Board therefore approved the one-year deferral, but emphasized that earlier implementation is encouraged and strongly urged that the standard be implemented for fiscal year 2012 if at all possible.

Due Process

- A8. The Exposure Draft (ED), Deferral of the Effective Date of SFFAS 38, *Accounting for Federal Oil and Gas Resources*, was released on January 5, 2011, with comments requested by February 7, 2011.
- A9. Upon release of the ED, notices and press releases were provided to the FASAB email listserv, the Federal Register, *The Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, *the CPA Letter*, *Government Accounting and Auditing Update*, the CFO Council, the Council of Inspectors General on Integrity and Efficiency, and the Financial Statement Audit Network, and committees of professional associations generally

commenting on exposure drafts in the past (e.g., Greater Washington Society of CPAs, AGA Financial Management Standards Board).

A10. This broad announcement was followed by direct e-mailings of the press release to:

- a. Relevant congressional committees: Senate Committee on Energy and Natural Resources, Senate Committee on Finance, House Committee on Financial Services, and House Committee on Natural Resources;
- b. Public interest groups and think tanks: Alliance to Save Energy, The Brookings Institution, The Cato Institute, Center on Budget and Policy Priorities, Citizens Against Government Waste, The Concord Coalition, The Heritage Foundation, National Parks Conservation Association (NPCA), Natural Resources Defense Council (NRDC), OMB Watch, Resources for the Future (RFF), Sierra Club, The Urban Institute, and World Resources Institute (WRI);
- c. Respondents to SFFAS 38 and related EDs (or their successors);
- d. Agencies that manage and / or account for federal natural resources: Department of the Interior (DOI) Office of the Secretary; DOI Bureau of Land Management ; DOI Bureau of Ocean Energy Management, Regulation and Enforcement; DOI U.S. Geological Service (USGS); Department of Agriculture (USDA), Deputy CFO; and USDA Forest Service.

A11. To encourage responses, reminder notices were provided to the FASAB email listserv on January 28, 2011, and February 8, 2011.

Comment Letters

A12. Four comment letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others	0	2
Auditors	0	0
Preparers and financial managers	2	0

A13. The Board considered responses to the exposure draft at its February 23, 2011, public meeting. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and

weighed the merits of the points raised. The respondents' comments are summarized below.

- A14. Three of the four respondents were in favor of deferring the effective date. One respondent disagreed, citing the need for DOI to incorporate the reporting for oil and gas resources into its newly reorganized reporting structure as it is being developed. The Board considered both views and decided to approve the one-year deferral, noting that the additional time provided to DOI to improve upon its estimation process in light of the major reorganization of MMS would be preferable.
- A15. This statement was approved for issuance by all members of the Board. Written ballots are available for public inspection at the FASAB's offices.

Statement of Federal Financial Accounting Standards 42: Deferred Maintenance and Repairs: Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32

Status

Issued	April 25, 2012
Effective Date	For fiscal years beginning after September 30, 2014.
Affects	<ul style="list-style-type: none">• SFFAS 6, par. 77-84 and Appendix C are rescinded.• SFFAS 14 is rescinded.• SFFAS 29, par. 26, 28, 41, and 42 are amended.• SFFAS 32, par. 12b., 12c., and 24 are rescinded.• SFFAS 59 amendments paragraphs 13, 15d, and 15e.• Technical Release 9, Section III.
Affected by	SFFAS 59, par. 14.

Summary

Deferred Maintenance and Repairs (DM&R) reporting enables the government to be accountable to citizens for the proper administration and stewardship of its assets. Specifically, DM&R reporting assists users by providing an entity's realistic estimate of DM&R amounts and the effectiveness of asset maintenance practices the entities employ in fulfilling their missions.

This Statement amends the required supplementary information (RSI) presentation requirements contained in Statement of Federal Financial Accounting Standards (SFFAS) 6, *Accounting for Property, Plant, and Equipment* and also provides conforming amendments as explained within the Scope and Applicability section at paragraph 6. The amendments require entities to: (1) describe their maintenance and repairs (M&R) policies and how they are applied, (2) discuss how they rank and prioritize M&R activities among other activities, (3) identify factors considered in determining acceptable condition standards, (4) state whether DM&R relate solely to capitalized general property, plant and equipment (PP&E) and stewardship PP&E or also to non-capitalized or fully depreciated general PP&E, (5) identify PP&E for which management does not measure and/or report DM&R and the rationale for the exclusion of other than non-capitalized or fully depreciated general PP&E, (6) provide beginning and ending DM&R balances by category of PP&E, and (7) explain significant changes from the prior year.

Other significant amendments contained in this Statement include (1) requiring that condition standards, related assessment methods, and reporting formats be consistently applied unless management determines that changes are necessary, (2) eliminating the requirement to report condition information, and (3) eliminating the (i) optional reporting of low-high DM&R estimates as well as (ii) option to report critical and non-critical DM&R.

Additionally, the amendments note the importance of communication with, and input from, professionals in diverse disciplines in compiling and reporting DM&R information.

Materiality	3
Effective Date	3
Accounting Standards	4
Scope and Applicability	4
Appendix A: Basis for Conclusions	12
Appendix B: Sample Illustration	23
Appendix C: Abbreviations	29

Introduction

Purpose

1. The objective of this Statement is to improve the measurement of deferred maintenance and repairs (DM&R) by incorporating changes responsive to concerns raised by the financial and technical¹ communities. The Board also considered, where appropriate, a Government Accountability Office (GAO) study² specific to repair and maintenance backlog issues surrounding federal real property.

Materiality

2. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Effective Date

3. This Statement is effective for periods beginning after September 30, 2014. Earlier implementation is encouraged.

¹ This Statement uses the phrase “technical community” or “technical communities” to refer to entity personnel responsible for the management of property, plant, and equipment (PP&E), including maintenance and repair.

² GAO Report No. [GAO-09-10](#) dated October 2008. *Federal Real Property. Government’s Fiscal Exposure from Repair and Maintenance Backlogs is Unclear.*

Accounting Standards

Scope and Applicability

4. This Statement applies to federal entities that present general purpose federal financial reports in conformance with generally accepted accounting principles as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
5. This Statement replaces the definitions, measurement and reporting requirements for deferred maintenance and repairs established in SFFAS 6, as amended by SFFAS 40, *Definitional Changes Related to Deferred Maintenance and Repairs: Amending Statement of Federal Financial Accounting Standards 6, Accounting for Property, Plant, and Equipment*. SFFAS 6, Chapter 3: *Deferred Maintenance and Repairs*, paragraphs 77 through 84, and Appendix C, *Deferred Maintenance and Repairs Illustration* are rescinded.
6. In addition to SFFAS 6, this Statement also provides the following conforming amendments:
 - a. SFFAS 14, *Amendments to Deferred Maintenance Reporting Amending SFFAS 6, Accounting for Property, Plant and Equipment, and SFFAS 8, Supplementary Stewardship Reporting*, is rescinded.
 - b. SFFAS 29, *Heritage Assets and Stewardship Land*, is amended to adopt the revised terminology and to rescind requirements for reporting **condition**³ information.
 - c. SFFAS 32, *Consolidated Financial Report of the United States Government Requirements: Implementing Statement of Federal Financial Accounting Concepts 4 "Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government,"* is amended to adopt the revised terminology and to rescind certain requirements.
 - d. Technical Release 9, *Implementation Guide for Statement of Federal Financial Accounting Standards 29: Heritage Assets and Stewardship Land*, Section III: Assessing and Reporting Condition is amended to explain the status of guidance relating to condition reporting.

³ Terms defined in the Glossary are shown in **bold-face** the first time they appear.

Definition

7. Deferred maintenance and repairs (DM&R) are maintenance and repairs that were not performed when they should have been or were scheduled to be and which are put off or delayed for a future period.
8. Maintenance and repairs are activities directed toward keeping fixed assets in an acceptable condition.⁴ Activities include preventive maintenance; replacement of parts, systems,⁵ or components; and other activities needed to preserve or maintain the asset. Maintenance and repairs, as distinguished from capital improvements, exclude activities directed towards expanding the capacity of an asset or otherwise upgrading it to serve needs different from, or significantly greater than, its current use.

Measurement

9. Amounts for DM&R may be measured using:
 - a. condition assessment surveys,
 - b. life-cycle cost forecasts, or
 - c. other methods that are similar to the condition assessment survey or life-cycle costing methods.
10. *Condition assessment surveys* are periodic⁶ visual (i.e., physical) inspections of property, plant and equipment (PP&E) to determine their current condition and estimated cost to correct any deficiencies.
11. *Life-cycle costing* is an acquisition or procurement technique which considers operating, maintenance, and other costs in addition to the acquisition cost of assets. Since it results in

⁴ The determination of acceptable condition may vary both between entities and among sites within the same entity. Management shall determine what level of condition is acceptable.

⁵ The term "systems" can refer to either (1) information technology assets (e.g., hardware, internal use software, data communication devices, etc.) or (2) groupings (assemblages) of component parts belonging to a building, equipment or other personal property.

⁶ This Statement does not require an entity's entire portfolio to be inspected each year. It is permissible to schedule condition assessment surveys on a cyclical (i.e., calendar) basis or a frequency based on consideration of risk provided scheduling is done in accordance with established practices.

forecasts of maintenance and repairs expense, these forecasts may serve as a basis against which to compare actual maintenance and repairs expense to arrive at an estimate of deferred maintenance and repairs.

12. Management should determine which methods to apply and what condition standards are acceptable. Once determined, condition standards, related assessment methods⁷, and reporting formats should be consistently applied unless management determines that changes are necessary. Although condition information is essential in developing DM&R amounts, reporting of condition information is not required. Changes to methods or formats that management determines are necessary should be accompanied by an explanation documenting the rationale for the change and any related impact on the DM&R estimate(s). To best meet the goal of DM&R reporting, communication with, and consideration of, input from professionals in diverse disciplines such as engineering, facilities management, finance, budgeting and accounting is necessary.
13. DM&R should be measured and reported for capitalized general PP&E noncapitalized general PP&E land (to include permanent land rights), and stewardship PP&E. DM&R also may be measured and reported for general PP&E other than land and permanent land rights that is non-capitalized or fully depreciated general PP&E. DM&R should include funded maintenance and repairs (M&R) that have been delayed for a future period as well as unfunded M&R. DM&R on inactive and/or excess PP&E should be included to the extent that it is required to maintain inactive or excess PP&E in acceptable condition. For example, inactive PP&E may be maintained or repaired either to comply with existing laws and regulations, or to preserve the value of PP&E pending disposal.

Component Entity Required Supplementary Information

14. DM&R reporting should provide (1) DM&R beginning and ending balances for the reporting period and (2) narrative information related to DM&R activities. Entities are required to present both qualitative and quantitative information.
15. At a minimum, the following information should be presented as required supplementary information (RSI) for all PP&E (each category established in SFFAS 6, as amended, should be included) regardless of the measurement method chosen.

⁷ Assessment methods are techniques or procedures used in a process of systematically evaluating an entity's PP&E in order to project M&R, renewal, or replacement needs that will maintain or preserve its ability to support the entity's mission or activities it is assigned to serve.

Qualitative

- a. A summary of the entity's M&R policies and brief description of how they are applied; i.e., method of measuring DM&R
- b. Policies for ranking and prioritizing M&R activities⁸
- c. Factors the entity considers in determining acceptable condition standards
- d. Whether DM&R relates solely to capitalized general PP&E and non-capitalized general PP&E land, stewardship PP&E or also to amounts relating to non-capitalized or fully depreciated general PP&E
- e. Capitalized and non-capitalized general PP&E, and non-capitalized heritage assets, and stewardship land for which management does not measure and/or report DM&R and the rationale for the exclusion
- f. If applicable, explanation of any significant changes⁹ to (1) the policies and factors subject to the reporting requirements established in a. through e. above and (2) DM&R amounts from the prior year¹⁰

Quantitative

- g. Estimates of the beginning and ending balances of DM&R for each major category¹¹ of PP&E for which maintenance and repairs have been deferred

⁸ As an example, entities may report (1) how they will pursue reducing their DM&R backlog and how they will be impacted by budget or funding shortfalls or reductions, and (2) whether or not the entity has used Return on Investment analyses in its ranking and prioritizing of either M&R or DM&R.

⁹ The determination of whether or not an item is significant is a matter of professional judgment. This determination is separate and distinct from materiality considerations that include considering the likely influence that such information could have on judgments or decisions of financial statement users.

¹⁰ Consistent with paragraph 12, once determined, condition standards and related assessment methods and reporting formats should be consistently applied.

¹¹ SFFAS 6 sets forth three categories of PP&E: (1) general PP&E; (2) heritage assets; and (3) stewardship land.

Consolidated Financial Report of the US Government Required Supplementary Information

16. The disclosure requirements listed in paragraphs 14 and 15 above are not applicable to the U.S. government-wide financial statements. The U.S. government-wide financial statements should include the following RSI:
- a. A description of what constitutes DM&R and how it was measured
 - b. Amounts of DM&R for each major category of PP&E (i.e., general PP&E, heritage assets, and stewardship land); and
 - c. A general reference to specific component entity reports for additional information

Conforming Amendments to Other Statements and Technical Releases

17. This Statement amends requirements in SFFAS 29 and 32 to replace 'deferred maintenance' with 'deferred maintenance and repairs' and to rescind certain requirements in SFFAS 29 and 32, including the requirement to report condition information. The changes to SFFAS 29 and 32 are presented in paragraphs 18 and 19 below.
18. Paragraphs 26, 28, 41 and 42 of SFFAS 29, *Heritage Assets and Stewardship Land*, are amended as follows:

~~[26] Entities should report the condition⁴⁴ of the heritage assets (which may be reported with the deferred maintenance information⁴²) as required supplementary information. Entities should include a reference to the condition and deferred maintenance and repairs information¹³ if reported in required supplementary information elsewhere in the report containing the basic financial statements.~~

Paragraph 26 Footnote references:

~~⁴⁴ Condition is the physical state of an asset. The condition of an asset is based on an evaluation of the physical status/state of an asset, its ability to perform as planned, and its continued usefulness. Evaluating an asset's condition requires knowledge of the asset, its performance capacity and its actual ability to perform, and expectations for its continued performance. The condition of a long-lived asset is affected by its durability, the quality of its design and construction, its use, the adequacy of maintenance that has been performed, and many other factors, including: accidents (an unforeseen and unplanned or unexpected event or~~

circumstance), catastrophes (a tragic event), disasters (a sudden calamitous event bringing great damage, loss, or destruction), and obsolescence. Examples of condition information include, among others, (1) averages of standardized condition rating codes; (2) percentage of assets above, at, or below acceptable condition; or (3) narrative information.

⁴² See SFFAS 6, Chapter 3, Deferred Maintenance (par. 77-84) for information regarding definition, measurement and disclosures specific to deferred maintenance.

¹³ See SFFAS 42, *Deferred Maintenance and Repairs, Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32* for information regarding definition, measurement and required supplementary information.- SFFAS 14, Amendments to Deferred Maintenance Reporting Amending SFFAS 6, Accounting for Property, Plant and Equipment and SFFAS 8, Supplementary Stewardship Reporting, defined deferred maintenance as RSI. The Board believed that a period of experimentation was necessary for deferred maintenance information and that classifying it as RSI would be more appropriate during the experimentation period. The Board may revise this standard based on experience gained during this time and the development of additional criteria.

[28.c.] A general reference to agency reports for additional information about heritage assets, such as agency stewardship policies for heritage assets, and physical units by major categories of heritage assets, and the condition of the heritage assets.

[41] Entities should report the condition²² of the stewardship land (which may be reported with the deferred maintenance information²³) as required supplementary information. Entities should include a reference to the condition and deferred maintenance and repairs information²⁴ if reported in required supplementary information elsewhere in the report containing the basic financial statements.

Paragraph 41 Footnote references:

²² Condition is the physical state of an asset. The condition of an asset is based on an evaluation of the physical status/state of an asset, its ability to perform as planned, and its continued usefulness. Evaluating an asset's condition requires knowledge of the asset, its performance capacity and its actual ability to perform, and expectations for its continued performance. The condition of a long-lived asset is affected by its durability, the quality of its design and construction, its use, the adequacy of maintenance that has been performed, and many other factors, including: accidents (an unforeseen and unplanned or unexpected event or circumstance), catastrophes (a tragic event), disasters (a sudden calamitous

event bringing great damage, loss, or destruction), and obsolescence. Examples of condition information include, among others, (1) averages of standardized condition rating codes; (2) percentage of assets above, at, or below acceptable condition; or (3) narrative information.

²³ See SFFAS 6, Chapter 3, Deferred Maintenance (par. 77-84) for information regarding definition, measurement and disclosures specific to deferred maintenance.

²⁴ See SFFAS 42, *Deferred Maintenance and Repairs, Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32*, for information regarding definition, measurement and required supplementary information. SFFAS 14, Amendments to Deferred Maintenance Reporting Amending SFFAS 6, Accounting for Property, Plant and Equipment and SFFAS 8, Supplementary Stewardship Reporting, defined deferred maintenance as RSI. The Board believed that a period of experimentation was necessary for deferred maintenance information and that classifying it as RSI would be more appropriate during the experimentation period. The Board may revise this standard based on experience gained during this time and the development of additional criteria.

[42. c.] A general reference to agency reports for additional information about stewardship land, such as agency stewardship policies for stewardship land, and physical units by major categories of stewardship land use, and the condition of the stewardship land.

19. Paragraphs 12b., 12c., and 24 of SFFAS 32: *Consolidated Financial Report of the United States Government Requirements: Implementing Statement of Federal Financial Accounting Concepts 4 "Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government"* are rescinded.

12. b. The text "The above listed required supplementary information is not applicable to the U.S. government wide financial statements. SFFAS 32 provides for required supplementary information applicable to the U.S. government wide financial statements for these activities." is added as a separate bullet following the existing text for par. 83.

12. c. The text "The U.S. government wide financial statements need not separately report stratification between critical and non-critical amounts of maintenance needed to return each major class of asset to its acceptable operating condition as well as management's definition of these categories. SFFAS 32 provides for optional information applicable to the U.S. government

~~wide financial statements for these activities.” is added to par. 84 as the final sentences.~~

~~24. The U.S. government wide financial statements should include the following required supplementary information:~~

~~a. a broad description of deferred maintenance;~~

~~b. amounts or ranges of amounts of deferred maintenance for each major asset category (i.e., general property, plant, and equipment; heritage assets, and stewardship land) for which maintenance has been deferred;~~

~~c. a general reference to component entity reports, and~~

~~d. optional reporting of the stratification between critical and non-critical amounts of maintenance needed to return each major asset category to its acceptable operating condition.~~

20. This Statement amends requirements in Technical Release 9, Section III, to acknowledge the rescission of requirements to report condition information as RSI. The following text is to be inserted before Section III:

Statement of Federal Financial Accounting Standards 42, *Deferred Maintenance and Repairs*, Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32, rescinded the requirement to report condition information regarding heritage assets and stewardship land as RSI. The following guidance offers insights regarding condition assessments and factors that may influence reporting of deferred maintenance and repairs information. The guidance has not been updated to conform to the new standards and should be considered other literature until revised implementation guidance, if any is provided.

Effective Date

21. This Statement is effective for periods beginning after September 30, 2014. Earlier implementation is encouraged.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards provided in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

- A1. Concerns pertaining to DM&R reporting have arisen since the issuance of SFFAS 6. The two most common concerns related to (1) the lack of comparability in assessing asset condition both within and among entities and (2) measurement and reporting practices and formats that vary greatly among entities. In its most recent real property study (GAO Report No. [GAO-09-10](#) dated October 2008), the GAO noted that entities define and estimate DM&R differently in part due to the degree of flexibility afforded by both SFFAS 6 and the Federal Real Property Profile Reporting Guidelines. As a result, confusion and uncertainty exists among users of DM&R information.
- A2. Primarily as a result of auditor concerns, SFFAS 14, *Amendments to Deferred Maintenance Reporting Amending SFFAS 6, Accounting for Property, Plant and Equipment and SFFAS 8, Supplementary Stewardship Reporting*, amended SFFAS 6 and SFFAS 8 to reclassify deferred maintenance information as required supplementary information instead of a disclosure in the notes to the financial statements.
- A3. At the time, the Board believed that a period of experimentation would be desirable for deferred maintenance information and that classifying it as RSI was appropriate during the experimentation period. As a result, the standards for estimating deferred maintenance were intentionally flexible. However, at a minimum, the Board expected to develop guidance on determining acceptable condition and revise the standards based on experience gained during the experimentation period.
- A4. Since completing deliberations on SFFAS 40, *Definitional Changes Related to Deferred Maintenance and Repairs: Amending Statement of Federal Financial Accounting Standards*

6, *Accounting for Property, Plant, and Equipment*, the Board has continued seeking advice and guidance from stakeholders interested in improving the management of, and reporting on, federal PP&E and related DM&R.

- A5. As demonstrated by SFFAS 40, the Board has spent considerable time and effort working with key stakeholders and the community-at-large evaluating much of the experience gained during the experimentation period. As a result, the Board has both reaffirmed and refined its position regarding DM&R measurement and reporting.
- A6. Two external reports served as the initial basis for the scope of the Task Force's work.¹² The first report (Deferred Maintenance Reporting for Federal Facilities, The National Academies, (2001), ISBN 0-309-56339-9) was a critique of the deferred maintenance definition in SFFAS 6, *Accounting for Property, Plant, and Equipment*. This report was prepared by the Federal Facilities Council under the auspices of The National Academies. The report was reviewed by the Task Force and provided a foundation for the proposed amendment(s) contained in SFFAS 40. The second report (GAO Report No. [GAO-09-10](#) dated October 2008) was a GAO study specific to federal real property repair and maintenance backlog issues. In that study, the GAO discussed the need for comparability and realistic estimates of deferred maintenance so that the government's fiscal exposure could be revealed.
- A7. The Task Force's work was not constrained by either of these external reports. Task Force members contributed entity specific information which also included input from internal and external audit communities.

Summary of Outreach Efforts

- A8. The Exposure Draft was issued June 27, 2011 with comments requested by September 16, 2011. Upon release of the exposure draft, notices and press releases went to *The Federal Register*, *FASAB News*, *the Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, the CFO Council, the Council of Inspectors General on Integrity and Efficiency (CIGIE), the Financial Statement Audit Network; members of both the Federal Real Property Council and the Federal Facilities Council and committees of professional associations generally commenting on exposure drafts in the past.

¹² During 2008 FASAB established a Task Force to address deferred maintenance and asset impairment issues. The Task Force consists of government and non-government representatives from various disciplines such as: real property/facilities management, personal property management, appraisal and valuation services, engineering, architecture, accounting, internal auditing, external auditing, finance, and budgeting.

Responses to the Exposure Draft

A9. Twenty-two responses were received. Table 1.0 summarizes responses by respondent type.

Table 1.0

Summary of Respondents by Type to Exposure Draft

RESPONDENT TYPE	FEDERAL (Internal)	NON-FEDERAL (External)	TOTAL
Preparers and financial managers	11	0	11
Users, academics, others	5	3	8
Auditors	3	0	3
Total	19	3	22

A10. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The following paragraphs discuss significant issues identified by respondents followed by Board decisions.

Respondents' Comments on the Exposure Draft

No Longer Requiring Condition Reporting - Refining the Goal of DM&R

A11. The majority of respondents agreed with the Board's proposal to no longer require condition reporting. Respondents who disagreed noted that (1) condition reporting for key infrastructure which directly affects public safety provides a measure of the effectiveness of the allocated budget to maintain those critical assets, (2) condition reporting has become the "standard" to understand the overall condition of facilities, and (3) all federal agencies are required to report condition information and DM&R by the Federal Real Property Council Reporting Requirements.

A12. The goal of DM&R is to provide reliable information on the estimated cost of the PP&E maintenance and repairs that have been deferred. To that end, this Statement no longer requires that condition information be reported. Although condition reporting is important and is the basis of an entity's DM&R estimate, the Board determined that it is not an essential component of financial reports. The Board's rationale for this decision is that condition assessment methods and reporting continue to evolve and there are no federal-wide uniform assessment or measurement methods that would increase comparability and understandability. Therefore, summarized condition information may not provide meaningful information to users. The Board believes the wide variation among entities in condition assessment methods and reporting (i.e., different condition ratings/rankings) could obscure user understanding of the government's fiscal exposure (realistic DM&R estimate). The Board believes that this is an area where entity administrative burden can be alleviated given the questionable benefits of summarized condition information.

A13. This Statement eliminates the requirement to report condition information. However, entities may include condition information in a manner they believe best presents and contextualizes DM&R and related performance matters.

Presenting Beginning and Ending DM&R Balances and Explanation of Significant Changes

A14. The majority of respondents agreed with the Board's proposal to require that entities present beginning and ending DM&R balances and explain significant changes. Respondents who disagreed noted that because many variables impact the change in DM&R estimates a significant change could result in wide disparities among the component entities.

A15. The Board believes that presenting DM&R balances and discussing significant changes increases comparability while also enhancing entity-specific consistency. Some respondents have noted that discussing significant changes is not only reasonable, but required inasmuch as it is a part of determining the underlying causes to such changes. As one respondent noted, discussing changes is essential for transparency and accountability.

A16. The Board believes that users need to know how much the M&R requirements increased (decreased) in dollar terms and the effect of this change on the DM&R balances. Moreover, it is important for users to (1) understand the events that occurred during the year and why they brought about significant increases or decreases and (2) whether or not DM&R levels have changed (e.g., the amount declined). To that end, federal entities are required to present their DM&R beginning and ending balances. As illustrated in Appendix B, entities should present these balances by category (i.e., general PP&E, heritage assets, and stewardship land), and explain significant changes by major asset category. The determination of whether an item is significant is a matter of professional judgment. This

determination is separate and distinct from materiality considerations. Factors that might be considered when determining whether an item is significant include the: (1) absolute dollar amount of the change in DM&R estimates, (2) percent change in DM&R estimates, (3) perceived importance of the reason for the change to financial statement users, and (4) potential consequences arising from the change (e.g., effect on mission). The Board believes that this will increase comparability and the relevance and reliability of the DM&R estimates and will significantly enhance entity-specific consistency from year to year.

Applying Reported Methods and Reporting Formats Consistently using an Interdisciplinary and Integrated approach

- A17. The majority of respondents agreed with the Board's proposal to require that entities apply reported methods and reporting formats consistently unless management determines that changes are necessary and if changes to methods or formats are necessary, such changes should be explained. Furthermore, respondents agreed that input from professionals in diverse disciplines is necessary to effectively compile and report DM&R.
- A18. Because consistency in measurement and reporting significantly adds to the informational value of DM&R estimates (i.e., trend information is useful to decision makers), management must use consistent assessment techniques, measurement methods and reporting formats from year-to-year. However, if management decides to change methods or formats, such changes should be accompanied by an explanation documenting the rationale for the change and any related impact to the DM&R estimate(s). This is consistent with Task Force concerns that (1) entities be allowed to adopt new and improved methods or technologies that might be brought about in the area of asset management and (2) greater rigor and discipline is needed in the area of DM&R measurement and reporting.
- A19. Staff research found that some agencies have interpreted SFFAS 6 requirements to apply only to unfunded DM&R activities.¹³ As a result, inaccurate reporting and increased lack of consistency and comparability has resulted. The Board notes whether funded or not, DM&R should be reported. For example, if funding exists but competing demands cause a schedule slippage and result in a delay to a future period, such costs should be reported as DM&R.
- A20. Staff research also found that some entities have not reported DM&R because they have not distinguished between needed capital improvements (e.g., activities which extend the useful life of PP&E) and needed repairs (e.g., activities which allow PP&E to attain its original useful life). SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles*,

¹³ Department of Defense Inspector General Report dated September 25, 2009, *Deferred Maintenance on the Air Force C-130 Aircraft* (Report No. D-2009-112.)

Including the Application of Standards Issued by the Financial Accounting Standards Board, states that “[g]enerally accepted accounting principles recognize the importance of reporting transactions and events in accordance with their substance. Consideration should be given to whether the substance of transactions or events differs materially from their form.”¹⁴ For DM&R amounts to be comparable, entities must consider the substance rather than the form—that is, the terms applied by management—of future activities relating to PP&E.

A21. An interdisciplinary and integrated approach is necessary to address completeness and consistency and meet the goal of DM&R reporting. This includes communicating among and considering input from experts in diverse disciplines such as engineering, facilities management, finance, budgeting, and accounting. Such input should be considered when determining acceptable condition and related costs to remedy assets. Such an approach will help to (1) ensure the increased value and efficacy of the reported information, (2) meet diverse user needs, and (3) foster system integration and process improvements via continual interaction among entity staff.

Narrative Information Describing M&R Policies and other Non-financial Information

A22. The majority of respondents agreed with the Board’s proposal to require that entities provide narrative information describing M&R policies and other non-financial information including any significant changes to policies and other factors from the prior year. Respondents who disagreed noted that combining policy statements across a reporting entity with heterogeneous assets and varying missions is difficult.

A23. The Board believes that users need to understand how entities carry-out their stewardship responsibilities. Moreover, many entities maintain such information as part of their overall management and stewardship responsibilities.

A24. Although flexibility is necessary in the areas of determining asset condition and defining acceptable condition, the Board believes that additional disclosures are required in order to increase consistency, comparability, and the reliability and relevance of DM&R estimates. Consequently, the Board believes that:

- a. disclosing M&R policies and how they are applied in practice assists users in understanding how an entity manages its DM&R.
- b. disclosing policies for ranking and prioritizing M&R activities assists users in understanding how an entity efficiently and effectively manages its M&R resources. As

¹⁴ SFFAS 34, footnote 5.

such, preparers may provide general context in their explanations concerning the amount of the ending balance that the entity would need to incur in the near-term to avoid adverse impact to the entity's mission. Additionally, the Board believes that in order to enhance the relevance and reliability of the entity's estimated DM&R amount, an entity should explain how it decides to allocate its (available) resources. For example, entities frequently give top priority to maintenance and repair activities that maintain employee or constituent health and safety or are required to satisfy regulatory mandates. Once this is accomplished, entity rankings may be adjusted for asset condition assessments, and management considerations that include: capital improvement plans, asset disposal plans, and budgetary funding outlook.

- c. identifying factors the entity considers in selecting acceptable condition standards assists users in understanding the unique nature of the entity's mission and operating environment and how these affect asset management. Regardless of whether entities report condition information, the underlying rationale an entity uses in making this managerial judgment enhances the relevance and reliability of the entity's estimated DM&R. For example, an entity might set different acceptable condition standards for identical assets because of geographical or environmental factors specific to each.
- d. disclosing whether DM&R relates solely to capitalized general PP&E and non-capitalized stewardship PP&E or also includes amounts relating to non-capitalized or fully depreciated general PP&E assists users in understanding how an entity manages its DM&R. Partially as a result of increased emphasis in the reporting of real property information, it has come to the Board's attention that some entities, in addition to tracking DM&R on capitalized general and non-capitalized stewardship PP&E, also track and report DM&R on expensed or fully depreciated general PP&E; i.e., all accountable PP&E.
- e. identifying PP&E for which management does not measure and/or report DM&R and the rationale for the exclusion assists users in understanding how an entity efficiently and effectively manages its M&R resources. Management should clearly disclose and provide a rationale for this exclusion. For example, PP&E designated as excess and subject to disposal or considered unserviceable may not have any associated DM&R.

Eliminating Dollar Ranges and Critical / Non-critical Designations

A25. The majority of respondents agreed with the Board's proposal to eliminate dollar ranges and critical / non-critical designations. However, a respondent noted that the intent of distinguishing critical from non-critical DM&R was to provide insight into the timing of such expenditures. As such, the respondent asked the Board to consider an alternative to providing information concerning the ending balance that the entity would need to achieve in the near term in order to avoid adverse impact to the entity's mission.

A26. The Board notes that requiring DM&R designations would be (1) overly prescriptive and difficult for agencies to calculate, (2) inconsistent with Board actions to-date that acknowledge the imprecise nature of DM&R estimates and (3) contrary to the goal of focusing on a singular DM&R estimate. However, the Board does believe that this may be beneficial information that preparers could consider providing.

A27. The stratification between critical and non-critical DM&R at SFFAS 6, paragraph 84 was intended to be optional and not an unnecessary burden to entities. It has come to the Board's attention that the Federal Real Property Guidelines define "critical" at the asset level (i.e., asset classification defines if M&R is critical or not) whereas the SFFAS 6 guidelines have been interpreted to apply to the discrete M&R activity (i.e., the nature of the work defines if M&R is critical or not). Furthermore, some entities are following Treasury guidelines which define "critical" as a matter of consequence or exigency (i.e., impact of not performing the M&R work/activity).¹⁵ Consistent with the Task Force's recommendation, it is the Board's opinion that having three separate definitions for "critical" has led to confusion, increased lack of comparability, and estimates that are not necessarily reflective of what entities expect to incur. The Board believes that the reporting of critical and non-critical DM&R is not useful, can lead to inconsistency, and therefore should be not be addressed in the Statement.

Other Matters

Active and Inactive PP&E

A28. Measuring DM&R related to active and inactive PP&E helps ensure that DM&R estimates capture reliable information on the estimated cost of the PP&E maintenance and repairs that have been deferred. For example, entities are often required by law or regulation to obtain approval(s) prior to disposing real property deemed inactive or excess. If entities continue to measure DM&R on PP&E pending disposition, DM&R estimates may be overstated because M&R having a low probability of occurrence may be included. As a result, DM&R that is not expected to be incurred due to an asset's inactive status may be separately identified in order to provide for a more realistic DM&R estimate, if deemed material.

¹⁵ June 17, 2010, Appendix 4 of Chapter 4700 in Vol. 1 of the Treasury Financial Manual, Other Financial Report (FR) Notes Data and Instructions. *"Critical deferred maintenance is urgently needed, absolutely necessary, and is an element that needs immediate attention. Furthermore, critical deferred maintenance is any deferred maintenance that poses a serious threat to the public or employee safety or health, natural or cultural resources, and a bureau's ability to carry out its assigned mission."*

Assessment Method Factors and Selection Criteria

A29. In measuring DM&R, entities are free to choose among assessment methods described in this Statement. For example, an entity may elect to use a life-cycle method to assess its PP&E as part of its overall project management strategy to enhance its ability to predict future maintenance and repair requirements. Another entity may elect to use a parametric method¹⁶ due to the size and complexity of its portfolio and to realize efficiencies and cost savings while another entity requiring asset-specific condition information may select the condition assessment survey method. The Board realizes that entities need to consider many factors when selecting assessment methods. Such factors could include:

- a. nature, size and complexity of the PP&E portfolio,
- b. mission requirements,
- c. cost versus benefit,
- d. changes in economic outlook,
- e. project management strategy,
- f. nature or type of asset to be inspected,
- g. asset-specific condition assessment requirements,
- h. environmental or weather conditions,
- i. availability of commercial-off-the-shelf (COTS) software,
- j. availability of government-off-the-shelf (GOTS) software,
- k. software scalability and related vendor support,
- l. regulatory requirements, and
- m. health and safety considerations.

¹⁶ Similar to the life-cycle costing method, the parametric method is an accepted technique that entails performing condition assessments at the system level rather than the component level.

A30. In order to obtain greater consistency and comparability this Statement provides that once selected, condition standards, related assessment methods and reporting formats should be consistently applied unless management determines that changes are necessary. General selection criteria management could use in evaluating different assessment methods include the following:

CONDITION ASSESSMENT SURVEYS (i.e., visual, physical inspections)

PROS

- Generates DM&R estimates
- More timely identification of health and safety issues
- Usually identifies and prioritizes work items / specific repairs
- Modified surveys are affordable
- Knowledge-based surveys (e.g., risk management strategies) eliminate over - and under-inspection
- Engineered-based surveys provide consistent and credible results

CONS

- Traditional surveys are expensive
- Does not always identify or prioritize work items / specific repairs
- Wasteful over-inspection, risky under-inspection
- Inspector bias could distort results

LIFE CYCLE COSTING METHODS (i.e., modeling)

PROS

- Generates DM&R estimates
- Affordable
- Efficient
- Focuses on buildings and systems
- Facilitates evaluation of large portfolios

CONS

- Determining the cumulative costs of deferring maintenance
- Does not identify or prioritize work items / specific repairs
- Not always appropriate for smaller portfolios
- Could require expensive updating of initial procurement information
- Credibility issues

Board Approval

A31. This Statement was approved for issuance by all members of the Board. The written ballots are available for public inspection at the FASAB's offices.

Appendix B: Sample Illustration

Appendix B Deferred Maintenance and Repairs Illustration

This appendix illustrates the requirements at paragraphs 14 and 15. The examples shown here are for illustrative purposes only. Different entities may develop different asset classes and descriptive terminology consistent with the set categories of general PP&E, heritage assets, and stewardship land. The following narrative discussion and Illustration #1, *General Purpose Display* meet the minimum requirements of this Standard. The various illustrations are not meant to articulate with one another and should be viewed on a stand-alone basis.

XYZ Entity Deferred Maintenance and Repairs for Fiscal Year 20x2

The XYZ entity operates over 1,300 facilities throughout the world, preserves nearly 300 national historical landmarks of natural, cultural, educational, or artistic importance, and is responsible for maintaining over 80,000 acres of stewardship land. Most of the facilities are predominantly used for office space and warehousing defense assets. Additionally, the entity operates a hospital at one of its remote sites. It is entity policy to ensure that medical equipment and critical equipment systems are maintained and managed in a safe and effective manner. Therefore, deferred maintenance and repairs do not arise for these two types of equipment and no periodic assessment is performed. Additionally, since (1) it is entity policy to maintain and preserve all fixed property, plant and equipment (PP&E) regardless of recorded values and (2) accounting and asset management systems do not differentiate M&R between PP&E capitalized (i.e., items whose cost exceeds the capitalization threshold) versus those expensed, DM&R estimates reported herein relate to all PP&E whether capitalized or not or fully depreciated.

Defining and Implementing M&R Policies in Practice.

As permitted under SFFAS 42, *Deferred Maintenance and Repairs, Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32*, the entity employs a parametric estimating method for the largest portion of its portfolio (real property such as office and warehouse space) and the condition assessment method for its hospital facility, defense and stewardship assets. With the exception of the hospital facility which is inspected on a yearly basis, the entity's real property portfolio is assessed on a 3 to 5 year rotating calendar. Both methods measure current real property asset condition and document real property deterioration.

Real property assessment methods produce both a cost estimate of deferred maintenance and repairs, and a Facility Condition Index (FCI). Both measures are indicators of the overall condition of the entity's facilities. The parametric estimating methodology involves an independent, rapid visual assessment of nine different systems within each facility to include: structure, roof, exterior, interior finishes, HVAC (heating, ventilation, and air conditioning), electrical, plumbing, conveyance, and program support equipment. The parametric estimating method is designed to be cost-effective and appropriate for application to a large population of facilities; results are not necessarily applicable for individual facilities or small populations of facilities.

The entity's hospital is inspected on a yearly basis employing a physical inspection method which focuses on component as well as system distresses in addition to identifying deficiencies. The entity's defense assets are routinely surveyed by unit and depot maintenance personnel and stewardship assets are routinely surveyed by on-site personnel and regional inspection teams.

As stated above, it is entity policy to ensure that medical equipment and critical facility equipment systems are maintained and managed in a safe and effective manner. Therefore, deferred maintenance and repairs assessment methods are generally not applied to equipment assigned to hospitals as any DM&R would be negligible.

Ranking and Prioritizing M&R Activities.

Maintenance and repair activities are first prioritized via health, safety and regulatory considerations at all facilities. Once this is accomplished, the FCI values are then ranked based on the ratings obtained during the condition assessment site visits. Rankings are generally adjusted to take into account current capital improvement efforts underway, future capital improvement plans, asset disposal plans, and budgetary funding outlook.

Factors Considered in Setting Acceptable Condition.

For office and warehouse space, the entity defines acceptable condition in accordance with standards comparable to those used in private industry. For example, industry standards for administrative buildings can vary substantially depending upon their classification as either a Class A, B, or C property. Such classifications are affected by building location, design, and age. Condition standards for warehouses are primarily set by local jurisdictions and consider factors such as accommodating loads, materials to be stored, the associated handling equipment, the receiving and shipping operations, associated trucking, and the needs of the operating personnel. Acceptable condition for the hospital facility is in accordance with federal statutory requirements and requirements adopted by the health care facilities industry substantially comparable to the requirements at 42 C.F.R. Part 483 entitled, *Requirements for States and Long Term Care Facilities*.

Military specifications and standards for defense assets vary greatly depending upon numerous factors such as the nature and type of equipment and mission expectations. Acceptable condition standards for defense assets are set at levels deemed to be mission capable or serviceable. Heritage assets and stewardship land adopt scientific conservation standards to preserve assets in a manner that fulfills the entity's obligation to stabilize, protect, and preserve the assets.

Significant Changes from Prior Year and Related Events.

The overall net increase of \$2.0 billion in DM&R is a result of the \$3.0 billion increase in General PP&E DM&R, offset by a \$1.0 billion decrease in heritage assets DM&R.

Funded DM&R decreased by \$1.0 billion as result of the entity's strategic initiative to repair and restore many of its historical landmarks. However, unfunded DM&R pertaining to inactive/excess general PP&E increased by \$3.0 billion as a result of (1) the transfer of properties from other federal entities, (2) newly identified properties and equipment no longer needed by the entity, and (3) continued degradation of properties awaiting final disposition. Management policy is to comply with legal requirements to maintain inactive/excess property in safe condition and to pursue cost-beneficial measures to preserve the value of properties. The entity in collaboration with other entities and members of Congress is in the process of finalizing plans to either dispose of or find alternate uses for the aforementioned properties. For such properties, DM&R include those M&R activities management believes are warranted but not necessarily the M&R appropriate for an equivalent active property.

The following illustration presents information on major PP&E categories experiencing material amounts of deferred maintenance and repairs and meets the basic illustration requirements of this Standard:

ILLUSTRATION 1 - GENERAL PURPOSE DISPLAY

Deferred Maintenance and Repair Costs

(Dollars in Millions)

Asset Category	20x2 Ending Balance DM&R	20x2 Beginning Balance DM&R

Statement of Federal Financial Accounting Standards 43: Funds from Dedicated Collections: Amending Statement of Federal Financial Accounting Standards 27, Identifying and Reporting Earmarked Funds

Status

Issued	June 1, 2012
Effective Date	For fiscal years beginning after September 30, 2012.
Affects	SFFAS 27, par. 11-39. SFFAC 2, par. 35
Affected by	None.

Summary

This Statement amends Statement of Federal Financial Accounting Standards 27, *Identifying and Reporting Earmarked Funds*, by:

- changing the term "earmarked funds" to "funds from dedicated collections."
- modifying the definition of a fund from dedicated collections by:
 - clarifying that at least one source of funds external to the federal government must exist for a fund to qualify as a fund from dedicated collections, and
 - adding an explicit exclusion for any fund established to account for pensions, other retirement benefits, other postemployment or other benefits provided for federal employees (civilian and military).
- permitting either consolidated or combined data on funds from dedicated collections to be provided.
- permitting certain component entities to report on funds from dedicated collections for amounts related to the statement of changes in net position in a note rather than on the face of the statement.
- illustrating optional formats for displaying information on the face of the balance sheet and statement of changes in net position.

Introduction

Purpose

1. The Board evaluated Statement of Federal Financial Accounting Standards (SFFAS) 27, *Identifying and Reporting Earmarked Funds*, which has been in effect since fiscal year (FY) 2006, and identified areas for improvement. The review found some aspects of the requirements that should be clarified and identified challenges inherent in presenting understandable information that meets the reporting objectives of SFFAS 27. This Statement amends the requirements to resolve these matters.

Materiality

2. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Accounting Standard

Applicability and Scope

3. This Statement applies to federal entities that present general purpose federal financial reports, including the consolidated financial report of the U.S. Government (CFR), in conformance with generally accepted accounting principles as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
4. This Statement amends Statement of Federal Financial Accounting Standards (SFFAS) 27, *Identifying and Reporting Earmarked Funds*.

Amendments

New Term for “Earmarked Funds”

5. The title of SFFAS 27 is amended as follows: SFFAS 27, *Identifying and Reporting Funds from ~~Earmarked Funds~~ **Dedicated Collections***.¹
6. The term “earmarked funds” is changed to “funds from dedicated collections” in the accounting standards of SFFAS 27 and conforming grammatical changes are made throughout SFFAS 27.² Paragraphs amended for terminology are: 11 – 18, 20 – 24, 26 – 34, and 39. The entire text as amended is presented in Appendix B.

Definition of Funds from Dedicated Collections

7. SFFAS 27, paragraph 11 is amended as follows:

[11]~~Earmarked funds~~ Generally, funds from dedicated collections are financed by specifically identified revenues,^{3a} provided to the government by non-federal sources, often supplemented by other financing sources, which remain available over time. These specifically identified revenues and other financing sources are required by statute to be used for designated activities, benefits or purposes, and must be accounted for separately from the government’s general revenues. The three required criteria for an earmarked fund from dedicated collections are:

1. A statute committing the federal government to use specifically identified revenues and/or other financing sources that are originally provided to the federal government by a non-federal source^{3b} only for designated activities, benefits or purposes;
2. Explicit authority for the ~~earmarked~~ fund to retain revenues and/or other financing sources not used in the current period for future use to finance the designated activities, benefits, or purposes; and
3. A requirement to account for and report⁴ on the receipt, use, and retention of the revenues and/or other financing sources that distinguishes the ~~earmarked~~ fund from the federal government’s general revenues.

¹ Terms defined in the Glossary are shown in **bold-face** the first time they appear.

² For example, in places the adjective “earmarked” has been changed to “such” funds, for example in paragraph 24 of SFFAS 27.

Footnote 3a: Such specifically identified revenue can be either exchange or nonexchange.

Footnote 3b: In some cases, specifically identified revenues or other financing sources are collected from a non-federal source by one agency and transferred or appropriated to another. For example, Social Security taxes are collected from non-federal entities (employees and employers) by the Internal Revenue Service. Those amounts are subsequently appropriated and transferred to the Social Security Administration. This internal process does not change the nature of the revenue or other financing source (i.e., specifically identified revenues or other financing sources originally collected from a non-federal source).

Footnote 4: A “report” may be something other than stand-alone financial statements for the ~~earmarked~~ fund from dedicated collections.

Predominant Source of Funds

8. To distinguish the definition from explanatory text relating to its application, a new subheading – “Application of the Definition” – is inserted in SFFAS 27 before paragraph 12.
9. SFFAS 27, paragraph 13 is amended as follows:

[13] **Fund** in this Statement’s definition of ~~earmarked~~ funds from dedicated collections refers to a “fiscal and accounting entity with a self-balancing set of accounts recording cash and other financial resources, together with all related liabilities and residual equities or balances, and changes therein, which are segregated for the purpose of carrying on specific activities or attaining certain objectives in accordance with special regulations, restrictions, or limitations.”⁵ Classification and reporting should be made at the level of an individual fund. A fund should be classified as a “fund from dedicated collections” if it meets the criteria in paragraphs 11.2 and 11.3 and either:

1. its predominant sources of revenue and other financing sources are non-federal sources meeting the paragraph 11.1 criterion, or
2. it has non-federal sources of revenue and other financing sources meeting the paragraph 11.1 criterion^{5a} that are material to the reporting entity.

For example, as currently funded, Medicare Parts B and D do not have non-federal sources as described in paragraph 11 as their predominant revenue and other financing sources. However, Medicare Parts B and D do have revenue and other financing sources material to the reporting entity that meet the criteria in paragraph 11. Therefore, Medicare Parts B and D should be classified as funds from dedicated collections.

Footnote 5: National Council on Governmental Accounting Statement 1, par. 16.

Footnote 5a: In situations where there is a mixed source of funding (so that not all of the revenue and other financing sources meet the criteria in paragraph 11) and the proportion and/or amounts vary from year to year so that it is difficult to determine a predominant source and/or assess materiality, acceptable options for classification include but are not limited to:

1. long-term expectations rather than periodic results that may fluctuate
2. 36-month averages

Changes in classification of funds from year to year should be disclosed.

10. SFFAS 27, paragraph 14 is amended as follows:

[14] Whereas ~~earmarked~~ funds from dedicated collections are financed by specifically identified revenues and other financing sources, the general fund is financed by receipts not ~~earmarked~~ dedicated by law for a specific purpose and by the proceeds of general borrowing. Although there are exceptions, funding decisions regarding activity financed from general receipts usually govern one fiscal year and are made as part of the process of enacting one of the annual appropriations acts. In contrast, legislation establishing ~~earmarked~~ funds from dedicated collections reflects a longer (if not indefinite) government commitment to collect, hold and spend identified revenues for a designated activity, benefit or purpose. ~~Earmarked~~ Funds from dedicated collections may ~~have~~ be given authority to make expenditures by means of a permanent indefinite appropriation, often enacted by authorizing legislation. If not, an appropriation provided in annual appropriation acts is necessary to make expenditures. Whether the ~~appropriation~~ budget authority is provided by authorizing legislation or annual appropriations acts, the ~~cumulative results of operations~~ earmarked funds ~~is~~ are reserved or restricted to the designated activity, benefit or purpose.

Funds Excluded

11. SFFAS 27, paragraph 18 is amended as follows:

[18] Certain categories of funds are excluded from the reporting requirements of this standard. Intragovernmental funds are excluded because they are revolving funds that conduct business primarily within and between government agencies. Credit financing accounts are also excluded. Credit financing accounts are nonbudgetary funds that do not accumulate results of operations; they primarily serve as clearing accounts for cash activity relating to federal credit programs. Fiduciary funds, which are not government-owned, are also excluded. Funds established to account for pensions, other retirement benefits, other

postemployment benefits, and other employee benefits provided to federal employees (civilian or military) should not be classified as funds from dedicated collections because such funds account for employer-employee transactions and requirements tailored to those transactions are provided by SFFAS 5, *Accounting for Liabilities of the Federal Government*, paragraphs 56-96.^{6a} In addition, because these funds recognize significant long-term liabilities, the large negative net position offsets much of the generally positive net position of other funds from dedicated collections. The result at the government-wide level is that the large negative net position of these funds obscures the large cumulative amount that needs to be repaid by the general fund in order for the dedicated collections to be used for their intended purposes.

Footnote 6a: Because classification and reporting should be made at the level of an individual fund, portions of funds, such as the Federal Employees Compensation Account portion of the Unemployment Trust Fund, should not be excluded because of this provision.

Component Entity: Disclosures and Eliminations

12. SFFAS 27, paragraphs 19 and 20 through 24 and paragraph 26 and related headings are amended as follows:

Financial Statement Presentation and Disclosures for Component Entities

Financial Statement Presentation

~~[19] [Earmarked non-exchange revenue and other financing sources, including appropriations, and net cost of operations should be shown separately on the Statement of Changes in Net Position. Also, the portion of cumulative results of operations and unexpended appropriations attributable to earmarked funds from dedicated collections should be shown separately on both the statement of changes in net position and the balance sheet. This standard does not require earmarked funds from dedicated collections to be separately shown on the statement of net cost. Non-exchange revenue and other financing sources, including appropriations, and net cost of operations for funds from dedicated collections should be shown separately on the statement of changes in net position if:~~

1. dedicated collections are the predominant source of revenue and other financing sources for the **component entity**, or
2. one or more of the entity's funds from dedicated collections

- a. is of immediate concern to constituents of the fund.
- b. is politically sensitive or controversial.
- c. is accumulating large balances, or
- d. the information provided in the financial statements would be a primary source of financial information for the public

For example, the Social Security and Medicare programs are of immediate concern to their constituents; both programs have a direct current or future impact on the majority of the general public.

[19a] Entities may present combined or consolidated amounts and the presentation must be labeled accordingly. (See Appendix C: Pro Forma Illustrations for examples of accounting entries and financial reporting.)

[19b] Component entities that do not separately show amounts from dedicated collections on the statement of changes in net position should refer on the face of the statement of changes in net position to the note on funds from dedicated collections.

[20] Most ~~earmarked~~ revenues and other financing sources that are dedicated collections are reported in the basic financial statements of the entity carrying out the program and responsible for administration of the fund. If more than one component entity is responsible for carrying out the program financed with ~~earmarked revenues and other financing sources~~ revenues and other financing sources that are dedicated collections, and the separate portions of the program can be clearly identified with a responsible component entity, then each component entity should report its portion in accordance with the requirements of this standard. If separate portions cannot be identified, the component entity with program management responsibility should report the fund.⁷

Footnote 7: To determine program management/accounting responsibility, agencies should consider the legislation authorizing the program; the Memorandum of Understanding that establishes responsibilities; and the provisions of SFFAC 2, *Entity and Display*, as amended by this standard.

Disclosure

[21] A component entity should disclose⁸ all ~~earmarked~~ funds from dedicated collections for which it has program management responsibility by either a list, (by official title,) or a statement indicating where the ~~information~~ list can be obtained (e.g., a website reference or

contact information). An earmarked fund from dedicated collections should not be characterized as a "trust" in general purpose external financial reports of federal entities. (The use of the term "trust fund" is acceptable only in the fund's official title.)

Footnote 8: Disclosure is reporting information in notes or narrative regarded as an integral part of the basic financial statements.

[22] The following information should be disclosed for each individual earmarked funds from dedicated collections. An exception is provided for component entities having numerous individual earmarked funds from dedicated collections. Paragraph 24 discusses criteria to consider in selecting individual funds for disaggregated disclosure. The following information should be disclosed for selected individual earmarked funds from dedicated collections, and in aggregate for all remaining earmarked funds from dedicated collections, and in total for all the entity's earmarked funds from dedicated collections:

1. Condensed information about assets and liabilities showing investments in Treasury securities, other assets, liabilities due and payable, other liabilities, cumulative results of operations and net position.
2. Condensed information providing gross cost, exchange revenue, net cost of operations, nonexchange revenues by major type and all other, other financing sources by major type and all other, and change in net position.

Entities may present combined or consolidated amounts and the presentation must be labeled accordingly. The information required by this paragraph for earmarked funds may be presented separately on the face of the entity's basic financial statements or disclosed in the accompanying notes. The information must be in sufficient detail to support reporting requirements for the U.S. government-wide financial statements in paragraphs 29 and 30. Information for funds not presented individually may be aggregated, but must be provided even if the aggregate total is immaterial. The total cumulative results of operations net position shown in the note disclosure should agree with the cumulative results of operations total net position for earmarked funds from dedicated collections shown on the face of the component entity's basic financial statements balance sheet.⁹ (See Appendix D: Examples of Note Disclosure of Summary Financial Information for an illustration of the disclosure required by this paragraph.)

Footnote 9: For the U.S. Treasury and any other component entity where earmarked fund investments are eliminated within the component entity, the note disclosure should include eliminations, similar to the note disclosure provided by the U.S. Government-wide financial statements as described in paragraph 30.

Footnote 9 was rescinded by SFFAS 43, *Revisions to Identifying and Reporting Funds from Dedicated Collections: Amending Statement of Federal Financial Accounting Standards 27*

[23] The following information should be disclosed for each individually reported ~~earmarked~~ fund from dedicated collections, or portion thereof, for which a component entity has program management responsibility (see paragraph 24).

1. A description of each fund's purpose, how the entity accounts for and reports the fund, and its authority to use those revenues and other financing sources.
2. The sources of revenue or other financing for the period and an explanation of the extent to which they are inflows of resources to the government or the result of intragovernmental flows.
3. Any change in legislation during or subsequent to the reporting period and before the issuance of the financial statements that significantly changes the purpose of the fund or that redirects a material portion of the accumulated balance.

[24] Selecting ~~earmarked~~ funds from dedicated collections to be presented individually requires judgment. The preparer should consider both quantitative and qualitative criteria. Acceptable criteria include but are not limited to:

a. quantitative factors such as

1. the percentage of the reporting entity's ~~earmarked~~ revenues from dedicated collections or
2. cumulative results of operations from ~~earmarked~~ such funds; and

b. qualitative factors such as

1. whether an ~~earmarked~~ fund from dedicated collections is of immediate concern to constituents of the fund,
2. whether it is politically sensitive or controversial,
3. whether it is accumulating large balances, or
4. whether the information provided in the financial statements would be the primary source of financial information for the public.

[25] The total ~~cumulative results of operations~~ net position of all ~~earmarked funds from dedicated collections~~ shown in the note disclosure should agree with the ~~cumulative results of operations~~ net position of ~~earmarked funds from dedicated collections~~ shown on the face of the component entity's balance sheet ~~and the statement of changes in net position~~.

[26] In accordance with the provisions of paragraph 20 ~~or footnote 5a of paragraph 13~~, if a component entity reports a different portion of an ~~earmarked fund program funded by dedicated collections~~ than it reported in prior years, it should not restate its prior year financial statements. It should disclose the change ~~in a note~~. This applies if a component entity does not report an ~~earmarked fund from dedicated collections, or portion thereof~~, that it reported in the previous year. It also applies if a component entity ~~does reports an earmarked fund from dedicated collections, or portion thereof~~, that it did not report in the previous year.

Financial Statements and Disclosures for the U.S. Government-wide Financial Statements

13. Requirements for the U.S. Government-wide Financial Statements are amended as follows:

[30] Specific information should be disclosed for selected ~~earmarked funds from dedicated collections~~. Paragraph 24 discusses criteria to consider in selecting individual funds for disaggregated disclosure. The following information should be provided for selected individual ~~earmarked funds from dedicated collections~~ and, in aggregate for all remaining earmarked funds from dedicated collections, and in total for all funds from dedicated collections ~~with eliminations necessary to produce the Government-wide total of earmarked funds~~.

1. Condensed information about assets, liabilities and net position.
2. Condensed information on gross cost, exchange revenue, net cost, nonexchange revenues and other financing sources, and change in net position.

The disclosure may present combined or consolidated amounts and the presentation must be labeled accordingly.

Updates for Subsequent Issuances

14. Footnote 6 of SFFAS 27, which refers to the exposure draft for SFFAS 31, is updated to refer to SFFAS 31.

-
15. Paragraph 37 of SFFAS 27 is updated as follows:

[Paragraph 37 was superseded by paragraph 34 of SFFAS 31, which rescinded paragraphs 83 through 87 of SFFAS 7.]

Implementation Guidance

16. In the year this standard becomes effective, entities should restate prior period amounts displayed on the face of the financial statements and disclosed in notes.

Effective Date

17. This Statement is effective for periods beginning after September 30, 2012. Early adoption is not permitted.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

<p>Note: This Statement changes the term “earmarked funds” to “funds from dedicated collections.” Conforming changes have been made for clarity and grammar.</p>
--

Project Background

- A1. SFFAS 27 was established to distinguish between funds from dedicated collections and all other funds. Funds from dedicated collections have characteristics that justify special accountability. An explicit commitment associated with the statutory establishment of such funds is created that raises an expectation on the part of the public that the government will use the amounts collected from specific sources and accumulated in funds from dedicated collections for their stated purpose. Resource inflow is accounted for separately from general tax receipts, allowing the program’s status to be more easily examined.
- A2. SFFAS 27 became effective in fiscal year 2006. It required each component entity to display nonexchange revenue and other financing sources, and net cost of operations³ attributed to funds from dedicated collections and all other funds separately on the statement of changes in net position. The component entity also displays the portions of cumulative results of operations and unexpended appropriations attributable to funds from dedicated collections and all other funds separately on the statement of changes in net position and on the balance sheet. The government-wide financial statements display revenue, other financing

³ Revenue from dedicated collections can be either exchange or nonexchange. Exchange revenue is included in the net cost of operations on the statement of changes in net position.

sources and net cost of operations attributed to funds from dedicated collections and all other funds separately on the U.S. government statement of operations and changes in net position. The U.S. government balance sheet displays separately the portions of net position attributable to funds from dedicated collections and all other funds.

- A3. The Board reviewed SFFAS 27 to determine if the intended objectives were being achieved. Following an initial review by staff, a task force that included representatives from 23 federal agencies was formed. The task force assisted the Board by identifying concerns, testing alternatives, and reviewing proposals.

Outcome of Task Force Evaluation

- A4. The following major issues were identified by FASAB staff and the Task Force:

- a. **Term “Earmarked”** – Competing meanings of the term “earmarked” were causing confusion. This Statement changes the term “earmarked funds” to “funds from dedicated collections.” Conforming changes have been made throughout.
- b. **Appropriateness of Classifications** – The appropriateness of certain types of funds being classified as funds from dedicated collections was questioned for the following reasons:
 - i. no non-federal (external) source of funding exists for some funds reported as funds from dedicated collections,
 - ii. classification of funds with mixed sources of funding where the predominant source is general fund appropriations may be misleading, and
 - iii. funds established to account for pensions, other retirement benefits, other postemployment benefits, and other employee benefits provided to federal employees (civilian and military) should not be reported as funds from dedicated collections because such funds account for employee-employer transactions and requirements tailored to those transactions are provided by SFFAS 5, *Accounting for Liabilities of the Federal Government*.
- c. **Understandability** – Presenting funds from dedicated collections information on the face of component-level financial statements may not be the most understandable format for financial statement readers.
- d. **Eliminations** – There was confusion over whether and how to perform and disclose eliminations.

A5. These issues are discussed in more detail in the sections that follow.

SUMMARY OF OUTREACH EFFORTS

- A6. The exposure draft, *Revisions to Identifying and Reporting Earmarked Funds: Amending Statement of Federal Financial Accounting Standards 27*, was issued June 22, 2011, with comments requested by August 22, 2011. Upon release of the exposure draft, notices and press releases were provided to
- a. The Federal Register;
 - b. *FASAB News*;
 - c. The *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, and the *CPA Letter*, and *Government Accounting and Auditing Update*;
 - d. The CFO Council, the Council of the Inspectors General on Integrity and Efficiency, and the Financial Statement Audit Network; and
 - e. Committees of professional associations generally commenting on exposure drafts in the past.
- A7. This broad announcement was followed by direct mailings of the exposure draft to the members of the Earmarked Funds Task Force. A list of the participating agencies is provided at Appendix D.
- A8. To encourage responses, a notice was sent to the FASAB's ListServ and to the FASAB's Twitter followers. In addition, a reminder was provided on August 16, 2011, to our Listserv. We also contacted affected agencies directly if a response had not been received by the date requested.

RESULT

A9. We received 23 responses from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		3
Auditors	2	1
Preparers and financial managers	17	

A10. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The respondents' comments are summarized below and are discussed in detail in the sections that follow.

A11. Terminology: All respondents agreed that the term "earmarked funds" should be changed, and most respondents agreed with the term "funds from dedicated collections."

A12. Appropriateness of Classifications:

- a. All respondents agreed with the requirement for an external source of funding.
- b. A majority of respondents agreed with the Board's proposal addressing the predominant source of funding when evaluating individual funds.
- c. All respondents agreed with the exclusion of certain funds.

A13. Understandability:

- a. A majority of respondents agreed with the Board's minority proposal to permit note-only reporting.
- b. A majority of respondents agreed with the option of an alternative format of parenthetical amounts within line item titles.

A14. Eliminations: A majority of respondents agreed that combined or consolidated amounts may be reported and must be labeled accordingly.

A15. Other:

- a. A majority of respondents agreed with an explicit requirement for data to be in sufficient detail to support government-wide reporting.
- b. A majority of respondents agreed with the proposed effective date of fiscal year 2012.

Terminology – "Earmarked Funds" changed to "Funds from Dedicated Collections"

A16. The Board believes that the term "earmarked funds" has become confusing to readers because of the increasing focus on a similar term, "earmarking," which refers to earmarked spending. Earmarking occurs when congressional direction (provided in legislation, report

language or other communication) designates appropriations for a specific purpose. In contrast, the reporting requirements of SFFAS 27 are focused on collections that are distinct from the government's general revenues and are dedicated for a specific purpose.

- A17. The Board believes that the new term, "funds from dedicated collections," is a unique and descriptive term that will not be confused with other commonly used terms. In addition, it explicitly states the reason for separate reporting (dedicated collections).

Appropriateness of Classifications

- A18. A primary objective of SFFAS 27 was that:

...under this standard the financial statements would thus present – in a transparent manner – the cumulative financing provided by earmarked funds to the general fund that will need to be repaid in order to use funds from dedicated collections for the designated activities, purposes or benefits.⁴

- A19. The need for greater transparency was explained as follows:

...the consolidated net position of the federal government reported on the U.S. government-wide financial statements does not include the effect of the claim on the U.S. Treasury that the various funds hold, just as the consolidated net position does not include the effect of other intragovernmental claims. Instead, the U.S. government-wide financial statements include the cumulative results of operations of earmarked funds – currently a large positive balance – as an offset against the cumulative results of operations of the general fund – currently a large negative balance. The result is that the financing provided by earmarked fund operations to general fund operations – which would otherwise be financed through the issuance of debt to the public, tax increases or other financing sources – is not shown on the face of the U.S. government balance sheet.⁵

- A20. By providing separate presentation of the cumulative results of operations attributable to funds from dedicated collections, the commitment to restrict the use of net position, or "net assets," accumulated in funds from dedicated collections would be apparent. In developing SFFAS 27, the Board noted that a 2001 report identified three hundred and ninety-two possible funds from dedicated collections. Annual revenues and other financing sources for those funds ranged from negligible amounts to over half a trillion dollars. Accumulated balances ranged from zero to over a trillion dollars.⁶ However, upon implementation in 2006, five of the sixteen largest funds from dedicated collections reported a negative net position.

- A21. Not previously having been aware of funds from dedicated collections with negative net positions, staff questioned whether these funds are appropriately included as funds from dedicated collections. Further research showed that some of the funds with negative net

⁴ SFFAS 27, Basis for Conclusions, paragraph 63.

⁵ SFFAS 27, Basis for Conclusions, paragraph 62.

⁶ SFFAS 27, Basis for Conclusions, paragraph 3.

positions did not receive any funding from dedicated collections. For example, the Department of Defense Medicare Eligible Retiree Health Care Fund receives income from three sources: an annual Treasury payment made on behalf of the military services at the beginning of the year based on average budgeted force strengths, annual payments from the Treasury to amortize the unfunded liability, and investment income on Treasury securities.

A22. The intent of SFFAS 27 was that the specifically identified revenues and other financing sources required to meet the criteria in paragraph 11 of SFFAS 27 should be from a source that is non-federal – that is, a source that is external to the federal government. Evidence of that intent is found in the SFFAS 27 explanation that such funding raises an expectation on the part of the public that the government will use the amounts collected from specific sources and accumulated in earmarked funds for their stated purpose⁷. However, SFFAS 27 did not explicitly state that a non-federal source of funds was required and current reporting practices vary. To ensure that funds reported as funds from dedicated collections are those where such a public expectation exists, this Statement provides amendments to SFFAS 27 to explicitly state that the source of the specifically identified revenues or other financing source must be external to the federal government, and to clarify the distinction between funds from dedicated collections and the general fund.

Funds with Mixed Sources of Funding

A23. In implementing SFFAS 27, agencies classified numerous funds primarily funded by general fund appropriations as funds from dedicated collections. The Board believes that guidance is needed for funds with mixed sources of funding (that is, a combination of (a) revenues and other financing sources that meet the criteria in paragraph 11 of SFFAS 27 ("non-federal") and (b) general fund appropriations ("federal")). In some such cases, the funding from non-federal sources is insignificant both to the component entity and the government as a whole. The Board believes that because a "fund" (usually associated with a Treasury account fund symbol) is the smallest financial accounting unit in the federal government, a fund with mixed sources of funding including dedicated collections presents special challenges in meeting the objectives of SFFAS 27. Conceptually, the portion representing dedicated collections should be separately identified. In the Board's view, separately accounting for the portion of these funds representing dedicated collections would impose reporting burdens in excess of any benefits. However, classifying both dedicated collections and general fund appropriations as "dedicated collections" would overstate restricted revenue in component entity reports.

⁷ SFFAS 27, Basis for Conclusions, paragraph 54.

A24. To avoid such overstatements while minimizing reporting burdens, the Board believes that to be classified as a fund from dedicated collections, a fund should be predominantly funded by revenues from non-federal sources that meet the definition and criteria in paragraph 11 of SFFAS 27 (“non-federal revenues”). However, if the non-federal revenues supporting the fund are material to the reporting entity, the Board believes that the fund should be classified as a fund from dedicated collections even if the non-federal revenues are not the predominant source of inflows of the fund for which they are collected. The Board believes that this approach will result in a cost-effective solution. Material non-federal revenues that meet the definition and criteria in paragraph 11 of SFFAS 27 will be disclosed and costs will not be incurred to provide special accountability for immaterial amounts of non-federal revenue that meet the criteria but are commingled with other financing sources provided through general fund appropriations. The Board has accordingly provided an exception to the “predominant source of funds” principle in cases where the revenue that meets the criteria of paragraph 11 of SFFAS 27 is material to the reporting entity. In such cases, such as Medicare Parts B and D, the entire fund should be included.

Funds Excluded

A25. The Board believes that funds established to account for pensions, other retirement benefits, other postemployment benefits, and other employee benefits provided to federal employees (civilian and military) should not be reported as funds from dedicated collections because such funds account for employee-employer transactions and requirements tailored to those transactions are provided by SFFAS 5, *Accounting for Liabilities of the Federal Government*, paragraphs 56-96. SFFAS 5 addresses accountability for intra-governmental and employee contributions toward the cost of employee benefits and any resulting liabilities.

A26. In addition, because these funds recognize significant long-term liabilities, the large negative net position offsets much of the generally positive net position of other funds from dedicated collections. The result at the government-wide level is that these funds reduce the cumulative amount to be repaid by the general fund in order for the dedicated collections to be used for their intended purposes. Accordingly, this Statement provides that such funds should be excluded from the category of funds from dedicated collections.

Understandability

A27. Members of the task force expressed concerns regarding the understandability of the display of separate amounts on the face of the component entity financial statements for funds from dedicated collections and all other funds, as currently required by SFFAS 27. The task force believes that this adds complexity to an already challenging financial presentation. Further, it may prevent display of comparative financial statements on the

same page. The task force believes that all information concerning funds from dedicated collections in the component entity financial statements should be disclosed in the notes.

A28. The Board believes that component entity financial statements need not display funds from dedicated collections and all other fund totals separately on each line item, provided that certain key data remains on the face of the statements. Component entity financial statements must be read with the understanding that they provide information about a single component of the federal government. Each component acts as an agent of that government and restrictions are placed on the use of most funds available to agencies whether the funds are from dedicated collections or not. While special accountability for the use of funds can be conveyed through component entity reports by presenting information on significant individual funds, the cumulative financial implications of total funds from dedicated collections are best understood from the government-wide perspective since the focus is on intra-governmental borrowing.

A29. However, the Board believes that users may be misled if a component entity has no information on the face of the basic financial statements about the magnitude of funds from dedicated collections that are reserved for use for designated activities, benefits, or purposes. Accordingly, the Board is requiring that component entities continue to report net position attributable to funds from dedicated collections on the balance sheet. In addition, the Board believes certain component entities should continue to report funds from dedicated collections separately on the face of the statement of changes in net position, and that component entities not required to report on the face of the statement should include a reference to the note on the face of the statement of changes in net position.

Eliminations

A30. SFFAS 27 provided confusing guidance on eliminations for component entities by implying that the funds from dedicated collections disclosure should include eliminations between funds from dedicated collections and all other funds. Practice has varied as a result. The amendments eliminate the confusing guidance and instead provide that combined or consolidated totals are permitted so long as they are properly labeled.

A31. The primary objective of SFFAS 27 relates to intra-governmental borrowing/investing:

Under this standard the financial statements would thus present- in a transparent manner- the cumulative financing provided by earmarked funds to the general fund that will need to be repaid in order to use earmarked funds for the designated activities, purposes or benefits.⁸

⁸ SFFAS 27, Basis for Conclusions, paragraph 63.

A32. Another objective of SFFAS 27 relates to special accountability:

All earmarked funds have characteristics that justify special accountability. While many government programs raise implied commitments for the future, there is a more explicit commitment associated with the statutory establishment of earmarked funds. The government raises an expectation on the part of the public that the government will use the amounts collected from specific sources and accumulated in earmarked funds for their stated purpose.⁹

A33. The above objectives of SFFAS 27 focus primarily on the accumulated net position of funds from dedicated collections. Because net position is not affected by eliminations, presentation of eliminations is not necessary to meet the objectives of SFFAS 27. In addition, because the focus of special accountability is necessarily on individual funds (or programs) – members question whether the consolidated total is useful for assessing the status of funds from dedicated collections available for the individual purposes established in law.

A34. Members believe that a broader study of fund reporting is needed. Specifically, a fund reporting project would address the question of whether consolidated or combined amounts are more useful when reporting on a specific class of funds. Until such a study is completed, the Board believes it is acceptable to report either consolidated or combined amounts and the amounts must be labeled accordingly.

Support for Government-wide Reporting

A35. To address concerns expressed by representatives of the Department of the Treasury, this Statement also proposes amendments to explicitly require that component entity reporting should fully support the required government-wide reporting on funds from dedicated collections in accordance with paragraphs 29 – 33 of SFFAS 27.

Board Approval

A36. This Statement was approved for issuance by all members of the Board. Written ballots are available for public inspection at the FASAB's offices.

⁹ SFFAS 27, Basis for Conclusions, paragraph 54.

Appendix B: Text of SFFAS 27 Accounting Standards, as Amended

Definition of Funds from Dedicated Collections

11. Generally, funds from dedicated collections are financed by specifically identified revenues,^{3a} provided to the government by non-federal sources, often supplemented by other financing sources, which remain available over time. These specifically identified revenues and other financing sources are required by statute to be used for designated activities, benefits or purposes, and must be accounted for separately from the federal government's general revenues. The three required criteria for a fund from dedicated collections are:
1. A statute committing the federal government to use specifically identified revenues and/or other financing sources that are originally provided to the federal government by a non-federal source^{3b} only for designated activities, benefits or purposes;
 2. Explicit authority for the fund to retain revenues and/or other financing sources not used in the current period for future use to finance the designated activities, benefits, or purposes; and
 3. A requirement to account for and report⁴ on the receipt, use, and retention of the revenues and/or other financing sources that distinguishes the fund from the federal government's general revenues.

Footnote 3a: Such specifically identified revenues can be either exchange or nonexchange.

Footnote 3b: In some cases, specifically identified revenues or other financing sources are collected from a non-federal source by one agency and transferred or appropriated to another. For example, Social Security taxes are collected from non-federal entities (employees and employers) by the Internal Revenue Service. Those amounts are subsequently appropriated and transferred to the Social Security Administration. This internal process does not change the nature of the revenue or other financing source (i.e., specifically identified revenues or other financing sources originally collected from a non-federal source).

Footnote 4: A "report" may be something other than stand-alone financial statements for the fund from dedicated collections.

Application of the Definition

12. The requirement to account for revenues and other financing sources that are statutorily available only for designated activities, benefits or purposes is usually created by statute. A fund from dedicated collections may be classified in the statute, the unified budget, or both, as a trust, special, or public enterprise fund. Application of this standard, however, shall not be based on how a statute or the unified budget labels the fund. Rather, the Board intends that the term “funds from dedicated collections” be applied based on the substance of the statute and consistent with the three criteria described above.
13. **Fund** in this Statement’s definition of funds from dedicated collections refers to a “fiscal and accounting entity with a self-balancing set of accounts recording cash and other financial resources, together with all related liabilities and residual equities or balances, and changes therein, which are segregated for the purpose of carrying on specific activities or attaining certain objectives in accordance with special regulations, restrictions, or limitations.”⁵ Classification and reporting should be made at the level of an individual fund. A fund should be classified as a “fund from dedicated collections” if it meets the criteria in paragraphs 11.2 and 11.3 and either:
 1. its predominant sources of revenue and other financing sources are non-federal sources meeting the paragraph 11.1 criterion, or
 2. it has non-federal revenue and other financing sources meeting the paragraph 11.1 criterion^{5a} that are material to the reporting entity.

For example, as currently funded, Medicare Parts B and D do not have non-federal sources as described in paragraph 11 as their predominant revenue and other financing sources. However, Medicare Parts B and D do have revenue and other financing sources material to the reporting entity that meet the criteria in paragraph 11. Therefore, Medicare Parts B and D should be classified as funds from dedicated collections.

Footnote 5: National Council on Governmental Accounting Statement 1, par. 16.

Footnote 5a: In situations where there is a mixed source of funding (so that not all of the revenue and other financing sources meet the criteria in paragraph 11) and the proportion and/or amounts of funding sources vary from year to year so that it is difficult to determine a predominant source and/or assess materiality, acceptable options for classification include but are not limited to:

1. long-term expectations rather than periodic results that may fluctuate
2. 36-month averages

Changes in classification of funds from year to year should be disclosed.

Distinct from the General Fund

14. Whereas funds from dedicated collections are financed by specifically identified revenues and other financing sources, the general fund is financed by receipts not dedicated by law for a specific purpose and by the proceeds of general borrowing. Although there are exceptions, funding decisions regarding activity financed from general receipts usually govern one fiscal year and are made as part of the process of enacting one of the annual appropriations acts. In contrast, legislation establishing funds from dedicated collections reflects a longer (if not indefinite) government commitment to collect, hold and spend identified revenues for a designated activity, benefit or purpose. Funds from dedicated collections may be given authority to make expenditures by means of a permanent indefinite appropriation, often enacted by authorizing legislation. If not, an appropriation provided in annual appropriation acts is necessary to make expenditures. Whether the budget authority is provided by authorizing legislation or annual appropriations acts, the funds are reserved or restricted to the designated activity, benefit or purpose.

Distinct from Fiduciary Activities

15. The activity of funds from dedicated collections differs from fiduciary activities primarily in that in funds from dedicated collections, fund assets are government-owned. A fiduciary activity is the collection or receipt, management, protection, accounting, investment and disposition by the federal government of cash or other assets in which non-federal individuals or entities have an ownership interest that the federal government must uphold.⁶ Therefore, even though a fund from dedicated collections is designated exclusively for a specific activity, benefit or purpose, the federal government does not have a fiduciary relationship with the individuals or groups who potentially will benefit from the fund.

Footnote 6: See SFFAS 31, Accounting for Fiduciary Activities, for more on fiduciary activity in the federal government and the differences between private trust funds and federal government trust funds.

Distinct from Private Sector Trust Funds

16. Although funds from dedicated collections are predominantly in funds that are designated by law as trust funds, the meaning of the term “trust” in the federal government differs significantly from its meaning in the private sector. Whereas funds from dedicated collections in the federal government are distinct from fiduciary activities, a trust in the private sector necessarily involves a fiduciary relationship.
17. A fund from dedicated collections should not be characterized as a “trust” in general purpose external financial reports of federal entities. (The use of the term “trust fund” is acceptable only in the fund’s official title.)

Exclusions from Reporting Requirements

18. Certain categories of funds are excluded from the reporting requirements of this standard. Intragovernmental funds are excluded because they are revolving funds that conduct business primarily within and between government agencies. Credit financing accounts are also excluded. Credit financing accounts are nonbudgetary funds that do not accumulate results of operations; they primarily serve as clearing accounts for cash activity relating to federal credit programs. Fiduciary funds, which are not government-owned, are also excluded. Funds established to account for pensions, other retirement benefits, other postemployment benefits, and other employee benefits provided to federal employees (civilian or military) should not be classified as funds from dedicated collections because such funds account for employer-employee transactions and requirements tailored to those transactions are provided by SFFAS 5, *Accounting for Liabilities of the Federal Government*, paragraphs 56-96.^{6a} In addition, because these funds recognize significant long-term liabilities, the large negative net position offsets much of the generally positive net position of other funds from dedicated collections. The result at the government-wide level is that the large negative net position of these funds obscures the large cumulative amount that needs to be repaid by the general fund in order for the dedicated collections to be used for their intended purposes.

Footnote 6a: Because classification and reporting should be made at the level of an individual fund, portions of funds, such as the Federal Employees Compensation Account portion of the Unemployment Trust Fund, should not be excluded because of this provision.

Reporting for Funds from Dedicated Collections

Financial Statement Presentation and Disclosures for Component Entities

Financial Statement Presentation

19. The portion of cumulative results of operations and unexpended appropriations attributable to funds from dedicated collections should be shown separately on the balance sheet. This standard does not require funds from dedicated collections to be separately shown on the statement of net cost. Non-exchange revenue and other financing sources, including appropriations, and net cost of operations for funds from dedicated collections should be shown separately on the statement of changes in net position if:
1. dedicated collections are the predominant source of revenue and other financing sources for the **component entity**, or
 2. one or more of the entity's funds from dedicated collections

-
- a. is of immediate concern to constituents of the fund,
 - b. is politically sensitive or controversial,
 - c. is accumulating large balances, or
 - d. the information provided in the financial statements would be a primary source of financial information for the public.

For example, the Social Security and Medicare programs are of immediate concern to their constituents; both programs have a direct current or future impact on the majority of the general public.

- 19a. Entities may present combined or consolidated amounts and the presentation must be labeled accordingly.
- 19b. Component entities that do not separately show amounts from dedicated collections on the statement of changes in net position should refer on the face of the statement of changes in net position to the note on funds from dedicated collections.
- 20. Most revenues and other financing sources that are dedicated collections are reported in the basic financial statements of the entity carrying out the program and responsible for administration of the fund. If more than one component entity is responsible for carrying out the program financed with revenues and other financing sources that are dedicated collections, and the separate portions of the program can be clearly identified with a responsible component entity, then each component entity should report its portion in accordance with the requirements of this standard. If separate portions cannot be identified, the component entity with program management responsibility should report the fund.⁷

Footnote 7: To determine program management/accounting responsibility, agencies should consider the legislation authorizing the program; the Memorandum of Understanding that establishes responsibilities; and the provisions of SFFAC 2, *Entity and Display*, as amended by this standard.

Disclosure

- 21. A component entity should disclose⁸ all funds from dedicated collections for which it has program management responsibility by either a list (by official title) or a statement indicating where the list can be obtained (e.g., a website reference or contact information). A fund from dedicated collections should not be characterized as a “trust” in general purpose external financial reports of federal entities. (The use of the term “trust fund” is acceptable only in the fund’s official title.)

Footnote 8: Disclosure is reporting information in notes or narrative regarded as an integral part of the basic financial statements.

22. Information should be disclosed for each individual fund from dedicated collections. An exception is provided for component entities having numerous individual funds from dedicated collections. Paragraph 24 discusses criteria to consider in selecting individual funds for disaggregated disclosure. The following information should be disclosed for selected individual funds from dedicated collections, in aggregate for all remaining funds from dedicated collections, and in total for all the entity's funds from dedicated collections:
1. Condensed information about assets and liabilities showing investments in Treasury securities, other assets, liabilities due and payable, other liabilities, cumulative results of operations and net position.
 2. Condensed information providing gross cost, exchange revenue, net cost of operations, nonexchange revenues by major type and all other, other financing sources by major type and all other, and change in net position.

Entities may present combined or consolidated amounts and the presentation must be labeled accordingly. The information required by this paragraph for funds from dedicated collections may be presented separately on the face of the entity's basic financial statements or disclosed in the accompanying notes. The information must be in sufficient detail to support reporting requirements for the U.S. government-wide financial statements in paragraphs 29 and 30. Information for funds not presented individually may be aggregated. The total net position shown in the note disclosure should agree with the total net position for funds from dedicated collections shown on the face of the component entity's balance sheet.⁹

Footnote 9 was rescinded by SFFAS 43, *Revisions to Identifying and Reporting Funds from Dedicated Collections: Amending Statement of Federal Financial Accounting Standards 27*.

23. The following information should be disclosed for each individually reported fund from dedicated collections, or portion thereof, for which a component entity has program management responsibility (see paragraph 24).
1. A description of each fund's purpose, how the entity accounts for and reports the fund, and its authority to use those revenues and other financing sources.
 2. The sources of revenue or other financing for the period and an explanation of the extent to which they are inflows of resources to the government or the result of intragovernmental flows.
 3. Any change in legislation during or subsequent to the reporting period and before the issuance of the financial statements that significantly changes the purpose of the fund or that redirects a material portion of the accumulated balance.

