96B. For contracts or agreements meeting the paragraph 96A criteria above, a reporting entity may elect to account for such contracts or agreements, including the lease component(s), as nonlease contracts or agreements in their entirety. This election applies to contracts or agreements existing as of October 1, 2023, and/or those subsequently entered into or modified on or prior to September 30, 2026 (end of the accommodation period).^{11A} The entity may elect a shorter accommodation period (contracts or agreements subsequently entered into or modified on or prior to September 30, 2025; September 30, 2024, or those existing as of October 1, 2023). The contracts or agreements under this election should be accounted for as nonleases for their remaining term, unless they are subsequently modified after the end of the accommodation period (see par. 96C below).

96C. Entities electing to apply the accommodation should prospectively apply the provisions of SFFAS 54, paragraph 73, to new or modified contracts or agreements meeting the paragraph 96A criteria above that commence after (or become effective after) the accommodation period.^{11B} For lease component modifications effective after the accommodation period that relate to contracts or agreements for which the accommodation was previously applied, the lease terms for such leases would assume that the lease term began as of the effective date of the modification for purposes of initial recognition and measurement.^{11C} For such modifications, the lease liability and lease asset (for lessees) or lease receivable and unearned revenue (for lessors) should initially be measured based on the remaining lease term and associated lease payments.

96D. A reporting entity may apply the provisions of paragraphs 96A-96C to groups of contracts or agreements that are reasonably similar in nature. A reporting entity may select different accommodation periods under paragraph 96B for different groupings of contracts or agreements.

^{11A}Unless the modification affects the primary purpose assessment under par. 96A and results in the primary purpose attribution changing from nonlease component(s) to lease component(s) based on the nature of the modified contract or agreement and professional judgment.

^{11B}Unless the modification is reported as a separate lease as provided in par. 84. In such cases, the additional lease would be recognized as a new lease, while the original lease component(s) may continue to be accounted for as a nonlease component under the accommodation without prospective application of par. 73.

^{11C}Unless the modification is reported as a separate lease under par. 84. See footnote 11B.

96E. A reporting entity electing the above transitional accommodation should disclose the election of the transitional accommodation during the reporting period(s) covered by the accommodation period and the reporting period immediately following the accommodation period. The disclosure need not be repeated during subsequent reporting periods.

97. The following implementation guidance addresses specific leasing circumstances.

- a. Prospective Implementation – Entities should report the effect of implementing this Statement on existing leases prospectively in accordance with paragraph 13 of SFFAS 21, *Reporting Correction of Errors and Changes in Accounting Principles, Amendment of SFFAS 7, Accounting for Revenue and Other Financing Sources*. Accordingly, any changes in assets or liabilities related to existing leases should be treated prospectively. The change should be accounted for in the period of implementation and applicable future periods. No adjustments should be made to previously reported expenses or revenue.
- b. Lease Term – The lease term should be determined based on the provisions of this Statement (par. 14-21). However, the lease term of an existing lease should be based on the number of years remaining in the lease contract or agreement as of the beginning of the period of implementation and not the number of years in the initial lease term. For example, if the initial lease term was 20 years, with no options to extend, at the beginning of Year 20X1 and the entity implements this Statement in Year 20X7 (six years into the lease at the beginning of Year 20X7), the initial lease term upon implementation would be 14 years.
- c. Short-Term Leases – A short-term lease would be determined based on the provisions of this Statement (par. 22-24). However, if the remaining lease term of an existing lease meets the definition of a short-term lease that lease should apply the short-term lease guidance. For example, if the initial lease term was 60 months as of the beginning of Year 20X1, with no options to extend, and the entity implements this Statement in Year 20X5 (48 months into the lease at the beginning of Year 20X5); the initial lease term at implementation would be 12 months and the lease would meet the definition of a short-term lease. Hence, the entity should account for the lease as a short-term lease.

Effective Date

98. The requirements of this Statement are effective for reporting periods beginning after September 30, 2023. Early adoption is not permitted.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment."

Project History

- A1. This Statement amends the lease accounting standards in SFFAS 5 and 6, which had been in effect since 1995. Under SFFAS 5 and 6, leases were classified as either capital or operating depending on whether the lease met any of four tests.
- A2. The Federal Accounting Standards Advisory Board (FASAB or "the Board") undertook this project primarily because SFFAS 5 and 6
 - a. do not make meaningful distinctions between capital and operating leases based on the substance of lease transactions and
 - b. are based on Financial Accounting Standards Board (FASB) lease accounting standards, which have been amended.
- A3. Lease accounting was first addressed by FASAB during the development of SFFAS 5 and 6. At that time, the Board decided to use the high-level language on lease accounting from FASB Statement of Financial Accounting Standards (SFAS) No. 13 *Accounting for Leases* [subsequently codified in Accounting Standards Codification (ASC) – Topic 840 *Leases*]. This minimal lease guidance included the definition of a capital lease, the criteria for capital leases, and the measurement of a capital lease asset and liability. The Board had plans to use this preliminary guidance as a placeholder until it was prepared to add lease accounting to its agenda as a separate project. Lease accounting had been on the list of potential Board agenda items each time the Board has considered its agenda for new projects.

-
- A4. There are several areas of lease accounting that were covered by the FASB standards that were never specifically addressed in the FASAB standards. Some of those topics include leasehold improvements, lease terms, leveraged leases, and subleases. The federal community often stressed that the federal standards on lease accounting should be comprehensive to reduce confusion on whether FASB standards apply to federal entities when FASAB's are silent on a topic.
- A5. Because FASB revised its standards, it was imperative for the Board to revisit lease accounting. One alternative was for the Board to issue detailed implementation guidance on the existing standards. The Board believed that the effort needed to issue such implementation guidance would be better used amending SFFAS 5 and 6. The Board closely reviewed the lease proposals of four standards setters (as stated in paragraph A8) to determine what underlying concepts, if any, would be applicable for federal financial reporting of leases. The Board believes this Statement offers the appropriate guidance for the accounting and financial reporting of leases for federal entities.
- A6. In August 2011, FASAB began a project to revise its current standards on lease accounting. FASAB staff formed a task force to assist in developing this Statement. Task force members included accounting, budget, and subject matter experts from federal agencies and independent public accounting firms.
- A7. The task force met several times over the course of the project and also exchanged numerous ideas and recommendations electronically. Staff sought the task force's views and recommendations in developing and describing alternatives to present to the Board. The task force's assistance was essential and its views carefully considered by members during deliberations. The task force played an important role in the research and release of the exposure draft (ED) preceding this Statement.
- A8. In evaluating an approach applicable to federal leases, the Board considered the approaches used in the following documents:
- a. FASB's SFAS 13, *Accounting for Leases* [superseded by FASB's ASC 840, which was subsequently superseded by ASC 842]
 - b. Governmental Accounting Standards Board's (GASB) Statement No. 87, *Leases*
 - c. International Accounting Standards Board's International Accounting Standard 17, *Leases* [superseded by International Financial Reporting Standard 16]
 - d. International Public Sector Accounting Standards Board's International Public Sector Accounting Standard 13, *Leases*
- A9. At the inception of the project, the Board decided to coordinate with GASB on the lease project because of the similarities among governmental entities regarding lease activities and reporting objectives. Staff worked closely with GASB staff during the development of

this Statement. In 2014, FASAB and GASB met to discuss issues related to each of their ongoing lease accounting projects. As a result of this collaboration, similar wording may appear in some sections of the FASAB and GASB standards.¹²

A10. This Statement amends the lease accounting standards in SFFAS 5 and SFFAS 6. This Statement also establishes distinct standards for intragovernmental leases.

Summary of Outreach Efforts and Responses

A11. FASAB issued the ED, titled *Leases*, on September 26, 2016, with comments requested by January 6, 2017. Upon release of the ED, FASAB provided notices and press releases to the FASAB email listserv, the Federal Register, *FASAB News*, the *Journal of Accountancy*, Association of Government Accountants *Topics*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, the Chief Financial Officers Council, the Council of the Inspectors General on Integrity and Efficiency, the Financial Statement Audit Network, and committees of professional associations generally commenting on EDs in the past (for example, the Greater Washington Society of CPAs, Association of Government Accountants Financial Management Standards Board).

A12. FASAB followed up this broad announcement with direct mailings of the ED to the following relevant congressional committees:

- a. House Committee on Oversight and Government Reform
- b. House Committee on Transportation
- c. House Committee on Budget
- d. Senate Committee on Homeland Security and Governmental Affairs
- e. Senate Committee on Budget
- f. Senate Committee on Environment and Public Works

A13. FASAB received 25 responses from preparers, auditors, professional associations, and citizens. Many respondents had concerns with the definition of leases and the scope of the Statement. Some respondents also identified certain issues that could be clarified within the Statement or addressed in the basis for conclusions.

¹²The GASB material is copyrighted by the Financial Accounting Foundation, 401 Merritt 7, Norwalk, CT 06856, USA, and is used with permission.

A14. The Board extended an invitation to the respondents of the Leases ED to discuss with the Board their comments on the ED and provide further clarification on their responses. In April 2017, five federal entities addressed the Board to further elaborate on their written comments.

A15. The Board did not rely on the number in favor of or opposed to a given position. Staff provides the Board information about the respondents' majority view only as a means of summarizing the comments. The Board considered each response and weighed the merits of the points raised.

Considerations Related to Benefits and Costs

A16. Throughout the course of developing this Statement, the Board sought to minimize the cost of improving the lease accounting requirements. The Board's assessment of the expected benefits and perceived costs of issuing new standards is often more qualitative than quantitative because it is difficult to accurately estimate the costs of implementing new standards. The Board has made its assessments based on the available evidence of expected benefits and perceived costs with the goal of a balance between maximizing benefits and minimizing costs.

Benefits

A17. This Statement will improve upon the existing guidance in SFFAS 5 and 6 by providing

- a. relevant and meaningful financial information needed by federal financial statement users and
- b. comprehensive lease standards that appropriately address the various lease transactions/activities of the federal community.

A18. One of the primary objectives of this Statement is providing federal leasing information needed to meet the operating performance reporting objective.¹³ Recognition of all PP&E leases, except for short-term leases and intragovernmental leases, and the related liabilities ensures the balance sheet informs users regarding the resources and obligations used to fulfill the entity's programs and activities. Additionally, this Statement requires the recognition of the interest cost associated with the entity's leases. This will ensure relevant

¹³SFFAC 1 establishes the operating performance objective and indicates that federal financial reporting should assist report users in evaluating the service efforts, costs, and accomplishments of the reporting entity; the manner in which these efforts and accomplishments have been financed; and the management of the entity's assets and liabilities.

and comparable information is available to assess the entity's operating performance as well as to monitor the entity's investment in PP&E and financing activities.

A19. The Board is aware that this Statement will require entities to ensure all of their leases are appropriately identified for evaluation, which can improve accountability of its resources and obligations. As noted in Statement of Federal Financial Accounting Concepts (SFFAC) 1, *Objectives of Federal Financial Accounting*, accounting can and should contribute to achieving and demonstrating several aspects of accountability, such as

- a. accountability for financial resources;
- b. accountability for faithful compliance or adherence to legal requirements and administrative policies;
- c. accountability for efficiency and economy in operations; and
- d. accountability for the results of government programs and activities, as reflected in accomplishments, benefits, and effectiveness

This Statement contributes to each of these aspects of accountability but is most helpful in achieving accountability for efficiency and economy in operations. By removing somewhat arbitrary and bright-line (rules-based) criteria, a more complete and representationally faithful reporting of PP&E, liabilities, and costs will be provided as discussed in paragraph A21.