-
24. Selecting funds from dedicated collections to be presented individually requires judgment. The preparer should consider both quantitative and qualitative criteria. Acceptable criteria include but are not limited to:
- a. quantitative factors such as
 - 1. the percentage of the reporting entity's revenues from dedicated collections or
 - 2. cumulative results of operations from such funds; and
 - b. qualitative factors such as
 - 1. whether a fund from dedicated collections is of immediate concern to constituents of the fund,
 - 2. whether it is politically sensitive or controversial,
 - 3. whether it is accumulating large balances, or
 - 4. whether the information provided in the financial statements would be the primary source of financial information for the public.
25. The total net position of all funds from dedicated collections shown in the note disclosure should agree with the net position of funds from dedicated collections shown on the face of the component entity's balance sheet.
26. In accordance with the provisions of paragraph 20 or footnote 5a of paragraph 13, if a component entity reports a different portion of a program funded by dedicated collections than it reported in prior years, it should not restate its prior year financial statements. It should disclose the change. This applies if a component entity does not report a fund from dedicated collections that it reported in the previous year. It also applies if a component entity reports a fund from dedicated collections that it did not report in the previous year.

Note on Investments

27. Investments in Treasury securities for funds from dedicated collections should be accompanied by a note that explains the following issues:
- The U.S. Treasury does not set aside assets to pay future expenditures associated with funds from dedicated collections. Instead, the cash generated from such funds is used by the U.S. Treasury for general government purposes.

-
- Treasury securities are issued to the fund as evidence of dedicated collections and provide the fund with the authority to draw upon the U.S. Treasury for future authorized expenditures (although for some funds, this is subject to future appropriation).
 - Treasury securities held by a fund from dedicated collections are an asset of the fund and a liability of the U.S. Treasury, so they are eliminated in consolidation for the U.S. government-wide financial statements.
 - When the fund from dedicated collections redeems its Treasury securities to make expenditures, the U.S. Treasury will finance those expenditures in the same manner that it finances all other expenditures.
28. Below is one example of a note that addresses the points in paragraph Investments in Treasury securities for funds from dedicated collections should be accompanied by a note that explains the following issues: above.

Intra-governmental Investments in Treasury Securities

The federal government does not set aside assets to pay future benefits or other expenditures associated with funds from dedicated collections (or name/s of fund/s). The dedicated cash receipts collected from the public into the fund are deposited in the U.S. Treasury, which uses the cash for general government purposes. Treasury securities are issued to the (component entity) as evidence of its receipts. Treasury securities are an asset to the (component entity) and a liability to the U.S. Treasury. Because the (component entity) and the U.S. Treasury are both parts of the government, these assets and liabilities offset each other from the standpoint of the government as a whole. For this reason, they do not represent an asset or a liability in the U.S. government-wide financial statements.

Treasury securities provide the (component entity) with authority to draw upon the U.S. Treasury to make future benefit payments or other expenditures. When the (component entity) requires redemption of these securities to make expenditures, the government finances those expenditures out of accumulated cash balances, by raising taxes or other receipts, by borrowing from the public or repaying less debt, or by curtailing other expenditures. This is the same way that the government finances all other expenditures.

Financial Statement Presentation and Disclosures for the U.S. Government-wide Financial Statements

Financial Statement Presentation

29. Funds from dedicated collections should be shown separately on the U.S. government statement of operations and changes in net position. The portion of net position attributable to funds from dedicated collections should be shown separately on the U.S. government balance sheet.¹⁰ (See Appendix C: Pro Forma Illustrations for examples of accounting entries and financial reporting.)

Footnote 10: Net position is composed of unexpended appropriations and cumulative results of operations for component entities. Since unexpended appropriations are not applicable at the U. S. government-wide level, net position equals cumulative results of operations.

Disclosure

30. Specific information should be disclosed for selected funds from dedicated collections. Paragraph 24 discusses criteria to consider in selecting individual funds for disaggregated disclosure. The following information should be provided for selected individual funds from dedicated collections, in aggregate for all remaining funds from dedicated collections, and in total for all funds from dedicated collections.

1. Condensed information about assets, liabilities and net position.
2. Condensed information on gross cost, exchange revenue, net cost, nonexchange revenues and other financing sources, and change in net position.

The disclosure may present combined or consolidated amounts and the presentation must be labeled accordingly

31. The information for funds from dedicated collections should be disclosed in the notes accompanying the basic financial statements. Information for funds not shown individually may be aggregated (see paragraph 24). A total column should be presented that relates the disaggregated data to the data on the face of the principal financial statements. The net position shown in the note disclosure should agree with the portion of net position attributable to funds from dedicated collections shown on the face of the balance sheet.
32. A note disclosure should provide a reference to component reports for additional information about individual funds from dedicated collections.

-
33. A note disclosure should provide a general description of funds from dedicated collections and an explanation of how the federal government as a whole could provide the resources represented by the balance in Treasury securities held by funds from dedicated collections.
34. A fund from dedicated collections should not be characterized as a “trust” in general purpose external financial reports of federal entities. (The use of the term “trust fund” is acceptable only in the fund’s official title.)

Basis of Accounting

35. All amounts reported and disclosed in the reporting entity’s basic financial statements or the notes thereto, as required in paragraphs 19 through 34, should be recognized and measured using the standards provided in generally accepted accounting principles applicable to the federal government.

Effective Date and Implementation

36. This standard is effective for periods beginning after September 30, 2005. Early adoption is not permitted. In the year this standard becomes effective, entities should not restate the prior period columns of the basic financial statements and related disclosures.

Effect on Existing Standards

37. [Paragraph 37 was superseded by paragraph 34 of SFFAS 31, which rescinded paragraphs 83 through 87 of SFFAS 7.]
38. This standard amends Statement of Federal Financial Accounting Concepts (SFFAC) 2, *Entity and Display*, footnote 3, as follows:

For some trust funds, the collection of the revenues is performed by an organizational entity acting in a custodial capacity that differs from the organizational entity that administers the trust fund. In those instances, the organizational entity that collects the revenue would be responsible for reporting only the collection and subsequent disposition of the funds. The organizational entity responsible for carrying out the program(s) financed by a trust fund, ~~or in the case of multiple responsible entities, the entity with the preponderance of fund activity,~~ will report all assets, liabilities, revenues and expenses of the fund, notwithstanding the fact that another entity has custodial responsibility for the assets. In the case of multiple responsible entities, if the separate

portions of the program can be clearly identified with a responsible component entity, then each component entity should report its portion in accordance with the requirements of SFFAS 27, *Identifying and Reporting Funds from Dedicated Collections*. If separate portions cannot be identified, the component entity with program management responsibility should report the fund.

39. This standard amends SFFAC 3, *Management's Discussion and Analysis- Concepts*, paragraph 26 as follows:

Financial Results, Position and Condition-MD&A should help those who read it to understand the entity's financial results and financial position and the entity's effect on the financial position and condition of the government. It should give readers the benefit of management's understanding of the significance and potential effect from both a short- and a long-term perspective of:

- the variations discussed in paragraph 14 in terms of major changes in types or amounts of assets, liabilities, costs, revenues, obligations and outlays;
- particular balances and amounts shown in the basic financial statements, including the notes, such as those dealing with earmarked funds dedicated collections, if relevant to important financial management issues and concerns; and
- the entity's required supplementary stewardship information (because RSSI describes economic conditions that cannot be expressed in the basic financial statements).

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Appendix C: Illustrative Component Entity Financial Statements

Component entities have the option to use separate lines or columns to display information on funds from dedicated collections on the face of the balance sheet and statement of changes in net position (Option A), or to use an alternative format, such as parenthetical amounts within line item titles (Option B).

The following examples are illustrative only and are intended to show how the information required in paragraph 19 might be displayed. These examples are not intended to be all inclusive and other acceptable alternatives may be developed by preparer.

Note: Although these illustrations show combined totals for dedicated collections and all other funds where those two categories of funds are reported separately, component entities may also opt to report consolidated amounts for dedicated collections and all other funds, respectively (i.e., after eliminations within each category of funds). Regardless of whether combined or consolidated amounts are reported for each category of funds, entity-wide totals for all funds should be consolidated amounts.

Statement of Federal Financial Accounting Standards 44: Accounting For Impairment Of General Property, Plant, And Equipment Remaining In Use

Status

Issued	January 3, 2013
Effective Date	For fiscal periods beginning after September 30, 2014. Earlier implementation encouraged.
Affects	None.
Affected by	None.

Summary

This Statement establishes accounting and financial reporting standards for impairment of general property, plant, and equipment (G-PP&E) remaining in use, except for internal use software. G-PP&E is considered impaired when there is a significant and permanent decline in the service utility of G-PP&E or expected service utility for construction work in progress. A decline is permanent when management has no reasonable expectation that the lost service utility will be replaced or restored.¹

This Statement does not anticipate that entities will have to establish additional or separate procedures beyond those that may already exist, such as those related to deferred maintenance and repairs, to search for impairments. Impairments can be identified and brought to management's attention in a variety of ways. Although a presumption exists that there are existing processes and internal controls in place to reasonably assure identification and communication of potential material impairments, this Statement does not require entities to conduct an annual or other periodic survey solely for the purpose of applying these standards. Management may determine that existing processes and internal controls are not sufficient to reasonably assure identification of potential material impairments and implement appropriate additional processes and internal controls.

Entity management should consider documenting the decisions it makes while determining how to implement the requirements of this Statement. Such decisions should include consideration of materiality. Materiality considerations should include an assessment of the impact to the cost of service(s) before and after the impairment.

¹ This Statement should not be directed to those G-PP&E assets (e.g., lower operating level assets, administrative support equipment, etc.) that have an immaterial impact on cost of service(s). Entities that determine they have an amount of G-PP&E such that no impairment could have a material effect would not have to be concerned with the implementation of the Statement. Each entity should undertake some advanced consideration to tailor and justify its implementation in light of materiality considerations specific to the entity.

Recognition of impairment losses is dependent upon a two-step process that entails (a) identifying potential impairments and (b) testing for impairment. The losses should be reasonably estimated by determining the portion of the decline in the net book value of the G-PP&E attributable to the lost service utility.

This Statement improves financial reporting by requiring entities to report the effects of G-PP&E impairments in their financial statements when they occur rather than as a part of the ongoing depreciation expense for the G-PP&E or upon disposal of the G-PP&E. This will enable users of financial statements to discern the cost of impairments when they occur, the financial impact on the reporting entity, and the cost of services provided following the impairment. This Statement also enhances comparability of financial statements between entities by requiring all entities to account for impairments in a similar manner.

Introduction

Purpose

1. Statement of Federal Financial Accounting Standards (SFFAS) 6, *Accounting for Property, Plant, and Equipment*, contains principles-based guidance concerning **general property, plant, and equipment (G-PP&E)**² that is removed from service due to **total (full) impairment** of G-PP&E or other reasons. SFFAS 6 requires that G-PP&E be removed from G-PP&E accounts along with associated accumulated depreciation/amortization, if prior to disposal, retirement, or removal from service it no longer provides service in the operations of the entity.³ SFFAS 6 does not address situations where there is less than total (full) impairment of G-PP&E.
2. SFFAS 10, *Accounting for Internal Use Software*, provides guidance for the impairment of **internal use software**.⁴ This Statement does not alter existing requirements regarding internal use software.
3. This Statement provides accounting and reporting requirements for **partial impairments** of G-PP&E remaining in use and construction work-in-process.

Materiality

4. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person

² Terms defined in the Glossary are shown in **bold-face** the first time they appear.

³ Refer to Technical Release 14, *Implementation Guidance on the Accounting for the Disposal of General Property, Plant, & Equipment*, which provides implementation guidance that clarifies existing SFFAS 6 requirements and is intended to help differentiate between permanent and other than permanent removal from service of G-PP&E. The implementation guidance also recognizes the many complexities involved in the disposal of G-PP&E, as well as delineates events that trigger discontinuation of depreciation and removal of G-PP&E from accounting records.

⁴ SFFAS 10, at paragraphs 28 through 31, provides additional procedures for recognizing and measuring impairment related to internal use software. The provisions in SFFAS 10 and SFFAS 6 are the same regarding situations where the software or G-PP&E is impaired and will be removed from service in its entirety. Both standards provide that the loss is measured as the difference between the book value and the net realizable value, if any. However, SFFAS 10 also provides for instances where (1) operational software is only partly impaired and (2) developmental software becomes impaired.

relying on the information would have been changed or influenced by the omission or the misstatement.

Effective Date

5. The standards are effective for reporting periods beginning after September 30, 2014. Earlier implementation is encouraged.
-

Standards

Scope and Applicability

6. This Statement applies to federal entities that present general purpose federal financial reports, including the consolidated financial report of the U.S. Government (CFR), in conformance with generally accepted accounting principles, as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
7. This Statement applies to G-PP&E⁵ except internal use software. This Statement establishes guidance on accounting for the impairment of G-PP&E remaining in use, including construction work in process. The provisions of this Statement are to be applied when indicators of potential impairment, as specified in this Statement, are identified by the entity. The entity is not required to conduct an annual or other periodic survey solely for the purpose of applying these standards. Existing processes that may identify indicators for potential impairment include routine assessments regarding the continued operational and functional capacity of G-PP&E, entity mission requirements, impacts of significant events or changes in circumstances, and deferred maintenance and repairs. The results of such processes may serve as the basis for applying these standards.

⁵ G-PP&E is any property, plant, and equipment (PP&E) used in providing goods or services and includes, among other types of PP&E, multi-use heritage assets, capitalized improvements to stewardship land, and construction work-in-process. PP&E includes land and land rights that are acquired for or in connection with items of G-PP&E used to provide government services or goods. G-PP&E does not include heritage assets, such as historic and national landmarks, and stewardship land; reporting for these assets should be in accordance with SFFAS 29, *Heritage Assets and Stewardship Land*. The cost of G-PP&E is capitalized, i.e., recorded as assets on the balance sheet. For detailed characteristics of and accounting for G-PP&E, see SFFAS 6, par. 23 through 45.

Definition of Impairment

8. Impairment is a significant⁶ and permanent decline in the service utility of G-PP&E, or expected service utility for construction work in process. Entities generally hold G-PP&E because of the services they provide or will provide in the future; consequently, impairments affect the service utility of the G-PP&E. The events or changes in circumstances that lead to impairments are not considered normal and ordinary.⁷ That is, at the time the G-PP&E was acquired, the event or change in circumstance would not have been (a) expected to occur during the useful life of the G-PP&E or, (b) if expected, sufficiently predictable to be considered in estimating its useful life.
9. The service utility of G-PP&E is the usable capacity that at acquisition was expected to be used to provide service, as distinguished from the level of utilization, which is the portion of the usable capacity currently being used. The current usable capacity of G-PP&E may be less than its original usable capacity due to the normal or expected decline in useful life or to impairing events or changes in circumstances, such as physical damage, obsolescence, enactment or approval of laws, or regulations or other changes in environmental or economic factors, or change in the manner or duration of use. Usable capacity may be different from maximum capacity⁸ in circumstances in which surplus capacity (the excess capacity over the usable capacity) is needed for safety, economic, operational readiness or other reasons. G-PP&E that experience decreases in utilization, and the simultaneous existence of or increases in surplus capacity not associated with a decline in service utility are not considered impaired.

Identification of Potential Impairment Loss – A Two-step Process

10. Generally, G-PP&E remaining in use is impaired if the decline in the service utility of the G-PP&E is significant and deemed permanent.

⁶ The determination of whether or not an item is significant is a matter of professional judgment. Such judgments may be based on: (1) the relative costs of providing the service before and after the decline, (2) the percentage decline in service utility, or (3) other considerations. Determining if a decline in service utility is significant is separate and distinct from materiality considerations that include considering the likely influence that such disclosure could have on judgments or decisions of financial statement users.

⁷ Normal and ordinary are defined as events or circumstances that fall within the expected useful life of the PP&E such as standard maintenance and repair requirements.

⁸ Maximum capacity is the usable capacity plus any surplus capacity.

-
11. The determination of whether G-PP&E remaining in use is impaired, as defined in paragraph 8 above, includes (a) identifying potential impairment indicators and (b) testing for impairment. G-PP&E would be identified as potentially impaired as a result of the occurrence of significant events or changes in circumstances, or routine asset management processes.

Step 1 – Identify Indicators of Potential Impairment

12. Some common indicators of potential impairment include those listed below. The indicators identified are not conclusive evidence that a measurable or reportable impairment exists. Entities should carefully consider the surrounding circumstances to determine whether a test of potential impairment is necessary given the circumstances.
- a. evidence of physical damage
 - b. enactment or approval of laws or regulations which limit or restrict G-PP&E usage
 - c. changes in environmental or economic factors
 - d. technological changes or evidence of obsolescence⁹
 - e. changes in the manner or duration of use of G-PP&E
 - f. construction stoppage or contract termination
 - g. G-PP&E idled or unserviceable for excessively long periods¹⁰

G-PP&E Identified From Significant Events or Changes in Circumstances

13. Events or changes in circumstances affecting G-PP&E that may indicate impairment are sometimes significant. Significant events or changes in circumstances are conspicuous or

⁹ Technological changes or evidence of obsolescence should be considered along with other factors when assessing impairment. For example, if obsolete G-PP&E continues to be used, the service utility expected at acquisition may not be diminished. Further, when obsolescence is expected, the declining service utility of G-PP&E subject to obsolescence can be addressed through depreciation, particularly by using accelerated methods that yield a lower capital cost per year as its utility diminishes when compared to that of later versions of the same asset.

¹⁰ Refer to Technical Release 14, *Implementation Guidance on the Accounting for the Disposal of General Property, Plant, & Equipment*, which provides implementation guidance that clarifies existing SFFAS 6 requirements and is intended to help differentiate between permanent and other than permanent removal from service of G-PP&E. The implementation guidance also recognizes the many complexities involved in the disposal of G-PP&E, as well as delineates events that trigger discontinuation of depreciation and removal of G-PP&E from accounting records.

known to the entity's management or oversight entities. This Statement does not require entities to conduct an annual or periodic survey solely to identify potential impairments of G-PP&E. Rather, significant events or changes in circumstances affecting G-PP&E that may indicate impairment are conspicuous or known to the entity's management or oversight entities and are generally expected to have prompted consideration¹¹ by management, oversight entities, or others (e. g., the media).

G-PP&E Identified from Asset Management Reviews (e.g., portfolio surveys)

14. Existing asset management processes may include portfolio surveys that consider matters such as the continued operational and functional capacity of G-PP&E, entity mission requirements, or deferred maintenance and repairs assessments. Potentially impaired G-PP&E may be identified from such surveys and further evaluated through the two-step process.

Reduced Demand Should Not Be Considered a Discrete or Sole indicator of Impairment

15. As explained in paragraph 9 above, reduced demand for the services of G-PP&E should not be considered a discrete or sole indicator of impairment. Instead, there should also be evidence of an underlying potential impairment resulting in the reduced demand. In these circumstances, the causes behind such changes in demand should be evaluated in light of the indicators listed in paragraph 12 and the G-PP&E should be tested for impairment.

Step 2 - Impairment Test

16. G-PP&E identified through the processes described in paragraphs 10 through 15 should be tested for impairment by determining whether the following two factors are present:
 - a. **The magnitude of the decline in service utility (as defined in par. 9) is significant.** The costs are now disproportionate to the new expected service utility. Such costs should include operational and maintenance costs. Judgment is required to determine whether the decline is significant. Such judgments may be based on: (1) the relative costs of providing the service before and after the decline, (2) the percentage decline in service utility, or (3) other considerations.
 - b. **The decline in service utility is expected to be permanent.** The decline is considered permanent when management has no reasonable expectation that the lost

¹¹ Consideration might include but is not limited to management discussions, internal managerial analyses or reviews, conferences or consultations with experts, media or public relations interviews, or external industry scrutiny.

service utility will be replaced or restored. That is, management expects that the G-PP&E will remain in service so that its remaining service utility will be utilized. In contrast, reasonable expectation that the lost service utility will be replaced or restored may exist when management has: (1) specific plans to replace or restore the lost service utility of this G-PP&E, (2) committed or obligated funding for remediation efforts, or (3) a history of remediating lost service utility in similar cases or for similar G-PP&E.

17. For construction work in process, the testing of impairment discussed in paragraph 16 above should be performed over the period of expected future service utility rather than current service utility.

Determining the Appropriate Measurement Approach

18. Impairment losses on G-PP&E that will continue to be used by the entity¹² should be estimated using a measurement method that reasonably¹³ reflects the diminished service utility of the G-PP&E. The goal of the measurement methods discussed below is to reasonably estimate the portion of the net book value associated with the diminished service utility of the G-PP&E. A specific method, including one of the methods listed below, would not be considered appropriate if it would result in an unreasonable net book value associated with the remaining service utility of the G-PP&E. Within an entity, one method may not be appropriate for measuring all impairments. Also, a reasonable method may nonetheless result in no impairment loss to be recognized. Regardless of the method used, recognition of the loss should be limited to the asset's net book value at the time of impairment. Widely recognized methods for measuring impairment include:
- a. **Replacement approach.** Impairment of G-PP&E with physical damage generally may be measured using a replacement approach. This approach uses the estimated cost to replace the lost service utility of the G-PP&E at today's standards¹⁴ to identify the portion of the historical cost of the G-PP&E that should be written off. For federal real property purposes, this cost can be derived from the plant replacement value (PRV).

¹² See SFFAS 6, *Accounting for Property, Plant, and Equipment*, paragraphs 38 and 39 for guidance regarding G-PP&E that will not continue to be used by the entity.

¹³ Given a choice among comparable methods, entities should adopt the most efficient and practical method available under the circumstances.

¹⁴ For example, "at today's standards" would generally mean the use of current market prices for materials, labor, manufactured items and equipment using current building, manufacturing, or fabrication techniques in compliance with current statutory, regulatory, or industry standards.

This estimate can be converted to historical cost by restating (i.e., deflating) the estimated cost to replace the diminished service utility using an appropriate cost index. Alternatively, it may be appropriate to apply the ratio of the estimated cost to replace the diminished service utility over total estimated cost to replace the G-PP&E, to the net book value of the G-PP&E.

- b. **Restoration approach.** Impairment of improvements made to stewardship land and multi-use heritage assets with physical damage may generally be measured by using a restoration approach. This approach uses the estimated cost to restore the diminished service utility of the G-PP&E to identify the portion of the historical cost of the G-PP&E that should be written off. This approach does not include any amounts attributable to improvements and additions to meet today's standards. The estimated restoration cost can be converted to historical cost by restating (i.e., deflating) the estimated restoration cost using an appropriate cost index. Alternatively, it may be appropriate to apply the ratio of estimated restoration cost to restore the diminished service utility over total estimated restoration cost to the net book value of the G-PP&E.
- c. **Service units approach.** Impairment of G-PP&E that are affected by enactment or approval of laws or regulations or other changes in environmental/economic factors or are subject to technological changes or obsolescence generally may be measured using a service units approach. This approach compares the service units provided by the G-PP&E before and after the impairment event or change in circumstance to isolate the historical cost of the service utility of the G-PP&E that cannot be used due to the impairment event or change in circumstance. The amount of impairment is determined by evaluating the service provided by the G-PP&E - either maximum estimated service units or total estimated service units throughout the life of the G-PP&E - before and after the event or change in circumstance.
- d. **Deflated depreciated current cost approach.** Impairment of G-PP&E that are subject to a change in manner or duration of use generally may be measured using a deflated depreciated current cost approach. This approach quantifies the cost of the service currently being provided by the G-PP&E and converts that cost to historical cost. A current cost for a G-PP&E to replace the current level of service is estimated. This estimated current cost is then depreciated to reflect the fact that the G-PP&E is not new, and then is subsequently deflated to convert it to historical cost dollars. A potential impairment loss results if the net book value of the G-PP&E exceeds the estimated historical cost of the current service utility (i.e., deflated depreciated current cost).
- e. **Cash flow approach.** Impairment of cash or revenue generating G-PP&E, such as those used for business or proprietary-type activities, may be assessed using a cash flow approach. Under this approach, an impairment loss should be recognized only if

the net book value of the G-PP&E (1) is not recoverable and (2) exceeds the higher of its net realizable value¹⁵ or value-in-use estimate.¹⁶ The net book value of the G-PP&E is not recoverable if it exceeds the sum of the undiscounted cash flows expected to result from the use and eventual disposition of the G-PP&E. That assessment should be based on the net book value of the G-PP&E at the date it is tested for recoverability, whether in use or under development. If the net book value is not recoverable, the impairment loss is the amount by which the net book value of the G-PP&E exceeds the higher of its net realizable value or value-in-use estimate. No impairment loss exists if the net book value is less than the higher of the G-PP&E's net realizable value or value-in-use estimate.

- f. **Lower of (1) Net Book Value or (2) Higher of Net Realizable Value or Value-in-Use Approach.** G-PP&E impaired from either construction stoppages or contract terminations, which are expected to provide service, should be reported at their recoverable amount; the lower of (1) the G-PP&E's net book value or (2) the higher of its net realizable value or value-in-use estimate. Impaired G-PP&E, which are not expected to provide service, should be accounted for and reported in accordance with SFFAS 6.

Recognizing and Reporting Impairment Losses

19. The loss from impairment should be recognized and reported in the statement of net cost when management concludes that the impairment is (1) a significant decline in service utility and (2) expected to be permanent. Such loss may be included in program cost(s) or cost(s) not assigned to programs consistent with SFFAS 4, *Managerial Cost Accounting Standards and Concepts*. However, in cases where an entity decides that an impairment loss should not be recognized, it could consider the need for adjustments to the G-PP&E's depreciation methods, useful life or salvage value estimates, as appropriate.

¹⁵ Net realizable value is the estimated amount that can be recovered from selling, or any other method of disposing of an item less estimated costs of completion, holding and disposal.

¹⁶ Statement of Federal Financial Accounting Concepts (SFFAC) 7, *Measurement of the Elements of Accrual-Basis Financial Statements in Periods After Initial Recording*, paragraph 50, defines value-in-use as "...the benefit to be obtained by an entity from the continuing use of an asset and from its disposal at the end of its useful life." Paragraph 51 further states that "Value in use is a remeasured amount for assets used to provide services. It can be measured at the present value of future cash flows that the entity expects to derive from the asset, including cash flows from use of the asset and eventual disposition. Value in use is entity specific and differs from fair value. Fair value is intended to be an objective, market-based estimate of the exchange price of an asset between willing parties. Value in use is an entity's own estimation of the service potential of an asset that it holds to provide a specific service." (underscoring added for emphasis)

-
20. The impairment loss should be recognized and reported regardless of whether the G-PP&E remaining in use is being depreciated individually or as part of a composite group. The impairment loss may be reported as a separate line item or line items on the statement of net cost. Deciding to display a separate line item or items on the statement of net cost requires judgment. The preparer should consider quantitative and qualitative criteria. Acceptable criteria include but are not limited to quantitative factors such as the percentage of the reporting entity's cost that resulted from the impairment and the size of the impairment loss relative to the G-PP&E; and qualitative factors including whether the loss would be of interest to decision makers and other users.
21. A general description of the G-PP&E remaining in use for which an impairment loss is recognized, the nature (e.g., damage or obsolescence) and amount of the impairment, and the financial statement classification of the impairment loss should be disclosed in the notes to the financial statements. Such disclosures should be made in the period the impairment loss is recognized.

Diminished Service Utility Without Recognized Impairment Loss

22. Events, changes in circumstances, or asset management reviews might indicate that the future service utility of G-PP&E remaining in use has been adversely affected. However, if future service utility has been adversely affected but the impairment test determines that a loss need not be recognized, a change to the estimates used in depreciation calculations such as estimated useful life and salvage value should be considered.

G-PP&E That No Longer Provides Service

23. G-PP&E that no longer provides service or in the case of construction work in process where there is no expectation of future service by the entity, should be accounted for in accordance with SFFAS 6, paragraphs 38 and 39, and Technical Release 14, *Implementation Guidance on the Accounting for the Disposal of General Property Plant, & Equipment*.

Remediating Previously Reported Impairments

24. Subject to the entity's capitalization policies, if an entity later remediates the previously impaired G-PP&E remaining in use, the costs incurred to replace or restore the lost service utility should be accounted for in accordance with applicable standards. For example, costs

to prepare the site and install replacement facilities would be recognized in accordance with SFFAS 6, *Accounting for Property, Plant, and Equipment*.

Recoveries

25. The impairment loss should be reported net of any associated recovery when the recovery and loss occur in the same year. Recoveries reported in subsequent years should be reported as revenue or other financing source as appropriate. If not otherwise apparent in the financial statements, the amount and financial statement classification of recoveries should be disclosed in the notes. The accounting for recoveries should be in accordance with SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*.

Consolidated Financial Report of the U.S. Government

26. The U.S. government-wide financial statements should disclose the following if an impairment loss for G-PP&E remaining in use is recognized:
- a. a general description of what constitutes G-PP&E impairment,
 - b. the consolidated G-PP&E impairment losses recognized by component entities, and
 - c. a reference(s) to component entity report(s) for additional information.

Effective Date

27. The requirements of this Statement are effective for reporting periods beginning after September 30, 2014. Earlier implementation is encouraged.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

- A1. In Statement of Federal Financial Accounting Standards (SFFAS) 23, *Eliminating the Category National Defense Property, Plant, and Equipment*, issued in May 2003, the Board identified impairment as one of three areas (the other two being depreciation and deferred maintenance) that it desired to consider integrating into a comprehensive project. Complete impairment was addressed in SFFAS 6, *Accounting for Property, Plant, and Equipment*, through the requirements that general PP&E “...be removed from general PP&E accounts along with associated accumulated depreciation/amortization, if prior to disposal, retirement or removal from service, it no longer provides service in the operations of the entity. This could be either because it has suffered damage, becomes obsolete in advance of expectations, or is identified as excess.” However, SFFAS 6 does not address partial impairment, even though the effects of partial impairment may be material in some cases. The Board decided to address asset impairment at the time it addressed deferred maintenance. Subsequent to the issuance of Statement of Federal Financial Accounting Standards 40: *Definitional Changes Related to Deferred Maintenance and Repairs: Amending Statement of Federal Financial Accounting Standards 6, Accounting for Property, Plant, and Equipment* in May 2011, the Board initiated work on addressing potential enhancements to existing FASAB guidance regarding impairment.
- A2. In evaluating an approach applicable to federal G-PP&E, the Board considered the approaches used in the following documents:
- Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards (SFAS) 144, *Accounting for the Impairment or Disposal of Long-Lived Assets* (Superseded by FASB Accounting Standards Codification (ASC) 360)

-
- Governmental Accounting Standards Board (GASB) Statement (GASBS) 42, *Accounting and Financial Reporting for Impairment of Capital Assets and for Insurance Recoveries*¹⁷
 - International Public Sector Accounting Standard (IPSAS) 21, *Impairment of Non-Cash Generating Assets*
 - IPSAS 26, *Impairment of Cash-Generating Assets*

A working group was organized to assist the Board in analyzing the impairment standards promulgated by the FASB, GASB, and the International Public Sector Accounting Standards Board (IPSASB). The working group's analysis was initially screened by the Deferred Maintenance and Asset Impairment (DM-AI) Task Force and subsequently tested with a broader community beyond the task force to obtain other points of view. The consensus recommendation was to use the GASBS 42 approach as a baseline for the development of a federal asset impairment standard.

Significant and Permanent Decline in Service Utility

- A3. This Statement requires recognizing a potential impairment loss only when there is a significant and permanent decline in the G-PP&E's service utility. In reaching this decision, the Board considered and weighed (a) the need for relevant, reliable, and consistent financial reporting and (b) entity burden.
- a. For financial reporting to be:
- (i) relevant - a logical relationship must exist between the information provided and the purpose for which it is needed. G-PP&E impairment information is relevant because it is capable of making a difference in a user's assessment of how well the entity is meeting its federal asset stewardship responsibilities.
 - (ii) reliable - information needs to be comprehensive and nothing material should be omitted nor should anything be included that would likely cause the information to be misleading. The reporting of G-PP&E impairments significantly adds to the informational value and reliability of amounts presented in the entity's balance sheet and statement of net cost.

¹⁷ © Financial Accounting Foundation, Governmental Accounting Standards Board, 401 Merrit 7, Norwalk, CT. All Rights Reserved. GASBS 42, November 2003.

(iii) consistent over time - an accounting principle or reporting method should be used for all similar transactions and events unless there is good cause to change. Establishing G-PP&E impairment standards significantly adds to consistent financial reporting.

- b. The Board is aware of the increased demands that entities confront due to initiatives that attempt to better align and integrate entity mission, budget, and performance objectives. As such, the Board desires to issue a G-PP&E impairment standard that entities can effectively adopt without undue administrative burden while still satisfying the objectives of federal financial reporting.

Recognizing Impairments

- A4. As discussed in paragraphs 13 and 14, impairments can be identified and brought to management's attention in a variety of ways. Although a presumption exists that there are existing processes and internal controls in place to reasonably assure such identification and communication, this Statement does not require entities to conduct an annual or other periodic survey solely for the purpose of applying these standards. In the event management determines existing processes and internal controls are not sufficient to reasonably assure identification of potential material impairments, additional processes and internal controls may be necessary.
- A5. The Board notes that not all significant events and/or changes in circumstances discussed by oversight bodies, management, or the media would necessarily be considered material to an entity's financial statements. Consequently, an entity must exercise judgment in this regard considering whether omitting or misstating information about the significant event and/or changes in circumstances makes it probable that the judgment of a reasonable person relying on the information would be changed or influenced by the omission or the misstatement. However, in cases where an entity decides that a significant event or change in circumstance is immaterial, it should consider the need for adjustments to the G-PP&E's depreciation methods, useful life or salvage value estimates.

The Board also notes that common indicators of potential impairment can be discovered during different types of asset management reviews that include the following types of G-PP&E assessments:

- a. Condition assessments revealing evidence of physical damage, deterioration, and/or distresses such as for a building (1) damaged by fire or flood, (2) not adequately maintained or repaired, (3) associated with significant amounts of deferred maintenance and repairs and/or (4) exhibiting signs of advanced degradation that might adversely impact expected duration of use, each requiring remedial or

replacement/restoration efforts to restore service utility

- b. Functionality assessments revealing evidence of reduced capacity, inadequate configuration, change in entity mission, change in the manner or expected use, and enactment or approval of laws, regulations, codes or other changes in environmental factors, such as new water quality standards that a water treatment plant does not meet (and cannot be modified to meet)
- c. Obsolescence assessments revealing evidence of technological development or obsolescence, such as that related to a major piece of diagnostic or research equipment (for example, a magnetic resonance imaging machine or a scanning electron microscope) that is rarely or never used because newly acquired equipment provides better service

Common Indicators of Potential Impairment

- A6. The Board considered the general approaches used by other standards-setters regarding the issues of impairment identification and testing. The DM-AI Task Force identified the GASB approach as being the most germane for federal application and recommended adopting its use with appropriate modifications. As a result, this Statement consists of a two-step process of (a) identifying potentially impaired G-PP&E through indicators of impairment and (b) testing to determine whether a potential impairment exists by comparing the net book value of the G-PP&E to a valuation reflecting the current state of the G-PP&E.
- A7. Recognizing the administrative burden and costs involved in applying a test of potential impairment, the Board desires to make clear that the indicators identified at paragraph 12 in and of themselves are not conclusive evidence that a measurable or reportable impairment exists. Entities should carefully consider the surrounding circumstances to determine if a test of potential impairment may be unnecessary given the circumstances.
- A8. In order to limit the universe of G-PP&E tested for potential impairment because of cost-benefit considerations, the Board proposes two modifiers to the indicators: (a) the magnitude of the decline in service utility is significant and (b) the decline in service utility is permanent. The first modifier would limit testing for potential impairment to only G-PP&E that have experienced a significant decline in service utility. The second modifier would limit testing to only those G-PP&E where the decline in service utility is expected to be permanent. The decline is considered permanent when management has no reasonable expectation that the lost service utility will be replaced or restored and that the G-PP&E's remaining service utility can continue providing value.

-
- A9. G-PP&E is to be considered impaired only when both of these two modifiers are present. When either of these conditions is not present, the decline in the service utility of the G-PP&E may be recognized through other methods such as changing useful life or salvage value estimates.

Determining if Magnitude of Decline in Service Utility is Significant

- A10. Because measurement of a potential impairment is not required unless a significant decline in service utility occurs, management should assess the magnitude of the service decline. In cases where there is physical damage to G-PP&E, the significance can often be objectively assessed because the costs of remediation (i.e., replacement or restoration) may be relatively easy to determine, at least within a range of estimates. In circumstances other than those involving physical damage, significance may be discerned by less objective assessments such as:

- (1) Whether management acts to address the situation. Management decisions may be indicative of a potential decline in service utility. For example, a specific action taken by management after a service decline may confirm that expenses exceed future benefit. Likewise, a decision by management to not address a service decline may be an indication the decline is not significant and a test of impairment is not required.
- (2) The costs are disproportionate with the new expected service utility. For example, when comparing the benefits and related costs associated with the new expected service utility after the potential impairment with those benefits and related costs existing prior to the impairment, management may confirm that costs significantly exceed future benefit. As a result, the decline is significant and a test of impairment is required.

Selecting a Measurement Approach

- A11. Professional judgment should be used when selecting a method to measure the decline in service utility of G-PP&E. Generally, potential impairments:
- a. reflecting degradation or physical damage may be measured using a replacement approach or, for multi-use heritage assets, a restoration approach.
 - b. reflecting a change resulting from enactment or approval of laws or regulations or other changes in environmental/economic factors or from technological development or

obsolescence generally may be measured using a service units approach.

- c. reflecting a change in manner or duration of use or change in mission generally may be measured using deflated depreciated current cost approach.
- d. for cash or revenue-generating G-PP&E may be measured using the cash flow approach.
- e. arising from construction stoppages or contract terminations for assets which are expected to provide service, should be reported at their recoverable amount; the lower of (1) the G-PP&E's net book value or (2) the higher of its net realizable value or value-in-use estimate.

A12. The Board emphasizes that in estimating the diminished service utility of the G-PP&E, the measurement approach chosen should yield a reasonable estimate reflecting the diminished service capacity of the G-PP&E. Before using a specific method a determination should be made that it will result in (1) a reasonable estimate of diminished service capacity for the specific asset and (2) a reasonable net book value associated with the remaining service utility of the G-PP&E. There should not be a presumption of reasonableness attached to the use of any of these methods if the resultant calculations reflect an unreasonable estimate of the remaining service utility of the G-PP&E. For example, if using the replacement approach, a cost estimate to remediate the damage to an asset is equal to or greater than the asset's total replacement cost, the resultant calculation would lead to a full write-down of the carrying value. However, if the asset is to remain in use, the full write-down would be inappropriate because some service potential remains. In such a case, management should look to another method such as the deflated depreciated current cost approach to estimate the historical cost of the asset's residual service capacity that will continue to be used. Additionally, within an entity, one method may not be appropriate for measuring asset impairments across all categories or classes of assets. The Board notes that a reasonable methodology may not result in the recognition of an impairment loss.

Among Comparable Methods – Choose the Most Efficient

A13. The Board recognizes that there may be cases where more than one comparable method could be used to measure the decline in an asset's service utility. In such cases, the entity should use whichever method most reasonably reflects the diminished service utility. In cases where the methods under consideration are expected to yield similar results, management should adopt the most efficient method available given the circumstances.

Reduced Demand

A14. The Board notes that reduced demand for the services of G-PP&E should not be considered as a discrete or sole indicator of potential impairment. That is, reduced demand absent evidence of an underlying potential impairment resulting in that reduced demand is not an indicator of impairment. For example, decreased demand for the processing services of a mainframe computer because former users of the mainframe have transitioned to PC and server-based systems should be considered a change in demand not requiring impairment testing. However, if associated with an indicator of potential impairment such as evidence of obsolescence, then the mainframe should be tested for potential impairment.

A15. In addition, a decrease in demand solely resulting from the conclusion of a special project requiring large amounts of processing time on a mainframe computer that runs other applications should not be considered for impairment testing.

A16. A decrease in occupancy is another example of a change in demand. If a decrease in the occupancy of hospital beds prompts management to close a hospital, a change in manner or duration of use has also resulted and a test for impairment should be performed. However, a test for impairment is not required if the decrease in hospital beds results solely because the hospital is changing from an overcrowded condition to one in which occupancy rates are now below the maximum allowed. However, care should be taken to ensure that there is not a potential indicator of impairment that could require testing.

Estimating Potential Impairment Losses

A17. Measuring the cost of the lost service utility generally requires the use of estimates or approximations. According to Statement of Federal Financial Accounting Concepts (SFFAC) 5, *Definitions of Elements and Basic Recognition Criteria for Accrual-Basis Financial Statements*, to be recognized an item must be measurable, meaning that a monetary amount can be determined with reasonable certainty or is reasonably estimable (underscoring added for emphasis). For this reason, the Board notes that it (1) does not seek exact precision in determining the lost service utility of the asset and (2) does not intend to direct or prescribe the use of any particular approach listed in paragraph 18.

A18. However, the Board notes that care should be taken when estimating potential impairment losses. For example, if a multi-use heritage asset requires testing for potential impairment, the restoration approach and not the replacement approach would generally provide for more accurate estimates. Although these approaches may appear to be identical, they are not. The replacement approach estimates the cost to replace the lost service utility of the G-PP&E at today's standards whereas the restoration approach does not. In either case, the

required estimates used for the calculation inputs are different and can significantly affect the potential impairment loss measurement. Differences will arise because the replacement approach uses estimates reflecting today's current labor and material options and costs, modern standards, and installation methods whereas the restoration approach uses estimates that generally require using historically accurate (e.g., aesthetic or historic) materials and construction methods approved by an historic architect or historic preservationist to preserve the historic nature and value of the multi-use heritage asset.

- A19. Entities should also ensure that impairment loss calculations exclude improvements or betterments. For example, assume that a portion of an old warehouse currently not being used suffers roof damage due to heavy snowfall. The entity decides not to repair the roof and to contain the damage by securing the adjoining area ensuring that there are no safety hazards. In this case, estimates for the construction of a new warehouse, including its roof should not include amounts for new types of roof ventilation systems, solar panel features, or green energy improvements, etc. Including such improvements or betterments might significantly affect the potential impairment loss measurement.

G-PP&E Impairment Loss Reversals and Remediation

- A20. Impairments may be subsequently remediated or otherwise restored or may be reduced in future periods. The Board concluded that reversals of G-PP&E impairment losses should not be recognized. In reaching the decision not to allow for reversals of G-PP&E impairment losses, the Board concluded that because reversal events are expected to be rare occurrences, there is no compelling need for complexity or increased burden as benefits do not appear to justify costs.
- A21. The Board concluded remediation of a previously reported impairment loss, is a change that results in an addition to the cost basis. Specifically, should management later decide to replace or restore an asset's lost service utility the costs incurred to do so become part of the G-PP&E's new cost basis. It is the Board's opinion that such a practice is consistent with the operating performance objective of federal financial reporting; users will be able to evaluate the service efforts, costs, and accomplishments of the reporting entity based on the revised cost basis.

Recoveries

- A22. Recoveries may be accounted for as either exchange or non-exchange transactions, depending on the nature of the related revenue that would be recorded. In accordance with SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*:

-
- a. Exchange revenues should be recognized when goods or services are provided to the public or another government entity at a price. An example would be commercial insurance purchased in connection with G-PP&E belonging to a public-private arrangement.
 - b. Non-exchange revenues should be recognized when a specifically identifiable, legally enforceable claim to resources arises, to the extent that collection is probable (more likely than not) and the amount is reasonably estimable. An example would be a donor's pledged contribution associated with a capital project restoration effort. In cases where the collecting and reporting entities are different, it is important to note that non-exchange revenue amounts should be measured by the collecting entities and recognized for financial statement reporting by the entities legally entitled to the revenue.

Distinguishing between Depreciation and Impairment

A23. Depreciation systematically and rationally allocates the historical cost of the G-PP&E's service utility to the benefitting periods. The asset's costs are allocated (i.e., the asset is depreciated) across multiple periods based on asset management plans and formulas, including such variables as expected useful life of the asset, usage patterns, and residual or salvage value, if any. Costs are allocated because: (1) the G-PP&E is expected to benefit more than one period and (2) generally, there is no other practical or efficient way to directly assign or associate cause (i.e., entity activity or event) and effect (i.e., service utility consumption). That is, depreciation is allocated, because specific causation cannot be ascertained.

A24. On the other hand, impairment occurs when there is a significant and permanent decline in the service utility during the depreciation period of G-PP&E remaining in use, and that decline is reasonably estimable in monetary terms. Essentially, an event or circumstance alters the utility and/or value of the asset such that the systematic and rational allocation process noted in paragraph A23 directly above can no longer be reasonably applied and must be also altered accordingly. Moreover, primarily due to the significant nature of the event or changed circumstances, an entity can directly assign or associate cause (the event or circumstance) and effect (change in anticipated utility and/or value of the asset). As a result, the lost or diminished service utility (arising from the impairment) can be directly assigned in a practical and efficient manner.

A25. To the extent that an entity's depreciation policies and practices reflect a pattern of service utility consumption that reasonably accounts for discrete events and/or changed circumstances, impairment losses may not apply. For example, if an entity operates in multiple climates within a country or maintains a global presence, its regular and on-going

depreciation may account for lost or diminished service utility resulting from damages likely to arise from reasonably anticipated climate or other environmental conditions. This could be evidenced by an entity deriving its useful life estimates from current and historical fixed asset records or maintenance and repair accounts, which include such events and/or circumstances. In such cases, the entity might shorten the useful life estimate, alter the anticipated consumption pattern, or reduce its salvage value estimate. Consequently, depreciation would inherently consider the conditions giving rise to the impairment, thus avoiding the need to recognize an impairment loss.

Perceived costs versus benefits

A26. The Board believes that the benefits of implementing this Statement outweigh its administrative costs of implementation. The Board has clarified the Statement so that users understand that they are not required to search out impairments or to apply the Statement to immaterial items. Entities should consider G-PP&E impairments in the context of their existing practices and apply this Statement only when there is an indicator of significant impairment present. Although GASB, IPSASB, and FASB pronouncements are available to provide federal preparers with guidance relative to impairments, issuance of a Statement by FASAB will eliminate the need, time, and effort to search principles from another standard-setter or consider analogous entity transactions. Other perceived benefits include: reporting impairments when they occur rather than through depreciation expense or disposal, providing management with information useful for capital investment decisions, discerning the cost of impairments and impact on the entity and the cost of services provided following the impairment, and lastly, enhancing comparability between entities.

Summary of Outreach Efforts

A27. The Exposure Draft (ED), *Accounting for Impairment of General Property, Plant, and Equipment Remaining in Use*, was released on February 28, 2012, with comments requested by May 28, 2012.

A28. Upon release of the ED, notices and press releases were provided to the FASAB email listserv, the Federal Register, *The Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, *the CPA Letter*, *Government Accounting and Auditing Update*, the CFO Council, the Council of Inspectors General on Integrity and Efficiency, and the Financial Statement Audit Network, and committees of professional associations generally commenting on exposure drafts in the past (e.g., Greater Washington Society of CPAs, AGA Financial Management Standards Board).

A29. This broad announcement was followed by direct e-mailings of the press release to:

- a. Relevant congressional committees: Senate Committee on Homeland Security and Governmental Affairs and House Committee on Oversight and Government Reform;
- b. Public interest groups: The *Institute for Responsible Infrastructure Stewardship* and the *National Academy of Sciences' Federal Facilities Council*;
- c. Respondents to SFFAS 42, *Deferred Maintenance and Repairs Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32*.

A30. Twenty-three (23) responses were received. Table 1.0 summarizes responses by respondent type.

Table 1.0 - Summary of Respondent Types to Exposure Draft

RESPONDENT TYPE	FEDERAL (Internal)	NON-FEDERAL (External)	TOTAL
Preparers and financial managers	16	0	16
Users, academics, others	2	2	4
Auditors	2	1	3
Total	20	3	23

A31. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The following paragraphs discuss significant issues identified by respondents followed by Board decisions.

Respondents' Comments on the Exposure Draft

A32. Respondents generally favored the Exposure Draft. By a 9-to-1 ratio respondents agreed with the Board's proposal to recognize impairment losses. Additionally, 22 of the 23 respondents agreed with the Board that entities are not expected to alter existing assessment methods as a direct consequence of this Statement. Some respondents offered suggestions that the Board adopted and revised the Exposure Draft accordingly. The most significant changes made to the proposed standards include: (1) simplifying the definition of impairment by not referencing either "gradual or sudden" and (2) clarifying entity reporting requirements. The most significant additions made to the Basis for Conclusions

include (1) clarifying that recoveries take the form of exchange or non-exchange revenues and (2) a discussion concerning what distinguishes depreciation from impairment. Highlighted below are some respondent concerns that the Board decided to address.

Identifying Indicators of Potential Impairment

A33. Some respondents expressed concern over the indicators. Concerns ranged from the indicators being viewed as conclusive evidence of impairment necessitating an impairment loss test to the indicators being too vague and in need of expansion to address magnitude, permanence, and materiality. As stated at paragraph A7, the Board desires to make clear that the indicators identified at paragraph 12 in and of themselves are not conclusive evidence that a measurable or reportable impairment exists. Furthermore, they are the first step in a two-step process and as a result cannot be deemed conclusive. Entities should carefully consider the surrounding circumstances to determine whether a test of potential impairment may be unnecessary given the circumstances. Furthermore, as stated at paragraphs A6 through A9 in the section entitled *Common Indicators of Potential Impairment*, the paragraph 12 indicators are not meant to be definitive in nature nor a fully inclusive list. Therefore, management must exercise discretion and judgment when assessing potential impairment losses.

A34. Other respondents shared a concern that their auditors would require specific reviews or that the audit community could not determine the extent of additional audit procedures that could result from this Statement. The Board believes that this issue gets back to internal controls and processes. The Board is of the opinion that in most cases management would not have to apply additional or separate procedures to identify potential impairments. Rather, management might have to document (1) linkage to asset management systems (refer to paragraphs A4 and A5) that identify and communicate potential impairments and (2) materiality so that auditors would accept that the financial statements are presented fairly. At a minimum, management can be expected to document how it interprets and expects to apply this Statement.

Materiality

A35. Some respondents sought clarification concerning materiality. The Board has made clear that this matter depends on the degree to which omitted or missing information could influence a reasonable person's judgment and that this Statement is not to be applied to immaterial items. The Board notes two important matters in this regard. First, when assessing materiality management should consider the impact of the potential impairment to the entity's cost of service(s). It is not the Board's intent to direct application of this Statement to those G-PP&E assets (e.g., lower operating level assets, administrative

support equipment, etc.) that have an immaterial impact on cost of service(s). Second, entities that determine they have an amount of G-PP&E such that no impairment could have a material effect would not have to be concerned with the implementation of the Statement. Each entity should undertake some advanced consideration to tailor and justify its implementation in light of materiality considerations specific to the entity.

Measurement

A36. Some respondents expressed concern over the measurement approaches. Concerns ranged from the approaches not being appropriate for real property asset classes to the Statement having too many methods from which to select. As stated at paragraphs 18 and A17, entities should use an approach that reasonably estimates the asset's diminished service utility. The Board has made clear that it seeks reasonable impairment loss estimates and is not prescribing any particular approach. Preparers are not restricted to the approaches shown at paragraph 18 and may use other approaches that accomplish the following two objectives: (1) reasonably estimate the diminished service utility and (2) reasonably estimate net book value associated with the remaining service utility.

G-PP&E Exemptions

A37. Some respondents noted provisions of this Statement should not apply to certain G-PP&E categories, classes, or base units. The Board explored the respondents' rationales for seeking to waive the requirements and determined that no exemptions would be warranted. A careful reading and implementation of the Statement would preclude application of this Statement to some G-PP&E classes. Specifically, as stated at paragraph 8, the events or changes in circumstances that lead to impairments are not considered normal and ordinary. That is, at the time the G-PP&E was acquired, the event or change in circumstance would not have been (a) expected to occur during the useful life of the G-PP&E or, (b) if expected, sufficiently predictable to be considered in estimating the useful life. For example, in the case of military equipment "normal and ordinary" would come with the expectation that the G-PP&E would be responding to contingencies and entering into combat operations at some future time. As a result, lost service utility arising from such events or circumstances could not be considered unanticipated and would fall outside the realm of this Statement. Additionally, G-PP&E classified as mission critical will rarely be partially and permanently impaired as its service utility would generally be replaced or restored and if not, the asset would be removed from active service because it would no longer be mission capable.

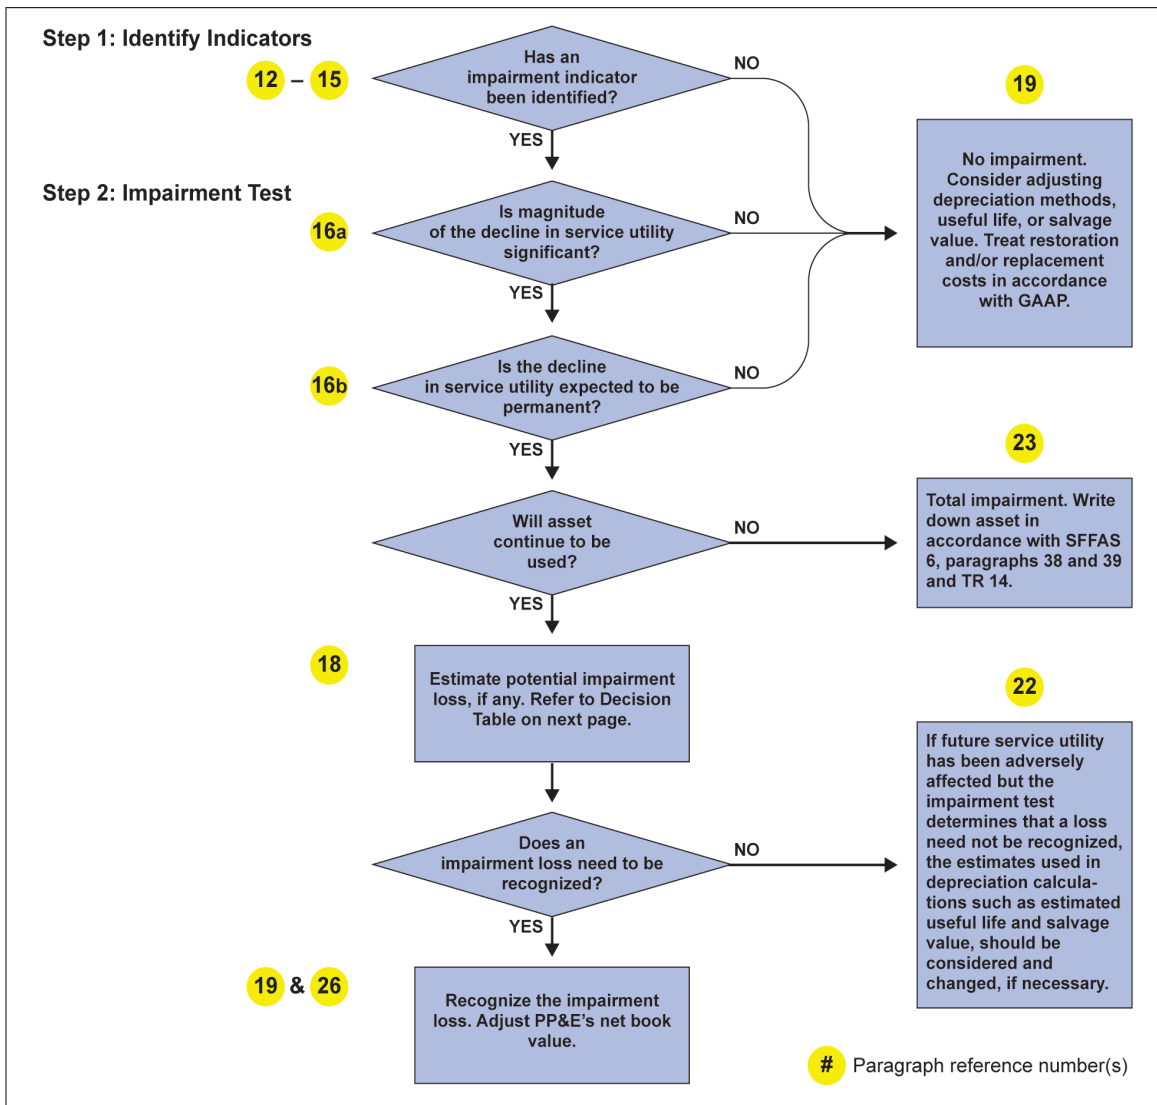

A38. The Board notes that in those cases where an entity considers certain G-PP&E to be non-mission critical or immaterial, management can (1) read the views of the Board concerning materiality as detailed in paragraph A35 above, and (2) reevaluate its capitalization

threshold and depreciation policies and procedures. For example, under the requirements of this Statement, office furniture and fixtures that have been capitalized could become impaired. However, management may determine that any resultant impact to its cost of service(s) would be immaterial. In such cases, an entity may elect to prospectively change its capitalization criteria and/or alter its depreciation policies.

Board Approval

A39. This Statement was approved for issuance by all members of the Board. The written ballots are available for public inspection at the FASAB's offices.

Appendix B: Flowchart, Decision Table and Illustrations

Select a method that reasonably represents diminished service utility by considering potential indicators and type of PP&E.

If more than one method is reasonable, select the most efficient and practicable method.

Measurement Methods*	Potential Indicators	Type of PP&E **	Reference	Illustrations that may be appropriate
Replacement Approach	• Physical Damage	All G-PP&E	Par. 18 a	1c
Restoration Approach	• Physical Damage	Multi-use Heritage PP&E	Par. 18 b	2b
Service Units Approach	• Physical Damage • Enactment or approval of laws/regulations • Changes in environmental or economic factors • Technological changes or obsolescence	All G-PP&E	Par. 18 c	1d, 3a, 3b
Deflated Depreciated Current Cost Approach	• Change in manner or duration of use.	All G-PP&E	Par. 18 d	4a
Cash Flow Approach	• Any of the indicators as listed at Paragraph 12 (a through g)	Cash or Revenue Generating G-PP&E	Par. 18 e	7a, 7b, 7c, 7d
Lower of (1) Net Book value or (2) Higher of Net Realizable Value or Value-in-Use Approach	• Construction stoppage / Contract terminations	All G-PP&E	Par. 17 & 18 f	5, 6a, 6b, 7b

*Other industry-accepted methods may be appropriate

** = excluding internal use software

ILLUSTRATIONS

This remainder of this appendix illustrates the application of the provisions of this Statement to assist in clarifying their meaning. The facts assumed in these examples are illustrative only and are not intended to modify or limit the requirements of this Statement or to indicate the Board's endorsement of the situations or methods illustrated. Additionally, these illustrations are not

intended to provide guidance on determining the application of materiality; as such, estimated impairment losses are labeled as “potential” in each illustration because they would still require a further assessment as to whether the estimated loss is material and should be recognized. Application of the provisions of this Statement may require assessing facts and circumstances other than those illustrated here and require reference to other applicable Standards to ensure each situation is considered in the appropriate context.

Illustration 1a

Temporary Declines in Service Utility: *Physical Damage to an Office Building with Mold Contamination*¹⁸

Assumptions

In 2012, entity officials became aware of extensive mold contamination at one of its office buildings. Facilities management personnel advised that the building be closed due to health and safety concerns. Shortly afterwards, the office building was vacated and closed. The mold remediation involves removing and rebuilding the interior walls and improving site drainage at a total cost of \$4 million.

Management develops specific plans to begin remediation efforts as soon as possible and replace the lost service utility. In addition, funding has been identified and set-aside.

Evaluation of potential estimated impairment loss

The mold contamination is evidence of physical damage – an impairment indicator. Also, the magnitude of the event (i.e., closure of the building) is a significant decline in service utility. However, because management has specific plans to replace the lost service utility of the building and has identified and set-aside funding, there is reasonable expectation that the damage is temporary and no potential estimated impairment loss is recognized.

¹⁸ Illustrations 1a through 1d have been adapted from GASB 42, Illustration 1, *Physical Damage – School with Mold Contamination*.

Illustration 1b

Complete Removal from Service: *Physical Damage to an Office Building with Mold Contamination*

Assumptions

In 2012, entity officials became aware of extensive mold contamination at one of its office buildings. Facilities management personnel advised that the building be closed due to health and safety concerns. Shortly afterwards, the office building was vacated and closed.

Due to the extent of the damage, management does not believe that remediation efforts will begin and that the lost service utility of the building is not temporary. As a result, management has decided to remove this building from service and prepare it for disposal.

Evaluation of potential estimated impairment loss

The mold contamination is evidence of physical damage – an impairment indicator. Also, the magnitude of the event (i.e., closure of the building) is a significant decline in service utility. Because management does not believe that remediation efforts will begin, the lost service utility of the building is permanent. However, because the entire office building will be taken out of service and prepared for disposal purposes, no potential estimated impairment loss is recognized. Instead, the provisions of SFFAS 6, *Accounting for Property, Plant, and Equipment*, paragraphs 38 and 39 are applicable.

Illustration 1c

Replacement Approach - Permanent Declines in Service Utility: *Physical Damage to an Office Building due to an Earthquake*

Assumptions

In 2012, entity officials became aware of extensive masonry wall and building foundation damage at one of its office buildings as a result of a recent earthquake. The damage to the masonry walls was spread throughout the five-story building and the building foundation was damaged at non-critical vertical-load points. Facilities management personnel and engineers advised that despite a decline in service utility, the damaged building would still be capable of meeting reasonable, but reduced performance objectives in its damaged state, making major repairs and costly upgrading unnecessary. Limited and minor repairs, both cosmetic and structural, could be made to improve visual appearance and component damage at nominal cost. Facilities managers and engineers

have estimated that the major repairs and upgrades (involving removal and rebuilding of the interior walls and improving site drainage) would cost \$2 million.

After a detailed review, management decided to accept the reduced performance objectives of the building and not make the major repairs and costly upgrades.

The office building was constructed in 1982 at a cost of \$1.3 million, including \$100,000 for acquisition of the building site. The building had an expected useful life of sixty years. During its life, the entity made improvements to the building totaling \$1.235 million. Accumulated depreciation related to the building and to the improvements were \$600,000 and \$320,000, respectively.

Evaluation of potential estimated impairment loss

The masonry wall and building foundation damage is evidence of physical damage – an impairment indicator. Also, the magnitude of the decline in the lost service utility is significant because its remediation would involve major repairs and costly upgrades. Because management decides to accept the reduced performance objectives of the building and not make the major repairs and costly upgrades, the lost service utility of the building is permanent. Because the loss of service utility is permanent, any potential estimated impairment loss may need to be recognized.

Measurement of potential estimated impairment loss

Facilities managers and engineers estimated that the major repairs and upgrades would have cost if incurred, \$2 million. In accordance with the entity's capitalization policies, 10 percent of the remediation cost would be allocable to site clean-up and treated as a period expense, and 90 percent would be allocable to remediating the masonry wall and building foundation damage. As recorded in the entity's asset management system, the estimated plant replacement value (PRV) of the office building is \$8.5 million.

Calculate Net Book Value

	Historical Cost	Accumulated Depreciation, 2012	Net Book Value, 2012
Land	\$100,000		\$100,000
Building acquisition, 1982	\$1,200,000	\$600,000	\$600,000
Improvements	1,235,000	320,000	915,000
Total - Building & Improvements	\$2,435,000	\$920,000	\$1,515,000

Calculate estimated cost to replace lost service utility:

Total remediation cost	\$2,000,000
Percentage wall & foundation cost	90%
Wall & Foundation Remediation cost	\$1,800,000

Calculate percentage of lost service utility in current dollars:

Wall & Foundation Remediation (estimate of lost service utility in current dollars)	\$1,800,000
Plant Replacement Value (estimate to replace building in current dollars)	\$8,500,000
Wall & Foundation Remediation cost percentage	21.18%

Calculate potential estimated impairment loss:

Net book value (historical cost)	\$1,515,000
Multiplied by: Wall & Foundation Remediation cost percentage	21.18%
Potential estimated impairment loss	\$320,877

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the building is \$320,877.

Illustration 1d

Choice Among Methods - Permanent Declines in Lost Service Utility: *Physical Damage to an Office Building with Mold Contamination*

Assumptions

In 2012, entity officials became aware of extensive mold contamination at one of its office buildings. The mold contamination in the walls of the building was limited to the top two floors of the five-story building and could be safely contained and encapsulated. Facilities management personnel advised that the first three floors of the building could continue to be safely used.

Management does not believe that the loss of service utility will impede their operations and consequently, do not plan to remediate the mold contamination. Management has decided to discontinue the use of the top two floors and commence containment and encapsulation efforts. The remainder of the building will be kept in service.

The office building was constructed in 1982 at a cost of \$1.3 million, including \$100,000 for acquisition of the building site. The building had an expected useful life of sixty years. During its life, the entity made improvements to the building totaling \$1.235 million.

Evaluation of potential estimated impairment loss

The mold contamination is evidence of physical damage – an impairment indicator. Also, the magnitude of the event (i.e., contamination of two of the five floors of the building) is a significant decline in service utility. Because management does not plan to replace the lost service utility of these floors, the lost service utility of the building is permanent. Because the loss of service utility is permanent, any potential estimated impairment loss may need to be recognized.

Measurement of potential estimated impairment loss

Facilities management personnel in consultation with the Comptroller's office advise management to use the service units approach instead of the replacement cost approach because using construction cost estimates are not likely to result in a materially different potential estimated impairment loss amount. Management agrees to select the service units approach because it reasonably represents diminished service utility and given the circumstances, it is the most efficient and practicable method to use.

Calculate percentage of lost service utility in terms of units:	
Lost service utility in terms of floor units	2 floors
Total service utility prior to damage in terms of floor units	5 floors
Percentage of lost service utility in terms of units	40.00%
Calculate potential estimated impairment loss:	
Net Book Value (historical cost)	\$1,515,000
Multiplied by: percentage of lost service utility - units	40.00%
Potential estimated impairment loss	\$606,000

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the building is \$606,000.

Illustration 2a

Normal and Ordinary Lost Service Utility: *Physical Damage to a Multi-use Heritage Asset*^{19,20}

Assumptions

Recent media reports have noted that acid precipitation (often called acid rain) is of increasing concern in the metropolitan area and, in particular to many of the area's historic and national landmarks including multi-use heritage assets. The entity's conservation scientists confirm the media reports and note that although normally rain is slightly acid, current rainfall has an average pH of more than 10 times normal levels.

¹⁹ Illustration 2a adapted from: Department of the Interior, *Acid Rain in Washington*, <http://pubs.usgs.gov/gip/stones/acid-rain.html>.

²⁰ Heritage Assets are PP&E that are unique for one or more of the following reasons: historical or natural significance; cultural, educational or artistic (e.g., aesthetic) importance; or, significant architectural characteristics. Multi-use Heritage Assets are heritage assets whose predominant use is general government operations. FASAB Appendix E: Consolidated Glossary,

Limestone and marble, the stones that form many of the buildings and monuments in the metropolitan area are especially vulnerable to acid precipitation because they are predominantly made of the mineral calcite (calcium carbonate), which dissolves (i.e., erosion) easily in acid. Capitalized alterations made over the years to accommodate the heavy traffic brought about by administrative and visitor use of one of the more prominent multi-use heritage assets has drawn management's attention. The entity's Inspector General (IG) has begun a review and in an interim draft report has noted the following,

“The marble balustrade on the south side, main entrance of the administrative building shows damage from acid rain posing a serious threat to the hundreds of visitors and employees who walk by this concourse daily. Management must take immediate corrective action in order to avoid potential bodily harm and liability.”

Management in consultation with the conservation scientists and facilities managers determines that (1) erosion (deterioration caused by exposure to the environment) is a natural part of the normal geologic cycle and was reasonably expected to occur, and (2) temporary braces and steel under-girding currently in-place are sufficient for the current year. Management plans to restore the balustrade during the next fiscal year.

Evaluation of potential estimated impairment loss

The erosion is evidence of physical damage – an impairment indicator. Also, the prominence of the event (i.e., coverage by the media and the IG's recommendation) would be evaluated as a potential impairment indicator of significant loss in service utility. However, no potential estimated impairment loss is recognized because (1) the decline in lost service utility is “normal and ordinary” as it arises from a cyclical act of nature and (2) restoration efforts to cure the damage are planned to begin next fiscal year. Management should consider evaluating its depreciation policies and methods to reflect the adverse effect of the acid rain on buildings and monuments made of limestone and marble.

Illustration 2b

Restoration Approach - Permanent Declines in Service Utility: *Physical Damage to a Multi-use Heritage Asset*

Assumptions

A fire recently destroyed most of a three-story wing addition of an historic building. The building addition housed senior administrative offices. The foundation and portions of the first level were not seriously damaged and considered salvageable.

The Secretary's proposal to the Board of Regents (Regents) requested a minimum of \$4.5 million to restore the three-story administrative wing. The Regents questioned the reasonableness of the cost estimate noting that typical office building construction in the metropolitan area costs about \$160.00 per square foot (psf). The Secretary advised that the \$160.00 psf estimate was not appropriate to use because it represented a "replacement" estimate using today's current labor, materials, standards and methods and not a "restoration" estimate that required using historically accurate materials and methods, as well as historic preservation and conservation methods as appropriate to preserve the historic nature and value of the multi-use heritage asset.

As an example, the Secretary noted the limited supply of the red Seneca sandstone used to construct the building in the 19th century and the added wing in the 20th century. The local quarry could only supply sufficient quantities to restore one level. As a result, complete restoration could not begin until a second quarry could be located to supply the additional quantities. Furthermore, experienced masons would have to be used for the restoration effort.

As a result of this information, the Regents modified the Secretary's request to restore one level of the wing noting that subsequent levels should not be restored in the future and that no such plans should be undertaken nor should any monies be committed. Displaced staff was moved to nearby vacant office space.

Evaluation of potential estimated impairment loss

The destruction to the three-story wing is evidence of physical damage – an impairment indicator. Also, the magnitude of the event (i.e., loss of senior administrative office space) would be evaluated as a significant decline in service utility. Because the Regents provided for partial restoration (one level) of the multi-use heritage asset, the lost service utility of the other two levels of the administrative wing is deemed permanent. As a result, because the lost service utility from these two levels is not reasonably expected to be restored, the potential estimated

impairment loss is considered permanent and any resultant potential estimated impairment loss may need to be recognized.

Measurement of potential estimated impairment loss

Facilities managers and reconstruction specialists have estimated that (1) the total remediation of the three-story wing would cost \$4.5 million and (2) restoring the first level would cost \$2.0 million. The net book value of the administrative portion of the building prior to the fire damage was \$1.75 million. In accordance with the Restoration Approach, the following estimates and calculations were presented to management:

Calculate estimated cost to restore lost service utility:	
Total restoration cost (all 3 levels)	\$4,500,000
Less: portion to be restored (first level)	\$2,000,000
Cost to restore lost service utility (2 nd and 3 rd levels)	<u>\$2,500,000</u>
Calculate percentage of restored lost service utility in current dollars:	
Cost to restore lost service utility of the 2 nd and 3 rd levels of the wing (estimate of lost service utility in current dollars)	\$2,500,000
Total restoration cost (all 3 levels)	\$4,500,000
Restoration cost percentage	<u>55.5%</u>
Calculate potential estimated impairment loss	
Net Book Value (historical cost of wing)	\$1,750,000
Multiplied by: Restoration cost percentage	55.5%
Potential estimated impairment loss	<u>\$971,250</u>

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the building is \$971,250.

Illustration 3a

Service Units Approach - Recoverable Service Utility: Technological Development or Evidence of Obsolescence - *Underutilized Magnetic Resonance Imaging Machine*²¹

Assumptions

In 2010, a hospital purchased a magnetic resonance imaging (MRI) system at a cost of \$2.25 million. The hospital estimated that the system would have an estimated useful life of seven years and that on average the system would be used for ten tests per day for five days per week. After installation, the utilization of the system was approximately at the levels estimated.

In 2013, an affiliated entity transferred an “open” MRI system to the hospital. The transferred MRI system began to be used more frequently than the original “closed” MRI system because the “open” MRI was more comfortable for patients and provided a superior image. Instead of providing ten images a day, the original MRI system was being used only on an overflow basis and averaged six images per day; a decrease to 60 percent of prior levels. Furthermore, the expenses associated with the continued operation and maintenance (O&M) of the “closed” MRI system continues to be incurred and management is evaluating the asset’s continued service use and whether or not to book an impairment loss.

Upon inspection of the “closed” MRI system and closer examination of the related O&M costs, hospital administrators have determined that it is cost-beneficial to keep the system operational and that there is no impairment loss. They estimate that the system can be expected to last at least three years longer than originally estimated and achieve its expected service output. Furthermore, hospital administrators contend that a significant portion of the costs are (1) considered “sunk” due to the fixed-price nature of the long-term maintenance contracts and (2) fixed inasmuch as they will be incurred regardless of the closed MRI system’s operating levels.

Evaluation of potential estimated impairment loss

Management initially identified that the change in technology was an indicator of potential impairment because it had resulted in a permanent reduction in the usage of the “closed” MRI system. Also, they believed that the magnitude test (i.e., decline in service utility relative to operating costs) had also been met due to the fact that the cost of operating the “closed” MRI system has remained the same while the service provided has decreased to 60 percent of prior levels. However, management has concluded that there is no potential estimated impairment

²¹ Illustrations 3a and 3b adapted from: GASBS 42, Illustration 4, *Technological Development or Evidence of Obsolescence -Underutilized Magnetic Resonance Imaging Machine*.

loss (i.e., the MRI system did not meet Step 2 – Impairment test) because the asset can achieve its expected service output by being kept in service three years longer than originally planned. Using the service units approach, management determines the followings:

Measurement of potential estimated impairment loss

Calculate Net Book Value:	
a Acquisition cost, 2010	\$2,250,000
Accumulated depreciation, 2013 (3 / 7 years)	<u>964,286</u>
b Net Book Value, 2013	<u>\$1,285,714</u>
Calculate Acquisition cost per service unit	
a Acquisition cost, 2010	\$2,250,000
c Originally expected service units (7 years × 52 weeks per year × 5 days per week × 10 uses per day)	<u>18,200</u>
d Acquisition cost per service unit (a divided by c) (rounded)	<u>\$124.00</u>
Calculate Remaining Number of Service Units & Related Costs to be recovered:	
d Acquisition cost per service unit (a divided by c)	\$124.00
e Remaining number of service units = (4 years plus 3 extended years × 52 weeks per year × 5 days per week × 6 uses per day)	<u>10,920</u>
f Remaining service costs to be recovered (d multiplied by e)	<u>\$1,354,080</u>
Calculate Potential Estimated Impairment Loss:	
Net Book Value, 2013 (b)	<u>\$1,285,714</u>
Remaining service costs to be recovered (f)	<u>\$1,354,080</u>
Potential estimated impairment loss (b minus f)	<u>N/A</u>

Reporting Considerations

Although there is no potential estimated impairment loss to consider or recognize because the remaining service costs to be recovered is greater than the PP&E's net book value, management should consider re-evaluating its depreciation policies and methods to reflect the additional 3 years of extended service.

Illustration 3b

Service Units Approach - Non-recoverable Service Utility: Technological Development or Evidence of Obsolescence - *Underutilized Magnetic Resonance Imaging Machine*

Assumptions

In 2010, a hospital purchased a magnetic resonance imaging (MRI) system at a cost of \$2.25 million. The hospital estimated that the system would have an estimated useful life of seven years and that on average the system would be used for ten tests per day for five days per week. After installation, the utilization of the system was approximately at the levels estimated.

In 2013, an affiliated entity transferred an “open” MRI system to the hospital. The transferred MRI system began to be used more frequently than the original “closed” MRI system because the “open” MRI was more comfortable for patients and provided a superior image. Instead of providing ten images a day, the original MRI system was being used only on an overflow basis and averaged one image per day; a decrease to 10 percent of prior levels. Furthermore, the expenses associated with the continued operation and maintenance of the “closed” MRI system continue to be incurred and has drawn management’s attention to evaluate the asset’s continued service use.

Evaluation of potential estimated impairment loss

The indicator of potential impairment is the change in technology, which has resulted in a permanent reduction in the usage of the “closed” MRI system. The magnitude test (i.e., decline in service utility relative to operating costs) has also been met due to the fact that the cost of operating the “closed” MRI system has remained the same while the service provided has decreased to 10 percent of prior levels. Potential estimated impairment loss using the service units approach would be determined as follows:

Measurement of potential estimated impairment loss

Calculate Net Book Value:

a	Acquisition cost, 2010	\$2,250,000
	Accumulated depreciation, 2013 (3 / 7 years)	964,286
b	Net Book Value, 2013	\$1,285,714

Calculate Acquisition cost per service unit

a	Acquisition cost, 2010	\$2,250,000
c	Originally expected service units (7 years × 52 weeks per year × 5 days per week × 10 uses per day)	18,200
d	Acquisition cost per service unit (a divided by c)	\$124.00 (rounded)

Calculate Remaining Number of Service Units & Related Costs to be recovered:

d	Acquisition cost per service unit (a divided by c)	\$124.00
e	Remaining service number of units = (4 years × 52 weeks per year × 5 days per week × 1 use per day)	1,040
f	Remaining service costs to be recovered (d multiplied by e)	\$128,960

Calculate Potential Estimated Impairment Loss:

	Net Book Value, 2013 (b)	\$1,285,714
	Remaining service costs to be recovered (f)	\$128,960
	Potential Estimated Impairment loss (b minus f)	\$1,156,754

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the equipment is \$1,156,754.

Illustration 4

Deflated Depreciated Current Cost Approach: Change in Manner or Duration of Use – *Training Facility Used for Storage*²²

Assumptions

In 2013, management decided to close a training facility because enrollments declined due to outsourcing initiatives brought about as a result of Office of Management and Budget (OMB) Circular No. A-76, “*Performance of Commercial Activities*.” The closed training facility has been converted for use as a storage warehouse.

This training facility was constructed in 2001 at a cost of \$10 million. The estimated useful life of the facility is fifty years. Entity management has (1) no evidence that enrollments will increase in the future such that the building would be reopened for use as a training facility and (2) concerns with the significantly high operating costs – maintenance and repair, depreciation, insurance, utilities, security, etc.

Because no physical damage occurred that would require detailed cost repair estimates, management decides to use the deflated-depreciated current cost approach to measure the potential estimated impairment loss. Facilities managers have been able to readily identify current plant replacement value (PRV) for a comparable warehouse of the same size as \$4.2 million and commercial construction indices of 100 and 150 for years 2001 and 2013, respectively.

Evaluation of potential estimated impairment loss

Impairment is indicated because the manner of use of the training facility has changed from training students to storage. The situation passes the magnitude test (i.e., decline in service utility relative to operating costs) because the ongoing costs of the training facility would likely be considered high in relation to the benefit it is providing - storage. Potential estimated impairment loss using the deflated depreciated current cost approach would be determined as follows:

²² Illustration 4a adapted from: GASB 42, Illustration 5, *Change in Manner or Duration of Use – School Used for Storage*.

Measurement of potential estimated impairment loss

Calculate Net Book Value:	
Historical cost, 2001	\$10,000,000
Accumulated depreciation (12 / 50 years)	2,400,000
a Net Book Value, 2013	\$7,600,000
Calculate Depreciated current cost (current dollars)	
Replacement cost of warehouse, 2013	\$4,200,000
Accumulated depreciation (12 / 50 years)	1,008,000
b Depreciated current cost	\$3,192,000
Calculate Deflation factor:	
c Commercial construction index, 2001	100
d Commercial construction index, 2013	150
e Deflation factor (c divided by d)	0.67
Apply deflation factor to depreciated current cost	
b Depreciated current cost	\$3,192,000
e Deflation factor (c divided by d)	0.67
f Deflated depreciated current cost (b × e)	\$2,138,640
Calculate Potential estimated impairment loss:	
a Net Book Value, 2013	\$7,600,000
f Deflated depreciated current cost (b × e)	2,138,640
Potential estimated impairment loss (a - f)	\$5,461,360

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the facility is \$5,461,360.

Illustration 5

Construction Stoppage—*Special Purpose Test Equipment* ²³

Assumptions

In 2012, in response to a Congressional order canceling a major program, management stopped all construction activities related to the fabrication of program-related special purpose test equipment. The entity conducts numerous design and build projects for military and scientific purposes all of which have potential commercial application. The entity's program manager advised management that the special purpose test equipment was substantially complete at the time of stoppage and could be considered available for commercial use. The entity had accumulated costs totaling \$10 million and was approximately 75 percent complete with the project.

Upon further inquiry, management determined that despite initial interest from two commercial firms, early in 2012, one of them filed for bankruptcy and the other withdrew its interest citing that the costs-to-complete are too high. There is no evidence to demonstrate that the construction stoppage is temporary or that other potential commercial interests can be found. Also, the program manager advises that there is no potential government use for this asset and that it should be disposed.

Evaluation of potential estimated impairment loss

The indicator of impairment is the construction stoppage. It appears to meet the test of impairment in that management would not have initiated the project if it had expected either program cancellation or lack of any potential commercial use. The situation passes the magnitude test because the costs-to-date (75% or \$10 million) are significant in both percentage and monetary terms. However, there is no potential estimated impairment loss to report in accordance with this standard because the asset is totally impaired as it has no commercial or government use and cannot provide service. As such, the requirements in SFFAS 6, paragraph 38²⁴ should be followed. Specifically, in the period of disposal accumulated costs should be

²³ Illustration 5 adapted from: GASB 42, Illustration 9, *Construction Stoppage—Airport Pavements*.

²⁴ Refer to Technical Release 14, *Implementation Guidance on the Accounting for the Disposal of General Property, Plant, & Equipment*, which provides implementation guidance that clarifies existing SFFAS 6 requirements and is intended to help differentiate between permanent and other than permanent removal from service of G-PP&E. The implementation guidance also recognizes the many complexities involved in the disposal of G-PP&E, as well as delineates events that trigger discontinuation of depreciation and removal of G-PP&E from accounting records.

removed from the asset accounts and any difference between the book value of the equipment and amounts realized shall be recognized as a gain or a loss.

Illustration 6a

Contract Termination - *Transferable Equipment Technology*

Assumptions

In 2012, the entity's chief contracting officer terminated a contract pursuant to the Federal Acquisition Regulations because the entity experienced substantial cost increases, schedule delays, and performance shortfalls. The terminated contract was to build the entity's next-generation surveillance equipment capable of covertly operating in adverse weather conditions. Despite several cure notices, the entity terminated the contract for default. The contractor has stated that it will not protest the termination. At the time of termination, the entity had incurred \$150 million in contract costs.

In the meantime, the program manager determined that the operating environment had changed and that remaining funds would be better spent on other priorities and was able to transfer the system technology to other entity projects. The manner and use of the systems are not expected to change.

Evaluation of potential estimated impairment loss

The indicator of impairment is the contract termination. It appears to meet the test of potential impairment because the event is significant and the termination decision will not be protested; i.e., permanent. However, because the entity was able to transfer the system technology to other entity projects, no potential estimated impairment loss exists.

Illustration 6b

Contract Termination - *Partially-Transferable Equipment Technology*

Assumptions

Same assumptions used in Illustration 6a except that the program manager was unable to transfer the entire system technology to other entity projects. After an inspection and engineering review, it was determined that 70 percent of hardware and software could be transferred to

existing projects. There is no potential use or application for the remaining 30 percent of equipment technology.

Evaluation of potential estimated impairment loss

The indicator of impairment is the contract termination. It appears to meet the test of potential impairment because the termination decision is a significant event and is considered permanent because the decision will not be protested. As a result of the entity being unable to transfer the entire system technology to other entity projects, an impairment exists.

Measurement of potential estimated impairment loss

Because 30 percent of the system technology cannot be transferred to other entity projects, a potential estimated impairment loss of \$45 million exists (30.0% X \$150 million).

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the equipment is \$45 million.

Illustration 7a

Cash flow approach – *Grouped Assets*

Assumptions

An entity manages and operates a shared-services center on a post-wide basis that provides administrative and information technology support. The entity groups the individual services separately into two distinct categories rather than on an individual basis. The net book values are \$12 million and \$11 million for the administrative and information technology (IT) groups, respectively.