A20. The Board believes that in a lease transaction, a lessee receives the right to control the use of another entity's PP&E (the underlying asset—the asset that is subject to the lease, such as a vehicle or building) for a period of time as specified in the contract or agreement. In exchange, the lessee promises to make payments over time for the right to control the use of that underlying asset. The guidance in SFFAS 5 and 6 was based on the notion that some leases are essentially financed purchases of the underlying asset (classified as capital leases) and other leases (classified as operating leases) are not. The classification of a lease as capital or operating depended on whether the lease met any of four tests. Those tests were intended to determine whether most of the risks and benefits of ownership of the underlying asset were transferred to the lessee. Those tests have been criticized because they often resulted in similar leases being accounted for in different ways; making it challenging to identify the total resources needed to support operations and the related obligations.

A21. The Board believes that this Statement increases the comparability among federal entities by recognizing those similar leases as lease assets and lease liabilities and disclosing key leasing information. This approach would replace bright-line distinctions between capital and operating leases. The increased comparability will allow financial report users to make

lease liability and interest cost comparisons among federal entities. This Statement also provides a clear definition of a lease that is intended to align with the concept of control established in SFFAC 5, *Definitions of Elements and Basic Recognition Criteria for Accrual-Basis Financial Statements*. The Board believes that this lease definition will reduce opportunities for entities to structure leasing transactions to achieve a specific accounting outcome. Such opportunities could result in misstated PP&E resources, related obligations, and costs.

Costs

- A22. The Board understands that many federal entities—particularly those having a significant number of long-term leases with non-federal entities—will incur additional costs as a result of this Statement. Based on feedback from the task force and ED responses, the initial costs to implement the revised standards will most likely result from reviewing existing lease agreements, ensuring all leases are appropriately identified, educating staff about how to apply the new requirements, implementing processes and controls to ensure all material leasing activity is captured going forward, and some system changes. Those costs will vary based on the number of leases that an entity has and the complexity of those arrangements. For example, it may take more effort to account for a lease agreement with options to extend and multiple components than a lease without those elements.
- A23. Respondent comments related to costs and benefits raised concerns about the overall effort and resources needed to implement the proposed guidance. Some respondents also raised concerns regarding limited resources to assess a significant volume of leases. Overall, the evaluation and analysis needed to implement this Statement is similar to the capital leases evaluation and analysis needed in SFFAS 5 and 6, which should help mitigate some of the costs of implementation.
- A24. Once implementation of the Statement is complete, the ongoing costs for many entities are unlikely to be significantly higher than the costs of complying with the previous standards. In the previous leases standards, entities were also required to identify leases, evaluate each lease to determine the applicable accounting model to apply (capital or operating), and to subsequently account for each lease, including the ongoing disclosure requirements. This Statement does not substantially change this level of effort and entities may be able to apply the requirements of this Statement using similar systems and processes as those used in previous leases standards to meet those reporting and disclosure requirements.
- A25. Additionally, the Board made several decisions in the interest of reducing implementation costs. These include, but are not limited to, the provisions regarding:
- a. Allowing a short-term lease exception and not requiring disclosures related to short-term leases by either lessees or lessors

- b. Not requiring a lessor to derecognize the underlying asset or calculate a residual value
- c. Allocation of the contract price to multiple components of a lease that allows the stated contract prices to be used if they do not appear to be unreasonable
- d. Allocation of the contract price to multiple components that allow best estimates to be used for allocation if no separate prices are included in the contract or if stated prices appear to be unreasonable
- e. The requirement to treat an entire multiple-component contract as a single lease unit if determining a best estimate is not practicable
- f. The exclusion of intragovernmental leases from balance sheet recognition and measurement as a lease asset and corresponding liability
- g. The extension of the effective date until fiscal year 2021 which allows more time to prepare and reduces the number of existing leases to be evaluated

A26. For many federal entities, the Board's decisions relating to intragovernmental leases will reduce the preparer's level of effort in comparison to the current lease accounting and financial reporting standards. The majority of federal entities engage primarily in intragovernmental leases. Consistent simplified treatment of intragovernmental leases will also reduce the cost of intragovernmental eliminations. These cost reductions were considered carefully by the Board.

A27. This Statement requires that leases unexpired at the beginning of the reporting period in which the Statement is implemented be recognized and measured using the facts and circumstances that exist at the beginning of the reporting period. The Board concluded that this approach to transition, as opposed to a retrospective approach, provides an appropriate balance between minimizing costs of transition and providing users of financial statements with comparable financial information. This implementation approach should further significantly reduce the costs associated with transitioning to the new lease requirements.

Scope

A28. For purposes of applying this Statement, a lease is defined as a contract or agreement whereby one entity (lessor) conveys the right to control the use of PP&E (the underlying asset) to another entity (lessee) for a period of time as specified in the contract or agreement in exchange for consideration. Leases include contracts or agreements that, although not explicitly identified as leases, meet the definition of a lease (which reflects the substance of a lease). This definition does not include contracts or agreements for services,

except those contracts or agreements that contain both a lease component and a service component. A service contract is a contract that directly engages the time and effort of a contractor whose primary purpose is to perform an identifiable task rather than to provide a tangible asset. Service contracts include maintenance of equipment or real property, advisory services, communications services, transportation services, and research and development.

- A29. This Statement does not apply to leases of assets under construction or leases (licenses) of internal use software.
- A30. GASB's Leases Statement No. 87 specifically excludes "contracts that meet the definition of a service concession arrangement in paragraph 4 of Statement No. 60, *Accounting and Financial Reporting for Service Concession Arrangements* (SCAs)." Currently, FASAB standards are silent on SCAs. Through its discussions, the task force identified several federal entities that have SCAs, and there was a concern that the proposed lease definition could inadvertently include SCAs. The Board considered specifically excluding SCAs from this Statement. To accomplish this, the Board considered adopting GASB's definition of SCA from Statement No. 60 because there is no federal definition.
- A31. The Board eventually decided that specifically excluding SCAs from the standards would raise more questions. Furthermore, SCAs are expected to be addressed in the public-private partnership recognition and measurement project; therefore, the Board agreed to remain silent on SCAs in this Statement until such guidance is issued. The Board believes the generally accepted accounting principles hierarchy will continue to guide preparers and auditors in accounting for SCAs.

Definitions

- A32. In this Statement, a lease is defined as "a contract or agreement whereby one entity (lessor) conveys the right to control the use of PP&E (the underlying asset) to another entity (lessee) for a period of time as specified in the contract or agreement in exchange for consideration." In the early stages of the project, the Board deliberated over the use of "contract" or "agreement" in the definition of a lease. The Board considered GASB's approach—where the term contract is more precise and limiting and requires that a lease be legally enforceable. Because legal enforceability is not the primary driver in intragovernmental leasing transactions, although legal enforceability is a primary driver for the non-intragovernmental leases, the Board decided to add "agreement" in addition to "contract" in the lease definition to alleviate ambiguity in its application. This should be especially relevant in the case of intragovernmental leases, which are often referred to as "lease agreements."

A33. The Board also reconsidered the broad scope of the lease definition, which included all nonfinancial assets not specifically excluded in the standards. During deliberations after receiving comment letters, the Board determined that the broader lease definition would necessitate the development of a definition of “nonmonetary assets” and “intangibles,” plus the inclusion of a more developed list of excluded transactions. Also, several respondents and task force members advocated a more narrow definition of leases. In an effort to reduce preparer burden, the Board reconsidered its decision and reevaluated the benefits of a narrower lease definition. The Board decided to narrow the scope of the definition to only include PP&E.

Lease Term – Options to Extend or Terminate

A34. Federal leases often include lessee options to extend or terminate a lease. Due to federal budget scoring rules and the availability of funds, many federal leases include relatively short noncancelable periods. The Board concluded that the lease term used to measure the lease liability should not be limited to the noncancelable lease periods, but it should include certain options to extend or terminate so that the lease term reflects how long the lease is expected to be in effect.

A35. The Board considered several potential probability thresholds for including options to extend or terminate the lease in the lease term. The Board considered its own definition of probable, GASB’s definition of probable, and FASB’s probability threshold “reasonably certain.” FASB’s probable definition equates to more likely than not (>50% probability). GASB’s probable definition equates to likely to occur and has a higher threshold of probability than more likely than not. FASB’s reasonably certain probability has an even higher threshold than likely to occur. The Board agreed to retain its definition of probable because it is more clearly understood with the federal reporting community and there seemed to be no compelling reason to introduce a new term for the sake of a higher threshold.

A36. During deliberations after receiving comment letters, the Board considered additional ways to reduce the preparer’s burden and agreed on the following points:

- a. The “noncancelable period” language should be clarified.
- b. Both the lessee and the lessor’s options to extend or terminate the lease contract or agreement, if probable, should be included in the lease term at its commencement.
- c. When the lessee or lessor is assessing its own options to extend or terminate the contract or agreement, the level of probability is at the probable threshold; however, when the lessee or lessor is assessing the other party’s options to extend or terminate

the contract or agreement, the level of probability is at a higher threshold, like reasonably certain, and should be based on significant evidence.

Remeasurement

A37. This Statement requires that when a lease liability is remeasured, the corresponding lease asset be adjusted by the same dollar amount (except in cases of impairment and in cases in which the adjustment would cause the asset to be reported as a negative amount). While acknowledging that adjusting the lease asset for a change in the lease liability results in the lease asset no longer being measured at adjusted historical cost, the Board believes that such an adjustment is practical.

Short-Term Leases

A38. The Board considered the short-term lease exception GASB proposed, which requires governments to recognize leases with useful lives or maturities of less than one year. The Board decided to align the short-term lease exception with the PP&E standards, which define PP&E as a tangible asset with an estimated useful life of 24 months or more. The reporting of short-term leases in this Statement is intended to reduce the cost to federal entities implementing these standards. This short-term exception eliminates the need for preparers to calculate amounts for short-term lease assets and liabilities. This exception requires lessees and lessors to recognize those leases with useful lives or maturities of less than two years as expense and revenue based on the payment provisions of those lease contracts or agreements and those standards regarding recognition of accruals. This measurement approach is not cash-basis recognition, as federal entities are still required to recognize receivables and payables for lease payments paid or received before or after the period to which they apply.

Intragovernmental Leases

A39. During the research phase of the project, the General Services Administration (GSA) provided an educational session to the Board where GSA representatives explained in-depth GSA's role in federal leasing. Based primarily on that discussion, the Board agreed that intragovernmental leases should be accounted for differently than leases between federal entities and non-federal entities. The Board agreed that a simplified approach for recognizing intragovernmental leases would be pragmatic and cost efficient.

A40. This Statement provides the overall recognition, measurement, and disclosure requirements for intragovernmental leases. An intragovernmental lease is a contract or agreement occurring within a consolidation entity or between two or more consolidation entities as defined under SFFAS 47 whereby one entity (lessor) conveys the right to control

the use of PP&E (the underlying asset) to another entity (lessee) for a period of time as specified in the contract or agreement in exchange for consideration. A lessee would not recognize a lease asset and a corresponding liability for an intragovernmental lease. Accordingly, a lessee would not recognize amortization expense related to a lease asset or interest expense on a lease liability.

- A41. The terms “intragovernmental” and “inter-entity” have been used interchangeably. Earlier FASAB standards predominately used “inter-entity.” However, government-wide usage of “intragovernmental” has become more common; therefore, the Board used intragovernmental in this Statement to describe leases occurring within a consolidation entity or between two or more consolidation entities as defined under SFFAS 47.