In December 2012 the entity's management decided to implement a public-private strategic initiative that could eventually over several years transition these shared-services operations to private ownership. Both national and local private interests have asked their respective political representatives to accelerate the entity's implementation time-table and influence a favorable outcome. Management was directed to (1) immediately estimate the amount that could be recovered from selling the operations and (2) identify to the lowest level identifiable, operating information to include cash flows for each category. An appraisal was conducted to ascertain the amount that could be recovered from selling each of the groups. The appraisal report noted (1) that net realizable value (NRV) amounts were greater than value-in-use estimates and (2) the

NRV amounts of \$13 million and \$8 million for the administrative and IT groups, respectively. The Chief Financial Officer identified the following cash flow information: (a) cash from continuing operations of \$12 million and \$9 million for the administrative and IT groups, respectively and (b) cash flows from disposal activities of \$2 million and \$1 million for the administrative and IT groups, respectively.

As a result of complying with this directive and evaluating the resultant financial information and appraisal analysis, management became concerned that its assets might be impaired and adversely impact its public-private strategic initiative.

Evaluation of potential estimated impairment loss

If an impairment indicator exists, an impairment analysis should be considered. In this case, the entity's public-private initiative includes a significant change in the manner or duration in which the assets will be used. This represents an impairment indicator that would trigger an impairment analysis. Furthermore, management's concern that its assets might be impaired passes the magnitude test.

Management is concerned that the presence of an impairment indicator might affect its plan regarding the future use of the shared-services if the analysis indicates that the net book value of the assets are not recoverable. To apply the cash flow approach, the entity will need to estimate the future undiscounted cash flows expected to result from the use of the assets and their eventual disposition. The future cash flows are the expected cash inflows to be generated by the asset net of any expected future cash outflows that are needed to produce the inflows.

Measurement of potential estimated impairment loss

This approach requires that an entity recognize a potential estimated impairment loss if (1) the undiscounted cash flows are less than the net book value of the assets (the net book value is not recoverable) and (2) the net book value exceeds the higher of the assets NRV²⁵ or value-in-use estimate.²⁶ A potential estimated impairment loss would be measured as the amount by which the net book value of the grouped assets exceed the higher of their net NRV or value-in-use estimate(s).

²⁵ Net realizable value is the estimated amount that can be recovered from selling, or any other method of disposing of an item less estimated costs of completion, holding and disposal. Source: FASAB Glossary, Appendix E.

²⁶ Statement of Federal Financial Accounting Concepts (SFFAC 7), *Measurement of the Elements of Accrual-Basis Financial Statements in Periods After Initial Recording*, at paragraph 50, defines value-in-use as "...the benefit to be obtained by an entity from the continuing use of an asset and from its disposal at the end of its useful life." Paragraph 51 further states that "Value in use is a remeasured amount for assets used to provide services. It can be measured at the present value of future cash flows that the entity expects to derive from the asset, including cash flows from use of the asset and eventual disposition. Value in use is entity specific and differs from fair value. Fair value is intended to be an objective, market-based estimate of the exchange price of an asset between willing parties. Value in use is an entity's own estimation of the service potential of an asset that it holds to provide a specific service." (underscoring added for emphasis)

When identifying cash flows, assets should be grouped at the lowest level for which there are identifiable cash flows that are largely independent of the cash flows of other groups of assets

Calculate Net book value:		
Net book value:	Asset Group: Administrative	Asset Group: IT
Assets' net book values at 12/31/2012 (a)	<u>\$12,000,000</u> (a)	<u>\$11,000,000</u> (a)
Calculate undiscounted cash flows		
Undiscounted cash flows from future operations	\$12,000,000	\$9,000,000
Undiscounted cash flows from future disposal of assets	2,000,000	1,000,000
Total - undiscounted cash flows (b)	<u>\$14,000,000</u> (b)	<u>\$10,000,000</u> (b)
Calculate Recoverability:		
Recoverability: (b minus a)	Asset Group: Administrative	Asset Group: IT
Total - undiscounted cash flows (b)	<u>\$14,000,000</u>	<u>\$10,000,000</u>
Assets' net book values at 12/31/2012 (a)	<u>12,000,000</u>	<u>11,000,000</u>
Recoverability (b minus a)	<u>\$2,000,000</u>	<u>\$(1,000,000)</u>
Is net book value recoverable?	Yes	No
Is asset subject to potential impairment?	No	Yes

Calculate potential estimated impairment loss:

A potential estimated impairment loss should be recognized only if the net book value of the G-PP&E (1) is not recoverable **and** (2) exceeds the higher of its net realizable value or value-in-use estimate. Because the administrative group has undiscounted cash flows greater than related net book values, recoverability is met and there is no potential impairment. However, because the IT group has undiscounted cash flows lower than related net book values, recoverability is not met and the potential for impairment exists. The calculation below shows that a \$3 million potential estimated impairment loss exists because the \$11 million net book value of the IT group's G-PP&E exceeds the higher of its net realizable value or value-in-use estimate (in this case we are told that the \$8 million NRV amount is higher than the value-in-use estimate).

Potential estimated impairment loss:	Asset Group: Administrative	Asset Group: Information Technology
Net Realizable Value of assets at 12/31/2012	N/A	\$ 8,000,000
Less: Assets' net book values at 12/31/2012	N/A	\$11,000,000
Excess of net book value over Net Realizable Value	N/A	\$3,000,000
Potential estimated impairment loss	N/A	\$3,000,000

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the IT asset group is \$3.0 million.

Illustration 7b

Cash flow approach – Equipment: Technological Development or Evidence of Obsolescence - *Underutilized Magnetic Resonance Imaging Machine*²⁷

Assumptions

In 2009, a hospital operating in a major metropolitan area purchased a “closed” magnetic resonance imaging (MRI) system at a cost of \$2.25 million to be used exclusively for non-service

²⁷ Illustration 7b adapted from: GASB 42, Illustration 4, *Technological Development or Evidence of Obsolescence - Underutilized Magnetic Resonance Imaging Machine*.

connected procedures. The hospital, which charges fees for non-service connected care estimated that the system would have an estimated useful life of seven years and that on average the system would be used for twenty tests per day for five days per week. The average user fee for MRI services is \$20.00 per use. Shortly after installation, utilization levels dropped to ten tests per day because of reduced demand for the services attributable to the “closed” nature of the MRI system.

In 2012, the manufacturer introduced an “open” MRI system that was advertised as being more comfortable for patients and provided a superior image. Furthermore, the expenses associated with the continued operation and maintenance of the “closed” MRI system continue to be incurred and has drawn management’s attention to evaluate the asset’s continued service use. Because similarly used MRI machines in the open market can be purchased from authorized dealers for \$750,000 (their mark-up percentages are unknown), management is considering the possibility of selling the old machine and using its proceeds to help purchase the “open” MRI system.

Hospital administrators and technicians believe that the “closed” system can continue being used at the current utilization level for at least 3 years beyond the originally estimated service life. Also, they believe that the “open” system provides for only marginal benefits that do not exceed their cost. In light of this information, management decides not to sell the “closed” system. However, because the service utility expected at acquisition (20 tests per day) can no longer be achieved and is accompanied by an underlying cause; reduced demand arising from the less comfortable “closed” system, a potential impairment loss exists.²⁸

Evaluation of potential estimated impairment loss

The indicators of potential impairment are (1) the change in technology and (2) reduced demand accompanied by an underlying cause; the less comfortable “closed” system. The magnitude test has also been met due to the fact that the cost of operating the “closed” MRI system has drawn management’s attention to evaluate the asset’s continued service use. Potential estimated impairment loss using the cash flow approach would be determined as follows:

²⁸ It is important to note that (1) the reduced demand alone is not a discrete or sole indicator of impairment and (2) technological changes or obsolescence should be considered along with other factors when assessing impairment. Regarding the former, had there been no underlying potential impairment (refer to the paragraph 12 indicators), no impairment test would have been required. Concerning the latter, had the utilization level (20 tests per day) and remaining service life (3 years) of the equipment stayed the same, no impairment test would have been required because the equipment’s service utility that was expected at acquisition would be deemed recoverable.

Measurement of potential estimated impairment loss

Calculate Net Book Value:		
a	Acquisition cost, 2009	\$2,250,000
	Accumulated depreciation, 2012 (3 / 7 years)	964,286
b	Net Book Value, 2012	\$1,285,714
Calculate undiscounted cash flows:		
c	Average service fee per use	\$20.00
d	Remaining service units (4 years plus 3 extra years × 52 weeks per year × 5 days per week × 10 use per day)	18,200
e	Undiscounted cash flows (c multiplied by d)	\$364,000
Calculate Recoverability: (b minus a)		
		MRI
	Total - undiscounted cash flows (e)	\$364,000
	Asset's net book values at 9/30/12 (b)	\$1,285,714
	Recoverability (e minus b)	\$(921,714)
Is Net book value Recoverable?		No
Is asset subject to potential impairment?		Yes

Calculate Potential Estimated Impairment Loss:

A potential estimated impairment loss should be recognized only if the net book value of the G-PP&E (1) is not recoverable and (2) exceeds the higher of its net realizable value or value-in-use estimate. Because management believes that the open market price of \$750,000 is a reasonable estimate of the asset's net realizable value, it is compared to the asset's value-in-use estimate to determine which amount is higher. However, because the \$364,000 undiscounted cash flows amount (prior to calculating the net present value to determine a value-in-use estimate) is lower than net realizable value amount of \$750,000, there is no need to present value the cash flows to calculate a value-in-use estimate.

Because management believes that the open market price of \$750,000 is a reasonable estimate, it is used as the “recoverable basis”. Had the net realizable value estimate been unavailable to management, a value-in-use estimate (net present value of the future cash flows) could have been used as the “recoverable basis”.

	MRI
Net Realizable value of asset	\$750,000
Less: Asset's net book value	<u>\$1,285,714</u>
Excess of net book value over fair value	\$ (535,714)
Potential estimated impairment loss	\$ (535,714)

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the equipment is \$535,714.

Illustration 7c

Cash flow approach – Facility: Changes in manner or duration of use - *Government owned-contractor operated (GOCO) manufacturing facility*²⁹

Assumptions

An entity operates a government owned-contractor operated (GOCO) manufacturing facility in an economically depressed area fabricating various commodities with commercial applicability. The facility's current net book value is \$22,500,000 with an estimated salvage value of \$5,000,000 and has a 25 year estimated remaining useful life. Under the terms of the contract, the government provides the contractor with exclusive use of the facility in exchange for negotiated lease payments in the amount of \$150,000 per year. The contractor is responsible for all maintenance and operating costs.

Recently this unique partnership has come under federal and state scrutiny as many legislators and environmentalists have expressed concerns that the contractor whose operations have caused contamination found in and around the facility is not being held financially responsible for the cleanup costs.

²⁹ Illustration 7c adapted from: Military Law Review, Volume 131 Winter 1991; - Government Owned – Contractor Operated Munitions Facilities: *Are they appropriate in the age of strict environmental compliance and liability?*; Major Mark J. Connor.

Outrage which has surfaced during congressional hearings on environmental cleanups has become the focus of print and cable-news outlets.

Further complicating management's "crisis response" is that (1) the contract effectively prohibits modifying the facility to achieve greater environmental compliance without legislative relief and (2) the contracting officer has initiated debarment procedures that effectively would shut down the facility in 90-days for an indeterminable amount of time.

Facilities managers and engineers believe that a prospective buyer can be found but that it will take significant time to pass all necessary sale requirements. Until then, they advise that the facility can be quickly reconfigured and partitioned into commercially viable long-term storage space. The required modifications would cost \$500,000 and lease agreements are estimated to generate approximately \$35,000 in annual revenues. A fairly recent analysis completed 9 months ago reveals that the property's net realizable value (NRV) was at that time, \$30,000,000; 20 percent of which is attributable to land.

Management has approved the reconfiguration and partition plan and believes that it will take a minimum of 5 years before all approvals are in place and disposal efforts can begin and an additional 2 years to ultimately dispose of the property. Because management is concerned with the proper financial reporting of this event, it has asked its comptroller for advice.

Evaluation of potential estimated impairment loss

The indicator of potential impairment is the change in manner of use. The magnitude test has also been met due to (1) federal and state scrutiny, (2) media coverage, and (3) the fact that the cost of operating the facility has drawn management's attention to evaluate the asset's continued service use and seek the comptroller's advice. Because the entity is seeking appropriate approvals to commence disposal efforts and does not know when such permission will be granted, management intends to convert a portion of the facility for public storage; a change in the manner of use.

Measurement of potential estimated impairment loss

Calculate Net book value:	Facility
Assets' net book value at 12/31/X1 (a) (excluding land)	\$22,500,000 (a)
Calculate undiscounted cash flows	
Required modifications (outflow)	(\$500,000)
Undiscounted cash in-flows from future rental lease payments (7 x \$35K)	\$245,000
Undiscounted cash in-flows from disposal of assets (1.0 -0.2 X \$30Mil)	24,000,000
Total - undiscounted cash flows (b)	\$23,745,000 (b)
Calculate Recoverability: (b minus a)	Facility
Total - undiscounted cash flows (b)	\$23,745,000
Assets' net book values at 12/31/X1 (a)	22,500,000
Recoverability (b minus a)	\$1,245,000
Is Net book value Recoverable?	Yes
Is asset subject to potential impairment?	No

Reporting Considerations

There is no potential estimated impairment loss to consider or recognize because the undiscounted cash flows to be recovered are greater than the G-PP&E's net book value.

Illustration 7d

Cash flow Approach (Calculating value-in-use using discounted cash flows) – Facility: Changes in manner or duration of use - *Government owned-contractor operated (GOCO) manufacturing facility*³⁰

Assumptions

Same facts as Illustration 7c above except that (1) management has decided to reconfigure the facility and lease available storage space for the remaining life of the facility, (2) the net realizable

³⁰ Adapted from: Military Law Review, Volume 131 Winter 1991 - Government Owned – Contractor Operated Munitions Facilities: Are they appropriate in the age of strict environmental compliance and liability? Major Mark J. Connor

value estimate is \$2 million, and (3) the salvage value is \$500,000. Furthermore, because management does not believe that a prospective buyer can be found it decides not to seek disposal authority. The entity's comptroller advises management that to assess whether or not a potential impairment exists a value-in-use estimate would be appropriate to use because it is higher than the net realizable value estimate. A risk-free discount rate of 3 percent is used.

Evaluation of potential estimated impairment loss

In this case the entity should (1) use the undiscounted cash flows to calculate recoverability and (2) present value (i.e., discount) the undiscounted cash flows to calculate the value-in-use estimate. In so doing, a potential estimated impairment loss is realized. Calculations follow:

Calculate cash flows:			
	Undiscounted	PV Factor	Discounted
Required modifications (outflow)	(\$500,000)	1.00	(\$500,000)
Undiscounted cash in-flows from future rental lease payments (25 x \$35K)	\$875,000	17.41315	\$609,460
Undiscounted cash in-flows from disposal of assets)	\$500,000	0.47761	\$238,805
Total - cash flows (b)	\$875,000		\$348,265

Calculate Recoverability: (b minus a)	
Recoverability: (b minus a)	Facility
Total - undiscounted cash flows (b)	\$875,000
Assets' net book values at 12/31/X1 (a)	<u>22,500,000</u>
Recoverability (b minus a)	(\$21,625,000)
Is net book value recoverable?	No
Is asset subject to potential impairment?	Yes

Calculate potential estimated impairment loss:	
Potential impairment:	Facility
Higher of NRV or Value-in-Use:	
NRV = \$2,000,000 (given)	
Value-in-Use = \$348,265 (discounted Cash Flows)	
Use the higher - Net Realizable Value	\$2,000,000
Less: Assets' net book value at 12/31/X1	<u>\$22,500,000</u>
Excess of net book value over recoverable value (in use)	\$20,500,000
Potential estimated impairment loss	\$20,500,000

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the facility is \$20,500,000.

Affected by	None.

Summary

This Statement provides a second one-year deferral of the transition of the statement presenting long-term fiscal projections for the U.S. government and related disclosures from required supplementary information (RSI) to basic information. Basic information is the information that is deemed essential for the financial statements and notes to be presented in conformity with generally accepted accounting principles (GAAP). RSI is information that a body that establishes GAAP requires to accompany basic information. While both categories of information are required, the auditor subjects the two categories of information to different procedures and complies with different reporting requirements under generally accepted government auditing standards (GAGAS).

This second deferral permits:

- the audit community to complete its consideration of the need for revised guidance, and
- the preparer time to plan for the audit.

During the deferral period, the consolidated financial report of the U. S. government will continue to report as RSI the information necessary for the reader to assess whether future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due. Deferral of the transition to basic information provides an additional year for the American Institute of CPAs (AICPA) to develop guidance for audit reports on long-term fiscal projections.

Introduction

Purpose

1. This Statement amends the effective date of the phased implementation first established in Statement of Federal Financial Accounting Standards (SFFAS) 36, *Comprehensive Long-Term Projections for the U.S. Government* and later amended by SFFAS 45, *Deferral of the Transition to Basic Information for Long-Term Projections*. When fully implemented, SFFAS 36 requires a basic financial statement in the consolidated financial report of the U.S. Government (CFR), disclosures, and related required supplementary information (RSI). To allow a phased implementation, a three-year transition period was provided during which all information was RSI. The transition period was deferred one-year from the originally planned effective date of fiscal year (FY) 2013 to FY 2014.
2. SFFAS 36, as amended, requires information to be presented as follows in FY 2014:
 - a. The basic financial statement would present for all activities:
 - i. the present value of projected receipts and non-interest spending under current policy without change,
 - ii. the relationship of these amounts to projected Gross Domestic Product (GDP), and
 - iii. changes in the present value of projected receipts and non-interest spending from the prior year.
 - b. Disclosures would explain and illustrate:
 - i. the assumptions underlying the projections,
 - ii. factors influencing trends, and
 - iii. significant changes in the projections from period to period.
 - c. RSI would explain and illustrate the projected trends in:
 - i. the relationship between receipts and spending,
 - ii. deficits or surpluses,
 - iii. Treasury debt held by the public as a share of GDP,
 - iv. possible results using alternative scenarios, and

-
- v. the likely impact of delaying corrective action when a fiscal gap exists.
3. This Statement amends the transition period provided in SFFAS 36, as amended, to allow one additional year – FY 2014 – during which all of the above information would be reported as RSI.

Materiality

4. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Standards

Scope

5. This Statement applies to the consolidated financial report of the U.S. Government (CFR).
6. This Statement amends Statement of Federal Financial Accounting Standards (SFFAS) 36, *Comprehensive Long-Term Projections for the U.S. Government*, and SFFAS 45, *Deferral of the Transition to Basic Information for Long-Term Projections*, to defer full implementation of its requirements by one year.

Amendments

7. SFFAS 45 is rescinded.
8. Par. 45 of SFFAS 36 is replaced by the following:
- (45) The following phase-in of reporting requirements as basic information provides for full implementation for reporting periods beginning after September 30, 2014.
 - a. These standards are effective for periods beginning after September 30, 2009.
 - b. Information should be reported as RSI for the first five years of implementation (fiscal years 2010, 2011, 2012, 2013, and 2014).

-
- c. Beginning in fiscal year 2015, the required information should be presented as specified in paragraphs 12 - 42.
 - d. Earlier implementation is encouraged.
-

Effective Date

9. The requirements of this Statement are effective upon issuance.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

- A1. Inclusion of audited long-term fiscal projections in U. S. federal government financial reports began in fiscal year 2006 with the statement of social insurance. A number of individual programs provide a statement of social insurance including Social Security and Medicare. In 2009, the Board issued SFFAS 36 and broadened requirements for long-term fiscal projections beyond these discrete social insurance programs. SFFAS 36 requires comprehensive projections for all government receipts and expenditures and the OMB prepares these projections.
- A2. The Board recognized the uncertainty inherent in making the policy, economic, and demographic assumptions necessary for comprehensive projections. The standards, therefore, provide for the exercise of judgment in selecting assumptions and require information to aid the reader in understanding and considering uncertainty and alternative outcomes. The audit community has been considering the need to revise the audit guidance, including initial guidance developed for the statement of social insurance, to address such comprehensive projections.
- A3. In 2012, the American Institute of CPAs (AICPA) Auditing Standards Board (ASB) organized the Prospective Information Task Force to consider the auditor's responsibility for prospective financial information. The Board provided a one-year deferral to allow time for the task force to develop guidance. The task force has been considering guidance for auditors and appropriate audit report language regarding the statement of long-term projections, the statement of social insurance, and the statement of changes in social insurance amounts. Final guidance is expected to be issued in 2014 or early 2015.

Additional time will be needed for the preparer and the auditor to plan for the audit based upon the final guidance.

- A4. Therefore, the Board proposed an additional one-year deferral of the transition of long-term fiscal projections from RSI to basic information is warranted. The Board released an exposure draft (ED), entitled *Deferral of Transition to Basic Information for Long-Term Projections: Amending SFFASs 36 and 45*, on April 30, 2014, with comments requested by June 2, 2014.

Responses to the Proposal

- A5. The Board received 12 responses to the exposure draft. Of these responses, five were from non-federal organizations or individuals, five from federal chief financial officer organizations, and two from federal offices of inspectors general. One respondent indicated the organization had no comment on the proposal. Three non-federal respondents objected to the proposal and the remaining respondents supported the proposal.
- A6. The Board considered responses to the exposure draft at its June 25, 2014, public meeting. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' views is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised.
- A7. Respondents opposed to deferring the transition to basic information noted the importance of the information to citizens as well as the time already provided for development of audit guidance. The Board considered the importance of the information when developing the proposal. In making its decision, the Board weighed the need for appropriate audit guidance and for time to plan for an audit under that guidance against the effect of a one-year delay. Because the information has been and will continue to be provided as RSI, the Board decided to provide the deferral. Thus, even with the deferral, the information will continue to be available and subject to the existing auditing standards related to RSI (see Appendix B for more information about audit considerations).

Board Approval

- A8. This Statement was approved unanimously. Written ballots are available for public inspection at the FASAB's offices.

Appendix B: Audit Considerations regarding Basic Information and RSI

This summary table serves as an aid to the reader in understanding the implications of the proposed deferral. It is not complete as it does not present in detail the auditing standards established by the American Institute of CPAs.

	Basic Information	RSI
Is the information required to be in the federal financial report?	Yes	Yes
Source: FASAB, Statement of Federal Financial Accounting Concepts (SFFAC) 2, Entity and Display, par. 73C and AICPA Auditing Standards as Clarified (AU-C) 730.04		
Is the information deemed essential if the financial statements are to "present fairly" in conformity with GAAP?	Yes	No
Source: FASAB SFFAC 2, par. 73B and 73C, and AICPA AU-C 730.04		

	Basic Information	RSI
What are the objectives of the auditor regarding basic information and RSI?	<p>The purpose of an audit is to provide financial statement users with an opinion by the auditor on whether the financial statements are presented fairly, in all material respects, in accordance with an applicable financial reporting framework, which enhances the degree of confidence that intended users can place in the financial statements.</p> <p>...As the basis for the auditor's opinion, GAAS require the auditor to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error. Reasonable assurance is a high, but not absolute, level of assurance. It is obtained when the auditor has obtained sufficient appropriate audit evidence to reduce audit risk (that is, the risk that the auditor expresses an inappropriate opinion when the financial statements are materially misstated) to an acceptably low level. Reasonable assurance is not an absolute level of assurance because there are inherent limitations of an audit that result in most of the audit evidence, on which the auditor draws conclusions and bases the auditor's opinion, being persuasive rather than conclusive.</p> <p>(AICPA, AU-C 200 .04 and 200.06)</p>	<p>The objectives of the auditor when a designated accounting standard setter requires information to accompany an entity's basic financial statements are to perform specified procedures in order to</p> <ol style="list-style-type: none"> describe, in the auditor's report, whether required supplementary information is presented and communicate therein when some or all of the required supplementary information has not been presented in accordance with guidelines established by a designated accounting standard setter or when the auditor has identified material modifications that should be made to the required supplementary information for it to be in accordance with guidelines established by the designated accounting standard setter. <p>(AICPA, AU-C 730.03)</p>
What audit fieldwork is required?	Audit procedures in accordance with applicable auditing standards and requirements. ^a	Limited procedures pursuant to AU-C 730.05-.06.

^a The phrase "applicable auditing standards and requirements" is used to refer to auditing standards generally accepted in the United States of America; the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States; and Office of Management and Budget (OMB) Bulletin No. 07-04, *Audit Requirements for Federal Financial Statements*, as amended.

	Basic Information	RSI
What is to be provided in the auditor's report?	When expressing an unmodified opinion on financial statements, the auditor's opinion should state that the financial statements present fairly, in all material respects, the financial position of the entity as of the balance sheet date and the results of its operations and its cash flows for the period then ended, in accordance with the applicable financial reporting framework. Also, the auditor's opinion should identify the applicable financial reporting framework and its origin. (AICPA AU-C Section 700.35 and .36)	Statement that the auditor has applied certain limited procedures and a statement that the auditor does not express an opinion or provide assurance on the information. (AICPA, AU-C 730-.08-.09)

	Basic Information	RSI
What audit report mention is required if the information is missing or not prepared in conformity with guidelines?	<p>Include a Basis for Modification Paragraph in the Report:</p> <p>If there is a material misstatement of the financial statements that relates to specific amounts in the financial statements (including quantitative disclosures), the auditor should include in the basis for modification paragraph a description and quantification of the financial effects of the misstatement, unless impracticable. If it is not practicable to quantify the financial effects, the auditor should so state in the basis for modification paragraph. (AICPA AU-C 705.18)</p> <p>If there is a material misstatement of the financial statements that relates to narrative disclosures, the auditor should include in the basis for modification paragraph an explanation of how the disclosures are misstated. (AICPA AU-C 705.19)</p> <p>If there is a material misstatement of the financial statements that relates to the omission of information required to be presented or disclosed, the auditor should describe in the basis for modification paragraph the nature of the omitted information; and include the omitted information, provided that it is practicable to do so and the auditor has obtained sufficient appropriate audit evidence about the omitted information. (AICPA AU-C 705.20)</p> <p>Modify the Auditor's Opinion:</p> <p>A qualified opinion states that except for the effects of the matter(s) described in the basis for qualified opinion paragraph, the financial statements are presented fairly, in all</p>	<p>Include a statement that management has omitted the information and the information is required and is an essential part of financial reporting. Also, the auditor would state that the opinion on the basic financial statements is not affected by the missing information. (AICPA AU-C 730.08e)</p> <p>In addition, if the measurement or presentation of the information departs materially from the prescribed guidelines, the auditor would state that although the opinion on the basic financial statements is not affected, material departures from the prescribed guidelines exist and the auditor would describe the departures. (AICPA AU-C 730.08f)</p>

Basic Information	RSI
material respects, in accordance with the applicable financial reporting framework. (AICPA AU-C 705.24)	
An adverse opinion states that the financial statements are not presented fairly in accordance with the applicable financial reporting framework. (AICPA AU-C 705.25)

Affected by	None.

Summary

This Statement establishes principles to include organizations for which elected officials are accountable in general purpose federal financial reports (GPFFRs). The principles guide financial reporting to recognize the complex diverse organizations possessing varying legal designations (for example, government agencies, not-for-profit organizations, corporations) that are used to address public policy challenges. The principles herein are not intended to establish whether an organization is or should be considered a federal agency for legal or political purposes. Rather, the principles guide preparers of financial statements at the government-wide and component reporting entity levels in determining what organizations should be included in the reporting entity's GPFFR for financial accountability purposes.

The government-wide GPFFR should include all organizations (1) budgeted for by elected officials of the federal government, (2) owned by the federal government, or (3) controlled by the federal government with risk of loss or expectation of benefits. In addition, this Statement establishes that an organization be included in the government-wide GPFFR if it would be misleading to exclude it even though it does not meet one of the three inclusion principles. When any of these conditions exists, information regarding the organization is necessary to provide accountability.

This Statement provides for determining the most appropriate means—consolidated financial statements or disclosures—to include information about these organizations in GPFFRs. Determining the most appropriate means requires an assessment of the degree to which the following characteristics are met: the organization is financed by taxes or other non-exchange revenue, is governed by the Congress and/or the President, imposes or may impose risks and rewards on the federal government, and/or provides goods and services on a non-market basis. Note, however, not all characteristics are required to be met to the same degree; classification is based on the assessment as a whole.

Generally, consolidated financial statements presenting the financial position and results of operations are appropriate for those organizations that are to a large degree financed by taxes and other non-exchange revenue, governed by elected officials, imposing risks and rewards on the federal government, and providing goods and services on a non-market basis. Consolidated financial statements present the financial information as if the organizations were a single economic entity. Such a presentation is needed to show—in

the aggregate—the net cost financed by taxes and other non-exchange revenue, the assets available for use, and the liabilities to be settled in the future. Organizations to be consolidated in the consolidated financial statements within the GPFFR are referred to as “consolidation entities.” Consolidation entities should apply Statement of Federal Financial Accounting Standards 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.

Some organizations that meet the principles for inclusion are to a large degree insulated from political influence and not intended to be funded primarily by taxes and other non-exchange revenue. Presenting information about these discrete organizations in consolidated financial statements would obscure the operating results and financial position of the reporting entity. Instead, information about these types of discrete organizations should be disclosed in notes to the consolidated financial statements of reporting entities applying federal financial accounting standards. The disclosures should reveal the nature of the relationship to the reporting entity, relevant activity during the reporting period, and the reporting entity’s future exposures to risks and rewards resulting from the relationship. Organizations to be disclosed in the GPFFR are referred to as “disclosure entities.” While the hierarchy of generally accepted accounting principles (GAAP) established for federal reporting entities may not necessarily apply to disclosure entities; information about such organizations is still needed for accountability purposes and to meet federal financial reporting objectives.

This Statement establishes that each component reporting entity’s GPFFR include all organizations for which it is accountable. This includes all consolidation entities and disclosure entities administratively assigned to it. The GPFFR for the government-wide reporting entity would be the consolidation of component reporting entity GPFFRs including information regarding disclosure entities.

In addition to the relationships that lead to organizations being included in the GPFFR based on the principles described above, the federal government may have significant relationships with other parties. This Statement requires disclosures if one party to an established relationship has the ability to exercise significant influence over the other party in making policy decisions, and the relationship is of such significance that it would be misleading to exclude information about it. The parties engaged in these relationships are “related parties.” With respect to related parties, the disclosures would provide information about the nature of the government’s relationship with the related party and other information to aid in understanding the relationship, including exposures to risk of loss or potential gain as a result of the relationship.

This Statement is effective for periods beginning after September 30, 2017. Earlier implementation is not permitted.

Introduction

Purpose

1. The federal government and its relationships with organizations have become increasingly complex. Notwithstanding these complexities, **general purpose federal financial reports**¹ (GPFFR) for the government-wide reporting entity should be broad enough to reflect the Congress and/or the President's accountability for those organizations. In addition, **component reporting entity** GPFFRs should allow the Congress and /or the President to hold management accountable. Although Statement of Federal Financial Accounting Concepts 2, *Entity and Display*, addresses identifying **reporting entities** and criteria for including components in a reporting entity, questions have continued in this area indicating the need for standards.² Standards that can be used to identify organizations to include in the GPFFR of the government-wide reporting entity and each component reporting entity are important to meet federal financial reporting objectives.
2. This Statement guides preparers of GPFFRs in determining what organizations to report upon, whether such organizations are considered "consolidation entities" or "disclosure entities"³ and what information should be presented. This guidance, together with existing guidance, will ensure that users of GPFFRs are provided with comprehensive financial information about federal reporting entities and their relationships so that federal financial reporting objectives⁴ are met. This statement requires reporting entities to disclose certain information about disclosure entities administratively assigned to them. It does not require new **disclosures** regarding consolidation entities administratively assigned to reporting entities. Any existing required disclosures for the consolidated financial statements of the reporting entity, which include the consolidation entities, would continue to apply. While not specifying the inclusion of classification of the components of the central banking system,

¹ Terms defined in the Glossary are shown in **bold-face** the first time they appear.

² Statement of Federal Financial Accounting Concepts 2 is considered Other Accounting Literature. See Statement of Federal Financial Accounting Standards 34, *The Hierarchy of Generally Accepted Accounting Principles (GAAP), Including the Application of Standards Issued by the Financial Accounting Standards Board*, for more information regarding the hierarchy.

³ "Consolidation entities" and "disclosure entities" are terms used to distinguish between entities based on the degrees to which the entity is (1) financed by taxes or other non-exchange revenue, (2) governed by the Congress and/ or the President, (3) imposing or may impose risks and rewards to the federal government and (4) providing goods and services on a market or non-market basis. See paragraphs 38 - 55 for more information.

⁴ Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*.

this Statement does establish certain minimum disclosures regarding the central banking system.

3. This Statement also guides preparers of GPFFRs in identifying **related parties** and in determining what information to provide about related party relationships of such significance that it would be misleading to exclude information. There are disclosures required regarding the nature of the relationship and financial-related exposures to risk of loss or potential gain resulting from relationships with such related parties.
4. The guidance recognizes that an organization's legal form may not reflect the substance of the relationship between the federal government and the organization. As such, the legal form or designation of an organization does not always determine whether it should be included in the government-wide GPFFR. Even in cases where legislation indicates an organization is "not an agency or instrumentality" of the federal government, the organization should be assessed against the guidance contained in this Statement to determine whether it should be included in the reporting entity's GPFFR. Inclusion results from a need for accountability given the nature of the relationship between the federal government and the organization but inclusion does not change the legal form of the organization.

Materiality

5. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Standards

Scope and Applicability

6. This Statement applies to federal reporting entities that prepare general purpose federal financial reports (GPFFRs) in conformance with generally accepted accounting principles (GAAP) as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards*

Board (FASB). Paragraph 66 of this Statement also applies to federal reporting entities that prepare GPFFRs in conformance with GAAP as provided by paragraphs 9 through 12 of SFFAS 34.⁵

7. This Statement does not require any entity to prepare and issue GPFFRs. The purpose of this Statement is to enable federal reporting entities preparing and issuing GPFFRs to determine:
 - a. whether SFFAS 34 is applicable to an organization,
 - b. what organizations should be included in the GPFFR of federal reporting entities applying SFFAS 34,
 - c. the manner in which information should be presented for organizations included in the GPFFR, and
 - d. what disclosures, if any, are needed regarding related parties.

Definitions

8. **Reporting Entity**—Reporting entities are organizations that issue a GPFFR because either there is a statutory or administrative requirement to prepare a GPFFR or they choose to prepare one. The term “reporting entity” may refer to either the government-wide reporting entity or a component reporting entity (see definitions below).

Statement of Federal Financial Accounting Concepts (SFFAC) 2 provides criteria for an entity to be a reporting entity.⁶ The criteria focus on whether:

- a. An entity’s management is responsible for controlling and deploying resources, producing outputs and outcomes, and executing the budget or a portion thereof (assuming that the entity is included in the budget), and is held accountable for the entity’s performance.

⁵ SFFAS 34, footnote 4, indicates Federal Accounting Standards Advisory Board (FASAB) GAAP would be the appropriate accounting standards for federal reporting entities within the executive, legislative, and judicial branches to adopt.

⁶ SFFAC 2, paragraphs 29-38, provides a discussion titled “Identifying the Reporting Entities for General Purpose Financial Reporting.”

-
- b. An entity's financial statements would provide a meaningful representation of operations and financial condition.
 - c. An entity's financial information could be used by interested parties to help them make resource allocation and other decisions and hold the entity accountable.
9. **Government-wide Reporting Entity**—The government-wide reporting entity's GPFFR includes all organizations for which the Congress and/or the President are accountable based on principles established in this Statement.
 10. **Component Reporting Entity**—"Component reporting entity" is used broadly to refer to a reporting entity within a larger reporting entity.⁷ Examples of component reporting entities include organizations such as executive departments, independent agencies, government corporations, legislative agencies, and federal courts. Component reporting entities would also include sub-components (those components included in the GPFFR of a larger component reporting entity) that may themselves prepare GPFFRs. One example is a bureau that is within a larger department that prepares its own standalone GPFFR.
 11. **Control with risk of loss or expectation of benefit**—"Control with risk of loss or expectation of benefit" is the power to impose will on and/or govern the financial and/or operating policies of another organization with the potential to be obligated to provide financial support or assume financial obligations or to obtain financial resources or non-financial benefits.⁸ See paragraphs 26 - 35 for further discussion of control.
 12. **Related Parties**—Organizations are considered to be related parties in the GPFFR if the existing relationship⁹ or one party to the existing relationship has the ability to exercise significant influence over the other party's policy decisions.

Organizational Approach to Defining Boundaries

13. The federal government is unique because its constitutionally established powers, motivations, and functions are different from those of all other organizations. It is an extremely complex organization responsible for the common defense and general welfare of

⁷ The larger reporting entity could be the government-wide reporting entity or another component reporting entity.

⁸ For example, a non-financial benefit would be one in which the federal government benefits from a service being provided to it or on its behalf.

⁹ Relationship, as used in this context, refers to material transactions or events involving both parties.

the nation. Although there are various perspectives¹⁰ for viewing the federal government, an organizational approach was established in SFFAC 2¹¹ as the most appropriate perspective for understanding the composition of the federal government. SFFAC 2 established that GPFFRs should include the aggregation of organizations for which the federal government is financially accountable as well as other organizations for which the nature and significance of their relationship with the government are such that their exclusion would cause the federal government's financial statements to be misleading or incomplete.

14. Accountability demands comprehensive reporting. To provide comprehensive reporting, the federal government must report on organizations that serve varied purposes and have complex governance structures and finances. In some cases, disclosing financial and other information in the notes about an organization rather than consolidating financial and other information about all organizations may better meet federal financial reporting objectives.
15. This Statement first establishes the principles for identifying organizations to include in the government-wide GPFFR (see Principles for Inclusion in the Government-wide GPFFR beginning with paragraph 20) and then distinguishes between consolidation entities and disclosure entities (see Reporting on Organizations-Consolidation Entities or Disclosure Entities beginning with paragraph 38). In applying these principles and meeting the reporting requirements, "organization" refers to the organization in its entirety including all funding sources (for example, appropriations or donations). The term "organization" is used broadly and may include, among others, departments, agencies, bureaus, divisions, commissions, corporations, and components.
16. This Statement also establishes that component reporting entities' GPFFRs must include all consolidation entities and disclosure entities for which they are accountable so that both the component reporting entity and government-wide GPFFRs are complete (see Identifying Organizations for which Component Reporting Entities Are Accountable beginning with paragraph 56).
17. This Statement provides guidance for how to report on consolidation entities and disclosure entities (see GPFFR Consolidation and Disclosure beginning with paragraph 66).
18. This Statement establishes minimum disclosure requirements regarding the central banking system (see paragraph 79).

¹⁰ SFFAC 2, paragraphs 13-28, discusses the organizational, budget and program perspectives of the federal government, as well as the intertwining of the perspectives.

¹¹ SFFAC 2, paragraphs 29-38.

-
19. Lastly, this Statement provides for disclosure of related party relationships of such significance that it would be misleading to exclude information about them (see Related Parties beginning with paragraph 80).
-

Principles for Inclusion in the Government-wide GPFFR

20. This Statement provides three principles for determining which organizations should be included¹² in the government-wide GPFFR (see paragraph 21-35). This Statement also provides an additional principle requiring inclusion of organizations if excluding them would be misleading (see paragraph 36-37). The three principles are to be applied without considering whether the relationship is temporary or permanent. However, whether the relationship is temporary or permanent would influence the likelihood that the entity exhibits the characteristics of a consolidation entity or of a disclosure entity.
21. An organization meeting any one of the three principles below is included in the government-wide GPFFR:
- a. In the Budget
 - b. Majority Ownership Interest
 - c. Control with Risk of Loss or Expectation of Benefit

In the Budget

22. An organization with an account or accounts listed in the *Budget of the United States Government: Analytical Perspectives—Supplemental Materials* schedule that provides budget account level information¹³ should be included in the government-wide GPFFR unless it is a

¹² “Included” means the information is either consolidated or disclosed.

¹³ The Budget presents information in various forms for different purposes. Only the *Budget of the United States Government: Analytical Perspectives—Supplemental Materials* schedule that provides budget account level information should be used for determining whether information about an entity should be included in the government-wide GPFFR. In the fiscal year 2015 Budget of the United States Government (the Budget), the schedule was entitled “Federal Budget by Agency and Account.”

non-federal organization receiving federal financial assistance.¹⁴ An organization listed in the budget is a non-federal organization receiving federal financial assistance if it is:

- a. a state, local or territorial government, or component thereof, or
 - b. a not-for-profit organization.
23. Notwithstanding the above provision regarding non-federal organizations listed in the budget, any entity meeting either of the next two principles (Majority Ownership Interest and Control with Risk of Loss or Expectation of Benefit) should be included in the government-wide GPFFR.

Majority Ownership Interest

24. The federal government (directly or through its components) may have an ownership interest¹⁵ in an organization. An ownership interest is a legal claim on the net residual assets of an organization such as holding shares or other formal equity instruments. The holding of an ownership interest usually but not always entitles the holder to an interest in voting rights.
25. Majority ownership interest exists with over 50 percent of the voting rights or net residual assets¹⁶ of an organization. When the federal government (directly or through its components) holds a majority ownership interest in an organization, it should be included as either a consolidation entity or a disclosure entity in the government-wide GPFFR.¹⁷

¹⁴ This Statement adopts the definition of “federal financial assistance” established in the Single Audit Act Amendments of 1996. However, an organization need not be subject to the requirements of the Single Audit Act in order to qualify as a non-federal organization receiving federal financial assistance. As defined by the Single Audit Act Amendments of 1996, federal financial assistance is assistance that non-federal organizations receive or administer in the form of grants, loans, loan guarantees, property, cooperative agreements, interest subsidies, insurance, food commodities, direct appropriations, or other assistance. For the purposes of these standards, federally-authorized support fees and other charges would be considered other assistance even if legislation granting authority to collect them indicates that the fees or other charges are not considered public monies of the United States.

¹⁵ “Ownership interest” is the possession of substantially all of the benefits and risks incident to ownership. *FASAB Handbook as of June 30, 2014--Glossary*.

¹⁶ For example, the federal government may hold more equity in preferred stock than all other stockholders but the preferred stock may be non-voting.

¹⁷ Ownership interests 50% or less should be accounted for in accordance with the appropriate accounting standards per the GAAP hierarchy. However, the organization should still be assessed against the control inclusion principle and the misleading to exclude principle.

Control with Risk of Loss or Expectation of Benefit

26. An organization that is controlled by the federal government with risk of loss or expectation of benefit should be included as either a consolidation entity or disclosure entity in the government-wide GPFFR. For these purposes, control with risk of loss or expectation of benefit is defined as follows:

Control with risk of loss or expectation of benefit is the power to impose will on and/or govern the financial and/or operating policies of another organization with the potential to be obligated to provide financial support or assume financial obligations or obtain financial resources or non-financial benefits.¹⁸ Both the power and either the risk of loss or expectation of benefits aspects of the definition should be met to justify inclusion of an organization. Hereafter, control with risk of loss or expectation of benefit is referred to as “control.”

27. Control refers to the ability to control, whether or not that ability is actively exercised, and should be assessed at the reporting date regardless of the federal government’s ability to change it in the future. In determining whether control exists, it is necessary to determine the substance of the relationship between the federal government and the organization as it may not be completely reflected by the legal form of the relationship.
28. Control does not necessarily mean the federal government has responsibility for the management of the day-to-day operations of an organization. Rather, it is the federal government’s authority to determine or influence the policies governing those activities that indicates control.
29. Determining whether control exists requires the application of professional judgment. The federal government achieves its objectives through a wide range of organizations which individually will fall on a continuum. At one end of the continuum, it is clear that an organization does not have the power to act independently and is controlled by the federal government—such as an executive department. At the other end, the organization has the power to act independently and, while the federal government may have a level of influence, it is clear that the federal government does not have control—such as a state or foreign government.

¹⁸ For example, a non-financial benefit would arise when the federal government receives a service or a service is provided to others on its behalf.

Indicators of Control

30. As discussed in the following paragraphs, there are indicators that should be considered in determining whether the federal government controls an organization. As noted above, consideration needs to be given to the nature of the relationship between the federal government and the organization and judgment applied to determine whether control exists.
31. Certain individual indicators provide persuasive evidence that control exists. Because each indicator provides strong evidence of control, meeting any one indicator would generally mean control is present. These indicators are when the federal government has the unilateral authority to:
- a. establish or amend the fundamental purpose and mission of the organization,¹⁹ which may include authorizing the organization to exercise sovereign powers of the federal government and requiring the organization to carry out federal missions and objectives;
 - b. appoint or remove a majority of the governing board members;
 - c. direct the governing body regarding the establishment and subsequent revision of financial and operating policies of the organization; or
 - d. dissolve the organization thereby having access to the assets and responsibility for the obligations.
32. Other indicators provide evidence that control may exist, but must be considered in the aggregate and often require the application of professional judgment in assessing. These indicators are when the federal government has the ability to or is obligated to:
- a. provide significant input into the appointment of members of the governing body of the organization or being involved in the appointment or removal of a significant number of members;
 - b. direct the ongoing use of the organization's assets;

¹⁹ Congressionally chartered not-for-profit organizations identified under United States Code (U.S.C.) Title 36, Subtitle II and III, should not be considered controlled solely because amendments to their federal charter must be enacted through legislation. Instead, consideration of control over such organizations should be based on paragraphs 31 and 32.

-
- c. direct investment decisions including the liquidation of investments;
 - d. appoint or remove key executives or personnel;
 - e. approve the budgets or business plans for the organization;
 - f. require audits;
 - g. veto, overrule, or modify governing board decisions or otherwise significantly influence normal operations;
 - h. finance the deficits of, provide financial support to, or settle liabilities of the organization;
 - i. direct the organization to work with the government to provide services to taxpayers which may include determining the outcome or disposition of matters affecting the recipients of services;
 - j. establish, rescind, or amend the organization's governance framework;
 - k. establish limits or restrictions on borrowing and investments of the organization; or
 - l. restrict the capacity to generate revenue of the organization, especially the sources of revenue.

Situations Where Control Does Not Exist

- 33. Because of the federal government's broad powers and economic influence, control should not be inferred from either:
 - a. authority to exercise regulatory powers over an organization; or
 - b. economic dependency of the organization on the federal government.
- 34. The federal government has the power to regulate many organizations by use of its sovereign and legislative powers. For example, the federal government has the power to regulate the behavior of organizations by imposing conditions or sanctions on their operations. However, the governing bodies of the regulated organizations make decisions within the regulatory framework. Regulatory powers do not constitute control for purposes of this Statement because the federal government's interest in these organizations extends only to the regulatory aspects of the operations.

-
35. Certain organizations may be economically dependent on the federal government but ultimately retain discretion as to whether to accept funding or do business with the federal government. For example, many not-for-profit organizations rely on federal government funding but that does not mean they are controlled by the federal government. Although the federal government may be able to influence organizations dependent on federal funding or business through purchasing power, the federal government typically does not govern their financial and operating policies.

Misleading to Exclude

36. There may be instances when an organization does not meet any one of the three inclusion principles in paragraphs 22 through 35 yet the government-wide GPFFR would be misleading or incomplete if the organization were excluded.²⁰
37. Organizations should be included in the government-wide GPFFR if it would be misleading to exclude them.

Reporting on Organizations—Consolidation Entities or Disclosure Entities

38. The principles above should be used to assess what organizations to include in the GPFFR. Next, a distinction should be made between “consolidation entities” and “disclosure entities” as that distinction determines how the organizations will be reported. This distinction, which should be consistent at the government-wide and component reporting entity levels, is based on an assessment of the degree to which the following characteristics are met: the organization is financed by taxes and other non-exchange revenue, is governed by the Congress and/or the President, imposes or may impose risks and rewards to the federal government, and/or provides goods and services on a non-market basis.²¹ Note, however, not all characteristics are required to be met or to be met to the same degree; classification is based on the assessment as a whole.

Consolidation Entities

39. The organizations that should be consolidated in the financial statements in the GPFFR are referred to as “consolidation entities.” Generally, an organization is considered a consolidation entity if, based on an assessment²² of the following characteristics as a whole, the organization:

²⁰ Although such situations would be rare, this Statement provides for situations that may arise.

²¹ Goods and services are provided on a non-market basis when they are provided free of charge or at charges that bear little relationship to the cost of providing such goods or services.

²² As discussed in paragraph 38, not all characteristics are required to be met or to be met to the same degree; classification is based on the assessment as a whole.

-
- a. is financed through taxes and other non-exchange revenues.
 - b. is governed by the Congress and/or the President.
 - c. imposes or may impose risks and rewards to the federal government.
 - d. provides goods and services on a non-market basis.
- 40. While greater judgment will be needed to classify other organizations, organizations listed in the budget, except for non-federal organizations receiving federal assistance (see paragraph 22), generally would qualify as consolidation entities.
 - 41. For consolidation entities, the governance structure is vertically integrated, such that the chain of command and manner of decision-making leads directly to elected officials. Vertical integration may include the establishment of organizational authorities, development and/or approval of budgets, and the appointment of organizational leaders by elected officials.
 - 42. Entities for which the relationship with the federal government is not expected to be permanent, such as receiverships, conservatorships, and other intervention actions, would be less likely to meet these characteristics as a whole. Such entities generally would not be classified as consolidation entities.

Disclosure entities

- 43. The federal government has relationships with organizations afforded a greater degree of autonomy than consolidation entities. Some organizations may exercise powers that are reserved to the federal government as sovereign. Other organizations may not themselves carry out missions of the federal government but, instead, are owned or controlled by the federal government as a result of (a) regulatory actions (such as organizations in **receivership or conservatorship**) or (b) other federal government intervention actions. Under such regulatory or other intervention actions, the relationship with the federal government is not expected to be permanent and such entities generally would be classified as disclosure entities when considering the characteristics taken as a whole. To avoid obscuring information about these more autonomous organizations while still providing accountability, such organizations are to be disclosed rather than consolidated in GPFFRs. Hereafter, these organizations are referred to as “disclosure entities.”
- 44. Disclosure entities may maintain a separate legal identity, have a governance structure that vests most decision-making authorities in a governing body to insulate the organization from political influence, and/or have relative financial independence.

-
45. Disclosure entities may receive limited or no funding from general tax revenues. The Congress and/or the President have less direct involvement in decision-making (governance) than in consolidation entities. Limited risks and rewards fall to the federal government. Disclosure entities may provide the same or similar goods and services that consolidation entities do, but are more likely to provide them on a market basis.²³
 46. Disclosure entities may include but are not limited to: quasi-governmental and/or financially independent entities, organizations in receiverships and conservatorships, and organizations owned or controlled through federal government intervention actions. As noted above, in some cases, the relationship with the federal government is not expected to be permanent. The following disclosure entity types, while not inclusive of all the types, are presented to assist in identifying organizations that are disclosure entities. The accompanying Appendix C—Illustrations offers non-authoritative hypothetical examples that may be useful in understanding the application of the standards.

Quasi-Governmental and/or Financially Independent Entities

47. Quasi-governmental and/or financially independent entities have relationships with the federal government that are not temporary. Such relationships may be considered long-term, or even permanent in some cases, when compared to other types of disclosure entities. Quasi-governmental and financially independent entities have different governance and financial arrangements. Their classification takes into consideration such factors as:
 - a. whether the governance of the entity is through officials appointed for terms aligning with the appointing official versus longer-term appointments or other governance structures intended to insulate the entity from political influence;
 - b. whether the entity is financed primarily through taxes and other non-exchange revenues versus limited or no such financing; and
 - c. whether the entity provides goods and services on a non-market basis versus provides goods and services on a market basis.
48. Governance differences typically lead to greater independence. Characteristics may include the following:

²³ Goods and services are provided on a market basis when prices are based on the prices charged in a competitive marketplace between willing buyers and sellers.

-
- a. Longer appointments of key executives or governing boards to allow these appointees a degree of independence from the Congress and/or the President
 - b. Delegated operational authority to provide a service or execute a program in a manner similar to private business enterprises
 - c. Private sector legal characteristics, such as not-for-profit status under the Internal Revenue Code
 - d. Exemption by statute from laws or regulations dealing with the federal budget, funds, personnel, ethics, acquisition, property, or works
 - e. Voluntary association with the federal government and shared purposes to implement government policies
49. Financial differences typically lead to greater fiscal autonomy. Characteristics may include the following:
- a. Primarily funded from a source other than appropriations
 - b. Delegated financial authority to provide a service or execute a program in a manner similar to private business enterprises
 - c. Principally engaged in selling goods and/or services to organizations outside of the federal government
 - d. Intended, in the normal course of its operations, to maintain its operations and meet its liabilities from revenues received from sources outside of the federal government
50. Not all entities of a given type will meet the factors above. These factors are provided to assist in identifying entities that are quasi-governmental and/or financially independent. Examples of the types of entities that could be considered quasi-governmental and/or financially independent entities are **Federally Funded Research and Development Centers**, museums, performing arts organizations, universities, and venture capital funds. Each entity should be assessed objectively since there are likely to be differences among the entities within these example types such that some should be classified as consolidation entities and others as disclosure entities.

Receiverships and Conservatorships

51. The federal government may take control or ownership of failed financial institutions, such as banks, with no goal to maintain control or ownership. Receiverships or conservatorships are established to liquidate failing financial institutions or to guide such institutions back to safe and sound conditions.²⁴ Entities controlled or owned through receiverships or conservatorships are generally disclosure entities.

Federal Government Intervention Actions Resulting in Control or Ownership

52. In exceptional circumstances such as economic instability or a national security crisis, the federal government may intervene in organizations not previously meeting the inclusion principles. Interventions arise because of the federal government's broad responsibility for the well-being of the country. Some, but not all, interventions establish ownership or control such that the organization then meets the inclusion principles. Although intervention actions are not expected to be permanent, they may not be subject to a defined time limit.
53. Typically federal government intervention actions are not routine activities. Strategic planning documents are unlikely to include objectives to routinely initiate such interventions or to permanently operate organizations acquired through interventions.
54. Examples of intervention actions resulting in control or ownership include:
- a. The federal government provides financial support and, in doing so, obtains control of an established organization but expects to relinquish or cede control.
 - b. The federal government acquires an ownership interest in an organization but expects to end its interest as soon as practicable.
55. These relationships with the federal government are not expected to be permanent and such entities generally would be classified as disclosure entities when considering the characteristics taken as a whole. Nonetheless, entities controlled or owned as a result of intervention actions at the fiscal year-end must be assessed to confirm the classification.

²⁴ For example, the Federal Deposit Insurance Corporation (FDIC) is an independent agency created by the Congress with the mission "to maintain stability and public confidence in the nation's financial system by: insuring deposits; examining and supervising financial institutions for safety and soundness and consumer protection; and, managing receiverships."

Identifying Organizations for Which Component Reporting Entities are Accountable

56. The government-wide reporting entity is the only federal reporting entity that is an independent economic entity²⁵ and the inclusion principles are expressed from the perspective of the federal government. However, GPFFRs for the government-wide reporting entity represent a consolidation of component reporting entity GPFFRs. Therefore, component reporting entities must identify and include in their GPFFRs all consolidation entities and disclosure entities for which they are accountable so that both the component reporting entity GPFFRs and government-wide GPFFR are complete.
57. A component reporting entity's GPFFR should include all organizations that would allow the users to hold the component reporting entity's management (such as appointed officials or other agency heads) accountable for implementation of public policy decisions. Inclusion would also reveal the risks inherent in component reporting entity operations, and thereby enhance accountability to the public. Each component reporting entity is accountable for all consolidation entities²⁶ and disclosure entities administratively assigned to it.
58. Administrative assignments to component reporting entities are typically made in laws and policy documents such as statutes, budget documents, regulations, or strategic plans. Administrative assignments can be identified by evaluating:²⁷
 - a. Scope of the Budget Process
 - b. Accountability Established Within a Component Reporting Entity
 - c. Misleading to Exclude and/or Misleading to Include

²⁵ SFFAC 2, paragraph 38.

²⁶ A consolidation entity comprises all consolidation entities administratively assigned to it and should present information about disclosure entities assigned to it.

²⁷ Component reporting entities should develop processes to ensure they identify and assess any organizations (1) within the scope of their budget process, (2) for which accountability is established within their component reporting entity, or (3) which are misleading to exclude. It is anticipated that central agencies will determine if there is a need for coordinated guidance to ensure government-wide consistency.

Scope of the Budget Process

59. Consolidation entities and disclosure entities subject to the budget approval and oversight process of the component reporting entity head should be included in the component reporting entity GPFFR. Each component reporting entity should include:
- a. all consolidation entities listed within its section of the *Budget of the United States Government: Analytical Perspectives--Supplemental Materials* schedule that provides budget account level information,²⁸ and
 - b. all disclosure entities included within its congressional budget justification.²⁹

Accountability Established Within a Component Reporting Entity

60. Consolidation entities and disclosure entities for which a component reporting entity has been assigned accountability responsibilities should be included in the GPFFR of that entity. Determining whether accountability was established or assigned to a component reporting entity requires the consideration of certain indicators and the application of professional judgment. Indicators³⁰ that accountability has been established in the component reporting entity include:
- a. Statutes or regulations establishing an organization state that it is assigned to or part of a larger federal organization.
 - b. An organization is included in the component reporting entity's published organization chart.

²⁸ The Budget presents information in various forms for different purposes. Only the *Budget of the United States Government: Analytical Perspectives—Supplemental Materials* schedule that provides budget account level information should be used for determining whether information about an entity should be included in the government-wide GPFFR. In the fiscal year 2015 Budget of the United States Government (the Budget), the schedule was entitled “*Federal Budget by Agency and Account*.”

²⁹ A congressional budget justification is a document submitted annually to Congress to justify an organization's budget request.

³⁰ These indicators provide evidence that accountability was established or assigned to a component reporting entity. Meeting any one would typically mean accountability was established.

-
- c. The component reporting entity acquires and/or monitors³¹ ownership interests in organizations where there are ongoing responsibilities³² such as:
- i. coordinating and/or conveying input on strategic plans,
 - ii. providing appropriated funds to the organization and receiving requests for funding in the current and/or future years,
 - iii. administering any federal grants or contracts awarded to the organization,
 - iv. monitoring activities and/or reporting on outcomes, or
 - v. monitoring the value of the ownership interest.
- d. A controlled organization³³ was established by statute or by action of the component reporting entity to support the mission of the component reporting entity, and a continuing relationship exists. Examples of continuing relationships include those in which the component reporting entity:
- i. approves bylaws including any amendments;
 - ii. is represented on the governing board (for example, as an ex-officio member);
 - iii. appoints members of the governing board;
 - iv. coordinates and/or conveys input on strategic plans;
 - v. monitors organizational performance;
 - vi. approves budgets, operating plans, or contracts with others;
 - vii. establishes and executes cooperative agreements with the organization;

³¹ Such responsibilities may be assigned to a program office.

³² These responsibilities are examples of actions or activities performed by the component reporting entity that are indicative of monitoring an ownership interest in an organization, which is an indicator of accountability.

³³ Where control exists at the government-wide level based on paragraphs 26-35.

-
- viii. administers federal grants to or contracts with the organization;
 - ix. testifies before Congress regarding organization performance and objectives; or
 - x. has significant financial transactions or balances that indicate ongoing managerial involvement.
61. If more than one component reporting entity is assigned responsibilities as described above, the following guidance applies:
- a. Disclosure entities should be included in the GPFFR of each component reporting entity assigned such responsibilities.
 - b. Consolidation entities should be administratively assigned to only one component reporting entity.³⁴ The component reporting entity assigned the largest share³⁵ of responsibilities described in paragraph 60 generally should include the consolidation entity.
62. If a disclosure entity has not been administratively assigned to a consolidation entity, the disclosure entity should be reported by a component reporting entity (a) assigned responsibility for transferring funds to or receiving funds from the disclosure entity or (b) with which its mission most closely aligns.

Misleading to Exclude and / or Misleading to Include

63. There may be instances where an organization is not administratively assigned to the component reporting entity based on the principles in paragraphs 59-62 yet the component reporting entity GPFFR would be misleading or incomplete if the organization were excluded. If so, such organizations should be included in the component reporting entity's GPFFR.³⁶
64. There may be instances where the principles in paragraphs 59-62 are met in form but not substance so that consolidation at the component reporting entity level would result in misleading presentation for the component reporting entity. While such conditions are

³⁴ Note that the component reporting entity to which a consolidation entity is administratively assigned may also be administratively assigned to a higher-level component reporting entity.

³⁵ Largest share as used here is based on the most significant administrative role.

³⁶ Although such situations would be rare, this Statement provides for situations that may arise.

expected to be rare, if it would be misleading to consolidate the organization in the component reporting entity GPFFR, the organization may be excluded so long as it is consolidated in another component reporting entity or directly in the government-wide reporting entity.

65. Determining whether it would be misleading to include a consolidation entity administratively assigned to a component reporting entity requires the application of professional judgment. Examples³⁷ of indicators that it may be misleading to include an organization are:
- a. The budget submission is combined prior to submission but is not jointly developed or executed, as indicated by:
 - i. the budget request not being directly approved by component reporting entity management, or
 - ii. the absence of significant involvement by component reporting entity management regarding budget execution, investments, or strategic planning.
 - b. The component reporting entity provides little or no direct oversight of the organization.
 - c. The organization's funding is separate from the component reporting entity's funding.
 - d. The consolidated cost information would be misleading.
 - e. The organization operates itself as a stand-alone organization (either since its inception or for a long history), has routinely prepared annual audited financial statements, and has submitted financial data directly to the Department of the Treasury for the government-wide GPFFR.

³⁷ The indicators listed in paragraph 65 a. – e. are examples and there may be other indicators not included on this list. Further, no specific number of indicators need be present to determine an organization would be misleading to include. This determination is based on the assessment as a whole after considering all facts and often requires professional judgment in making such decisions.

GPFFR Consolidation and Disclosure

Consolidation entities

66. Consolidation entities' financial statements should be consolidated for the government as a whole to facilitate an assessment of the financial position³⁸ of the federal government and the cost of operations financed by taxes and other non-exchange revenue. Component reporting entities should consolidate the financial information for all consolidation entities administratively assigned to them. Consolidation³⁹ aggregates the individual financial amounts of organizations that constitute a reporting entity and results in presentation of information for a single economic entity representing taxpayer-supported activities, resources, and obligations.
67. Consolidation entities as defined herein are considered federal reporting entities and should apply GAAP as defined in SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This Statement does not establish new disclosure requirements regarding consolidation entities but acknowledges existing standards require disclosures.
68. SFFAS 34 recognizes that some federal reporting entities prepare and publish financial reports pursuant to the accounting and reporting standards issued by the FASB. SFFAS 34 provides that GPFFRs prepared in conformity with accounting standards issued by the FASB also may be regarded as in conformity with GAAP. Consolidation entities (that is, the consolidated government-wide reporting entity or a consolidated component reporting entity) may consolidate component or sub-component reporting entity financial statements prepared in accordance with SFFAS 34 without conversion for any differences in accounting policies among the organizations.

Reporting on Disclosure entities

69. Maintaining a distinction between the finances of consolidation entities and disclosure entities will more effectively meet federal financial reporting objectives. Such a distinction

³⁸ The consolidated financial statements should include amounts and balances, consistent with applicable accounting standards, even if the amounts and balances arise from or are supported by different funding sources (for example, appropriations or donations).

³⁹ Consolidation is a method of accounting that combines the accounts of those entities line by line on a uniform basis of accounting and eliminates balances and transactions among the entities. For selected financial statements such as the statement of budgetary resources, a combined financial statement which does not eliminate balances and transactions among the entities is acceptable.

allows for separate presentation of financial information for organizations where there is a difference in purpose, governance structure, and financial relationships. Disclosing financial and other information in the notes about disclosure entities rather than consolidating financial and other information about all organizations included in a GPFFR may better meet federal financial reporting objectives. While the hierarchy of GAAP established for federal reporting entities may not necessarily apply to disclosure entities, information about such organizations is still needed for accountability purposes and to meet federal financial reporting objectives.

70. For those organizations classified as disclosure entities, the preparer should exercise judgment in determining the appropriate disclosures based on the factors and principles provided herein. Information regarding disclosure entities should be disclosed in accordance with Disclosure Requirements as detailed in paragraphs 72 to 75 below after considering the factors listed in paragraph 71.

Factors in Determining Disclosures

71. Materiality is an overarching consideration in financial reporting. Preparers should consider both qualitative and quantitative materiality in determining the information that should be presented regarding disclosure entities. Beyond materiality, the following factors⁴⁰ should be considered in making judgments about the extent of appropriate disclosures:
 - a. **Relevance to reporting objectives**—Significance of the disclosure entity's information to meeting the reporting objectives established in SFFAC 1, *Objectives of Federal Financial Reporting*, with regard to the reporting entity. In particular, this would include the significance of the information regarding results of operations and financial position to meeting the operating performance and stewardship reporting objectives.
 - b. **Nature and magnitude of the potential risks/exposures or benefits associated with the relationship**—Information is needed to provide an understanding of the potential operational or financial impact, including financial-related exposures to risk of loss and potential gain, to the consolidation entity resulting from the disclosure entity's operations.

⁴⁰ The factors are presented in a list for consideration in the aggregate; no individual weights should be assigned or interpreted.

-
- c. **Complexity of the relationship**—More complex relationships would involve additional detailed disclosures to ensure the relationship is understood by the readers.
 - d. **Extent to which the information interests, or may be expected to interest, a wide audience**—There may be a wide interest in the information due to the sensitivity of the relationship, materiality of the transactions, media attention, or other reasons. Interested parties may expect more extensive information regarding the disclosure entity or its relationship with the federal government.
 - e. **Extent to which there are no alternative sources of reliable information**—An objective of GPFFRs is to meet the needs of users who may have limited access to information or statements and lack the ability to demand the desired information.

Disclosure Requirements

- 72. In addition to the factors presented in paragraph 71 regarding the extent of disclosures, other qualitative and quantitative factors should be considered in determining whether information regarding a disclosure entity should be presented separately due to its significance or aggregated with the information regarding other disclosure entities. If information is aggregated, aggregation may be based on disclosure entity type, class, investment type, or a particular event deemed significant to the reporting entity.
- 73. Disclosures should be integrated so that concise, meaningful, and transparent information is provided. Integration is accomplished by providing a single comprehensive note regarding the disclosure entity or entities and related balances, or by incorporating references to relevant notes elsewhere in the GPFFR but relating to the disclosure entity or entities. For example, a reference may be made to a note regarding investments in the disclosure entity.
- 74. For each significant disclosure entity and aggregation of disclosure entities, information should be disclosed to meet the following objectives:⁴¹
 - a. **Relationship and Organization**: The nature of the federal government's relationship with the disclosure entity or entities.
 - b. **Relevant Activity**: Nature and magnitude of relevant activity during the period and balances at the end of the period.

⁴¹ The objectives are not listed in any order of preference.

-
- c. **Future exposures:** A description of financial and non-financial risks, potential benefits and, if possible, the amount of the federal government's exposure to gains and losses from the past or future operations of the disclosure entity or entities.

75. Examples of information that may meet the above objectives and provide the necessary understanding of the disclosure entity's relationship and organization, relevant activities, and future exposures specific to the federal government are provided below. The examples are provided to assist in determining the types of information that would meet the objectives in paragraph 74. No individual example is itself a required disclosure and the examples are not required in the aggregate. The examples are listed individually and should not be considered alternatives or substitutes for one another. The list of examples below is not exhaustive and additional items of information necessary to meet the objectives should be disclosed even if not specifically identified in the list below. Disclosures that meet the objectives in paragraph 74 should be provided. In determining what information is needed to meet the objectives in paragraph 74, the factors in paragraph 71, including the complexity, nature, and magnitude of the relationship, should be considered.

- a. The name and description of the disclosure entity,⁴² including information about how its mission relates to federal policy objectives, actions taken on behalf of the federal government, its organization, and any significant involvements with outside parties.
- b. The nature of the relationship between the federal government and the disclosure entity including relevant information regarding:
 - i. How any control or influence over the disclosure entity is exercised;
 - ii. Key terms of contractual agreements, statutes, or other legal authorities; and
 - iii. The percentage of ownership interest and/or voting rights.
- c. For intervention actions, the primary reasons for the intervention and a brief description of the federal government's plan relative to monitoring, operating and/or disposing of the disclosure entity and/or a statement that the intervention is not expected to be permanent.
- d. A description and summary of assets, liabilities, revenues, expenses, gains, and losses recognized in the financial statements of the reporting entity as a consequence

⁴² For simplicity, information is described in relation to a single disclosure entity. Nonetheless, the information may be presented for an aggregation of disclosure entities.

-
- of transactions with or interests in the disclosure entity and the basis for determining the amounts reported (or a reference to other disclosures where such information is provided).
- e. A discussion of the disclosure entity's key financial indicators and changes in key financial indicators.
 - f. Information regarding the availability of the disclosure entity's annual financial report and how it can be obtained.
 - g. In the event that contractual agreements, statutes, or other legal authorities obligate the reporting entity to provide financial support to the disclosure entity in the future, information regarding potential financial impacts (including those terms of the arrangements to provide financial support and liquidity, including events or circumstances that could expose the federal government to a loss).
 - h. The nature of, and changes in, the risks and benefits associated with the control of, or other involvement with, the organization during the period.
 - i. The amount that best represents the federal government's maximum exposure to gain or loss from its involvement with the disclosure entity, including how the maximum exposure to gain or loss is determined. (If this cannot be quantified, a narrative discussion could be offered.)
 - j. Other information that would provide an understanding of the potential financial impact, including financial-related exposures to risk of loss or potential gain to the reporting entity, resulting from the disclosure entity's operations including important existing, currently-known demands, risks, uncertainties, events, conditions, and trends—both favorable and unfavorable.
76. Any disclosure entity's financial information presented in the reporting entity's GPFFR should be based on accrual-basis standards provided in GAAP or an other comprehensive basis of accounting developed for its specific type of entity.⁴³ This includes GAAP for the relevant domain (FASAB, Governmental Accounting Standards Board, or FASB).

⁴³ Consolidation entities should apply the GAAP hierarchy established in SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.

-
77. When information is derived from the disclosure entity's financial report, it is preferable but not mandatory that the report be for the same reporting period as the government-wide reporting entity. If a disclosure entity's reporting period differs from the government-wide reporting entity's and it is not cost-beneficial to align the reporting periods, any financial information disclosed from the disclosure entity's financial report should be for a reporting period ending within the government-wide reporting entity's reporting period.
78. Significant changes in information occurring from the end of the disclosure entity's reporting period should be reported consistent with the requirements of SFFAS 39, *Subsequent Events: Codification of Accounting and Financial Reporting Standards Contained in the American Institute of CPAs Statements on Auditing Standards*.
-

Minimum Disclosures Regarding the Central Banking System⁴⁴

79. The following information regarding the central banking system should be disclosed⁴⁵ in the government-wide GPFFR:
- a. Description of the central banking system, including information about how its mission relates to federal policy objectives, actions taken on behalf of the federal government, its organization, and any significant involvements with outside parties.
 - b. The nature of the relationship between the federal government and the central banking system including relevant information regarding governance structure with particular emphasis on matters affecting its independence and insulation from political influence.
 - c. A discussion of the significance and magnitude of financial actions reported during the year by the central banking system to achieve monetary and fiscal policy objectives.

⁴⁴ Central banking system functions are currently carried out by the Federal Reserve System (FRS). The FRS comprises the Board of Governors, the Federal Open Market Committee, the regional Federal Reserve Banks, and the Bureau of Consumer Financial Protection. The Bureau was established in 2010 as an independent bureau within the FRS pursuant to the Dodd-Frank Wall Street Reform and Consumer Protection Act. The law provides that the Bureau's financial statements should not be consolidated with the financial statements of either the Board of Governors or the Federal Reserve System.

⁴⁵ Depending on the circumstances, some of the listed information may be disclosed due to other requirements. The resulting disclosures should be integrated so that concise, meaningful and transparent information is provided and information is not repetitive.

-
- d. A description and summary of assets, liabilities, revenues, expenses, gains, and losses recognized in the financial statements of the reporting entity as a consequence of transactions with or interests in the central banking system and the basis for determining the amounts reported (or a reference to other disclosures where such information is provided).
 - e. The amount that best represents the federal government's maximum exposure to gain or loss from its involvement with the central banking system, including how the maximum exposure to gain or loss is determined (If this cannot be quantified, a narrative discussion could be offered.).
 - f. Information regarding the availability of the central banking system annual financial reports and how they can be obtained.

Related Parties

80. In addition to organizations for which the Congress and/or the President are accountable,⁴⁶ the federal government may have relationships with other parties. Only relationships of such significance that it would be misleading to exclude information about such relationships warrant disclosure.⁴⁷ Guidance is provided below but judgment will also be required to identify relationships that warrant disclosure as related parties.
81. Related parties: Organizations are considered to be related parties in the GPFFR if the existing relationship⁴⁸ or one party to the existing relationship has the ability to exercise significant influence over the other party's policy decisions.
82. Significant influence (for the purpose of this Statement) is the power to participate in the policy decisions of an entity, but not control those policies. Significant influence may be exercised in several ways, sometimes by representation on the board of directors or equivalent governing body but also by, for example, participation in the policy-making process, interchange of managerial personnel, or dependence on technical information. Significant influence may be gained by a minority ownership interest, statute, or agreement.
83. Significant influence does not arise from regulatory actions or economic dependency alone. However, regulation or economic dependency, together with other factors, may give rise to significant influence and therefore a related party relationship. Judgment is required in assessing the impact of regulation and economic dependence on a relationship.
84. Although component reporting entities of the federal government may significantly influence each other, component reporting entities are subject to the overall control of the federal government and operate together to achieve the policies of the federal government and are not considered related parties. Therefore, component reporting entities need not be disclosed as related parties by other component reporting entities.
85. Related parties *generally* would include (see paragraph 86 for organizations *generally* not included) but are not limited to:

⁴⁶ Entities for which the Congress and/or the President are accountable are in the budget, majority owned, or controlled and would meet the inclusion principles and be reported as either a consolidation entity or disclosure entity and not be subject to related party reporting.

⁴⁷ Significance is assessed at the reporting entity and may differ among component reporting entities and the government-wide reporting entity.

⁴⁸ Relationship, as used in this context, refers to material transactions or events involving both parties.

-
- a. **Government sponsored enterprises** not meeting the inclusion principles
 - b. Organizations governed by representatives from each of the governments that created the organization, including the United States, wherein the federal government has agreed to ongoing or contingent financial support to accomplish shared objectives (for example, certain multi-lateral development banks)
86. In the context of this Statement, the following generally would not be considered related parties:⁴⁹
- a. Organizations meeting the inclusion principles
 - b. Organizations with which the federal government transacts a significant volume of business resulting in economic dependence such as government contractors, state and local governments, and not-for-profit organizations⁵⁰
 - c. Organizations owned or managed by full-time employees of the federal government or members of their immediate families
 - d. Full-time employees of the federal government
 - e. Foreign governments
 - f. Organizations created through treaties or trade agreements that define common goals and means for joint action where the U.S. role in governing and financing the organizations is not significant
 - g. Special interest groups⁵¹
87. Although paragraph 86 discusses the potential exclusion of certain organizations as related parties, other factors may create a need for related party disclosures for such organizations. The use of judgment will be necessary in identifying those factors consistent with the information needs described in paragraph 88.

⁴⁹ As described in paragraph 87 below, paragraphs 86a. – 86g. identify potential exclusions but judgment will be required to determine whether some pose risks that warrant disclosures.

⁵⁰ However, economic dependency, together with other factors, may give rise to significant influence and, therefore, a related party relationship.

⁵¹ Special interest groups refers broadly to organizations whose members share common concerns and try to influence government policies. Examples include but are not limited to labor unions, trade associations, religious organizations, membership organizations, and lobbying organizations.

-
88. Certain information regarding significant related party relationships may enable users to better understand the financial statements of the reporting entity because:
- a. related party relationships might expose the federal government to risks or provide opportunities that would not have existed in the absence of the relationship;
 - b. related party relationships can influence the way in which the federal government operates with other entities in achieving its individual objectives; and
 - c. related parties may enter into transactions that unrelated parties would not enter into, or may agree to transactions on different terms and conditions than those that would normally be available to unrelated parties.
89. For related party relationships of such significance to the reporting entity that it would be misleading to exclude information about such relationships, the following should be disclosed:
- a. Nature of the federal government's relationship with the party, including the name of the party or if aggregated, a description of the related parties. Such information also would include, as appropriate, the percentage of ownership interest.
 - b. Other information that would provide an understanding of the relationship and potential financial reporting impact, including financial-related exposures to risk of loss or potential gain to the reporting entity resulting from the relationship.

Effect on Existing Concepts—Amendments to SFFAC 2, *Entity and Display*

90. This section establishes conforming amendments to the Statement of Federal Financial Accounting Concepts (SFFAC) 2, *Entity and Display*, as described in the following paragraphs.
91. Paragraph 2 is replaced with the following paragraph which describes the amended purpose and contents of SFFAC 2.

The purpose of this statement is to establish concepts regarding what would be encompassed by a Federal Government entity's financial report. The statement specifies the types of entities for which there should be financial reports (hereinafter called "reporting entities"), establishes an organizational perspective for considering the makeup of each type of reporting entity, identifies types of financial reports for communicating the information for each type of reporting entity, suggests the types of information each type of report would

convey, and identifies the process and factors the Board may consider in determining whether information should be basic information, required supplementary information (RSI), or other accompanying information (OAI).

92. Paragraphs 3 - 5 are rescinded because the preamble applicable to all concepts statements, which was adopted at the time SFFAC 5, *Definitions of Elements and Basic Recognition Criteria for Accrual-Basis Financial Statements* was issued, addresses the topics covered.

93. Paragraph 6a below is inserted following paragraph 6 to recognize the importance of accountability in determining organizations to be included in the reporting entity GPFFR:

6a. SFFAC 1 also discusses accountability and users' information needs as the foundation for the objectives of federal financial reporting. Specifically, paragraphs 71-72 state "It may be said that 'accountability' and its corollary, 'decision usefulness,' comprise the two fundamental values of governmental accounting and financial reporting. They provide the foundation for the objectives of federal financial reporting. ... The assertion of accountability therefore leads to identifying, first, those to whom government is accountable and, second, the information needed to maintain and demonstrate that accountability." Based on the concepts established in SFFAC 1, it is clear that accountability is a fundamental goal of financial reporting to be considered in establishing the boundaries of general purpose federal financial reports.

94. Paragraph 7 is rescinded because the preamble applicable to all concepts statements addresses the topics covered.

95. Paragraph 10, first bulleted item is amended by replacing it with the following bulleted item addressing an understanding of what the reporting entity entails:

- ensure each reporting entity includes information to support accountability by including all relevant organizations—those that are in the budget, owned by the Federal Government, or controlled by the Federal Government with risk of loss or expectation of benefit;

96. Paragraph 18, the last sentence is amended by changing 'earmarked collections' to 'dedicated collections.'

97. Paragraph 29 is amended by adding the following footnote after the first sentence:

The Office of Management and Budget specifies the form and content of agency financial statements, pursuant to its authority under the Chief Financial Officers Act of 1990, as amended (title 31, U.S. Code, section 3515(d)) through issuance of Bulletins and Circulars.

OMB intends to base form and content on the concepts contained in this Statement. Any uncertainty as to what to consider as a reporting entity would be resolved by OMB in consultation with the appropriate Congressional committees.

98. Paragraph 38 is amended to exclude references to other paragraphs amended by this Statement. Paragraph 38 is replaced with the following:

The ultimate aggregation of organizations is into the Federal Government which, in reality, is the only independent economic entity. The Federal Government encompasses all of the resources and responsibilities existing within the component reporting entities. The aggregation includes organizations for which the Federal Government is accountable as well as other organizations for which the nature and significance of their relationship with the Federal Government are such that their exclusion would cause the Federal Government's financial statements to be misleading or incomplete.

99. Paragraphs 39 -50 are rescinded because the standards herein provide guidance on the same matters. It is not necessary or appropriate to retain the guidance in SFFAC 2.
100. The sub-heading before paragraph 51 - "Other Aspects Concerning Completeness of the Entity" - is revised to read "Other Aspects Concerning Completeness of the Component Reporting Entity."
101. Paragraph 51 is replaced with the following:

Identifying the organizations to include in the reporting entity is one aspect of ensuring that the users of a reporting entity's financial reports are provided with all the information relevant to the reporting entity. However, because the only independent economic entity is the entire Federal Government, financial resources or free services are often provided from one component in the government to another component without a quid pro quo. For example, a portion of the retirement costs of Federal employees is reported by the Office of Personnel Management rather than the organizational entities employing the persons. Thus, within parameters more appropriately established in accounting standards, it is important to ensure that the reporting entity's financial reports include amounts that are attributable to the reporting entity's activities, even though they are recorded elsewhere. This is particularly important for costs associated with the use of human resources; personnel services are such a major part of most government activities. It is also important for the costs of services provided by other reporting entities, such as computer services provided by another unit.

102. Paragraphs 52 – 53 are rescinded because these paragraphs relate to issues covered in standards and are not necessary for understanding the notion of the reporting entity.

103. A new sub-heading “Need to Distinguish between Consolidation Entities and Disclosure Entities” is inserted at paragraph 53A.

104. Insert Paragraphs 53A – 53 E under the sub-heading: “Need to Distinguish between Consolidation Entities and Disclosure Entities” - The language provides a high level explanation of consolidation entities and disclosure entities. These are new terms introduced in this Statement critical to understanding the reporting entity concept in the federal government. More importantly, the language describes the need to distinguish them and the reason for this distinction in terms of financial statement presentation.

53A. The Federal Government is a large and complex organization. In order to fulfill public policy objectives, the Federal Government may use both consolidation entities (such as departments and agencies) and organizations that are distinct from consolidation entities to fulfill public policy objectives (such as financially independent organizations). These distinct organizations are referred to collectively as “disclosure entities.”

53B. Disclosure entities may maintain a separate legal identity, have a governance structure designed to insulate the organization from political influence, and/or be granted relative financial independence. Despite disclosure entities’ relative operational and financial independence, accountability for all organizations owned or controlled by the Federal Government rests with the Congress and/or the President. So, both consolidation entities and disclosure entities should be included in financial reports to provide accountability.

53C. It may be difficult to provide accountability, by meeting financial reporting objectives, through consolidated financial statements because they blur the distinction between consolidation entities and disclosure entities. Consolidated financial statements may obscure the fact that resources and resource allocation decisions for disclosure entities are more independent than similar decisions for consolidation entities. While consolidation entities are financed by taxes and other non-exchange revenue and governed by elected officials, disclosure entities often do not rely on taxes and other non-exchange revenue for financing or elected officials for spending authority. For example, a single-column presentation of information for all organizations likely would create a risk of incorrect inferences. Such inferences may include the amount of assets and revenues available for consolidation entities to use in general government activities, and the extent to which taxpayers stand ready to liquidate liabilities and meet expenses of disclosure entities.

53D. Maintaining a distinction between consolidation entities and disclosure entities may more effectively meet federal financial reporting objectives. Such a distinction may be maintained through discrete presentation of information regarding disclosure entities. Nonetheless, disclosures are not a substitute for consolidation entities recognizing the financial effects of transactions with disclosure entities.

53E. Consolidated financial statements for only consolidation entities will facilitate an assessment of the financial position of the federal government and the cost of operations financed by taxes and other non-exchange revenue. Consolidation aggregates the individual financial statements of organizations that constitute a reporting entity and results in presentation of information for a single economic entity representing consolidated activities supported by taxes and other non-exchange revenue, resources, and obligations. Consolidation entities are considered federal entities and should apply GAAP as defined in SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. The following sections discuss display of information in consolidation entity financial reports.

105. Paragraph 78 is rescinded because it is not conceptual guidance. It identifies an expectation that material differences between the recognition and measurement requirements under the FASB and the FASAB standards will be adjusted before consolidation.