Leases Other than Short-Term Leases, Contracts or Agreements that Transfer Ownership, and Intragovernmental Leases

Recognition and Measurement for Lessees – Lease Liability

- A42 SFFAC 5, defines a liability as a “present obligation of the federal government to provide assets or services to another entity at a determinable date, when a specified event occurs, or on demand.” The Board believes that the lessee taking possession of the underlying asset or gaining access to control the use of the underlying asset is an event that creates such an obligation until the end of the lease term.
- A43. The Board believes the present value of future lease payments to be made for the lease term, which represent the obligations of the lessee under the lease contract or agreement, is the appropriate measurement of the liability. Such a calculation is consistent with the premise that a lease is a financing transaction and supports recognition of the cost of the financing.

Recognition and Measurement for Lessees – Lease Asset

- A44. An asset is defined in SFFAC 5 as “a resource that embodies economic benefits or services that the federal government controls.” Lessees should recognize a lease asset to correspond with the lease liability. At the beginning of a lease, the lessee obtains the right to control the use of another entity’s PP&E (the underlying asset), and that right is a resource embodying economic benefits. The Board believes this right meets the definition of an asset. Because the lease liability represents the amount to be paid for the lease asset, the Board concluded that the initial measurement of the lease asset should be based on the measurement of the associated lease liability. PP&E assets generally are measured at historical cost, which is the amount paid for those assets. Therefore, measuring the lease asset based on the lease liability is consistent with historical cost accounting applicable to PP&E.

Recognition and Measurement for Lessors

- A45. Symmetry between the lessee and lessor accounting models is important in establishing accounting and financial reporting standards. The Board believes that federal entity lessees and lessors should account for the shared transaction in a way that mirrors how the other party accounts for it.
- A46. The lease contract or agreement gives the lessor the right to receive payments in exchange for the lessee's right to control the use of the underlying asset. The Board believes that right meets the definition of an asset in SFFAC 5. The right to receive payments is a resource that can be drawn upon, and the lessor presently controls that right.

Board Approval

- A47. This Statement was approved unanimously. Written ballots are available for public inspection at FASAB's offices.

Statement of Federal Financial Accounting Standards 55: Amending Inter-entity Cost Provisions

Status

Issued	May 31, 2018
Effective Date	For periods beginning after September 30, 2018. Earlier implementation is permitted.
Affects	<ul style="list-style-type: none">• SFFAS 4, par. 110, 111, and 113A are amended.• SFFAS 30 is rescinded.• Interpretation 6 is rescinded.
Affected by	None.
Related Guidance	TR 8 was rescinded by TR19

Summary

Statement of Federal Financial Accounting Standards (SFFAS) 4, *Managerial Cost Accounting Standards and Concepts (including Interpretation 6, Accounting for Imputed Intra-departmental Costs: An Interpretation of SFFAS No. 4)*, required reporting entities to recognize the full costs of services received from other federal reporting entities even if there was no requirement to reimburse the providing reporting entity for the full cost of such services.

This Statement revises SFFAS 4 to provide for the continued recognition of significant inter-entity costs by business-type activities and rescinds the following:

- SFFAS 30, Inter-Entity Cost Implementation: Amending SFFAS 4, Managerial Cost Accounting Standards and Concepts¹
- Interpretation 6, Accounting for Imputed Intra-departmental Costs: An Interpretation of SFFAS No. 4

With the rescission of SFFAS 30, paragraphs 110 and 111 of SFFAS 4, as amended, are restored to their original language prior to the issuance of SFFAS 30. However, the Federal Accounting Standards Advisory Board adjusted the standards to require business-type activities to recognize inter-entity costs. Recognition of inter-entity costs by activities that are not business-type activities is not required with the exception of inter-entity costs for personnel benefits and the Treasury Judgment Fund settlements unless otherwise directed by the Office of Management and Budget. Notwithstanding the absence of a requirement, non-business-type activities may elect to recognize imputed cost and corresponding imputed financing for other types of inter-entity costs.

¹ TR 8 was rescinded by TR 19.

Materiality

The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Standards

Scope

1. This Statement applies when a reporting entity is presenting general purpose federal financial reports (GPFFRs), including the consolidated financial report of the U.S. Government (CFR), in conformance with generally accepted accounting principles (GAAP) as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.

Rescission of SFFAS 30, *Inter-entity Cost Implementation: Amending SFFAS 4, Managerial Cost Accounting Standards and Concepts*

2. This paragraph rescinds SFFAS 30, *Inter-Entity Cost Implementation: Amending SFFAS 4, Managerial Cost Accounting Standards and Concepts*, in its entirety. In doing so, this removes the broad requirement to recognize certain inter-entity costs.

Amendments to SFFAS 4, *Managerial Cost Accounting Standards and Concepts*

3. With the rescission of SFFAS 30, paragraphs 110 and 111 of SFFAS 4, *Managerial Cost Accounting Standards and Concepts*, are restored to their original language prior to the issuance of SFFAS 30.
4. This paragraph amends² SFFAS 4, paragraphs 110 and 111 by
 - a. revising the subtitle for this section and moving it before paragraph 110
 - b. revising the paragraphs to provide for recognition of inter-entity costs by business-type activities and recognition of inter-entity costs for non-business type activities that elect to do so and

² The amendments are shown with strikethrough deletions of existing text and underlined additions.

-
- c. providing for other minor updates.

Recognition

110. Implementation of this standard on inter-entity costing should be accomplished in a practical and consistent manner by the various federal entities. ~~Therefore, t~~ The Office of Management and Budget, with assistance from the FASAB staff, should may issue guidance identifying the specific additional inter-entity costs for entities to should recognize. begin recognizing. OMB should then issue guidance identifying these costs These particular inter-entity costs should be specified in accordance with this standard including the recognition criteria presented in paragraphs 111 through 113 below. ~~The OMB should consider information and advice from Treasury, GAO, and other agencies in developing the implementation guidance. It is anticipated that the largest and most important inter-entity costs will be identified first. As entities gain experience in the application of the standard, recognition of other inter-entity costs may be specified in future guidance or required by future standards.~~

Recognition Criteria

111. Recognition of Ideally, all significant inter-entity costs should be recognized. This is especially important when those costs constitute inputs to government goods or services provided to non-federal entities for a fee or user charge. Generally, T the fees and user charges should recover the full costs of those goods and services. [Footnote 33] Thus, the cost of inter-entity goods or services needs to be recognized by the receiving entity in order to determine fees or user charges for goods and services sold outside by the federal government. Recognition of inter-entity costs supporting business-type activities [Footnote 33A] and recognition of inter-entity costs for non-business type activities that elect to do so Such recognition, however, should be made in accordance with the implementation guidance provided by FASAB through one or more Technical Releases. [Footnote 33B] ~~issued by OMB as discussed above. Activities that are not business-type activities are not required to recognize inter-entity costs other than inter-entity costs for personnel benefits and the Treasury Judgment Fund settlements unless otherwise directed by OMB. Notwithstanding the absence of a requirement, non-business-type activities may elect to recognize imputed cost and corresponding imputed financing for other types of inter-entity costs.~~

[Footnote 33: OMB Circular A-25 addresses user charges by federal entities.]

[Footnote 33A: Business-type activity is defined as a significantly self-sustaining activity which finances its continuing cycle of operations through collection of exchange revenue as defined in SFFAS 7, Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting. (See also SFFAS 6, Accounting for Property, Plant, and Equipment, footnote 27.)]

[Footnote 33B: Technical Release (TR) 8, Clarification of Standards Relating to Inter-Entity Costs provides implementation guidance. Additional TRs may be provided by FASAB if needed.]

5. This paragraph amends the sub-title "Accounting and Implementation Guidance" of SFFAS 4 that precedes paragraphs 108 - 109 by adding a reference to the Recognition paragraphs in SFFAS 4. It does not amend the language contained within those paragraphs.

Accounting and Implementation Guidance [Footnote 31A]

[Footnote 31A: These paragraphs should be read in conjunction with "Recognition" paragraphs 110- 113 to provide a complete understanding of the implementation of standard on inter-entity costing due to different recognition requirements for certain types of activities.]

6. This paragraph amends SFFAS 4 by adding a new sub-title "Component Reporting Entity Disclosures" following paragraph 113 and adding paragraph 113A.

Component Reporting Entity Disclosures

113A. Component reporting entities should disclose that only certain inter-entity costs are recognized for goods and services that are received from other federal entities at no cost or at a cost less than the full cost. An example disclosure includes:

Goods and services are received from other federal entities at no cost or at a cost less than the full cost to the providing federal entity. Consistent with accounting standards, certain costs of the providing entity that are not fully reimbursed [by the component reporting entity] are recognized as imputed cost [in the Statement of Net Cost], and are offset by imputed revenue [in the Statement of Changes in Net Position]. Such imputed costs and revenues relate to business-type activities (if applicable), employee benefits, and claims to be settled by the Treasury Judgment Fund.³ However, unreimbursed costs of goods and services other than those identified above are not included in our financial statements.

7. As a result of the above changes, business-type activities are still required to recognize inter-entity costs. Although recognition of inter-entity costs by activities that are not business-type activities is not required with the exception of inter-entity costs for personnel

³ For simplicity, the illustration addresses only the unreimbursed costs required to be imputed by accounting standards. Component reporting entities should identify the general nature of other imputed costs recognized in their financial statements.

benefits and the Treasury Judgment Fund settlements unless otherwise directed by OMB, non-business-type activities may elect to recognize imputed cost and corresponding imputed financing for other types of inter-entity costs.

Rescission of Interpretation 6, *Accounting for Imputed Intra-Departmental Costs: An Interpretation of SFFAS 4*

8. This paragraph rescinds Interpretation 6, *Accounting for Imputed Intra-departmental Costs: An Interpretation of SFFAS 4*, in its entirety.

Effective Date

9. The requirements of this Statement are effective for reporting periods beginning after September 30, 2018. Earlier implementation is permitted.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

Department of Defense Implementation Guidance Request Project

- A1. Since 2014, the Department of Defense (DoD) has requested the Federal Accounting Standards Advisory Board's (FASAB or "the Board") consideration of several financial reporting areas of concern and related audit challenges. While DoD continues its efforts to comply with the Chief Financial Officers Act of 1990 (as amended), it has noted certain challenges in satisfying existing standards including SFFAS 4. Through its goals to associate costs with the related operating activities, SFFAS 4 creates special challenges to large, complex and matrixed organizations such as DoD.
- A2. There are many complex relationships among the components of DoD, such as the military services, as well as between DoD and other related departments, such as the U.S. Coast Guard. Many specialized components provide services to other components of DoD. Generally, DoD operates in a matrixed environment. It shares resources, such as employees and assets, across sub-components that have different functional disciplines to accomplish a shared assignment or mission. Often this is done without removing the resources and associated cost from the sub-component. Because of the extensive sharing of resources, implementing the inter-entity costing requirements would be more challenging and costly to DoD than other departments.
- A3. For example, the Defense Security Service's (DSS) mission includes a variety of security functions for DoD. While it may be obvious that the security functions are for the benefit of all DoD reporting entities, Congress appropriates the funding to DSS and the cost is

primarily (but not always) assumed by DSS. Financial accounting requirements seek to associate the costs of security functions with the activities that benefit from them. For example, the military services request security services but may not be required by law or management practices to fund those security services. Under prior accounting standards, the cost of services would have been associated with each military service through an imputed cost. However, given the complexity of DoD's components and operations, it may not be cost effective to impute costs for such services. In addition, the benefit of doing so may be reduced at DoD in comparison to other federal departments and agencies due to the challenge of identifying outputs and associating outputs with a single reporting entity.

Generally Accepted Accounting Principles History

- A4. FASAB issued SFFAS 4 in July of 1995, and it became effective in fiscal year (FY) 1998. However, the requirement for imputing inter-entity costs that are not reimbursed or are under-reimbursed was not immediately effective in FY1998. The Board explained this in the SFFAS 4 basis for conclusions as follows:

248. As discussed above, the Board realizes that there may be problems in implementing the standard on inter-entity costing. Recognition of non-reimbursed or under-reimbursed inter-entity costs is a new concept to federal entities and involves a new way of thinking about costs. There is concern that application of the standard may be inconsistent among federal entities. In addition, there could be problems, particularly at first, in developing estimates of costs; in revising accounting systems and procedures to accommodate these requirements; and in training personnel to accomplish the task. Furthermore, the Board recognizes the concern that some have about the elimination of inter-entity cost transactions for consolidated reporting since the accounting procedures may be complicated.

249. As a result of these problems and concerns, the Board has expressed the need to take a measured, step-by-step, practical approach to implementation of this standard. Therefore, the Board has decided that, in implementing the standard, it recommends that OMB, with assistance from the FASAB staff, should identify the specific inter-entity costs for entities to begin recognizing and OMB should then issue guidance identifying those costs. OMB should consider the requirements of the standard including the recognition criteria in developing the guidance and it should also consider suggestions and information provided by Treasury, GAO, and other agencies. The Board anticipates the largest and most important inter-entity costs will be identified first, followed by others as entities gain experience in the application of the standard. This approach is seen as a practical way to ensure uniformity in the application and implementation of the standard and to provide time and experience in overcoming any other practical problems which may arise. Also, the Board may recommend specific inter-entity costs for recognition in possible future recommended standards.

-
- A5. In April 2003, the Board issued Interpretation 6 requiring implementation of inter-entity costing for costs between reporting entities that are part of the same department of a larger reporting entity. The requirement was effective for FY 2005.
- A6. In August 2005, the Board issued SFFAS 30, requiring full implementation of the inter-entity cost provision in FY 2009. SFFAS 30 followed extensive research on inter-entity costs by an Accounting and Auditing Policy Committee (AAPC) task force. The results were described in the in SFFAS 30 as follows:

The AAPC Inter-entity Cost Task Force (task force) was formed and initial research was conducted beginning in July 2000. The task force reported its research findings and recommendations to the AAPC at its May 2003 meeting. The task force noted that the current limitation in recognizing inter-entity costs was an impediment to progress towards full costing. The task force did not recommend changes to the current limitations in the application of SFFAS 4 inter-entity costs provisions. However, the task force did not find material non-reimbursed or under-reimbursed inter-entity costs for which government-wide guidance was warranted. The task force report is available on the AAPC website at <http://files.fasab.gov/pdf/files/aapciectfreport.pdf>.

- A7. As provided in paragraphs 28-30 of the basis for conclusions in SFFAS 30, half the respondents disagreed with the proposal that led to SFFAS 30:
28. Approximately one-half of the respondents agreed with the Board's proposal that the inter-entity cost provisions of SFFAS 4 should be fully implemented. In other words, approximately one-half of the respondents disagreed with the Board's proposal and agreed with the alternative view proposal to implement the inter-entity cost provisions by identifying specific costs to be recognized on a step-by-step basis.
29. Approximately one-half of the respondents believed that there were non-reimbursed or under-reimbursed inter-entity costs meeting the recognition criteria in SFFAS 4. Additionally, a majority of respondents believed that federal entities would seek additional reimbursable agreements or modify existing agreements (e.g., by increasing fees) because non-reimbursed or under-reimbursed inter-entity costs may be recognized.
30. Approximately one-half of the respondents believed that additional guidance was needed to apply the factors in determining whether an inter-entity cost is material to the receiving entity and that additional guidance was needed to apply the broad and general support exception.
- A8. In summary, in its due process of SFFAS 30, the Board determined the main concerns identified by respondents included (1) the lack of implementation guidance and (2) costs not

being recognized consistently across agencies. These concerns also supported the task force findings. Therefore, the Board determined that there was a need for additional guidance, which led to the development of Technical Release (TR) 8, *Clarification of Standards Relating to Inter-Entity Costs*. The Board concluded that the standards, along with the issuance of TR 8, balanced the concerns expressed by the task force and the ultimate goals of SFFAS 4. The majority of the Board determined SFFAS 30 was essential to attain the full cost accounting envisioned by SFFAS 4.

Existing Practices (Current SFFAS 4 Imputed Costs)

A9. The goal of SFFAS 4, as amended, to identify full cost is critical to improving performance measurement. This Board understands the previous Board's reasons for issuing SFFAS 30 because paragraphs 34-36 of SFFAS 4 explain the following:

34. Measuring performance is a means of improving program efficiency, effectiveness, and program results. One of the stated purposes of the GPRA of 1993 is to "...improve the confidence of the American people in the capability of the federal government, by systematically holding federal agencies accountable for achieving program results."

35. *Measuring costs is an integral part of measuring performance in terms of efficiency and cost-effectiveness.* Efficiency is measured by relating outputs to inputs. It is often expressed by the cost per unit of output. While effectiveness in itself is measured by the outcome or the degree to which a predetermined objective is met, it is commonly combined with cost information to show "cost-effectiveness." Thus, the service efforts and accomplishments of a government entity can be evaluated with the following measures:

(1) Measures of service efforts which include the costs of resources used to provide the services and non-financial measures;

(2) Measures of accomplishments which are outputs (the quantity of services provided) and outcomes (the results of those services); and

(3) Measures that relate efforts to accomplishments, such as cost per unit of output or cost-effectiveness. (emphasis added)

36. Thus ... performance measurement requires both financial and non-financial measures. *Cost is a necessary element for performance measurement, but is not the only element.* (emphasis added)

A10. Currently, the inter-entity cost provisions have been implemented as envisioned by most agencies. However, the effect of inter-entity costs other than those associated with personnel benefits and Treasury Judgment Fund activities has been significantly less than one percent of gross costs at most agencies, calling into question the cost benefit of the original Statement. FASAB received additional feedback about imputed costs from

representatives of the largest agencies at roundtables on streamlining financial reporting. The comments were consistent with the results that imputed costs are often immaterial at the departmental level. In addition, feedback was consistent that where the outcome of operations requires many sub-components to work together in a matrixed environment (not only for DoD but other departments such as Health and Human Services), relating cost to performance of each sub-component is challenging.

- A11. In addition, ongoing implementation efforts at DoD are expected to be very costly given the complex operating relationships among the sub-components of DoD. Consideration of DoD's implementation challenges and the experiences of other federal reporting entities (described above) led to the Board's reconsideration of the requirements contained within SFFAS 4 and SFFAS 30 under FASAB's Evaluation of Existing Standards project so that any changes would be applicable government-wide.
- A12. Board members agree inter-entity cost must be imputed for those reporting entities conducting business-type activities because the information is directly tied to rates. However, there are certain reporting entities or departments where the operating environment does not lend itself to full cost. For example, there are large, complex departments that may have sub-components that are not distinct for performance purposes. Therefore, the ability to relate cost to performance is more challenging for certain organizations than for others.
- A13. For example, within DoD, under existing accounting standards, the full cost of inter-entity services would be associated with each military service through an imputed cost. However, given the complexity of DoD's components and operations, it may not be cost effective to impute costs for such services. In addition, the benefit of doing so may be reduced due to the challenge of identifying outputs and associating outputs with a single reporting entity such as a military service.
- A14. Based on a government-wide review of (unaudited) percentages of gross cost attributable to imputed costs other than those for personnel benefits and Treasury Judgment Fund settlements, the Board observed the imputed costs are often immaterial at the department level. Personnel benefits and Treasury Judgment Fund settlements are required to be imputed by GAAP standards other than SFFAS 4, and those standards ensure they continue to be imputed.⁴ The modifications herein restore the option for future recognition of other inter-entity costs if OMB decides to do so.
- A15. The Board carefully considered the cost benefits, operating environments, current reporting, and what must be accomplished for those reporting entities that had not

⁴ See (1) paragraphs 93-95 of SFFAS 4, *Managerial Cost Accounting Standards and Concepts*, for the costs of employees' benefits, (2) paragraphs 74-76 of SFFAS 5, *Accounting for Liabilities of The Federal Government*, for the pension's costs subset for personnel benefits, and (3) Interpretation 2, *Accounting for Treasury Judgment Fund Transactions: An Interpretation of SFFAS 4 and SFFAS 5*, for Treasury Judgment Fund settlements.

implemented the requirements. After careful consideration, the Board concluded that the standard will not have negative consequences to reporting entities and that its benefits will clearly exceed its costs for reporting entities that had not implemented inter-entity cost requirements as well as reduce the reporting burden for agencies that have been imputing such costs. Therefore, based on research and the current costs to comply with existing standards, the Board decided to amend existing standards by requiring the reporting of inter-entity costs (other than those associated with personnel benefits and the Treasury Judgment Fund settlement, which is required for all entities) to business-type activities.

Summary of Outreach

- A16. FASAB issued the exposure draft (ED) *Amending Inter-entity Cost Provisions* on September 1, 2017, with comments requested by November 30, 2017.
- A17. Upon release of the ED, FASAB provided notices and press releases to the FASAB subscription email list, the Federal Register, FASAB News, the *Journal of Accountancy*, Association of Government Accountants Topics, the *CPA Journal*, *Government Executive*, *the CPA Letter*, the Chief Financial Officers Council, the Council of the Inspectors General on Integrity and Efficiency, and committees of professional associations generally commenting on EDs in the past (for example, the Greater Washington Society of CPAs and the Association of Government Accountants Financial Management Standards Board).
- A18. FASAB received 16 responses from preparers, auditors, users of federal financial information, and professional associations. The Board did not rely on the number of respondents in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered each response and weighed the merits of the points raised. The respondents' comments are summarized below. The respondents identified certain issues that could be clarified within the Statement or addressed in the basis for conclusions.
- A19. The majority of respondents agreed with the proposal to revise SFFAS 4 to provide for recognition of inter-entity costs by business-type activities and to rescind SFFAS 30 and Interpretation 6.

- A20. One respondent (the Department of Agriculture) disagreed because it believed recognition of inter-entity costs that are not fully reimbursed should not be limited to business-type activities. The respondent explained that the Commodity Credit Corporation (CCC) has no employees⁵ or facilities, and the imputed costs are roughly 10% of operating costs. With further evaluation and consideration of the scenario, the Board determined it may be appropriate to revise the proposed language to remove the word "limit" and allow non-business type activities the election to recognize other imputed costs.
- A21. Based on certain responses, there appeared to be confusion regarding the recognition of inter-entity costs by activities that are not business-type activities. The Board clarified the summary, standards, and basis for conclusions to ensure the language regarding recognition of inter-entity costs by activities that are not business-type activities was explicit.
- A22. The language explained that with the rescission of SFFAS 30, paragraphs 110 and 111 of SFFAS 4, as amended are restored to their original language. However, FASAB adjusted the standards to require business-type activities to recognize inter-entity costs. Recognition of inter-entity costs by activities that are not business-type activities is not required with the exception of personnel benefits and the Treasury Judgment Fund settlements unless otherwise directed by OMB. Notwithstanding the absence of a requirement, non-business-type activities may elect to recognize imputed costs and corresponding imputed financing for other types of inter-entity costs.
- A23. With the amendments presented in this Statement, the revised paragraphs 110-111 of SFFAS 4 are as follows:

Recognition

110. Implementation of this standard on inter-entity costing should be accomplished in a practical and consistent manner by federal entities. The Office of Management and Budget may issue guidance identifying additional inter-entity costs entities should recognize. The inter-entity costs should be specified in accordance with this standard including the recognition criteria presented in paragraphs 111 through 113.

111. Recognition of all significant inter-entity costs is important when those costs constitute inputs to government goods or services provided for a fee or user charge.