Effective Date

106. This Statement is effective for period periods beginning after September 30, 2017. Earlier implementation is not permitted.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Introduction

- A1. The federal government and its relationships with other organizations have become increasingly complex. These complex relationships make it difficult to identify federal entities for financial accountability purposes. In addition, some organizations may be viewed as "non-federal" and yet be owned or controlled by the federal government. Identifying the organizations to be included in the government-wide and component reporting entity general purpose federal financial reports (GPFFRs) is necessary to ensure the completeness of GPFFRs.
- A2. GPFFRs should include the varied organizations for which the Congress and/or the President are accountable regardless of their form. Therefore, the primary reason for developing standards for the government-wide and component reporting entity GPFFRs is to ensure that users will be provided with complete financial information about the federal government. While SFFAC 2, *Entity and Display*, provides criteria for determining if an organization should be included, questions have continued in this area that resulted in the need for standards.

Project History /Task Force

- A3. In 2008, the Board formed a task force to support the project. The objective of the task force was "to assist in developing the proposed standards on the boundaries of the reporting entity and specific criteria for determining whether an organization should be included."

-
- A4. The task force met several times over the course of the project and also exchanged numerous ideas and recommendations electronically. The task force views and recommendations were presented to the Board for its consideration during the development of these standards. The task force's assistance was essential and its views carefully considered by members during deliberations. The task force played an important role in the research and survey work that led to the release of the *Reporting Entity* Exposure Draft. (See Appendix E for a list of task force members.)
-

Summary of Outreach Efforts

- A5. The Exposure Draft (ED), *Reporting Entity*, was issued on April 3, 2013 with comments requested by July 3, 2013.
- A6. Upon release of the ED, notices and press releases were provided to the FASAB email listserv, the Federal Register, the Journal of Accountancy, AGA Today, the CPA Journal, Government Executive, the CFO Council, the Council of the Inspectors General on Integrity and Efficiency, and the Financial Statement Audit Network, and committees of professional associations generally commenting on exposure drafts in the past (for example, Greater Washington Society of CPAs, AGA Financial Management Standards Board).
- A7. This broad announcement was followed by direct mailings of the exposure draft to the following relevant congressional committees:
- a. Senate Committee on Homeland Security and Governmental Affairs
 - b. Senate Committee on Banking, Housing, and Urban Affairs
 - c. Senate Committee on Rules and Administration
 - d. House Committee on Science, Space, and Technology
 - e. House Committee on Oversight and Government Reform
 - f. House Committee on Financial Services
- A8. Additional types of relevant organizations were contacted with direct mailings such as museums and performing art organizations, organizations that apply FASB GAAP, and intelligence agency organizations.

-
- A9. Thirty-nine responses were received from preparers, auditors, professional associations, and citizens. In addition, over ten participants provided testimony on the issues surrounding the project to the Board at a public hearing.
- A10. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response, as well as the testimony provided at the public hearing, and weighed the merits of the points raised. Due to the complexity of the standard and the issues raised, it was deemed most efficient and appropriate to include the summary of the issues raised by respondents and disposition in the narrative relating to the Board's deliberation of the issue.
-

Organizational Approach to Defining Boundaries

Underlying Concepts

- A11. The federal government is complex and therefore defining the boundary of GPFFRs may be difficult. Its constitutionally established powers and often its motivations and functions are different from other organizations. Despite these complexities, difficulties, and differences, accountability is a fundamental goal of financial reporting. As noted in SFFAC 1:

The federal government derives its just powers from the consent of the governed. It therefore has a special responsibility to report on its actions and the results of those actions. These reports must accurately reflect the distinctive nature of the federal government and must provide information useful to the citizens, their elected representatives, federal executives, and program managers. Providing this information to the public, the news media, and elected officials is an essential part of accountability in government.⁵²

- A12. SFFAC 1 discusses accountability and users' information needs as the foundation of governmental financial reporting. Specifically, paragraphs 71 and 72 state "It may be said that 'accountability' and its corollary, 'decision usefulness,' comprise the two fundamental values of governmental accounting and financial reporting. They provide the foundation for the objectives of federal financial reporting. ...The assertion of accountability therefore leads to identifying, first, those to whom government is accountable and, second, the information needed to maintain and demonstrate that accountability."

⁵² SFFAC 1, paragraph 8.

- A13. SFFAC 1 explains that the federal government has a special responsibility to report on its actions and the results of those actions. SFFAC 1 discusses the information needs of both internal and external users including the citizens, their elected representatives, federal executives, and program managers because meeting user information needs is an essential part of accountability in government.
- A14. An organizationally based approach to defining boundaries supports accountability to all users but particularly to external users who may be unaware of the nature of organizational relationships. Focusing on organizations helps to identify who is accountable and for what. In addition, an organizational approach provides meaningful financial statements by aligning boundaries with defined organizations for which there would likely be users of GPFFRs.⁵³

Identifying and Classifying Organizations

- A15. The Board considered several alternative approaches to identifying organizations for which elected officials—the Congress and/or the President—are accountable. This Statement provides that reporting entities should first identify what organizations⁵⁴ are to be included⁵⁵ in the reports. The three principles for including organizations in the government-wide GPFFR are: In the Budget, Majority Ownership Interest, and Control with Risk of Loss or Expectation of Benefit. This Statement also includes a provision requiring inclusion of an organization if it would be misleading to exclude it.
- A16. Next, for those organizations to be included, a distinction is made between consolidation entities and disclosure entities. This distinction determines how financial information is to be presented in the GPFFR. Consolidation entity financial information is to be presented in consolidated financial statements and related notes. Disclosure entity financial information is to be disclosed in notes to the financial statements.
- A17. Professional judgment is required in the application of the standards in this Statement. This Statement presents a principles-based approach to determining which organizations should be included⁵⁶ in the government-wide GPFFR because of the wide and varying relationships of the federal government. General purpose federal financial reports for the government-wide reporting entity should be broad enough to report the Congress' and the President's accountability for organizations. This ensures that the financial reports contain

⁵³ See SFFAC 2, paragraphs 29-38, for a discussion of the organizational approach.

⁵⁴ "Organization" refers to the organization in its entirety including all funding sources (for example, appropriations or donations) for which the entity is accountable. It is used broadly and may include among others departments, agencies, bureaus, divisions, commissions, corporations, and components.

⁵⁵ "Included" means an organization's information is either consolidated or disclosed.

⁵⁶ Note that this Statement does not specify which organizations must prepare and issue financial statements.

all the information essential for fair presentation of the government's financial position and results of operations.

- A18. One controversial matter addressed in this Statement was the inclusion of organizations where the ownership or control is intended to be temporary; such as receiverships, conservatorships, and entities owned or controlled due to intervention actions. The Board considered many options in developing the exposure draft and concluded that preparers and auditors would find it difficult to apply the notion of "temporary" absent clear guidance in the standards. In some circumstances, temporary relationships evolve into permanent relationships. Also, some federal government components are subject to sunset provisions and are also temporary. Because it was unlikely the Board could anticipate the full range of circumstances preparers and auditors may face, the Board proposed in the exposure draft that the same principles be applied to all organizations.
- A19. A few respondents asked the Board to provide that relationships intended to be temporary be excluded but most agreed with the proposal. Some respondents also asked that the Board explain how the temporary status of the relationship should be considered in applying the principles. The Board revised the proposal to explicitly state that whether relationships are temporary or permanent should not be considered in determining whether an organization is included in the GPFFR. Instead, the revised standards explain that whether a relationship is temporary or permanent is likely to influence whether the entity exhibits the characteristics established for a consolidation entity or for a disclosure entity. The standards also acknowledge that receiverships, conservatorships, and intervention entities would generally be disclosure entities but also state that entities controlled or owned as a result of intervention actions at the fiscal year-end must be assessed to confirm the classification.
- A20. Members discussed the potential that inclusion of such entities in GPFFRs might lead users to conclude that entities receiving temporary federal government financial assistance have become part of the federal government. The summary alerts readers that the "principles herein are not intended to establish whether an organization is or should be considered a federal agency for legal or political purposes." The Board recognizes that its responsibility is to ensure GPFFRs meet federal financial reporting objectives and that is the focus of this Statement. By avoiding subjective provisions such as "temporary" and instead establishing principles that can be applied to all relationships, this Statement supports meeting federal financial reporting objectives.

Principles for Inclusion in the Government-wide GPFFR

In the Budget

- A21. Identification of an organization in the President's Budget is the clearest evidence that an organization should be included in the government-wide report. Absent budgetary actions – originating with the President's Budget and leading to appropriations – federal organizations would be unable to conduct operations. Financial reporting objectives – budgetary integrity, operating performance, stewardship, and systems and controls – could not be met if organizations identified in the budget were not included in the financial reports. Therefore, the most efficient means to identify organizations for inclusion in the GPFFR is by their participation in the budget process as evidenced by being listed in the schedule of the *Budget of the United States Government: Analytical Perspectives—Supplemental Materials* that provides budget account level information.

Application to Legislative and Judicial Branches

- A22. Although the legislative and judicial branches (and most organizations within those branches) may not be required to prepare financial statements, based on the '*In the Budget*' principle, those organizations would be reported upon in the government-wide report. FASAB GAAP would be the appropriate accounting standards for those entities within the judicial and legislative branches that prepare GAAP-based financial statements. While this Statement does not require any entity to prepare and issue a GPFFR, it does enable federal reporting entities preparing and issuing GPFFRs in conformance with GAAP as defined by SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*, to determine what organizations should be included in GPFFRs.

Organizations Receiving Federal Financial Assistance

- A23. The schedule of the *Budget of the United States Government: Analytical Perspectives—Supplemental Materials* that provides budget account level information also sometimes identifies specific recipients of federal financial assistance. SFFAC 2 (prior to the amendments set forth in this Statement) acknowledged that the schedule sometimes names an organization to receive a "subsidy" and stated "This does not mean, however, that an appropriation that finances a subsidy to a non-Federal entity would, by itself, require the recipient to be included in the financial statements of the organization or program that expends the appropriation." Thus, "subsidy" is the term used in SFFAC 2 (before amendments set forth in this Statement) to distinguish such "non-federal" organizations from the organizations intended to be included in the GPFFR.

- A24. While the provision in SFFAC 2 was correct, this Statement establishes standards and terms used in standards should be defined. The Board considered ways to define “subsidy” but concluded it was more appropriate to rely on the existing definition of “federal financial assistance.”
- A25. As exposed, the proposed language attempted to ensure organizations that receive federal financial assistance⁵⁷ as defined by the Single Audit Act Amendments of 1996 but listed under an appropriation in the schedule of the *Budget of the United States Government: Analytical Perspectives—Supplemental Materials* that provides budget account level information are not automatically included in the GPFFR. Most grants are provided through programs and the recipient organizations are not necessarily listed in the budget. However, in some cases an organization is listed. The Board believes a means to confirm whether specifically identified recipient organizations are “non-federal organizations receiving federal financial assistance” is needed. When such organizations are listed in the budget, they should be assessed against the “majority ownership interest” and “control with risk of loss or expectation of benefit” principles before being excluded from the government-wide GPFFR.
- A26. Although few organizations are listed in the budget as receiving subsidies, respondents questioned (1) whether such organizations had to be subject to the requirements of the Single Audit Act to be considered, (2) whether federally authorized “support fees” would meet the definition of assistance, and (3) whether listing within the budget should be an inclusion principle given this practice. Because of these questions, the wording was clarified to provide that such non-federal organizations would be state, local, or territorial governments (or components thereof) or not-for profit organizations. In addition, the footnotes clarify that the exclusion is not limited to organizations subject to the Single Audit Act or to specific forms of financial assistance. Lastly, if an organization listed in the budget is to be excluded it is because it is neither owned nor controlled as defined in these standards.

⁵⁷ This Statement adopts the definition of “federal financial assistance” established in the Single Audit Act Amendments of 1996. However, an organization need not be subject to the requirements of the Single Audit Act in order to qualify as a non-federal organization receiving federal financial assistance. As defined by the Single Audit Act Amendments of 1996, federal financial assistance is assistance that non-federal entities receive or administer in the form of grants, loans, loan guarantees, property, cooperative agreements, interest subsidies, insurance, food commodities, direct appropriations, or other assistance. For the purposes of these standards, federally-authorized support fees and other charges would be considered other assistance even if legislation granting authority to collect them indicates that the fees or other charges are not considered public monies of the United States.

Organizations Partially in the Budget

- A27. The Board deliberated the issue of certain organizations being partially in the budget (for example, some of their operations or accounts are not in the President's Budget), such as a museum receiving substantial donor support. The Board determined organizations should be included in the government-wide GPFFR based on the "in the budget" principle. The Board further decided that such organizations should be presented in the same manner as other consolidation entities or disclosure entities, as discussed later in this Statement. Therefore, the language in the principle ("in the budget") does not provide separate and distinct guidance for organizations partially funded by non-budgetary sources. This means the organization is either a consolidation entity or a disclosure entity and should be reported as one or the other, in its entirety.
- A28. Certain respondents expressed concern because donated funds are for specific purposes and are not available for general government use. They believed full consolidation may be misleading. However, entities receiving donations administer and are accountable for both appropriations and donated funds. Presently, the financial statements for museums receiving donations display consolidated totals along with separate columns for federal and donor funds. This presentation provides accountability for all funds under the entity's management while alerting the reader to restrictions. Similar presentation at the government-wide level may be accomplished by presenting donated funds as dedicated collections to the extent they meet this definition. For example, such reporting would reveal that donor funds are unavailable for general use by the government.

Need for Additional Principles

- A29. While the principle "in the budget" is the most efficient means to identify organizations for inclusion, there are additional principles to be considered to identify other organizations that should be included in the government-wide GPFFR. The budget principle represents a starting point in analysis but accountability goals could not be met solely through that principle. Because the budget's purposes differ from financial reporting objectives in many respects (such as the focus on the allocation of budgetary resource flows versus costs of operations), it is possible that organizations or activities might be excluded from the budget for reasons that do not justify exclusion from financial reports. For example, some organizations may be established to operate in a manner similar to businesses and are excluded from the budgetary process. Therefore, additional inclusion principles are necessary to ensure completeness in the context of the federal financial reporting objectives.

Majority Ownership Interest

- A30. Ownership interests typically provide owners access to resources and exposure to risks while supporting their desired goals. Federal financial reporting objectives require that information about service efforts, costs, and accomplishments be made available. To ensure such information is included, when the federal government holds a majority ownership in an organization, the organization should be included in the GPFFR. As described in this Statement, majority ownership interest exists with over 50 percent of the voting rights or the net residual assets of an organization.
- A31. The Board noted that some may question how to account for minority ownership interests (less than 50 percent). The Board agreed addressing minority interests through the project is likely to be less effective than allowing the GAAP hierarchy to fill any void. To address the potential question, the Board included within this Statement a footnote stating ownership interests 50 percent or less should be accounted for in accordance with the appropriate accounting standards per the GAAP hierarchy.

Control with Risk of Loss or Expectation of Benefit

- A32. When the federal government controls an organization with risk of loss or expectation of benefit, the organization should be included in the government-wide GPFFR to provide accountability. As detailed in this Statement, control involves the power to impose will on and/or govern the financial and/or operating policies of another organization with the potential to obtain financial resources or non-financial benefits or be obligated to provide financial support or assume financial obligations as a result of those actions. Both the power and the risk of loss or expectation of benefit aspects of the control definition should be present to justify inclusion of the organization in the GPFFR.
- A33. For example, this Statement provides for situations where the risk of loss or expectation of benefit does not exist—in the instance of the federal government exercising regulatory powers over an organization. In these cases, the federal government is unable to exercise that power for its own benefit and rarely explicitly assumes risk of loss. Therefore, including such an organization in the GPFFR would misrepresent the financial position and results of operation of the government. This would not support achievement of the objectives of financial reporting.
- A34. For financial reporting purposes, assessment of control is made at the reporting date and based on current legislation, rather than legislation that may or may not be enacted in the future.
- A35. Determining control requires judgment, and this Statement provides indicators to assist in making determinations. The first set of indicators is “persuasive” as the federal government has the authority to control and any one of the listed items would generally mean control is

present. The second set of indicators requires more judgment because the set of indicators is considered in the aggregate to assess whether the federal government has the ability to control the organization.

- A36. Because the federal government does not usually seek only financial benefits, the expected benefit associated with control does not have to be a financial benefit. Instead, it may be non-financial. For example, it may be in the form of a service provided on the federal government's behalf or the ability to direct the work of the other organization to deliver goods and services.

Misleading to Exclude

- A37. This Statement includes a general provision requiring inclusion of an organization if it would be misleading to exclude it. In developing the proposal, some Board members and respondents to the proposal believed this may be problematic because no criteria are offered. However, the Board ultimately agreed the general provision could accommodate unique situations that may arise in the future. This is consistent with provisions of SFFAC 2 and the Governmental Accounting Standards Board Statement 14, *The Financial Reporting Entity*.
- A38. Requiring inclusion of an organization that would be misleading to exclude allows for judgment in unique situations not anticipated when the standards were developed. If it were feasible to anticipate such situations and develop criteria, then there would be no need for the misleading to exclude provision. While there are concerns regarding possible unanticipated consequences, the Board believes the provision will be of benefit during the implementation period. If adjustments are needed, agencies may seek amendments to the standards or additional guidance as appropriate. Further, the Board also may consider whether the provision is necessary after implementation.

Reporting on Organizations—Consolidation or Disclosure

- A39. Differences in purposes and governance structures by organizations may require different presentation of related financial information. This Statement provides that the reporting entity should first determine which organizations are to be included in its GPFFRs. Next the reporting entity should classify each included organization as a consolidation entity or a disclosure entity. Different means of presenting relevant information are provided for consolidation entities and disclosure entities. Consolidation entities⁵⁸ should apply the

⁵⁸ Consolidated financial statements provided for "consolidation entities" will include all disclosures and required supplementary information required by existing standards. Existing standards will ensure that adequate information is provided regarding the nature and organizational structure of consolidation entities as well as the activities and future exposures.

hierarchy of GAAP established for “federal reporting entities” in Statement of Federal Financial Accounting Standards (SFFAS) 34. While the hierarchy of GAAP established for federal reporting entities may not necessarily apply to disclosure entities; information about such organizations is still needed for accountability purposes and to meet federal financial reporting objectives.

- A40. The distinction between consolidation entities and disclosure entities is based on the degree to which the following characteristics are met: the organization is financed by taxes and other non-exchange revenue, is governed by the Congress and/or the President, imposes or may impose risks and rewards to the federal government, and/or provides goods and services on a non-market basis. Maintaining a distinction between consolidation entities where financial and operational decisions are more directly governed by the Congress and/or the President, and disclosure entities that are more financially (or operationally) independent will provide information to users that is more understandable and relevant. In some cases, disclosure of information regarding an individual organization is more useful than consolidation of the individual organization’s financial statements in the government-wide financial statements. In other instances, consolidation of individual organizations’ financial statements is needed to provide fair presentation of activities financed by taxes and other non-exchange revenue, and/or relying on the taxpayers to settle liabilities.
- A41. While principle-based standards do not explicitly classify specific organizations as consolidation entities or disclosure entities, the Board considered the need to illustrate how the inclusion principles and the criteria for classification as a consolidation entity or disclosure entity might be applied to certain significant individual organizations or classes of organizations. For many classes of organizations, illustrations are provided in Appendix C. With respect to certain significant organizations with particularly unique characteristics, such as the central banking system (Federal Reserve System (FRS)),⁵⁹ a majority of the Board did not believe illustrations would be appropriate because the illustrations might become de facto requirements regarding that entity’s classification.
- A42. The role of preparers and auditors is to assess each organization against the principles in paragraphs 22 – 55 and reach their own conclusions. In contrast, the role of standards-setters is to set accounting standards and consider the potential implications. In doing so, the Board acknowledges some members believe the Board should explicitly address

⁵⁹ The FRS comprises the Board of Governors, the Federal Open Market Committee, the regional Federal Reserve Banks, and the Bureau of Consumer Financial Protection. The Bureau was established in 2010 as an independent bureau within the FRS pursuant to the Dodd-Frank Wall Street Reform and Consumer Protection Act. The law provides that the Bureau’s financial statements should not be consolidated with the financial statements of either the Board of Governors or the Federal Reserve System. (The Bureau has been consolidated directly in the government-wide report to date.) For simplicity, the basis for conclusions discusses the system as a whole rather than its individual components.

inclusion and classification (as a consolidation entity or disclosure entity) of the FRS in GPFFRs because of the magnitude of its operations. While different individuals could reach different conclusions due to the unique and changing role of the central banking system, most members believe explicitly classifying the FRS, or any entity, at a point in time would be inappropriate and result in this Statement becoming outdated as circumstances change.

- A43. Despite the decision not to explicitly classify the FRS, the Board considered each possible classification of the FRS. This consideration did not take into account all the facts and circumstances that would be considered by the preparer and auditor. Instead, like the illustrations in Appendix C, high-level facts were considered in sufficient detail to provide reasonable assurance to the Board that preparers and auditors would consider the appropriate matters in making decisions. The majority of the Board believes the principles are sufficient to aid preparers and auditors in assessing any organization, including the FRS, and in making decisions regarding inclusion and classification as a consolidation entity or disclosure entity.
- A44. If the assessment of the FRS resulted in its classification as a consolidation entity, the government-wide consolidated financial statements and related notes would present information as if the FRS and other consolidation entities operate together as a single economic entity. Any balances and transactions among the consolidation entities would be eliminated. For example, all Treasury securities held as investments by the FRS and reported as liabilities by the Department of the Treasury would be eliminated. Significant additions to the government-wide balance sheet as a result of consolidating the FRS would be liabilities for deposits of depository institutions and Federal Reserve notes outstanding as well as assets for investments in non-federal organizations. Consolidation would also affect the reported operating results of the government; interest expense would be reduced by the amount paid by the U.S. Treasury to the FRS and revenue would be reduced by the amount paid by the FRS to the U.S. Treasury.
- A45. If the assessment of the FRS resulted in its classification as a disclosure entity, disclosures regarding the FRS would aid users in understanding the FRS, its relationship with the federal government, any significant activities, and any risks posed to the federal government. Such disclosures would allow the reader to consider monetary policy and fiscal policy as distinct activities. The government-wide consolidated financial statements would present the results of fiscal policy. Consolidation of fiscal and monetary policy financial information, as described above, would result in elimination of some Treasury securities. Thus, the use of Treasury securities to conduct monetary policy and their elimination upon consolidation could obscure the Treasury securities (debt) that result from the fiscal policies of the federal government. Further, liabilities for Federal Reserve notes outstanding and deposits by depository institutions differ in character from liabilities arising

from fiscal policy. In contrast, disclosures may provide an understanding of the relationship between monetary and fiscal policy and support consideration of these distinct activities.

- A46. The Board recognizes the FRS performs a unique federal function—central banking—and there is only one organization of this type. The FRS is unique not only in its mission, but also in its governance, structure, activities, and the need to maintain independence. Its responsibilities are broad reaching and of great interest because of the impact of monetary policy on the country. The magnitude of its role and transactions led the Board to require certain minimum disclosures about the FRS. The minimum disclosures recognize that there is special interest in the activity of the central banking system. The minimum disclosures for the government-wide report are in addition to any other reporting requirements at the government-wide or component reporting entity levels. The minimum disclosures focus on governance, significant roles and responsibilities, the significance and magnitude of financial actions reported by the FRS to achieve monetary and fiscal policy objectives, transactions with the reporting entity, risks to the federal government, and future exposures to gains and losses. The disclosures should be integrated and, depending on the circumstances, also may be required by other provisions in this Statement or other GAAP requirements.

Consolidation entities

- A47. Consolidation entities generally provide goods and services on a non-market basis. That is, prices are not established solely through market transactions where supply and demand determine price. Goods and services provided on a non-market basis may be free of charge or provided at prices that are either not economically significant or bear little relationship to the cost of the goods or services.
- A48. Consolidation entities generally are financed through taxes and other non-exchange revenue as evidenced by inclusion in the budget. Significant risks and rewards fall to the federal government for consolidation entities. Inclusion in the budget is the clearest evidence an organization is relying on taxes and other non-exchange revenue and that elected officials are key decision makers.
- A49. The budget is a political document serving many purposes. The 1967 *Report of the President's Commission on Budget Concepts* indicates that “the budget must serve simultaneously as an aid in decisions about both the efficient allocation of resources among competing claims and economic stabilization and growth.” On the topic of coverage of the budget, the Commission recommended that “the budget should, as a general rule, be comprehensive of the full range of Federal activities.” Because the budget includes “federal activities,” entities listed in the budget, except those receiving federal financial assistance, generally qualify as consolidation entities.

A50. The assessment of whether an organization meets the attributes for a consolidation entity is based on the assessment of all the attributes and the degree to which each is met. As such, not all attributes are required to be met; classification is based on the assessment as a whole.

Disclosure entities

- A51. Disclosure entities receive limited or no funding from general tax revenues. Disclosure entities, in contrast to consolidation entities, are often structured so there is a clear barrier or limit on taxpayer financing of the entity. Disclosure entities have relative financial independence and often provide goods and services on a market basis. This may be an effort to shield the federal government from risk.
- A52. Another contrast with consolidation entities is that with disclosure entities, the Congress and/or the President have much less direct involvement in decision-making. Decision-making may rest with a governing board insulated from political influence and there may be situations where disclosure entities have a separate legal identity. In some cases, the relationship with the federal government is not expected to be permanent.
- A53. It is important to recognize the continuum that exists among disclosure entities. For example, despite a greater degree of autonomy, some disclosure entities may still exercise powers that are reserved to the federal government as sovereign. Other disclosure entities may not themselves carry out missions of the federal government but, instead, are owned or controlled by the federal government as a result of regulatory or intervention actions.
- A54. This Statement provides categories of disclosure entities primarily as a way to help identify disclosure entities. However, this Statement does not require presentation by any specific class or category and allows flexibility in presenting information about disclosure entities. The categories of potential disclosure entities include quasi-governmental and/or financially independent entities, receiverships and conservatorships, and federal government intervention actions.

Quasi-Governmental and/or Financially Independent Entities

- A55. This Statement describes quasi-governmental and/or financially independent entities as those entities where governance and/or financial differences lead to greater independence. This Statement identifies both governance and financial characteristics that would be found in this type of entity.
- A56. Quasi-governmental and/or financially independent entities may include certain Federally Funded Research and Development Centers (FFRDCs), museums, performing arts organizations and universities, and venture capital funds. Because details may differ

among organizations in each example type, an objective assessment may classify some individual organizations as consolidation entities rather than disclosure entities. Appendix C- Illustrations offers examples that may be useful in application.

Receiverships and Conservatorships

A57. This Statement describes receiverships and conservatorships as those failed financial institutions and banks the federal government takes control or ownership of with no goal to maintain the relationship. Absent a decision to make control permanent, such controlled or owned organizations generally would be disclosure entities.

Federal Government Intervention Actions

A58. This Statement describes federal government intervention actions as resulting from exceptional circumstances where the involvements are not expected to be permanent. SFFAC 1 acknowledges the unique nature of federal government activity and its broad responsibilities. Paragraph 50 explains “The federal government is unique, when compared with any other entity in the country, because it is the vehicle through which the citizens of the United States exercise their sovereign power. The federal government has the power through law, regulation, and taxation to exercise ultimate control over many facets of the national economy and society...” SFFAC 1 describes the federal government’s responsibility for the general welfare of the nation in paragraph 53-54 as “a broad responsibility that involves multiple goals.”

A59. With these broad responsibilities, the federal government may decide to take certain actions or intervene in certain situations. Examples may include actions to provide stability to the financial markets, key industries, states, cities, or counties. These types of federal government interventions are considered rare.⁶⁰ Historically the federal government has been involved in few commercial enterprises on an equity basis or shared ownership basis.⁶¹ Although the federal government may not act to maximize profits, the federal government may intervene and act in capacities to protect citizens. This may ultimately lead to taking control of organizations or acquiring some form of ownership.

A60. The federal government may also intervene by providing assistance through extending loans or debt guarantees that do not meet the inclusion principles established in this Statement . Such transactions should be accounted for in accordance with the appropriate

⁶⁰ The financial crisis that began in 2007 is considered to be the most severe since the Great Depression. (White Paper on Changes to Financial Regulations)

⁶¹ Congressional Research Service (CRS) Report for Congress RL30533, *The Quasi Government: Hybrid Organizations with Both Government and Private Sector Legal Characteristics*.

accounting standards per the GAAP hierarchy. This Statement does not require additional disclosures for intervention actions that do not meet the inclusion principles.

- A61. The initial SFFAC 2 provided an exception for situations where the criteria leading to consolidation are met temporarily. Specifically, paragraph 45 of SFFAC 2 stated “The entity or any of the above criteria are likely to remain in existence for a time, i.e., the interest in the entity and its governmental characteristics are more than fleeting.” “Fleeting” may imply periods of one year or less to some and the Board considered how to clarify the term “fleeting.” Ultimately, the Board decided terms such as “fleeting” and “temporary” imply a time limit.
- A62. However, there may be instances where an intervention is longer than one year due to the extreme factors of the national crisis. In most instances, it is difficult to establish and meet a timeline for ending an intervention. In these instances, the focus continues to be on governance and protection, rather than maximizing profits or establishing new federal government lines of business. Although the actions may be longer than one year, the interventions are “not expected to be permanent.” The Board notes that this “non-permanent” expectation would generally lead to the entities exhibiting more of the characteristics of a disclosure entity than of a consolidation entity. This is preferable to relying on “temporary” or “fleeting” which implies that a time limit could be established.
- A63. A further implication the Board wishes to avoid is that organizations owned or controlled as a result of interventions are considered “federal government entities” when applying the Code of Professional Conduct established by the American Institute of CPAs.⁶² This Statement recognizes that such interventions create a need for accountability but they do not make the disclosure entities arising from intervention actions “federal government entities” or federal reporting entities. While the hierarchy of GAAP established for federal reporting entities may not necessarily apply to disclosure entities, information about such organizations is still needed for accountability purposes and to meet federal financial reporting objectives.

Component Reporting Entities

- A64. The Board believes there should be consistency in treatment of organizations at the government-wide and the component reporting entity levels. The reasons for including organizations at the component reporting entity level should be consistent with the reasons

⁶² The American Institute of CPAs establishes ethics rules for its members through its Code of Professional Conduct. Rule 203, Accounting Principles, designates three bodies to establish accounting principles for three different domains—nongovernmental entities, state and local governmental entities, and “federal government entities.” (ET Section 203, paragraph .01)

in the government-wide entity GPFFR. Further, classification as consolidation entities or disclosure entities should be consistent in government-wide and component reporting entity GPFFRs. The Board believes a single set of principles for inclusion and classification presented from the government-wide perspective provides for the desired consistency. This is appropriate and necessary because the government-wide reporting entity is the only federal reporting entity that is an independent economic entity.

- A65. Nonetheless, implementation of these principles involves the component reporting entities because the government-wide report is, for the most part, a consolidation of the reports provided by component reporting entities. Therefore, component reporting entities must identify and include in their GPFFRs all consolidation entities and disclosure entities for which they are accountable so that both the component reporting entity GPFFRs and government-wide GPFFR are complete.
- A66. The Board believes that component reporting entities should identify consolidation entities and disclosure entities administratively assigned to the component reporting entity. Standards that are based on organization and accountability provide a more realistic view of how component reporting entities become accountable for organizations and how component entity boundaries are likely to be determined. The result will be component reporting entity GPFFRs that include all organizations for which the component reporting entity management (for example, appointed officials) are expected to be accountable.
- A67. Administrative assignments to component entities are typically made in policy documents such as laws, budget documents, regulations, or strategic plans. Ultimately, component reporting entities would identify and include in their GPFFRs all consolidation entities and disclosure entities for which they are accountable so that both the component reporting entity and government-wide GPFFRs are complete.
- A68. Administrative assignments can be identified by evaluating the following three areas:
- a. Scope of the Budget Process
 - b. Accountability Established Within a Component Entity
 - c. Misleading to Exclude and/or Misleading to Include
- A69. Component reporting entities should develop processes to ensure they identify and include those consolidation entities and disclosure entities that are: (1) within the scope of their budget process, (2) for which accountability is established within their component reporting entity, or (3) which are misleading to exclude. In rare cases, a component reporting entity may find that it would be misleading to include a consolidation entity that appears to be within the scope of their budget process or to have accountability established within the

component reporting entity. While most respondents agreed with the proposal, several indicated a need for implementation guidance, especially regarding the misleading to include provision. In addition, there was some confusion about how the inclusion principles applied from the government-wide perspective relate to the administrative assignments at the component reporting entity level.

- A70. The Board does not intend to provide detailed administrative assignment implementation guidance at this time. Central agencies are anticipated to determine if there is a need for coordinated guidance to be developed to ensure government-wide consistency. A coordinated effort from the central agencies could promote a process to ensure the component reporting entities are performing the necessary procedures to capture the material organizations from their perspectives and also for consideration at the government-wide level. The effective date considered this and allowed sufficient time for a coordination of efforts as well as development of any needed implementation guidance.
- A71. Regarding the “misleading to include provisions,” the Board made editorial changes to clarify that they expect this to occur only in rare cases where the substance of relationships between consolidation entities differs from their form. For example, the Pension Benefit Guarantee Corporation (PBGC) is legally established within the Department of Labor. Nonetheless, PBGC has always operated as a separate legal entity with a mandate to fund its operations from premiums and has provided separate audited financial statements since its inception. Some believe that it would be misleading to consolidate PBGC and Department of Labor financial statements. In contrast, the misleading to include provision would not be an appropriate justification for excluding an office such as the Office of the Inspector General from the consolidated financial statements of its associated Department.
- A72. Also, some respondents questioned whether the misleading to include provision would be applicable to disclosure entities. The Board does not believe disclosure entities can be misleading to include because disclosures explain the relationship. Such explanations would prevent misleading presentations about disclosure entities.
- A73. During due process, some respondents questioned the difference between the inclusion principles and administrative assignments. The inclusion principles are to be applied from a government-wide perspective; whereas administrative assignments are determined from the component reporting entity perspective. Prior to implementation of this Statement, based on initial provisions of SFFAC 2, component reporting entities apply the conclusive and indicative criteria from their perspective as individual government agencies. In some cases, no individual government agency has direct involvement in the operations of entities that nonetheless are controlled through legislation established by and/or officials appointed by elected officials. Also, some ownership documents identify the federal government as owner rather than a particular government agency. To ensure that all

owned or controlled entities are included, the inclusion principles must consider the relationship of an organization and the federal government as a whole.

- A74. Another key difference is that administrative assignments are assessed from the component reporting entity perspective. Therefore, component reporting entities will need to adapt to a multi-step process involving varying perspectives (inclusion principles applied from a government-wide perspective and administrative assignments from the departmental perspective). Accordingly, coordination with the central agencies during the implementation process will be important.

GPFFR Consolidation and Disclosure

- A75. As noted above, decisions about the government-wide GPFFR require determining what organizations are to be included in the reports and identifying appropriate means to present relevant information about organizations. The final determination of the presentation of financial information through consolidation or disclosure is based upon the results of two assessments—first, if the organization is included and second, if those included organizations are classified as consolidation entities or disclosure entities.
- A76. The Flowchart at Appendix B is a useful tool in applying the principles established. It is helpful in the assessment and applying the standards in order. It includes paragraph references to underlying principles and major decision points.

Consolidation Entities

- A77. This Statement provides that consolidation entities should apply SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. In addition, it provides for the consolidation of the financial statements of consolidation entities so citizens may assess the financial position and the cost of operations of the federal government. Consolidation of financial information regarding the activities financed by taxes and other non-exchange revenue, resources, and obligations where governance rests with the Congress and/or the President ensures that the reporting objectives of SFFAC 1 are met.
- A78. Existing guidance may also require additional information—either through disclosures or required supplementary information—regarding consolidation entities. While the term “disclosure entities” is used to refer to organizations included in GPFFRs through disclosures, readers should not infer that disclosures would not also be provided regarding consolidation entities and related activities and transactions consistent with existing standards.

Consolidation of FASB-based and FASAB-based Information

- A79. While FASAB is the appropriate source of GAAP for federal entities, the Board has considered the potential ramifications when some federal entities follow GAAP for nongovernmental entities promulgated by the Financial Accounting Standards Board (hereafter “FASB GAAP”) and their information is consolidated with information based on FASAB standards. For example, federal government corporations, the U.S. Postal Service, certain component reporting entities of the U.S. Department of the Treasury and the Department of Housing and Urban Development, and some other organizations in the executive and legislative branches have historically applied FASB GAAP and continue to do so. SFFAS 34 recognizes that “general purpose financial reports prepared in conformity with accounting standards issued by the FASB also may be regarded as in conformity with GAAP for those entities that have in the past issued such reports.” SFFAS 34 also provides that a federal reporting entity preparing audited financial statements for the first time may adopt FASB standards in the rare case that the needs of its primary users would be best met through the application of FASB standards. The acceptance of these practices raises the question of whether the information prepared under FASB standards may be consolidated with information prepared under FASAB standards in consolidated reports prepared by component reporting entities and in the consolidated government-wide reporting entity.
- A80. The Board has considered such issues on several occasions and provided concepts as follows:

The reporting entities of which the components [preparing reports under FASB or regulatory accounting standards] are a part can issue consolidated, consolidating, or combining statements that include the components’ financial information prepared in accordance with the other accounting standards. They need to be sensitive, however, to differences resulting from applying different accounting standards that could be material to the users of the reporting entity’s financial statements. If these differences are material, the standards recommended by FASAB and issued by OMB and GAO should be applied. The components would need to provide any additional disclosures recommended by FASAB and included in the OMB issued standards that would not be required by the other standards.⁶³ (SFFAC 2, *Entity and Display*, paragraph 78 (excerpt from section on “Financial Reporting For An Organizational Entity”))

⁶³ In October 1999, FASAB was recognized as the Rule 203 standards-setting body for the federal government. As such, FASAB now issues the standards, rather than issuing recommendations to OMB and GAO for issuance of the standards.

-
- A81. The Board determined in SFFAS 34 that FASB-based statements are acceptable in certain circumstances. While there may be significant differences between FASB and FASAB standards, both standards result in accrual-basis information and disclosures that aid users in understanding the information. Converting FASB-based information to FASAB-based information for consolidated financial reports of larger organizations may not be justifiable since conversion may not aid users.
- A82. Users may be confused by the presentation of different amounts for a component in its own financial report and in the consolidated financial reports of larger organizations; particularly when both amounts would be in accordance with GAAP for federal entities per SFFAS 34. In addition, conversion imposes a cost and it is not clear that the cost is justifiable based on benefits to the user. Therefore, this Statement establishes that amounts derived for component reporting entities in compliance with SFFAS 34 may be consolidated without adjustment and the aforementioned concepts from SFFAC 2 paragraph 78 are rescinded.
- A83. However, if this leads to consolidation in a single line item of amounts measured differently due to differences between FASB and FASAB principles, then one would anticipate disclosures of the different accounting policies and the related amounts to aid the reader in understanding the information provided. The Board considered adopting requirements for such disclosures but believes that existing requirements and long-standing professional practices are sufficient.
- A84. The Board initially proposed that activities measured in accordance with FASAB standards and amounts related to intragovernmental were required to be disclosed in the notes of component reporting entities to facilitate eliminations at the government-wide reporting level. However, after further consideration of the comments, the board determined this information may not be relevant for the component reporting entity GPFFRs and was more appropriately obtained in the Treasury closing package. Likewise, the budgetary reporting issues highlighted by respondents appeared to be a reconciliation and system issue that should be addressed in the Treasury Financial Manual instead of an accounting standard. Also during due process it was determined that certain component reporting entities reporting on a FASB basis convert their information to a FASAB basis upon consolidation. The preparers, auditors, and users believe the information is meaningful for their purposes. As this may be the case in certain instances, but not all, the Board did not want this Statement to prevent those wishing to convert from doing so if it aids the users by providing this meaningful information. Hence, while conversion may be appropriate in certain situations, it is not for all.

Disclosure Entities

- A85. The Board believes consolidation of disclosure entities would not result in information meeting the basic qualitative characteristics of information in financial reports because it would not provide the most relevant, understandable, or consistent information. The Board believes consolidation of disclosure entities may obscure the boundaries of the risks and rewards intended to be assumed or gained. Further, assets that are not available for purposes other than the specific business operation of the non-consolidated organization might be commingled with federal assets, and liabilities not fully guaranteed by the federal government might be added to federal liabilities. Instead, financial balances and amounts for organizations having the characteristics of disclosure entities should be kept separate from balances and amounts for those organizations having the characteristics of consolidation entities to prevent distortions to the consolidated financial statements.
- A86. The Board believes SFFAC 1 recognizes the challenges that may arise in applying traditional approaches to financial reporting. SFFAC 1 paragraph 49 states "...Federal accounting and financial reporting are shaped by, and need to respond to, the unique characteristics and environment of the federal government." SFFAC 1 paragraph 105 further explains "reports must accurately reflect the distinctive nature of the federal government and must provide information useful to the people, their elected representatives, and federal executives..." SFFAC 1 also provides the qualitative characteristics of information in financial reports, by identifying these basic characteristics: understandability, reliability, relevance, timeliness, consistency, and comparability.⁶⁴
- A87. This Statement provides flexibility in identifying needed information regarding disclosure entities because the range of disclosure entities is broad and different information may need to be disclosed to meet the reporting objectives. Providing this flexibility allows the preparer to present information judged most necessary to meet reporting objectives while also providing an understanding of the potential effect of the relationship on the consolidation entity's financial statements.

Factors in Determining Disclosures

- A88. Because of the flexibility needed regarding disclosures, preparers are provided a list of factors to assist in determining what disclosures to include. Materiality is an overarching consideration in financial reporting. Preparers should consider both qualitative and quantitative materiality in determining disclosure entity presentation and disclosure. Beyond materiality, the factors provided in this Statement assist in determining the nature and extent of information regarding a disclosure entity to be provided.

⁶⁴ SFFAC 1, paragraph 156.

A89. The factors are to be considered in the aggregate; no individual weight should be assigned or interpreted. The assessment of the appropriate disclosures should be made after considering all the factors. During due process, several respondents disagreed with the factor “*Disclosure entity views/perspective*” that provided for consideration and judgment of about how the disclosure entity views its relationship with the federal government. Most respondents did not believe this should influence the level of disclosures and noted that often the reporting entity would not be aware of the disclosure entity views. The Board recognized that there may be situations where the disclosure entity’s view regarding its relationship with the federal government should influence the type and extent of information that is disclosed. However, it may be difficult to state operationally how this would affect disclosures in given situations. Therefore, while the Board agrees this factor may be relevant, the Board nonetheless removed it from this Statement.

Disclosure Requirements

- A90. The Board recognizes that although this Statement provides flexibility in meeting the disclosure objectives, a wide variety of information is listed as examples to meet the intended objectives and there are not requirements for how information must be aggregated. Qualitative and quantitative factors are considered in determining whether information regarding a disclosure entity is presented separately due to its significance or aggregated with the information regarding other disclosure entities. If information is aggregated, aggregation may be based on disclosure entity type, class, investment type, or a particular event deemed significant to the reporting entity. For example, one reporting entity may determine it appropriate to aggregate by investment types, such as equity or loan; another by disclosure entity type, such as receiverships; and yet another by class, such as museum.
- A91. Further, disclosures should be integrated so that concise, meaningful and transparent information is provided. Integration is accomplished by providing a single comprehensive note regarding the disclosure. Care should be taken to ensure the objectives are met, without producing unintended consequences. Preparers should keep in mind there are associated costs and potential audit implications with any information included in a GPFFR. Incorporating by reference or including other entities’ summary financial statements or summary financial information generally would result in an auditor being required to gain audit assurance on that information and thereby may result in additional audit costs.
- A92. The Board believes any financial information about disclosure entities in the reporting entity’s GPFFR should be based on accrual basis standards specific to the type of organization while minimizing additional costs on the disclosure entity. There will be instances where information about disclosure entities is produced for reporting periods that differ from the reporting entity’s reporting period. To minimize additional costs, the Board

agreed that if disclosure entities have a different reporting period than the reporting entity's GPFFR, disclosure of information from a reporting period ending within the reporting entity's reporting period is acceptable. The Board performed outreach on this issue to the audit community and to the federal entity task force. Generally, the feedback supported this approach.

- A93. However, due to the fact there could be a large time lag, there should be a provision for disclosing significant changes in the information as a result of events occurring after the issuance of the disclosure entities' audited financial statements and before the issuance of the reporting entity's audited financial statements for a later fiscal year-end. The Board notes this would only be necessary if the disclosure entities' summarized financial statements or summarized financial information were presented. Otherwise normal transactions would be captured throughout the year so this would be a somewhat narrowed focus.

Related Parties

- A94. The Board determined it should define "related parties" and address them within this Statement for several reasons. Related party reporting is such a fundamental notion within GAAP and the auditing standards that addressing how related party concepts apply in the federal domain is important. Absent clear related party standards in the federal domain, the Board believes the private sector concepts would be applied by default and that application would be inappropriate.
- A95. Because of the extent of the federal government's relationships—whether already established or implied—"related parties" concepts may result in numerous relationships requiring disclosure. Therefore, the Board requires disclosure of related party relationships of such significance to the reporting entity that it would be misleading to exclude information about them. For clarity of intent, the standards rely heavily on listing parties to be included and excluded.
- A96. In addition, this Statement provides room for judgment because one cannot anticipate all types of relationships the federal government may have or might have in the future that should be reported. While the standards identify potential exclusions that generally would not be related parties (and those that may) one should consider the many complex relationships where significant influence is exerted. Judgment will be required to determine which significant influences may pose risks that warrant disclosures and these standards do not preclude the reporting of a related party if factors deem it appropriate. The related parties category is needed to provide for disclosure of those organizations that are not included under the inclusion principles but where there is an existing relationship of such significance that it would be misleading to exclude.

- A97. Component reporting entities of a single controlling entity are generally subject to related party reporting requirements in other standard-setting domains but will not be considered related parties under federal standards.⁶⁵ In reaching this conclusion, the Board discussed how jointly controlled component reporting entities present information about their relationships. Presently, component reporting entities are required by OMB guidance to state in the management's discussion and analysis section that: "The statements should be read with the realization that they are for a component of the U.S. Government, a sovereign entity." In addition, existing standards require recognition of inter-entity costs to ensure that cost information is not misstated as a result of relationships between component reporting entities. While members noted that readers may need additional contextual information to understand what these complex relationships imply about component reporting entity information, the decision to exclude these entities from related party reporting placed such information requirements outside the scope of this Statement.
- A98. During its due process, the Board considered a request that 'related parties' language be modified to clarify that members appointed to boards as individuals and the entities they are affiliated with are not in related party relationships with the departments or agencies. The Board did not believe additional language was necessary as the broad classes of exclusions provided were sufficient. Board members noted concern with broad exclusions of board members and organizations with which they are affiliated because there may be situations where disclosures would be appropriate. Further, current practices have provided meaningful and transparent information and the Board believes this information should continue to be provided absent a change in circumstances.
- A99. The Board further understood the respondent's concern that the term 'related party,' as commonly used in financial reports, may imply less than arms-length transactions. The Board believes once federal standards are issued, the term 'related parties' in the federal environment will develop its own unique meaning—that is, relationships of such significance to the reporting entity that it would be misleading to exclude information if one party to the existing relationship has the ability to exercise significant influence over the other party's policy decisions. There is a focus on exposures to risk of loss or potential gain as a result of the relationship. Additionally, the standards do not prevent an entity from referring to related parties as "affiliated institutions" or any other appropriately descriptive term. When doing so, it may be informative to explain the relationships by including information such as conflict of interest rules and other frameworks under which they operate.
- A100. During due process, certain respondents asked for clarification regarding the difference between a disclosure entity and a related party. More specifically, the respondents had

⁶⁵ Therefore, intragovernmental transactions would not be considered related party transactions.

difficulty finding a distinction between the characteristics of a related party and those of a disclosure entity meeting the "misleading to exclude" inclusion principle. When considering whether the principles required clarification, the Board noted the key difference between related parties and included organizations is that related parties are not controlled or owned but are significantly influenced by or influencing the federal government. In considering whether an organization rises to "misleading to exclude" the Board believes this distinction between included organizations and related parties will be helpful. The Board did not believe there was a need to revise the standards.

A101. The Board recognizes the difficulty in applying new standards to complex relationships. However, the Board believes the standards are clear. While there is a key change in the application of principles from the government-wide perspective, central agency coordination and guidance during the implementation process will aid users in adopting this perspective.

Amendments to SFFAC 2, *Entity and Display*

A102. This Statement provides amendments to SFFAC 2, *Entity and Display*. This Statement provides a description of the change to SFFAC 2 and an explanation as to why the change is being made. Most of the conforming changes are rescissions that result from movement of criteria for determining what organizations are required to be included in the federal reporting entity's GPFFR from a concepts statement to a standards statement.

A103. Paragraphs 54—77 and 79—112 of SFFAC 2 address concepts outside the scope of this Statement and are not amended.

A104. In addition, no changes are made to paragraphs 11-37 of SFFAC 2 because the Board believes these paragraphs provide the conceptual underpinning for understanding the structure of the federal government and how this relates to reporting entities for general purpose federal financial reporting. Although there may be some small differences in terminology in those paragraphs, the Board did not believe they were significant enough to warrant amendments.

A105. Paragraphs 47-50 of SFFAC 2 identify certain organizations or types of organizations (the Federal Reserve System, Government Sponsored Enterprises, and Bailout Entities) that could be included in the government-wide reporting entity based on the SFFAC 2 concepts but that should not be included. This Statement establishes principles to provide users of GPFFRs with comprehensive financial information while recognizing the complexity of the federal government and its relationships with varied organizations. The principles can be applied to the organizations previously excluded and conclusions reached to include the organizations—either as consolidation entities or disclosure entities—or to continue to exclude the organizations. SFFAC 2 is being amended to ensure that concepts provide a

framework for standards-setting but do not themselves establish standards by listing specific exclusions.

Other Unique Situations

A106. As part of the exposure draft process, the Board also asked respondents if there were other unique situations that should be addressed within this Statement. The Board received input from respondents on several example organizations that they believe should be clarified in this Statement. The Board considered the suggestions against the goal to develop principles-based standards that could be applied to all organizations. The Board believes the standards are sufficiently clear. Therefore, the Board did not revise the proposed requirements in response to these unique circumstances.

Board Approval and Dissent

A107. This Statement was approved for issuance by 8 members of the Board. One member dissented. The written ballots are available for public inspection at the FASAB's offices. The dissent of the member who opposed the issuance of this Statement is presented in paragraphs A108 through A115.

A108. Although Mr. Steinberg believes this Statement achieves the objective of providing authoritative guidance for defining the federal government reporting entity, he dissents because he believes the Statement implies, and therefore could lead readers to conclude, that the federal government considers receiverships, conservatorships, and intervention entities to be part of the federal government. He concurs that the federal government's general purpose financial report should disclose the relationships of these organizations to the reporting entity, the nature and magnitude of their relevant activities during the period and balances at the end of the period, and the reporting entity's future exposures to financial and non-financial risks and rewards resulting from these relationships, and has pointed to the numerous accounting standards already requiring those disclosures. However, he believes there are three compelling reasons for this Statement to not imply that receiverships, conservatorships, and intervention entities are part of the federal government reporting entity, as is done in paragraphs 51 through 55.

A109. Accounting literature has traditionally followed the postulate that, for an organization to be deemed part of a larger organization, the relationship has to be other than temporary—a condition that does not exist with the receiverships, conservatorships, and intervention entities. The desire to remain consistent with this postulate was pointed out by more than one respondent to the Exposure Draft. The Board, nonetheless, maintained that organizations for which the relationships are temporary, such as receiverships, conservatorships, or intervention entities, are part of the federal government reporting entity, but modified the standards to state that they would be classified generally as

disclosure entities rather than consolidation entities. Mr. Steinberg believes the purpose of the postulate is to define the relationship that should exist in order that there be reporting, and not the form of the reporting itself.

A110. The policy of the federal government is to not engage in activities that are typically conducted by the private sector. Banking is an activity that since the nation's founding, has mostly been conducted by the private sector. Although failed and failing banks are taken into receivership, it is not because the government intends to provide banking services, but only to oversee an orderly liquidation or transfer of those banks' assets, and thereby protect the depositors. Likewise, the organizations for which the government has, from time to time, decided to provide temporary financial support, that is, intervention entities, are in sectors of the economy that the federal government recognizes are not its function: automobile manufacturing and financing, manufacture of weapons systems, commercial insurance, banking, state and local government. Listing the receiverships, conservatorships, and intervention entities as part of the federal government reporting entity, as this Statement does, can be inferred as an expansion of the federal government into areas traditionally reserved for the private sector.

A111. Some of the most strident political arguments in recent years are about the expanding reach of the federal government into the private sector. Issuance of an accounting standard that could be read as including in the federal government reporting entity, entities normally viewed as outside the federal government (for example, automobile manufacturers, automobile financing companies, defense manufacturers, insurance companies, privately-owned banks, state and local governments) supports the position of those who claim the federal government is slowly expanding its reach and becoming increasingly socialist. Accounting standards should neither support a political position, nor give the appearance of such.

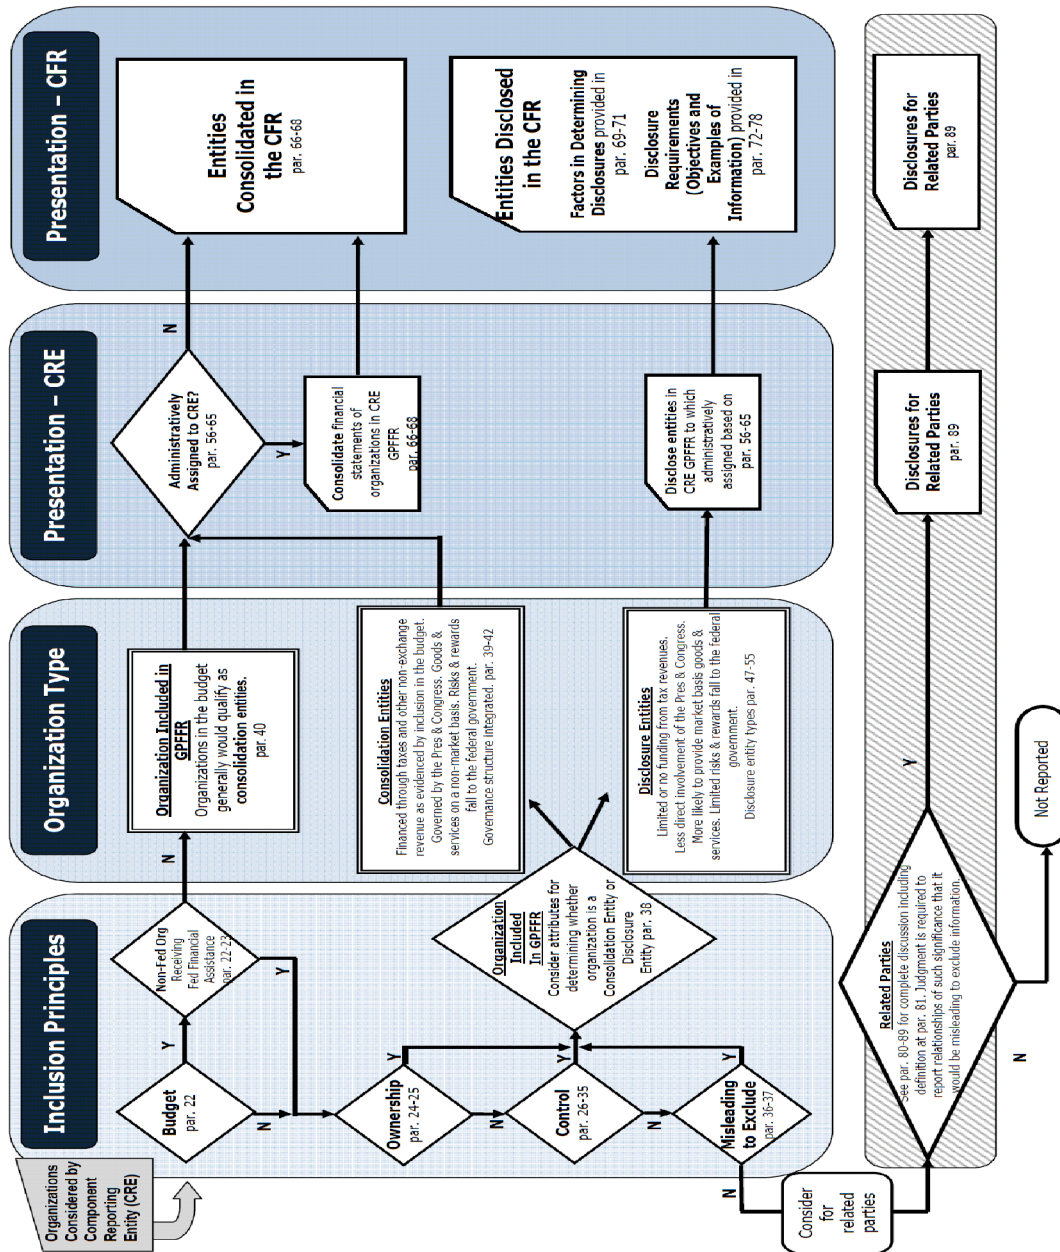

A112. Indeed, the inappropriateness of implying that receiverships, conservatorships, and intervention entities are part of the federal government reporting entity is revealed by a disavowal and apparent self-contradiction in the Statement itself. Paragraphs 51-55 identify receiverships, conservatorships, and intervention entities as one of the parts of the reporting entity that are deemed disclosure entities. Paragraph A63, on the other hand, states that the Board "wishes to avoid [the implication] that organizations owned or controlled as a result of interventions are considered 'federal government entities' when applying the Code of Professional Conduct established by the American Institute of CPAs," but then states that "this does not make the disclosure entities arising from intervention actions 'federal government entities.'" (underlining added)

A113. Mr. Steinberg agrees the accountability for receiverships, conservatorships, and intervention entities should be disclosed, but these types of organizations should not be listed in this Statement in such a way that they may be inferred by readers to be part of the

federal government reporting entity. His beliefs are based on long-standing accounting postulates, the existing policy of the federal government, and the potential appearance that the accounting standards support a particular political agenda.

- A114. Mr. Steinberg is also concerned with the manner in which this Statement provides for the reporting of museums, performing arts companies, and other entities partially funded by appropriations and partially by donations in the federal government's general purpose financial report. Specifically, these entities have often viewed the activities funded by donations as conducted by organizations that are separate from the organization performing activities funded by appropriations. They therefore provided the Department of the Treasury with information for only the activities funded by appropriations. Hence, the government-wide financial report often presented the financial position and results for only a portion of the museums, performing arts companies, and other entities funded partly by appropriations and partly by donations. The Board recognized the inappropriateness of financial statements presenting only a part of an entity and therefore agreed that the entirety of these entities should be included in the federal government reporting entity, whether through consolidation or as disclosure entities. This requirement was stated initially in two footnotes and in the Basis for Conclusions, but not in the body of the Standard. One of the footnotes was subsequently moved to the body of the Standard.
- A115. Mr. Steinberg believes that while the movement of the footnote to the body of the Standard avoids the dangerous precedent of defining accounting standards in only footnotes and the Basis for Conclusions, the requirement, as stated, will enable entities to still claim that the activities funded by donations are in separate organizations that do not meet the inclusion principles of "in the budget," "majority ownership interest," or "control." Therefore these portions of the entities might be inappropriately excluded from the federal government reporting entity's general purpose financial statements.

Appendix B: Flowchart

Appendix C: Illustrations

Preamble

These illustrations demonstrate how the provisions of this Statement could be applied to organizations given simplified hypothetical circumstances. They are for illustrative purposes only and are nonauthoritative. They do not:

1. represent actual organizations,
2. provide a thorough analysis of all the facts and circumstances that are needed to reach a conclusion in practice,
3. indicate a preferred method of analyzing facts and circumstances, and
4. substitute for the application of professional judgment to actual facts and circumstances.

These illustrations follow the sequence presented in the decision flowchart in Appendix B. All tentative conclusions are based primarily on the hypothetical circumstances presented. In most illustrations, the tentative conclusions refer to consideration of other factors by management and the auditor. This reference is included to emphasize that, in practice, consideration of all relevant facts and circumstances would be needed to reach conclusions. The reader should assume that the general reference to “other factors” means that such factors, in aggregate, supported the conclusions implied by the necessarily limited assumed facts and circumstances presented in each illustration.

Application of the standards to actual organizations requires consideration of the circumstances specific to each organization and the exercise of professional judgment. Although the limited assumed facts and circumstances presented in the illustrations may be similar to situations at a particular reporting entity, they should not be used in practice as a substitute for a complete and thorough consideration of all of the relevant facts and circumstances, which may lead to a conclusion different from the tentative conclusions in these illustrations. For example, the illustrations make certain assumptions that, in practice, require judgment of the specific facts and circumstances to make appropriate determinations.

All of the illustrations discuss administrative assignments to component reporting entities where there is only one component reporting entity relationship described. In reality, more than one component reporting entity may have a relationship with the illustrative organization. In such cases, additional information would need to be considered to determine whether other administrative assignments exist.

ABC Department

(In the Budget—Consolidation Entity)

Assumed Facts and Circumstances

Congress established ABC Department (ABC), a federal organization, to promote entrepreneurship and innovation as a means to address national economic and environmental challenges. Provisions that govern ABC are generally prescribed in legislation and ABC accomplishes its mission through the activities of various bureaus, grants to research institutions, and contracts with universities and not-for-profit organizations.

The executive leadership of ABC consists of a secretary, deputy secretary, and three assistant secretaries. The President nominates and the Senate confirms each of these officials. These officials serve at the pleasure of the President. ABC is subject to all laws and regulations applicable to executive branch agencies.

ABC relies on appropriated public funds to conduct its mission and is listed in the schedule in the *Budget of the United States Government: Analytical Perspectives—Supplemental Materials* that provides budget account level information. The President and the Congress consider ABC's requests for resources and determine the amount that should be budgeted to provide services. Furthermore, ABC is not considered to be a non-federal organization receiving federal financial assistance.

Tentative Conclusions

Based on the assumed facts and circumstances, management determined and the auditor concurred that ABC should be included in the government-wide GPFFR because it (1) meets the first of the three inclusion principles (being listed in the budget) and (2) is not a non-federal organization receiving federal financial assistance.

Classification as a Consolidation Entity or Disclosure Entity

Further, because it is listed in the budget, ABC generally would qualify as a consolidation entity assuming no information to the contrary. In this example, management determined and the auditor concurred that there were no facts contradicting the assumption that ABC is a consolidation entity. As a consolidation entity, ABC's financial statements should be consolidated in the government-wide GPFFR.

Administrative Assignments

The assumed facts and circumstances do not indicate ABC should be consolidated with another component reporting entity. Further consideration of ABC's relationships with other consolidation entities would be needed to determine if ABC has been administratively assigned to another component reporting entity. Further consideration would also be needed to identify any consolidation entities or disclosure entities administratively assigned to ABC.

Epsilon Corporation

(In the Budget—Consolidation Entity)

Assumed Facts and Circumstances

The Congress and the President established Epsilon Corporation as an independent government corporation to insure consumer funds placed in trust with certain types of institutions. Federal legislation established provisions that govern Epsilon's activities. Epsilon is governed by a seven member board of directors and each board member is appointed by the President and confirmed by the Senate. The Congress monitors Epsilon's activities by conducting hearings on Epsilon's programs and requesting Government Accountability Office (GAO) and Office of Inspector General (OIG) audits.

Epsilon is listed in the schedule in the *Budget of the United States Government: Analytical Perspectives—Supplemental Materials* schedule that provides budget account level information. Epsilon receives its funding based on legislation permitting it to receive and spend premiums from the institutions it insures. Legislation limits how Epsilon can invest proceeds from premiums and, to help ensure that Epsilon remains financially viable, legislation requires Epsilon to have a reserve fund. The board of directors determines the level of the reserve fund. If Epsilon encounters a shortfall, the organization may borrow a limited amount from the U.S. Department of the Treasury (Treasury), but any additional funding requirements must be obtained from premium assessments.

Epsilon is required to periodically report to the Congress and the President on matters such as:

- Program performance results
- Financial position, results of operations, and cash flows
- Adequacy of internal controls and systems

Furthermore, Epsilon is not considered to be a non-federal organization receiving federal financial assistance.

Tentative Conclusions

Based on the assumed facts and circumstances, management determined and the auditor concurred that Epsilon Corporation should be included in the government-wide GPFFR because it meets the first inclusion principle (in the budget) and is not a non-federal organization receiving federal financial assistance.

Classification as a Consolidation Entity or Disclosure Entity

Further, because it is listed in the budget, Epsilon generally would qualify as a consolidation entity assuming no information to the contrary. In this example, management determined and the auditor concurred that there were no facts rebutting or contradicting the assumption that Epsilon is a consolidation entity. As a consolidation entity, Epsilon's financial statements should be consolidated in the government-wide GPFFR.

Administrative Assignments

There is no information included in the assumed facts and circumstances indicating that Epsilon should be consolidated with another component reporting entity. Further consideration of Epsilon's relationships with other consolidation entities would be needed to determine if Epsilon has been administratively assigned to another component reporting entity or has had consolidation entities administratively assigned to it. Also, further consideration would be needed to identify any disclosure entities administratively assigned to Epsilon for which disclosures are needed.

Sigma Association

(Control based on Persuasive Indicator—Disclosure Entity (Financially Independent))

Assumed Facts and Circumstances

The Congress and the President established Sigma Association (Sigma) as a not-for-profit, non-taxpayer funded organization to market innovative U.S. agricultural technology worldwide and to respond to any claims of damage arising from new technology. The fundamental purpose of the corporation is specified in legislation and its mission statement is "to open new markets for U.S. agricultural technology through a cooperative marketing strategy and risk-sharing approach for market participants."

Sigma is governed by a ten-member board of directors. Five members are appointed by the President and confirmed by the Senate. Four members are elected by industry members. The

Secretary of Agriculture (or his/her designee) serves as a voting ex-officio member of the board. No more than three of the appointed members may be from the same political party. Board members serve seven-year terms and can only be removed for cause (meaning they may not be removed for policy decisions). Also, Congress monitors Sigma's activities by conducting hearings on Sigma's programs and requesting GAO audits.

Sigma is financed by fees imposed on industry members. Sigma's board of directors must establish an annual budget and legislation limits how Sigma can invest proceeds from fees. To help ensure that Sigma remains financially viable, legislation requires Sigma to have a reserve fund. The board of directors determines the level of the reserve fund after considering input from industry members. If Sigma encounters a shortfall, it may borrow a limited amount from the Treasury, but any additional funding requirements must be obtained from future fee assessments on industry members.

Tentative Conclusions

Based on the assumed facts and circumstances, and other considerations, management determined and the auditor concurred that Sigma should be included in the government-wide GPFFR because Sigma meets the third inclusion principle (control with expected benefits or risk of loss). Indicators that the federal government can control Sigma are that the Congress and/or the President (1) established its fundamental purpose and mission through legislation, and (2) appoint a majority of the members of its board of directors (its governing body). Each of these facts individually would be sufficient to indicate control such that Sigma would be included.

Classification as a Consolidation Entity or Disclosure Entity

For this illustration, management determined and the auditor concurred that, based on the assumed facts and circumstances as well as other considerations not described in the illustrations, Sigma should be reported as a disclosure entity because it is a financially independent organization. Management and the auditor considered the assumed facts and circumstances presented below in the aggregate, weighed them against other considerations, and used professional judgment.

Evidence suggesting that it is a disclosure entity includes:

1. Tax revenue is not appropriated for ongoing operations.
2. The corporation is relatively financially independent because it is primarily funded from a source other than appropriations. Its budget and fees are not subject to Congressional or Presidential approval.

3. Having seven-year terms for directors who are not subject to removal for policy decisions indicate a higher degree of autonomy than executive branch appointees. This governance structure vests greater decision-making authority with the board while insulating it from political influence. As a result, Congressional and Presidential oversight is less direct since they are not involved in decisions such as the level of reserves needed.
4. While Sigma is permitted to borrow from the Treasury, such borrowing is limited. This means risks to the federal government are limited. Instead, Sigma is expected to maintain its operations and meet its liabilities with revenues received from sources outside of the federal government.

Evidence suggesting that Sigma may be a consolidation entity includes:

1. The President and the Senate, who appoint and confirm, respectively, members of the board of directors as well as establish organizational authorities in legislation, have a governance role.
2. Sigma provides a service that is not available from market participants. Its fees are adjusted to recover losses rather than to respond to market influences. Hence, its fees are not market-based.

Administrative Assignment

Because each disclosure entity must be reported by at least one consolidation entity, management considered whether Sigma has been administratively assigned to the Department of Agriculture. Evidence suggesting administrative assignment to the Department of Agriculture includes that the secretary serves as an ex-officio member of the board.

As a result, management determined and the auditor concurred that the Department of Agriculture should disclose information regarding Sigma in its GPFFR. If Sigma is also administratively assigned to other component reporting entities, then those component reporting entities should also consider the need to disclose information in their GPFFRs.

Scholars University

(Not Included)

Assumed Facts and Circumstances

The Congress and the President chartered Scholars University as a small, private, independent, not-for-profit educational institution and legislation describes the mission of the university. The

legislation also indicates that the university is not an instrumentality of the federal government and that the federal government does not assume any liabilities of the university.

Scholars University is governed by a 29-member board of trustees. The Secretary of Education is an ex-officio member of the board and the remaining members are elected by the board for three-year terms. The board controls and directs the university's affairs such as determining the university's tuition and fee structure, adding or removing colleges within the university, and establishing new research institutions.

To support its mission, Scholars University receives most of its revenue from tuition, fees, and private contributions. The university receives appropriations to support some of its academic programs. The university is listed in the schedule in the *Budget of the United States Government: Analytical Perspectives—Supplemental Materials* that provides budget account level information under a Department of Education program because an amount is appropriated for Scholars University each year. Although the appropriations discuss limitations on how the funds may be used, the university generally has discretion over how it chooses to allocate funds for its academic programs and construction activities.

Tentative Conclusions

Based on the assumed facts and circumstances and other information, management determined and the auditor concurred that Scholars University should not be included in the government-wide GPFRR. Although it meets the first inclusion principle (in the budget), management asserts that Scholars University is a non-federal organization receiving federal financial assistance in the form of a grant. Any non-federal organization listed in the budget should be assessed against the other two principles. So, management must determine if the other inclusion principles are met or if it would be misleading to exclude the university.

The initial analysis is summarized below:

- Ownership—The Congress and the President chartered Scholars University as a private, independent organization. There is no evidence that the federal government has an ownership interest in the university.
- Control—Based on the assumptions presented, the persuasive indicators of control have not been met. While the federal government chartered Scholars University, the standards provide that further indicators of control must be present to conclude that the organization is controlled. The remaining persuasive indicators—appointing or removing a majority of the governing board members, establishing financial and operating policies, and dissolving the university and having access to its assets—are not met. The available facts and circumstances suggest that Scholars is not controlled. [Note, however, for brevity this illustration does not present an analysis of indicators of

control that in the aggregate may reveal that Scholars is controlled. Such an analysis may be needed in practice.]

- Misleading to exclude—Scholars University is a small not-for-profit that is listed in the Budget solely as a program within the Department of Education. Management determined and the auditors concurred that it is both quantitatively and qualitatively immaterial. Also, there were no other facts and circumstances that would suggest that Scholars University should be included in the GPFFR. As a result, it would not be misleading to exclude.

Based on the assumed facts and circumstances and other considerations, management determined and the auditor concurred that Scholars University should not be included in the government-wide GPFFR.

Education Research Institute (ERI)

(Control based on Persuasive Indicator—Consolidation Entity)

Assumed Facts and Circumstances

The purpose of the Education Research Institute (ERI) is to assist state and local officials in making informed decisions regarding effective education methods. ERI was established by the Congress and the President through a public law specifying the organization's:

- status as a tax exempt not-for-profit,
- purpose and duties,
- governance structure,
- sources of financing, and
- reporting requirements.

The public law establishing ERI requires reauthorization of its operations every five years. If the Congress and the President do not authorize continued operation, ERI must cease operations and distribute its net assets to a successor organization designated by the federal government. If ERI is unable to satisfy its liabilities prior to dissolution, the federal government will assume its liabilities.

ERI is governed by a seven-member board of directors; five of whom are voting. Two members are specific federal officials within the Department of Education who serve part-time and do not have voting rights. The remaining five serve full-time, are appointed by the Association of Local School Boards, and serve six-year terms. One of these five members is elected by the board to serve as chairperson.

The legislation creating ERI designates funding of \$1 per elementary school student per year to be made available from the general fund of the U.S. Treasury to the ERI trust fund. An annual transfer to ERI is not listed in the schedule in the *Budget of the United States Government: Analytical Perspectives—Supplemental Materials* that provides budget account level information but is included in the Department of Education's Congressional Budget Justification. The board of directors is authorized to establish an annual budget not to exceed the amounts available in the trust fund. ERI may fund up to 25% of its annual budget through donations but may not use federal funds to solicit donations.

The Department of Education approves the ERI annual budget. The department also reports information related to ERI activities in its annual performance report and Congressional Budget Justification.

ERI must provide annually an audited financial report to the Department of Education and relevant Congressional committees.

Tentative Conclusions

Based on the assumed facts and circumstances and other considerations, management determined and the auditor concurred that ERI should be included in the government-wide GPFFR because the third inclusion principle (control with risk of loss or expectation of benefit) is met. A persuasive indicator of control exists because the federal government can unilaterally dissolve the organization and have access to its assets and responsibility for its liabilities.

Classification as a Consolidation Entity or Disclosure Entity

For this illustration, management determined and the auditor concurred that, based on the assumed facts and circumstances as well as other considerations not described in the illustrations, ERI should be reported as a consolidation entity. In arriving at this conclusion, management and the auditor considered the assumed facts and circumstances presented below in the aggregate and, finding no other facts that in the aggregate contradict these, used professional judgment to determine that ERI is a consolidation entity.

Evidence suggesting that ERI is a consolidation entity includes:

1. It is primarily financed by taxes.
2. Federal government has assumed the risks associated with ERI's liabilities.
3. The purpose of ERI is to assist state and local officials by providing consultation services on a non-market basis.

4. ERI's annual budget is approved by the Department of Education and the Department also provides information related to ERI activities in its annual performance report and Congressional Budget Justification. These activities show that elected officials, acting with and through politically appointed officials, make decisions regarding ERI's budget.

Evidence suggesting that ERI is a disclosure entity includes:

1. A majority of the members of the board of directors is appointed by non-federal officials.
2. ERI is able to access donations to sustain some of its operations.

Administrative Assignment

The Department of Education should consider whether or not ERI is administratively assigned to it. Evidence that indicates ERI is administratively assigned includes Education's participation in ERI's budgetary process and inclusion of information regarding ERI in its own Congressional Budget Justification. Having considered the above information and other available evidence, the Department of Education determined and its auditor concurred that it should consolidate ERI's financial statements in its GPFFR.

Mediation Corporation

(Control based on Indicators in the Aggregate—Disclosure Entity)

Assumed Facts and Circumstances

Mediation Corporation (Mediation) was established as a 501(c)(3) non-member not-for-profit organization through a public law specifying the organization's:

- status and operating location,
- purpose and duties,
- governance structure,
- sources of financing, and
- reporting requirements.

The purpose of Mediation is to ensure that low-income individuals have access to mediation services to resolve non-criminal legal disputes. An assigned duty is to develop and maintain a network of state and local government organizations to deliver services financed by grants. Network members may raise funds to finance delivery of services through taxes, donations, and other grants without limitation.

The governing board comprises 13 members including Mediation's executive secretary. The President nominates candidates to fill the board member positions. A panel of local government officials participating in the network selects new members of the governing board from among the nominees. No more than seven members may be affiliated with the same political party. The members elect their chairperson from among the members. The President appoints the executive secretary and the Senate confirms the appointment. The executive secretary's term is fifteen years during which the President may only remove the appointee for cause.

Mediation is financed by an annual appropriation, interest earnings, and grants from any public or private grant-making organization. Grants must not finance more than 20 percent of its annual budget. The U.S. Attorney General approves the annual budget. Any liabilities incurred by Mediation must be settled from its assets and are not backed by the full faith and credit of the U.S. Government.

An annual appropriation is provided in the *Budget of the United States Government: Analytical Perspectives—Supplemental Materials* that provides budget account level for "Grants to the Mediation Corporation." The appropriation is made to the Department of Justice which transfers budget authority to Mediation. Mediation manages its cash balances similar to other not-for-profits and may retain any interest earned on unspent funds. In addition, it may apply for and receive grants from any grant making organization—public or private—subject to the 20 percent limitation.

The public law creating Mediation requires it to make annual audited financial reports publicly available. Mediation also files annual tax returns with the Internal Revenue Service. Furthermore, Mediation is considered to be a non-federal organization receiving federal financial assistance.

Tentative Conclusions

Although Mediation meets the first inclusion principle (in the budget), it is a non-federal organization receiving federal financial assistance. To determine if Mediation should be included in the government-wide GPFFR, management considered the remaining inclusion principles—majority ownership interest and control with risk of loss or expectation of benefit.

It is unclear, based on the assumed facts and circumstances, whether Mediation is owned by the federal government and, therefore, meets the second inclusion principle. Therefore, management must consider the control indicators to determine if the third inclusion principle (control) is met. None of the persuasive indicators of control are present based on the assumed facts and circumstances so considerable professional judgment is required to determine whether—in the aggregate—the indicators provide evidence of control. The indicators suggesting federal government control over Mediation include:

1. The federal government provides significant input regarding selection of the organization's governing board members since a selection can only be made from among candidates identified by the President.
2. The President appoints a key executive—the executive secretary—and may remove him or her for cause.
3. Federal law restricts Mediation's capacity to generate revenues since only appropriations, interest earned, and grants may be used. In addition, only 20 percent of its annual needs may be met through grants.
4. The U.S. Attorney General approves the annual budget.
5. Federal law requires annual audited financial reports.
6. Federal law directs Mediation to work through a network of government agencies to provide services.

Based on the assumed facts and circumstances and other considerations, and using professional judgment, management determined and the auditor concurred that Mediation should be included in the government-wide GPFFR.

Classification as a Consolidation Entity or Disclosure Entity

For this illustration, management determined and the auditor concurred that, based on the assumed facts and circumstances as well as other considerations not described in the illustrations, Mediation should be reported as a disclosure entity. In arriving at this conclusion, management and the auditor considered the assumed facts and circumstances presented below in the aggregate and, finding no other facts that in the aggregate contradict these, used professional judgment to determine that Mediation is a disclosure entity.

Evidence suggesting that Mediation is a consolidation entity includes:

1. It is primarily funded by taxes.
2. Elected officials determine Mediation's budget, because at least 80 percent of its funding is appropriated to Justice. In addition, an appointed federal official, the U.S. Attorney General, approves Mediation's annual budget.

Evidence suggesting that Mediation is a disclosure entity includes:

1. Members of its governing body are selected by non-federal officials, serve longer terms than political appointees, must include members from different political parties, and may only be removed for cause. These conditions insulate the governing body from political influence.
2. Mediation has some access to non-federal funding through grants and its network of service providers is free to access non-federal funding for service delivery (subject to the 20 percent limitation).
3. Federal government has not assumed risks related to Mediation's liabilities.

Administrative Assignments

The Department of Justice should consider whether or not Mediation is administratively assigned to it. Evidence that indicates it is administratively assigned includes the Department of Justice's participation in Mediation's budgetary process. After considering the above and other factors, and using professional judgment, management at the Department of Justice determined and the auditor concurred that disclosures regarding Mediation should be presented in its GPFFR.

Bicycle America, Inc. (Scenario A)

(Not Included)

Assumed Facts and Circumstances

Individual bicycle shop owners determined that a nation-wide network of shops and trails was needed to encourage greater reliance on bicycles for transportation and invested in a new corporation, Bicycle America (BA). BA's mission was to create a coast-to-coast network and ensure wide access to bicycling. Shares in the venture are held by local bicycle shops in all major cities.

BA is governed by a board of directors. The board controls and directs the organization's affairs and interests. Board members are elected by the shareholders to serve three-year terms.

Until recently, BA was able to finance its operations from user fees. A recent lawsuit led to serious financial challenges and cash was unavailable to meet pressing needs. Absent a cash inflow, BA was considering closing the trails. Due to exceptional citizen reliance on the trails for transportation and recreation, the federal government intervened and enacted legislation to provide funding.

The federal government provided a short-term loan to BA. The federal financial intervention to preserve BA was not separately identified in the Budget, but was part of a larger federal program within the Department of Transportation.

The funding legislation also established a temporary advisory committee to monitor BA's financial condition and inform Congress of potential issues that may warrant additional actions. In addition, the advisory committee will develop a plan to aid BA in returning to financial solvency and refinancing the short-term loan.

Tentative Conclusions

Based on the assumed facts and circumstances and other considerations, management determined and the auditor concurred that BA should not be included in the government-wide GPFFR. Specifically, BA is not listed in the Budget. Further, based on the available information and other considerations, management determined and the auditor concurred BA does not meet either the remaining ownership or control inclusion principle because BA continues to be owned by common shareholders and governed by the existing board of directors. The advisory committee offers advice to the Congress and does not have authority to direct BA to act. Management determined and the auditor concurred that, based on the assumed facts and circumstances as well as other considerations not described in the illustration, it would not be misleading to exclude BA.

Bicycle America, Inc. (Scenario B)

(Ownership—Disclosure Entity (Intervention))

Assumed Facts and Circumstances

Same as above except that in addition to the actions in Scenario A above, the federal government received shares that carry 51 percent of the voting rights of BA common stock and the advisory committee will develop a plan to sell the shares.

Tentative Conclusions

Based on the changed assumptions and no information to the contrary, and using professional judgment, management determined and the auditor concurred that BA should be included in the government-wide GPFFR. When the federal government holds a majority ownership interest, albeit temporary, the owned organization should be included in the government-wide GPFFR.

Classification as a Consolidation Entity or Disclosure Entity

The available facts and circumstances indicate that the federal government's involvement with BA is an intervention. Based on the assumed facts and circumstances and other considerations, management determined and the auditor concurred that BA should be reported as a disclosure entity because (1) separate legal identity is maintained, and (2) limited funding from general tax revenues is provided. The initial determination would need to be evaluated periodically to determine if the classification remains appropriate.

Administrative Assignments

Department of Transportation was assigned responsibility for transferring funds to BA which indicates an administrative assignment. As a result, management determined and their auditor concurred that the department should disclose information regarding BA in its GPFFR. If BA is also administratively assigned to other component reporting entities, then those component reporting entities should also disclose information in their GPFFRs.

Chatham Laboratory

(Control based on Persuasive Indicator—Consolidation Entity (FFRDC))

Assumed Facts and Circumstances

Federal Department of ABC (ABC) organized Chatham Laboratory as a federally funded research and development center (FFRDC) to conduct specialized engineering research that supports ABC's mission related to infrastructure and leads to improved services. As specified in the agreement, ABC provides the physical capital and ongoing funding for the FFRDC and sets research goals for Chatham.

ABC selects a contractor to operate Chatham and conduct research consistent with the established goals. ABC is not involved in the day-to-day operations of Chatham. ABC routinely evaluates Chatham's performance and maintains a research office to review strategic plans, consider progress, and serve as a liaison to other federal institutions. ABC reports on Chatham's efforts in its own performance reports.

Chatham operations are funded entirely through appropriations provided to ABC. ABC identifies Chatham in its Congressional Budget Justification but Chatham is not specifically identified in the *Budget of the United States Government: Analytical Perspectives—Supplemental Materials* schedule that provides budget account level information. Instead, amounts for Chatham are included in a larger research program which makes payments to the contractor consistent with the terms of the contract. Chatham's contract operator must submit financial and performance

reports to ABC periodically. All Chatham assets belong to the federal government and the results of Chatham research are the property of the federal government. In addition, ABC would be responsible for liabilities arising from use of the facilities to conduct research such as environmental cleanup liabilities. ABC is also responsible for employee benefits in the event Chatham operations are terminated.

Tentative Conclusions

Based on the assumptions and other considerations, management determined and the auditor concurred that Chatham should be included in the government-wide GPFFR. While contracting for the operation of Chatham, officials at ABC also act as the governing body by establishing the purpose and mission of Chatham. Further, ABC continues in this role through its involvement in Chatham's strategic planning and monitoring of performance. Establishing the purpose and mission of an organization is a persuasive indicator that control exists.