⁵ The Commodity Credit Corporation (CCC) is a Government-owned and operated entity that was created to stabilize, support, and protect farm income and prices. CCC also helps maintain balanced and adequate supplies of agricultural commodities and aids in their orderly distribution. ... CCC has no operating personnel. Its price support, storage, and reserve programs, and its domestic acquisition and disposal activities are carried out primarily through the personnel and facilities of the Farm Service Agency (FSA).

Generally, the fees and user charges should recover the full costs of those goods and services. [Footnote 33] Thus, the cost of inter-entity goods or services needs to be recognized by the receiving entity in order to determine fees or user charges for goods and services sold by the federal government. Recognition of inter-entity costs supporting business-type activities [Footnote 33A] and recognition of inter-entity costs for non-business type activities that elect to do so should be made in accordance with implementation guidance provided by FASAB through one or more Technical Releases. [Footnote 33B] Activities that are not business-type activities are not required to recognize inter-entity costs other than inter-entity costs for personnel benefits and the Treasury Judgment Fund settlements unless otherwise directed by OMB. Notwithstanding the absence of a requirement, non-business-type activities may elect to recognize imputed cost and corresponding imputed financing for other types of inter-entity costs.

[Footnote 33: OMB Circular A-25 addresses user charges by federal entities.]

[Footnote 33A: Business-type activity is defined as a significantly self-sustaining activity which finances its continuing cycle of operations through collection of exchange revenue as defined in SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*. (See also SFFAS 6, *Accounting for Property, Plant, and Equipment*, footnote 27.)]

[Footnote 33B: Technical Release (TR) 8, *Clarification of Standards Relating to Inter-Entity Costs* provides implementation guidance. Additional TRs may be provided by FASAB if needed.]

- A24. While agreeing with the proposal, one respondent suggested certain provisions of the proposed statement appear to be in conflict. The respondent noted SFFAS 4 appears to require all reporting entities to recognize the full costs of services received from other federal reporting entities even if there is no requirement to reimburse the providing entity for the full cost. This respondent believed that certain elements of the proposal appear to contradict certain portions of SFFAS 4. The Board acknowledges the ambiguity created by the interrelation of the full cost and inter-entity standards contained in different sections of SFFAS 4. This ambiguity is further complicated if particular paragraphs or sentences of SFFAS 4 are read in isolation.
- A25. The focus of this Statement is narrow and the Board did not undertake a review of SFFAS 4 in its entirety. The Board addressed the ambiguity by adding clarifying language where appropriate, which included a new footnote to an earlier section within the SFFAS. The new footnote explains the recognition paragraphs (par. 110-113) should be considered in conjunction with other sections to provide a complete understanding regarding the implementation of inter-entity costing due to different recognition requirements for different types of activities.

-
- A26. The majority of respondents generally agreed that component reporting entities should provide a concise statement to acknowledge that significant services were received for which no cost is recognized. However, certain respondents suggested additional explanation and clarification regarding the disclosure. The respondents believed providing clarity in these areas would ensure consistency and reduce costs associated with preparation and audit. Certain respondents also suggested sample wording of the disclosure.
- A27. The Board believed the comments indicated concern regarding the "costs" of determining whether unreimbursed inter-entity costs are "significant" and whether the proposed disclosure, without details of specific costs excluded, provided a meaningful distinction between entities with and without "significant inter-entity costs". Based on the comments, the Board determined the disclosure requirements should be revised. Component reporting entities should disclose that only certain inter-entity costs are recognized for goods and services that are received from other federal entities at no cost or at a cost less than the full cost. In addition, the Board included sample wording for the disclosure in the Statement. The Board believed the sample wording would provide the minimum disclosure and that if the reporting entity recognized other imputed costs, that fact should be disclosed as well.
- A28. Although the Board concluded that the proposed Statement will reduce the reporting burden for agencies, it recognizes that any change in standards may require time to implement. Therefore, the Board changed the effective date to be effective for reporting periods beginning after September 30, 2018, with earlier implementation permitted.
- A29. As explained in paragraph 12 of SFFAS 21, *Reporting Corrections of Errors and Changes in Accounting Principles, Amendment of SFFAS 7, Accounting for Revenue and Other Financing Sources*, "For the purposes of this standard, changes in accounting principles also include those occasioned by the adoption of new federal financial accounting standards." Therefore, reporting entities follow the guidance in SFFAS 21 paragraph 13.a. - 13.c. for all changes in accounting principles:
- a. The cumulative effect of the change on prior periods should be reported as a "change in accounting principle." The adjustment should be made to the beginning balance of cumulative results of operations in the statement of changes in net position for the period that the change is made.
 - b. Prior period financial statements presented for comparative purposes should be presented as previously reported.
 - c. The nature of the changes in accounting principle and its effect on relevant balances should be disclosed in the current period. Financial statements of subsequent periods need not repeat the disclosure.

Board Approval

A30. This Statement was approved unanimously. Written ballots are available for public inspection at FASAB's offices.

Statement of Federal Financial Accounting Standards 56: Classified Activities

Status

Issued	October 4, 2018
Effective Date	For periods beginning after September 30, 2018.
Affects	None.
Affected by	None.
Related Guidance	Interpretation 8

Summary

The objective of this Statement is to balance the need for financial reports to be publicly available with the need to prevent the disclosure of classified national security information or activities in publicly issued General Purpose Federal Financial Reports (GPFFRs). This Statement allows financial presentation and disclosure to accommodate user needs in a manner that does not impede national security.

This Statement permits modifications that do not affect net results of operations or net position. In addition, this Statement allows a component reporting entity to be excluded from one reporting entity and consolidated into another reporting entity, and the effect of the modification may change the net results of operations and/or net position.

Further, Interpretations of this Statement, which may themselves contain classified information, will address the requirements of this and other standards and permit other modifications when needed to prevent the disclosure of classified information. Modifications permitted by this Statement and future Interpretations may affect the net results of operations and/or net position of those entities applying the Interpretations.

The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Standards

Scope

1. This Statement applies to federal entities that issue unclassified general purpose federal financial reports (GPFFRs), including the consolidated financial report of the U.S. Government (CFR), in conformance with generally accepted accounting principles (GAAP), as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
2. This Statement does not apply to the reporting of financial information within the GPFFR in the classified environment and only applies when the information is presented in the unclassified environment, such as publicly available component reporting entity GPFFRs. This Statement does not apply to classified GPFFRs provided to cleared personnel, including elected officials. This does not relieve reporting entities from their requirements and responsibilities to comply with other accounting standards in the appropriate classified environment.

Definitions

3. **Classified National Security Information**, also known as "classified information," is any information that has been determined pursuant to Executive Order (EO) 13526, as amended; or any successor orders, to require protection against unauthorized disclosure and is marked to indicate its classified status. Information may be classified at one of the following three levels:
 - a. **TOP SECRET**, which is applied to information, the unauthorized disclosure of which reasonably could be expected to cause exceptionally grave damage to the national security that the original classification authority is able to identify or describe;
 - b. **SECRET**, which is applied to information, the unauthorized disclosure of which reasonably could be expected to cause serious damage to the national security that the original classification authority is able to identify or describe; and
 - c. **CONFIDENTIAL**, which is applied to information, the unauthorized disclosure of which reasonably could be expected to cause damage to the national security that the original classification authority is able to identify or describe.

-
4. **Original Classification Authority** is an individual authorized in writing, either by the President, the Vice President, or by agency heads or other officials designated by the President, to classify information in the first instance.
 5. **Derivative Classification** is incorporating, paraphrasing, restating, or generating in new form information that is already classified, and marking the newly developed material consistent with the classification markings of the source of the information. Derivative classification includes the classification of information based on classification guidance. The duplication or reproduction of existing classified information is not derivative classification.
-

Application of Standards and Disclosures

6. Classified information is prohibited from public release. Classified information is determined by an Original Classification Authority (OCA) or by applying derivative classification.
7. Reporting entities are expected to comply with other accounting standards in the appropriate classified environment. Reporting entities should apply this Statement when an OCA concludes, or others determine by applying derivative classification, that the information is classified and, therefore, cannot be presented without modification in unclassified GPFFRs. Component reporting entities have the discretion to apply this Statement at the program or transaction level.
8. This Statement permits certain modifications to prevent the disclosure of classified information in an unclassified GPFFR. This Statement permits the following:
 - a. An entity may modify information required by other standards if the effect of the modification does not change the net results of operations or net position.
 - b. A component reporting entity is allowed to be excluded from one reporting entity and consolidated into another reporting entity. The effect of the modifications may change the net results of operations and/or net position.
 - c. An entity may apply Interpretations of this Statement that allow other modifications to information required by other standards, and the effect of the modifications may change the net results of operations and/or net position.

The above modifications allowed by this Statement are discussed in more detail in paragraphs 9-11 below.

Presentation and Disclosure Modifications

9. The entity should modify unclassified financial statement presentations, disclosures, required supplementary information (RSI), and required supplementary stewardship information (RSSI) required by other Statements to prevent the disclosure of classified information if the effect of the modification does not change the net results of operations or net position. In this context, modify means:
 - a. Presenting amounts associated with one financial statement line item in another financial statement line item but not presenting narrative explaining the modification.
 - b. Omitting required disclosures, RSI, or RSSI that would otherwise reveal classified information.

Consolidation Modifications

10. An organization may be excluded from a particular reporting entity to prevent the disclosure of classified information and consolidated into another reporting entity. According to SFFAS 47, *Reporting Entity*, there are organizations¹ that should be included in a particular component reporting entity's GPFFR. Such organizations may be excluded from the particular component reporting entity's GPFFR to prevent the disclosure of classified information and consolidated into another reporting entity.² If a reporting entity consolidates an organization that is excluded from another reporting entity's GPFFR to prevent the disclosure of classified information, that consolidation modification may affect one or both reporting entities' net results of operations and/or net position.

Interpretations

11. The Board may issue Interpretations of this Statement that affect other Statements. Such Interpretations may permit other unclassified GPFFR presentation and disclosure modification options, as needed. These modification options would prevent unauthorized disclosure in an unclassified GPFFR. Modifications that affect the entity's net results of operations and/or net position may be allowed by Interpretations of this Statement.

¹ Decisions to exclude an organization from a particular component reporting entity to prevent the disclosure of classified information may be evidenced by, for example, approval or concurrence from an oversight organization, such as the Office of Management and Budget.

² SFFAS 47, *Reporting Entity*, provides the framework for determining what organizations (for example, component reporting entities or sub-components) should be included in the reporting entity's GPFFRs for financial accountability purposes. A reporting entity may be the government as a whole, another component entity, or a subcomponent reporting entity.

Component Reporting Entity Disclosures

12. All federal component reporting entities must include the following in the summary of significant accounting policies.

Accounting standards require all reporting entities to disclose that accounting standards allow certain presentations and disclosures to be modified, if needed, to prevent the disclosure of classified information.

Component reporting entities must not disclose application of this Statement, including any Interpretations of this Statement.

Financial Report of the U.S. Government Disclosures

13. The financial report of the U.S. Government (government-wide financial report) must include the following in the government-wide summary of significant accounting policies.

Accounting standards allow certain presentations and disclosures to be modified, if needed, to prevent the disclosure of classified information. Accordingly, modifications may have been made to certain presentations and disclosures.

The government-wide financial report must not disclose specific Interpretations of this Statement that may have been applied.