Classification as a Consolidation Entity or Disclosure Entity

For this illustration, management determined and the auditor concurred that, based on the assumed facts and circumstances as well as other considerations not described in the illustrations, Chatham should be reported as a consolidation entity. In arriving at this conclusion, management and the auditor considered the assumed facts and circumstances presented below in the aggregate and, finding no other facts that in the aggregate contradict these, used professional judgment to determine that Chatham is a consolidation entity.

Evidence suggesting that Chatham is a consolidation entity includes:

1. It is primarily financed by taxes.
2. The federal government has assumed the risks associated with Chatham's liabilities.
3. Chatham's annual budget is developed by ABC officials and information related to Chatham activities is provided in ABC's performance report and Congressional Budget Justification. This indicates that decision-making regarding the budget is exercised by elected officials through politically appointed officials and the budget process.

Evidence suggesting that Chatham is a disclosure entity includes:

1. Day-to-day operating decisions are made by a contractor.

After considering the above analysis and other factors, management determined and the auditor concurred that Chatham is a consolidation entity.

Administrative Assignment

ABC should consider whether or not Chatham is administratively assigned to it. In the example, evidence suggesting Chatham is administratively assigned includes ABC's role in Chatham's strategic planning, budgeting, and administration. Having considered the assumed facts and circumstances and other available evidence, the Department of ABC determined and its auditor concurred that it should consolidate Chatham's financial statements in its GPFFR.

Gotham Laboratory

(Not included—Economic Dependency Insufficient to Show Control)

Assumed Facts and Circumstances

The Department of XYZ (XYZ), a department within the executive branch of the federal government, contracted with Gotham Laboratory (Gotham) to conduct specialized engineering research that fulfills a federal mission related to infrastructure and leads to improved services of XYZ. As specified in the agreement, XYZ provides funding to Gotham and Gotham's management team plans, manages, and executes the assigned research program.

XYZ serves on a panel providing input on the appointment of the board of directors for Gotham. However, the board of directors elects new members and the board manages Gotham's research. Gotham also may engage in any outside research activities approved by its board of directors.

Gotham performs services for various federal and non-federal organizations but receives 90 percent of its funding from XYZ. XYZ receives appropriated funds to support the Gotham research program. The remaining 10 percent of Gotham funding is derived from contracts with other federal agencies and private industry as well as donations. Gotham's budget is not reviewed or approved by any federal officials. Gotham is subject to the usual federal contract oversight and reporting requirements.

Tentative Conclusions

Based on the assumptions and other considerations, management determined and the auditor concurred that Gotham should not be included in the government-wide GPFFR. Gotham is not listed in the *Budget of the United States Government: Analytical Perspectives—Supplemental Materials* schedule that provides budget account level information. Further, based on the assumed facts and circumstances and other considerations, Gotham does not meet the inclusion principles of either majority ownership or control with risk of loss or expectation of benefit. Although Gotham appears to be economically dependent on the federal government, it ultimately

retains discretion as to whether to accept funding or do business with the federal government. Despite the influence resulting from this dependency, the federal government does not govern Gotham's financial and operating policies. Further, management determined and the auditor concurred that, based on the assumed facts and circumstances as well as other considerations not described in the illustration, it would not be misleading to exclude Gotham.

Andromeda Prime Power Systems

(Related Party—GSE)

Assumed Facts and Circumstances

The federal government created Andromeda Prime Power Systems (APPS) as a government sponsored enterprise (GSE) to facilitate commercial space travel. APPS controls interplanetary travel among a network of commercial space stations and is subject to federal regulations regarding safety and technology transfers to other nations.

APPS is governed by a nine-member board of directors elected by common stock shareholders. Board members serve three-year terms.

APPS issued common stock and received a federal government grant to finance its initial capital and startup costs. The APPS is under no obligation to return the grant funds but is expected to promote U.S. competitive interests in the emerging space travel industry.

During the reporting period, APPS' board approved a strategic plan to expand its systems to accommodate increased commercial demands and APPS issued bonds to finance the initiative. The interest rate required by lenders indicates that the market assumes the federal government has implicitly guaranteed the payment of principal and interest. In its regulatory capacity, the federal government required APPS to establish a capital reserve and created a five-member APPS Advisory Board to monitor and advise Congress on APPS' fiscal operations.

APPS derives its revenues from fees charged to commercial organizations and receives no ongoing federal support through the Budget.

Tentative Conclusions

Based on the assumptions and other considerations, management determined and the auditor concurred that APPS should not be reported in the government-wide GPFFR as a consolidation entity or disclosure entity. APPS is not listed in the schedule in the *Budget of the United States Government: Analytical Perspectives—Supplemental Materials* that provides budget account

level information and the federal government does not have a majority ownership interest in the company.

Further, management conducted a thorough assessment of control indicators and determined the federal government does not exercise control of APPS. Regulation of APPS does not, by itself, establish control.

However, based on the assumptions and other considerations, management determined and the auditor concurred that APPS should be disclosed as a related party. Related parties generally include GSEs not meeting the inclusion principles, especially those organizations for which the relationship is of such significance that it would be misleading to exclude information about it.

U.S. Museum (Scenario A)

(In the Budget—Consolidation Entity)

Assumed Facts and Circumstances

The U.S. Museum (the Museum) was organized to bring history and lessons about the United States to individuals through educational outreach, teacher training, traveling exhibitions, and scholarship.

The Museum is an independent establishment of the federal government and is governed by a board of trustees, known as the Museum Council. The Council has 13 voting members and 2 nonvoting members. Of the voting members, 11 are appointed by the President and serve 10-year terms (appointments are staggered) and the other 2 are appointed from among members of Congress to serve during their term. The non-voting members are selected by the Council.

The Museum receives an annual appropriation as well as private donations. Annual appropriations account for approximately 90 percent of operations and activities, with the remaining 10 percent coming from donor activities and museum sales. The museum is listed in the *Budget of the United States Government: Analytical Perspectives—Supplemental Materials* schedule that provides budget account level information. All donations are considered to be available for use unless specifically restricted by the donor or by time. Furthermore, the Museum is not considered to be a non-federal organization receiving federal financial assistance.

Tentative Conclusions

Based on the assumptions and other considerations, management determined and the auditor concurred that the Museum should be included in the government-wide GPFFR because the Museum meets the first inclusion principle (in the budget). Further, the President and the

Congress appoint the Museum Council which indicates the federal government controls the Museum which meets the third inclusion principle (control with risk of loss or expectation of benefit).

Classification as a Consolidation Entity or Disclosure Entity

Because it is listed in the budget, the Museum generally would qualify as a consolidation entity assuming no information to the contrary. In this example, management determined and the auditor concurred that there were no facts rebutting or contradicting the assumption that the Museum is a consolidation entity. As a consolidation entity, its financial statements should be consolidated in the government-wide GPFFR. The financial statements included should be for the entire organization and thus include the sources and uses for both the appropriations and the donated funds.

Administrative Assignment

Based on a review by management, no other component reporting entity has been assigned administrative responsibilities for the Museum. Therefore, the Museum is consolidated only directly into the government-wide GPFFR.

U.S. Museum (Scenario B)

(Control based on Persuasive Indicator—Disclosure Entity (Financially Independent))

Assumed Facts and Circumstances

The U.S. Museum (the Museum) was originally organized by volunteers to bring history and lessons about the United States to individuals through educational outreach, teacher training, traveling exhibitions, and scholarship. The Museum is intended to be a self supporting operation. Shortly after its founding, it entered into a cooperative relationship with the Department of Federal Museums, a department within the executive branch.

The Museum is incorporated as a not-for-profit organization governed by the Museum Council. The Council has 15 voting members referred to as trustees. The presidentially-appointed head of the Department of Federal Museums serves as the Council chairperson. Of the remaining voting trustees, nine are appointed by the President and five are selected and approved by the Council. Except for the chairperson, all trustees serve ten-year terms which are staggered. The Council selects a Board of Directors for the Museum and appoints the Chief Executive Officer.

The Museum is a public-private partnership which receives an annual appropriation as well as private donations, rental income, and sales revenue. No fees are charged for educational events

or museum tours. Rental income from the Museum facilities is derived from rates competitive with other venues for similar events. Rental of the facilities is intended to support museum activities such that the museum can eventually be self supporting. Presently, annual appropriations account for approximately 15 percent of operations and activities, with the remaining 85 percent coming from donor activities, rental income, and museum sales. The museum is listed in the *Budget of the United States Government: Analytical Perspectives—Supplemental Materials* schedule that provides budget account level information. The funding received from donations is restricted to use by the Museum and the trustees approve the annual budget including rental income and fundraising goals.

The Museum's employees are not federal employees. The Museum is required to fully fund any deferred compensation programs and to advise its employees that the federal government has not guaranteed their deferred compensation.

Tentative Conclusions

Based on the assumed facts and circumstances and other considerations, management determined and the auditor concurred the Museum should be included in the government-wide GPFFR because it meets the third inclusion principle (control with risk of loss or expectation of benefit). Although the Museum also meets the first inclusion principle (in the budget), it is a non-federal organization receiving federal financial assistance. An assessment of the remaining inclusion principles shows that the Museum meets the third inclusion principle (control with risk of loss or expectation of benefit) because it is controlled by the federal government since a majority of the trustees are appointed by the President; a persuasive indicator of control.

Classification as a Consolidation Entity or Disclosure Entity

For this illustration, management determined and the auditor concurred that, based on the assumed facts and circumstances as well as other considerations not described in the illustrations, the Museum should be reported as a disclosure entity. In arriving at this conclusion, management and the auditor considered the assumed facts and circumstances presented below in the aggregate and, finding no other facts that in the aggregate contradict these, used professional judgment to determine that the Museum is a disclosure entity.

Evidence suggesting that U. S. Museum is a consolidation entity includes:

1. Appointments to the Council are made by elected officials.
2. Museum services, educational events and tours, are provided on a non-market basis to the general public.

Evidence suggesting that U.S. Museum is a disclosure entity includes:

1. The Museum is a separate legal organization – a not-for-profit – and terms for a majority of Council members are ten-years. This insulates the organization from political influence. Further, day-to-day operations are governed by a board of directors whose members are not directly appointed by elected officials.
2. The Museum is intended to receive limited financing from taxes and market rates are charged for facility rentals.
3. The Museum is required to make explicit that any liability for deferred compensation of its employees is not guaranteed by the federal government. This indicates that limited risks are imposed on the federal government.

Disclosure entities should be presented by the component reporting entity to which they are administratively assigned and, if material, by the government-wide entity.

Administrative Assignment

Management determined and the auditor concurred the Department of Federal Museums should present the Museum as a disclosure entity in its GPFFR because the department is assigned administrative responsibility for the Museum based on appointment of its head to serve as chairperson of the Council.

Firefighters' Housing Limited Partnership

(Owned and Controlled—Consolidation Entity)

Assumed Facts and Circumstances

Agency 123 has been authorized to establish pre-positioned housing and equipment storage facilities on federal land to ensure immediate and efficient deployment of firefighting resources in response to wildfires in remote areas. The enabling legislation allows Agency 123 to enter into a wide range of financial agreements with private-sector participants to provide housing and equipment storage for the firefighters.

The agency and a private developer formed a limited partnership—Firefighters' Housing Limited Partnership (FHLP)—to develop, operate, maintain, and own all housing and storage units and facilities within a designated area for 25 years. Agency 123 leased land to FHLP under a 25-year ground lease. At the end of the 25-year ground lease, the agency has the option to renew the partnership for another 25 years. If it does not renew, all structures and land revert back to

Agency 123 in accordance with the agency's residual ownership interest. During the 25-year ground lease, Agency 123 will provide an annual payment to FHLP from its appropriated funds for management services, use of the housing by Agency 123 employees during the fire season, and equipment storage year-round.

The private sector partner is guaranteed a minimum payment from FHLP and has no ownership interest in FHLP properties. The private sector partner also is entitled to a share of profits from non-fire season vacation rentals of the housing so long as the facilities meet established condition requirements. Profits not distributed to the private sector partner are retained by FHLP and can be used for capital improvements including development of new housing in adjacent parks under similar terms.

As part of the partnership agreement, Agency 123 has significant authority to determine the policies governing FHLP's activities and to affect day-to-day decisions such as design and construction. Any debt incurred by FHLP must be authorized by the agency. Furthermore, capital and operating budgets require agency approval and financial transactions are monitored on a monthly basis by the agency's contract administration office. The partnership is required to produce audited financial statements annually.

Tentative Conclusions

Based on the assumed facts and circumstances and other considerations, management determined and the auditor concurred that FHLP should be included in the government-wide GPFFR. A substantial ownership interest is present via the agency's continuing ownership interest. In addition, several control indicators are met as summarized in the following analysis of available information:

1. Agency 123 may be able to direct the partnership regarding the establishment and subsequent revision of financial and operating policies through its review and approval of operating budgets, designs, and condition of the facilities. If so, this would be a persuasive indicator of control. Management should weigh the impact of its role in directing the FHLP's financial and operating policies and consider how much discretion falls to the private sector partner.
2. Other indicators in the aggregate may indicate control. Agency 123 has significant authority to:
 - a. direct the ongoing use of assets,
 - b. approve the budgets and business plans for FHLP,
 - c. require audits, and

-
- d. limit borrowing and investment by FHLP.

Classification as a Consolidation Entity or Disclosure Entity

For this illustration, management determined and the auditor concurred that, based on the assumed facts and circumstances as well as other considerations not described in the illustrations, FHLP should be reported as a consolidation entity. In arriving at this conclusion, management and the auditor considered the assumed facts and circumstances presented below in the aggregate and, finding no other facts that in the aggregate contradict these, used professional judgment to determine that FHLP is a consolidation entity.

Evidence suggesting that FHLP is a consolidation entity includes the following:

1. FHLP provides housing to firefighters as its primary function on a non-market basis.
2. It is financed by tax revenues supplemented by any retained profits from non-fire season rentals.
3. Decisions are made by organizational leaders at Agency 123 who are appointed by the President and confirmed by the Senate.
4. Funds transferred to FHLP will be approved through the usual budgetary process so that FHLP funding will be included in the budget approved by the Congress and the President.

Evidence suggesting that FHLP is a disclosure entity includes the following:

1. FHLP has a legal identity separate from Agency 123.
2. FHLP is authorized to provide vacation housing services to customers on a market basis and use the proceeds to first compensate the private sector partner and then reduce the cost of firefighter housing borne by the taxpayer.

As a consolidation entity, FHLP's financial statements should be consolidated by the component reporting entity to which it is administratively assigned.

Administrative Assignment

Management determined and the auditor concurred that Agency 123 should consolidate FHLP's financial statements because it is assigned administrative responsibility for FHLP based on its inclusion of FHLP funding in its budget request and its coordination and monitoring of FHLP's plans and performance.

The Blue Mountain Observatory

(Control based on Indicators in the Aggregate—Disclosure Entity (FFRDC))

Assumed Facts and Circumstances

Agency XYZ created an FFRDC, the Blue Mountain Observatory (BMO), to provide facilities and leadership needed to conduct scientific research in a wide range of fields, including the study of black holes. Agency XYZ is BMO's primary sponsor. University Cooperative (UC) is a not-for-profit membership corporation created by 50 universities conducting research that would benefit from use of BMO facilities. UC was created to seek the role of managing, operating, and maintaining BMO under a cooperative agreement with Agency XYZ. UC subsequently entered into a cooperative agreement with Agency XYZ.

UC is governed by a board of trustees appointed to represent each of the 50 member universities. UC trustees appoint an individual to serve as president of BMO. The trustees also oversee BMO operations including providing input on strategic plans, approving the annual program plan before its submission to Agency XYZ for approval, responding to Agency XYZ input, and monitoring financial activities including establishing investment policies. UC employs staff to perform all BMO activities and these individuals are referred to as 'BMO employees.' Member universities fund any non-BMO activities of UC.

The cooperative agreement between UC and Agency XYZ ensures close coordination between Agency XYZ and BMO employees. The agreement contains requirements necessary for Agency XYZ's oversight of both BMO's programs and UC's management activities, including the following provisions:

1. Provide input to a strategic plan developed by BMO employees in collaboration with UC trustees. The strategic plan sets the overall direction and priorities for BMO.
2. Agency XYZ must approve the annual program plan and budget for use of resources.
3. UC must provide to Agency XYZ an annual scientific report and audited financial statements.
4. Agency XYZ participates in developing a five-year strategic plan.
5. BMO and Agency XYZ must meet annually to review progress and ensure that scientific and facility priorities remain consistent with those of Agency XYZ.

UC works cooperatively with Agency XYZ to ensure the effective implementation of the strategic mission of BMO to the benefit of the research community. Mid-way through the current

cooperative agreement, Agency XYZ will conduct comprehensive reviews of science, facilities, and management to inform future decisions regarding recompetition of the cooperative agreement for the facility. UC is under no obligation to continue in its role in managing, operating, and maintaining BMO.

In the most recent fiscal year, BMO received \$100 million in funding from Agency XYZ through its cooperative agreement with UC. Agency XYZ proposed the \$100 million in funding in its Congressional Budget Justification and described how the funds would be used to support the research programs at BMO. In administering the funds provided by Agency XYZ for BMO programs, UC may:

1. expend funds to meet ongoing operational needs,
2. make annual cash contributions to employee benefits programs (accrued leave and pension plans),
3. make annual payments due under long-term leases, and
4. construct or purchase new assets so long as all resulting property is titled to BMO.

In the event the cooperative agreement with UC is terminated, Agency XYZ would assume management responsibility for the facility. Further, Agency XYZ would seek appropriations for termination expenses such as post-retirement benefit liabilities for BMO employees. However, Agency XYZ would be obligated to pay termination benefits only if funds were appropriated for that purpose.

Tentative Conclusions

Based on the assumed facts and circumstances and other considerations, management determined and the auditor concurred that BMO should be included in the government-wide GPFFR. BMO is not listed in the *Budget of the United States Government: Analytical Perspectives—Supplemental Materials* schedule that provides budget account level information so other inclusion principles must be considered. BMO facilities are owned by the federal government and new assets are titled to the federal government. With respect to the control inclusion principle, Agency XYZ establishes the fundamental purpose and mission of BMO through its participation in strategic planning and the overall effort to ensure BMO goals are consistent with Agency XYZ research goals. This effort includes annual actions to approve BMO's annual program plan and operating budget. These actions are persuasive indicators of control.

Classification as a Consolidation Entity or Disclosure Entity

For this illustration, management determined and the auditor concurred that, based on the assumed facts and circumstances as well as other considerations not described in the illustrations, BMO should be reported as a disclosure entity. In arriving at this conclusion, management and the auditor considered the assumed facts and circumstances presented below in the aggregate and, finding no other facts that in the aggregate contradict these, used professional judgment to determine that BMO is a disclosure entity.

Evidence suggesting that BMO is a consolidation entity includes the following:

1. BMO provides, as its primary function, research facilities and leadership to university members of UC on a non-market basis. It is financed by taxpayer funds supplemented by non-government donors.
2. Key operational decisions are made by organizational leaders at Agency XYZ who are appointed by the President and confirmed by the Senate.
3. Funds transferred to BMO will be approved through the usual budgetary process so that use of tax revenues to support BMO is ultimately decided by the Congress and the President.

Evidence suggesting that BMO is a disclosure entity includes the following:

1. BMO has a legal identity separate from Agency XYZ.
2. The governance structure ensures that universities have substantial input regarding BMO's strategic plans and annual program plan. The significant involvement of non-governmental organizations lessens political influence.
3. BMO's liabilities are not obligations of the U.S. government.
4. BMO is authorized to accept donations from non-government organizations.

As a disclosure entity, BMO should be presented by the component reporting entity to which it is administratively assigned.

Administrative Assignment

Management determined and the auditor concurred that Agency XYZ should disclose information about BMO because it is assigned administrative responsibility for BMO based on its inclusion of BMO funding in its budget request and its coordination and monitoring of BMO's plans and performance.

Table 1: Summary Application of Standard

IS THE ORGANIZATION INCLUDED IN THE GOVERNMENT-WIDE GPFFR?						CONSOLIDATION ENTITY OR DISCLOSURE ENTITY	
NAME	IN THE BUDGET	OWNED	CONTROL	MISLEADING TO EXCLUDE	IS THE ORGANIZATION INCLUDED?	A CONSOLIDATION ENTITY (CONSOLIDATED)	A DISCLOSURE ENTITY (DISCLOSED)
ABC Department	Yes				Yes	Organizations listed in the budget generally would qualify as consolidation entities.	
Epsilon Corporation	Yes				Yes	Organizations listed in the budget generally would qualify as consolidation entities.	
Sigma Association	No	No	Yes. A majority of the governing board members is appointed by the President and confirmed by the Senate and they established its fundamental purpose and mission through legislation.		Yes		Financially independent organization
Scholars University	Yes but as a non-federal organization receiving federal financial assistance.	No	No. Scholars' board of trustees elects its respective board members. Scholars' board of trustees primarily directs the university's affairs and the university seeks sources of revenue to operate virtually in a self-sustaining manner.	Management and auditor agreement based on facts and circumstances it was not misleading to exclude.	No		
Education Research Institute	No	No	Yes, the federal government can unilaterally dissolve ERI and have access to its assets and responsibility for its liabilities.		Yes	The ERI Trust Fund is primarily funded through taxes, elected officials establish ERI's budget, services are provided on a non-market basis, and federal government assume risk.	

IS THE ORGANIZATION INCLUDED IN THE GOVERNMENT-WIDE GPFFR?						CONSOLIDATION ENTITY OR DISCLOSURE ENTITY	
NAME	IN THE BUDGET	OWNED	CONTROL	MISLEADING TO EXCLUDE	IS THE ORGANIZATION INCLUDED?	A CONSOLIDATION ENTITY (CONSOLIDATED)	A DISCLOSURE ENTITY (DISCLOSED)
Mediation Corporation	Yes but as a non-federal organization receiving federal financial assistance. Therefore, must assess against other principles.	No	Yes. Considering the control indicators in the aggregate, the federal government controls Mediation. It provides significant input on the selection of governing board members, appoints a key executive, limits Mediation's capacity to generate revenue, approves the annual budget, requires audited financial statements, and directs Mediation to work with other governments.		Yes		Mediation's governing body is insulated from political influence and risks are not assumed by the federal government.
Bicycle America, Inc. (Scenario A)	No	No. BA is owned by shareholders.	No, governing board members are elected by shareholders rather than subject to political appointment.	No, Management and auditor agreement based on facts and circumstances it was not misleading to exclude.	No. Advisory committee offers advice but does not have the authority to direct BA to act.		
Bicycle America, Inc. (Scenario B)	No	Yes, the federal government acquired 51% of the voting rights in BA.			Yes		Intervention activity—separate legal entity with limited financing from general taxes.
Chatham Laboratory (FFRDC)	No	The assets and research results are owned.	Yes. The federal government establishes the purpose and mission of Chatham.		Yes	Yes, Chatham is primarily funded by taxes, and governance rests with the President and Congress.	

IS THE ORGANIZATION INCLUDED IN THE GOVERNMENT-WIDE GPFFR?						CONSOLIDATION ENTITY OR DISCLOSURE ENTITY	
NAME	IN THE BUDGET	OWNED	CONTROL	MISLEADING TO EXCLUDE	IS THE ORGANIZATION INCLUDED?	A CONSOLIDATION ENTITY (CONSOLIDATED)	A DISCLOSURE ENTITY (DISCLOSED)
Gotham Laboratory	No	No	No	No, Management and auditor agreement based on facts and circumstances it was not material to exclude.	No. Although it may be economically dependent, Gotham has discretion as to whether to accept funding from the government.		
Andromeda Prime Power Systems (GSE)	No	No	No, APPS' governing body is elected by common shareholders. The APPS Advisory Board advises Congress and does not direct APPS' operations.		No, Management determined and the auditor concurred APPS should be disclosed as a related party.		
U.S. Museum (Scenario A)	Yes				Yes	Yes. The Museum is in the budget and primarily funded by taxes and governance rests with the President and Congress.	
U.S. Museum (Scenario B)	Yes but as a non-federal organization receiving federal financial assistance.	No	Yes. The President appoints a majority of the governing body's members.		Yes		The museum is a financially independent organization.
Firefighters' Housing Limited Partnership	No	Ownership of property is retained.	Yes. Agency 123 has significant authority to direct the limited partnership's activities and to affect day-to-day activities such as in design and construction and the partnership's purpose is to carry out federal missions and objectives.		Yes	Yes. Taxes fund the housing and risks have been assumed.	

IS THE ORGANIZATION INCLUDED IN THE GOVERNMENT-WIDE GPFFR?						CONSOLIDATION ENTITY OR DISCLOSURE ENTITY	
NAME	IN THE BUDGET	OWNED	CONTROL	MISLEADING TO EXCLUDE	IS THE ORGANIZATION INCLUDED?	A CONSOLIDATION ENTITY (CONSOLIDATED)	A DISCLOSURE ENTITY (DISCLOSED)
Blue Mountain Observatory(FFRDC)	No	Property is owned by the federal government.	Yes. The federal government establishes the purpose and mission of BMO.		Yes		BMO is a separate legal entity and UC plays a significant role in its governance without political influence.

Statement of Federal Financial Accounting Standards 48: Opening Balances for Inventory, Operating Materials and Supplies, and Stockpile Materials

Status

Issued	January 27, 2016
Effective Date	For periods beginning after September 30, 2016. Earlier implementation is encouraged.
Affects	SFFAS 3, par. 20, 22, 23-25, 26, 42, 44, and 53.
Affected by	None.
Related Guidance	TR 18, <i>Implementation Guidance for Establishing Opening Balances</i>

Summary

This Statement permits a reporting entity to apply an alternative valuation method in establishing opening balances for inventory, operating materials and supplies, and stockpile materials. This method is permitted when presenting financial statements, or one or more line items addressed by this Statement, following generally accepted accounting principles (GAAP) promulgated by the Federal Accounting Standards Advisory Board either (1) for the first-time or (2) after a period during which existing systems could not provide the information necessary for producing such GAAP-based financial statements without use of the alternative valuation method.

This Statement is intended to provide an alternative valuation method to adoption of GAAP when historical records and systems do not provide a basis for valuation of opening balances in accordance with SFFAS 3, *Accounting for Inventory and Related Property*.

Introduction

Purpose

1. This Statement permits a reporting entity to apply an alternative valuation method in establishing opening balances for inventory, operating materials and supplies (OM&S), and stockpile materials. These assets are addressed in Statement of Federal Financial Accounting Standards (SFFAS) 3, *Accounting for Inventory and Related Property*. While SFFAS 3 addresses six types of tangible property, only inventory, OM&S, and stockpile materials are required to be valued using the "initial amount" measurement approach.¹
2. The alternative valuation method permitted by this Statement may be applied when a reporting entity is presenting financial statements or one or more line items addressed by this Statement following generally accepted accounting principles (GAAP) promulgated by the Federal Accounting Standards Advisory Board (FASAB) either (1) for the first-time or (2) after a period during which existing systems could not provide the information necessary for producing such GAAP-based financial statements without use of the alternative valuation method.

Materiality

3. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

¹ The *measurement approach* is how an asset or liability is measured in periods after initial recording-i.e., at the historical cost or initial transaction amount (with subsequent adjustments for amortization, depreciation, or depletion, if applicable) or at an amount, such as fair value, measured at each financial statement date. A different measurement approach may be appropriate for different assets and liabilities. Amounts initially recorded are referred to as the "initial amount" and amounts measured at each subsequent financial statement date are "remeasured amounts." [Statement of Federal Financial Accounting Concepts (SFFAC) 7, *Measurement of the Elements of Accrual-Basis Financial Statements in Periods After Initial Recording*, par. 7a]

Standards

Scope

4. This Statement applies when a reporting entity is presenting financial statements or one or more line items addressed by this Statement following generally accepted accounting principles (GAAP) promulgated by the Federal Accounting Standards Advisory Board (FASAB) either (1) for the first-time or (2) after a period during which existing systems could not provide the information necessary for producing such GAAP-based financial statements without use of the alternative valuation method. The application of this Statement based on the second condition is available once per reporting entity.
5. This Statement may only be applied in establishing **opening balances**² for the reporting period that the reporting entity, taken as a whole, makes an **unreserved assertion** that its financial statements, or one or more line items addressed by this Statement, are presented fairly in accordance with GAAP.
6. Reporting entities that meet either condition in paragraph 4 and elect to apply the alternative valuation method in establishing opening balances permitted by this Statement are subject to the reporting requirements under paragraph 13 of Statement of Federal Financial Accounting Standards (SFFAS) 21: *Reporting Corrections of Errors and Changes in Accounting Principles*.

Definitions

7. **Deemed Cost**—Amount used as a surrogate for initial amounts that otherwise would be required to establish opening balances.
8. **Opening Balances**—Account balances that exist at the beginning of the reporting period. Opening balances are based upon the closing balances of the prior period and reflect the effects of transactions and events of prior periods and accounting policies applied in the prior period. Opening balances also include matters requiring disclosure that existed at the beginning of the period, such as contingencies and commitments.³

² Terms defined in the Glossary are shown in bold-face the first time they appear.

³ Adopted from AU-C 510, *Opening Balances – Initial Audit Engagements, Including Reaudit Engagements* (AICPA Professional Standards).

-
9. **Unreserved Assertion**—An unconditional statement.
-

Alternative Valuation Method for Opening Balances

10. **Deemed cost** is an acceptable valuation method for opening balances of inventory, operating materials and supplies (OM&S), and stockpile materials for the reporting period when the reporting entity makes an unreserved assertion that its financial statements, or one or more line items addressed by this Statement, are presented fairly in accordance with GAAP.
11. Because the reporting entity may have multiple component reporting entities using various valuation methods simultaneously, deemed cost should be based on one, or a combination, of the following valuation methods:⁴
- a. Standard price (selling price)⁵ or fair value⁶
 - b. Latest Acquisition Cost⁷
 - c. Replacement cost⁸
 - d. Estimated historical cost (initial amount)
 - e. Actual historical cost (initial amount)

⁴ The methods are not listed in order of preference.

⁵ The latest known representative acquisition cost plus authorized cost recovery rate for each item of inventory and related property. This is established annually and is often referred to as selling price. Selling price and fair value may or may not be identical due to the intragovernmental nature of some sales.

⁶ Fair value is the amount at which an asset or liability could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale. (SFFAC 7, par. 38).

⁷ The Latest Acquisition Cost (LAC) Method provides that all like units that are held be valued at the invoice price of the most recent like item purchased, less any discounts, plus any additional costs incurred to bring the item to a form and location suitable for its intended use. *FASAB Handbook Glossary as of June 30, 2014*

⁸ Replacement cost is the amount required for an entity to replace the remaining service potential of an existing asset in a current transaction at the reporting date, including the amount that the entity would receive from disposing of the asset at the end of its useful life. (SFFAC 7, par. 46)

-
12. Once established using deemed cost, opening balances are to be considered consistent with GAAP. No distinction or breakout of the deemed cost amount in the opening balances is required.
-

Disclosure Requirements

13. A reporting entity electing to apply deemed cost in establishing opening balances for inventory, OM&S, or stockpile materials should disclose this fact and describe the method used in the first reporting period in which the reporting entity makes an unreserved assertion that its financial statements, or one or more line items addressed by this Statement, are presented fairly in accordance with GAAP. Financial statements, or as applicable, reports on line items, of subsequent periods need not repeat this disclosure unless the statements for which deemed cost was applied in establishing opening balances are presented for comparative purposes. No disclosure of the distinction or breakout of amount of deemed cost of inventory, OM&S, or stockpile materials included in the opening balance is required.
-

Effect on Existing Standards - Amendments to SFFAS 3, *Accounting for Inventory and Related Property*

14. This section amends SFFAS 3, *Accounting for Inventory and Related Property*, as described in the following paragraphs.
15. Paragraph 20 is replaced with the following paragraph: “**Valuation.** Inventory shall be valued at either (1) historical cost or (2) a method that reasonably approximates historical cost.”
16. Paragraph 22, the last sentence is amended by removing “(e.g., a standard cost system).”
17. Paragraphs 23-25 are rescinded to remove the term latest acquisition cost (LAC) from SFFAS 3 when used to mean that LAC that is equivalent to historical cost (inclusive of the valuation allowance).
18. Paragraph 26 is replaced by the following paragraph which expands the exception to valuation in SFFAS 3 to incorporate the Alternative Valuation Method for Opening Balances provided in this Statement.

"26. Valuation Method for Opening Balances and Exceptions to Valuation.

- a. **Alternative Valuation Method for Opening Balances.**⁹ Deemed cost¹⁰ is an acceptable valuation method for opening balances of inventory, operating materials and supplies (OM&S), and stockpile materials when a reporting entity is presenting financial statements, or one or more line items addressed by Statement of Federal Financial Accounting Standards (SFFAS) 48, *Opening Balances for Inventory, Operating Materials and Supplies, and Stockpile Materials*, following generally accepted accounting principles (GAAP) promulgated by the FASAB either (1) for the first-time or (2) after a period during which existing systems could not provide the information necessary for producing such GAAP-based financial statements without use of the alternative valuation method. The following should be considered in applying an alternative valuation method:
- i. The alternative valuation method may only be applied in establishing opening balances for the reporting period that the reporting entity, taken as a whole, makes an unreserved assertion¹¹ that its financial statements, or one or more line items addressed by SFFAS 48, are presented fairly in accordance with GAAP.
 - ii. The application of this method based on the second condition specified above is available once per reporting entity.
 - iii. Reporting entities that meet either condition in paragraph 26a. and elect to apply the alternative valuation method in establishing opening balances permitted by SFFAS 48 are subject to the reporting requirements under paragraph 13 of Statement of Federal Financial Accounting Standards 21: *Reporting Corrections of Errors and Changes in Accounting Principles*.
 - iv. Because the reporting entity may have multiple component reporting entities using various valuation methods simultaneously, deemed cost should be based on one, or a combination, of the following valuation methods:¹²

⁹ Opening balances are account balances that exist at the beginning of the reporting period. Opening balances are based upon the closing balances of the prior period and reflect the effects of transactions and events of prior periods and accounting policies applied in the prior period. Opening balances also include matters requiring disclosure that existed at the beginning of the period, such as contingencies and commitments.

¹⁰ Deemed cost is an amount used as a surrogate for initial amounts that otherwise would be required to establish opening balances.

¹¹ An unreserved assertion is an unconditional statement.

¹² The methods are not listed in order of preference.

-
- (1) Standard price (selling price)¹³ or fair value¹⁴
 - (2) Latest Acquisition Cost¹⁵
 - (3) Replacement cost¹⁶
 - (4) Estimated historical cost (initial amount)
 - (5) Actual historical cost (initial amount)
- v. Disclosure requirements-A reporting entity electing to apply deemed cost in establishing opening balances for inventory, OM&S, or stockpile materials should disclose this fact and describe the method used in the first reporting period in which the reporting entity makes an unreserved assertion that its financial statements, or one or more line items are presented fairly in accordance with GAAP. Financial statements, or as applicable, reports on line items, of subsequent periods need not repeat this disclosure unless the statements for which deemed cost was applied in establishing opening balances are presented for comparative purposes. No disclosure of the distinction or breakout of amount of deemed cost of inventory, OM&S, or stockpile materials included in the opening balance is required.
- b. **Exceptions to Valuation.** An exception for reporting inventory, OM&S, and stockpile materials at net realizable value is available for agricultural, mineral, and other products (e.g. petroleum) with all the following criteria:
- i. Units of which are interchangeable,
 - ii. Units of which have immediate marketability,
 - iii. Units for which appropriate costs may be difficult to obtain."

¹³ The latest known representative acquisition cost plus authorized cost recovery rate for each item of inventory and related property. This is established annually and is often referred to as selling price. Selling price and fair value may or may not be identical due to the intragovernmental nature of some sales.

¹⁴ Fair value is the amount at which an asset or liability could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale. (SFFAC 7, par. 38)

¹⁵ The Latest Acquisition Cost (LAC) Method provides that all like units that are held be valued at the invoice price of the most recent like item purchased, less any discounts, plus any additional costs incurred to bring the item to a form and location suitable for its intended use. *FASAB Handbook Glossary as of June 30, 2014*

¹⁶ Replacement cost is the amount required for an entity to replace the remaining service potential of an existing asset in a current transaction at the reporting date, including the amount that the entity would receive from disposing of the asset at the end of its useful life. (SFFAC 7, par. 46)

-
19. Paragraph 42 is amended by adding the following after historical cost "or on a basis that reasonably approximates historical cost. The provisions of paragraph 26, Alternative Valuation Method for Opening Balances, extend to Operating Material and Supplies."
 20. Paragraph 44 is amended by deleting the last sentence: "In addition, any other valuation method may be used if the results reasonably approximate those of one of the above historical cost methods (e.g., a standard cost or latest acquisition cost system)."
 21. Paragraph 53, the first sentence is amended by adding the following after historical cost "or on a basis that reasonably approximates historical cost. The provisions of paragraph 26, Alternative Valuation Method for Opening Balances, extend to Stockpile Materials."
Paragraph 53 is also amended by deleting the last sentence: In addition, any other valuation method may be used if the results reasonably approximate those of one of the above historical cost methods (e.g., a standard cost or latest acquisition cost system)."
-

Effective Date

22. This Statement is effective for periods beginning after September 30, 2016. Earlier implementation is encouraged.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

Department of Defense Implementation Guidance Request Project

- A1. In February 2014, the Department of Defense (DoD) identified several areas of concern for the Board's consideration. The Board agreed to undertake a project to address these areas by providing practical guidance within the framework of existing accounting standards and, where necessary, provide the appropriate guidance to address issues not addressed within the framework of existing accounting standards.
- A2. This Statement is related to the request for guidance on the use of reasonable baseline estimates on the valuation of inventory, operating materials and supplies (OM&S), and stockpile materials from non-GAAP legacy systems. Statement of Federal Financial Accounting Standards (SFFAS) 3, *Accounting for Inventory and Related Property*, requires valuation at historical cost (initial amounts).
- A3. In the initial phase of the project, Board staff met with senior officials from DoD to develop a comprehensive list of inventory valuation methodologies in place and the status of implementation of an SFFAS 3 compliant system for each DoD component.
- A4. Based on the meetings and information provided it was determined that:
 - a. Most DoD component legacy systems have valued inventory, OM&S, and stockpile materials at latest acquisition cost or standard cost (selling price) rather than historical cost. These legacy systems do not maintain a record of the cost of previous

- purchases. Therefore, DoD does not have the data necessary for revaluing inventory, OM&S, and stockpile materials at transition from a non-GAAP to a GAAP valuation (that is, historical cost).
- b. DoD components transitioned from non-GAAP legacy systems to SFFAS 3 compliant systems at different times. While DoD has implemented systems that are SFFAS 3 compliant, it is difficult to determine at what point DoD inventory valuation using a historical cost methodology (for example, moving average cost) will be cleansed (eliminated through turnover) of non-GAAP values derived from legacy systems.
 - c. DoD components advised that they do not have the information to provide historical turnover rates for the purpose of identifying items that have turnover rates such that the non-GAAP valuation method used prior to the adoption of SFFAS 3 would approximate historical cost.
 - d. DoD does not have the information for revaluation and it is not practical or cost effective to develop models for revaluation.

Summary of Outreach Efforts and Responses

- A5. The Exposure Draft (ED), *Opening Balances for Inventory, Operating Materials and Supplies (OM&S) and Stockpile Materials*, was issued on June 2, 2015 with comments requested by July 20, 2015.
- A6. Upon release of the ED, notices and press releases were provided to the FASAB email listserv, the Federal Register, FASAB News, the Journal of Accountancy, Association of Government Accountants Today, the CPA Journal, Government Executive, and the CPA Letter, the CFO Council, the Council of the Inspectors General on Integrity and Efficiency, and committees of professional associations generally commenting on exposure drafts in the past (for example, the Greater Washington Society of CPAs, Association of Government Accountants Financial Management Standards Board.)
- A7. This broad announcement was followed by direct mailings of the ED to the following relevant congressional committees:
 - a. House Appropriations- Sub-Committee on Defense
 - b. House Committee on Armed Services
 - c. House Committee on Oversight and Government Reform

-
- d. House Committee on the Budget
 - e. House Committee on Veterans' Affairs
 - f. Senate Appropriations- Sub-Committee on Defense
 - g. Senate Committee on Armed Services
 - h. Senate Committee on Finance
 - i. Senate Committee on Homeland Security and Governmental Affairs
 - j. Senate Committee on the Budget
 - k. Senate Committee on Veterans' Affairs

A8. The DoD also received the ED.

A9. Twelve responses were received from preparers, auditors, and professional associations. All respondents (with the exception of one respondent that did not specify agreement or disagreement) agreed with the proposal. The respondents identified certain issues that could be clarified within the Statement or addressed in the Basis for conclusions.

A10. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered each response and weighed the merits of the points raised. The respondents' comments are summarized below.

A11. Two respondents requested that aspects of the scope be clarified. After considering the comments, the Board considered options and decided to state consistently the conditions that entities must meet in order to apply the provisions of this Statement rather than attempting to describe the many conditions for which the Statement does not apply. Additionally, the Board believed it should address the applicability of Statement of Federal Financial Accounting Standards (SFFAS) 21: *Reporting Corrections of Errors and Changes in Accounting Principles* to those reporting entities that meet the conditions and elect to apply the provisions of this Statement. Specifically, paragraph 12 states "...For the purposes of this standard, changes in accounting principles also include those occasioned by the adoption of new federal financial accounting standards." Therefore, reporting entities meeting the conditions and electing to apply this Statement should follow the guidance in SFFAS 21 paragraph 13(a) - (c) for all changes in accounting principles:

"(a) The cumulative effect of the change on prior periods should be reported as a "change in accounting principle." The adjustment should be made to the beginning balance of

cumulative results of operations in the statement of changes in net position for the period that the change is made.

(b) Prior period financial statements presented for comparative purposes should be presented as previously reported; and

(c) The nature of the changes in accounting principle and its effect on relevant balances should be disclosed in the current period. Financial statements of subsequent periods need not repeat the disclosure."

- A12. SFFAS 21 provides that the adjustment should be made to the beginning balance of cumulative results of operations in the statement of changes in net position for the period that the change is made. Thus, no change would be made to the ending net position of the previous year. The disclosures should be at a high level and explain that opening balances of a particular line item or group of line items were valued at deemed cost under this Statement, briefly describe deemed cost, and indicate the effect of adoption on beginning net position.
- A13. In addition, changes to the basis for conclusions were made so it did not appear that references to DoD in the basis for conclusions were intended to limit the applicability of deemed cost. While the Statement resulted from a request from DoD, it may be applied to any reporting entity that falls within the scope of the Statement.
- A14. During due process, two respondents noted potential confusion due to the similarities between the valuation methods identified for use in arriving at deemed cost for opening balances and with methods identified for use in SFFAS 3. Respondents questioned how the alternative valuation method differs from other valuation methods which approximate historical cost such as latest acquisition cost. They asked whether methods that are allowable under SFFAS 3 should be removed because those would not be considered alternative methods.
- A15. The Board believes all reasonable methods should be allowed for opening balances. Therefore, the list of potential deemed cost methods remains expansive. This list includes historical cost because deemed cost may be a consolidation of amounts based on historical cost methods and other methods that do not approximate historical cost. Further, some respondents were confused by the references to latest acquisition cost. The Board's intends that latest acquisition cost, without adjustment for unrealized holding gains and losses needed to approximate historical cost, be permitted under the deemed cost method; thus, this method was not a method that approximates historical cost as provided by SFFAS 3.

-
- A16. The Board believes that amending SFFAS 3 to incorporate the alternative valuation approach for opening balances would clarify the intended application and address the concerns raised by respondents. Specifically, removing the term latest acquisition cost (LAC) from SFFAS 3 when used to mean that LAC is equivalent to historical cost (inclusive of the valuation allowance) will avoid potential misunderstandings. The Board believes removing this discussion of LAC will prevent confusion regarding the use of LAC adjusted to approximate historical cost through an allowance for unrealized holding gains or losses as a deemed cost method (not adjusted to approximate historical cost) as provided in this Statement. To assist users, the Board is providing Appendix C: Amendments to SFFAS 3, a marked version of the relevant sections (Inventory, Operating Materials and Supplies, and Stockpile Materials) of SFFAS 3.
- A17. In addition, it was suggested the term "may" as used in paragraph 11 regarding the use of valuation methods presents an auditability challenge and respondents recommended it be changed to "should." The Board's intent was to be permissive regarding methods; however, after considering the suggestion that an unacceptable method could be used the language was changed. The Board still believes the standards should provide for all methods, including those that are allowable under SFFAS 3, because this provides flexibility and a cost-effective approach for large and complex organizations to include several valuation methods because the reporting entity may have components using different methods and/or adopting methods permitted under SFFAS 3 at different times.
- A18. In addition, four respondents requested clarification on the disclosure requirements. Based on the comments, language was added to the disclosure paragraph to clarify that financial statements of subsequent periods need not repeat this disclosure unless the statements to which deemed cost was applied in establishing opening balances are presented for comparative purposes. One respondent requested clarification on what is meant by first reporting period in relation to interim reporting. The first reporting period would be the first financial statement year end that an unreserved assertion is made. The Board does not believe this would include interim financial statements that presently are unaudited and do not include note disclosures. One respondent requested that the Board consider adding a requirement for the amount of the deemed cost to be disclosed. The Board considered carefully the disclosures that would provide the most meaningful information when developing the Statement. Considering the intent and purpose of this Statement, the Board does not believe such a disclosure would add sufficient value to warrant the significant effort and costs.
- A19. During due process, three respondents requested the term "unreserved assertion" be defined. The Board revised the Statement to include a definition of the term. Additionally, a respondent suggested that certain entities' management (such as DoD) may be required to make assertions regarding its financial information. An example is management assertions that DoD financial statements are validated as ready for audit by not later than September

30, 2017. This Statement refers to an unreserved assertion that the reporting entity's "financial statements, or one or more line items addressed by this Statement, are presented fairly in accordance with GAAP." Other assertions - such as being ready for an audit - may or may not accompany such an assertion. Other minor changes were made to the Statement as suggested by respondents that improved the clarity of the document and terms.

Alternative Valuation Method

Consideration of Other Accounting Standards

A20. During deliberation on the project, the Board considered the recently issued International Public Sector Accounting Standards (IPSAS) No. 33, *First Time Adoption of Accrual Basis International Public Sector Accounting Standards*. The International Public Sector Accounting Standards Board (IPSASB) reached several relevant conclusions with IPSAS No. 33:

- a Use of deemed cost facilitates the introduction of IPSASs in a cost effective way.
- b Multiple options for deemed cost are appropriate.
- c The use of deemed cost should be restricted to those circumstances where reliable information about the historical cost of the asset is not available.
- d Use of deemed cost does not affect fair presentation.

A21. The Board believes that it should take an approach similar to the IPSASB standard. Deemed cost is a surrogate for initial amounts and an acceptable valuation method for opening balances for inventory, OM&S, and stockpile materials. Use of deemed cost is intended to provide a cost-effective approach to the adoption of SFFAS 3 where historical records and systems do not support such balances.

Alternative Valuation Method for Opening Balances

A22. A reporting entity may use deemed cost as an alternative valuation method in establishing opening account balances for inventory, OM&S, and stockpile materials addressed in SFFAS 3 for the reporting period that the reporting entity first makes an unreserved assertion that its financial statements, or one or more line items addressed by this Statement, are presented fairly in accordance with GAAP.

- A23. This guidance is intended to provide a cost-effective approach to the adoption of SFFAS 3 where historical records and systems do not support such balances. Therefore, most often deemed cost will be based on the reporting entity's valuation method or system used for managing inventory, OM&S, and stockpile materials prior to the adoption of SFFAS 3.
- A24. Large and complex reporting entities such as DoD may have used a variety of valuation methods prior to the adoption of SFFAS 3. Therefore, this Statement allows for deemed cost to include several valuation methods because the reporting entity may have components (1) using different methods simultaneously and/or (2) adopting a method permitted under SFFAS 3 at different times prior to establishing opening balances. Deemed cost may be one of or a combination of valuation methods. However, this Statement requires that the accounting for all activity after the opening balance is established comply with SFFAS 3.
- A25. Opening balances in this Statement are the balances at the beginning of the first reporting period when the entity makes an unreserved assertion that its financial statements, or one or more line items addressed by this Statement, are fairly presented in accordance with GAAP. Once established using deemed cost, opening balances are to be considered consistent with historical cost requirements of SFFAS 3.
- A26. Opening balances, established by application of this Statement, should be included in ongoing inventory valuation methods as a surrogate for the initial amounts that would have existed had a GAAP valuation method been used. Further, no distinction or segregation of amounts arising from the opening balances is required. For example, cost of goods sold using deemed cost need not be distinguished from cost of goods sold at historical cost under a first-in first-out approach. The purpose of this Statement is to provide an alternative valuation method for this specific situation. Absent a reliable record of transactions related to hundreds of thousands of individual types of inventory, OM&S, and stockpile materials, acceptance of non-GAAP values at the transition point to SFFAS 3 compliant systems is the most cost-effective approach.
- A27. However, all activity after the opening balances for inventory, OM&S, and stockpile materials are established must comply with the recognition, measurement, presentation, and disclosure requirements in SFFAS 3.

Implementation by Component Reporting Entities

- A28. As stated above, complex reporting entities such as DoD may have used a variety of valuation methods prior to the adoption of SFFAS 3. Further, reporting entity components may have transitioned to an SFFAS 3 valuation method at different times; however, some components established balances for existing inventory, OM&S, and stockpile materials at the time of transition using methods that were not in accord with SFFAS 3. Therefore,

given the timing of the transition to an SFFAS 3 valuation methodology, opening balances for the reporting entity may be based on transitional values based on one of the other methods listed in paragraph 11 of this Statement and subsequent transactions consistent with SFFAS 3 methods. The result of combining these values is considered deemed cost.

- A29. A component reporting entity that is in the process of implementing systems that are SFFAS 3 compliant is permitted to apply this Statement at the time it makes an unreserved assertion that its financial statements, or one or more line items addressed by this Statement, are presented fairly in accordance with GAAP. This Statement allows component reporting entities (for example, DoD components) to make the assertion at different times. The reporting entity may make the assertion after a sufficient number of components do so. This Statement considers the opening balances and subsequent transactions of these component reporting entities as deemed cost for the consolidated reporting entity when its assertion is made.
- A30. Using the DoD example, certain DoD components may have transitioned at an earlier date to SFFAS 3 compliant systems; this allows them to assert independently of the larger DoD. DoD would make a DoD-wide assertion when a sufficient number of DoD components are compliant. While a DoD component's "deemed cost" opening balance might be earlier than the DoD-wide opening balance, the consolidation of the various methods would be DoD's opening balance deemed cost at the beginning of the period DoD was able to make an unreserved assertion on its financial statements or one or more line items addressed by this Statement.
- A31. Considering the flexibility allowed with the Statement, reporting entities should ensure they are ready to make an unreserved assertion that their financial statements, or one or more line items addressed by this Statement, are fairly presented prior to making the election since it may only be made once. A complex entity should work with its components to ensure the most appropriate method allowed by this Statement is selected. Further, reporting entities should ensure issues such as supporting documentation for opening balances established are addressed and validated through sampling or other means, including consideration of any audit findings or conclusion affecting the reliability of the valuation, prior to making the unreserved assertion. The importance of a reporting entity being prepared to make the unreserved assertion is critical because the election may only be made once. For example, if a reporting entity makes an unreserved assertion regarding the FY 2018 beginning balances, the reporting entity must be able to support the valuation, in all material respects. If the audit for FY 2018 determines that the valuation does not comply with the alternative valuation in all material respects, the reporting entity then would need to:
- a. continue in subsequent years to correct or support the valuation as of the beginning of FY 2018, or

-
- b. accept a modified audit report until the reporting entity demonstrates compliance with SFFAS 3 (as amended), in all material respects.
-

Disclosure Requirements

- A32. The election to apply the provisions of this Statement (deemed cost in establishing opening balances for inventory, OM&S, or stockpile materials) should be disclosed in the financial statements in the first reporting period in which the reporting entity makes an unreserved assertion that its financial statements, or one or more line items addressed by this Statement, are presented fairly in accordance with GAAP. The reporting entity should also disclose a description of what valuation method(s) deemed cost is based on, but no disclosure of amounts valued at deemed cost is required.
- A33. The Board discussed that, with time, the valuation of inventory, OM&S, and stockpile materials will not be materially different than historical cost because the older inventory may be consumed. If reporting entities are able to document that turnover rates for inventory, OM&S, and stockpile materials are such that the opening balance valuation is at historical cost, a reference to deemed cost would not be required. This Statement, however, does not impose a requirement that reporting entities engage in an effort to conclude that the use of deemed cost is no longer necessary.

Board Approval

- A34. This Statement was approved unanimously. Written ballots are available for public inspection at the FASAB's offices.

Appendix C: Amendments to SFFAS 3

Appendix C was provided to assist users. It provides a marked version of relevant sections of SFFAS 3. Because the FASAB Handbook presents texts as amended, SFFAS 3 has been updated. Users may view Appendix C as presented in SFFAS 48 on the Original Standards Webpage at <http://fasab.gov/standards>.

Statement of Federal Financial Accounting Standards 49: Public-Private Partnerships: Disclosure Requirements

Status

Issued	April 27, 2016
Effective Date	For periods beginning after September 30, 2018. Early adoption is permitted.
Affects	None.
Affected by	<ul style="list-style-type: none">• SFFAS 57, par. 12, amends footnotes 7-8 of par. 15.• SFFAS 63, par. 5, amends par. 24.b.

Summary

This Statement establishes principles to ensure that disclosures about Public-Private Partnerships (P3s) are presented in the reporting entity's general purpose federal financial reports (GPFFRs). The principles guide financial reporting by establishing a P3 definition and identifying risk-based characteristics that need to exist before considering the P3 arrangement or transaction for disclosure.

This Statement exempts certain arrangements or transactions from the P3 disclosure requirements contained herein. Such exempt arrangements or transactions are subject to existing disclosure requirements in other Statements of Federal Financial Accounting Standards (SFFAS) applicable to such arrangements or transactions.

This Statement provides for first determining those arrangements or transactions that are exempt from the provisions of this Statement before proceeding to the P3 definition. Federal P3s are defined as "risk-sharing¹ arrangements or transactions lasting more than five years between public and private sector entities." Arrangements or transactions meeting the P3 definition are then evaluated against risk-based characteristics referred to as "Conclusive Characteristics." Should the arrangement or transaction not meet any one of the Conclusive Characteristics required for disclosure, the arrangement or transaction should then be evaluated against the "Suggestive Characteristics" before concluding whether disclosure is required. If an arrangement or transaction warrants reporting, the disclosures should be provided.

¹ Risk-sharing exists when a public sector entity shares risks and rewards with a private sector entity whenever the benefits of the arrangement or transaction accrue to both the private sector entity and the public sector entity and (1) the public sector entity is at risk of loss, or (2) the private sector entity's ability to perform is at risk and success of the arrangement or transaction depends upon the public sector's intervention.

Disclosure requirements comprise quantitative and qualitative information to assist users in understanding the nature of P3s such as the relative benefits/revenues being received in exchange for the government's consideration, the contractual terms governing payments to and from the government, and related risks including those deemed remote. Disclosures can be provided by individual P3 or summarized; for example, by an entity's strategic objectives, departmental or bureau categorizations, or program budget classifications.

This Statement helps achieve the operating performance and budgetary integrity objectives outlined in Statement of Federal Financial Accounting Concepts (SFFAC) 1, *Objectives of Federal Financial Reporting*, by making P3s more understandable. P3 information is important to meeting these objectives because the federal government is accountable to citizens for the proper administration of its resources. Moreover, because P3s are a form of investment, they should be adequately disclosed in order to assist report users in determining: (a) the important assets of the U.S. government and how effectively they are being managed and (b) the identification of risks.

This Statement is effective for periods beginning after September 30, 2018. Earlier implementation is permitted.

Introduction

Purpose

1. To meet challenges such as those brought about by limited budgetary resources governments are increasingly establishing risk-sharing arrangements or transactions² with the private sector. Some of these arrangements or transactions may also involve private financing and enable governmental agencies to fulfill their missions to their constituents that would otherwise not be possible without such arrangements or transactions.
2. These risk-sharing arrangements or transactions are commonly referred to as **Public-Private Partnerships (P3s)**³ but may also be referred to as Alternative Financing Arrangements, or Privatization Initiatives, some of which are extremely complex. For example, P3s may involve the use of appropriated funds, non-appropriated funds, third-party financing, or significant amounts of private capital or investment. Furthermore, P3s can (1) be so long-term in nature that costs along with the accompanying benefits may not be distributed equitably across generations, (2) exclude contractual protections afforded the government by the Federal Acquisition Regulation (FAR) such as, but not limited to: termination rights and obligations, contract by negotiation, cost accounting administration, and contract cost allowability, and (3) require the government to provide resources or absorb losses greater than other alternative procurement methods or competing in-house performance.⁴ Lastly, P3s may involve the transfer of government assets, including intellectual property, into private hands for extended periods of time.
3. As a result, the Board recognizes that the accounting and reporting issues related to risk-sharing can also be extremely complex, involving a wide array of assets and liabilities. P3s by their very design transfer or share various forms of risk among the P3 partners. Such risk allocation strategies are in essence the very incentives that serve as the foundation or building blocks for P3s. Therefore, an entity should understand how much (total) risk resides in an arrangement or transaction and how much of that risk has been (1) transferred to the

² Risk-sharing can be either structural or transactional. P3 Structural Arrangements are external to the government entity's operations and often involve the creation of a Special Purpose Vehicle (SPV), Trust, or Limited Partnership (LP). For example, military base housing. P3 Transactional Arrangements are internal to the government entity's operations. For example, work-share programs not involving the creation of a SPV, Trust, or LP.

³ Terms defined in the Glossary are shown in bold-face the first time they appear.

⁴ In-house refers to using government facilities and personnel as opposed to relying on commercial sources to supply the products and services the government needs.

private partner, (2) shared with the private partner, and (3) retained by the entity (that is, the government sponsor). Such an understanding relies on a thorough analysis of the underlying contractual agreements, guarantees, insurance, and indemnification strategies as well as the existence and nature of any underlying private party capital buffer that might exist; that is, the extent of any debt (for example, bonds, loans and notes) and equity (for example, stocks, and other securities representing an ownership interest) participation.

4. Entities can execute P3s via **structural arrangements** through the use of **special purpose vehicles (SPV's)** and/or directly as **program transactional arrangements**. Furthermore, many P3s are either discrete (long-term) leases or involve aspects of leasing.
5. The Board has previously addressed various types of long-term arrangements or transactions in which the government participates (for example, leases or guarantees). As such, accounting standards exist that provide for recognition and measurement of assets/liabilities and revenues/expenses as well as disclosures of certain risks in these long-standing types of arrangements or transactions. This Statement supplements existing guidance to help ensure adequate disclosure of those arrangements/transactions that either form the basis of or are part of a P3. Therefore, existing accounting standards that govern the various types of long-term arrangements/transactions continue to apply.
6. To that end, the Board notes that there are risks associated with P3s. For example, risks (1) where actual costs will be greater than budgeted costs, (2) the entity may have to absorb part or all of the project's private debt, (3) the entity will not achieve expected returns on its investments in limited partnerships, (4) conditions may lead to a government-acknowledged event where an entity assumes financial responsibility for the event, and (5) the public purpose or public value will not be fulfilled or achieved. Because of the risks involved in entering into such long-term agreements, some of which involve government assets, specific disclosures regarding P3s are needed. Such disclosures foster accountability and improve understanding of (1) the general risks inherent in P3 arrangements by revealing their purpose, objective, funding, operational and financial structures; and (2) contractual risks of loss such as early termination requirements. Disclosures should generally accompany the related asset and/or liability display contained within the financial statements.
7. A contingency is an existing condition, situation, or set of circumstances involving uncertainty as to possible gain or loss to an entity. Some risks associated with P3s may result in the incurrence of losses and applying Statement of Federal Financial Accounting Standards 5 (SFFAS 5): *Accounting for Liabilities of the Federal Government* would be appropriate. For recognition of losses, SFFAS 5 requires that a past event has occurred for which a future outflow or other sacrifice of resources is probable and measurable. Disclosure should be provided for reasonably possible losses and probable losses that are not measurable.

-
8. Due to their very nature, P3s are used to manage risks, some of which may be risks of loss included in the terms of the contractual P3 arrangements or transactions that are deemed remote but are nonetheless material and may require disclosure. For example, excluding contractual protections afforded the government by the FAR⁵ inherently increases the entity's risk as does a relationship with an industry or private partner that may require the government to provide resources or absorb losses beyond what was contemplated. It is the Board's opinion that remote risks of loss included in the terms of the contractual P3 arrangements or transactions that are material should be disclosed. Therefore, consideration should be given to those risks that management does not expect to be likely yet could represent a risk of loss to the entity. With this being said, the Board also recognizes that (1) certain remote risks may have a reasonably high materiality threshold and (2) not all individual remote risks in a P3 arrangement or transaction need to be disclosed to satisfy the requirements of this Statement. As such, remote risks should not be dismissed from disclosure without further consideration of user needs and the qualitative and quantitative characteristics when applying materiality.
 9. Disclosures comprise quantitative and qualitative information and not all P3 risks can be readily or sufficiently measured. However, federal financial reports are most likely to meet reporting objectives and, therefore, user's needs when disclosures help readers understand complex arrangements or transactions and the associated risk. To this end, qualitative disclosures are as important as quantitative disclosures. Further, both quantitative and qualitative factors should be considered in assessing materiality as well as the nature and content of information to be disclosed.
 10. Because the Board has identified the need for clarity with respect to questions that arise concerning the full costs including risk of these complex arrangements or transactions, this Statement is a first step toward developing principles-based guidance and identifying potential gaps in existing guidance. The Board is working and will continue to work closely with stakeholders interested in improving the accounting and reporting of these complex arrangements or transactions. By addressing disclosure issues as a first step, the Board will facilitate continued cooperation and greater interest in identifying areas requiring attention while minimizing preparer burden. It should be noted that the Board also plans to address measurement, recognition, and reporting issues through continued consultation with stakeholders. This could lead to the issuance of additional guidance.

⁵ For example, contractual protections afforded the government by the FAR include but are not limited to: termination rights and obligations, contract by negotiation, cost accounting administration, and contract cost allowability.

Materiality

11. The provisions of this Statement need not be applied to immaterial items. However, materiality should be applied cumulatively or in the aggregate by the entity. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement. Refer to paragraphs 8 and 9 above for related comments.

Standards

Scope

12. This Statement applies to federal entities that present general purpose federal financial reports, including the consolidated financial report of the U.S. Government (CFR), in conformance with generally accepted accounting principles, as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, including the Application of Standards Issued by the Financial Accounting Standards Board*.
13. This Statement is applicable to public-private partnerships (P3s) and this term is used to refer to a wide variety of service, management, operating, and research and development arrangements or transactions meeting the definition of P3s presented in paragraphs 16 through 18.⁶ Such arrangements and transactions may include contracts, grants, reimbursable agreements, alternative financing arrangements, privatization initiatives, and other arrangements or transactions.
14. Some P3s can result in risk of loss and therefore should be assessed against the risk based (conclusive and suggestive) characteristics at paragraphs 20 and 21 to identify those that should be disclosed.
15. The following arrangements and transactions are not subject to the provisions of this Statement:
 - a. Non-lease acquisitions of property, plant, and equipment (PP&E) that are subject to the Federal Acquisition Regulations (FAR) and the private entity is not directly financing, operating, or maintaining the PP&E as part of an overall risk-sharing arrangement or transaction

⁶ For purposes of this Statement, the private sector refers to individuals and entities acting in their private capacities outside of the authority and control of federal, state, or local governments and encompasses for-profit businesses and non-profit organizations that are outside of the authority and control of federal, state or local governments.

-
- b. Leases⁷ that are not bundled⁸ and are entered into using General Services Administration (GSA)-delegated authority (This Statement does not amend existing standards applicable to leases and those standards remain applicable to all such arrangements/transactions.)
 - c. Acquisition of supplies and services, including construction, research and development, and commercial items, made pursuant to the FAR Simplified Acquisition Procedures (FAR Part 13)
 - d. Formal and informal arrangements or transactions that do not share risks or rewards and are solely designed to foster goodwill, encourage economic development, promote research and innovation, or coordinate and integrate strategic initiatives
 - e. Grants to state, local, and Indian tribal governments and other public institutions and arrangements or transactions with foreign governments
 - f. Arrangements or transactions in which private entities voluntarily contribute nominal resources or provide incidental resources without expectation of compensation or government indemnification for any possible risk of loss

⁷ The term leases, as defined by FASAB standards, includes enhanced use leases.

⁸ A bundled lease typically arises when parties to a leasing arrangement agree to include additional products or services in the leasing arrangement, some of which might be related or tied directly to the underlying leased product or services (for example, product updates or maintenance). Although these additional products or services are not always expressly identified in the underlying lease agreement and may be documented in other agreements, they are nonetheless considered "bundled" with the underlying lease agreement.

Definition

16. Subject to the exclusions noted in paragraph 15 and for the purposes of this Statement, federal public-private partnerships (P3s) are risk-sharing⁹ arrangements or transactions with expected lives greater than five years between public and private sector entities. Such arrangements or transactions provide a service or an asset for government and/or general public use where in addition to the sharing of resources, each party shares in the risks and rewards of said arrangements or transactions.
17. A public sector entity shares risks and rewards with a private sector entity whenever the benefits of the arrangement or transaction accrue to both the private sector entity and the public sector entity and (1) the public sector entity is at risk of loss, or (2) the private sector entity's ability to perform is at risk and success of the arrangement or transaction depends upon the public sector's intervention.
18. The expected life of a P3 is the term or period for which the entity, including consideration of economic incentives, is likely to participate in the P3. The expected life is initially determined at the inception of the P3 arrangement when the economic incentives are identified and considered in the formation of the P3. Economic incentives considered may include expected significantly reduced costs or increased efficiencies if contracts are renewed or if the P3 approach is continued realization of return on investment, continuity of mission critical services, flexibility, and significant costs associated with nonrenewal, such as required payments at the end of the contract to compensate the private party for significant capital investments. Typically, expected life is documented in budget justifications, cost benefit or value for money analyses, or other analyses. Expected life may extend beyond the current contract period (including options or renewals). Expected life is re-evaluated as P3 contracts are renewed and when the entity identifies significant changes in circumstances during the contract period that may affect the expected life.¹⁰
19. Arrangements or transactions which are not excluded by paragraph 15 and meet the definition in paragraphs 16 through 18 should be assessed against the risk based characteristics in paragraphs 20 and 21.

⁹ Risk-sharing can be either structural or transactional. P3 Structural Arrangements are external to the government entity's operations and often involve the creation of a Special Purpose Vehicle (SPV), Trust, or Limited Partnership (LP); for example, military base housing. P3 Transactional Arrangements are internal to the government entity's operations; for example, work-share programs not involving the creation of a SPV, Trust, or LP.

¹⁰ The Basis for Conclusions (BFC) paragraph A41 provides examples regarding determination of a P3's expected life.

Identification of P3'S Requiring Disclosure

20. The following risk characteristics are conclusive evidence that P3s possess risk of loss indicating that disclosures should be provided. If any one of the following conclusive risk characteristics is met, the P3 arrangement or transaction should be disclosed.

Conclusive Risk Characteristics	Risk Rationale ¹¹
<p>1. The arrangement or transaction results in the conveyance or creation of a long-lived asset or long-term financing¹² liability.</p> <p>¹² Contractors routinely finance operations while awaiting payment of invoices. Such routine financing is not indicative of a P3 in and of itself.</p>	<p>¹¹ The rationale presented herein explains why the Board believes there is or may be risk of loss when the characteristic is present. The rationale discusses risk broadly and is not intended to create specific disclosure requirements. The disclosures are articulated in paragraph 24. Please refer to BFC paragraphs A37 through A43 for related comments.</p> <p>Not all P3s result in the conveyance or construction of an asset. However, in those that do, the government's risk may be significantly increased because of costs that accompany asset ownership or control. Further, financing may be provided in whole or shared in part by private sector entities. Note that some private partners may incur substantial financing liabilities in preparation for delivering services even if an asset is not created.</p>
<p>2. The federal entity participates in, helps sponsor, or is party to a Special Purpose Vehicle (SPV), partnership, trust, and other such arrangements.</p>	<p>Entities such as SPVs, partnerships, trusts, and other such arrangements can be established for a variety of strategic and/or tactical reasons. Generally speaking, they are commonly considered risk-containment vehicles and are more often than not, purposefully not included in budgets or balance sheets. P3s employing SPVs, partnerships, trusts, and other such arrangements can be or most often become borrowing arrangements/transactions or alternative financing mechanisms. Therefore, the risk rests in the fact that because SPVs, partnerships, trusts, and other such arrangements can facilitate funding/financing, an agency's explicit or implicit long-term debt or promise to pay the established entity is not appropriately recognized in either budget or financial reports.</p>
<p>3. The arrangement or transaction covers a significant portion of the economic life of a project or asset.</p>	<p>Those P3 procurement or contract arrangements/transactions that cover a significant portion of the economic life of a project or asset pose greater risk to the federal entity because there is often no re-procurement or re-negotiation opportunity for the agency. As a result, changed conditions that could warrant a fair and reasonable re-negotiation or re-competition cannot be exercised and increased costs that would otherwise be avoided are incurred for the duration of the arrangement/transaction.</p>

<p>4. The principal arrangement or transaction is exempt from:</p> <p>a. if a contract, the FAR; or</p> <p>b. b. if a grant, Office of Management and Budget (OMB) requirements (2 C.F.R. Title 2, Part 200).</p>	<p>The FAR for contracts and OMB requirements for grants govern the administrative framework and include procurement, accounting, and legal requirements to help safeguard taxpayer dollars. Therefore, those P3s exempt from such requirements are at an increased-risk because well-established safeguards and contract resolution mechanisms are absent.</p>
---	---

1. The following risk characteristics are evidence that P3s may possess risk of loss and require disclosure. The following suggestive risk characteristics should be considered in the aggregate. Each suggestive risk characteristic will require entity judgment as each characteristic is analyzed in connection with the other suggestive risk characteristics.

Suggestive Risk Characteristics	Risk Rationale¹¹
<p>1. A Value for Money (VfM)¹³ analysis is performed.</p> <p>¹³ In its publication "The Value for Money Analysis: A Guide for More Effective PSC and PPP Evaluation," the National Council of Public Private Partnerships adopted the United Kingdom's, Her Majesty's Treasury Value for Money definition as contained in Her Majesty's Value Assessment Guide: VfM is defined as the optimum combination of whole-of-life costs and quality (or fitness for purpose) of the good or service to meet the user's requirement. VfM is not the choice of goods and services based on the lowest cost bid. To undertake a well-managed procurement, it is necessary to consider upfront, and at the earliest stage of procurement, what the key drivers of VfM in the procurement process will be.</p>	<p>¹¹ The rationale presented herein explains why the Board believes there is or may be risk of loss when the characteristic is present. The rationale discusses risk broadly and is not intended to create specific disclosure requirements. The disclosures are articulated in paragraph 24. Please refer to BFC paragraphs A37 through A43 for related comments.</p> <p>The term VfM is commonly used in connection with P3 arrangements or transactions. VfM analyses are broader in scope emphasizing qualitative factors, as opposed to the more traditional quantitatively based cost-benefit analyses most often performed. If an entity conducts a VfM analysis it may indicate that the project in question is a P3. VfM's are typically more subjective than traditional cost-benefit analyses and are sometimes prepared ex-post facto, thus increasing potential risk to the agency.</p>
<p>2. The consideration or items given up in an arrangement/transaction or their value are not readily apparent.</p>	<p>Generally under common law, consideration from both parties is required in order to have what constitutes a binding contract. Some courts have ruled that in those cases where the exchange appears excessively one sided, no quid-pro-quo exists and the contract may be void by law. Therefore, in those cases where consideration or its value from either party is not readily apparent, such cases could lead to recourse or remedies that have adverse financial ramifications to the agency.</p>

<p>3. Significant work force duties, activities, or knowledge are cross-shared between public and private sector P3 parties.</p>	<p>As federal entities face under-utilization and skill retention issues, with Congressional approval, some entities are entering into P3 arrangements/transactions to put both infrastructure and government personnel to heightened work. However, there is a concern that the analyses used to justify these arrangements or transactions often exclude government personnel costs, including associated legacy costs (for example, pension and OPEB). Therefore, increased risk exists in those cases where such costs are excluded from cost-benefit or VfM analyses because the government (1) is left absorbing these costs with no related activity base, (2) is exposed to potential liabilities arising from union and/or employee litigation, and (3) may lose governmental skill-sets that would lead to costlier procurement options.</p>
<p>4. The focus is more on collaboration and informal, real-time, resolution processes than on formal, contractual, administrative processes.</p>	<p>Due to their very nature, P3 arrangements or transactions involve risk-sharing and in some cases, issues such as contract disputes are resolved informally. However, such informal resolution processes could lead to potential liability when contracting, procurement, or legal personnel are not involved. Therefore, the risk rests in the potential liability arising from informal resolution of what otherwise would require more formal contractual administrative processes.</p>
<p>5. The government relies on either the private sector partner's or a third party's determination of a P3's performance or return on investment/equity without performing its own verification of performance or return on investment/equity.</p>	<p>Agencies often rely on 3rd party experts to assist in performing various types of analyses. It has been noted that conflicts of interest often exist because there are only a few firms who practice in this highly sophisticated area. As a result, some firms have provided advisory services to both the private partner and government sponsor of a P3 arrangement/transaction. In addition, fees are often based on the dollar volume of the arrangement/transaction creating what some believe are self-serving incentives. Therefore, the risk in those P3 arrangements/transactions rests where an agency does not or cannot perform its own independent analysis, thus relying solely on either the private partner or a third party determination of a P3's performance or return on investment/equity without performing its own verification. Such analyses may belie the significant risk the government has or will incur.</p>

Disclosure Requirements

Component Reporting Entity Disclosures

22. The P3 disclosures at paragraph 24 below specify the inclusion of qualitative and quantitative information and may be aggregated or grouped by an entity's strategic objectives, departmental or bureau categorizations, program budget classifications, or other means.
23. Disclosures should generally accompany the related asset and/or liability display contained within the financial statements. Depending on the circumstances, some of the required information may be disclosed due to other requirements. The resultant disclosures should be integrated so that concise, meaningful, and transparent information is provided and information is not repetitive.
24. Disclosures should be provided for the initial period and all annual periods thereafter where an entity is party to a P3 arrangement/transaction. The following information should be disclosed:
 - a. The purpose, objective, and rationale for the P3 arrangement or transaction and the relative benefits/revenues being received in exchange for the government's consideration, monetary and non-monetary; and the entity's statutory authority for entering into the P3.
 - b. A description of federal and non-federal funding of the P3 over its expected life, including the estimated mix of federal and non-federal funding, and the estimated amounts of such funding.^{10A, 10B}
 - c. The operational and financial structure of the P3 including the reporting entity's rights and responsibilities, including:

^{10A} Such estimated amounts may be specific amounts or a range of amounts of the funding. Disclosure should include the basis for management's estimates (for example, based on contract terms, initial estimates of P3 funding, etc.) as well as any significant uncertainties surrounding the estimates.

^{10B} Funding, as used here, relates to the amount of contributions of federal and non-federal capital, equity, or debt instruments to the P3 project, but excludes ongoing operating revenues and costs. Such funding may take different forms, such as cash, tangible assets, leaseholds, loans, and/or loan guarantees. In contrast, paragraph 24.c.ii. relates to the federal entity's aggregate cash flows to be received and to be paid over the remaining expected life of the P3, which comprise ongoing operating revenues and costs.

-
- i. A description of the contractual terms governing payments to and from the government over the expected life of the P3 arrangement or transaction to include:
 - 1. explanation of how the expected life was determined
 - 2. the time periods payments are expected to occur
 - 3. whether payments are made directly to each partner or indirectly through a third-party, such as, military housing allowances
 - 4. in-kind contributions/services and donations
 - ii. The amounts received and paid by the government during the reporting period(s) and the amounts estimated to be received and paid in aggregate over the expected life of the P3
- d. Identification of the contractual risks of loss the P3 partners are undertaking
- i. Identification of such contractual risks of loss should include a description of (1) the contractual risk and (2) the potential effect on cash flows if the risks were realized (for example, early termination requirements including related exit amounts and other responsibilities such as asset condition (hand-back) requirements, minimum payment guarantees, escalation clauses, contingent payments, or renewal options).
 - ii. Disclosure of remote risks of loss should be limited to those included in the terms of the contractual P3 arrangements or transactions. If remote risks of loss are disclosed, an explanation should be included that avoids the misleading inference that there is more than a remote chance of a loss.
- e. As applicable:
- i. Associated amounts recognized in the financial statements such as gains or losses and capitalized items
 - ii. Significant instances of non-compliances with legal and contractual provisions governing the P3 arrangement or transaction
 - iii. Whether the private partner(s), including any Special Purpose Vehicle (SPV), have borrowed or invested capital contingent upon the reporting entity's

promise to pay whether implied or explicit

- iv. Description of events of termination or default

Financial Report of The U.S. Government Disclosures

25. The U.S. government-wide financial statements should disclose:

- a. a general description of P3 arrangements or transactions
- b. the consolidated amounts the government received and paid during the reporting period(s) and estimated to be received and paid in aggregate over the expected life of the P3s
- c. a reference(s) to applicable component entity report(s) for additional information

Effective Date

26. The requirements of this Statement are effective for reporting periods beginning after September 30, 2018. Early adoption is permitted.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement not the material in this appendix should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

- A1. This project was added to the FASAB's technical agenda in April 2012 because federal agencies have increasingly turned to public-private partnerships to accomplish goals and in light of budget pressures likely to further increase their use. Although federal generally accepted accounting principles are fairly robust, the Board noted that due to the complex nature of P3s significant study would be required regarding a host of issues dealing with the definition, measurement, and recognition of P3s. In December 2012, the project plan was adopted with the overall goal of recognizing the full costs of P3s in the financial statements. In addition, a P3 task force was formed and held its first meeting in February 2013.
- A2. Final standards or guidance were expected to follow a three year effort. Specific project objectives include:
 - a. Defining terms
 - b. Providing guidance (that is, identifying gaps) for the recognition and measurement of:
 - i. assets and liabilities
 - ii. revenues and expenses
 - iii. establishing disclosure requirements
 - c. Considering guidance for other arrangements/transactions related to P3s (for example, sale-leaseback or other long-term arrangements)

-
- A3. Early in its deliberations the Board was clear that forthcoming guidance must be consistently applied and covered by an overarching principle(s). The Board noted its concern is with the risks to which the government is exposed and related disclosures. As a result, members decided that because P3s often involve innovative operational and complicated accounting practices, accompanied by sophisticated financing agreements, these complexities necessitate the establishment of disclosure requirements as a first step to (1) developing uniform, principles-based guidance, and (2) identifying potential gaps in existing guidance. To that end, the Board decided that a broad P3 definition accompanied by risk-based characteristics should be pursued to establish a framework for determining which P3s should be disclosed. The Board believes that the resulting disclosures will inform the need for and development of future standards providing recognition and measurement guidance specific to P3s. Therefore, any further work will be undertaken after these disclosures become effective.
- A4. P3 task force meetings for this phase of the project were held between February 2013 and May 2014. All meetings were well attended with representation from federal agencies, commercial sector(s), and citizens. Participants came from diverse disciplines such as accounting, auditing, facilities management, financial reporting, housing, information technology (IT), commercial and investment banking, procurement, and program management. To best meet the project goals and objectives, staff, in addition to engaging in task force discussions, initiated fact-finding meetings with experts and practitioners both within and external to government. Staff met with federal agency representatives, public policy experts, consultants, private equity participants, and a private IT/Cloud/Software development firm.
-

Common Themes and Other Matters

- A5. The most common themes arising from task force and fact finding meetings considered in developing the Statement include:
- a. At a minimum, participants expect continued use if not growth in P3s.
 - b. Government employee legacy & relocation costs are not presently considered in Value for Money (VfM)¹⁴ analyses.

¹⁴ VfM is a much broader concept than typical cost-benefit analysis because it emphasizes "value" in more of a qualitative than quantitative manner. Quantitatively, some VfM models use a project's Internal Rate of Return (IRR) to help determine project acceptability. The VfM concept has drawn criticisms not only because of its subjectivity and lack of rigor in application, but because in some cases (1) cash flows can be easily managed to meet desired expectations and (2) VfM results are used as ex-post facto justifications for qualitatively made project and/or award decisions. It is important to note that the same criticisms can be made of the more traditional cost-benefit analyses used in management decision making.

-
- c. Long-term nature of P3s is accepted, but concerns include
 - i. lack of transparency in the solicitation and award processes along with the lack of competition hinders accountability and fair and reasonable pricing,
 - ii. not applying the Federal Acquisition Regulation¹⁵ (FAR) increases government risk, and
 - iii. some P3s circumvent procurement administration.
 - d. In-kind contributions are difficult to value or are overvalued and not always reported.
 - e. P3 financial reporting is generally supported but agencies and participants vary in the what, how, and where of disclosures. For example, relative to significant and material P3 arrangements or transactions, some believe that property, plant, and equipment (PP&E) note disclosure would be sufficient whereas others believe that MD&A discussion is more appropriate because of the SFFAS 15, *Management's Discussion and Analysis*, requirement to address the future effects of existing, currently-known demands, risks, uncertainties, events, conditions and trends, while others suggest reporting in both locations.

A6. Other matters arising during task force and fact finding meetings included:

- a. **Increased Risk to Citizens.** A few participants noted that P3s erode (1) the notion of public service (for example, what is inherently governmental) and (2) in many cases, belief in good government. This increased risk is evidenced by those entities that:
 - i. purposefully avoid capital acquisition budgeting requirements
 - ii. absorb "availability" risk¹⁶ absent sufficient private partner consideration

¹⁵ The FAR is the primary regulation for use by all Federal Executive agencies in their acquisition of supplies and services with appropriated funds. It became effective on April 1, 1984, and is issued within applicable laws under the joint authorities of the Administrator of General Services, the Secretary of Defense, and the Administrator for the National Aeronautics and Space Administration, under the broad policy guidelines of the Administrator, Office of Federal Procurement Policy, Office of Management and Budget.

¹⁶ Availability risks or project completion risks exist when for example, defects in construction or quality shortfalls within the control of the private partner occur that preclude the asset or service from being available for its intended use requiring the government sponsor to intervene.

-
- iii. lose control of assets
 - iv. lock into long-term arrangements/transactions that cannot be re-competed or re-negotiated
 - v. are constrained by contract modification restrictions
 - vi. are constrained by proximity and/or right-to-compete restrictions
 - vii. ignore government employee personnel (legacy) costs
- b. **Financing costs.** To enable private financing to work, P3's must be longer-term in nature to allow for sufficient time to liquidate debt and achieve return on investment targets. This is significantly different than traditional procurement contract periods that are typically 5 years or less.
 - c. **Performance Metrics.** Financial reporting would be enhanced by incorporating performance metrics that could point to both risks and potential liabilities as they arise.

Summary of Outreach Efforts

- A7. The ED was issued October 1, 2014 with comments requested by January 2, 2015. Upon release of the exposure draft, notices and press releases went to the following organizations:
- a. *The Federal Register*
 - b. *FASAB News*
 - c. *The Journal of Accountancy, AGA Today, the CPA Journal, Government Executive and the CPA Letter*
 - d. The CFO Council, the Council of the Inspectors General on Integrity and Efficiency, the Financial Statement Audit Network; and members of both the Federal Real Property Council and Federal Facilities Council
 - e. Committees of professional associations generally commenting on exposure drafts in the past
- A8. This broad announcement was followed by electronic mailings of the exposure draft followed up by several reminder notices.to:

-
- a. Relevant congressional committees
 - i. House Committee on Oversight and Government Reform
 - ii. Senate Committee on Homeland Security and Governmental Affairs
 - b. Public interest and labor union groups
 - i. In the Public Interest
 - ii. American Federation of State, County and Municipal Employees

A9. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The following paragraphs discuss significant issues identified by respondents followed by Board decisions.