Effective Date

- 14 This Statement is effective upon issuance.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. The authoritative sections of the Statements are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

- A1. In August 2016, the Department of Defense (DoD or the Department) identified several areas for the Federal Accounting Standards Advisory Board's consideration where the application of general accepted accounting principles would result in the exposure of classified information. As the DoD was preparing to commence full-scope financial statement audits, it identified specific accounting standard requirements that would conflict with its responsibility to prevent the unauthorized disclosure of information in accordance with Executive Order (EO) 13526 of December 29, 2009, "Classified National Security Information."
- A2. Specifically, EO 13526 recognizes, "Our democratic principles require that the American people be informed of the activities of their Government. Also, our Nation's progress depends on the free flow of information both within the Government and the American people. Nevertheless, throughout our history, the national defense has required that certain information be maintained in confidence in order to protect our citizens, our democratic institutions, our homeland security, and our interactions with foreign nations. Protecting information critical to our Nation's security and demonstrating our commitment to open Government through accurate and accountable application of classification standards and routine, secure, and effective declassification are equally important priorities."
- A3. Executive Order 13526, SEC 1.4 authorizes classification of information regarding the following types:
- military plans, weapons systems, or operations;

-
- foreign government information;
 - intelligence activities (including covert actions), intelligence sources or methods, or cryptology;
 - foreign relations or foreign activities of the United States, including confidential sources;
 - scientific, technological, or economic matters relating to the national security;
 - United States Government programs for safeguarding nuclear materials or facilities;
 - vulnerabilities or capabilities of systems, installations, infrastructures, projects, plans, or protection services relating to the national security; or
 - the development, production, or use of weapons of mass destruction.

Unauthorized disclosure of classified information is prohibited by Title 18 U.S. Code, Section 798.

Summary of Outreach Efforts and Responses

- A4. FASAB issued the ED, titled *Classified Activities* on December 14, 2017, with comments requested by March 16, 2018. Upon release of the ED, FASAB provided notices and press release to the FASAB email listserv, the *Federal Register*, *FASAB News*, the *Journal of Accountancy*, *Association of Government Accountants Topics*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, the Chief Financial Officers Council, the Council of the Inspectors General on Integrity and Efficiency, the Financial Statement Audit Network, and committees of professional associations generally commenting on ED's in the past (for example, the Greater Washington Society of CPAs, Association of Government Accountants Financial Management Standards Board).
- A5. FASAB followed up this broad announcement with direct mailings of the ED to the following relevant congressional committees:
- a. House Homeland Security Committee: Full Committee
 - b. House Homeland Security Committee: Sub-committee on Oversight and Management Efficiency

-
- c. House Homeland Security Committee: Sub-committee on Counterterrorism and Intelligence
 - d. Senate Select Committee on Intelligence
 - e. House Permanent Select Committee on Intelligence
 - f. Senate Armed Services Committee
 - g. House Armed Services Committee
 - h. House Oversight and Government Reform Committee
 - i. Senate Homeland Security and Governmental Affairs Committee
 - j. Senate Appropriations Committee
 - k. House Appropriations Committee
- A6. FASAB received 17 responses from preparers, auditors, and professional associations. Many respondents had concerns with how to inform readers of GPFFRs regarding the potential modifications given the classified nature of the modifications themselves. The Board has revised the disclosure requirements to address the respondents' concerns. The Board has also incorporated revisions proposed by some respondents to clarify this Statement or address issues in the basis for conclusions.
- A7. The Board did not rely on the number in favor of or opposed to a given position. Staff provides the Board information about the respondents' majority view only as a means of summarizing the comments. The Board considered each response and weighed the merits of the points raised.

Standards on Classified Activities

- A8. There are many component reporting entities engaged in classified activities. In the recent past, information regarding the total amount budgeted for such classified activities was not publicly disclosed. However, in the last decade, changes were made so that highly aggregated budget numbers for such activities would be made available. Details remain classified including the amount of funding for particular components within the intelligence community and other departments or agencies. Disclosure of the disaggregated funding details would harm national security interests.

-
- A9. Similarly, disaggregated detailed financial reporting could also harm national security interests. To address the issue of classified information being revealed by applying the requirements of SFFAS 47, *Reporting Entity*, this Statement permits certain modifications and disclosures at both the component reporting entity level and at the government-wide level.
- A10. The Board had several discussions with national security experts and stakeholders that allowed the Board the opportunity to evaluate the available options for presenting classified information in unclassified GPFFRs without jeopardizing national security, including the specific options suggested by respondents. The Board determined that options other than those permitted in this Statement may not always adequately resolve national security concerns. Therefore, based on the evaluation of the options, the Board concluded that this Statement and future related Interpretations provide the optimal solution. This option would allow reporting entities to issue unclassified, publicly available financial statements that comply with accounting standards. Without this Statement, there is a risk that reporting entities may need to classify their entire financial statements to comply with existing accounting standards, which would likely result in the need to classify a large portion of the government-wide financial statements.
- A11. Some respondents suggested that the Board require component reporting entities to only disclose that certain presentation and disclosure modifications have been made when the entity has applied this Statement to prevent the disclosure of classified information. The Board, in consultation with national security stakeholders, concluded that the identification by a component reporting entity that this Statement has been applied would reveal classified information. Doing so would allow GPFFR users to identify component reporting entities with and without modifications. Further, users could identify changes among component reporting entities over time if modifications are disclosed in some reporting periods but not others. Therefore, the Board is requiring a more neutral disclosure for component reporting entities and the government-wide entity to prevent specific identification of component reporting entities applying this Statement. This neutral disclosure
- a. protects the identity of those component reporting entities that have made modifications to prevent the disclosure of classified information, and
 - b. avoids implying that a component reporting entity has made a modification when they have not.
- A12. This Statement and future Interpretations would be applied as needed based on an assessment of the need to prevent the disclosure of classified information or to assist other departments and agencies by including an organization as described in paragraph 10. During the audit, the preparer would inform the properly cleared auditor whether and how

this Statement and related Interpretations were applied. GPFFR modified pursuant to this Statement and related Interpretations would be considered in accordance with generally accepted accounting principles.

- A13. Some respondents questioned the proposal to require documentation retained in the appropriate environment to adequately support classified information and modifications. Such documentation was intended to allow recorded amounts modified to prevent the disclosure of classified information to reconcile in aggregate to unmodified schedules or other documentation subject to audit. Upon review, members noted that the proposed requirement related to systems, controls, and audit procedures. This proposed level of detail regarding documentation exceeded that of other financial accounting standards.
- A14. The Board believes that standards regarding the underlying documentation of modifications are unnecessary and has removed the proposed requirement. The Board expects that - as with other aspects of financial statements - the preparer will maintain sufficient documentation to support modifications. Such documentation is an important aspect of management control over financial reporting. The documentation will be available during the audit but in an environment appropriate to classified information.
- A15. Modifications may not be needed to prevent the disclosure of certain classified information. Therefore, this Statement permits, rather than requires, modifications on a case-by-case basis.

Process for Future Classified Interpretations

- A16. The Board anticipates issuing classified Interpretations of this Statement to address specific issues raised by affected component reporting entities. The Board has established a process to engage cleared stakeholders in due process regarding classified Interpretations of this Statement. The process will engage users of information related to classified activities.
- A17. The six-step process established in the "Memorandum of Understanding among the Government Accountability Office, the Department of the Treasury, and the Office of Management and Budget, on Federal Government Accounting Standards and a Federal Accounting Standards Advisory Board" will be followed in developing classified Interpretations. Appropriate protections will be applied to classified information, consistent with federal law applicable to federal advisory committees and their activities involving information classified pursuant to Executive Order. The six-step process for classified Interpretations and related protections are described below.

-
- a. Identification of accounting issues and agenda decisions
 - i. The Board will carry out this step by consulting with cleared stakeholders in secure facilities. Stakeholders - including preparers, auditors, and users of classified information - will be informed regarding the process for raising issues for Board consideration.
 - b. Preliminary deliberations
 - i. Preliminary deliberations will engage all members of the Board. Deliberations will occur during closed meetings. Closed meetings will be approved and announced in the Federal Register consistent with the process established in the Federal Advisory Committee Act.
 - c. Preparation of initial documents (issues papers and/or discussion memoranda)
 - i. We expect that all initial documents will contain classified information and will therefore be subject to federal requirements pertaining to classified information. Initial documents will be prepared by cleared individuals of FASAB staff and representatives of affected organizations who have original or derived classification authority.³ Such documents will be shared with members in a setting appropriate to the classification level of the documents. Members will be afforded adequate time to review the materials, ask questions, and deliberate over the materials before making decisions regarding the issues raised.
 - d. Release of documents to the public, public hearings, and consideration of comments
 - i. Members of the public will have an opportunity to comment on the proposed Statement. The public will be able to comment on the general subject matter discussed in the proposed Statement and the existence of classified Interpretations. The Board will consider all comments provided.
 - ii. Also, because we expect that all documents related to Interpretations will contain classified information, release will be limited to cleared individuals and organizations that have signed a non-disclosure agreement and have a need-to-know, in accordance with federal requirements pertaining to classified information. The Board will ensure a representative group of stakeholders with varied perspectives and appropriate clearances are engaged. The Board

³ The Board does not have specific original classification authority. The classification level of all work products will be determined by those with that authority.

expects to seek input from elected representatives of the public and appointed government officials to ensure the needs of citizens are balanced against national security interests. The Board will consider all comments and input received from the representative group of stakeholders.

- e. Further deliberations, exposure draft, and consideration of comments
 - i. This step will occur in closed sessions as noted above. The Board will seek input from cleared individuals, including elected and appointed officials, and organizations to the greatest extent possible given the classified nature of the materials and deliberations. The Board will consider all comments and input received from the representative group of stakeholders.
- f. Vote to approve proposed Interpretations
 - i. Consistent with the Board's established procedures for consideration of proposed Interpretations, final classified Interpretations will be those approved by a majority of the members and not objected to by a member representing the Comptroller General, the Secretary of the Treasury, or the Director of OMB during a 45-day review period. Final classified Interpretations will be maintained by FASAB. Component reporting entities should contact FASAB to arrange access to the classified Interpretations as needed. FASAB will provide access to any relevant Interpretations following appropriate security procedures.

A18. This approach balances the public's interest in financial information with the need to prevent the disclosure of classified information. The Board's role in promulgating classified Interpretations is to appropriately guide the modifications used in preventing the disclosure of classified information.

A19. The Board may issue Interpretations and implementation guidance in the classified environment. The issuance of classified Interpretations and guidance by the Board will be publicly announced in the Federal Register and on the FASAB website. The public will be made aware of the guidance's existence and the unclassified title of the guidance. All classified guidance will be made available only to those individuals who have been designated as having a need to know and who hold the proper clearances.

Board Approval

A20. This Statement was approved unanimously. Written ballots are available for public inspection at FASAB's offices.

Statement of Federal Financial Accounting Standards 57: Omnibus Amendments 2019

Status

Issued	September 27, 2019
Effective Date	Paragraphs 9 and 10 are effective upon issuance. Paragraph 2 is effective for reporting periods beginning after September 30, 2019. Early adoption is not permitted. Paragraphs 3 through 6, 11, and 12 are effective for reporting periods beginning after September 30, 2023. Early adoption is not permitted.
Affects	<ul style="list-style-type: none">• SFFAS 5, par. 15• SFFAS 6, par. 26• SFFAS 8 is rescinded.• SFFAS 49, par. 15.b, footnotes 7-8
Affected by	<ul style="list-style-type: none">• SFFAS 58 amends the effective date in par. 15.• SFFAS 60 rescinds par. 7-8 and amends par. 15

Summary

The objective of this Statement is to address consistency issues and other improvements that have been identified during implementation and application of certain FASAB Statements. This Statement:

- eliminates the required supplementary stewardship information (RSSI) category by rescinding Statement of Federal Financial Accounting Standards (SFFAS) 8, *Supplementary Stewardship Reporting*,
- updates references to leases in SFFAS 5, *Accounting for Liabilities of the Federal Government*, and SFFAS 49, *Public-Private Partnerships: Disclosure Requirements*, and
- makes a minor change to SFFAS 6.