Respondents' Comments on the Exposure Draft

A10. The exposure draft was issued with an alternative view that expressed concerns over the (1) breadth of the general definition, (2) disclosures related to certain remote risks, and (3) clarity of "significant exposure." Specific comments regarding respondent concerns and Board re-deliberations are noted in the following paragraphs as appropriate.

Definition: Public-Private Partnerships

A11. In consultation with constituents to include respondent comments received and related outreach concerning the breadth and scope of the definition, the Board has further developed and refined the definition proposed in the exposure draft. The Board desired establishing a definition that (1) reflected actual federal P3 practices, (2) covered the wide breadth and diverse scope of federal assets, and (3) focused on the risk-sharing or risk transfer strategies that are the very essence of these complicated arrangements or transactions. The definition is intended for general application to be applied uniformly across the federal government.

A12. In reviewing the P3 definitions of other standard-setters, the Board notes that their guidance is largely focused on service concession arrangements (that is, a sub-set of P3s) that directly benefit the general public. The definition contained in this Statement is much broader given the wide breadth and diverse scope of federal assets being managed. It is important to note that (1) federal preparers and auditors have identified accounting topics that extend beyond those typically found in service concession arrangements, (2) oversight

entities such as the Congressional Budget Office, GAO, and inspectors general have defined and identified P3 arrangements or transactions to be more than just service concessions, and (3) service concession accounting guidance primarily reflects economic development initiatives such as new roads, toll roads, highways, airports, railways, and hospitals, whereas federal initiatives extend well beyond economic development such as the common defense and general welfare of the nation thus necessitating accounting guidance to best fit these federal initiatives.

A13. In developing the definition, the Board primarily relied on (1) the task force's review of existing definitions from several authoritative sources, (2) various respondent comments to the definition contained in the exposure draft, and (3) an ad-hoc working group comprised of selected respondents. The task force identified the more common characteristics of P3s which are believed to exist in the federal government. Some of the more common P3 characteristics identified include: existence of very long-term contractual agreements (for example, anywhere from five to 99 years), shared or transferred financing, agreements covering a significant portion of the project's or asset's life, shared risks, shared rewards, shared skills and expertise, conveyance or creation of real and personal property, and the use of SPVs. Those respondents specifically commenting on the definition as well as the ad-hoc working group primarily suggested better linkage between the definition and the risk-based characteristics. Accordingly, the broad definition contained in the exposure draft was further refined and is as follows:

Subject to the exclusions noted in paragraph 15 and for the purposes of this Statement, federal public-private partnerships (P3s) are risk-sharing arrangements or transactions with expected lives greater than five years between public and private sector entities. Such arrangements or transactions provide a service or an asset for government and/or general public use where in addition to the sharing of resources, each party shares in the risks and rewards of said arrangements or transactions.

Scope, Applicability and Exclusions

Scope

A14. The Board recognizes that establishing a P3 definition reflecting the breadth and diverse scope of entity missions, operational strategies, available leasing authorities, and other variables might capture activities which are already being recognized or disclosed in the entity's financial statements. Specifically, this is because the Board has previously addressed various types of long-term arrangements/transactions in which the government participates (for example, leases and guarantees). As such, existing accounting standards provide for recognition and measurement of assets/liabilities and revenues/expenses as well as disclosures of certain risks in these long-standing types of arrangements or transactions. However, the Board believes that there is a need for disclosure requirements

specific to the risks existing in P3s for which there is no current accounting guidance. The requirements herein do not replace existing disclosure requirements in other SFFASs for similar arrangements or transactions such as leases. P3s are complex arrangements/transactions and an entity would apply all applicable standards to report relevant information in the notes.

Applicability

A15. To help ensure achievement of the federal reporting objectives while minimizing unwarranted disclosure of P3 arrangements or transactions, the Board has established filters at several decision points to aid preparers in this regard. The filters are categorized as follows:

- a. Definitional Features Indicative of Risk - After careful study the Board initially identified four major features of federal P3 arrangements or transactions that were embodied in the proposed definition: (1) agreements covering a significant portion of the economic life of a project or asset, and/or lasting more than five years, (2) financing provided in whole or shared in part by the private partner, (3) conveyance or transfer of real property, personal property, or multi-sector skills and expertise, and (4) formation of SPV's. However, as a result of respondent comments concerning linkage between the definition and the risk-based characteristics and a working group recommendation, the Board (1) realigned the four major features by incorporating them directly into the risk-based characteristics and (2) within the definition, specifically excluding arrangements or transactions which are not more than 5 years in duration.
- b. Risk-based Characteristics - The Board has identified and refined during its re-deliberations certain key characteristics discussed later that reflect varying degrees of risk that exist in federal P3s. Therefore, should these characteristics be absent in a P3, the disclosure requirements of this Statement would generally not apply.
- c. Materiality - As is the custom with all Statements issued by the Board, only those P3s that are material (qualitatively and quantitatively) in nature, more thoroughly discussed later, should be subject to the requirements of this Statement. The Board notes that because materiality assessments require both qualitative and quantitative judgments, specific guidance limiting preparer and auditor considerations of information would not be appropriate.

Exclusions

A16. As a result of respondent comments concerning the breadth of the proposed definition, the ad-hoc working group recommended and the Board adopted three additional exclusions. The three additional exclusions are:

-
- a. grants to state, local, and Indian tribal governments and other public institutions,
 - b. arrangements or transactions with foreign governments, and
 - c. arrangements or transactions sharing nominal or incidental resources.

The first two exclusions identified above reflect that this Statement only applies when a federal entity is in a risk-sharing arrangement or transaction with the private sector¹⁷ and not a public sector institution. Risks associated with public-to-public partnerships (for example, federal to state or federal to local) and those associated with foreign governments (1) are significantly different when compared to risks arising in public-private partnerships and (2) warrant extensive research far beyond the scope of this Statement. Moreover, arrangements or transactions with Indian tribal governments or foreign governments are closely governed by selected agencies and Congressional committees and are also beyond the scope of this Statement. Lastly, arrangements or transactions in which private entities voluntarily contribute nominal resources or provide incidental resources without expectation of compensation or government indemnification for any possible risk of loss are also excluded from the requirements of this Statement.

A17. In summary, the following arrangements or transactions are excluded from the requirements of this Statement:

- a. non-lease acquisitions of property, plant, and equipment that are subject to the FAR and the private entity is not directly financing, operating, or maintaining the PP&E as part of an overall risk-sharing arrangement or transaction,
- b. leases meeting certain conditions,
- c. acquisitions made using Simplified Acquisition Procedures (FAR Part 13),
- d. formal and informal arrangements or transactions that do not share risks or rewards and are solely designed to foster goodwill, encourage economic development, promote research and innovation, or coordinate and integrate strategic initiatives,
- e. grants to state, local, and Indian tribal governments and other public institutions and those with foreign governments, and

¹⁷ For purposes of this Statement, the private sector refers to individuals and entities acting in their private capacities outside of the authority and control of federal, state or local governments and encompasses for-profit businesses and non-profit organizations that are outside of the authority and control of federal, state or local governments.

-
- f. arrangements or transactions sharing nominal or incidental resources.

A18. Concerning leases, in consultation with the P3 Task Force and after careful consideration, the Board concluded:

- a. to exclude leases¹⁸ that meet the following two conditions: a) they are not bundled and b) they are entered into using GSA delegated authority. Such leases (1) have no significant P3 risk of loss, (2) are already subject to existing FASAB guidance, (3) have well defined FAR-based contractual processes and remedies in place to address risks associated with landlord-tenant relationships, (4) have contractually capped payments for termination liabilities, and (5) have termination payments that are indemnified by GSA's Building Fund. The Board believes that if a lease is either bundled or not entered into using GSA delegated authority, the provisions of this Statement should apply.
- b. to not broadly exclude Enhanced Use Leases (EULs) except for those meeting the two conditions cited above because they are more oriented towards P3s as a result of (1) possessing special authorities and not being subject to the FAR, (2) often operating under a risk-reward model as opposed to those entity leases that are basically a landlord-tenant relationship and not a risk-sharing partnership, and (3) possibly including ancillary services and in-kind consideration as part of the arrangement or transaction. Because the Board believes that EULs could be encompassed by this Statement, a determination should be made as to whether disclosures are required via the application of the risk-based characteristics.

Risk-based Characteristics

A19. Although federal P3s are varied and complex, the Board believes there are some common characteristics that can be used to identify those P3s that create risk of loss and should be disclosed. Because the Board is aware of the administrative burdens agencies face day-to-day and that some P3 portfolios might be voluminous, in addition to identifying those P3s that create risk of loss, the risk-based characteristics can also be applied to assist a federal entity in determining which P3 arrangements or transactions do not require disclosure.

¹⁸ The term leases includes enhanced use leases (EULs) which are typically long-term lease agreements that allow public or private entities to use an agency's property. Agency EUL programs have allowed entities to develop or occupy federal properties such as power plants, housing and healthcare facilities, office space, and parking facilities, and in return, federal agencies receive cash or in-kind consideration. Please note that there is no government-wide definition of EULs. Source: [GAO-13-14](#) Federal Real Property: Improved Cost Reporting Would Help Decision Makers Weigh the Benefits of Enhanced Use Leasing, December 2012).

- A20. The risk-based characteristics have been developed, refined, and categorized from an initial comprehensive list of characteristics that distinguishes federal P3s from traditional procurement actions. With the assistance of the task force, the Board further analyzed and then selected risk-based characteristics which indicate significant P3 risk of loss. These risk-based characteristics are intended to: (1) apply to all types of P3s: construction, housing, utilities, military depots, and others, and (2) assist a federal entity in ascertaining which P3 arrangements or transactions should be disclosed. Once a P3 is identified for disclosure, such arrangements or transactions would then be evaluated in light of the entity's materiality considerations including quantitative and qualitative threshold(s).
- A21. As a result of respondent comments concerning linkage between the definition and the risk-based characteristics, the working group recommended and the Board adopted an additional risk-based characteristic for grants and other arrangements. Specifically, OMB requirements (2 C.F.R. Title 2, Part 200) for grants govern the administrative framework and include requirements to help safeguard and protect taxpayer dollars. Therefore, those P3s exempt from such requirements are at an increased-risk because well-established safeguards and resolution mechanisms are absent.

Conclusive and Suggestive Characteristics

- A22. The majority of respondents agreed with the risk-based characteristics, their related classification, and their proposed application. However, as mentioned above, the working group recommended and the Board adopted an additional risk-based characteristic for grants and other arrangements. Moreover, the Board clarified the two categories of risk-based characteristics (conclusive and suggestive) pursuant to respondent concerns. Conclusive characteristics are those that existence of any one characteristic means the P3 arrangement or transaction should be disclosed. However, existence of any one of the suggestive characteristics is evidence that the P3 arrangement or transaction may possess risk of loss and require disclosure. Such a suggestive characteristic should be considered in the aggregate with all the other suggestive characteristics before a final decision is made. Each conclusive characteristic is meant to be definitive whereas each suggestive characteristic requires entity judgment as each one is analyzed in connection with the other suggestive characteristics.
- A23. If a P3 arrangement or transaction is subject to disclosure, it should be further evaluated in light of materiality considerations that include both qualitative and quantitative assessments. Additionally, materiality should be applied cumulatively or in the aggregate by the entity.

Materiality

Considering User Needs

A24. As the standards-setting body for the federal government, the Board has stated that there are two fundamental values that provide the foundation for governmental accounting and financial reporting: "accountability" and its corollary, "decision usefulness." Concepts explain that "Because a democratic government should be accountable for its integrity, performance, and stewardship, it follows that the government must provide information useful to assess that accountability." The Board believes that P3 disclosures are an essential element in establishing accountability.

A25. In applying the concept of materiality, the needs of the users of the annual financial report should be considered. Specific to P3s for example, users are interested in: (1) assessing the costs and related risks of entering into such long-term agreements; (2) assessing the efficiency and effectiveness of these risk-sharing agreements as well as the government's management of its assets and liabilities; and (3) determining how financial resources, budgetary or otherwise, have been obtained and used and whether their acquisition and use were in accordance with the entity's legal authorization. As a result, the Board believes that the P3 disclosures required by this Statement will help answer these questions while achieving the associated reporting objectives.

Qualitative and Quantitative Assessments Require Judgment

A26. In connection with concerns over the breadth and scope of the definition, some respondents suggested that the Board develop a clear and objective materiality standard that would limit the disclosure requirement to those transactions that present substantial financial risk to the government. The Board believes that refining the definition and adding additional exclusions best addresses respondent concerns in this regard. Respondents are reminded that "materiality" has not been formally defined in the accounting community; rather, it is a matter of judgment on the part of preparers of financial statements and the auditors who attest to them. The determination of whether an item is material:

- a. requires the exercise of considerable judgment, based on consideration of specific facts and circumstances, and
- b. depends on the degree to which omitting or misstating information about this item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

A27. The Board believes that preparers and auditors are in the best position to exercise this judgment predicated on their direct knowledge of the specific facts and circumstances and

user needs. Furthermore, the Board believes that specific guidance concerning materiality assessments would limit preparer and auditor considerations and are therefore inappropriate.

A28. The Board notes that while a P3 arrangement or transaction might not be considered material from a quantitative standpoint, it may be considered qualitatively material and subject to this Statement's disclosure requirements if the disclosures would influence or change the judgment of the financial statement user. Exclusive reliance on certain quantitative benchmarks or thresholds to assess materiality should be avoided.

Materiality Includes Probability Assessments

A29. Decisions whether to recognize or, in the case of this Statement, disclose a P3 arrangement or transaction may take into account considerations that include uncertainties. Uncertainties can be expressed as a measurement of an appropriate attribute (for example, historical cost, fair value, expected value, or some other attribute) which may include an assessment of the probability of future flows of economic benefits or services (emphasis added). Furthermore, uncertainties are often subjected to assessments of the materiality of the item, and the benefit versus the cost of recognition or, in this Statement's case, disclosure.

A30. Statement of Federal Financial Accounting Standards 5 (SFFAS 5), *Accounting for Liabilities of the Federal Government*, states that "probable" refers to that which

- a. can reasonably be expected, or
- b. is believed to be more likely than not on the basis of available evidence or logic with the exception of pending or threatened litigation and unasserted claims.

A31. The Board notes that the concept of probability is imprecise and may be difficult to apply with respect to certain P3 activities such as economic stabilization payments, in addition to other matters that could arise during the life of the P3 arrangement or transaction. However, the "more likely than not" phrase in SFFAS 5 accommodates the assessment of the probability of those uncertainties often associated with P3s due to their long-term nature and project variability.

A32. Historically, some studies including work done by GAO suggest that, in practice, preparers and auditors in the private sector often interpret "probable" to mean a subjective assessment of probability considerably in excess of 50%. However, FASAB has defined "probable" as "more likely than not," that is, a subjective assessment of probability greater than 50% (51% or more).

Risks that are Deemed Remote

A33. Most of the respondents agreed with the Alternative View that stated (1) disclosure of remote contingencies is not limited to the terms of contractual arrangements, (2) the concept of "significant exposure" is not sufficiently clear to result in consistent disclosures, and (3) risks related to entity operations or performance (referred to in the Alternative View as business risks) would be included in the risk disclosure. As such, respondents were concerned that such additional disclosures could overwhelm or mislead users. The Board believes that it has addressed respondent concerns in this regard by refining the definition contained in the Exposure Draft, adding additional exclusions, eliminating references to "significant exposure," and in emphasizing at paragraph 24d that remote risks of loss should be limited to those that are included in the terms of the contractual P3 arrangements or transactions. The Board is of the opinion that remote risks can and should be reported where appropriate as explained below.

A34. SFFAS 5 provides that contingencies deemed remote (that is, the chance that a loss has been incurred is slight) are not recognized as a contingent liability or disclosed.¹⁹ However, SFFAS 5 requires that a contingent liability should be disclosed if any of the conditions for liability recognition are not met and there is at least a reasonable possibility that a loss or an additional loss may have been incurred.

A35. The Board believes that some risks of loss associated with P3s may be consistent with contingencies in SFFAS 5 that arise because of an existing condition, situation, or set of circumstances involving uncertainty as to possible gain or loss to an entity, including the concepts of probable, reasonably possible, and remote. It is this uncertainty, or risk in other words, that prompts entities to seek private partners who can best manage and/or contain the effects of the uncertainty that could ultimately lead to a loss. In applying SFFAS 5 some contingencies may be identified for which the degree of uncertainty is so great that no reporting (that is, recognition or disclosure) is required by that Statement. However, the Board notes that (1) reporting such contingencies is not inconsistent with the provisions of SFFAS 5 and (2) as discussed above at paragraph A32, because FASAB has defined

¹⁹ Per SFFAS 5, paragraph 38, a contingent liability should be recognized when all of these three conditions are met:

- A past event or exchange transaction has occurred (for example, a federal entity has breached a contract with a nonfederal entity).
- A future outflow or other sacrifice of resources is probable (for example, the nonfederal entity has filed a legal claim against a federal entity for breach of contract and the federal entity's management believes the claim is likely to be settled in favor of the claimant).
- The future outflow or sacrifice of resources is measurable (for example, the federal entity's management determines an estimated settlement amount).

"probable" as "more likely than not," the FASAB framework suggests that "reasonably possible" and "remote" risks be assessed for disclosure at the remaining (more narrow) band.

A36. Due to their very nature, P3s can also possess risks of loss that may be considered remote but material. For example, excluding contractual protections afforded the government by the Federal Acquisition Regulation (FAR) inherently increases the entity's risk as does a relationship with an industry or private partner that may require the government to provide resources or absorb losses beyond what was contemplated. The Board believes such P3 arrangements or transactions should be disclosed, subject to materiality, even though the risks of loss included in the terms of the contractual P3 arrangements or transactions may be deemed remote. The Board further notes that enterprise risk management frameworks often focus on remote risks because of the magnitude of any potential adverse effects that might arise. Therefore, consideration should be given to those risks that management does not expect to be likely, but represent a material risk of loss to the government if they were to occur. With this being said, the Board also notes that such remote risks may have a reasonably high materiality threshold balanced by whether the omission is such that it is probable that the judgment of a reasonable person would have been changed or influenced by the disclosure. As such, remote risks should not be dismissed from disclosure without further consideration of user needs and the qualitative and quantitative characteristics when applying materiality.

Disclosure Requirements of P3s

A37. The task force conducted research and identified examples of disclosures surrounding P3s from a variety of international and national authoritative sources which address P3 information needs for different types of users. Additionally, the task force considered fact-finding meetings with public and private representatives regarding the types of information that diverse users believe are important. As a result, the task force overwhelmingly agreed with requiring disclosures concerning (1) why the government selects a P3 model to conduct business, (2) the solicitation and procurement processes used, (3) how the P3 is structured, (4) the expected benefits, and (5) the total amounts expected to be paid. Although it was noted that requiring a description of the solicitation and procurement processes is unusual in financial reporting, the task force reached that conclusion because P3s fall outside the routine way governments procure services and such disclosures reveal the potential risk that governments assume, which can ultimately lead to liability recognition.

A38. In analyzing the task force's recommendations the Board considered the federal financial reporting objectives. Of the four objectives outlined in Statement of Federal Financial Accounting Concepts (SFFAC) 1, *Objectives of Federal Financial Reporting*, the operating performance and budgetary integrity objectives are identified as being most important for P3

reporting. The Board agreed that P3 reporting is important to meeting these objectives because the federal government is accountable to citizens for the proper administration of its resources. As such, the Board agreed with the majority of the task force's recommendations. However, requiring disclosure of an entity's solicitation and procurement processes falls outside the realm of financial reporting. Furthermore, the Board questioned the informational value of such a disclosure and concluded that its cost also exceeded potential benefits identified by the task force.

- A39. P3s are a form of investment and they should be adequately disclosed in order to assist report users in determining: (a) the important assets of the U.S. government and how effectively they are being managed and (b) whether the government's financial position improved or deteriorated over the period of the P3. P3s often involve innovative operational and complicated accounting practices, accompanied by sophisticated financing agreements. These complexities necessitate the establishment of disclosure principles as a first step to (1) developing uniform principles-based guidance, and (2) identifying potential gaps in existing guidance.
- A40. Respondents were mixed regarding disclosures with some stating that the disclosures are onerous and burdensome and the others in agreement with the proposed disclosures or seeking additional disclosures. As a result of considering the overall financial reporting objectives, and in light of certain respondent comments regarding administrative burden, the Board decided to not require disclosure of amounts estimated to be received and paid during each of the succeeding five years. That is, only the amounts received and paid by the government during the reporting period(s) and the amounts estimated to be received and paid in aggregate over the expected life of the P3 need be reported. In determining the expected life of the P3 arrangement or transaction the entity's economic incentives (that is, its risks and/or rewards) should be considered.
- A41. The Board offers two examples regarding the determination of a P3s expected life. First, consider an infrastructure arrangement containing a master ground lease of 50 years where in exchange for an up-front payment the entity out-leases (government-owned) land for the construction of an office building and at the same time enters into an occupancy lease which can be renewed for up to 75 years. The expected life of the P3 should be limited to 50 years given the fact that the entity's economic incentive at year 50 changes due to the master ground lease's expiration. That is, at such time the entity may decide to renew the master ground lease and renegotiate its occupancy lease or sell the land and not renew the occupancy lease. As a result, the amounts estimated to be received and paid in aggregate over the 50 years would be reported. Second, consider a spare parts sustainment program where an entity partners with an inventory logistics firm to handle the entire supply chain management function of a major weapons system expected to remain in service for the next 25 years. Although by statute the entity can only enter into a 5 year (for example, base year with 4 renewable options) contract, it has an economic incentive to maintain the relationship

beyond 5 years. This is primarily due to the fact that the private partner is likely to incur a substantial investment to manage the supply chain and the investment will need to be recovered over time. As a result, the amounts estimated to be received and paid in aggregate over the 25 years would be reported.

Aggregation

A42. Due to the relative complexity and potential voluminous nature of P3s that an entity might be party to, the Statement permits entities to aggregate disclosures by providing broad and summarized information instead of unique or discrete arrangement or transaction detail. However, entities are permitted to disclose information related to individually significant P3 arrangements or transactions separately if entity management believes that such disclosure would better meet user needs.

A43. For example, disclosures of P3 arrangements or transactions could be aggregated by an entity's strategic objectives, departmental or bureau categorizations, program budget classifications, or other means. In this way users are presented with information that is comprehensive and material to an entity's financial statements without placing an undue burden on preparers to provide P3 specific or granular level information. Respondents generally supported the aggregation of information.

Reporting Period

A44. Disclosures should be provided for the initial period and all annual periods thereafter where an entity is party to a material P3 arrangement/transaction

Board Approval and Dissent

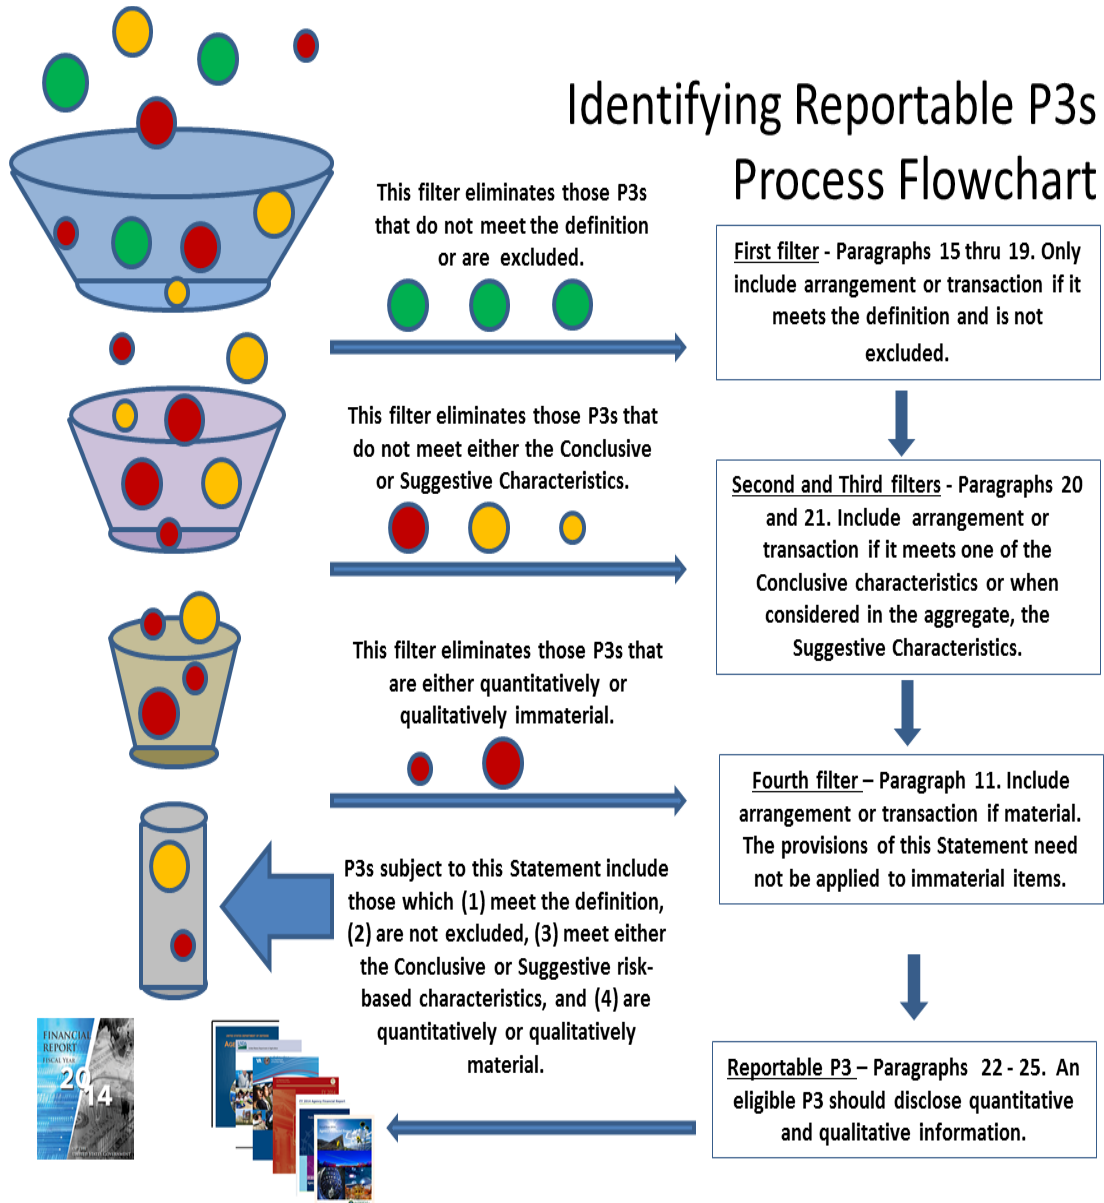

A45. This Statement was approved for issuance by 8 members of the Board. One member dissented. The written ballots are available for public inspection at the FASAB's offices. The dissent of the member who opposed the issuance of this Statement is presented in paragraphs A46 and A47.

A46. Ms. Ho dissents to the issuance of this Statement. She believes that the increased use of P3s in the federal government makes the need for clarity in the accounting for P3s vitally important. Ms. Ho acknowledges that the taxpayer has the right to know what obligations the government has agreed to and what the total cost is for a P3 project. Ms. Ho commends FASAB for their thorough examination of the issue, which encompassed several years.

A47. Ms. Ho strongly supports more transparency in financial reporting of federal taxpayers' dollars. However, she shares the concerns voiced by many agencies in response to the

exposure draft that the disclosures required by this Statement will create a burden that does not justify the cost required to collect, analyze, report and audit the information needed to comply with this Statement's requirements. In particular, Ms. Ho feels that the expected life requirement will result in inconsistent application by agencies throughout government, which is contrary to the goal of the Statement.

Statement of Federal Financial Accounting Standard 50: Establishing Opening Balances for General Property, Plant, and Equipment: Amending SFFAS 6, 10, and 23, and Rescinding SFFAS 35

Status

Issued	August 4, 2016
Effective Date	For periods beginning after September 30, 2016. Earlier implementation is encouraged.
Affects	<ul style="list-style-type: none">• SFFAS 6, par. 25, 26, and 40.• SFFAS 10, par. 16 and 36.• SFFAS 23, par. 10 is amended and par. 11-18 are rescinded.• SFFAS 35 is rescinded.
Affected by	None.
Related Guidance	TR 18, <i>Implementation Guidance for Establishing Opening Balances</i>

Summary

This Statement provides implementation guidance to allow a reporting entity, under specific conditions, to apply alternative methods in establishing opening balances for general property, plant, and equipment. It amends Statement of Federal Financial Accounting Standards (SFFAS) 6, *Accounting for Property, Plant, and Equipment*, SFFAS 10, *Accounting for Internal Use Software*, and SFFAS 23, *Eliminating the Category National Defense Property, Plant, and Equipment*, and rescinds SFFAS 35, *Estimating the Historical Cost of General Property, Plant, and Equipment: Amending Statements of Federal Financial Accounting Standards 6 and 23*. The alternative methods include (1) using deemed cost to establish opening balances of general property, plant, and equipment, (2) selecting between deemed cost and prospective capitalization of internal use software, and (3) allowing an exclusion of land and land rights from opening balances with disclosure of acreage information and expensing of future acquisitions.

The alternative methods are permitted when presenting financial statements, or one or more line items addressed by this Statement, following generally accepted accounting principles (GAAP) promulgated by the Federal Accounting Standards Advisory Board either (1) for the first time or (2) after a period during which existing systems could not provide the information necessary for producing such GAAP-based financial statements without use of the alternative methods. The application of this Statement based on the second condition is available to each reporting entity only once per line item addressed in this Statement.

Introduction

Purpose

1. This Statement amends Statement of Federal Financial Accounting Standards (SFFAS) 6, *Accounting for Property, Plant, and Equipment*, SFFAS 10, *Accounting for Internal Use Software*, and SFFAS 23, *Eliminating the Category National Defense Property, Plant, and Equipment*, and rescinds SFFAS 35, *Estimating the Historical Cost of General Property, Plant, and Equipment*: Amending Statements of Federal Financial Accounting Standards 6 and 23 by providing implementation guidance to allow a reporting entity, under specific conditions, to apply alternative methods in establishing opening balances for general property, plant, and equipment (PP&E).¹
2. The alternative methods permitted by this Statement may be applied when a reporting entity is presenting financial statements, or one or more line items addressed by this Statement, following generally accepted accounting principles (GAAP) promulgated by the Federal Accounting Standards Advisory Board (FASAB) either (1) for the first time or (2) after a period during which existing systems could not provide the information necessary for producing such GAAP-based financial statements without use of the alternative methods. The application of this Statement based on the second condition is available to each reporting entity only once per line item addressed in this Statement.
3. This Statement provides implementation guidance to allow a reporting entity to apply an alternative valuation method (deemed cost) in establishing opening balances for general PP&E in the first reporting period in which the reporting entity makes an unreserved assertion that its financial statements, or one or more line items, are presented fairly in accordance with GAAP. It also allows an exclusion of land and land rights from the opening balances with disclosure of acreage information and expensing of future acquisitions. It also provides for selecting between deemed cost and prospective capitalization of internal use software (IUS) in the first reporting period in which the reporting entity makes an unreserved assertion that its financial statements, or one or more line items, are presented fairly in accordance with GAAP. The alternative methods provided in this Statement should also be applied to correct subsequently discovered errors in general PP&E that was valued under an alternative method.

¹ For a complete discussion of the definition, characteristics, recognition, and measurement principles for general PP&E, see SFFAS 6, par. 21-39. For the definition, recognition, and measurement principles for internal use software, see SFFAS 10, par. 9-34.

-
4. As a result of these amendments and rescission, all implementation guidance for general PP&E, with the exception of specific provisions applicable to IUS, will be incorporated into SFFAS 6. The Board believes providing implementation guidance for general PP&E other than IUS in SFFAS 6 will provide a comprehensive guide for users in a single Statement.
-

Materiality

5. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Standards

Scope

6. This Statement applies when a reporting entity is presenting financial statements, or one or more line items addressed by this Statement, following generally accepted accounting principles (GAAP) promulgated by the Federal Accounting Standards Advisory Board (FASAB) either (1) for the first time or (2) after a period during which existing systems could not provide the information necessary for producing such GAAP-based financial statements without use of the alternative methods. The application of this Statement based on the second condition is available to each reporting entity only once per line item addressed in this Statement. This Statement also is applicable to the financial report of the U. S. Government for purposes of consolidating a component reporting entity meeting the above conditions.
7. The alternative methods provided in this Statement may be applied in establishing **opening balances**² for the reporting period in which the reporting entity, taken as a whole, makes an **unreserved assertion** that its financial statements, or one or more line items addressed by this Statement, are presented fairly in accordance with GAAP. The alternative methods provided in this Statement should also be applied to correct subsequently discovered errors in general property, plant, and equipment (PP&E) that were valued under an alternative method.
8. A reporting entity that meets either condition in paragraph 6 and elects to apply the alternative methods in establishing opening balances permitted by this Statement is subject to the reporting requirements under paragraph 13 of Statement of Federal Financial Accounting Standards (SFFAS) 21, *Reporting Corrections of Errors and Changes in Accounting Principles*, Amendment of SFFAS 7, *Accounting for Revenue and Other Financing Sources*.

² Terms defined in the Glossary are shown in bold-face the first time they appear.

Definitions

Definitions in paragraphs 9 – 10 are presented within the standards because they are new terms intended to have a specific meaning when applying the standards.

9. **Opening Balances**—Opening balances are account balances that exist at the beginning of the reporting period. Opening balances are based upon the closing balances of the prior period and reflect the effects of transactions and events of prior periods and accounting policies applied in the prior period. Opening balances also include matters requiring disclosure that existed at the beginning of the period, such as contingencies and commitments.³
10. **Unreserved Assertion**—An unreserved assertion is an unconditional statement.

Amendments to SFFAS 6, *Accounting for Property, Plant, and Equipment*

11. This paragraph amends SFFAS 6, *Accounting for Property, Plant, and Equipment*, paragraph 25 by adding the following language at the end of the first sentence: “unless the reporting entity made the election to implement the provisions of paragraph 40.g.i.”

The revised paragraph 25 of SFFAS 6 is:

25. Land and land rights acquired for or in connection with other general PP&E²⁹ shall be included in general PP&E unless the reporting entity made the election to implement the provisions of paragraph 40.f.i.

[footnote 29: “Acquired for or in connection with other general PP&E” is defined as land acquired with the intent to construct general PP&E and land acquired in combination with general PP&E, including not only land used as the foundation, but also adjacent land considered to be the general PP&E’s common grounds]

12. This paragraph amends SFFAS 6, paragraph 26 by adding the following language as the second sentence: “Although the measurement basis for valuing general PP&E remains

³ Adopted from AU-C 510, *Opening Balances – Initial Audit Engagements, Including Reaudit Engagements* (AICPA Professional Standards).

historical cost, reasonable estimates may be used to establish the historical cost of general PP&E, in accordance with the asset recognition and measurement provisions herein.”

The revised paragraph 26 of SFFAS 6 is:

26. All general PP&E shall be recorded at cost. Although the measurement basis for valuing general PP&E remains historical cost, reasonable estimates may be used to establish the historical cost of general PP&E, in accordance with the asset recognition and measurement provisions herein. Cost shall include all costs incurred to bring the PP&E to a form and location suitable for its intended use. For example, the cost of acquiring property, plant, and equipment may include...

13. This paragraph amends the implementation guidance provided in SFFAS 6 by replacing paragraph 40.

Paragraph 40 of SFFAS 6 is replaced with:

40. Alternative Methods for Establishing Opening Balances.^{44A}The following guidance is applicable for the reporting period when the reporting entity is presenting financial statements, or one or more line items addressed by this Statement, following generally accepted accounting principles (GAAP) promulgated by FASAB either (1) for the first time or (2) after a period during which existing systems could not provide the information necessary for producing such GAAP-based financial statements without use of the alternative methods. The following should be considered in establishing opening balances:

[footnote 44: Opening balances are account balances that exist at the beginning of the reporting period. Opening balances are based upon the closing balances of the prior period and reflect the effects of transactions and events of prior periods and accounting policies applied in the prior period. Opening balances also include matters requiring disclosure that existed at the beginning of the period, such as contingencies and commitments.]

- a. The alternative methods for establishing opening balances may be applied for the reporting period in which the reporting entity, taken as a whole, makes an unreserved assertion^{44B} that its financial statements, or one or more line items addressed by this Statement, are presented fairly in accordance with GAAP. The alternative methods

^{44B} The application of these alternative methods based on the second condition specified in paragraph 40 is available to each reporting entity only once per line item.

provided in this Statement should also be applied to correct subsequently discovered errors in general PP&E that were valued under an alternative method.

- b. The application of these alternative methods based on the second condition specified in paragraph 40 is available to each reporting entity only once per line item.
- c. A reporting entity that meets either condition in paragraph 40 and elects to apply any of the alternative methods available in establishing opening balances is subject to the reporting requirements under paragraph 13 of Statement of Federal Financial Accounting Standards 21, *Reporting Corrections of Errors and Changes in Accounting Principles, Amendment of SFFAS 7, Accounting for Revenue and Other Financing Sources*.
- d. Alternative Valuation Method. **Deemed cost**^{44C} is an acceptable valuation method for opening balances of general PP&E. Because the reporting entity may have multiple component or subcomponent reporting entities^{44D} using various valuation methods simultaneously, deemed cost should be based on one, or a combination, of the following valuation methods:^{44E}

[footnote 44C: Deemed cost is an amount used as a surrogate for initial amounts that otherwise would be required to establish opening balances.]

[footnote 44D: SFFAS 47, *Reporting Entity*, provides that "component reporting entity" is used broadly to refer to a reporting entity within a larger reporting entity. Examples of component reporting entities include organizations such as executive departments and agencies. Component reporting entities would also include subcomponents that may themselves prepare general purpose federal financial reports (GPFFRs). One example is a bureau that is within a larger department that prepares its own standalone GPFFR.]

[footnote 44E: The methods are not listed in order of preference.]

i. Replacement cost^{44F}

[footnote 44F: Replacement cost is the amount required for an entity to replace the remaining service potential of an existing asset in a current transaction at the reporting date, including the amount that the entity would receive from disposing of the asset at the end of its useful life (Statement of Federal Financial Accounting Concepts (SFFAC)

^{44C} Deemed cost is an amount used as a surrogate for initial amounts that otherwise would be required to establish opening balances..

7, Measurement of the Elements of Accrual-Basis Financial Statements in Periods After Initial Recording, par. 46).]

- ii. Estimated historical cost (initial amount). Reasonable estimates may be based on:
 - a) cost of similar assets at the time of acquisition;
 - b) current cost of similar assets discounted for inflation since the time of acquisition (that is, deflating current costs to costs at the time of acquisition by general price index); or
 - c) other reasonable methods, including latest acquisition cost and estimation methods based on information such as, but not limited to, budget, appropriations, engineering documents, contracts, or other reports reflecting amounts to be expended.

iii. **Fair value**^{44G}

[footnote 44G: Fair value is the amount at which an asset or liability could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale (SFFAC 7, par. 38).]

- e. Establishing in-service dates.
 - i. In some cases, the in-service date must be estimated. In estimating the year that the base unit was placed in service, if only a range of years can be identified, then the midpoint of the range is an acceptable estimate of the in-service date.
 - ii. It is not necessary to separately identify the in-service date for material improvements^{44H} included in the opening balances of a base unit. All improvements included in the opening balances at deemed cost may be treated as if they were placed in-service at the date the base unit was placed in-service.

[footnote 44H: Material improvements are costs which either extend the useful life of existing general PP&E or enlarge or improve its capacity.]

- f. Alternative methods for land and land rights. A reporting entity should choose among the following alternative methods for establishing an opening balance for land and land rights. Because a reporting entity may have multiple component or subcomponent reporting entities selecting different alternative methods, a reporting entity should establish an opening balance based on one, or a combination, of these alternative methods. However, application of a particular alternative method must be

consistent within each individual subcomponent reporting entity prior to consolidation into the larger component reporting or reporting entity.

- i. The reporting entity may exclude land and land rights from the opening balance of general PP&E. If this alternative method is applied, the reporting entity should expense future land and land right acquisitions.
 - ii. Land and land rights may be recognized in opening balances based on the provisions of the alternative valuation method (deemed cost) provided in paragraph 40.d.
- g. Once established using alternative methods, opening balances are considered consistent with GAAP.
- h. Component Reporting Entity Disclosures:
- i. A component reporting entity electing to apply deemed cost in establishing opening balances for general PP&E should disclose this fact and describe the methods used in the first reporting period in which the reporting entity makes an unreserved assertion that its financial statements, or one or more line items, are presented fairly in accordance with GAAP. Financial statements or, as applicable, reports on line items of subsequent periods need not repeat this disclosure, unless the financial statements for which deemed cost was applied in establishing opening balances are presented for comparative purposes. No disclosure of the distinction or breakout of the amount of deemed cost of general PP&E included in the opening balance is required.
 - ii. A component reporting entity electing to apply the provisions of paragraph 40.f.i. to land and land rights should disclose this fact and describe the alternative methods used in the first reporting period in which the reporting entity makes an unreserved assertion that its financial statements, or one or more line items, are presented fairly in accordance with GAAP. A component reporting entity electing to exclude land and land rights from its general PP&E opening balances must disclose, with a reference on the balance sheet to the related disclosure, the number of acres held at the beginning of each reporting period, the number of acres added during the period, the number of acres disposed of during the period, and the number of acres held at the end of each reporting period. A reporting entity electing to exclude land and land rights from its general PP&E opening balance should continue to exclude future land and land rights acquisition amounts and provide the disclosures. In the event different alternative methods are applied to land and land rights (as permitted by paragraph 40.f.) by subcomponent reporting entities consolidated into a larger reporting entity, the

alternative method adopted by each significant subcomponent should be disclosed.

- i. Financial Report of the U.S. Government Disclosures
 - i. When a component reporting entity elects to apply deemed cost, the U.S. government-wide financial statements should disclose this fact, the identity of the component reporting entity, and a reference to the component reporting entity's financial report. Subsequent financial statements need not repeat this disclosure unless the financial statements for which deemed cost was applied in establishing opening balances are presented for comparative purposes. No disclosure of the distinction or breakout of the amount of deemed cost of general PP&E included in the opening balance is required.
 - ii. When a component reporting entity elects to apply the provisions of paragraph 40.f.i. to land and land rights, the U. S. government-wide financial statements should disclose this fact, the number of acres held at the end of each reporting period, an explanation of the election, the identity of the component reporting entity, and a reference to the component reporting entity's financial report

Amendments to SFFAS 10, *Accounting for Internal Use Software*

14. This paragraph amends SFFAS 10, *Accounting for Internal Use Software*, paragraph 16 by adding the following first sentence: "Although the measurement basis remains historical cost, reasonable estimates may be used to establish the capitalized cost of internally developed software, in accordance with the asset recognition and measurement provisions herein."

The revised paragraph 16 of SFFAS 10 is:

16. Although the measurement basis remains historical cost, reasonable estimates may be used to establish the capitalized cost of internally developed software, in accordance with the asset recognition and measurement provisions herein. For internally developed software, capitalized cost should include the full cost (direct and indirect cost) incurred during the software development stage. Such cost should be limited to costs incurred after...

[footnote 4: For a full discussion of direct and indirect cost, see SFFAS No. 4, *Managerial Cost Accounting Concepts and Standards for the Federal Government* (June 1995), pars. 90-92. Also see, Statement of Federal Financial Accounting Concepts No. 2, *Entity and Display*, pars. 94-95.]

-
15. This paragraph amends the implementation guidance provided in SFFAS 10 by replacing paragraph 36.

Paragraph 36 of SFFAS 10 is replaced with:

36. Alternative Methods for Establishing Opening Balances.^{9a} The following guidance is applicable for the reporting period when the reporting entity is presenting financial statements, or the line item addressed by this Statement, following generally accepted accounting principles (GAAP) promulgated by FASAB either (1) for the first time or (2) after a period during which existing systems could not provide the information necessary for producing such GAAP-based financial statements without use of the alternative methods.

[footnote 9A: Opening balances are account balances that exist at the beginning of the reporting period. Opening balances are based upon the closing balances of the prior period and reflect the effects of transactions and events of prior periods and accounting policies applied in the prior period. Opening balances also include matters requiring disclosure that existed at the beginning of the period, such as contingencies and commitments.]

The following should be considered in establishing opening balances:

- a. The alternative methods for establishing opening balances may be applied for the reporting period in which the reporting entity, taken as a whole, makes an unreserved assertion that its financial statements, or the line item addressed by this Statement, are presented fairly in accordance with GAAP. The alternative methods provided in this Statement should also be applied to correct subsequently discovered errors in general PP&E that were valued under an alternative method.

[footnote 9B: An unreserved assertion is an unconditional statement.]

- b. The application of these alternative methods based on the second condition specified in paragraph 36 is available only once to each reporting entity.
- c. A reporting entity that meets either condition in paragraph 36 and elects to apply any of the alternative methods available in establishing opening balances is subject to the reporting requirements under paragraph 13 of Statement of Federal Financial Accounting Standards 21, *Reporting Corrections of Errors and Changes in Accounting Principles*, Amendment of SFFAS 7, *Accounting for Revenue and Other Financing Sources*.

-
- d. **Alternative Methods.** A reporting entity should choose among the following alternative methods for establishing an opening balance for internal use software. Because a reporting entity may have multiple component or subcomponent reporting entities selecting different alternative methods, a reporting entity should establish an opening balance based on one, or a combination, of these alternative methods. However, application of a particular alternative method must be consistent within each individual subcomponent reporting entity prior to consolidation into the larger component reporting or reporting entity.

[footnote 9C: SFFAS 47, *Reporting Entity*, provides that "component reporting entity" is used broadly to refer to a reporting entity within a larger reporting entity. Examples of component reporting entities include organizations such as executive departments and agencies. Component reporting entities would also include subcomponents that may themselves prepare general purpose federal financial reports (GPFFRs). One example is a bureau that is within a larger department that prepares its own standalone GPFFR.]

- i. **Alternative Valuation Method.** Deemed cost^{9D} is an acceptable valuation method for opening balances of internal use software. See SFFAS 6 paragraph 40.d. for implementation guidance regarding deemed cost.

[footnote 9D: Deemed cost is an amount used as a surrogate for initial amounts that otherwise would be required to establish opening balances.]

- ii. **Prospective capitalization.** The reporting entity may choose prospective capitalization of internal use software. If the reporting entity elects prospectiveAn unreserved assertion is an unconditional statement. treatment, the reporting entity should choose between the following acceptable alternative methods at the opening balance date:
- a) Exclude all internal use software, inclusive of that under development at the opening balance date, from the opening balance.
 - b) Exclude internal use software in service from the opening balance, but include amounts related to internal use software under development at the opening balance date. Internal use software under development should be recognized in opening balances based on the provisions of paragraphs 15 through 27 or on the alternative valuation method (deemed cost) provided in paragraph 36.d.i.
- e. Once established using alternative methods, opening balances are considered consistent with GAAP.

f. Component *Reporting Entity* Disclosures:

- i. A component reporting entity electing to apply deemed cost in establishing opening balances for internal use software should disclose this fact and describe the methods used in the first reporting period in which the reporting entity makes an unreserved assertion that its financial statements, or one or more line items, are presented fairly in accordance with GAAP. Financial statements or, as applicable, reports on line items of subsequent periods need not repeat this disclosure, unless the financial statements for which deemed cost was applied in establishing opening balances are presented for comparative purposes. No disclosure of the distinction or breakout of the amount of deemed cost of internal use software included in the opening balance is required.
- ii. A component reporting entity electing to apply the provisions of paragraph 36.d.ii. should disclose this fact and describe the alternative methods used in the first reporting period in which the component reporting entity makes an unreserved assertion that its financial statements, or one or more line items, are presented fairly in accordance with GAAP. In the event different alternative methods are applied by subcomponent reporting entities consolidated into a larger reporting entity, the alternative method adopted by each significant subcomponent should be disclosed. Financial statements or, as applicable, reports on line items of subsequent periods need not repeat this disclosure, unless the statements for which the alternative method was applied in establishing opening balances are presented for comparative purposes. No disclosure of the distinction or breakout of amount of deemed cost of internal use software included in the opening balance is required.

g. Financial Report of the U.S. Government Disclosures:

- i. When a component reporting entity elects to apply deemed cost, the U.S. government-wide financial statements should disclose this fact, the identity of the component reporting entity, and a reference to the component reporting entity's financial report. Subsequent financial statements need not repeat this disclosure unless the financial statements for which deemed cost was applied in establishing opening balances are presented for comparative purposes. No disclosure of the distinction or breakout of the amount of deemed cost of internal use software included in the opening balance is required.
- ii. When a component reporting entity elects to apply the provisions of paragraph 36.d.ii., the U.S. government-wide financial statements should disclose this fact, an explanation of the election, the identity of the component reporting entity, and a reference to the component reporting entity's financial report.

Amendments to SFFAS 23, *Eliminating the Category National Defense Property, Plant, and Equipment*

16. This section amends the implementation guidance provided in SFFAS 23, *Eliminating the Category National Defense Property, Plant, and Equipment*, as described in the following paragraphs.
17. Paragraph 10 is replaced with:
 10. See SFFAS 6 for implementation guidance applicable to all general PP&E.
18. Paragraphs 11-18 of SFFAS 23 are rescinded.

Rescission of SFFAS 35, *Estimating the Historical Cost of General Property, Plant, and Equipment: Amending Statements of Federal Financial Accounting Standards 6 and 23*

19. This paragraph rescinds SFFAS 35, *Estimating the Historical Cost of General Property, Plant, and Equipment: Amending Statements of Federal Financial Accounting Standards 6 and 23* in its entirety. Provisions from SFFAS 35 were incorporated into the implementation guidance of SFFAS 6 and SFFAS 10 as applicable.

Effective Date

20. This Statement is effective for periods beginning after September 30, 2016. Earlier implementation is encouraged.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

Department of Defense Implementation Guidance Request Project

- A1. In February 2014, the Department of Defense (DoD) identified several areas of concern for FASAB's consideration. The Board agreed to undertake a project to address these areas by providing practical guidance within the framework of existing accounting standards and, where necessary, by providing the appropriate guidance to address issues not addressed within the framework of existing accounting standards.
- A2. This Statement is issued in response to DoD's request for guidance on establishing opening balances for general property, plant, and equipment (PP&E). Accounting for the federal government's general PP&E is complex and continues to be a challenge for large federal departments. This topic has been addressed in numerous Statements of Federal Financial Accounting Standards (SFFASs) and Interpretations as well as guidance issued by the Accounting and Auditing Policy Committee. SFFAS 6, *Accounting for Property, Plant, and Equipment*, SFFAS 10, *Accounting for Internal Use Software*, SFFAS 23, *Eliminating the Category National Defense Property, Plant, and Equipment*, and SFFAS 35, *Estimating the Historical Cost of General Property, Plant, and Equipment: Amending Statements of Federal Financial Accounting Standards 6 and 23* address the accounting and reporting requirements for general PP&E.
- A3. During the project, the Board's staff met with DoD officials, as well as members of the audit community, to develop an understanding of the issues faced by DoD in establishing their baseline for general PP&E. This included discussing valuation methodologies employed,

management assertions and the completion of audits, and the status of implementation of a system compliant with general accepted accounting principles (GAAP) for the DoD components.

A4. Based on the meetings and information provided it was determined that:

- a. DoD's financial systems and many aspects of DoD's accounting policy for general PP&E have not been in accordance with GAAP.
- b. Many DoD organizations that maintain several different accounting and property systems are involved in acquiring general PP&E assets.
- c. DoD has not had consistent procedures related to general PP&E acquisitions or document retention.
- d. All major systems DoD has utilized for acquisitions of general PP&E have either never been audited or, when audited, had significant deficiencies or material weaknesses.
- e. Capital improvement projects have not been reliably tracked, so DoD was unable to determine the date the improvements were placed in service or to establish a valuation baseline.
- f. DoD has approximately 440,000 separate real property assets, and many real property assets were built more than 40 years ago.
- g. DoD records related to land values are not in a structured, searchable system. The records are not digitized and accessing them involves searching boxed records. Also, source documents, such as deeds, may not be complete, and court records often have gaps given the length of time involved.
- h. DoD does not have a complete inventory of its internal use software (IUS), and costs of IUS have not been captured consistently.
- i. General equipment is a broad category that includes military equipment and consists of hundreds of thousands of assets.

A5. After considering the status of DoD's efforts and the fact that DoD has had numerous years to implement the standards and has shown little progress, the Board discussed the merits of the project. Specifically, one member had concerns regarding the Board's role and potentially undermining the Board's own credibility by acting to offer relief to DoD (because the department has been unable to adopt GAAP requirements). The Board acknowledges that appearance is a concern. However, the Board has been tasked with establishing standards for which the benefits exceed the cost.

-
- A6. The Board noted that while DoD has had numerous years to meet the standards and become GAAP compliant, they have not. Conditions remain that existed when FASAB issued many of these standards, and the cost to implement all the standards concurrently is greater than would have been incurred if standards were implemented in a timely manner. The goal of this Statement is to avoid requiring the expenditure of taxpayer dollars in recreating information that would have been of greater benefit in the past (for example, to evaluate major acquisition/construction programs as they were executed), but for which the current use is limited to accountability and assessing the cost of current services. The Board proposed less costly alternatives that will support this objective.
 - A7. The Board believes assisting DoD with establishing a baseline benefits all parties. Providing a starting point will enable DoD to focus on needed improvements to systems and controls to process transactions going forward and thereby establish and maintain reliable financial information regarding future PP&E acquisitions. Establishing a sound financial management system is of primary importance.
 - A8. The Board also acknowledges that other standard-setters have provided guidance for organizations implementing an entire body of standards for the first time. The challenge of establishing opening balances for large public sector entities warrants the flexibilities provided in this Statement.

Summary of Outreach Efforts and Responses

- A9. FASAB issued the exposure draft (ED) *Establishing Opening Balances for General Property, Plant, and Equipment: Amending Statement of Federal Financial Accounting Standards (SFFAS) 6, SFFAS 10, SFFAS 23, and Rescinding SFFAS 35* on December 22, 2015, with comments requested by February 4, 2016.
- A10. Upon release of the ED, FASAB provided notices and press releases to the FASAB subscription email list, the Federal Register, *FASAB News*, the *Journal of Accountancy*, Association of Government Accountants Topics, the *CPA Journal*, *Government Executive*, the *CPA Letter*, the Chief Financial Officers Council, the Council of the Inspectors General on Integrity and Efficiency, and committees of professional associations generally commenting on EDs in the past (for example, the Greater Washington Society of CPAs and the Association of Government Accountants Financial Management Standards Board).
- A11. FASAB followed up this broad announcement with direct mailings of the ED to the following relevant congressional committees:
 - a. House Appropriations—Subcommittee on Defense

-
- b. House Committee on Armed Services
 - c. House Committee on Oversight and Government Reform
 - d. House Committee on the Budget
 - e. House Committee on Veterans' Affairs
 - f. Senate Appropriations—Subcommittee on Defense
 - g. Senate Committee on Armed Services
 - h. Senate Committee on Finance
 - i. Senate Committee on Homeland Security and Governmental Affairs
 - j. Senate Committee on the Budget
 - k. Senate Committee on Veterans' Affairs
- A12. FASAB received 22 responses from preparers, auditors, users of federal financial information, and professional associations. The majority of respondents agreed with the proposals to: (1) permit opening balances of general PP&E to be valued based on deemed cost and require the related disclosures, (2) allow a reporting entity to choose among alternative methods in establishing an opening balance for IUS and require the related disclosures, and (3) rescind SFFAS 35.
- A13. However, approximately one-half of the respondents disagreed with the proposal to allow exclusion of land from the opening balances of general PP&E. They also disagreed with the proposal to require a reporting entity electing to exclude land from its general PP&E opening balances to exclude future land acquisition amounts.
- A14. The respondents identified certain issues that could be clarified within the Statement or addressed in the basis for conclusions.
- A15. The Board did not rely on the number of respondents in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered each response and weighed the merits of the points raised. The respondents' comments are summarized below.

Land

- A16. When developing the ED, the Board proposed options for land that were different from those for other general PP&E. Allocation of the cost of general PP&E, excluding land, among accounting periods is essential to assessing operating performance. Statement of Federal Financial Accounting Concepts (SFFAC) 1, *Objectives of Federal Financial Reporting*, focuses on relating costs to accomplishments in reporting an entity's operating performance. Cost information is of fundamental importance, both to program managers in operating their activities efficiently and effectively and to executive and congressional decision makers in determining resource allocation. General PP&E is capitalized and depreciated to provide this information. Because land is not depreciated due to its infinite useful life, the benefits of capitalizing land are primarily in the period of acquisition. That is, the cost of the land is identified so the acquisition can be evaluated and capitalized. In doing so, the period operating costs are not overstated. In future periods, the ongoing benefit is that accountability for the asset is established.
- A17. The Board carefully considered those aspects of the land category, along with measurement challenges, cost-benefit considerations, and the qualitative characteristics of financial information. The Board determined the most practical and cost-beneficial approach to establishing an opening balance for land would be to permit the reporting entity to exclude land from the opening balance of general PP&E and to support accountability through disclosures. The Board proposed that the reporting entity disclose, with a note reference on the balance sheet, the number of acres of land held at the beginning of each reporting period, the number of acres added during the period, the number of acres disposed of during the period, and the number of acres held at the end of each reporting period. A reporting entity electing to exclude land from its general PP&E opening balance would continue to exclude amounts for future land acquisitions. Accordingly, the reporting entity would provide the disclosures each year thereafter.
- A18. Some members who supported excluding land expressed concern regarding the resulting inconsistency in reporting and suggested the Board begin a project on land in the near future to review existing standards, to explore options to improve reporting on land, and to seek a consistent approach. Other members wanted to explore valuing existing land holdings based on deemed cost (consistent with general PP&E) or on a set amount per acre of land. The Board asked respondents whether they agreed or disagreed with the proposal to allow exclusion of land from the opening balances of general PP&E even though other component reporting entities would report the cost of certain land in general PP&E. The Board also requested feedback regarding three alternative approaches: (1) to value general PP&E land holdings based on historical cost, a set amount per acre of land, deemed cost, or another valuation method, (2) to defer any changes in the current requirements until the Board completes a reexamination of the appropriate basis of accounting for land, or (3) to adopt another option.

-
- A19. Approximately one-half of the respondents disagreed with the ED to allow exclusion of land from the opening balances of general PP&E. Nearly all respondents supported a land project to reexamine standards for reporting on land. In addition, the majority of the respondents preferred that the Board defer changes to the current land requirements, such as exclusions of land from the balance sheet or other actions that may affect future acquisitions, until the Board completes the re-examination.
- A20. As part of due process, the Board carefully considered the following:
- a. respondents' comments regarding land,
 - b. DoD feedback regarding implementation challenges and options, and FASAB's land
 - c. project plan entitled *Accounting and Reporting of Government Land*.
- A21. Respondents' key reasons for disagreeing with the proposal to allow exclusion of land were (1) inconsistent accounting treatment that would be consolidated at the government-wide level and (2) the potential that a temporary change may lead to added cost for reporting entities electing to implement the Statement. Consistent with the support for permitting opening balances of general PP&E to be valued based on deemed cost, respondents agreed that deemed cost and/or existing standards could be used to value opening balances of land.
- A22. The Board considered DoD's feedback because DoD would most likely elect to implement the Statement. DoD conveyed the following important factors to the Board:
- a. DoD reports that it owns considerable land qualifying as general PP&E. DoD would have to expend significant financial and personnel resources to determine the valuation of land.
 - b. In contrast to the information used to establish deemed cost for other general PP&E, information that would be necessary to establish deemed cost for land would not be used for DoD management purposes.
 - c. DoD supports reporting acreage information until the land project is completed. The potential for future valuation requirements was not viewed as more costly than requiring deemed cost and later changing the valuation requirements. DoD noted there are current accountability requirements, and it is actively working on obtaining acreage information.
- A23. Although respondents' conveyed that inconsistency was a concern, the Board notes that current standards are not consistent because they differentiate between stewardship land

and land acquired in connection with development or construction of an item of general PP&E. Stewardship land is not capitalized, but disclosures of information regarding use of the land and physical measures are required (see SFFAS 29, *Heritage Assets and Stewardship Land*). Land classified as general PP&E is capitalized at historical cost. Stewardship land can be used in development or construction of general PP&E but is not capitalized.

- A24. The land project is being initiated to address such inconsistencies, and Board members showed a strong commitment to moving forward and expediting the project to resolve inconsistencies. At the February 2016 Board meeting, the Board approved a project plan entitled *Accounting and Reporting of Government Land*. The requirements in SFFASs 6 and 29 have resulted in significant differences in accounting treatment for land holdings. The land project will consider additional research and factors to determine how best to account for and to report land. However, the Board does not believe decisions to be made in the land project should delay the exclusion of land from opening balances as provided in this Statement. This Statement is of limited scope and seeks cost beneficial options for opening balances. If the exclusion was not available, component reporting entities would be required to adopt one of the valuation methods available under deemed cost. The land project may reach conclusions that make such valuation methods obsolete, and the costs incurred to adopt deemed cost would have been unnecessary.
- A25. Further, the Board has expressed a commitment to complete the land project quickly to resolve inconsistencies. The Board has also communicated to those parties most likely to be impacted that decisions made regarding land are subject to change as a result of the land project.
- A26. As noted above, consistent with the support for opening balances of general PP&E to be valued based on deemed cost, respondents expressed that deemed cost could be used to value opening balances of land. Therefore, the Board believes deemed cost should also remain an option for establishing opening balances for land. As a result, a larger component reporting entity may establish an opening balance for land based on a combination of multiple subcomponent reporting entities' alternative methods, which may or may not be the same. This is permitted by the Statement. However, application of a particular alternative method must be consistent within each subcomponent reporting entity prior to its consolidation into a larger component reporting entity.
- A27. One area that Board members believe needs transparency and additional clarification is the potential for inconsistent accounting treatment at the government-wide level, with some land reported in dollars and some in acres. The issue is further complicated by the fact that stewardship land is also included as a note reference on the balance sheet and reported in physical units, which may be different than acres. Without additional information to explain what is included at the consolidated level, this situation would not be

clear to readers at the government-wide level. Therefore, the Board added a narrative disclosure requirement for the government-wide financial report. The disclosure requires a narrative explanation of any election made by component reporting entities regarding land. Each component reporting entity electing to exclude land should be identified with a reference to the component reporting entity's financial report.

- A28. After considering all of the above factors, the Board considered the pros and cons of deferring significant action on land until the completion of the land project, as requested by the respondents who disagreed with the proposal. While the respondents are correct that land will be treated inconsistently, the Board believes it has a responsibility to weigh the cost of developing deemed cost for vast land holdings against the possibility that the land project will conclude that such deemed costs are not useful. Therefore, the Board adopted its proposal to permit land to be excluded from the opening balance of general PP&E and to support accountability through disclosures.
- A29. Although some land rights⁴ may not have an indefinite useful life, the Board proposed in the ED (similarly to what it did with respect to land) that an exclusion of land rights from the opening balances with disclosure of acreage information and expensing of future acquisitions. The Board recognizes that land rights are diverse, situation specific, and may not always result in disclosures required by this Statement. In fact, SFFAS 6 provides that land rights that are for a specified period of time shall be depreciated or amortized over that time period. The Board believes this is a cost effective approach for opening balances of land rights and completion of the land project would more fully research the issues and provide comprehensive standards. The Board reiterates that decisions made within this Statement regarding land and land rights are subject to change based upon the results of the land project.
- A30. Although the majority of respondents agreed with the proposal to rescind SFFAS 35 and to permit reasonable estimates in the preparation of financial statements, this provision of the Statement generated many comments from respondents.
- A31. A common suggestion provided by respondents was that reporting entities would benefit from the inclusion of language from paragraph 19⁵ of the ED in SFFAS 6 and SFFAS 10 to clarify that the Board intended reasonable estimates to be applicable to any general PP&E versus just opening balances. Although the Board believes the broad statement provided in the paragraph should be sufficient to address the matter, members agreed including the

⁴ "Land rights" are interests and privileges held by the entity in land owned by others, such as leaseholds, easements, water and water power rights, diversion rights, submersion rights, rights-of-way, and other like interests in land.

⁵ "Reasonable estimates are permitted in the preparation of financial statements subsequent to the rescission of SFFAS 35."

provisions of paragraph 19 of the ED in SFFASs 6 and 10 may be clearer. Specifically, SFFAS 6, paragraph 26, and SFFAS 10, paragraph 16, were amended to specify that although the measurement basis for valuing general PP&E remains historical cost, reasonable estimates may be used.

- A32. Respondents who disagreed with the proposal to rescind SFFAS 35 primarily cited audit concerns and the valuable guidance provided in SFFAS 35 as their reasoning. However, many of the detailed concerns expressed by respondents are addressed through existing guidance. The Board reiterates (as explained in the ED) that Technical Release 13, *Implementation Guide for Estimating the Historical Cost of General Property, Plant, and Equipment*, remains in effect regardless of these amendments and that each significant provision of SFFAS 35 was incorporated in the amendments—including the ability to use estimates in the future. In addition, SFFAS 4, *Managerial Cost Accounting Standards and Concepts*, establishes a requirement for cost accounting that acknowledges the use of cost finding techniques and the allocation of costs on a reasonable and consistent basis. The Board also believes it important to point out the Statement provides for the use of deemed cost to correct errors in the opening balances. Reporting entities should consider all available GAAP guidance when implementing new accounting standards.

Internal Use Software (IUS)

- A33. While the majority of respondents agreed with the proposal to allow a reporting entity to choose among alternative methods in establishing an opening balance for IUS, several respondents expressed their concerns to the Board. Five respondents expressed concern with prospective capitalization of IUS, but agreed with deemed cost as an alternative method. The respondents did not believe component reporting entities should be able to adopt inconsistent alternative methods when establishing an opening balance for IUS. In contrast, one respondent believed prospective capitalization of IUS should be the only option because this would enhance consistency while also appropriately balancing the value and cost of the information in the financial statements.
- A34. The Board recognizes the concerns raised by respondents and considered them during the development of the Statement. While the Board understands the importance of consistency and comparability in financial reporting, the Board believes users of federal financial statements often have different objectives and may not necessarily compare asset values among various reporting entities in the way that users of financial statements do in a commercial setting.
- A35. The Board considered the fact that there may be component reporting entities (such as working capital funds that charge rates) for which the prospective treatment would be undesirable. The Board determined it would be best to provide optimum flexibility by providing for the option of deemed cost for IUS. Therefore, the Board agreed the

Statement should allow for the alternative methods in establishing opening balances for IUS.

- A36. The Statement requires the application of a particular alternative be consistent within each of the subcomponent reporting entities⁷ prior to consolidation. In the event different alternative methods are applied by subcomponent reporting entities, the alternative method applied by each significant sub-component reporting entity should be disclosed. The Board believes the disclosure requirements regarding the different alternative methods for establishing opening balances for IUS, if applicable, will support sufficient analysis for users of federal financial statements.
- A37. The Board believes a reporting entity should be allowed to choose among alternative methods in establishing an opening balance for IUS. Concerns regarding inconsistencies will resolve quickly due to the short useful life of IUS.

Other Areas

- A38. Certain respondents requested clarifying language be added to expand upon the phrase “one or more line items addressed by this Statement,” to define line items as being line items on the financial statements or line items within the note disclosures. The Board acknowledges the term line item is quite broad, especially in relation to general PP&E. The preparer can use judgment to decide upon the line items to present either on the face of a financial statement or in related disclosures. Therefore, the Board believes line items may be based on a class of general PP&E, such as those currently included in the required disclosures, or on other reasonable means of disaggregation on the face of the statement or in the notes.
- A39. A respondent asked for clarification whether the standards apply to the government-wide reporting entity. It is the intention of the Board that all standards apply to any entity—component or government-wide unless otherwise stated. SFFAS 24, *Selected Standards for the Consolidated Financial Report of the United States Government*, states that SFFASs “apply to all federal entities, that is, to the Government as a whole and to component entities ... unless provision is made for different accounting treatment in a current or subsequent SFFAS.” Because this Statement applies to first-time adopters as well as entities making an unreserved assertion for the first time, this Statement is

⁷ SFFAS 47, *Reporting Entity*, provides that “component reporting entity” is used broadly to refer to a reporting entity within a larger reporting entity. Examples of component reporting entities include organizations such as executive departments and agencies. Component reporting entities would also include subcomponents that may themselves prepare general purpose federal financial reports (GPFFRs). One example is a bureau that is within a larger department that prepares its own standalone GPFFR.

applicable to the government-wide reporting entity for purposes of consolidating component reporting entities at any time.

- A40. Several respondents provided comments regarding “in-service dates,” questioning whether the in-service dates for material improvements are the same as the base unit and if reporting entities should disregard the in-service dates for material improvements. The Board notes the Statement is permissive. Material improvements included in the opening balances at deemed cost may be treated as if they were placed in-service at the date the base unit was placed in-service, but this treatment is not required.

Alternative Valuation Method and Implementation Guidance

- A41. During deliberation on the project, the Board considered the recently-approved SFFAS 48, *Opening Balances for Inventory, Operating Materials and Supplies, and Stockpile Materials*. SFFAS 48 permits a reporting entity to apply an alternative valuation method in establishing opening balances for inventory, operating materials and supplies, and stockpile materials. Deemed cost, or the amount used as a surrogate for initial amounts that otherwise would be required to establish opening balances, was the alternative valuation method for valuation of opening balances (in accordance with SFFAS 3, *Accounting for Inventory and Related Property*, as amended by SFFAS 48).
- A42. The Board based part of its decision to select deemed cost in SFFAS 48 on International Public Sector Accounting Standard (IPSAS) 33, *First-time Adoption of Accrual Basis International Public Sector Accounting Standards*. The International Public Sector Accounting Standards Board reached several relevant conclusions in IPSAS 33:
- a. Use of deemed cost facilitates the introduction of IPSASs in a cost-effective way.
 - b. Multiple options for deemed cost are appropriate.
 - c. The use of deemed cost should be restricted to those circumstances where reliable information about the historical cost of the asset is not available.
 - d. Use of deemed cost does not affect fair presentation.
- A43. Consistent with the decisions in SFFAS 48, the Board believes a similar approach is appropriate with this project. Deemed cost is a surrogate for initial amounts and an acceptable valuation method for opening balances for general PP&E. Use of deemed cost is intended to provide a cost-effective approach to the adoption of SFFAS 6, as amended, where historical records and systems do not support such balances.

A44. The Board determined permitting a reporting entity to apply alternative methods in establishing opening balances for general PP&E would be most appropriate through implementation guidance. The implementation guidance for general PP&E currently resides in several Statements. Accordingly, this Statement amends SFFAS 6, SFFAS 10, and SFFAS 23, and rescinds SFFAS 35 by providing implementation guidance to allow a reporting entity, under specific conditions, to apply alternative methods in establishing opening balances for general PP&E. Further, based on these amendments and rescission, all implementation guidance for general PP&E, with the exception of specific provisions applicable to IUS, will be in SFFAS 6. The Board believes providing implementation guidance for all general PP&E in SFFAS 6 will provide a more inclusive approach and a comprehensive guide for users versus reviewing multiple Statements that relate to this topic.

Amendments to Statements of Federal Financial Accounting Standards

Amendments to SFFAS 6, *Accounting for Property, Plant, and Equipment*

- A45. This Statement amends SFFAS 6 implementation guidance to include alternative methods for establishing opening balances. A reporting entity may use deemed cost as an alternative valuation method in establishing opening account balances for general PP&E for the reporting period in which the reporting entity first makes an unreserved assertion that its financial statements, or one or more line items addressed by this Statement, are presented fairly in accordance with GAAP. The presentation of line items may vary in detail. For example, components of general PP&E, such as land, may be a separate line item, or there may be a single line item for all general PP&E. Further, a reporting entity may determine it would like to make an unreserved assertion on classes of general PP&E disclosed in the notes to the financial statements.
- A46. This guidance is intended to provide a cost-effective approach to the adoption of SFFAS 6, where historical records and systems do not support such balances. Accordingly, this Statement provides flexibility by permitting use of several measurement attributes and estimates. Deemed costs should be based on one, or a combination, of the following valuation methods: replacement cost, estimated historical cost, reasonable estimates, or fair value. The Board believes application of deemed cost is the most cost-effective option.

Plant Replacement Value (PRV)

- A47. DoD currently estimates plant replacement value (PRV), which is based on cost factors such as averages of contractual cost data from the prior three years, commercially available cost data, and models using general price information. PRV is inclusive of capital

improvements. While PRV has not been used for financial reporting purposes, DoD officials have stated it is used for decision making and management purposes. This Statement allows for PRV to be used as a starting point in establishing replacement cost for real property.

- A48. SFFAC 7, *Measurement of the Elements of Accrual-Basis Financial Statements in Periods After Initial Recording*, paragraph 47, explains there may be several ways of arriving at an estimate of replacement cost:

Replacement cost is a remeasured amount, an entry value that is often advocated for assets used in providing services, such as capital assets and inventory not held for sale. Replacing the remaining service potential of an existing asset is not the same as acquiring an identical asset. However, in practice, it may be difficult to measure remaining service potential directly. There may be several ways of arriving at an approximation. For example, one way would be to measure the current cost of a similar asset, reduced by an appropriate amount to allow for the lower service potential of the existing asset due to its age and condition. Thus, the replacement cost of an asset is not the same as the fair value of either an equivalent new asset or the existing asset at the reporting date. For example, to arrive at the replacement cost of a fifty-year-old office building at the midpoint of its expected life, the fair value of an equivalent, newly constructed office building would have to be adjusted for the value of the difference in age or service potential. In addition, the fair value of the existing building may be higher than the replacement cost because the building can be put to alternative uses that produce greater benefits to the owner.

- A49. Although the PRV can be used as a starting point in establishing replacement cost for real property, adjustments would be needed. Further, the preparer would need to substantiate the PRV data used.

Government Property in the Hands of Contactors

- A50. Government property in the hands of contactors has been a challenging area for reporting entities. This may include government-furnished equipment and contractor-acquired equipment. Previous Boards believed the accounting treatment for such assets should be consistent with that of other assets because there is no conceptual difference. Further, most would agree there should be accountability over government-owned assets in the hands of others.
- A51. SFFAS 6, paragraph 18 provides that PP&E includes “property owned by the reporting entity in the hands of others (for example, state and local governments, colleges and universities, or Federal contractors)” and paragraph 34 (along with the footnote to paragraph 34) elaborates that PP&E should be recognized when title passes or is delivered to the acquiring entity or to an agent of the entity. For PP&E acquired by a

contractor on behalf of the entity (for example, the entity will ultimately hold title to the PP&E), PP&E should also be recognized upon delivery, or constructive delivery, whether to the contractor for use in performing contract services or to the entity.

- A52. During the due process deliberation of SFFAS 23 in 2003, this issue also surfaced. A respondent, unaware of existing standards, encouraged the Board to develop standards that address this type of property because the respondent believed that “accounting control over this property is deplorable.” As discussed in the Basis for Conclusions to SFFAS 23, the previous Board found that “despite the existence of standards for contractor held assets since late 1995, little progress has been made in resolving the issue. The Board does not believe that deferral of standards related to vast amounts of PP&E will facilitate resolution of the contractual and administrative details needed to reasonably comply with generally accepted accounting principles.”
- A53. The Board understands that certain reporting entities may have long-standing contracts lacking the contractual terms and systems needed to accumulate the necessary information. The alternative valuation method—deemed cost—is applicable to general PP&E in the hands of others. The Board considered other alternatives, including those proposed by DoD, to mitigate the cost of properly reporting such PP&E. DoD’s proposal intended to take a prospective approach for establishing completeness and accountability for government property in the hands of contractors. Much of DoD’s rationale was based on the belief that government property in the hands of contractors is immaterial and that the equipment has a short useful life. However, existing data have known integrity and reliability issues that preclude reliance on them as a basis for prospective treatment. DoD also based the proposal on the fact that they would incur significant costs to bring these assets to record. The Board notes that GAAP is not the only cost driver. DoD has other accountability obligations and a management need for complete records to support decision making.⁸
- A54. The Board concluded that the current DoD process of including improved contract clauses in new or modified contracts should continue. As existing contracts expire or are modified, this issue should be resolved. Based on preliminary estimated information presented by DoD, 77% of the current contracts expire in 2016 and 12% expire in 2017. Hence, assuming that these estimates are reasonably accurate, processes would be in place to capture government property in the hands of contractors by 2018 through issuance of new contracts with required clauses. Considering that much of the information and data indicates the contracts for government property in the hands of contractors will expire soon and the assets may be immaterial or fully depreciated, with time, DoD may be in a position

⁸ In a May 13, 2014, statement to the U. S. Senate Committee on Homeland Security and Governmental Affairs, then DoD Comptroller Robert Hale acknowledged the importance of completeness when he explained, “Our audit strategy focuses first on the elements of our business that most often influence our decision making—namely budgetary dollars and the existence and completeness of property records.”

to support that this line item is not materially misstated. This supports that accounting treatment for government property in the hands of contractors should continue to be consistent with general PP&E.

- A55. The Board conducted outreach on this topic prior to issuing the ED. Feedback from the audit community conveyed that the issues DoD encountered with property in the hands of contractors are the same for all DoD general PP&E. With respect to DoD's proposal, there were noted audit challenges due to gray areas, such as no established cut-off date, the need for clarity with definitions, and complexities with implementation. In addition, there were noted existence and completeness challenges. There was also a belief that challenges will remain until the necessary contractual improvements are fully implemented.

Combination of Methods Permitted

- A56. The Board recognizes that large and complex reporting entities, such as DoD, may have used a variety of valuation methods prior to the adoption of a GAAP-compliant method. Therefore, this Statement allows for deemed cost to include several valuation methods because the reporting entity may have components (1) using different methods simultaneously and/or (2) adopting a method permitted under SFFAS 6 at different times prior to establishing opening balances. Deemed cost should be based on one, or a combination, of the accepted valuation methods. However, this Statement requires that the accounting for all activity after the opening balance is established comply with SFFAS 6.
- A57. The purpose of this Statement is to provide alternative methods for reporting entities meeting the scope conditions set forth in paragraph 6 of this Statement. Absent a reliable record of transactions related to hundreds of thousands of records and related assets, this is the most cost-effective approach for determining opening balances while reporting entities, such as DoD, finalize a sound GAAP-compliant financial management system. All activity after the opening balances for general PP&E are established must comply with the recognition, measurement, presentation, and disclosure requirements in SFFAS 6.

Amendments to SFFAS 10, *Accounting for Internal Use Software*

- A58. SFFAS 10 provides accounting standards for IUS used by federal entities. Previously, IUS had been addressed in SFFAS 6. Because certain questions remained, the Board decided to review the issues and to develop a separate Statement.
- A59. IUS addressed by SFFAS 10 includes purchased commercial "off-the-shelf" software, contractor-developed software, and internally-developed software. Under the provisions of SFFAS 10, IUS is classified as general PP&E as defined in SFFAS 6. With the issuance of SFFAS 10, the section on IUS in SFFAS 6 was rescinded. SFFAS 10 provided guidance regarding the definition of IUS, the types of cost elements to capitalize, the timing and

thresholds of capitalization, amortization periods, accounting for impairment, as well as other guidance.

- A60. When SFFAS 10 was issued, the previous Board in effect provided for prospective implementation of SFFAS 10 in paragraph 36 by stating that “cost incurred prior to the initial application of this statement, whether capitalized or not, should not be adjusted to the amounts that would have been capitalized, had this statement been in effect when those costs were incurred.”
- A61. The Board acknowledges that reporting entities have had numerous years to implement SFFAS 10 (as well as other standards). The fact remains that some entities have not had or do not have systems that can provide the information necessary; therefore, the conditions remain that existed when many of these standards were issued. The Board considered certain unique aspects to this category of general PP&E that justify a similar treatment that was provided when SFFAS 10 was established. Specifically, the Board believes it would be cost-beneficial to allow prospective treatment of IUS because it typically has a shorter useful life than other assets and is a soft asset that is harder to inventory when compared to tangible assets. These facts make the cost of implementation higher than for other general PP&E and the benefit lower due to the shorter time the IUS would be reported as an asset for amortization.
- A62. Therefore, the Board believes the most appropriate path is to amend the implementation guidance provided in SFFAS 10 to provide for prospective application of IUS if the reporting entity elects to do so. Considering the various stages of implementation within reporting entities, the Board determined this Statement should provide flexibility. Therefore, the guidance also provides for an alternative valuation method consistent with general PP&E. Considering IUS is classified as general PP&E, the Board believes it is appropriate to allow use of deemed cost and to refer users to the deemed cost implementation guidance in SFFAS 6. Together, these amendments allow the preparer to elect:
- a. to establish opening balances for existing IUS based on deemed cost,
 - b. to establish an opening balance of zero and to capitalize costs consistent with SFFAS 10 prospectively, or to
 - c. establish an opening balance of zero for IUS in service, and to establish an opening balance for IUS in development based on deemed cost, and to capitalize costs consistent with SFFAS 10 prospectively.
- A63. Based on the flexibility offered for establishing opening balances for IUS, a larger reporting entity may establish an opening balance for IUS based on a combination of multiple component reporting entities’ alternative methods, which may or may not be the same.

Therefore, a larger reporting entity may have multiple component reporting entities⁹ that selected different alternative methods. This is permitted by the Statement; a larger reporting entity may establish an opening balance based on a combination of alternative methods. Application of a particular alternative method must be consistent within each individual subcomponent reporting entity prior to consolidation into the larger reporting entity.

Amendments to SFFAS 23, *Eliminating the Category National Defense Property, Plant, and Equipment*

- A64. The purpose of SFFAS 23 was to amend specific standards with regard to national defense (ND) PP&E. More specifically, SFFAS 23 rescinded the term “ND PP&E.”
- A65. SFFAS 23 also provided implementation guidance for assets reclassified as general PP&E. Much of that guidance referred to the requirements in the implementation guidance provided in SFFAS 6. SFFAS 23 was effective for periods beginning after September 30, 2002, with earlier implementation encouraged. The Board believes it appropriate to rescind the implementation guidance in SFFAS 23 and to refer users to the implementation guidance in SFFAS 6 that applies to all general PP&E, including general PP&E assets previously considered ND PP&E.
- A66. By rescinding the paragraphs in SFFAS 23, the Board ensured the appropriate relevant guidance was included in the amendments to the SFFAS 6 implementation guidance. The Board chose not to rescind SFFAS 23 in its entirety because the standards provide other amendments, such as rescinding the term ND PP&E as discussed above, which must be maintained.

Rescission of SFFAS 35, *Estimating the Historical Cost of General Property, Plant, and Equipment: Amending Statements of Federal Financial Accounting Standards 6 and 23*

- A67. The purpose of SFFAS 35 was to clarify that reasonable estimates of original transaction data’s historical cost may be used to value general PP&E. It was to establish a cost-effective method to comply with SFFAS 6 by allowing reasonable estimates determined in accordance with SFFAS 6, as amended. While rescinding SFFAS 35 in its entirety, the

⁹ SFFAS 47, *Reporting Entity*, provides that “component reporting entity” is used broadly to refer to a reporting entity within a larger reporting entity. Examples of component reporting entities include organizations such as executive departments and agencies. Component reporting entities would also include sub-components that may themselves prepare general purpose federal financial reports (GPFFRs). One example is a bureau that is within a larger department that prepares its own standalone GPFFR.

Board ensured any pertinent guidance was included in the amendments to the SFFAS 6 implementation guidance.

- A68. The Board also reiterates the conclusions of the previous Board. As explained in SFFAS 35, Basis for Conclusions, paragraph A12:

The Board stresses to federal entities that the measurement basis for G-PP&E remains historical cost; however, reasonable estimates are allowed. The Board believes entities should use judgment regarding the decision to use estimated historical cost in lieu of original transaction based data. The Board also notes that estimates are widely used throughout the financial statements. In this case, estimates should provide a reasonable approximation of historical cost; the measurement basis required for G-PP&E.