Table of Contents

Summary	1
Standards	3
Scope	3
Eliminating the Required Supplementary Stewardship Information Category	3
Amendments to SFFAS 5, 6, and SFFAS 49	3
Effective Date	7
Appendix A: Basis for Conclusions	8
Appendix B: Abbreviations	12

Standards

Scope

1. This Statement applies to federal entities that present general purpose federal financial reports (GPFFRs), including the consolidated financial report of the U.S. Government (CFR), in conformance with generally accepted accounting principles (GAAP), as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.

Eliminating the Required Supplementary Stewardship Information Category

2. This paragraph rescinds SFFAS 8, *Supplementary Stewardship Reporting*, in its entirety, including the requirement for reporting information in the required supplementary stewardship information (RSSI) category.

Amendments to SFFAS 5, 6, and SFFAS 49

3. SFFAS 54, *Leases* becomes effective for reporting periods beginning after September 30, 2023. Early adoption is not permitted.
4. Specifically, this Statement amends the following documents:
 - SFFAS 5, *Accounting for Liabilities of the Federal Government*
 - SFFAS 6, *Accounting for Property, Plant, and Equipment*
 - SFFAS 49, *Public-Private Partnerships: Disclosure Requirements*
5. This paragraph amends paragraph 15 of SFFAS 5 to remove a reference to capital leases:

15. This section presents a definition and criteria for recognizing a liability and related disclosure requirements. It also provides specific standards for contingencies, ~~capital leases~~, federal debt, pensions, other postemployment and retirement benefits, and insurance (other than social insurance) and guarantees.

-
6. The revised paragraph 15 of SFFAS 5 is as follows:

15. This section presents a definition and criteria for recognizing a liability and related disclosure requirements. It also provides specific standards for contingencies, federal debt, pensions, other postemployment and retirement benefits, and insurance (other than social insurance) and guarantees.

7. Paragraph 7 was rescinded by SFFAS 60.

8. Paragraph 8 was rescinded by SFFAS 60.

9. This paragraph amends paragraph 26 of SFFAS 6 by revising the final bullet to remove a reference to "material amounts"; materiality applies to all of the bulleted items

26. All general PP&E shall be recorded at cost. Although the measurement basis for valuing general PP&E remains historical cost, reasonable estimates may be used to establish the historical cost of general PP&E, in accordance with the asset recognition and measurement provisions herein. Cost shall include all costs incurred to bring the PP&E to a form and location suitable for its intended use. For example, the cost of acquiring property, plant, and equipment may include:

- amounts paid to vendors;
- "transportation charges to the point of initial use;
- handling and storage costs;
- labor and other direct or indirect production costs (for assets produced or constructed);
- engineering, architectural, and other outside services for designs, plans, specifications, and surveys;
- acquisition and preparation costs of buildings and other facilities;
- an appropriate share of the cost of the equipment and facilities used in construction work;
- fixed equipment and related installation costs required for activities in a building or facility;

-
- direct costs of inspection, supervision, and administration of construction contracts and construction work;
 - legal and recording fees and damage claims;
 - fair value of facilities and equipment donated to the government; and
 - ~~material amounts~~ of interest costs paid.^[footnote omitted]

10. The revised paragraph 26 of SFFAS 6 is as follows:

26. All general PP&E shall be recorded at cost. Although the measurement basis for valuing general PP&E remains historical cost, reasonable estimates may be used to establish the historical cost of general PP&E, in accordance with the asset recognition and measurement provisions herein. Cost shall include all costs incurred to bring the PP&E to a form and location suitable for its intended use. For example, the cost of acquiring property, plant, and equipment may include:

- amounts paid to vendors;
- transportation charges to the point of initial use;
- handling and storage costs;
- labor and other direct or indirect production costs (for assets produced or constructed);
- engineering, architectural, and other outside services for designs, plans, specifications, and surveys;
- acquisition and preparation costs of buildings and other facilities;
- an appropriate share of the cost of the equipment and facilities used in construction work;
- fixed equipment and related installation costs required for activities in a building or facility;
- direct costs of inspection, supervision, and administration of construction contracts and construction work;

-
- legal and recording fees and damage claims;
 - fair value of facilities and equipment donated to the government; and
 - "Interest costs paid."^[footnote omitted]

11. This paragraph amends footnote 7 and 8 of paragraph 15.b in SFFAS 49 by revising the footnote to remove the reference to capital and operating leases:

15. The following arrangements and transactions are not subject to the provisions of this Statement:

- a. Non-lease acquisitions of property, plant, and equipment (PP&E) that are subject to the Federal Acquisition Regulations (FAR) and the private entity is not directly financing, operating, or maintaining the PP&E as part of an overall risk-sharing arrangement or transaction
- b. Leases⁷ that are not bundled⁸ and are entered into using General Services Administration (GSA)-delegated authority (This Statement does not amend existing standards applicable to leases and those standards remain applicable to all such arrangements/transactions.)

FN 7 – The term leases, as defined under FASAB standards, includes enhanced use leases ~~and both capital and operating leases, as defined under current FASAB standards.~~

FN 8 – A bundled lease typically arises when parties to a leasing arrangement agree to include additional products or services in the leasing arrangement, some of which might be related or tied directly to the underlying leased product or services (for example, ~~software~~ product updates or maintenance). Although these additional products or services are not always expressly identified in the underlying lease agreement and may be documented in other agreements, they are nonetheless considered "bundled" with the underlying lease agreement.

12. The revised footnotes 7 and 8 of paragraph 15.b in SFFAS 49 is as follows:

15. The following arrangements and transactions are not subject to the provisions of this Statement:

- a. Non-lease acquisitions of property, plant, and equipment (PP&E) that are subject to the Federal Acquisition Regulations (FAR) and the private entity is not directly financing,

operating, or maintaining the PP&E as part of an overall risk-sharing arrangement or transaction

- b. Leases⁷ that are not bundled⁸ and are entered into using General Services Administration (GSA)-delegated authority (This Statement does not amend existing standards applicable to leases and those standards remain applicable to all such arrangements/transactions.)

FN 7 - The term leases, as defined under FASAB standards, includes enhanced use leases.

FN 8 - A bundled lease typically arises when parties to a leasing arrangement agree to include additional products or services in the leasing arrangement, some of which might be related or tied directly to the underlying leased product or services (for example, product updates or maintenance). Although these additional products or services are not always expressly identified in the underlying lease agreement and may be documented in other agreements, they are nonetheless considered "bundled" with the underlying lease agreement.

Effective Date

- 13. Paragraphs 9 and 10 of this Statement are effective upon issuance.
- 14. Paragraph 2 of this Statement is effective for reporting periods beginning after September 30, 2019. Early adoption is not permitted.
- 15. Paragraphs 3 through 6, 11, and 12 of this Statement are effective for reporting periods beginning after September 30, 2023. Early adoption is not permitted.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. The authoritative sections of the Statements are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

PROJECT HISTORY

Required Supplementary Stewardship Information

- A1. SFFAS 8 established the RSSI category to distinguish information about the government's stewardship from basic financial statements and required supplementary information (RSI). The Federal Accounting Standards Advisory Board (FASAB or "the Board") reasoned that information about the government's stewardship may include non-financial data, may be based on projections or assumptions, and may not articulate with basic financial statements.¹ In addition, the importance of stewardship information needed to be highlighted² and receive more audit scrutiny than RSI.³
- A2. Audit guidance for RSSI, however, was never developed. The Board consequently began eliminating the category by reclassifying most of the RSSI elements to the basic financial statements or RSI. Only the stewardship investments information remained in RSSI and this Statement eliminates the requirement to present stewardship investments trend information as RSSI.

¹ SFFAS 8, par. 20.

² SFFAS 8, par. 111.

³ SFFAS 8, par. 114.

-
- A3. While the Board questioned whether the RSSI category should be eliminated, stewardship investment information in some form can help users assess whether government operations have contributed to the nation's current and future well-being. Stewardship investments include expenses incurred for nonfederal physical property, such as highways and bridges; expenses incurred to increase or maintain national economic productive capacity, such as investments in human capital; and expenses incurred for research and development that are intended to provide future benefits or returns. However, outreach regarding this proposal revealed that users may define "investment" more broadly than SFFAS 8 and prefer cash basis data that the Office of Management and Budget reports annually.
-

Leases

- A4. The Board believes it is appropriate to amend the necessary standards to eliminate references to "capital" and "operating" leases used prior to the issuance of SFFAS 54. The terms "capital" and "operating" leases were eliminated with the issuance of SFFAS 54. This proposal provides conforming amendments to the following statements:
- SFFAS 5, *Accounting for Liabilities of the Federal Government*
 - SFFAS 6, *Accounting for Property, Plant, and Equipment*
 - SFFAS 49, *Public-Private Partnerships: Disclosure Requirements*
-

Clarity Amendments

- A5. Paragraph 26 of SFFAS 6 provides examples of costs that may be included as capitalized cost of acquiring PP&E. One example references "material amounts of interest cost paid." Some found it confusing to qualify only one of the examples as "material," but not the others. The Board believes removing the reference to "material amounts" will not change existing practice while improving the clarity of existing standards.
-

Summary of Outreach Efforts and Responses

- A6. FASAB issued the exposure draft (ED) on February 22, 2019 with comments requested by April 23, 2019. Upon release of the ED, notices and press releases went to the following: the *Federal Register*, *FASAB News*, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive* and the *CPA Letter*, the CFO Council, the Council of the Inspectors

General on Integrity and Efficiency (CIGIE), the Financial Statement Audit Network; and committees of professional associations generally commenting on EDs in the past.

- A7. FASAB received a total of 11 responses from preparers, auditors, and professional associations. The majority of respondents generally agreed with the Board's proposal to eliminate the RSSI category by rescinding SFFAS 8. Respondents noted that the proposal would remove a reporting requirement that users, in their observation, have not relied upon or utilized.
- A8. Respondents that did not agree with the proposal to eliminate the RSSI category noted that a separate category highlights the importance of the stewardship information and distinguishes it from other information. Stewardship information also informs users on the extent of investments that provide long-term benefits for the nation.
- A9. Eliminating the RSSI category does not preclude preparers from reporting investment information in management's discussion and analysis (MD&A), other information, or both. Also, preparers have the discretion to employ the technology they deem appropriate for assisting users in locating the information within their GPFFR and among other reporting that may provide more detailed information.
- A10. Stewardship investments may be significant for some reporting entities and warrant discussion in the MD&A. SFFAS 15, *Management's Discussion and Analysis*, states that MD&A should provide "a clear and concise description of the reporting entity and its mission, activities, program and financial performance, systems, controls, legal compliance, financial position, and financial condition."⁴
- A11. Given the Board's decision to eliminate the RSSI category, the majority of respondents agreed that guidance on reporting stewardship investment information in MD&A would be needed. Guidance would help ensure that reporting entities consistently provide the information that would be most beneficial to users. The Board is conducting a project on improving MD&A, and the project will consider the respondents' concerns and suggestions.
- A12. Regarding the clarity amendments, all of the respondents agreed with the proposal to update references to leases in SFFAS 5, SFFAS 6, and SFFAS 49, and make a minor change for clarity. Based on a suggestion from a respondent, the Board edited proposed language to clarify a reference to leasehold improvements. Also, respondents suggested additional changes to SFFAS 6 and other requirements. The Board will review those additional respondent suggestions in future Omnibus amendments or during the evaluation of existing standards.

⁴ SFFAS 15, par. 1.

A13. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered each response and weighed the merits of the points raised.