- A69. When SFFAS 35 was issued, the Board believed that allowing or encouraging estimates as reporting entities worked towards implementing systems and processes that could capture historical data would be beneficial. However, it appears this has not occurred at all departments, and there has been an overreliance that was unintended. The language in SFFAS 35 has often been misinterpreted to mean something other than reasonable estimates is in accordance with SFFAS 6.
- A70. Therefore, the Board believes it is appropriate to rescind SFFAS 35. The Board acknowledges that reasonable estimates are permitted in the preparation of financial statements, with or without the existence of SFFAS 35. As noted in paragraph A17 of SFFAS 35, “estimates that do not lead to material misstatements are acceptable without guidance from the Board.”
- A71. Prior to the issuance of the ED, DoD raised concerns with the Board’s proposal to rescind SFFAS 35 based on the time it would take for DoD to become full cost compliant. DoD requested the Board consider retaining SFFAS 35 or providing transitional guidance in this area. The Board believes current standards provide flexibility and there are resources other than SFFAS 35 within the GAAP hierarchy to assist in this area. For example, there is guidance (Technical Releases) to assist in accumulating, allocating, and reporting the cost of general PP&E when there is no detailed cost accounting system.
- A72. Technical Release 15, *Implementation Guidance for General Property, Plant, and Equipment Cost Accumulation, Assignment and Allocation* provides illustrations and implementation guidance related to recognition requirements for programmatic, managerial, administrative, and other elements of program costs incurred during the general PP&E lifecycle, as well as decisions regarding the granularity of cost information and acceptable methods for recognizing those costs. This implementation guidance is not dependent on SFFAS 35 and remains applicable even if SFFAS 35 is rescinded.

A73. Additionally, SFFAS 4 established a requirement for cost accounting that acknowledges the use of cost finding techniques. The requirement is:

Each reporting entity should accumulate and report the cost of its activities on a regular basis for management information purposes. Costs may be accumulated either through the use of cost accounting systems or through the use of cost finding techniques.

A74. Management has discretion in applying the cost assignment methods identified in SFFAS 4, *Managerial Cost Accounting Standards and Concepts* to accumulate acquisition costs. Of particular importance is the emphasis on economic feasibility with regard to direct tracing of costs to outputs. SFFAS 4, paragraph 124, provides that "[in] principle, costs should be assigned to outputs in one of the methods listed below in the order of preference:

- a. Directly tracing costs wherever economically feasible;
- b. Assigning costs on a cause-and-effect basis; and
- c. Allocating costs on a reasonable and consistent basis."

Disclosures

A75. The disclosures required for component reporting entities and the government-wide reporting entity are also included in the amendments to the implementation guidance in SFFAS 6 and 10. Specifically, the election to apply the provisions of this Statement should be disclosed in the financial statements in the first reporting period in which the component reporting entity makes an unreserved assertion that its financial statements, or one or more line items addressed by this Statement, are presented fairly in accordance with GAAP. The first reporting period would be the first year-end financial statement that an unreserved assertion is made. The Board does not believe the first reporting period should be an interim reporting period because interim financial statements presently are unaudited and do not include note disclosures.

A76. The Board notes that the term "unreserved assertion" may be used in other contexts. For example, certain entities' management (such as DoD) may be required to make management assertions regarding their financial information and that their financial statements are validated as ready for audit by no later than September 30, 2017. This Statement refers to an unreserved assertion that the reporting entity's "financial statements, or one or more line items addressed by this Statement, are presented fairly in accordance with GAAP." Other assertions—such as being ready for an audit—may or may not accompany such an assertion.

-
- A77. The component reporting entity disclosures (in the amendments to SFFAS 6) address both component reporting entities that may have elected to only apply deemed cost in establishing the opening balances for general PP&E as well as component reporting entities that elected to apply the provision to exclude land and land rights from opening balances. For those component reporting entities only applying deemed cost, the component reporting entity should disclose a description of what valuation method(s) deemed cost is based on, but no disclosure of amounts valued at deemed cost is required. This disclosure need not be repeated unless the financial statements or, as applicable, reports on line items are presented for comparative purposes.
- A78. A component reporting entity electing to exclude land and land rights should disclose this fact and describe the alternative method used in the first reporting period in which the reporting entity makes an unreserved assertion that its financial statements, or one or more line items, are presented fairly in accordance with GAAP and continue to be so as long as an amount is not reported on the balance sheet. In addition, those reporting entities electing to exclude land and land rights from its general PP&E opening balances must also disclose, with a note reference on the balance sheet, the number of acres held at the beginning of each reporting period, the number of acres added during the period, the number of acres disposed of during the period, and the number of acres held at the end of each reporting period. The Board believes requiring these disclosures would meet accountability requirements and ensure appropriate measures continue to be taken for existence and completeness requirements. As discussed above, the Board determined that a larger component reporting entity may establish an opening balance for land and land rights based on a combination of multiple subcomponent reporting entities' alternative methods, which may or may not be the same. However, application of a particular alternative method must be consistent within each subcomponent reporting entity prior to its consolidation into a larger component reporting entity.
- A79. The component reporting entity disclosures (in the amendments to SFFAS 10) address that component reporting entities may have elected to apply different alternative methods in establishing the opening balance of internal use software. This Statement provides for an alternative valuation method of deemed cost that is consistent with general PP&E and prospective capitalization of IUS. A component reporting entity electing to apply the alternative methods should disclose this fact and describe the alternative methods used in the first reporting period in which the reporting entity makes an unreserved assertion that its financial statements, or one or more line items, are presented fairly in accordance with GAAP. In the event different alternative methods are applied by subcomponent reporting entities consolidated into a larger reporting entity, the alternative method adopted by each significant subcomponent should be disclosed.
- A80. Further, the government-wide reporting entity should disclose when a component reporting entity elects to apply deemed cost along with a reference to the component reporting

entity's financial report. In addition, when a component reporting entity elects to exclude land and land rights, this also should be disclosed, along with an explanation of the election, the number of acres with a reference to the component reporting entity's financial report. The government-wide reporting entity should disclose when a component reporting entity elects to apply deemed cost in establishing opening balances for internal use software. In addition, when a component reporting entity elects to apply prospective capitalization, an explanation of the election and reference to the component reporting entity's financial report should be disclosed.

Application of this Statement

- A81. A component reporting entity in the process of implementing systems that are GAAP-compliant is permitted to apply this Statement at the time it makes an unreserved assertion that its financial statements, or one or more line items addressed by this Statement, are presented fairly in accordance with GAAP. This Statement allows component reporting entities (for example, DoD components) to make the assertion at different times. The reporting entity may make the assertion after a sufficient number of components do so. This Statement considers the opening balances and subsequent transactions of these component reporting entities as deemed cost for the consolidated reporting entity when its assertion is made.
- A82. Using the DoD example, certain DoD components may have transitioned at an earlier date to GAAP-compliant systems; this allows them to assert independently of the larger DoD. It is anticipated DoD will make a DoD-wide assertion when a sufficient number of DoD components are compliant. While a DoD component's "deemed cost" opening balance might be earlier than the DoD-wide opening balance, the consolidation of the various methods would be the DoD's opening balance deemed cost at the beginning of the period DoD was able to make an unreserved assertion on its financial statements, or one or more line items, addressed by this Statement.
- A83. Considering the flexibility allowed with the Statement, reporting entities should ensure they are ready to make an unreserved assertion that their financial statements, or one or more line items addressed by this Statement, are fairly presented prior to making the election because it may only be made once. A complex entity should work with its components to ensure the most appropriate method allowed by this Statement is selected. Further, reporting entities should ensure issues, such as supporting documentation for opening balances, are addressed and validated through sampling or other means, including consideration of any audit findings or conclusion affecting the reliability of the valuation, prior to making the unreserved assertion. It is critical that a reporting entity be prepared to make the unreserved assertion because the election may only be made once. For example, if a reporting entity makes an unreserved assertion regarding the fiscal year

2018 beginning balances, the reporting entity must be able to support the valuation in all material respects. If the audit for fiscal year 2018 determines that the valuation does not comply with the alternative valuation in all material respects, the reporting entity then would need to continue in subsequent years to correct or to support the valuation as of the beginning of fiscal year 2018.

- A84. Reporting entities that meet the conditions specified in paragraph 6 and elect to apply the alternative methods in establishing opening balances permitted by this Statement are subject to the reporting requirements under paragraph 13 of SFFAS 21, *Reporting Corrections of Errors and Changes in Accounting Principles, Amendment of SFFAS 7, Accounting for Revenue and Other Financing Sources*. Specifically, paragraph 12 of SFFAS 21 states, “For the purposes of this standard, changes in accounting principles also include those occasioned by the adoption of new federal financial accounting standards.”
- A85. Therefore, reporting entities meeting the conditions and electing to apply this Statement should follow the guidance in SFFAS 21 paragraph 13.a. – 13.c. for all changes in accounting principles:
- a. The cumulative effect of the change on prior periods should be reported as a “change in accounting principle.” The adjustment should be made to the beginning balance of cumulative results of operations in the statement of changes in net position for the period that the change is made.
 - b. Prior period financial statements presented for comparative purposes should be presented as previously reported.
 - c. The nature of the changes in accounting principle and its effect on relevant balances should be disclosed in the current period. Financial statements of subsequent periods need not repeat the disclosure.
- A86. SFFAS 21 provides that the adjustment should be made to the beginning balance of cumulative results of operations in the statement of changes in net position for the period that the change is made. Thus, no change would be made to the ending net position of the previous year. The disclosures should be at a high level and explain that opening balances of a particular line item or group of line items were valued at deemed cost under this Statement, then briefly describe deemed cost and indicate the effect of adoption on beginning net position.
- A87. In addition, the alternative methods provided in this Statement should also be applied in correcting subsequently discovered errors in general PP&E that was valued under an alternative method.

Board Approval

A88. This Statement was approved unanimously. Written ballots are available for public inspection at FASAB's offices.

Statement of Federal Financial Accounting Standards 51: Insurance Programs

Status

Issued	January 18, 2017
Effective Date	For periods beginning after September 30, 2018.
Affects	• SFFAS 5, par. 97-121 are rescinded.
Affected by	None.

Summary

This Statement establishes accounting and financial reporting standards for insurance programs. It provides standards to ensure that insurance programs are adequately defined and report consistent information about the liabilities for losses incurred and claimed as well as expected losses during remaining coverage. These standards replace the insurance and guarantee program standards provided in paragraphs 97-121 of Statement of Federal Financial Accounting Standards 5, *Accounting for Liabilities of The Federal Government*.

To support consistency, this Statement identifies three categories: 1) exchange transaction insurance programs other than life insurance, 2) nonexchange transaction insurance programs, and 3) life insurance programs. Insurance programs are categorized based upon the type of revenue received as defined by Statement of Federal Financial Accounting Standards 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*.

This Statement provides guidance as to how and when insurance programs should recognize revenue, expenses, and liabilities according to the aforementioned categories. The recognition, measurement, and disclosure guidance provides for concise, meaningful, and transparent information regarding the operating performance of insurance programs.

Insurance Programs is the first phase in a multiple phase project entitled *Risk Assumed*. Other programs designed to manage risk for the federal government will be addressed by future research conducted under the *Risk Assumed* project.

The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Standards

Scope

1. This Statement applies when a reporting entity is presenting general purpose federal financial reports (GPFFRs), including the consolidated financial report of the U.S. Government (CFR), in conformance with generally accepted accounting principles (GAAP) as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
2. This Statement provides general principles that should guide preparers of GPFFRs in accounting for and reporting on exchange and nonexchange insurance transactions, related claims and liabilities, losses, and costs of insurance programs. Other items related to insurance program activities such as revenue classification that are not addressed in this Statement should be reported in accordance with other standards.
3. This Statement rescinds the Insurance and Guarantees section in SFFAS 5, *Accounting for Liabilities of The Federal Government, paragraphs 97-121*.
4. This Statement establishes three categories of insurance and related guidance: exchange transaction insurance programs other than life insurance, nonexchange transaction insurance programs, and life insurance programs. In addition, there is a section providing government-wide disclosure requirements.

Definitions

Definitions in paragraphs 5 through 21 are presented within the standards because they are new terms intended to have a specific meaning when applying the standards.

5. **Insurance Program-** "insurance program" is a general term used to refer to a program that is authorized by law to financially compensate a designated population of beneficiaries by accepting all or part of the risk for losses incurred as a result of an adverse event.
6. The following are excluded from insurance programs:
 - a. Programs that administer direct loans and loan guarantees¹
 - b. Programs that qualify as social insurance²
 - c. Programs authorized to engage in disaster relief activities³
 - d. Programs that provide grants
 - e. Programs that provide benefits or assistance based on an individual's or a household's income and/or assets
 - f. Programs that assume the risk of loss arising from federal government operations⁴
 - g. Programs that pay claims through an administrative or judicial role for individuals or organizations who claim they have been harmed by a federal agency⁵

¹ SFFAS 2, *Accounting for Direct Loans and Loan Guarantees*.

² SFFAS 17, *Accounting for Social Insurance* (including unemployment insurance).

³ The Robert T. Stafford Disaster Relief and Emergency Assistance Act (Public Law 100-707), commonly referred to as the Stafford Act, is the act that authorizes and regulates disaster relief programs.

⁴ For example, see Government Accountability Office (GAO)-05-265R, *Catalogue of Federal Insurance Activities, Enclosure IV: Description of Accounts With Federal Self-Insurance Activity*

⁵ An example may include an administrative settlement or tort claim resulting from military events.

-
- h. Programs that indemnify contractors, agreement partners, and other third parties for loss or damage incurred while or caused by work performed for a federal agency⁶
 - i. Workers' or occupational illness compensation programs that compensate current or former employees (or survivors) and certain third parties for injuries and occupational diseases obtained while working for a federal agency
7. **Adverse Event**—an "adverse event" may be a single-occurring event or a series of events that cause losses to the beneficiary or beneficiaries as identified in the insurance arrangement.
 8. **Cash Surrender Value**—the "cash surrender value" is the sum of money that will be returned to the policyholder on a life insurance policy if the policy is canceled before its maturity or the insured event (death) occurs.
 9. **Claim Adjustment Expenses (CAE)**—"claim adjustment expenses" (CAE) are incremental costs directly attributable to investigating, settling, and/or adjusting claims. An incremental cost is one that can result only when claims have been incurred. CAE include but are not limited to legal and adjuster's fees. CAE may be incurred through work performed by federal employees and/or contractors.
 10. **Arrangement Period**—"arrangement period" is the period over which adverse events that occur are covered.
 11. **Exchange Transaction Insurance Programs Other Than Life Insurance**—"exchange transaction insurance programs other than life insurance" cover the risk of loss from adverse events, other than death of individuals, involved in exchange transactions with the federal government as defined in SFFAS 7.⁷
 12. **In-Force**—"in-force" refers to arrangements that are unexpired as of a given date.
 13. **Incurred But Not Reported (IBNR)**—claims "incurred but not reported" (IBNR) are estimated claims from events that have occurred as of the end of the reporting period but have not yet been reported for settlement.

⁶ These are administrative settlements for transactions with contractors under the Federal Acquisition Regulation's authorized indemnification clauses, as well as authorized indemnification clauses within other legally binding arrangements. First responders within programs that do not have a statutory insurance or guarantee mission are also within this scope.

⁷ SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*.

-
14. **Insurance Claim**—an "insurance claim" is a formal request for payment for losses as authorized under the insurance arrangement.
15. **Insurance Arrangement (Arrangement)**—an "insurance arrangement" (arrangement) is a general term used for a contract or other agreement between an insurance program and specific parties, such as but not limited to individuals, state, local, or foreign governments, other federal agencies, or businesses. An arrangement may include and/or identify:
- a. the term the insurance arrangement is in-force,
 - b. the insurance program's responsibilities,
 - c. the risk assumed by the insurance program, such as:
 - i. all risk for covered losses,
 - ii. partial risk by filling a gap where commercial insurance companies are not able or willing to provide the insurance,
 - iii. a timing risk wherein the insurance program provides compensation for losses in anticipation that future funding sources will be sufficient to cover all or part of past benefits paid, or
 - iv. risks shared with a third party.
 - d. the adverse event,
 - e. the insured party or parties and their premium requirements,
 - f. the beneficiary or beneficiaries and their responsibilities for filing claims, and/or
 - g. the financial compensation.
16. **Insurance Portfolio**—an "insurance portfolio" is a grouping of insurance programs or arrangements that have some meaningful relationship based on arrangement period/duration, shared risks, management, customers, geographic regions, or other factors.
17. **Liability for Losses on Remaining Coverage**—the "liability for losses on remaining coverage" is an accrued obligation to beneficiaries attributable to coverage of insured events anticipated to occur after the end of the reporting period through the open arrangement period.

-
18. **Life Insurance Programs**—“life insurance programs” cover the risk of loss from death of individuals.
19. **Nonexchange Transaction Insurance Programs**—“nonexchange transaction insurance programs” cover the risk of loss from adverse events through nonexchange transactions, as defined in SFFAS 7.
20. **Premiums**— “premiums” is a general term used to refer to exchange revenue⁸ billed by insurance programs. Programs may refer to their exchange revenue by various terms, including but not limited to premiums, assessments, and/or fees.
21. **Recoveries**—“recoveries” include monies:
- a. returned from another agency through an indemnification agreement,
 - b. returned from a third party or commercial insurance company to repay all or part of a loss originally paid for by the program,
 - c. recouped from the sale of salvageable parts through acquisition and disposal or salvage of assets, and/or
 - d. received from adjustments made to previously paid insurance claims.

Exchange Transaction Insurance Programs Other Than Life Insurance

22. Exchange transaction insurance programs other than life insurance collect premiums through arrangements to cover the risk of loss from adverse events other than death of individuals.
23. An insurance program other than a life insurance program receiving any exchange revenue should be designated as an exchange transaction insurance program other than life insurance.

⁸ See SFFAS 7, par. 33, for the exchange revenue definition and Appendix B: Guidance for the Classification of Transactions, par. 284, for the classification of exchange revenue insurance programs.

Recognition and Measurement

Revenue and Liability for Unearned Premiums

- 24. Premiums should be recognized as revenue when earned over the period of the arrangement in proportion to insurance protection provided.
- 25. A liability for unearned premiums should be recognized for the amount of premiums collected and/or due by the end of the reporting period that have not yet been earned in proportion to the insurance protection to be provided during the remaining arrangement period.

Liability for Unpaid Insurance Claims

- 26. A liability for unpaid insurance claims should be recognized for adverse events that occurred before the end of the reporting period. The liability should be initially recorded at the estimated settlement amount and remeasured at the end of each reporting period.
- 27. The estimated settlement amount includes:
 - a. outflows to liquidate:
 - i. claims that have been reported but not paid
 - ii. claims incurred but not reported (IBNR)
 - (1.) A single-occurring event or a series of events causing loss must be completed by the end of the reporting period to be considered an adverse event of the reporting period.⁹
 - (2.) Management should use judgment to determine if an adverse event causes claims IBNR prior to the reporting date.
 - b. related estimated CAE, and
 - c. estimated inflows from recoveries not realized at the end of the reporting period.

⁹ If a series of events causing loss begins prior to the reporting date and additional pending events are required to result in losses, then it is not considered an adverse event and should not be included in the estimated settlement costs for claims IBNR.

-
- i. If estimated recoveries exceed the related claims for an insurance portfolio then recognition is limited to the amount of the related claims.¹⁰
 - ii. Recoveries should be recognized as reductions of claims, rather than as revenue.
 - 28. Adjustments to the liability for unpaid insurance claims, other than those resulting from payments made to liquidate existing liability balances, should be recognized as a component of claims expense.
 - 29. Guidance from SFFAS 39, *Subsequent Events: Codification of Accounting and Financial Reporting Standards Contained in the AICPA Statement on Auditing Standards*, applies to subsequent events relating to unpaid insurance claims.

Liability for Losses on Remaining Coverage

- 30. The liability for losses on remaining coverage as of the end of the reporting period represents the estimated amounts to be paid to settle claims (including CAE) for the remaining open arrangement period in excess of the sum of both:
 - a. related unearned premiums as of the end of the reporting period and
 - b. premiums due after the end of the reporting period that relate to the remaining open arrangement period.
- 31. Estimates should be determined by considering insurance portfolios rather than individual arrangements.
- 32. The liability should be estimated using methods designed to address uncertainties concerning future events.
- 33. The objective of such methods is a reasonable estimate of expected cash flow. While there are various ways to determine expected cash flow, methods using Actuarial Standards of Practice¹¹ are generally appropriate.
- 34. No specific method is required. An entity must use judgment based on the risk inherent in the insurance portfolio, sensitivity to external factors, and the availability of relevant

¹⁰ Any amount expected to be recovered in excess of the recognized claim, which will result in a gain, should not be recognized until any contingencies relating to the recovery have been resolved because a contingent gain cannot be recognized until realized.

¹¹ See <http://www.actuarialstandardsboard.org/standards-of-practice/> (last accessed October 18, 2016).

information to select a method. A reporting entity should consider all relevant information at the balance sheet date. This information may include:

- a. historical experience;
 - b. adjustments to historical experience for differences in current conditions;
 - c. current conditions;
 - d. trends;
 - e. assumptions about future events;
 - f. risk factors;
 - g. uncertainties about possible variations in the amount or timing of the potential settlement of claims; and
 - h. as appropriate, data, projections, and supporting analysis supplied by independent expert(s).
35. SFFAS 39 addresses subsequent events and provides guidance regarding recognized and nonrecognized events. All subsequent events relating to losses on remaining coverage should be classified as nonrecognized events. Nonrecognized events are to be disclosed in accordance with SFFAS 39, paragraph 15.
36. If the effect of the time value of money is significant, for example, when settlement may occur over several years, then the estimated settlement amount should be discounted. (See SFFAS 33, *Pensions, Other Retirement Benefits, and Other Postemployment Benefits: Reporting the Gains and Losses from Changes in Assumptions and Selecting Discount Rates and Valuation Dates*, par. 28-32 for guidance on selecting discount rates.)
37. Adjustments to the liability for losses on remaining coverage should be recognized as a component of claims expense.

Disclosure Requirements

Factors in Determining Disclosures

38. Materiality is an overarching consideration in financial reporting for information that should be presented regarding exchange transaction insurance programs other than life insurance. Materiality judgments consider both quantitative and qualitative factors. Acceptable quantitative factors may include whether certain groups of arrangements are accumulating

large claim expenses or unpaid claim liability balances. Acceptable qualitative factors may include whether a group of arrangements is of immediate concern to constituents, politically sensitive, and/or controversial.

39. Disclosures should be integrated so that concise, meaningful, and transparent information is provided in a comprehensive note regarding the insurance program and related balances, or by providing references to relevant notes elsewhere in the GPFFR, such as the Debt Note to the Financial Statements.

Disclosures Applicable to Component Entity Reports

40. The following information should be provided for each material insurance portfolio, and/or in aggregate for all remaining insurance portfolios, and/or individual insurance arrangements:
- a. What is insured or guaranteed, for whom, and what other government agencies and/or commercial insurance programs administer or assume risk for any part of the program
 - b. Full costs,¹² premiums collected, appropriations used, and borrowing needed during the reporting period, as well as the ability to repay borrowing
 - c. Investing activities, such as buying treasury securities
 - d. Arrangement duration and renewal characteristics, such as non-cancelable or guaranteed renewals
 - e. Premium pricing policies (in accordance with SFFAS 7, par. 46) including risk characteristics used in determining premiums and any requirements to set premium prices that do not cover the full estimated cost to settle claims
 - f. The nature and magnitude of uncertainty of estimated amounts to be paid to settle future claims, including:
 - i. the basis and estimation method
 - ii. significant risk assumptions and factors, including relevant trend information
 - iii. how much risk, if any, is shared by third parties

¹² See SFFAS 4, *Managerial Cost Accounting Standards and Concepts*, par. 80-104.

-
- g. The total amount of coverage provided through insurance in-force as of the end of the reporting period¹³
 - h. Any event(s) that caused a material change in the amounts recognized during the reporting period, such as low probability high impact adverse events, changes in laws, and/or actuarial assumptions
41. Information for changes in the liability balance for unpaid insurance claims should be provided as follows:
- a. Beginning balance
 - b. Claims expense
 - c. CAE¹⁴
 - d. Payments to settle claims
 - e. Recoveries and other adjustments
 - f. Ending balance

Nonexchange Transaction Insurance Programs

42. Nonexchange insurance programs collect funds on demand and/or receive appropriations to cover the risk of loss from certain adverse events.
43. An insurance program other than a life insurance program receiving any exchange revenue should be designated as an exchange transaction insurance program other than life insurance.

¹³ An explanation should be included that avoids the misleading inference that there is more than a remote likelihood that claims equal to the entire insurance in-force amount will be filed at the same time.

¹⁴ Claims Adjustment Expenses should be recognized for claims occurring prior to the end of the current reporting period.

Recognition and Measurement

Revenue

44. Nonexchange transaction insurance programs should apply general revenue recognition standards as found in SFFAS 7 (as amended).

Liability for Unpaid Insurance Claims

45. A liability for unpaid insurance claims should be recognized for adverse events that occurred before the end of the reporting period. The liability should be initially recorded at the estimated settlement amount and remeasured at the end of each reporting period.
46. The estimated settlement amount includes:
- a. outflows to liquidate:
 - i. claims that have been reported but not paid
 - ii. claims IBNR
 - (1.) A series of events causing loss must be completed by the end of the reporting period to be considered an adverse event of the reporting period.¹⁵
 - (2.) Management should use judgment to determine if an adverse event causes claims IBNR prior to the reporting date.
 - b. related estimated CAE, and
 - c. estimated inflows from recoveries not realized at the end of the reporting period.
 - i. If estimated recoveries exceed the related claims for a specific portfolio then recognition is limited to the amount of the related claims.¹⁶

¹⁵ If a series of events causing loss begins prior to the reporting date and additional pending events are required to result in losses, then it is not considered an adverse event and should not be included in the estimated settlement costs for claims IBNR.

¹⁶ Any amount expected to be recovered in excess of the recognized claim which will result in a gain should not be recognized until any contingencies relating to the recovery have been resolved; a contingent gain cannot be recognized until realized.

-
- ii. Recoveries should be recognized as reductions of claims, rather than as revenue.
- 47. Adjustments to the liability for unpaid insurance claims, other than those resulting from payments made to liquidate existing liability balances, should be recognized as a component of claims expense.
 - 48. Guidance from SFFAS 39 applies to subsequent events relating to unpaid insurance claims.

Disclosure Requirements

Factors in Determining Disclosures

- 49. Materiality is an overarching consideration in financial reporting for information that should be presented regarding nonexchange transaction insurance programs. Materiality judgments consider both quantitative and qualitative factors. Acceptable quantitative factors may include whether certain groups of arrangements are accumulating large claim expenses or unpaid claim liability balances. Acceptable qualitative factors may include whether a group of arrangements is of immediate concern to constituents, politically sensitive, and/or controversial.
- 50. Disclosures should be integrated so that concise, meaningful, and transparent information is provided in a comprehensive note regarding the insurance program and related balances, or by providing references to relevant notes elsewhere in the GPFFR but which relate to the insurance program.

Disclosures Applicable to Component Reporting Entities

- 51. The following information should be provided for each material insurance portfolio, and/or in aggregate for all remaining insurance portfolios, and/or individual insurance arrangements:
 - a. What is insured or guaranteed, for whom, and what other government agencies and/or commercial insurance programs administer or assume risk for any part of the program
 - b. Full costs,¹⁷ premiums collected, appropriations used, and borrowing needed during the reporting period, as well as the ability to repay borrowing
 - c. Investing activities, such as buying treasury securities

¹⁷ See SFFAS 4, *Managerial Cost Accounting Standards and Concepts*, paragraphs 80 - 104.

-
- d. Any event(s) that caused a material change in the amounts recognized during the reporting period, such as low probability high impact adverse events, changes in laws, and/or actuarial assumptions
52. Information for changes in the liability balance for unpaid insurance claims should be provided as follows:
- a. Beginning balance
 - b. Claims expenses
 - c. CAE¹⁸
 - d. Payments to settle claims
 - e. Recoveries and other adjustments
 - f. Ending balance

Life Insurance Programs

53. Life insurance programs collect premiums for life insurance arrangements to cover the risk of loss from death of individuals.

Recognition and Measurement

Revenue

54. Premiums should be recognized as revenue when due from policyholders.

Liability for Unpaid Insurance Claims

55. A liability for unpaid insurance claims should be recognized for adverse events that occurred before the end of the reporting period. The liability should be initially recorded at the estimated settlement amount and remeasured at the end of each reporting period.
56. The estimated settlement amount includes:

¹⁸ Claims Adjustment Expenses should be recognized for claims occurring prior to the end of the current reporting period.

-
- a. outflows to liquidate:
 - i. claims that have been reported but not paid
 - ii. claims IBNR
 - b. related estimated CAE, and
 - c. estimated inflows from recoveries, such as monies recovered from improper payments, not realized at the end of the reporting period.
 - i. If estimated recoveries exceed the related claims for a group of arrangements then recognition is limited to the amount of the related claims.¹⁹
 - ii. Recoveries should be recognized as reductions of claims, rather than as revenue.
57. Adjustments to the liability for unpaid insurance claims, other than those resulting from payments made to liquidate existing liability balances, should be recognized as a component of claims expense.
58. Guidance from SFFAS 39 applies to subsequent events relating to unpaid insurance claims.

Liability for Future Policy Benefits

59. The liability for future policy benefits represents the expected present value of future claims to be paid to, or on behalf of, existing policyholders, less the expected present value of future net premiums to be collected from those policyholders.
60. SFFAS 39 addresses subsequent events and provides guidance regarding recognized and nonrecognized events. All subsequent events relating to the liability for future policy benefits should be classified as nonrecognized events. Nonrecognized events are to be disclosed in accordance with SFFAS 39, paragraph 15.
61. Estimates should be determined by considering insurance portfolios rather than individual arrangements.

¹⁹ Any amount expected to be recovered in excess of the recognized claim which will result in a gain should not be recognized until any contingencies relating to the recovery have been resolved; a contingent gain cannot be recognized until realized.

-
62. The liability is estimated using appropriate financial and/or actuarial methods that include assumptions, such as estimates of expected investment yield, mortality, morbidity, terminations, and expenses. (For more information, see SFFAS 33.)
 63. Changes in the liability for future policy benefits that result from periodic re-estimations should be recognized as an expense during the period in which the changes occur.
 64. The effects of changes in relevant law or policy should be recognized when those changes occur.

Disclosure Requirements

Factors in Determining Disclosures

65. Materiality is an overarching consideration in financial reporting for information that should be presented regarding life insurance programs. Materiality judgments consider both quantitative and qualitative factors. Acceptable quantitative factors may include whether certain groups of arrangements are accumulating large claim expenses or unpaid claim liability balances. Acceptable qualitative factors may include whether a group of arrangements is of immediate concern to constituents, politically sensitive, and/or controversial.
66. Disclosures should be integrated so that concise, meaningful, and transparent information is provided in a comprehensive note regarding the insurance program and related balances, or by providing references to relevant notes elsewhere in the GPFFR but which relate to the insurance program.

Disclosures Applicable to Component Reporting Entities

67. The following information should be provided for each material insurance portfolio, and/or in aggregate for all remaining insurance portfolios, and/or individual insurance arrangements:
 - a. The type of life insurance and specific characteristics of those products, such as when and how benefits are paid and what other government agencies or commercial insurance programs administer and/or assume risk for any part of the program
 - b. Premium pricing policies (in accordance with SFFAS 7, par. 46) including risk characteristics used in determining premiums and requirements to set premium prices that do not cover the full estimated cost to settle claims
 - c. Full costs,²⁰ premiums collected, appropriations used, and borrowing needed during the reporting period, as well as the ability to repay borrowing

²⁰ See SFFAS 4, *Managerial Cost Accounting Standards and Concepts*, par. 80-104.

-
- d. Investing activities, such as buying treasury securities
 - e. The nature and magnitude of uncertainty to estimate the amounts to be paid to settle future claims, including the basis and estimation method
 - i. Significant risk assumptions and factors, including relevant trend information
 - ii. How much risk, if any, is shared by third parties
 - f. The total value of life insurance policies issued—insurance in-force—at the end of the reporting period, which represents the maximum risk exposure²¹
 - g. The net cash surrender value of policies at the end of the reporting period, including appropriate information to aid in avoiding the misleading inference that there is a more than remote likelihood that 100% of all policies will cancel at the end of the reporting period
 - h. Any event(s) that caused a material change in the amounts recognized during the reporting period, such as low probability high impact adverse events, changes in laws, and/or actuarial assumptions
68. Information for changes in the liability balance for unpaid insurance claims should be provided as follows:
- a. Beginning balance
 - b. Claims expenses
 - c. CAE²²
 - d. Payments to settle claims
 - e. Recoveries and other adjustments
 - f. Ending balance

²¹ An explanation should be included that avoids the misleading inference that there is more than a remote likelihood that claims equal to the entire insurance in-force amount will be filed at the same time.

²² Claims Adjustment Expenses should be recognized for claims occurring prior to the end of the current reporting period.

Disclosures Applicable to the Consolidated Financial Report of the U.S. Government

69. The CFR should disclose the following information:²³

- a. A broad description of insurance programs
- b. A general reference to relevant component reporting entity reports²⁴
- c. The balance for insurance program liabilities
- d. A narrative discussion of programs' ability or inability to repay any borrowing
- e. The total amount of coverage provided through insurance in-force as of the end of the reporting period²⁵

Effective Date

70. The requirements of this Statement are effective for reporting periods beginning after September 30, 2018.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

²³ Disclosure is "reporting information in notes or narrative regarded as an integral part of the basic financial statements."

²⁴ The term "component reporting entity" is used to distinguish between the U.S. federal government and its components. The U.S. federal government is composed of organizations that manage resources and are responsible for operations. These include major departments and independent agencies, which are generally divided into sub organizations, for example, smaller organizational units with a wide variety of titles, including bureaus, administrations, agencies, and corporations.

²⁵ Include an explanation about the insurance in-force amount that avoids the misleading inference that there is more than a remote likelihood that claims equal to this maximum risk exposure will be paid at the same time.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the Statement—not the material in this appendix—should govern the accounting for specific transactions, events or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

- A1. The Federal Accounting Standards Advisory Board (FASAB or “the Board”) undertook a project to improve the accounting and reporting of all significant risks assumed by the Federal Government. Due to the breadth of the *Risk Assumed* project, the Board decided to break it into multiple phases. These standards address the first phase – *Insurance Programs*. Other programs designed to manage risk for the federal government will be addressed by future research conducted under the *Risk Assumed* project.
- A2. FASAB undertook insurance programs as phase I of the *Risk Assumed* project because while paragraphs 97-121 in SFFAS 5 include a requirement to report risk assumed for insurance programs, the resulting information as reported by various agencies is not comparable. Further review found that it is challenging to determine the operational results and financial position of insurance programs.
- A3. In addition, the Board’s conceptual framework now provides a definition of liability and describes measurement attributes that were not available when FASAB developed SFFAS 5. Statement of Federal Financial Accounting Concepts (SFFAC) 5, *Definitions of Elements and Basic Recognition Criteria for Accrual-Basis Financial Statements*, defines liability as “a present obligation of the federal government to provide assets or services to another entity at a determinable date, when a specified event occurs, or on demand.” SFFAC 7, *Measurement of the Elements of Accrual-Basis Financial Statements in Periods After Initial Recording*, defines attributes of elements that may be measured. This Statement adopts the most current concepts so that the accounting principles for insurance liabilities provide comprehensive guidance for consistent reporting.

A4. Project goals are to:

- a. define federal insurance programs and related terms,
- b. ensure consistent reporting for all insurance programs implemented by the federal government,
- c. address measuring uncertainty regarding estimating losses on open arrangements as of the end of the reporting period,
- d. ensure disclosures address uncertainties and risk factors, and
- e. provide for reporting on significant risks assumed in order to meet the stewardship and operating performance objectives of federal financial reporting.

A5. The Board formed a task force to assist in developing the proposed standards for insurance programs. Task force members included accounting, budget, and insurance subject matter experts from federal agencies and independent public accounting firms.

A6. The task force met several times over the course of the project, delivered an education session to the Board, and also exchanged numerous ideas and recommendations electronically. Staff sought the task force's views and recommendations in developing and describing alternatives to present to the Board during the development of these standards. The task force's assistance was essential and its views carefully considered by members during deliberations. The task force played an important role in the research and release of the proposed standards and this Statement.

Summary of Outreach Efforts and Responses

A7. FASAB issued the ED, titled *Insurance Programs*, on December 30, 2015, with comments requested by March 30, 2016.

A8. Upon release of the ED, FASAB provided notices and press releases to the FASAB email listserv, the Federal Register, *FASAB News*, the *Journal of Accountancy*, Association of Government Accountants *Topics*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, the Chief Financial Officers Council, the Council of the Inspectors General on Integrity and Efficiency, and committees of professional associations generally commenting on EDs in the past (for example, the Greater Washington Society of CPAs, Association of Government Accountants Financial Management Standards Board).

-
- A9. FASAB followed up this broad announcement with direct mailings of the ED to the following relevant congressional committees:
- a. House Agriculture Committee
 - b. House Appropriations Committee
 - i. Subcommittee on Agriculture, Rural Development, Food and Drug Administration and Related Agencies
 - ii. Subcommittee on Oversight and Government Reform
 - iii. Subcommittee on Homeland Security
 - c. House Budget Committee
 - d. House Committee on Veterans' Affairs
 - e. House Committee on Homeland Security —Subcommittee on Emergency Preparedness, Response, and Communications, Majority
 - f. House Committee on Financial Services
 - g. Senate Agriculture Committee
 - h. Senate Appropriations Committee
 - i. Subcommittee on Agriculture, Rural Development, Food and Drug Administration and Related Agencies
 - ii. Subcommittee on Homeland Security
 - i. Senate Committee on Banking, Housing, and Urban Affairs—Subcommittee on Securities, Insurance, and Investment
 - j. Senate Budget Committee
 - k. Senate Committee on Finance
 - l. Senate Committee on Health, Education, Labor & Pensions
 - m. Senate Committee on Homeland Security and Governmental Affairs

n. Senate Committee on Veterans' Affairs

- A10. FASAB received 18 responses from preparers, auditors, professional associations, and citizens. The majority of respondents agreed with proposals for new definitions and exclusions; they also agreed with the three categories: exchange transaction insurance programs other than life insurance, nonexchange transaction insurance programs, and life insurance programs for reporting insurance programs.
- A11. However, the auditors and accounting associations disagreed with the proposals for how to estimate the settlement of future claims for the liability for losses on remaining coverage.
- A12. Some respondents also identified certain issues that could be clarified within the Statement or addressed in the basis for conclusions.
- A13. The Board did not rely on the number in favor of or opposed to a given position. Staff provides the Board information about the respondents' majority view only as a means of summarizing the comments. The Board considered each response and weighed the merits of the points raised. The respondents' comments are summarized in the following section.

Key Areas of Improvement

- A14. SFFAS 5 resulted in inconsistent reporting among insurance programs due to the absence of definitions and use of terms like possible loss, probable future events, measurable, and uncertainty. The Board considered existing concepts and standards for similar circumstances such as loan guarantees to identify options for improvement. The Board also considered task force testimony that insured events are often hard to project due to their high impact yet low probability nature and the lack of available data to predict them. As a result, the Board determined that current reporting could be improved through:
- a. definitions of relevant terms,
 - b. clarity for what programs are excluded,
 - c. guidance for revenue recognition and unearned premiums,
 - d. consistent recognition of liabilities including future loss estimates, and
 - e. structured disclosure requirements.

Definitions of Relevant Terms and Excluded Activities

- A15. During the initial phase of the project, the Board determined that definitions of relevant terms would be necessary for consistent reporting. Staff worked extensively with the task force to develop these definitions. The Board decided to use general terms to include all current insurance and future insurance programs in this Statement. The Board determined that the following provided the foundation for the definitions developed for this project.
- a. Insurance Program—while most respondents did agree with the definition, programs that were not structured like commercial insurance programs with actual contracts requested clarification. In addition, respondents found inclusion of the term “non-loan guarantee” in the definition confusing; this was subsequently removed. Therefore, the Board defined a federal insurance program by its fundamental nature. The substance—and not the name—of a program determines if it is an insurance program and therefore subject to these standards.
 - i. Exclusions—a number of respondents requested clarification on what activities were excluded from this Statement. One respondent requested that the Board expand upon the exclusion of entitlement programs to avoid excluding insurance programs that perform entitlement-like activities but are actually insurance programs.
 - ii. One respondent recommended including fiduciary funds, workers’ compensation programs, and programs established to pay claims on adverse events that occurred in the past.
 - iii. A number of respondents requested that the Board provide context to explain the exclusions in this proposed standard.
 - b. Therefore, the Board amended the wording of certain exclusions to aid in assessing the programs and activities that should be excluded.
 - c. Each of the activities and programs excluded involve risk and, therefore, share a characteristic of insurance programs. The Board concluded that judgment is required in applying the exclusions and that providing context may aid in making such judgments. The rationale for each exclusion is presented below:
 - i. Programs that administer direct loans and loan guarantees are excluded because standards for these programs are provided in SFFAS 2, *Accounting for Direct Loans and Loan Guarantees*.

-
- ii. Programs that qualify as social insurance are excluded because standards for these programs are provided in SFFAS 17, *Accounting for Social Insurance* (including unemployment insurance).
 - iii. Programs authorized to engage in disaster relief activities are excluded because while benefits are based on losses from adverse events, coverage is available broadly to the population and benefits may not be as clearly defined as in insurance programs. These aspects make it more challenging to apply the recognition and measurement provisions of this Statement. Disaster relief activities will be addressed in a later phase of risk assumed.
 - iv. Programs that provide grants are excluded because while grants may be based on losses from adverse events, other criteria make it more challenging to apply the recognition and measurement provisions of this Statement.
 - v. Programs that provide benefits or financial assistance based on an individual's or a household's income and/or assets are excluded because while an adverse event may be a cause of the income/asset criteria, it is the criteria that determine the benefits or assistance and not the event behind it.
 - vi. Programs that assume the risk of loss arising from federal government operations; workers' or occupational illness compensation programs; programs that pay claims through an administrative or judicial role for individuals or organizations who claim they have been harmed by a federal agency; and programs that indemnify contractors, arrangement partners, and other third parties for loss or damages incurred while or caused by work performed for a federal agency are excluded. The Board updated these exclusions by removing a reference to self-insurance and missions because these terms were unclear to respondents. The Board determined that the cost incurred for such activities and programs are part of the full cost of doing business. For example, a program with fleet vehicles that pays for damage from accidents out of funds designated as operation and maintenance would include such costs in the overall program cost.
- d. Adverse Event—each insurance program is responsible for settling losses that result from specific adverse events. The Board learned through an education session with the Federal Crop Insurance Corp that an adverse event may be a single event or a series of events. Therefore, an adverse event has not occurred until all of the events in a series occur.
 - e. Insurance Arrangement—while most respondents agreed with the term “contract” some respondents noted that they do not have formal contracts and may then be excluded from this Statement. The task force provided information that exchange transaction insurance programs and life insurance programs engage in an explicit

agreement or arrangement. The Board decided to change the term from “insurance contract” to “insurance arrangement” to capture the nature of the arrangement as defined by law or regulation. Therefore, the definition of an insurance arrangement includes the elements that insurance programs agree upon to provide settlement of losses to beneficiaries.

- f. Insurance Portfolios—one respondent requested that the Board define insurance portfolios and refer to that term consistently throughout the Statement. The Board agreed and added a definition for insurance portfolios.
- g. Insurance Program Categories—the Board determined that an insurance program will fit into one of three categories. Each category processes different types of transactions that settle losses from specific adverse events. The categories are as follows:
 - i. Exchange transaction insurance programs other than life insurance cover the risk of loss from adverse events, other than death of individuals, involved in exchange transactions as defined by SFFAS 7.
 - ii. Nonexchange transaction insurance programs cover the risk of loss from adverse events through nonexchange transactions as defined by SFFAS 7.
 - iii. Life insurance programs cover the risk of loss from death of individuals.
- h. A number of respondents requested additional information for better understanding of the exchange and nonexchange transaction categories other than life insurance. In particular, respondents wanted to know (1) how to determine if a program should be classified as a nonexchange transaction insurance program and (2) how to classify a program if it receives both exchange and nonexchange revenue.
 - i. The Board’s intention for the exchange transaction insurance programs other than life insurance and nonexchange transaction insurance programs is to define these categories in relation to the revenue standards in SFFAS 7.
 - ii. Some respondents were confused by the Board’s reference to only SFFAS 7 and not SFFAS 5 in defining these categories. SFFAS 7 and SFFAS 5 each define exchange transactions as occurring when “each party to the transaction sacrifices value and receives value in return.”²⁶ The Board determined that classifying the programs based on the type of revenue received would be straightforward and that no other substantive difference would result.

²⁶ See SFFAS 5, par. 22, and SFFAS 7, par. 33.

-
- iii. This Statement addresses revenue recognition that is unique to each category, but does not reiterate the revenue recognition standards. To address this, the Board added a general statement in the Scope section that refers the preparer to other standards when necessary.
 - iv. The Board notes that some insurance programs may be funded with both exchange and nonexchange revenue. The Board concluded that a program other than life insurance that receives any exchange revenue should be designated as an exchange transaction insurance program other than life insurance.
 - v. Nonexchange transaction insurance programs cover the risk of loss from adverse events through nonexchange transactions, such as collection of nonexchange revenue or use of appropriations. For example, some levy:
 - (1) excise taxes which, like other taxes, are determined by the government's power to compel payment and are classified by SFFAS 7, paragraph 243 as nonexchange revenue;
 - (2) surcharges which, like excise taxes, are determined by the government's power to compel mandatory recoupment of the federal share of pay for losses.

Revenue Recognition and Liability for Unearned Premiums

- A16. Exchange transaction insurance programs other than life insurance recognize revenue in proportion to the insurance protection to be provided. Any revenue collected but not earned prior to the end of the reporting period is recognized as unearned premiums.
- a. The following is an example of revenue that is earned evenly over a 12-month arrangement period because insurance protection is provided evenly during the arrangement period. The premium of \$1,200 is collected on July 1. By September 30, three months have been covered earning the exchange program \$300. The remaining \$900 is unearned because the remaining arrangement period is still open into the next fiscal year: from October 1 through June 30. The \$900 is recognized separately on the balance sheet as unearned premium.
 - b. The following is an example of revenue that is earned for three equivalent national rallies held during a 12-month arrangement period. The premium of \$1,500 is collected on July 1. By September 30, two of the three rallies have occurred, earning the exchange program \$1,000. The remaining \$500 is unearned because the third rally is not scheduled until December 20, which is during the remaining arrangement

period from October 1 through June 30. The \$500 is recognized separately on the balance sheet as unearned premium.

- A17. Nonexchange transaction insurance programs do not recognize unearned premiums because they do not earn premiums. The Board believes that insurance programs in this category should apply general revenue recognition standards. Therefore, no specific revenue recognition guidance is provided in this Statement.
- A18. Life insurance programs do not recognize unearned premiums. The Board concluded that revenue from life insurance arrangements should be recognized when due from policyholders because there is no better basis for determining when revenue is earned. Premiums are due and collected each pay period or on another recurring basis over the entire duration of the arrangement. In addition, the expected present value of future net premiums is deducted from the expected present value of future claims to arrive at the liability for future policy benefits.

Recognition of Liabilities and Measurement of Future Loss Estimates

- A19. Liability for unpaid claims is recognized for all categories. Regardless of category, at the end of the reporting period insurance programs might be processing claims for losses due to adverse events that occurred by the end of the reporting period.
- a. The amounts due for claims that have been submitted but not paid are included in the liability for unpaid claims.
 - b. There are also claims IBNR. The amounts for these claims are not known and must be estimated for adverse events that occurred by the end of the reporting period. If an adverse event is a series of events not completed by the end of the reporting period, then the Board concluded that these are not claims IBNR and should not be included in the liability for unpaid claims. Nonetheless, for exchange transaction insurance programs other than life insurance, such series should be considered in estimating a liability for losses on remaining coverage.
 - c. Claims adjustment expenses are costs directly related to settling claims from adverse events that occurred by the end of the reporting period. The Board concluded that CAE should be included in the liability for unpaid claims for submitted and IBNR claims to recognize the full cost to settle claims.
- A20. Recognition of a liability for losses on remaining coverage is required for exchange transaction insurance programs other than life insurance.
- a. Research by the task force determined that a program has a service obligation to pay for any losses caused by adverse events during the entire arrangement period. The

Board agrees and therefore decided to separate the liability for losses on remaining coverage from the liability from the unpaid claims portion.

- b. The Board concluded that recognizing a reasonable estimate of future losses for the open arrangement period that extends beyond the end of the reporting period will remove ambiguity created by SFFAS 5 standards to recognize contingency liabilities.
- c. According to SFFAS 5, paragraph 38, contingent liabilities must be recognized if a past transaction has occurred and a future outflow or other sacrifice of resources is probable and measureable. Under the new standards, the liability for losses on remaining coverage is the estimated future cash flows arising from adverse events that are expected to happen during the period that coverage will be provided. Therefore, the Board's next challenge was how to consistently address uncertainty regarding measurement.
- d. Task force research showed that federal insurance programs were using a variety of statistical modeling methods to estimate future losses depending on their unique uncertainties and risk factors. For example, the Department of Agriculture's Risk Management Agency oversees crop insurance and relies upon a regression analysis;²⁷ the Department of Homeland Security's Federal Emergency Management Agency oversees flood insurance and relies on a lognormal distribution;²⁸ and the National Credit Union Administration uses an internal econometric model that applies estimated failure and loss rates, taking into account the historical loss history, insuree, risk ratings, insuree financial ratios, and other conditions.
- e. To address such measurement challenges, the Financial Accounting Standards Board Statement of Financial Accounting Concepts No. 7, paragraphs 44-54, describes a variety of pricing tools and methods for developing an expected cash flow estimate.
- f. To allow for a variety of estimating methods for federal insurance programs, the ED required that programs should first use expected cash flow to estimate the cost to settle claims on remaining coverage. The ED acknowledged that there would be various methods available to estimate cash flows and probabilities. Further, the

²⁷ Regression analysis is a statistical technique used to measure the extent to which a change in one quantity (variable) is accompanied by a change in some other quantity (variable). GAO, Aug 1, 1974-Case Study (CS-5), *Using Regression Analysis To Estimate Costs Published*, page 1.

²⁸ In statistics the best known distribution is the normal, the familiar bell-shaped curve which is symmetrical about its mean. Certain other distributions stem from the normal. For example... the lognormal distribution... A random variate x is lognormally distributed if the logarithm of x is normally distributed. In short, the distribution of x is itself lognormal when the distribution of $\log x$ is normal. A typical lognormal distribution is skewed to the right and has a lower bound such that the probability of x being less than this lower bound is exactly zero. Lester G. Telser, Review of the Lognormal Distribution, *Journal of Farm Economics* 41. No 1, Feb., 1959, page 161.

-
- proposal provided that if expected cash flow estimates were not practical and appropriate, then an entity could estimate a single most-likely amount to be paid to settle future claims during the remaining open arrangement period.
- g. A number of respondents were concerned with implementation of and auditing to the terms “practical and appropriate.”
 - h. In addition, one member believed that the entity should be able to use any method that provides a reasonable estimate of cash flows, based on all available information existing at the balance sheet date, including experience with previous trends, and, as appropriate, the views of independent experts. However, the majority of members still preferred expected cash flow to estimated cash flow. After discussion, all members agreed to allow any method for which the objective is a reasonable estimate of expected cash flows. This allows management the flexibility to choose a method that produces a reasonable estimate of expected cash flows specific to the program’s future adverse event uncertainties and risk factors.
- A21. Recognition of a liability for future policy benefits is required for life insurance programs. Future benefits and premiums are estimated using financial and/or actuarial methods, depending on the portfolio risk characteristics and arrangement duration. These amounts are discounted to the present value to recognize the liability for future benefits.
- A22. Estimates for the liability for losses on remaining coverage and future policy benefits are recognized by insurance portfolios with similar characteristics, including arrangement duration. The Board decided not to define “arrangement duration” due to the subjective nature of duration. For example, one insurance program might determine that a 36-month arrangement is short-duration, while another assigns the arrangement to a long-duration group. Recognizing these liabilities by groups of arrangements allows judgment by each insurance program in defining the duration of their arrangements.

Subsequent Events

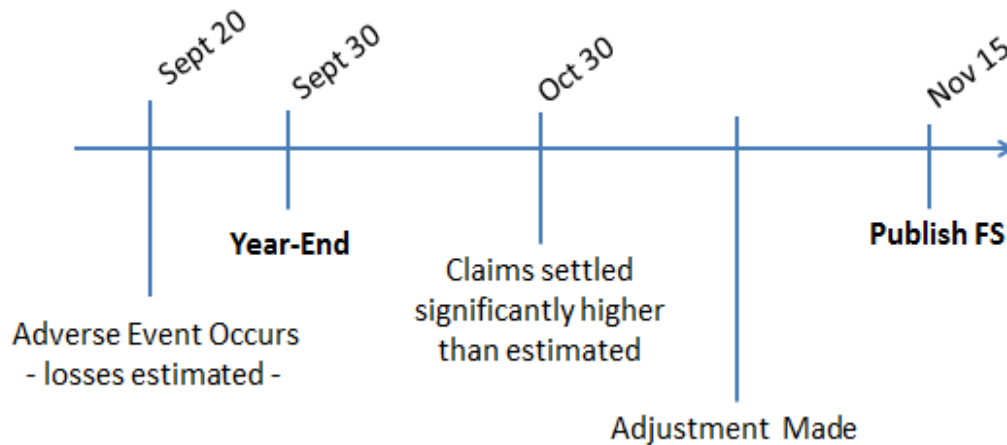

- A23. Certain respondents requested clarification regarding subsequent events and the application of SFFAS 39 in relation to whether these standards are to add to or supplement SFFAS 39. The Board determined that the treatment of subsequent events should differ for the liability for unpaid insurance claims versus the liability for losses on remaining coverage as follows.

Liability for Unpaid Insurance Claims

- A24. For the liability for unpaid insurance claims, events or transactions occurring after the balance sheet date but before the financial report is issued are considered subsequent

events. A subsequent event may or may not result in the adjustment of the financial statements, depending on whether it is a recognized or nonrecognized event. See SFFAS 39 for detailed guidance. Examples of subsequent events for insurance programs with a September 30 year-end and a November 15 financial statement (FS) publication date may include the following.

- a. Recognized event: claims settled on October 30 for an amount significantly different from the liability recorded for a major disaster that occurred on September 20 would require adjustment to the liability for unpaid claims in the financial statements.

- b. Nonrecognized event: a major disaster that occurs on October 20 would not require an adjustment to the financial statements but may require disclosure.

Liability for Losses on Remaining Coverage

- A25. The liability for losses on remaining coverage estimates future events. Due to the uncertainty of the occurrence, magnitude, and timing of these future events, the Board decided that all subsequent events relating to the liability for losses on remaining coverage should be classified as nonrecognized events in accordance with SFFAS 39, paragraph 15.

Disclosures

- A26. Disclosures are required for each insurance program category to aid the reader in understanding the estimates and fiscal health of insurance programs in relation to the risk they assume for losses incurred due to adverse events.

Avoiding Duplicity of Information

- a. Task force research informed the Board that current standards required presentation of similar information in multiple places (for example, notes and required supplementary information), which burdened the agencies and readers. In addition, disclosures were inconsistent among programs, making it difficult to determine the fiscal health—the amount of loss estimated versus the amount and funding types necessary to settle the actual losses—of individual programs as well as insurance programs at the government-wide level.
- b. The Board concluded that the updated disclosures will avoid duplication by allowing insurance programs to reference relevant notes.

Changes in the Liability for Unpaid Insurance Claims

- c. For consistent reporting, the Board requires a reconciliation of the liability for unpaid claims that a number of insurance programs already produce. The Board reviewed the current reconciliations and consolidated relevant information for consistent reporting. All categories should report this information so readers receive consistent information.
- d. The Board concluded that requiring disclosure of full costs, premiums collected, appropriations used, borrowing needed during the reporting period, as well as the ability to repay the borrowing should provide a holistic picture of an insurance program's performance.

Insurance In-Force

- e. The Board concluded that disclosing the balance of insurance in-force as of the end of the reporting period will provide useful information as to the maximum risk exposure to the program. However, one respondent requested, and the Board subsequently agreed, to update the standard to provide more clarity on how the program should explain that paying the full amount of insurance in-force is very unlikely.

Low Probability, High Impact Adverse Events-Uncertainty

- f. Some respondents were concerned about how to disclose the uncertainty of adverse events, including those that are low probability, high impact (very rare, but upon occurrence causes extreme loss). The Board understands that uncertainty is subjective to each insurance program in relation to the risks it insures—which may cause extreme loss that is hard to estimate. Some programs may also encounter uncertainty in relation to a multitude of events that must occur over time and often do not occur within one reporting period.
- i. The following are examples of hard to predict adverse events that may cause substantial losses: a “Katrina” type²⁹ of hurricane, a political uprising in a country that completely disrupts American businesses, or an unusual detrimental weather pattern combined with volatile commodity pricing.

²⁹ Per FEMA - Hurricane Katrina was a long-lived hurricane that made landfall three times along the United States coast and reached Category 5 at its peak intensity... CNN reported that ...Hurricane Katrina is the costliest disaster in the history of the global insurance industry. The National Flood Insurance Program paid out \$16.3 billion in claims...Private Insurance companies have paid an estimated \$41.1 billion in claims.

-
- ii. Due to this uncertainty in magnitude and timing, the Board concluded that the disclosure about estimating uncertainty allows management to discuss its particular constraints in determining the liability for losses on remaining coverage.

Disclosures – Financial Report of U.S. Government

- A27. Disclosures for the financial report of the U.S. Government should be reported at a high level of detail. The Board concluded that detailed disclosures should be found at the component reporting entity level.

Board Approval

This Statement was approved unanimously. Written ballots are available for public inspection at FASAB's office.

Statement of Federal Financial Accounting Standards 52: Tax Expenditures

Status

Issued	May 31, 2017
Effective Date	For periods beginning after September 30, 2017. Earlier implementation is encouraged.
Affects	None.
Affected by	None.

Summary

This Statement requires certain information on tax expenditures to assist users of the consolidated financial report of the U.S. Government (CFR) in understanding the existence, purpose, and impact of tax expenditures.

Specifically, this Statement requires that the CFR:

- Include narrative disclosures and information regarding tax expenditures that inform the reader regarding the:
 - definition of tax expenditures,
 - general purpose of tax expenditures,
 - impact on and treatment of tax expenditures within the federal budget process, and
 - impact of tax expenditures on the government's financial position and condition.
- Alert readers regarding the availability of published information on tax expenditure estimates, such as those published annually by the Department of the Treasury's Office of Tax Policy.

This Statement also encourages presentation of tax expenditure estimates as other information (OI)¹ in the CFR.²

¹ The term *Other Information* (OI) used in this Statement and the term *Other Accompanying Information* (OAI), as defined by Statement of Federal Financial Accounting Concepts (SFFAC) 6, par. 5, are synonymous.

² Although the Federal Accounting Standards Advisory Board (FASAB) does not require OI to be presented, FASAB may at times encourage voluntary reporting of items to help in the development of information that may enhance overall federal financial reporting. For example, FASAB may consider an item to be relevant to entity operations but, for the moment, does not meet other criteria for required information.

The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Standards

Scope

1. This Statement requires narrative disclosures and information regarding tax expenditures, and it encourages the presentation of a selection of the major tax expenditure estimates, such as those published annually by the Department of the Treasury's (Treasury) Office of Tax Policy, as other information (OI) in the consolidated financial report of the U.S. Government (CFR).³
2. The reporting requirements in this Statement apply to the CFR. They do not apply to the financial statements of component reporting entities. They also do not affect the reporting in the *Budget of the U.S. Government* or any other special purpose report.
3. This Statement does not alter or contradict the definition of tax expenditures, as established by the Congressional Budget and Impoundment Control Act of 1974. This Statement does not affect the Treasury or the Joint Committee on Taxation's (JCT) interpretation of the statutory definition. Hence, this Statement does not affect the policies and practices of Treasury's Office of Tax Policy or the JCT with respect to the definition, identification, recognition, and measurement of tax expenditures.

Definitions

4. Tax expenditures

The Congressional Budget and Impoundment Control Act of 1974 (Public Law 93-344) defines **tax expenditures** as "revenue losses attributable to provisions of the Federal tax laws which allow a special exclusion, exemption, or deduction from gross income or which provide a special credit, a preferential rate of tax, or a deferral of tax liability."

While the term "revenue losses" is used in the statutory definition, tax expenditures have traditionally been measured as reductions in federal tax revenues relative to normal baseline provisions of an individual and corporate income tax system, which were properly

³ The term other information (OI) used in this Statement and the term other accompanying information (OAI), as defined by Statement of Federal Financial Accounting Concepts (SFFAC) 6, par. 5, are synonymous.

approved and authorized by the Congress to accomplish identified policy objectives, recognizing that federal tax revenues would be reduced.

5. Baseline provisions

Baseline provisions are the starting points used to measure the impact of tax expenditures on tax revenues as compared to revenues that would be collected otherwise, absent the special exclusion, exemption, deduction, credit, preferential rate, or deferral. Certain practical aspects of the tax code are incorporated into the baseline—such as progressive tax rates, personal exemptions, standard deductions, deductions of expenses incurred in order to earn income, and deferrals of unrealized income.

Disclosure Requirements

Financial Report of the U.S. Government Disclosures

6. Disclosures about tax expenditures should help provide readers with a general understanding of how tax expenditures affect the government's tax collections, financial position, and financial condition; and how budgetary objectives can be achieved through the mechanism of tax expenditures.
7. Disclosures within the notes to the financial statements should include:
 - a. a "plain language" definition of the term tax expenditures;⁴
 - b. examples of types of tax expenditures, such as special deductions, credits, deferrals, preferential rates, exemptions, and exclusions; and
 - c. a description of how tax expenditures affect nonexchange revenue, tax collections, and refunds, as well as whether tax expenditure amounts are presented in the basic financial statements.

⁴ This Statement does not establish the wording of the "plain language" definition.

Required Supplementary Information

Management's Discussion and Analysis

8. Management's discussion and analysis (MD&A) should include:
- a. a "plain language" definition of the term tax expenditures;
 - b. the general purpose of tax expenditures;
 - c. examples of types of tax expenditures, such as special deductions, credits, deferrals, preferential rates, exemptions, and exclusions;
 - d. information about other factors that may affect tax collections in order to place tax expenditure information in an appropriate context;
 - e. a description of how tax expenditures are treated for budgetary and financial reporting purposes, including their impact on the surplus or deficit and their treatment within the federal budget process, and how they affect the government's financial position and condition; and
 - f. a statement regarding the availability of published information on tax expenditures, such as the Treasury Office of Tax Policy's unaudited annual report on tax expenditures, and how that information can be obtained.

Other Information

9. The Federal Accounting Standards Advisory Board (FASAB or "the Board") encourages the presentation of a selection of the major tax expenditure estimates, such as those published annually by Treasury's Office of Tax Policy, as OI in the CFR.
10. The Board encourages the presentation of tax expenditure estimates in a manner that informs readers of:
- a. the general magnitude of tax expenditures and their impact on federal revenues (revenue effect) during the fiscal year;
 - b. the source of the estimates; and

-
- c. the availability of published information wherein the estimates presented in OI were originally published, such as the Treasury Office of Tax Policy's unaudited annual report on tax expenditures, and how that information can be obtained.
-

Effective Date

11. The requirements of this Statement are effective for reporting periods beginning after September 30, 2017. Earlier implementation is encouraged.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Introduction

A1. In SFFAC 1, the Board established four objectives of federal financial reporting. These objectives provide a framework for assessing the existing accountability and financial reporting systems of the federal government and for considering new accounting standards.⁵ The objectives address (1) Budgetary Integrity, (2) Operating Performance, (3) Stewardship, and (4) Systems and Controls.

a. This Statement contributes to Objectives 1, 2, and 3.

i. Objective 1, Budgetary Integrity, states that:

Federal financial reporting should assist in fulfilling the government's duty to be publicly accountable for monies raised through taxes and other means and for their expenditure in accordance with the appropriations laws that establish the government's budget for a particular fiscal year and related laws and regulations.

1. Sub-objective 1A states that:

Federal financial reporting should provide information that helps readers to determine how budgetary resources have been obtained and used ...

2. Sub-objective 1C states that:

⁵ SFFAC 1, par. 109.

Federal financial reporting should provide information that helps readers to determine how information on the use of budgetary resources relates to information on the costs of program operations.

ii. Objective 2, Operating Performance, states that:

Federal financial reporting should assist report users in evaluating the service efforts, costs, and accomplishments of the reporting entity, and the manner in which these service efforts have been financed...

iii. Objective 3, Stewardship, states that:

Federal financial reporting should assist report users in assessing the impact on the country of the government's operations and investments for the period and how, as a result, the government's and the nation's financial conditions have changed and may change in the future.

Federal financial reporting should provide information that helps the reader to determine whether (1) the government's financial position improved or deteriorated over the period, (2) future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due, and (3) government operations have contributed to the nation's current and future well-being.

- A2. Tax expenditures reduce federal revenues as a result of tax legislation. These reductions have historically been measured relative to normal baseline provisions of an individual and corporate income tax system. Many tax expenditures resemble mandatory spending programs for which spending is typically determined by rules for eligibility and benefit formulas. Other tax expenditures resemble discretionary spending programs for which the Congress appropriates annual funding. Forgoing budgetary resources through the use of tax expenditures can be a method of achieving policy objectives without direct outlays of funds by federal agencies and programs. Accordingly, the Board sought to provide budgetary information, which contributes to Objective 1. In particular, such tax expenditure information should contribute to sub-objectives 1A and 1C by providing information to assist readers in understanding how tax expenditures affect the availability of budgetary resources and tax collections, and how certain policy objectives are addressed through the mechanism of forgoing tax revenues.
- A3. Tax expenditures may be used as one of many means to accomplish policy objectives of the federal government. Although tax expenditures are not direct outlays of federal funds, they are often viewed as alternatives to other policy instruments, such as spending or regulatory

programs. The Board believes that the service efforts, costs, and accomplishments of the reporting entity—the U.S. government—include those service efforts undertaken, costs incurred through, and accomplishments resulting from the use of tax expenditures. Accordingly, financial reports should provide operating performance information, which contributes to Objective 2.

- A4. Because tax expenditures may be viewed as alternatives to spending or regulatory programs, they can also be viewed as government investments of forgone budgetary resources designed to address policy objectives. Thus, individual tax expenditures may affect (1) the government's financial position, (2) the budgetary resources available to sustain public services and to meet obligations as they come due, and/or (3) the nation's current and future well-being. Accordingly, financial reports should provide stewardship information, which contributes to Objective 3.

PROJECT HISTORY

- A5. In October 2014, the Board approved this project in order to determine what information regarding tax expenditures should be included in general purpose federal financial reports (GPFFRs). The decision followed an October 2013 educational briefing to the Board that resulted in identifying the topic as a high priority.
- A6. Throughout the project, the Board relied on a task force that included experts in the areas of tax expenditures, tax policy, and federal financial reporting. The task force provided critical assistance and knowledge to the Board and FASAB staff in developing (1) recommendations to the Board, (2) Appendix B: Tax Expenditures Explained, and (3) illustrations that were included in the exposure draft (ED). The task force also provided technical comments and feedback on working drafts and attended Board meetings to answer technical questions and provide insight during deliberations.
- A7. In December 2015, the task force issued its [Report to the FASAB](#), which included three recommendations to the Board and three options for the Board's consideration with respect to the presentation of tax expenditure estimates in the CFR.
- a. The first recommendation of the task force was to include an introduction section or background paper, as drafted by the task force, to educate readers of and respondents to the Board's ED and the final Statement regarding tax expenditures.
 - i. The Board approved this recommendation to be implemented in a proposed standard, but elected to include a condensed introduction section along with the full background paper developed by the task force (with minor changes) as

an appendix section (Appendix B: Tax Expenditures Explained). This recommendation was ultimately implemented in this Statement.

- b. The second recommendation of the task force was to require certain narrative disclosures regarding tax expenditures within the notes to the financial statements and MD&A of the CFR.
 - i. Task force members decided early in the project that they did not generally support issuing proposed standards that affected component reporting entities of the federal government due to potentially significant challenges and costs associated with doing so. For example, implementing accounting standards for identifying tax expenditures that are key performance or financial indicators for a component reporting entity could be time consuming and costly to the preparer.
 - ii. The task force concluded that this recommendation would improve users' awareness and understanding of tax expenditures while avoiding extensive, voluminous, or costly disclosures.
 - iii. The Board approved the recommendation to be implemented in a proposed standard with certain minor changes to the recommendation as written in the task force report. This recommendation was ultimately implemented in this Statement.
- c. The third recommendation of the task force was to require the inclusion of hyperlinks in the CFR to inform readers regarding other online sources of information where readers of the government-wide report can obtain more detailed information regarding tax expenditures.
 - i. FASAB staff worked with members of the task force and other members of the federal financial statement auditing community to develop proposed language for implementing this recommendation.
 - ii. The Board discussed how best to implement this recommendation. Board members came to the conclusion that the language in paragraph 8.f provides discretion to the preparer to embed a hyperlink to information sources that it deems to be most appropriate, should reporting on tax expenditures evolve, expand, or improve in the future.
 - iii. The Board sought to develop a requirement that would continue to be relevant in the future and also allow the preparer to exercise discretion in selecting information sources that are referenced in the CFR.

-
- iv. Board members determined that implementing the requirement in paragraph 8.f will likely necessitate the use of electronic hyperlinking in the CFR, given (1) the costs and burdens of using alternative methods for implementing the requirement, such as postage and printing costs, and (2) the availability and minimal costs associated with hyperlinking to electronic information available on the internet. The Board encourages the use of hyperlinks in implementing the requirement.
 - v. The Board concluded that the requirement in paragraph 8.f makes it sufficiently clear to the preparer and auditor that the reader should be informed that the information referenced is unaudited. Moreover, the Board concluded that MD&A was an appropriate section for directing users to unaudited reports.
- d. Options for consideration proposed by the task force regarding the presentation of tax expenditure estimates were to (1) encourage the inclusion of tax expenditure estimates as OI in the CFR, (2) require the inclusion of tax expenditure estimates within required supplementary information (RSI) of the CFR, or (3) neither encourage nor require the inclusion of tax expenditure estimates within the CFR and focus exclusively on narrative content and links to other resources for comprehensive reporting of estimates.
- i. Task force members who supported the placement of tax expenditure estimates in OI were primarily concerned about the quality, timeliness, and availability of reliable data upon which these estimates are based. These task force members were also concerned that existing differences in the list of tax expenditures identified by two credible sources of such estimates-Treasury's Office of Tax Policy and the JCT-may pose challenges, particularly if such information were audited. Additionally, estimation methodologies for certain tax expenditures can neither be tested nor improved over time by way of assessing their historical performance against tax return data or transactions; assessing historical performance for certain tax expenditures requires the use of data that are not collected on tax returns or otherwise available because these estimates are imputed rather than based on recordable transactions that actually occurred. Task force members supporting the inclusion of estimates in OI believed that these unique challenges impede the preparer's ability to (1) identify a generally accepted universe of tax expenditures; (2) develop estimates generally accepted as reliable, fair, and correctly measured; and (3) include estimates within RSI or basic information without negative or potentially unresolvable audit challenges.

-
- ii. These members recommended-and the Board ultimately concluded-that encouraging the inclusion of estimates in OI avoids such costs and challenges, increases transparency and context surrounding the general magnitude and impact of tax expenditures on the government's financial position, and elevates tax expenditure estimates into an unaudited section of the CFR to create more transparency.

REQUIREMENT FOR INFORMATION IN MD&A AND NOTES

- A8. The Board concluded that the CFR's MD&A should include a discussion of tax expenditures, their general purpose, and how they affect the government's financial position and condition. This Statement also requires discussion of other factors that may affect tax collections in order to place tax expenditure information in an appropriate context. The specific requirements are presented in paragraph 8 and sub-paragraphs 8.a-8.f.
- A9. Requiring information on tax expenditures in the MD&A and notes to the financial statements in the CFR is important for the following reasons:
- a. Discussion regarding the topic of tax expenditures is currently absent; however, tax expenditures have had a significant impact on the federal government's financial position, tax collections, and performance outcomes each year. The significant impact of tax expenditures warrants discussion in MD&A because MD&A should "provide a clear and concise description of the reporting entity and its ... activities, program and financial performance, systems, controls, legal compliance, financial position, and financial condition."⁶
 - b. Tax expenditures are significant to the management, budgetary, and oversight functions of the Congress and the Administration. Tax expenditures are often used by the federal government as a mechanism to address policy objectives. Tax expenditures may also affect the judgment of citizens about the efficiency and effectiveness of the tax code in accomplishing certain financial or policy objectives. Therefore, tax expenditures are consistent with the provisions of Statement of Federal Financial Accounting Standards 15, paragraph 6, which states:

MD&A should deal with the "vital few" matters; i.e., the most important matters that will probably affect the judgments and decisions of people who rely on the GPFFR as a

⁶ SFFAS 15, par. 1.

source of information. ... Matters to be discussed and analyzed are those that management of the reporting entity believes it is reasonable to assume could:

- i. lead to significant actions or proposals by top management of the reporting unit;
 - ii. be significant to the managing, budgeting, and oversight functions of the Congress and the Administration; or
 - iii. significantly affect the judgment of citizens about the efficiency and effectiveness of their federal government.
- c. In SFFAC 1, the Board established four objectives of federal financial reporting. These objectives provide a framework for assessing the existing accountability and financial reporting systems of the federal government and for considering new accounting standards.⁷ The objectives address (1) Budgetary Integrity, (2) Operating Performance, (3) Stewardship, and (4) Systems and Controls.
- d. Objective 1, Budgetary Integrity, states that:

Federal financial reporting should assist in fulfilling the government's duty to be publicly accountable for monies raised through taxes and other means and for their expenditure in accordance with the appropriations laws that establish the government's budget for a particular fiscal year and related laws and regulations.

- i. Sub-objective 1A states that:

Federal financial reporting should provide information that helps readers to determine how budgetary resources have been obtained and used ...

- ii. Sub-objective 1C states that:

Federal financial reporting should provide information that helps readers to determine how information on the use of budgetary resources relates to information on the costs of program operations.

- e. Tax expenditures reduce federal revenues via tax legislation. Many tax expenditures resemble mandatory spending programs for which spending is typically determined by rules for eligibility and benefit formulas. Other tax expenditures resemble discretionary spending programs for which the Congress appropriates annual funding. Forgoing

⁷ SFFAC 1, par. 109.

budgetary resources through the use of tax expenditures can be a method of achieving policy objectives without direct outlays of funds to federal agencies and programs. Accordingly, the MD&A and financial statement note requirements in this Statement will provide budgetary information and contribute to addressing Objective 1. In particular, the disclosure requirements will contribute to addressing sub-objectives 1A and 1C because these disclosures provide readers with an understanding of how tax expenditures affect the availability of budgetary resources and tax collections, and how certain policy objectives are addressed through the mechanism of forgoing tax revenues.

- f. Objective 2, Operating Performance, states that:

Federal financial reporting should assist report users in evaluating the service efforts, costs, and accomplishments of the reporting entity, and the manner in which these service efforts have been financed; and the management of the entity's assets and liabilities.

- g. Tax expenditures are used as one of many means to accomplish policy objectives of the federal government. Although tax expenditures are not direct outlays of federal funds, they are often viewed as alternatives to other policy instruments, such as spending or regulatory programs. The service efforts, costs, and accomplishments of the reporting entity-the U.S. government-include those service efforts undertaken, costs incurred through, and accomplishments resulting from the use of tax expenditures. Accordingly, this Statement will result in information that alerts readers to the efforts and costs associated with tax expenditures and, therefore, will provide operating performance information and contribute to addressing Objective 2.

- h. Objective 3, Stewardship, states that:

Federal financial reporting should assist report users in assessing the impact on the country of the government's operations and investments for the period and how, as a result, the government's and the nation's financial conditions have changed and may change in the future.

Federal financial reporting should provide information that helps the reader to determine whether (1) the government's financial position improved or deteriorated over the period, (2) future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due, and (3) government operations have contributed to the nation's current and future well-being.

- i. Because tax expenditures are often viewed as alternatives to spending or regulatory programs, they can be viewed as government investments of forgone budgetary

resources designed to address policy objectives. Thus, tax expenditures affect (1) the government's financial position, (2) the budgetary resources available to sustain public services and to meet obligations as they come due, and (3) the nation's current and future well-being. Accordingly, the Board concluded that the requirements for MD&A and notes to the financial statements in the CFR provide stewardship information and contribute to addressing Objective 3.

A10. Requiring information on tax expenditures in the notes to the financial statements in the CFR is important for the following reasons:

- a. The requirements will help readers understand that the tax system is used to accomplish policy goals as well as collect revenue.
- b. The requirements will help readers understand that some "efforts" and related costs are not transparent in the financial statements but do affect them.
- c. The requirements provide context of other factors affecting tax collection in order to place tax expenditures in an appropriate context and help readers to have a more complete understanding of factors affecting the government's financial position and condition.

A11. The information reported in accordance with the requirements of this Statement for MD&A and the notes to the financial statements in the CFR will improve users' awareness and understanding of tax expenditures, their use, and their relationship to and impact on federal revenues and the overall financial position of the U.S. government.

A12. The information reported in accordance with requirements of this Statement will help users to evaluate and understand (1) the impact of the tax code on budgetary resources and uses; (2) the service efforts, costs, and accomplishments of the reporting entity, and the manner in which these service efforts have been financed and/or affected by the tax system; and (3) how the tax code relates to and/or affects the government's investments and financial position, and how the government's financial condition has changed and may change in the future as a result.

REPORTING ESTIMATES IN OTHER INFORMATION

A13. Regarding cost-benefit considerations, SFFAC 1, paragraph 155 states that "for many purposes, other information sources and other techniques to maintain and demonstrate accountability are either essential or more cost-effective." Paragraphs 9-10 of this Statement provide readers with a means of easily accessing other relevant tax expenditure information sources.

-
- A14. Regarding the inclusion of estimates in OI and informing readers of the source and availability of published information wherein the estimates were originally published; the Board concluded that suitable amounts of detail, context, and explanations can accompany estimates presented in a reasonably concise manner while also meeting the needs of users with different levels of knowledge regarding tax expenditures. Accordingly, the inclusion of statements to alert readers that the published information includes a complete population of the tax expenditure estimates identified by the reporting party and whether such information includes details of the estimating conventions and explanatory definitions of the tax expenditures presented in OI would also be helpful to users.
- A15. The Board may elect to evaluate the costs, limitations, benefits, and other implications of developing additional measurement, recognition, and disclosure guidance in the future.
- A16. Given the conceptual issues that make tax expenditures unauditable, before any future efforts are potentially undertaken, the following matters need to be considered:
- a. How best to define, identify, and measure tax provisions that are both relevant for financial reporting purposes and generally accepted by economists and other experts
 - b. Whether it is feasible to develop estimates that are considered to be representationally faithful, consistent, comparable, and auditable
 - c. If auditability can be achieved, what considerations would enable the preparer and auditor to achieve their respective responsibilities in a reasonably effective and efficient manner

SUMMARY OF OUTREACH EFFORTS AND RESPONSES

- A17. The ED was issued June 2, 2016, with comments requested by September 15, 2016. Upon its release, notices and press releases were sent to the following organizations:
- a. The *Federal Register*;
 - b. *FASAB News* and the related listserv subscribers, including:
 - i the *Journal of Accountancy*, *AGA Today*, *Accounting Today*, the *CPA Journal*, *Government Executive* and the *CPA Letter*;
 - ii the CFO Council, the Council of the Inspectors General on Integrity and Efficiency, and the Financial Statement Audit Network;

iii committees of professional associations generally commenting on FASAB EDs in the past; and

iv other individuals and organizations in the federal accountability community.

A18. This broad announcement was followed by electronic mailings of the ED and subsequent reminder notices to:

a. Relevant congressional committees, including:

- i. the House Committee on Oversight and Government Reform,
- ii. the Senate Committee on Homeland Security and Governmental Affairs,
- iii. the House Committee on Ways and Means,
- iv. the Senate Committee on Finance,
- v. the House Committee on the Budget,
- vi. the Senate Committee on the Budget, and
- vii. the JCT;

b. Non-profit, public policy, and accounting organizations, such as:

- i. state and territorial CPA societies,
- ii. accounting, tax, and public policy and research organizations,
- iii. accounting and auditing firms, and
- iv. taxpayer associations;

c. Individuals that have published articles, commentary, and/or research regarding tax expenditures, such as:

- i. college professors,
- ii. economists, and
- iii. tax policy analysts.

-
- A19. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered each response and weighed the merits of the points raised. The respondents' comments are summarized below.
- A20. FASAB received 12 responses from federal agencies, users of federal financial information, and professional associations. The majority of respondents agreed with the proposed requirements in the ED, which are implemented in this Statement in paragraphs 6-8 and the related sub-paragraphs.
- A21. However, some respondents disagreed with Board proposals in the ED to encourage the presentation of major tax expenditure estimates in OI in a manner that informs readers of the general magnitude of tax expenditures and their impact on federal revenues. A few respondents viewed RSI as a more appropriate classification for the information. Other respondents expressed a preference to exclude estimates from the CFR altogether and refer readers to external resources wherein comprehensive reports and estimates can be obtained.
- A22. The Board carefully considered respondents' views and found them to be consistent with the considerations, costs, benefits, and views expressed by task force and Board members in earlier deliberations.
- A23. The Board concluded that it would not be appropriate to change the ED proposal from encouraging the presentation of major tax expenditure estimates from external sources in OI to requiring such information in RSI. Such a change would classify the information as required information. For reasons discussed in paragraphs A7.d.i and A16, the Board concluded that such a requirement must be preceded by the development of recognition and measurement criteria.
- A24. The Board also concluded that it would not be appropriate to remove the ED proposal to encourage the presentation of major tax expenditure estimates. For reasons discussed in paragraph A7.d.ii, the Board maintains that the implementation of paragraphs 9-10 and the related sub-paragraphs will enhance user awareness and understanding of tax expenditures and their relationship to and impact on federal revenues and the overall financial position of the U.S. government.
- A25. One respondent expressed that requirements to report on tax expenditures should also be extended to at least certain component reporting entities. The respondent noted that many component reporting entity objectives and achievements are financed as much through tax expenditures as through outlays.

A26. The Board agrees that tax expenditures contribute to component reporting entity performance objectives and costs inherent to the achievement of those objectives. In its review of the respondent's comment letter, the Board concluded that cost-benefit considerations regarding its decision not to extend requirements to component reporting entities should be clarified in the basis for conclusions.

A27. The Board concluded early in the project that there is strong evidence of significant challenges to identifying and assigning tax provisions and aligning those provisions with agency goals. Board members considered problems identified in a Government Accountability Office (GAO) report issued in July 2016,⁸ including the following:

- a. There is a continuing lack of clarity about the roles of different federal agencies in conducting reviews of tax expenditures. This lack of clarity can lead to inaction in identifying tax expenditures' contributions to agency goals.
- b. Whether or not agencies have a defined role in administering tax expenditures influences whether those agencies identify tax expenditure contributions to their goals.
 - i. If agencies do not have a defined role in administering a tax expenditure, they may choose not to identify the tax expenditure's contributions to their goals.
 - ii. The agencies that linked tax expenditures to performance measures typically had a defined role in administering them, and therefore collected data on those tax expenditures.

A28. Before efforts can be undertaken by FASAB to extend requirements to component reporting entities, many issues need to be considered and deliberated by the Board, such as:

- a. how best to define and identify tax provisions that are relevant for financial reporting purposes,
- b. the extent to which a component reporting entity's role in administering a tax provision should affect recognition of that tax provision for financial reporting purposes,
- c. the extent to which the alignment of a component reporting entity's missions, goals, and objectives with the accomplishments of a tax provision should affect recognition of that provision for financial reporting purposes, and

⁸ GAO, *Tax Expenditures: Opportunities Exist to Use Budgeting and Agency Performance Processes to Increase Oversight*, [GAO-16-622](#) (Washington, D.C.: July 7, 2016).

-
- d. the types of information most relevant to users of GPFFRs and how this information should be presented therein, if at all.

A29. A few respondents expressed concerns about or provided suggested edits to an illustration included in the ED.

A30. Instead of addressing comments on the illustration, the Board elected to remove the illustration from the ED for the following reasons:

- a. The primary purpose of the illustration was to enable ED respondents to envision how the proposed requirements might be implemented in the CFR.
- b. The illustration was in a non-authoritative appendix.
- c. There is only one CFR. Treasury and the Office of Management and Budget (OMB) officials expressed that including such an illustration in the final Statement was not essential to understanding provisions of the standard.
- d. The illustration may become outdated as the CFR preparer may develop more innovative ways to present information and/or as tax policy evolves.

BOARD APPROVAL

A31. This Statement was approved by the Board with a vote of seven members in favor of its issuance and two members, Ms. Ho and Mr. Reger, abstaining from the vote. Written ballots are available for public inspection at the FASAB office.

Appendix B: Tax Expenditures Explained

Purpose

In light of the Board's mission to improve federal financial reporting, it is paramount that such reporting assists report users in evaluating the service efforts, costs, accomplishments, and fiscal sustainability of the federal government and in understanding how these efforts and accomplishments have been financed. Although tax expenditures have similarities to federal spending in their impact on service efforts, costs, accomplishments, and fiscal sustainability; they have historically received little focus in general purpose federal financial reporting. Establishing reporting requirements with respect to this topic requires an understanding of tax expenditures, the methods used to estimate income tax expenditures, and considerations in using those estimates.

This section provides an overview of tax expenditures to aid preparers and users in understanding reporting in regard thereto. Specifically, this section:

1. defines tax expenditures and describes the six types of tax expenditures;
2. provides context with respect to the purpose of tax expenditures, why they are important, and their relationship to government performance, taxpayer behaviors, and the economy; and
3. summarizes how tax expenditure estimates are prepared by Treasury. This ultimately affects how tax expenditure estimates can be used and interpreted.

Background

The Congressional Budget and Impoundment Control Act of 1974 (the Budget Act) defines tax expenditures as

"...revenue losses attributable to provisions of the federal tax laws which allow a special exclusion, exemption, or deduction from gross income or which provide a special credit, a preferential rate of tax, or a deferral of tax liability."
(Section 3(a)(3) of Public Law 93-344)

Generally, tax expenditures are provisions in the tax law available to certain subsets of taxpayers who engage in certain activities, face special circumstances, or otherwise meet certain criteria. The government uses tax expenditures to stimulate behavior that will accomplish public policy

goals such as facilitating homeownership, reducing the cost of borrowing for state and local governments, encouraging higher education, or promoting domestic energy production.

Tax expenditures are “revenue losses” in that the provisions reduce income taxes owed and, therefore, revenue collected. Tax expenditures resemble federal spending in that such provisions affect the federal deficit/surplus by impacting income tax revenue; however, tax expenditures are often not treated the same as federal spending for budgetary or financial reporting purposes.⁹ Many tax expenditures resemble mandatory spending programs for which spending is typically determined by rules for eligibility and benefit formulas. Other tax expenditures resemble discretionary spending programs for which the Congress appropriates annual funding. Many tax expenditures can only be removed or changed through tax legislation. While tax expenditures help determine the government’s net revenue, tax expenditure estimates are not explicitly displayed in the Statements of Net Cost or Changes in Net Position.

How Tax Expenditures Are Identified

The first step in identifying tax expenditures is defining the tax baseline so that the provisions considered “special” (per the Budget Act definition above) can be distinguished from those provisions consistent with a baseline tax system. Traditionally, for the federal income tax, the baseline tax system is a comprehensive income tax with certain practical provisions that are generally accepted as being part of a baseline tax system. Accordingly, provisions such as the personal exemption, standard deductions, deductions of expenses incurred in earning income, and a progressive rate structure are considered to be part of the baseline tax system for measurement purposes.

Judgments about such provisions are based on a general consensus view of analysts regarding practical provisions of a baseline tax system versus “special” provisions that constitute a tax expenditure. For example, the personal exemption and standard deduction are viewed as defining a zero-rate bracket that is part of baseline tax law as are the other graduated rate brackets in the individual income tax. In contrast, the child tax credit is considered a tax expenditure because it provides a “special” benefit that would not exist under baseline tax law.

⁹ In certain cases a tax preference may provide cash in the form of a refundable tax credit even if the taxpayer owes no tax. The budget records payments to taxpayers for refundable tax credits (such as earned income tax credits) that exceed the taxpayer’s tax liability as outlays. As such, a portion of this type of tax preference is reported as outlays in the budget to the extent payments exceed the taxpayer’s liability, whereas the portion offsetting the taxpayer’s liability reduces budget revenues but is not explicitly reported in the budget.

After determining the baseline tax system, the credits, deductions, special exceptions and allowances that reduce tax liability below the level implied by the baseline tax system are then considered to be tax expenditures.

Types of Tax Expenditures

There are six types of tax expenditures—exclusions, exemptions, deductions, credits, preferential rates, and deferrals. below describes each and provides an example.

Table 1: Examples of Provisions That Are Tax Expenditures When They Are Exceptions to the Normal [Baseline] Tax Structure

Tax expenditure	Description	Examples
Exclusion	Excludes income that would otherwise constitute part of a taxpayer's gross income.	Employees generally pay no income taxes on contributions their employers make on their behalf for medical insurance premiums.
Exemption	Reduces gross income for taxpayers because of their status or circumstances.	Taxpayers may be able to reduce their tax liability if they have a dependent who is a child aged 19 through 23 and is a full-time student.
Deduction	Reduces gross income due to expenses taxpayers incur.	Taxpayers may be able to deduct state and local income taxes and property taxes.
Credit	Reduces tax liability dollar-for-dollar. Additionally, some credits are refundable meaning that a credit in excess of tax liability results in a cash refund.	Taxpayers with children under age 17 potentially can qualify for up to a \$1,000 partially refundable, per child credit, provided their income does not exceed a certain level.
Preferential tax rate	Reduces tax rates on some forms of income.	Capital gains on certain income are subject to lower tax rates under the individual income tax.
Deferral	Delays recognition of income or accelerates some deductions otherwise attributable to future years.	Taxpayers may defer paying tax on interest earned on certain U.S. savings bonds until the bonds are redeemed.

Source: [GAO-13-167SP](#): Guide for Evaluating Tax Expenditures.

In considering these six types of tax expenditures, it may be possible to achieve certain public policy outcomes in a variety of ways. For example, some public policy outcomes may be achieved through a preferential rate, a deduction, or a credit. Because a variety of approaches can produce the same cash effect, the types are different in form rather than substance.

Most reports do not categorize tax expenditures by type. The types are presented to aid in understanding the mechanisms used to establish preferences.

Budget Act Requirements and History

The term “tax expenditures” was introduced in 1967 by Assistant Secretary for Tax Policy, Stanley Surrey, in a speech calling for a “full accounting” of them. Following his speech, estimates were prepared by Treasury and later by the JCT of the Congress.

In 1974, the Budget Act charged the House and Senate Budget Committees with the duty “to request and evaluate continuing studies of tax expenditures, to devise methods of coordinating tax expenditures, policies, and programs with direct budget outlays, and to report the results of such studies to the Senate on a recurring basis.” The Budget Act further required that the annual President’s Budget include tax expenditure estimates.¹⁰

Estimates are now available annually from both the JCT¹¹ and the President’s Budget.¹² Each JCT report contains a discussion of the concept of tax expenditures, identification of new tax expenditures enacted into law, a general explanation on how the committee staff measures tax expenditures, estimates of tax expenditures, and distributions of selected individual tax expenditures by income class.

Treasury prepares estimates provided in the President’s Budget. These estimates are for the current fiscal year and the ten years thereafter. The estimates are intended to support budget analysis and are a measure of the economic benefits that are provided through the tax laws to various groups of taxpayers and sectors of the economy. The estimates also may be useful in assessing the efficiency and effectiveness of achieving specific public goals through the use of tax expenditures. Treasury provides the tax expenditure estimates before the end of each fiscal year and makes them available on the Treasury website before the President’s Budget is issued.¹³

Government Performance Reporting for Tax Expenditures

The Government Performance and Results Act of 1993 (GPRA) originally put in place a framework for performance planning and reporting, and the GPRA Modernization Act of 2010 (GPRAMA) has significantly enhanced the statutory framework.¹⁴ The GPRAMA framework aims at taking a more crosscutting and integrated approach to focusing on results and improving government performance. OMB is required to coordinate with agencies to establish federal government priority goals—otherwise referred to as cross-agency priority (CAP) goals.¹⁵ GPRAMA requires certain agencies to identify a subset of agency goals as agency priority goals (APG), which reflect the highest priorities of each agency. Fully implementing GPRAMA requirements could provide the foundation for reviewing tax expenditure performance and assessing their contributions toward federal goals. GPRAMA requires OMB to identify tax expenditures that contribute to the CAP goals. In addition, OMB guidance has directed agencies to identify tax expenditures that contribute to their APGs since 2012 and to their strategic objectives since 2013.¹⁶

While OMB has determined that there are no tax expenditures that are critical to achievement of the current CAP goals, agencies have not yet completed actions necessary to identify tax expenditures that contribute to their APGs.¹⁷

How Treasury Prepares the Administration's Estimates

As noted in the definition above, tax expenditures arise from special provisions allowing an exclusion, exemption, or deduction from gross income, a credit, a preferential rate of tax, or a deferral of liability. Deciding whether a provision of tax law is a special exception to the baseline income tax system is a matter of judgment. The baseline used by Treasury to identify these special exceptions is adapted from a comprehensive income tax approach in which income is the sum of consumption and the change in net wealth in a given period of time with certain

¹⁴ Pub. L. No. 103-62, 107 Stat. 285 (Aug. 3, 1993) and Pub. L. No. 111-352, 124 Stat. 3866 (Jan. 4, 2011).

¹⁵ OMB set the first interim CAP goals in 2012 and identified the next set of CAP goals in March 2014, which is to be updated every four years.

departures.¹⁸ This baseline assumes an individual income tax and a separate corporate income tax.¹⁹

Preparing tax expenditure estimates requires consideration of certain information about the economy, presently and in the future. Treasury estimates for economic activity are consistent with the economic assumptions in the President's Mid-Session Review of the prior year's budget and reflect current law as of July 1.²⁰

Each tax expenditure is measured by the difference between tax liability under current law and the tax liability that would result if the tax expenditure provision were repealed and had never existed. It is assumed that there is no behavioral response to the elimination of the provision and taxpayers simply recalculate their tax in the absence of the provision in question. Thus, tax expenditures calculate revenues forgone by the existence of the rule but not necessarily the amount of revenue that would be raised if it were repealed. For example, the ability to deduct mortgage interest expense on owner-occupied housing is considered to be a tax expenditure. The tax expenditure estimate reports the revenue change that would occur if this deduction were repealed, but does not take into account any revenue effect that might occur as a result of most changes in taxpayer behavior, such as taxpayer decisions to own homes. However, in recalculating the tax due in the absence of this deduction, the tax expenditure estimate assumes taxpayers would switch from itemizing deductions to claiming the standard deduction if that were tax minimizing in the absence of the ability to deduct mortgage interest on an itemized return.

When possible, Treasury uses samples of tax returns provided by the Internal Revenue Service as the basis for tax expenditure estimates. For provisions benefiting individual tax filers the Individual Tax Model (ITM) Tax Calculator is often used. The ITM is based upon a stratified sample of individual tax returns that represent the entire tax filing population. This sample is augmented by additional data to represent the U.S. population. The ITM projects these individual records forward consistent with the Administration's economic forecast. The ITM Tax Calculator allows the computation of tax for each record under differing tax laws.

¹⁸ For example, one major departure is that income is taxable only when it is realized in exchange. Thus, the deferral of tax on unrealized capital gains is not regarded as a tax expenditure. Another example is that values of assets and debt are not generally adjusted for inflation.

¹⁹ Treasury and the JCT differ in their assumed baselines from which tax expenditures are measured. For a summary of the differences see Altshuler, Rosanne and Robert Dietz. "Reconsidering Tax Expenditure Estimation." *The National Tax Journal*, June 2011, 64 (2, Part 2), 459-490.

²⁰ "Current law baseline" refers to the budget estimates prepared by the Administration based on laws enacted at the time they are prepared. If a provision will expire or change under currently enacted law then the baseline projections reflects the effects of that expiration or change.

For example, the Lifetime Learning tax credit is considered a tax expenditure because the baseline tax system would not allow credits targeted at particular activities, investments, or industries. Treasury uses the ITM Tax Calculator to compute tax liability for each filing unit under current law and current law with the Lifetime Learning tax credit removed.

As another example, the exclusion of public assistance benefits is considered a tax expenditure because transfers from the government would be considered income to the taxpayer under the baseline tax system. Since tax records do not record the receipt of these types of benefits, Treasury estimates the value of this tax expenditure by supplementing historical Bureau of Economic Analysis National Income and Product Accounts data with U.S. Department of Health and Human Services and state expenditure data to determine the total forecasted value of public assistance transfers to taxpayers under current law over the budget window. The tax expenditure is calculated by multiplying the aggregate public transfers by an estimate of the average effective tax rate for tax filers receiving public assistance benefits.

Treasury estimates the cash effect of each tax expenditure. Some tax expenditures represent deferrals of taxation (a tax not paid in the current tax year will be paid in a future tax year when the deferral reverses). Estimates for such deferrals are based on the net tax effect of current year deductions or exclusions and reversals of prior year deferrals included in current year taxable income.²¹ For example, defined contribution employer plans are estimated as the net tax effect of current year contributions excluded from income and income reported upon withdrawals from plans.

Year-to-year differences in the calculations for each tax expenditure reflect changes in tax law, including phase outs of tax expenditure provisions and changes that alter the baseline income tax structure, such as the tax rate schedule, the personal exemption amount, the standard deduction, and other factors. For example, the dollar value of tax expenditures tends to increase and decrease as tax rates increase and decrease, respectively, without any other changes in law.

Understanding Estimates

Tax expenditure estimates are developed to aid policymakers. It is important to understand that they are not transaction-based amounts. The estimates are updated annually using the best available data and models. However, data limitations and resource constraints are inherent in the process. For example, some data collected on tax returns are not available in time for the annual estimates; other data are not collected on tax returns at all and must always be estimated.

²¹ To complement these estimates, Treasury also reports a discounted present-value estimate of the future net revenue effects for the tax expenditure activity in the most recently concluded calendar year.

The major considerations regarding the estimates are identified below.

Not Necessarily Equivalent to Forgone Revenue. Estimates should be regarded as approximations. As with expenses incurred with spending programs, tax expenditure estimates do not necessarily equal the change in the deficit²² that would result from repealing these special provisions because:

- a. eliminating a tax expenditure may have incentive effects that alter economic behavior and
- b. tax expenditures are interdependent even without incentive effects.

Difficulty in Calculating Totals. A total for the estimated tax expenditures is not provided in the President's Budget because each tax expenditure is estimated independently assuming other parts of the tax code remain unchanged. The estimates might be different if two or more tax expenditures were changed simultaneously because of potential interactions among provisions. Nonetheless, other experts do present a total summing the separate estimates. The Congressional Budget Office (CBO) has modeled the interaction of the ten largest tax expenditures in the individual income tax law and found that interactions that overstate the effect are similar in size to interactions that understate the effect.²³ As a result, CBO concluded that the total is a meaningful estimate for the general magnitude of tax expenditures under current tax law. If the law changes in significant ways the interactions may not result in offsetting over- and understatements of the effect to the same extent.

Completeness. As noted earlier, significant judgments are required to identify special provisions of the income tax code. Given the complexity of the tax code, differences in judgments lead some to include provisions in tax expenditure lists that others would exclude and vice versa. In addition, special provisions can be included in taxes other than income taxes (for example, excise taxes), but these generally are not included in reports on tax expenditures.

Expiring Provisions. Estimates are based on tax law enacted as of July 1 of the reporting year and assume that any provisions scheduled to expire will expire. As noted above, provisions likely to be extended are ignored for estimation purposes until

²² Note that repealing certain spending programs would also not reduce the deficit by the amount of spending because of interaction with other programs and the tax system. For example, Social Security benefits may be taxed so that eliminating the benefits would also reduce tax revenue and possibly increase spending in other benefit programs. Thus, the change in the deficit would be smaller than the direct spending eliminated through the adjustment to the Social Security program.

²³ Congressional Budget Office. *The Distribution of Major Tax Expenditures in the Individual Tax System*. May 2013.

such legislation is actually enacted. In other words, estimates are based on current law rather than analyzing policy outcomes likely to occur. As a result, an extensive knowledge of tax policy may be required in order to understand multi-year tax expenditure projections when provisions are scheduled to expire or when provisions of previous legislation are phased in.

Alternatives. Estimates involve significant judgments and, as a result, there are alternative approaches to estimation. For example, alternatives regarding the application of marginal tax rates, treatment of related tax provisions, or selection of a different baseline (such as a consumption tax rather than an income tax) would affect tax expenditure estimates. In addition, while estimates are provided for the cash (current revenue) effect for each of the ten fiscal years covered by the projections, a present value alternative that considers the full life cycle of the taxable activity may be more useful for tax expenditures involving deferrals or other long-term revenue effects. For such tax expenditures, the present value effects are important because deferrals will reverse in later years, and a present-value estimate for the activity in the current calendar year would include this activity.

See <http://www.treasury.gov/resource-center/tax-policy/Pages/Tax-Expenditures.aspx> for a complete listing of tax expenditures reported and estimated by Treasury.

Statement of Federal Financial Accounting Standards 53: Budget and Accrual Reconciliation: Amending SFFAS 7, and 24, and Rescinding SFFAS 22

Status

Issued	October 27, 2017
Effective Date	For periods beginning after September 30, 2018. Earlier implementation is permitted.
Affects	<ul style="list-style-type: none">• SFFAS 7, par. 80-82, 91-93, 95-102.• SFFAS 22 is rescinded.• SFFAS 24, par. 9.• SFFAC 2
Affected by	None.

Summary

This Statement amends requirements for a reconciliation between budgetary and financial accounting information established by Statement of Federal Financial Accounting Standards (SFFAS) 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*. To increase informational value and usefulness, and to support the government-wide financial statement reconciling net operating cost to the budget deficit, this Statement provides for the budget and accrual reconciliation (BAR) to replace the statement of financing. The BAR explains the relationship between the entity's net outlays on a budgetary basis and the net cost of operations during the reporting period.

The BAR will start with net cost of operations and be adjusted by

- components of net cost that are not part of net outlays,
- components of net outlays that are not part of net cost, and
- other temporary timing differences, which reflect some special adjustments.

The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Standards

Scope

1. This Statement applies when a component reporting entity is presenting general purpose financial reports in conformance with SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, including the Application of Standards Issued by the Financial Accounting Standards Board*. This information is not required in the consolidated financial report of the U.S. Government as a whole.

Amendments to SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting* (SFFAS 7)

2. Paragraphs 80 to 82 of SFFAS 7 established standards regarding a reconciliation and are replaced with the following paragraphs:
 80. Budgetary and financial accounting information are complementary, but both the types of information and the timing of their recognition are different. To better understand these differences, the reconciliation should explain the relationship between the net cost of operations¹ and net outlays by the entity during the reporting period. The reconciliation should reference the reported "net outlays"² and related adjustments as defined by Office of Management and Budget (OMB) Circular A-11: *Preparation, Submission, and Execution of the Budget*.

[footnote 1: The terms "net cost of operations" and "net cost" are used interchangeably to refer to the total cost incurred by the reporting entity less exchange revenue earned during the period.]

[footnote 2: OMB Circular A-11: Preparation, Submission, and Execution of the Budget states, "Outlay means a payment to liquidate an obligation (other than the repayment to the Treasury of debt principal). Outlays are a measure of Government spending. Subtract all offsetting collections (unexpired and expired) from gross outlays to yield net outlays so that the contribution of the budget account to the Federal Government's bottom line (the surplus or deficit) can be determined."]

81. The net cost of operations should be adjusted by

-
- a. components of net cost that are not part of net outlays (e.g., depreciation and amortization expenses of assets previously capitalized, change in asset/liabilities);
 - b. components of net outlays that are not part of net cost (e.g., acquisition of capital assets); and
 - c. other temporary timing differences (e.g., prior period adjustments due to correction of errors).
82. The adjustments should be presented and explained in appropriate detail and in a manner that best clarifies the relationship between net outlays and the accrual basis amounts used in financial accounting. A narrative explaining the purpose, the nature, and the line items of the reconciliation also should be presented with the reconciliation. The amount and nature of non-cash outlays should be disclosed. For purposes of this Statement, non-cash outlays are outlays that are recognized without a concurrent cash disbursement, such as interest accrued by the Department of the Treasury (Treasury) on debt held by the public and the change in allowance for subsidy cost.
3. Paragraphs 91 to 93 of SFFAS 7 amended Statement of Federal Financial Accounting Concepts 2, *Entity and Display*, to address the then new reconciliation. To ensure SFFAC 2 aligns with the amended standards, these paragraphs are replaced with the following paragraphs:
- 91. Subobjective 1C of the Budgetary Integrity objective states that information is needed to help the reader to determine "how information on the use of budgetary resources relates to information on the costs of program operations and whether information on the status of budgetary resources is consistent with other accounting information on assets and liabilities." This objective arises because accrual-based expense measures used in financial statements differ from the obligation and outlay-based measures used in budgetary reporting.
 - 92. To satisfy this objective, information is needed about the differences between budgetary and financial (i.e., proprietary) accounting that arise as a result of the different measures. This could be accomplished through a **Budget and Accrual Reconciliation (BAR)** that reconciles the net budgetary outlays for a federal entity's programs and operations to the net cost of operating that entity. The data presented could be for the reporting entity as a whole, for the major suborganization units, for major budget accounts, or for aggregations of budget accounts, rather than for each individual budget account of the entity.

-
93. The **Budget and Accrual Reconciliation** is added to SFFAC No. 2's suggested list of items included in the section titled "Financial Reporting for an Organizational Entity." In addition, a footnote (referencing the Reconciliation of Net Costs to Outlays) should be added stating the following:

OMB will provide guidance regarding details of the display for the Budget and Accrual Reconciliation, including whether it should be presented as a basic financial statement or as a schedule in the notes to the basic financial statements.

4. The header before paragraph 95 of SFFAS 7 titled "Statement of Financing" is replaced with "Budget and Accrual Reconciliation."
5. Paragraphs 95 to 102 of SFFAS 7 amended SFFAC 2 to provide for the reconciliation. These paragraphs are amended to ensure the concepts and the related illustration (presented as Appendix 1-G of SFFAC 2) align with the amended standards. Paragraphs 95 to 102 and the related illustration are replaced with the following:
95. The purpose of the reconciliation of Net Costs to Outlays is to explain how budgetary resources outlayed during the period relate to the net cost of operations for the reporting entity. This information should be presented in a way that clarifies the relationship between the outlays reported through budgetary accounting and the accrual basis of financial (i.e., proprietary) accounting. By explaining this relationship, the reconciliation provides the information necessary to understand how the budgetary outlays finance the net cost of operations and affect the assets and liabilities of the reporting entity. The appropriate elements for the reconciliation are indicated in the following paragraphs. They provide logical groupings of reconciling items that help the reader move from outlays to net cost of operations.
96. **Net Cost of Operations** is from the Statement of Net Cost.
97. **Components of net cost that are not part of net outlays** are most commonly (a) the result of allocating assets to expenses over more than one reporting period (e.g., depreciation) and the write-down of assets (due to revaluations), (b) the temporary timing differences between outlays/receipts and the operating expense/revenue during the period, and (c) costs financed by other entities (imputed inter-entity costs).
98. **Components of net outlays that are not part of net cost** are primarily amounts provided in the current reporting period that fund costs incurred in prior years and amounts incurred for goods or services that have been capitalized on the balance sheet (e.g., plant, property and equipment acquisition and inventory acquisition).

-
99. **Other temporary timing differences** reflect special adjustments (e.g., prior period adjustments due to correction of errors).
 100. **Net Outlays** is the summation of the above amounts and equals the Statement of Budgetary Resources net outlays amount.
 101. The preparer should present material amounts separately in the reconciliation and discuss these in the narrative. The use of "other" captions should be minimized and individually material amounts should not be netted to report an immaterial amount.
 102. The following is an example for the financial statement format. This format and its narrative will be added to the appendices of SFFAC No. 2.

Entity and Display, Appendix 1-G

EXAMPLE FINANCIAL STATEMENT FORMATS - BUDGET AND ACCURAL RECONCILIATION

NARRATIVE

Budgetary and financial accounting information differ. Budgetary accounting is used for planning and control purposes and relates to both the receipt and use of cash, as well as reporting the federal deficit. Financial accounting is intended to provide a picture of the government's financial operations and financial position so it presents information on an accrual basis. The accrual basis includes information about costs arising from the consumption of assets and the incurrence of liabilities. The reconciliation of net outlays, presented on a budgetary basis, and the net cost, presented on an accrual basis, provides an explanation of the relationship between budgetary and financial accounting information. The reconciliation serves not only to identify costs paid for in the past and those that will be paid in the future, but also to assure integrity between budgetary and financial accounting. The analysis below illustrates this reconciliation by listing the key differences between net cost and net outlays.

*Unrealized valuation loss on investment in the reconciliation is related to the write down of security investment due to recent market volatility, which did not result in an outlay but did result in a cost. The large increase of accounts payable compared to last year is because this year's rent expense has not been paid but was included in the net cost this year and not included in the outlays. The large variance in the "transfers in/(out) without reimbursement" between fiscal year (FY) 201X and FY201X is primarily due to the transfer of program management responsibility from agency 1 to agency 2 as discussed in further detail in Note X. In addition, the decrease in "Imputed financing source" is a result of the payment in FY201X for the ABC Settlement.**

* This is an illustration of what might be presented in the narrative paragraph. It is an example of how to explain the material line items in the reconciliation and describes why some material line items either increase or decrease net cost but do not have the same impact on net outlays.

RECONCILIATION EXAMPLE- For the year ended September 30, 201X

	Intra- governmental	With the public	Total FY 201x
NET COST	\$xxx	\$xxx	\$xxx
Components of Net Cost That Are Not Part of Net Outlays:			
Property, plant, and equipment depreciation	xxx	xxx	xxx
Property, plant, and equipment disposal & revaluation	xxx	xxx	xxx

Rescission of SFFAS 22, Change in Certain Requirements for Reconciling Obligations and Net Cost of Operations, Amendment of SFFAS 7, Accounting for Revenue and Other Financing

6. SFFAS 22 is rescinded in its entirety by this Statement.

Amendment to SFFAS 24, Selected Standards for the Consolidated Financial Report of the United States Government

7. The following paragraph replaces SFFAS 24, paragraph 9:

9. Paragraphs 77-82 of SFFAS 7 are not applicable to the consolidated financial report of the U.S. Government as a whole.¹ [Text of footnote 1: Footnote rescinded by SFFAS 53.]

Effective Date

8. The requirements of this Statement are effective for reporting periods beginning after September 30, 2018. Early adoption is permitted. In the initial year of implementation, the

³ Total Net Outlays can be linked to the Statement of Budgetary Resources, and equals gross outlays less actual offsetting collections and distributed offsetting receipts. The net outlays for Intra-governmental and With the Public listed in the format are calculated totals.

disclosure requirements that were applicable in prior reporting periods (SFFAS 7 (unamended) paragraphs 80 to 82) are not required for comparative presentations.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

- A1. The Statement of Financing (SOF) note disclosure has been criticized as too complex and not useful. In July 2012, the Association of Government Accountants' research report (titled Government-wide Financial Reporting) suggested improvements in the processes used to prepare the consolidated financial report, as well as related standards. Moreover, the consolidated financial report of the U.S. Government (CFR) includes a basic financial statement reconciling the Unified Budget Deficit (deficit) and the Net Cost of Operations. The deficit is based on receipts and outlays rather than obligations. The current component reporting entity obligation-based SOF reconciliation does not align with the CFR reconciliation.
- A2. In February 2016, the Board agreed to undertake a project to assess the SOF and formed a Budget and Accrual Reconciliation (BAR) task force. Through this project, the Board planned to address concerns regarding the reconciliation and the need to support the CFR reconciliation by aligning the component reporting entity disclosures with the CFR requirements. In addition to agreeing with the concerns of the Board, the BAR task force identified the following topics to be addressed:
- a. The complexity and usefulness of the SOF note
 - b. Ways to more directly relate budgetary data and accrual data for a less complex presentation
 - c. Support for the CFR reconciliation statement (limited to component reporting entity requirements)

-
- A3. The BAR task force, which included industry representatives from several public accounting and consulting firms, as well as representatives with financial reporting preparation and policy background from the following federal agencies, supported the development of this proposed Statement:
- a. Department of Energy (DOE)
 - b. Treasury
 - c. Department of Veterans Affairs (VA)
 - d. Small Business Administration (SBA)
 - e. U.S. Coast Guard (USCG)
 - f. Securities and Exchange Commission (SEC)
- A4. During the initial phase of the project, the BAR task force was divided into subgroups to research (a) the usefulness of the current SOF, (b) a new component reporting entity reconciliation format, and (c) the potential amendment to the existing standards to adopt the new reconciliation format. The SOF sub-group reviewed 23 major agencies' current SOF notes to understand their current SOF note preparation process and surveyed task force members on the advantages and disadvantages of the current SOF note. Based on the research result, the task force came to the following conclusions:
- a. Each agency established its own processes.
 - b. The SOF is time consuming to prepare.
 - c. Without government-wide guidance, the SOF note is not comparable between agencies.
 - d. The SOF note is too complex to be useful.
- A5. Subsequently, the BAR task force researched and developed a first draft of the BAR format based on the objectives identified. In addition, the BAR subgroups (a) performed agency-level piloting of the BAR, (b) researched detailed account level guidance needed to support the BAR, (c) aligned the current format to the related CFR format, and (d) conducted other research including consideration of changes to the existing standards.
- A6. In June 2016, the Board approved the BAR task force's recommendations based on its research results. These recommendations included the following:

-
- a. The current SOF note should be replaced due to its complexity and limited usefulness.
 - b. There is a need to develop an alternative presentation format that would better relate budgetary and accrual data, as well as support the CFR reconciliation.
- A7. By the end of July 2016, the task force proposed an updated BAR. Six agencies--DOE, SBA, SEC, Treasury, USCG, and VA--piloted the BAR and provided their feedback on the pilot process and how the updated BAR compares to the current SOF note. Based on the pilot results, the BAR task force identified many advantages and some disadvantages of replacing the SOF note with a reconciliation of net cost to net outlays.
- A8. In August 2016, the Board tentatively approved the new format and supported continued development efforts, including involving more agencies to pilot the BAR. By the end of this project phase, a total of 13 agencies--including 11 cabinet agencies--joined the pilot efforts.
- A9. Based on feedback from the task force and pilot agencies, the new BAR
- a. supports the CFR reconciliation,
 - b. is easier to prepare than the current SOF note disclosure,
 - c. is easier for users not familiar with federal budgeting and accounting to understand due to its similarity to the commercial cash flow statement, and
 - d. requires that each agency develop a new process to support the development of the new BAR.
- A10. The task force developed detailed account level guidance for each line item of the BAR and compared it to the information needed to support the CFR budget deficit and net cost reconciliation. The task force found that a majority of the current CFR reconciliation line items will be supported by the new reconciliation. The remaining line items primarily relate to budget receipts, which were intentionally omitted in the new reconciliation to simplify the presentation and reduce the preparation burden on the component reporting entities.
- A11. According to the task force respondents, the new reconciliation is an improvement in comparison to the existing reconciliation. The BAR is more closely aligned with information presented in component reporting entity financial statements. It is easier to understand, and readily auditable. Further, the requirement to provide a narrative explanation of the reconciliation and significant reconciling items also enhances its understandability. For most agencies, it does not require a change of the agencies' current software.

-
- A12. Treasury has collaborated with the task force representatives in developing guidance that could be used to prepare the BAR. Such guidance will facilitate implementation and reduce costs.

Summary of Outreach Efforts and Responses

- A13. The Board issued the exposure draft (ED), *Budget and Accrual Reconciliation*, on December 21, 2016, with comments requested by March 14, 2017.
- A14. Upon release of the ED, FASAB provided notices and press releases to the FASAB subscription email list, the Federal Register, FASAB News, the *Journal of Accountancy*, Association of Government Accountants Topics, the *CPA Journal*, *Government Executive*, the *CPA Letter*, the Financial Statement Audit Network, and committees of professional associations generally commenting on EDs in the past (for example, the Greater Washington Society of CPAs and the Association of Government Accountants Financial Management Standards Board).
- A15. FASAB received 27 responses from preparers, users of federal financial information, and professional associations. The majority of respondents agreed with the proposals to (1) replace the SOF with the BAR, (2) present the BAR as a footnote, and (3) present a narrative disclosure accompanying the BAR.
- A16. Approximately half of the respondents disagreed with the proposed effective date and the proposal for the restatement of comparative prior period information. Nine out of 27 respondents also disagreed with the proposal to have a breakdown of the Intragovernmental and With the Public in the reconciliation.
- A17. Some respondents identified certain issues that could be clarified within the Statement or addressed in the basis for conclusions.
- A18. The Board did not rely on the number of respondents in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered each response and weighed the merits of the points raised. The respondents' significant comments are summarized below.
- A19. Some respondents disagreed with the proposed effective date because they believed it did not allow them sufficient time to test the new format. To maximize agency success in adopting the proposed Statement and allow each agency sufficient time testing the new process, the Board agreed to change the effective date to periods beginning after September 30, 2018, with early adoption permitted.

-
- A20. Some respondents stated that to restate prior period data, a one-year phase-in period would be needed. During this time, comparative data could be collected and reported while agencies continued to provide the SOF. Most of the respondents believed that a change to the BAR format should be done prospectively. The Board considered that the restatement of the prior period data does not add any additional value, and the prior year SOF would not be comparable with the BAR format during the implementation year. Ultimately, the Board agreed to present only data for one reporting period in the first year of implementation, with a comparative presentation in the following reporting period.
- A21. The agencies listed various reasons or challenges that they would face, should agencies be required to present separately in the BAR Intragovernmental and With the Public data. For example, while the BAR reconciles line items from the Statement of Net Cost and Statement of Budgetary Resources, only the Statement of Net Cost provides information needed to distinguish between amounts that are Intragovernmental as opposed to With the Public. That distinction is not made regarding amounts, including outlays, shown on the Statement of Budgetary Resources. A few agencies also stated that outlays by trading partner are not readily available in their current systems, and agencies are concerned about the additional system investment cost and the labor-intensive work to segregate information for certain line items associated with this breakdown request.
- A22. Treasury has stated it needs the audited breakdown of Intragovernmental and With the Public to support the elimination process during consolidation. Without the breakdown, the BAR format is less beneficial for the CFR reconciliation because intragovernmental amounts will not be identified for elimination.
- A23. After carefully considering the comments received on the breakdown, the Board proposed an updated BAR format without the breakdown of the budgetary net outlays. However, the format retains the breakdown of line items above the net outlays based on the following:
- a. Although the BAR format is illustrated in the Statement, this Statement does not explicitly require this breakdown. The Office of Management and Budget (OMB) and Treasury have the option to establish more or less detailed requirements upon implementation or in the future.
 - b. In the proposed BAR format, the line items for the section "Components of Net Cost That Are Not Part of Net Outlays" are taken directly from the Balance Sheet and the Statement of Net Cost. The needed breakdowns already exist in those statements. The majority of the individual line items for the section "Components of Net Outlays That Are Not Part of Net Cost" can be supported by USSGL for the breakdown.
- A24. To ensure the updated BAR format reasonably addressed agency concerns before finalizing this Statement, Treasury updated the detailed account level guidance with a

breakdown of Intragovernmental and With the Public. The updated format and guidance were provided to the nine agencies expressing concerns about the breakdown during the comment period. Six of the nine agencies responded after piloting both the format and the guidance, and they all preferred this updated format. Based on the positive feedback from those respondents, the revised format is included as an illustration to be presented in SFFAC 2 as amended by this Statement.

A25. The Board believes disclosing information about any non-cash outlays would aid in preparing the CFR reconciliation of the budget surplus (deficit) to the change in cash.

Board Approval

A26. This Statement was approved for issuance by all members of the Board.

Summary

This Statement revises the financial reporting standards for federal lease accounting. It provides a comprehensive set of lease accounting standards to recognize federal lease activities in the reporting entity's general purpose federal financial reports and includes appropriate disclosures.

This Statement requires that federal lessees recognize a lease liability and a lease asset at the commencement of the lease term, unless it meets the scope exclusions or the definition/criteria of a non-intragovernmental short-term lease, contract or agreement that transfers ownership, or intragovernmental lease. A federal lessor would recognize a lease receivable and unearned revenue, unless it meets any of the scope exclusions or the definition/criteria of a non-intragovernmental short-term lease, contract or agreement that transfers ownership, or intragovernmental lease.

The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Standards

Scope

1. This Statement applies to federal entities that present general purpose federal financial reports, including the consolidated financial report of the U.S. Government (CFR), in conformance with generally accepted accounting principles, as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
2. For purposes of applying this Statement, a **lease**¹ is defined as a contract or agreement whereby one entity (lessor) conveys the right to control the use of property, plant, and equipment (PP&E)² (the underlying asset) to another entity (lessee) for a period of time as specified in the contract or agreement in exchange for consideration. To qualify as a lease, the underlying asset typically should be identified by being explicitly specified in a contract or agreement. However, an asset also can be identified by being implicitly specified at the time that the asset is made available for use by the lessee. Leases include contracts or agreements that, although not explicitly identified as leases, meet the definition of a lease.
3. To determine whether a contract or agreement conveys the right to control the use of the underlying asset, a federal entity should assess whether the contract or agreement gives the lessee both of the following:
 - a. The right to obtain economic benefits or services from use of the underlying asset as specified in the contract or agreement
 - b. The right to control access to the economic benefits or services of the underlying asset as specified in the contract or agreement
4. The lease definition excludes contracts or agreements for services, except those contracts or agreements that contain both a lease component and a service component (par. 73). A service contract is a contract that directly engages the time and effort of a contractor whose primary purpose is to perform an identifiable task rather than to provide a tangible asset.

¹ Terms defined in the Glossary are shown in **bold-face** the first time they appear.

² SFFAS 6, *Accounting for Property, Plant, and Equipment*.

-
5. This Statement does not apply to
- a. accounting for leases of assets prior to the commencement of the lease term, such as during construction periods or^{2A}
 - b. leases (licenses) of internal use software (SFFAS 10, *Accounting for Internal Use Software*, as amended).

Definitions

Definitions in paragraphs 6 through 13 are presented within the standards because they are new terms intended to have a specific meaning when applying the standards.

- 6. **Lease** – A lease is defined as a contract or agreement whereby one entity (lessor) conveys the right to control the use of PP&E (the underlying asset) to another entity (lessee) for a period of time as specified in the contract or agreement in exchange for consideration.
- 7. **Short-Term Lease** – A short-term lease is a non-intragovernmental lease with a lease term (as defined in par. 14-21) of 24 months or less.
- 8. **Intragovernmental Lease** – An intragovernmental lease is a contract or agreement occurring within a consolidation entity or between two or more consolidation entities as defined in SFFAS 47, *Reporting Entity*³ whereby one entity (lessor) conveys the right to control the use of PP&E (the underlying asset) to another entity (lessee) for a period of time as specified in the contract or agreement in exchange for consideration.
- 9. **Lease Incentives** – Lease incentives include lessor payments made to or on behalf of the lessee to entice the lessee to sign a lease. Lease incentives may include up-front cash payments to the lessee; for example, moving costs, termination fees to the lessee's prior

^{2A} For leases other than short-term leases and intragovernmental leases, the lessee would account for payments prior to commencement of the lease term as advances paid in contemplation of the future receipt of the lease asset. The lessor would account for receipts prior to commencement of the lease term as advances received. These advances would be accounted for in a manner consistent with SFFAS 1, *Accounting for Selected Assets and Liabilities*, par. 57-61, prior to the lease commencement date. Such advances would be considered assets of the lessee and liabilities of the lessor. At lease commencement, the lessee would then reclassify the asset and include it in the measurement of the lease asset in accordance with SFFAS 54, par. 49, and the lessor would reclassify the advances received as unearned revenue in accordance with par. 64.b.

³ SFFAS 47, *Reporting Entity*, par. 38-42.

lessor, or the lessor's assumption of the lessee's lease obligation under a different lease with another lessor.

10. **Lease Concessions** – Lease concessions are rent discounts made by the lessor to entice the lessee to sign a lease. For example, lease concessions may include rent holidays/free rent periods or reduced rents.
11. **Leasehold Improvements** – Leasehold improvements are additions, alterations, remodeling, renovations, or other changes to a leased property that either extend the useful life of the existing property or enlarge or improve its capacity and are paid for (financed) by the lessee.
12. **Lessor Improvements** – Lessor improvements are additions, alterations, remodeling, renovations, or other changes to a leased property that either extend the useful life of the existing property or enlarge or improve its capacity and are paid for (financed) by the lessor rather than by the lessee.
13. **Initial Direct Lease Costs** – Initial direct lease costs are costs that are directly attributable to negotiating and arranging a lease or portfolio of leases that would not have been incurred without entering into the lease.

Lease Term

14. The lease term is the noncancelable period plus certain periods subject to options to extend or terminate the lease. The noncancelable period is the shorter of
 - a. the period identified in the lease contract or agreement that precedes any option to extend the lease or
 - b. the period identified in the lease contract or agreement that precedes the first option to terminate the lease.
15. The lessee's lease term includes the noncancelable period and the following periods, if applicable:
 - a. Those periods specified in the lease contract or agreement that relate to a lessee's option to extend the lease if it is probable, based on all relevant factors, that the lessee will exercise that option
 - b. Those periods specified in the lease contract or agreement that follow a lessee's option to terminate the lease (up until the point in time when there is another option or, if none,

-
- the end of the lease) if it is probable, based on all relevant factors, that the lessee will not exercise that option
- c. Those periods specified in the lease contract or agreement that relate to a lessor's option to extend the lease if there is significant evidence, based on all relevant factors, that the lessor will exercise that option
 - d. Those periods specified in the lease contract or agreement that follow a lessor's option to terminate the lease (up until the point in time when there is another option or, if none, the end of the lease) if there is significant evidence, based on all relevant factors, that the lessor will not exercise that option
16. The options should be considered in chronological order. If a determination is made that an additional period will not be added to the lease term for an option based on the likelihood criteria above, subsequent options would not be considered. For example, if the lessee determined that it was not probable that a lessee option to extend would be exercised; any subsequent option periods would not be evaluated.
17. The lessor's lease term includes the noncancelable period and the following periods, if applicable:
- a. Those periods specified in the lease contract or agreement that relate to a lessor's option to extend the lease if it is probable, based on all relevant factors, that the lessor will exercise that option
 - b. Those periods specified in the lease contract or agreement that follow a lessor's option to terminate the lease (up until the point in time when there is another option or, if none, the end of the lease) if it is probable, based on all relevant factors, that the lessor will *not* exercise that option
 - c. Those periods specified in the lease contract or agreement that relate to a lessee's option to extend the lease if there is significant evidence, based on all relevant factors, that the lessee will exercise that option
 - d. Those periods specified in the lease contract or agreement that follows a lessee's option to terminate the lease (up until the point in time when there is another option or, if none, the end of the lease) if there is significant evidence, based on all relevant factors, that the lessee will not exercise that option
18. The options should be considered in chronological order. If a determination is made that an additional period will not be added to the lease term for an option based on the likelihood criteria above, subsequent options would not be considered. For example, if the lessor

determined that it was not probable that a lessor option to extend would be exercised; any subsequent option periods would not be evaluated.

19. In determining the lease term for both the lessee and lessor, the following specific provisions should be applied:
- a. Periods for which both the lessee and lessor (1) have an option to terminate the lease without permission from the other party or (2) have to agree to extend are cancelable periods and are excluded from the lease term. For example, month-to-month lease holdovers, also referred to as rolling lease extensions, or any lease that continues into a holdover period until a new contract or agreement is signed would be considered cancelable if both the lessee and the lessor have an option to terminate. Therefore, either could cancel the lease at any time. These holdover periods are cancelable periods and should be excluded from the lease term.⁴
 - b. An option to terminate is an unconditional right that exists within the contract. A provision that gives a lessee or lessor the right to terminate the lease conditional upon certain circumstances or upon the occurrence of certain events, such as the action or inaction of the other party to the lease contract, should not be considered an option to terminate the lease for purposes of determining the lease term. For example, provisions that allow for termination of a lease due to a violation of terms and conditions, such as a default on payments, are not considered options to terminate the lease.
 - c. An availability of funds or cancellation clause allows federal lessees to cancel a lease agreement, typically on an annual basis, if funds for the lease payments are not appropriated. This type of clause should affect the lease term only when it is probable that the clause will be exercised.
 - d. If a lessee has the option to purchase the underlying asset during the lease term and the contract is not a contract that transfers ownership (required to be reported in accordance with par. 25), the lease term should exclude the period, if any, after the date at which the option is probable of being exercised.
20. At the commencement of a lease term, lessors and lessees should assess all factors relevant to the likelihood that the lessee or lessor will exercise options identified in paragraphs 15-19, whether these factors are contract or agreement based, underlying asset based, market based, or federal specific. The assessment often will require the

⁴ SFFAS 1, *Accounting for Selected Assets and Liabilities*, applies to any related accounts payable or accounts receivable amounts.

consideration of a combination of these interrelated factors. Examples of factors to consider include, but are not limited to, the following:

- a. A significant economic incentive, such as contractual or agreement terms and conditions for the optional periods that are favorable compared with current market rates
 - b. A significant economic disincentive, such as costs to terminate the lease and sign a new lease (for example, negotiation costs, relocation costs, abandonment of significant leasehold improvements, costs of identifying another suitable underlying asset, costs associated with returning the underlying asset in a contractually specified condition or to a contractually specified location, or a substantial cancellation penalty)
 - c. The history of exercising options to extend or terminate
 - d. The extent to which the asset underlying the lease is mission critical to the federal entity
21. Lessors and lessees should reassess the lease term only if one or more of the following events occur:
- a. The lessor or lessee elects to exercise an option that was previously presumed would not be exercised under the likelihood criteria in paragraphs 15 and 17
 - b. The lessor or lessee does not elect to exercise an option that was previously presumed would be exercised under the likelihood criteria in paragraphs 15 and 17
 - c. An event specified in the lease contract or agreement that requires an extension or termination of the lease takes place.
 - d. A lease modification that amends the noncancelable period and results in remeasurement in accordance with paragraphs 85-86.

Short-Term Leases

22. A short-term lease is a non-intragovernmental lease with a lease term (as defined in paragraphs 14-21) of 24 months or less.

Lessee Treatment of Short-Term Leases

23. A lessee should recognize short-term lease payments as an expense based on the payment provisions of the contract or agreement and standards regarding recognition of accounts payable and other related amounts. The lessee should recognize an asset if payments are made in advance of the reporting period to which they relate or a liability for rent due and unpaid at the end of the reporting period to which they relate. Rental increases, rental decreases, lease incentives, and lease concessions should be recognized when incurred as increases/reductions to lease rental expense.

Lessor Treatment of Short-Term Leases

24. A lessor should recognize short-term lease payments as revenue based on the payment provisions of the contract or agreement and standards regarding recognition of accounts receivable and other related amounts. The lessor should recognize a liability if payments are received in advance of the reporting period to which they relate or an asset for rent due and to be received subsequent to the reporting period to which they relate. Rental increases, rental decreases, lease incentives, and lease concessions should be recognized when incurred as increases/reductions to lease rental income.

Contracts or Agreements that Transfer Ownership

25. A contract or agreement that (a) transfers ownership of the underlying asset to the lessee by the end of the contract or agreement and (b) does not contain options to terminate (par. 14-19), but that may contain an availability of funds or cancellation clause that is not probable of being exercised (par. 19.c), should be reported as a purchase of that asset by the lessee or a financed sale of the asset by the lessor. For this purpose, options to purchase the underlying asset prior to the transfer of ownership are not considered options to terminate.⁵

Intragovernmental Leases

26. An intragovernmental lease is a contract or agreement occurring within a consolidation entity or between two or more consolidation entities as defined in SFFAS 47 whereby one entity (lessor) conveys the right to control the use of PP&E (the underlying asset) to another entity (lessee) for a period of time as specified in the contract or agreement in exchange for

⁵ See SFFAS 6, par. 26A.

consideration. Any lease that meets the definition of an intragovernmental lease would be required to follow the accounting and disclosure guidance described in paragraphs 27-38.

27. A lessee should recognize lease payments, including lease-related operating costs (for example, maintenance, utilities, taxes, etc.) paid to the lessor, as expenses based on the payment provisions of the contract or agreement and standards regarding recognition of accounts payable and other related amounts. Prepaid rent or a payable for rent due should be recognized as an asset or liability, respectively, and an expense should be recognized in the appropriate reporting period based on the specifics of the lease provisions.
28. A lessor should recognize lease receipts, including lease-related operating costs (for example, maintenance, utilities, or taxes) received from the lessee as income based on the provisions of the contract or agreement and standards regarding recognition of accounts receivable and other related amounts. Rent paid in advance or a receivable should be recognized as a liability or asset, respectively, and income should be recognized in the appropriate reporting period based on the specifics of the lease provisions.
29. Rental increases/decreases may be fixed in the lease and take place with the passage of time (for example, be based on such factors as anticipated increases/decreases in costs or anticipated appreciation/depreciation in property values, but the amount of the increase/decrease is specified in the lease) or they may be contingent on future events.
30. Rental increases/decreases may also be variable and based on future changes in specific economic factors on which lease payments are based, for example, future sales or usage activity levels or future inflation/deflation (tied to a specific economic indicator where the specific amount of the change is not known).
31. Rental increases, rental decreases, lease incentives, and lease concessions should be recognized by the lessee and lessor when incurred as increases/reductions to lease rental expense and income, respectively.
32. Paragraph 32 was rescinded by SFFAS 60.
33. Paragraph 33 was rescinded by SFFAS 60.
34. Leasehold improvements that are placed in service at or after the beginning of the lease term should be amortized over the useful life (the normal operating life in terms of utility to the lessee) of the leasehold improvement, but no longer than the expected lease term.
35. Lessor improvements are components of the leased property and should be capitalized and depreciated by the lessor over their useful life consistent with the lessor's accounting for PP&E.⁶

⁶ This recognition is consistent with PP&E capital improvements outlined in SFFAS 6, par. 37.

-
36. Initial direct lease costs incurred by the lessee should be expensed when incurred. Initial direct lease cost incurred by the lessor should be expensed when incurred.

Disclosures for Intragovernmental Leases

37. Lessees should disclose the following regarding intragovernmental lease activities (which may be grouped for purposes of disclosure):
- a. A general description of significant intragovernmental leasing arrangements, including general lease terms with any applicable specific intragovernmental requirements
 - b. Annual lease expense in total and by major underlying asset category
38. Lessors should disclose the following regarding intragovernmental lease activities (which may be grouped for purposes of disclosure):
- a. A general description of significant leases
 - b. Future lease payments that are to be received to the end of the lease term for each of the five subsequent fiscal years and in five-year increments thereafter

Lessee Recognition, Measurement, and Disclosures for Leases Other than Short-Term Leases, Contracts or Agreements that Transfer Ownership, and Intragovernmental Leases

39. At the commencement of the lease term, a lessee should recognize a lease liability and a right-to-use lease asset (hereinafter referred to as the lease asset), except as provided in paragraphs 22-24 (short-term leases), paragraph 25 (contracts or agreements that transfer ownership), and paragraphs 26-38 (intragovernmental leases).

Lease Liability

40. A lessee initially should measure the lease liability at the present value of payments expected to be made during the lease term. Measurement of the lease liability should include the following, if required by a lease:
- a. Fixed payments

-
- b. Variable payments that depend on an index or a rate (such as the Consumer Price Index or a market interest rate), initially measured using the index or rate as of the commencement of the lease term
 - c. Variable payments that are fixed in-substance as described in paragraph 41
 - d. Amounts that are probable of being required to be paid by the lessee under residual value guarantees
 - e. The exercise price of a purchase option if it is probable that the lessee will exercise that option
 - f. Payments for penalties for terminating the lease, if the lease term reflects the lessee exercising (1) an option to terminate the lease or (2) an availability of funds or cancellation clause
 - g. Any lease incentives (par. 70-71) receivable from the lessor
 - h. Any other payments to the lessor that are probable of being required based on an assessment of all relevant factors
41. Variable payments based on future performance of the lessee or usage of the underlying asset should not be included. Rather, these variable payments should be recognized as an expense in the reporting period in which those payments are incurred. However, any component of these variable payments that is fixed in-substance should be included in the lease liability. An example is a lease payment based on a percentage of sales or usage but with a required minimum amount to be paid. That required minimum payment is fixed in-substance.
42. The future lease payments should be discounted using the interest rate the lessor charges the lessee. If the interest rate is not stated in the lease, the interest rate should be based on the interest rate on marketable Treasury securities at the commencement of the lease term (or at the subsequent financial reporting date in accordance with par. 44), with a similar maturity to the term of the lease.⁷
- 42A. If the interest rate is based on marketable Treasury securities, it should be consistent with the interest rate on marketable Treasury securities at the commence of the lease term, in accordance with paragraphs 40 and 42 (or the interest rate on marketable Treasury securities on the subsequent financial reporting date, in accordance with par. 46 and 48).

⁷Footnote 7 was rescinded by SFFAS 61.

The interest rate may be based on a recent interest rate on marketable Treasury securities or historical average interest rate on marketable Treasury securities of a similar maturity to the term of the lease, provided that the interest rate is consistent with the interest rate on marketable Treasury securities at the commencement of the lease term (or subsequent financial reporting date).

- 42B. When selecting an interest rate based on marketable Treasury securities of similar maturity to the term of the lease, reporting entities may round up or down to the nearest maturity or interpolate the interest rate for the period between two maturities. The methodology for selecting an interest rate based on marketable Treasury security maturities should be consistent from period to period.
- 42C. Reporting entities should not extrapolate beyond the longest Treasury maturity when the lease term exceeds it; rather, reporting entities should select the longest Treasury maturity. For example, if the longest Treasury maturity at commencement of the lease term is 30 years, reporting entities should select the 30-year rate as the discount rate for a lease with a 75-year term.
43. In subsequent financial reporting periods, the lessee should calculate the amortization of the discount on the lease liability and recognize that amount as interest expense for the period. Any payments made should be allocated first to the accrued interest liability and then to the lease liability.
44. The lessee should remeasure the lease liability at subsequent financial reporting dates if one or more of the following changes⁸ have occurred at or before that financial reporting date, based on the most recent lease contract or agreement before the changes, and if the changes individually or in the aggregate, are expected to significantly affect the amount of the lease liability since the previous measurement:
- a. There is a change in the lease term.
 - b. An assessment of all relevant factors indicates that the likelihood of a residual value guarantee being required to be paid has changed from probable to not probable or vice versa.
 - c. An assessment of all relevant factors indicates that the likelihood of a purchase option being exercised has changed from probable to not probable, or vice versa.

⁸ Changes arising from amendments to a lease contract or agreement should be accounted for under the provisions of par. 80-86 for lease modifications and terminations.

-
- d. There is a change in the estimated amounts for payments already included in the liability (except as provided in par. 45).
 - e. There is a change in the interest rate the lessor charges the lessee if used as the initial **discount rate**.
 - f. A contingency, upon which some or all of the variable payments that will be made over the remainder of the lease term are based, is resolved such that those payments now meet the criteria for measuring the lease liability in paragraph 40. For example, an event occurs that causes variable payments that were contingent on the performance or use of the underlying asset to become fixed payments for the remainder of the lease term.
45. If a lease liability is remeasured for any of the changes in paragraph 44, the liability also should be adjusted for any change in an index or rate used to determine variable lease payments if that change in the index or rate is expected to significantly affect the amount of the liability since the previous measurement. A lease liability is not required to be remeasured solely for a change in an index or rate used to determine variable payments.
46. The lessee also should update the discount rate as part of the remeasurement if one or both of the following changes have occurred and the changes individually or in the aggregate are expected to significantly affect the amount of the lease liability:
- a. There is a change in the lease term.
 - b. An assessment of all relevant factors indicates that the likelihood of a purchase option being exercised has changed from probable to not probable, or vice versa.
47. A lease liability is not required to be remeasured, nor is the discount rate required to be reassessed, solely for a change in the interest rate on marketable Treasury securities.
48. If the discount rate is required to be updated based on the provisions in paragraph 46, the discount rate should be based on the revised interest rate the lessor charges the lessee at the time the discount rate is updated. If that interest rate cannot be readily determined, the interest rate on marketable Treasury securities with a similar maturity to the term of the lease at the time the discount rate is updated should be used (see par. 42-42C above).

Lease Asset

49. A lessee should initially measure the lease asset as the sum of the following:
- a. The amount of the initial measurement of the lease liability (par. 40)

-
- b. Lease payments made to the lessor at or before the commencement of the lease term, less any lease incentives (par. 70-71)
 - c. Initial direct lease costs that are necessary to place the lease asset into service
50. A lease asset should be amortized in a systematic and rational manner over the shorter of the lease term or the useful life of the underlying asset, except as provided in paragraph 51. The amortization of the lease asset should be reported as amortization expense.
51. If a lease contains a purchase option that the lessee has determined is probable of being exercised, the lease asset should be amortized over the useful life of the underlying asset. However, if the underlying asset will be capitalizable and nondepreciable in the reporting period the purchase option is expected to be exercised, the lease asset should not be amortized. If the underlying asset will be non-capitalizable in the reporting period the purchase option is expected to be exercised, the lease asset should be amortized over the remaining lease term.^{8A}
52. The lease asset generally should be adjusted by the same amount when the lease liability is remeasured based on paragraphs 44-48. However, if this change reduces the carrying value of the lease asset to zero, any remaining amount should be reported in the statement of net cost as a gain. Changes arising from amendments to a lease contract or agreement should be accounted for under the provisions of paragraphs 80-86 for lease terminations and modifications.
53. Leased assets are subject to SFFAS 44, *Accounting for Impairment of General Property, Plant, and Equipment Remaining in Use*. The presence of impairment indicators (described in par. 8-15 of SFFAS 44) with respect to the underlying asset may result in a change in the manner or duration of use of the lessee's rights to obtain and control access to economic benefits and services derived from the underlying asset and the application of SFFAS 44. The change in the manner or duration of use of the underlying asset is an indicator that the lease asset may be impaired. If impaired, the lease asset should be reduced first for any change in the lease liability resulting from remeasurement under paragraphs 44-48 of SFFAS 54 or terminations or modifications under paragraphs 80-86 of SFFAS 54. Any remaining amount should be recognized as an impairment loss. Paragraphs 16-25 of SFFAS 44 provide criteria for testing for impairment, along with recognizing, reporting, and disclosing impairment losses. This guidance should be applied to lease assets to the extent

^{8A} Once SFFAS 59, *Accounting and Reporting of Government Land*, becomes fully effective, underlying assets that are general PP&E land will become non-capitalizable. For reporting periods prior to this, general PP&E land is capitalizable and nondepreciable.

that impairment losses exceed any reduction to the lease liability and lease asset that may stem from the impairment.⁹

Component Reporting Entity Disclosure Requirements for Lessees

54. Lessees should disclose the following regarding lease activities (which may be grouped for purposes of disclosure), other than short-term leases, contracts or agreements that transfer ownership, and intragovernmental leases:
- a. A general description of its leasing arrangements, including the basis, terms, and conditions on which variable lease payments not included in the lease liability are determined
 - b. The total amount of lease assets and the related accumulated amortization, to be disclosed separately from PP&E assets
 - c. The amount of lease expense recognized for the reporting period for variable lease payments not previously included in the lease liability
 - d. Principal and interest requirements to the end of the lease term, presented separately, for the lease liability for each of the five subsequent years and in five-year increments thereafter
 - e. The amount of the annual lease expense and the discount rate used to calculate the lease liability

Lessor Recognition, Measurement, and Disclosures for Leases Other than Short-Term Leases, Contracts or Agreements that Transfer Ownership, and Intragovernmental Leases

55. At the commencement of the lease term, a lessor should recognize a lease receivable and unearned revenue, except as provided in paragraph 22-24 (short-term leases), paragraph 25 (contracts or agreements that transfer ownership), and paragraphs 26-38 (intragovernmental leases). Any initial direct lease costs incurred by the lessor should be reported as an expense of the period.

⁹ Footnote 9 was stricken by SFFAS 60 amendments to paragraph 53.

Lease receivable

56. A lessor initially should measure the lease receivable at the present value of lease payments to be received for the lease term, reduced by any provision for uncollectible amounts. Measurement of the lease receivable should include the following types of payments that might be required by a lease:
- a. Fixed payments
 - b. Variable payments that depend on an index or a rate (such as the Consumer Price Index or a market interest rate), initially measured using the index or rate as of the commencement of the lease term
 - c. Variable lease payments that are fixed in-substance as described in paragraph 57
 - d. Residual value guarantees that are fixed payments in substance (par. 57)
 - e. Any lease incentives (par. 70-71) payable to the lessee
57. Variable payments based on future performance of the lessee or usage of the underlying asset should not be included in the measurement of the lease receivable. Rather, those payments should be recognized as revenue in the reporting period to which those payments relate. However, any component of those variable payments that is fixed in substance should be included in the lease receivable. For example, if a lease payment is based on a percentage of sales but has a required minimum payment, that required minimum is a fixed payment in substance. Similarly, a residual value guarantee is an in-substance fixed payment if it stipulates the underlying asset will be sold at the end of the lease term, with the lessee assuming a liability for any shortfall if the sales price is less than an agreed-upon minimum amount.
58. Amounts to be received under residual value guarantees (that are not fixed in substance) should be recognized as a receivable and revenue when (a) a guarantee payment is required (as agreed to by the lessee and lessor) and (b) the amount can be reasonably estimated. Amounts to be received for the exercise price of a purchase option or penalty for lease termination should be recognized as a receivable and revenue when those options are exercised.

-
59. The future lease payments to be received should be discounted using the interest rate the lessor charges the lessee. If the interest rate is not stated in the lease, the interest rate should be based on the interest rate on marketable Treasury securities at the commencement of the lease term (or at the subsequent financial reporting date, in accordance with par. 61), with a similar maturity to the term of the lease.^{9A}
- 59A. If the interest rate is based on marketable Treasury securities, it should be consistent with the interest rate on marketable Treasury securities at the commencement of the lease term, in accordance with paragraphs 56 and 59 (or the interest rate on marketable Treasury securities on the subsequent financial reporting date, in accordance with par. 63). The interest rate may be based on a recent interest rate on marketable Treasury securities or historical average interest rate on marketable Treasury securities of a similar maturity to the term of the lease, provided that the interest rate is consistent with the interest rate on marketable Treasury securities at the commencement of the lease term (or subsequent financial reporting date).
- 59B. When selecting an interest rate based on marketable Treasury securities of similar maturity to the term of the lease, reporting entities may round up or down to the nearest maturity or interpolate the interest rate for the period between two maturities. The methodology for selecting an interest rate based on marketable Treasury security maturities should be consistent from period to period.
- 59C. Reporting entities should not extrapolate beyond the longest Treasury maturity when the lease term exceeds it; rather, reporting entities should select the longest Treasury maturity. For example, if the longest Treasury maturity at commencement of the lease term is 30 years, reporting entities should select the 30-year rate as the discount rate for a lease with a 75-year term.
60. In subsequent financial reporting periods, the lessor should calculate the amortization of the discount on the receivable and report that amount as interest revenue for the period. Any payments received should be allocated first to the accrued interest receivable and then to the lease receivable.
61. The lessor should remeasure the lease receivable at subsequent financial reporting dates if one or more of the following changes have occurred at or before that financial reporting date, based on the most recent lease contract or agreement before the changes,¹⁰ and the

^{9A} Footnote 9A was rescinded by SFFAS 61.

¹⁰ Changes arising from amendments to a lease contract or agreement should be accounted for under the provisions of par. 80-86 for lease modifications and terminations

changes individually or in the aggregate, are expected to significantly affect the amount of the lease receivable since previous measurement:

- a. There is a change in the lease term.
 - b. There is a change in the interest rate the lessor charges the lessee.
 - c. A contingency, upon which some or all of the variable payments that will be received over the remainder of the lease term are based, is resolved such that those payments now meet the criteria for measuring the lease receivable in paragraph 56. For example, an event occurs that results in variable payments that were contingent on the performance or use of the underlying asset becoming fixed payments for the remainder of the lease term.
62. If a lease receivable is remeasured for any of the changes in paragraph 61, the receivable also should be adjusted for any change in an index or rate used to determine variable lease payments if that change in the index or rate is expected to significantly affect the amount of the receivable since the previous measurement. A lease receivable is not required to be remeasured solely for a change in an index or rate used to determine variable lease payments.
63. The lessor also should update the discount rate as part of the remeasurement if one or both of the following changes have occurred and the changes individually or in the aggregate are expected to significantly affect the amount of the lease receivable:
- a. There is a change in the lease term.
 - b. There is a change in the interest rate the lessor charges the lessee.

Unearned Revenue

64. A lessor initially should measure the unearned revenue to include the following:
- a. The amount of the initial measurement of the lease receivable (par. 56)
 - b. Lease payments received from the lessee at or before the commencement of the lease term that relate to future periods (for example, the final month's rent), less any lease incentives (par. 70-71) paid to, or on behalf of, the lessee at or before the commencement of the lease term
65. A lessor subsequently should amortize the unearned revenue, recognizing it as earned revenue, in a systematic and rational manner over the term of the lease. The unearned

revenue generally should be adjusted using the same amount as the change resulting from the remeasurement of the lease receivable as discussed in paragraphs 61-63. However, if the change reduces the carrying value of the unearned revenue to zero, any remaining amount should be reported in the statement of net cost as a loss.

Underlying Asset

66. A lessor should not derecognize the asset underlying the lease. A lessor should continue to apply other applicable guidance to the underlying asset, including depreciation and impairment. However, if the lease contract or agreement requires the lessee to return the asset in its original or enhanced condition, a lessor should not depreciate the asset during the lease term.

Component Reporting Entity Disclosures for Lessors

67. Lessors should disclose the following regarding lease activities (which may be grouped for purposes of disclosure), other than short-term leases, contracts or agreements that transfer ownership, and intragovernmental leases:
- a. A general description of its leasing arrangements, including the basis, terms, and conditions on which any variable lease payments not included in the lease receivable are determined
 - b. The carrying amount of assets on lease by major classes of assets, and the amount of related accumulated depreciation
 - c. The total amount of revenue (for example, lease revenue, interest revenue, and any other lease-related revenue) recognized in the reporting period from leases
 - d. The amount of revenue recognized in the reporting period for variable lease payments and other payments not previously included in the lease receivable, including revenue related to residual value guarantees and termination penalties
68. In addition to the disclosures in paragraph 67, if a federal entity's principal ongoing operations consist of leasing assets through the use of non-intragovernmental leases, the federal entity should disclose a schedule of future lease payments that are included in the lease receivable, showing principal and interest, for each of the five subsequent years and in five-year increments thereafter.

Financial Report of the U.S. Government Disclosures

69. If applicable, the financial report of the U.S. Government should disclose the following regarding its lease activities:
- a. A general description of its leasing arrangements
 - b. The total amount of lease assets, and the related accumulated amortization, to be disclosed separately from PP&E assets
 - c. Principal and interest requirements to the end of the lease term, presented separately, for the lease liability for each of the five subsequent years and in five-year increments thereafter
 - d. A general reference to relevant component reporting entity reports

Lease Incentives and Lease Concessions

70. Lease incentives include lessor payments made to or on behalf of the lessee to entice the lessee to sign a lease. Lease incentives may include up-front cash payments to the lessee, for example, moving costs, termination fees to lessee's prior lessor, or lessor's assumption of the lessee's lease obligation under a different lease with another lessor. Lease concessions are rent discounts made by the lessor to entice the lessee to sign a lease. For example, lease concessions may include rent holidays/free rent periods or reduced rents.
71. Lease incentives and lease concessions reduce the amount that a lessee is required to pay for a lease. For leases other than short-term leases and intragovernmental leases, lease incentives and lease concessions that provide payments to, or on behalf of, a lessee at or before the commencement of a lease term are included in initial measurement by directly reducing the amount of the lease asset (par. 49). Lease incentive and lease concession payments to be provided after the commencement of the lease term should be accounted for by lessees and lessors as reductions of lease payments for the periods in which the incentive or concession payments will be provided. Those payments should be measured by lessees consistently with the lessee's lease liability (par. 40-48) and by lessors consistently with the lessor's lease receivable (par. 56-63). Accordingly, lease incentive and lease concession payments to be provided after the commencement of the lease term are included in initial measurement and any remeasurement if they are fixed or fixed in substance, whereas variable or contingent lease incentive or lease concession payments are not included in initial measurement. Lessor improvements that are made to or on behalf of the lessee without additional cost to the lessee should be accounted for by the lessee and

the lessor consistent with other lease incentives and lease concessions. As leasehold improvements are paid for (financed) by the lessee, leasehold improvements would not be considered a lease incentive or concession received from the lessor.^{10A}

Contracts or Agreements with Multiple Components

72. Lessors and lessees may enter into contracts or agreements that contain multiple components, such as a contract or agreement that contains both a lease component and a nonlease component, or a lease that contains multiple underlying assets.
73. If a lessor or lessee enters into a contract or agreement that contains both a lease (such as the right to use a building) and a nonlease component (such as a maintenance services for the building), the federal entity should account for the lease and nonlease components as separate contracts or agreements, unless the contract or agreement meets the exception in paragraph 76.
74. If a lease involves multiple underlying assets and the assets have different lease terms, the lessor and lessee should account for each underlying asset as a separate lease component. The provisions of this paragraph should be applied unless the contract or agreement meets the exception in paragraph 76.
75. To allocate the contract or agreement price to the different components, lessors and lessees should first use any prices for individual components that are included in the contract or agreement, as long as the price allocation does not appear to be unreasonable based on the terms of the contract or agreement and professional judgment, maximizing the use of observable information, for example, using readily available observable stand-alone prices. Stand-alone prices are those that would be paid or received if the same or similar assets were leased individually or if the same or similar nonlease components (such as services) were contracted individually. Some contract or agreements provide discounts for bundling multiple leases or lease and nonlease components together in one contract or agreement. These discounts may be taken into account when determining whether individual component prices do not appear to be unreasonable. For example, if the individual component prices are each discounted by the same percentage from normal market prices, those component prices would not be considered unreasonable.
76. If a contract or agreement does not include prices for individual components or if any of those prices appear to be unreasonable as provided in paragraph 75, lessors and lessees

^{10A} The treatment of lease incentives and lease concessions is addressed in par. 23-24 for short-term leases and par. 31 for intragovernmental leases.

should use professional judgment to determine their best estimate for allocating the contract or agreement price to those components, maximizing the use of observable information. If it is not practicable to determine a best estimate for price allocation for some or all components in a contract or agreement, a federal entity should account for those components as a single lease unit.

77. If multiple components are accounted for as a single lease unit as provided for in paragraph 76, the accounting for that unit should be based on the primary lease component within that unit. For example, the primary lease component's lease term should be used for the unit if the lease components have different lease terms.

Contract or Agreement Combinations

78. Contracts or agreements that are entered into at or near the same time with the same counterparty should be considered to be part of the same lease contract or agreement if either of the following criteria is met:
- a. The contracts or agreements are negotiated as a package with a single objective.
 - b. The amount of consideration to be paid in one contract or agreement depends on the price or performance of the other contract or agreement.
79. If multiple contracts or agreements are determined to be part of the same lease contract or agreement, that contract or agreement should be evaluated in accordance with the guidance for contracts or agreements with multiple components in paragraphs 72-77.

Lease Terminations and Modifications

80. The provisions of a lease contract or agreement may be amended while the contract or agreement is in effect. Examples of amendments to lease contracts or agreements include changing the contract or agreement price, lengthening or shortening the lease term, and adding or removing an underlying asset. An amendment should be considered a lease modification unless the lessee's right to use the underlying asset decreases, in which case the amendment should be considered a partial or full lease termination. By contrast, exercising an existing option, such as an option to extend or terminate the lease as discussed in paragraphs 15-19, is subject to the guidance for remeasurement.

Lease Terminations

81. The lessee and lessor should account for an amendment during the reporting period resulting in a decrease in the lessee's right to use the underlying asset (for example, the lease term is shortened or the number of underlying assets is reduced) as a partial or full lease termination.

Lessee Treatment of Lease Terminations

82. A lessee generally should account for the partial or full lease termination by reducing the carrying values of the lease asset and lease liability and recognizing a gain or loss for the difference. However, if the lease is terminated as a result of the lessee purchasing the underlying asset from the lessor, the lease asset should be reclassified to the appropriate class of owned asset.

Lessor Treatment of Lease Terminations

83. A lessor should account for the full or partial termination of a lease by reducing the carrying values of the lease receivable and related unearned revenue and recognizing a gain or loss for the difference. However, if the lease is terminated as a result of the lessee purchasing an underlying asset from the lessor, the carrying value of the underlying asset also should be derecognized and included in the calculation of any resulting gain or loss.

Lease Modifications

84. The lessee and lessor should account for an amendment during the reporting period resulting in a modification to a lease contract or agreement as a separate lease (that is, separate from the most recent lease contract or agreement before the modification) if both of the following conditions are present:
- a. The lease modification gives the lessee an additional lease asset by adding one or more underlying assets that were not included in the original lease contract or agreement.
 - b. The increase in lease payments for the additional lease asset does not appear to be unreasonable based on (1) the terms of the amended lease contract or agreement and (2) professional judgment, maximizing the use of observable information (for example, using readily available observable stand-alone prices).

Lessee Treatment of Lease Modifications

85. Unless a modification is reported as a separate lease as provided in paragraph 84, a lessee should account for a lease modification by remeasuring the lease liability. The lease asset should be adjusted by the difference between the remeasured liability and the liability immediately before the lease modification. However, if the change reduces the carrying value of the lease asset to zero, any remaining amount should be reported in the statement of net cost as a gain.

Lessor Treatment of Lease Modifications

86. Unless a modification is reported as a separate lease as provided in paragraph 84, a lessor should account for a lease modification by remeasuring the lease receivable. The unearned revenue should be adjusted by the difference between the remeasured receivable and the receivable immediately before the lease modification. However, to the extent the change relates to payments for the current period, the change should be recognized as revenue or expense for the current period.

Subleases

87. A sublease involves three parties: the original lessor, the original lessee (who also is the lessor in the sublease), and the new lessee. The original lessor should continue to apply the general lessor guidance. The federal entity that is the original lessee and becomes the lessor in the sublease should account for the original lease and the sublease as two separate transactions, as a lessee and a lessor, respectively. Those two separate transactions should not be offset against one another. The new lessee should apply the general lessee guidance.
88. The original lessee (and now the lessor in a sublease) should include the sublease in its disclosure of the general description of lease arrangements. Its lessor transactions related to subleases should be disclosed separately from its lessee transactions related to the original lease.

Sale-Leaseback Transactions

89. Sale-leaseback transactions involve the sale of an underlying asset by the owner and a lease of the property back to the seller (original owner). A sale-leaseback should include a transaction that qualifies as a sale¹¹ to be eligible for sale-leaseback accounting. A sale-

¹¹ See SFFAS 7, *Accounting for Revenue and Other Financial Sources and Concepts for Reconciling Budgetary and Financial Accounting*, par. 295 (with the public) and par. 314-315 (intragovernmental)..

leaseback transaction that does not include a transaction that qualifies as a sale should be accounted for as a borrowing by both the seller-lessee and the buyer-lessor.

90. The sale and lease portions of a sale-leaseback transaction should be accounted for as two separate transactions—a sale transaction and a lease transaction—except that the difference between the carrying value of the capital asset that was sold and the net proceeds from the sale should be reported as unearned revenue or deferred expense to be recognized in the statement of net cost in a systematic and rational manner over the term of the lease. However, if the lease portion of the transaction qualifies as a short-term lease, any difference between the carrying value of the capital asset that was sold and the net proceeds from the sale should be recognized immediately.
91. A sale-leaseback transaction is considered to have off-market terms if there is a significant difference between (a) the sales price and the estimated fair value of the asset or (b) the present value of the contractual lease payments and the estimated present value of what the lease payments for that asset would be at a market price, whichever of the two differences is more readily determinable. The difference should be reported based on the substance of the transaction (for example, as a borrowing, a nonexchange transaction, or an advance lease payment) rather than as a part of the sales-leaseback transaction.
92. A seller-lessee should disclose the terms and conditions of sale-leaseback transactions as part of the disclosures required of a lessee (par. 37 or 54, as applicable). A buyer-lessor should disclose the terms and conditions as part of the disclosures required of a lessor (par. 38 or 67, as applicable).

Lease-Leaseback Transactions

93. In a lease-leaseback transaction, an asset is leased by one party (first party) to another party and then leased back to the first party. The leaseback may involve an additional asset (such as leasing a building that has been constructed by a developer on land owned by and leased back to a federal entity) or only a portion of the original asset (such as leasing back only one floor of a building to the owner). A lease-leaseback transaction should be displayed in the financial statements as a net transaction. Both parties to a lease-leaseback transaction should disclose the amounts of the lease and the leaseback separately.

Amendments to SFFAS 5, *Accounting for Liabilities of the Federal Government*, and SFFAS 6, *Accounting for Property, Plant, and Equipment*

94. This Statement replaces the measurement and reporting requirements for lease accounting established in SFFAS 5, *Accounting for Liabilities of the Federal Government*, paragraphs 43-46. Therefore, the paragraphs marked below are rescinded.

SFFAS 5: *Accounting for Liabilities of the Federal Government*

~~[43.] Capital leases are leases that transfer substantially all the benefits and risks of ownership to the lessee. If, at its inception, a lease meets one or more of the following four criteria, the lease should be classified as a capital lease by the lessee:~~

- ~~▪ The lease transfers ownership of the property to the lessee by the end of the lease term.~~
- ~~▪ The lease contains an option to purchase the leased property at a bargain price.~~
- ~~▪ The lease term is equal to or greater than 75 percent of the estimated economic life of the leased property.~~
- ~~▪ The present value of rental and other minimum lease payments, excluding that portion of the payments representing executory cost, equals or exceeds 90 percent of the fair value of the leased property.~~

~~The last two criteria are not applicable when the beginning of the lease term falls within the last 25 percent of the total estimated economic life of the leased property. If a lease does not meet at least one of the above criteria it should be classified as an operating lease.~~

~~[44.] The amount to be recorded by the lessee as a liability under a capital lease is the present value of the rental and other minimum lease payments during the lease term, excluding that portion of the payments representing executory cost to be paid by the lessor. [footnote 20: "The cost of general property, plant, and equipment acquired under a capital lease shall be equal to the amount recognized as a liability for the capital lease at its inception. See SFFAS No. 6, *Accounting for Property, Plant, and Equipment*.] However, if the amount so determined exceeds the fair value of the leased property at the inception of the lease, the amount recorded as the liability should be the fair value. If the portion of the minimum lease payments representing executory cost is not determinable from the lease provisions, the amount should be estimated.~~

~~[45.] The discount rate to be used in determining the present value of the minimum lease payments ordinarily would be the lessee's incremental borrowing rate unless (1) it is practicable for the lessee to learn the implicit rate computed by the lessor and (2) the implicit rate computed by the lessor is less than the lessee's incremental borrowing~~

rate. If both these conditions are met, the lessee shall use the implicit rate. The lessee's incremental borrowing rate shall be the Treasury borrowing rate for securities of similar maturity to the term of the lease.

[46.] During the lease term, each minimum lease payment should be allocated between a reduction of the obligation and interest expense so as to produce a constant periodic rate of interest on the remaining balance of the liability. [footnote 21: OMB Circular No. A-11, "Preparation and Submission of Annual Budget Estimates," explains the measurement of budget authority, outlays, and debt for the budget in the case of lease purchases and other capital leases. Circular A-94, "Guidelines and Discount Rates for Benefit Cost Analysis of Federal Programs," provides the requirements under which a lease purchase or other capital lease has to be justified and the analytical methods that need to be followed.]

95. This Statement replaces the measurement and reporting requirements for lease accounting established in SFFAS 6, *Accounting for Property, Plant, and Equipment*, paragraphs 20 and 29. Therefore, the paragraphs marked below are rescinded.

SFFAS 6: *Accounting for Property, Plant, and Equipment*

[20.] Capital leases are leases that transfer substantially all the benefits and risks of ownership to the lessee. If, at its inception, a lease meets one or more of the following four criteria, [footnote 21: Note that the criteria for identifying capital leases for financial reporting purposes differ from OMB criteria for budget scoring of leases. OMB Circular No. A-11, *Preparation and Submission of Budget Estimates*, includes criteria for identifying operating leases in Appendix B. OMB provides four additional criteria which relate to the level of private sector risk involved in a lease purchase agreement. This is necessary because, for budget purposes, there is a distinction between lease purchases with more or less risk. This distinction is not made in the financial reports and, therefore, FASAB does not include the four criteria related to risk levels.] the lease should be classified as a capital lease by the lessee. Otherwise, it should be classified as an operating lease.

[footnote 22: "Operating leases" of PP&E are leases in which the Federal entity does not assume the risks of ownership of the PP&E. Multi-year service contracts and multi-year purchase contracts for expendable commodities are not capital leases.]

- The lease transfers ownership of the property to the lessee by the end of the lease term.
- The lease contains an option to purchase the leased property at a bargain price.
- The lease term is equal to or greater than 75 percent of the estimated economic life [footnote 23: "Estimated economic life of leased property" is the estimated

~~remaining period during which the property is expected to be economically usable by one or more users, with normal repairs and maintenance, for the purpose for which it was intended at the inception of the lease, without limitation by the lease term.] of the leased property.~~

- ~~▪ The present value of rental and other minimum lease payments, excluding that portion of the payments representing executory cost, equals or exceeds 90 percent of the fair value [footnote 24: "Fair value" is the price for which an asset could be bought or sold in an arm's-length transaction between unrelated parties (e.g., between a willing buyer and a willing seller). (adapted from Kohler's Dictionary for Accountants)] of the leased property.~~

~~The last two criteria are not applicable when the beginning of the lease term falls within the last 25 percent of the total estimated economic life of the leased property.~~

~~[29.] The cost of general PP&E acquired under a **capital lease** shall be equal to the amount recognized as a liability for the capital lease at its inception (i.e., the net present value of the lease payments calculated as specified in the liability standard [footnote 35: See Statement of Recommended Accounting Standards No. 5, *Accounting for Liabilities of the Federal Government*.] unless the net present value exceeds the fair value of the asset).~~

Implementation

96. This Statement requires that leases unexpired at the beginning of the reporting period in which the Statement is implemented be recognized and measured using the facts and circumstances that exist at the beginning of the reporting period. Therefore, in the period of implementation,

- a. the determination of the lease term would assume that the lease term began as of the beginning of the period of implementation and
- b. the lease liability and lease asset should initially be measured based on the remaining lease term and associated lease payments as of the beginning of the period of implementation.

96A. The transitional accommodation applies only to contracts or agreements that meet both of the following criteria:

- a. The contracts or agreements contain nonlease component(s) and may contain lease component(s).

- b. The purpose of the contracts or agreements is primarily attributable to the nonlease component(s), such as service components, based on management's assessment of the nature of the contracts or agreements and professional judgment. The primary purpose attribution to the nonlease component(s) should not appear to be unreasonable based on the nature of the contracts or agreements and professional judgment.