Board Approval

A14. This Statement was approved for issuance by all members of the Board. Ballots are available for inspection at the Board's offices.

Scope

1. This Statement applies to federal entities that present general purpose federal financial reports (GPFFR), including the consolidated financial report of the U.S. Government (CFR), in conformance with generally accepted accounting principles (GAAP), as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
2. This Statement amends SFFAS 54, *Leases*, to defer the effective date of implementation by three years.
3. This Statement also amends SFFAS 57, *Omnibus Amendments 2019*, to defer the effective date of certain conforming amendments contained therein related to SFFAS 54.

Amendment to SFFAS 54

4. Paragraph 98 of SFFAS 54 is amended as follows:

98. The requirements of this Statement are effective for reporting periods beginning after September 30, ~~2020~~ 2023. Early adoption is not permitted.

Amendment to SFFAS 57

5. Paragraph 15 of SFFAS 57 is amended as follows:

15. Paragraphs 3 through 8, 11, and 12 of this Statement are effective for reporting periods beginning after September 30, ~~2020~~ 2023. Early adoption is not permitted.

Effective Date

6. The requirements of this Statement are effective upon issuance.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. The authoritative sections of the Statements are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

- A1. In April 2018, the Federal Accounting Standards Advisory Board (FASAB or "the Board") issued SFFAS 54. SFFAS 54 provides a comprehensive set of lease accounting standards to recognize federal lease activities in the reporting entity's GPFFR and include appropriate disclosures. Such standards were set to go into effect for reporting periods beginning after September 30, 2020.
- A2. Since the issuance of SFFAS 54, the Accounting and Auditing Policy Committee (AAPC) initiated a project to develop implementation guidance for the federal financial accounting and reporting community on applying the requirements of SFFAS 54.¹ As part of this effort, the Board and AAPC engaged a task force to obtain feedback from stakeholders and constituents and monitor implementation efforts across the federal government.

Summary of Outreach and Responses

- A3. The Board believes that SFFAS 54 offers appropriate guidance for the accounting and financial reporting of leases for federal entities and maintains the views expressed in the basis for conclusions to SFFAS 54 regarding costs and benefits. Implementation of SFFAS

¹ The AAPC is a permanent committee established by the Board to assist the federal government in improving financial reporting by timely identifying, discussing, and recommending solutions to accounting issues within the framework of existing authoritative literature. The AAPC works under the general oversight of the Board.

54 will ensure that GPFFR users receive useful information regarding the resources and obligations that support federal programs and activities and can monitor federal investments in property, plant, and equipment, and lease financing activities.

- A4. Notwithstanding such benefits, the Board believes a three-year deferral of the effective date of SFFAS 54 is a prudent response commensurate to the identified implementation challenges, costs, and constraints and will allow reporting entities to reliably implement SFFAS 54.
- A5. The Board reviewed and discussed implementation issues in August and October of 2019 by reviewing Board and task force briefing materials and receiving feedback and status reports from task force panelists and technical staff.
- A6. Through these efforts, the Board gained an understanding of the nature and magnitude of implementation challenges encountered by federal reporting entities. The Board found that challenges were significant for reporting entities with large lease portfolios.
- A7. The following factors (not all-inclusive) are examples of significant challenges encountered when implementing SFFAS 54:
 - a. The need to develop and acquire information technology, data elements, core systems requirements, and internal controls at the government-wide and component reporting entity levels
 - b. Resource limitations, coupled with extensive preparation activities necessary for implementation
 - c. The need for the federal financial accounting and reporting community to receive, understand, and apply forthcoming implementation guidance due to the extensive complexity and breadth of implementation issues identified by the leases implementation guidance task force
- A8. Based on the initial feedback obtained by the Board and its SFFAS 54 implementation monitoring activities, the Board agreed that proposing a two-year deferral of the effective date of SFFAS 54 in its exposure draft (ED) *Deferral of the Effective Date of SFFAS 54, Leases*, was appropriate. In the proposal, the Board noted that it expected to issue additional SFFAS 54 implementation guidance during fiscal year 2021.
- A9. FASAB issued the ED on December 18, 2019, with comments requested by January 31, 2020. Upon release of the ED, notices and press releases went to the following: the Federal Register, the FASAB newsletter, *Journal of Accountancy*, *Accounting Today*, the Chief Financial Officers Council, the Council of the Inspectors General on Integrity and Efficiency,

committees of professional associations generally commenting on EDs in the past (for example, the Greater Washington Society of CPAs and the Association of Government Accountants Financial Management Standards Board), and the roster of AAPC leases implementation task force members and observers.

- A10. Twenty-two comment letters were received from preparers, auditors, professional associations, and users of federal financial information. The Board considered responses to the ED at its April 2020 meeting. The Board did not rely on the number in favor of or opposed to a given position. The Board considered each response and weighed the merits of the points raised. The respondents' comments are summarized below.
- A11. All respondents agreed that a deferral was necessary. Twenty-one of 22 indicated agreement with the two-year deferral, while one of 22 stated that two years would not provide sufficient time to consider forthcoming implementation guidance in conducting implementation preparation activities.
- A12. Several respondents agreed with the proposal while expressing concerns about the complexity and breadth of implementation challenges. Respondents also expressed a desire to have sufficient time to consider and integrate forthcoming implementation guidance. A few respondents indicated that ongoing systems development efforts and implementation preparation activities are likely to be affected by such guidance. Some were concerned about risks and costs incurred as a result of compressed timeframes for considering the guidance, once finalized and issued.
- A13. Based on the feedback obtained through the leases implementation task force, staff research and outreach, and public comments, the Board concluded that a three-year deferral was appropriate.
- A14. Most federal reporting entities will continue their current lease accounting practices until SFFAS 54 becomes effective; they should not follow the Financial Accounting Standards Board's (FASB) new lease standards (Accounting Standards Codification - *Leases* - *Topic 842*) nor should they follow the Governmental Accounting Standards Board's (GASB) new lease standards (GASB Statement No. 87, *Leases*).²
- A15. Rather, reporting entities should continue to follow the current FASAB guidance that addresses lease transactions. This comprises paragraphs 43-46 of SFFAS 5 and paragraphs 20 and 29 of SFFAS 6. These paragraphs are not rescinded by SFFAS 54 until

² Except for a limited number of reporting entities permitted to follow FASB generally accepted accounting principles (see SFFAS 34, par. 9-12). Those entities will adopt new lease accounting standards promulgated by FASB as appropriate.

it becomes effective. Previously-existing FASB guidance under Accounting Standards Codification - *Leases - Topic 840* should continue to be used when the accounting treatment for a lease transaction or event is not specified by paragraphs 43-46 of SFFAS 5 and paragraphs 20 and 29 of SFFAS 6.

Board Approval

A16. This Statement was approved for issuance by all members of the Board.

Summary

The objective of this Statement is to ensure consistent accounting treatment and reporting for federal land.

This Statement sets forth the Federal Accounting Standards Advisory Board's (FASAB or "the Board") agreement with those in the financial reporting community who noted the importance of having accounting standards that provide relevant, reliable, and consistent information concerning federal land.

The Board determined that the vast holdings and uses of federal land cannot adequately be conveyed to the public through monetary measurements. Specifically, limitations inherent in valuations such as passage of time and inflation make historical cost less relevant to users. Alternative methods needed to routinely appraise or corroborate over 622 million acres of land are impractical and cost prohibitive. Instead, the Board concluded that, consistent with its conceptual framework, reporting estimated acres increases transparency, comparability, consistency, and reliability of land information while either avoiding or at least significantly minimizing burden and costs that would otherwise be borne if monetary measures were used to recognize land on the balance sheet.

Prior to the issuance of this Statement, federal accounting standards required the capitalization of the historical cost of general property, plant, and equipment (G-PP&E) land and disclosures regarding restrictions on the use or convertibility of G-PP&E to include G-PP&E land. Similarly,

prior to this Statement federal accounting standards required the expensing of stewardship land (SL) for the period in which the acquisition cost was incurred and disclosures on the relationship between SL and the entity's mission, the entity's SL policies, major categories of SL use, and physical units of SL.

This Statement's principal requirements include:

- Reclassifying G-PP&E land and permanent land rights as a non-capitalized asset
- Referencing a note on the balance sheet that discloses information about G-PP&E land and permanent land rights without an asset dollar amount
- Reporting estimated acres of G-PP&E land and SL using three predominant use sub-categories
 - Conservation and preservation land
 - Operational land
 - Commercial use land
- Reporting estimated acres of land held for disposal or exchange
- Reporting land rights information, whether such rights are permanent or temporary, and amounts paid during the year to maintain such rights

Materiality

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial.¹ A misstatement, including omission of information, is material if, in light of surrounding facts and circumstances, it could reasonably be expected that the judgment of a reasonable user relying on the information would change or be influenced by the correction or inclusion of the information. Materiality should be evaluated in the context of the specific reporting entity. Determining materiality requires appropriate and reasonable judgment in considering the specific facts, circumstances, size, and nature of the misstatement. Consequently, after quantitative and qualitative factors are considered, materiality may vary by financial statement, line item, or group of line items within an entity.

¹ Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled Materiality, for a detailed discussion of the materiality concepts.

Standards

Scope

1. This Statement applies to federal entities that present general purpose federal financial reports, including the consolidated financial report of the U.S. Government (CFR), in conformance with generally accepted accounting principles, as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
2. This Statement amends the following guidance:²
 - a. SFFAS 6, *Accounting for Property, Plant, and Equipment*
 - b. SFFAS 29, *Heritage Assets and Stewardship Land*
 - c. SFFAS 32, *Consolidated Financial Report of the United States Government Requirements: Implementing Statement of Federal Financial Accounting Concepts 4 "Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government"*
 - d. SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*
 - e. SFFAS 42, *Deferred Maintenance and Repairs: Amending Statements of Federal Financial Accounting Standards 6, 14, 29, and 32*
 - f. SFFAS 50, *Establishing Opening Balances for General Property, Plant, and Equipment: Amending SFFAS 6, SFFAS 10, SFFAS 23, and Rescinding SFFAS 35*³
3. This Statement does not change existing standards addressing Tribal land and land rights other than permanent land rights. In addition, this Statement does not apply to:

² Amendments to each of the Statements include, where applicable, (1) strikethrough deletions of existing text and (2) red, underlined additions. In some amendments, red underlining has been omitted for reading ease.

³ Amendments to SFFAS 50, a Statement which amended SFFAS 6, will be incorporated by reference as reflected in the SFFAS 6 amendments contained herein.

-
- a. land held in trust or administered on behalf of Indian tribal governments or individual Indian land,
 - b. the Outer Continental Shelf (OCS).⁴
-

Amendments to SFFAS 6, Accounting for Property, Plant, and Equipment

- 4. This paragraph amends SFFAS 6 to clarify that land and permanent land rights are to remain in the general property, plant, and equipment (G-PP&E) category but are not to be capitalized.
 - a. Paragraph 25 is amended as follows:

25. Land and permanent land rights^{28.1} acquired for or in connection with other general PP&E²⁹ ~~shall be included in~~ are considered general PP&E but are not to be capitalized on the balance sheet. General PP&E land shall exclude (1) withdrawn public lands^{29.1} or (2) land restricted for conservation, preservation, historical, or other like restrictions. Such land shall remain categorized as stewardship land (SL). ~~unless the reporting entity made the election to implement the provisions of paragraph 40.f.i.. In some instances, general PP&E may be built on existing Federal lands. In this case, the land cost would often not be identifiable. In these instances, general PP&E shall include only land and land rights with an identifiable cost that was specifically acquired for or in connection with construction of general PP&E.~~

FN 28.1 - Land rights, such as easements or rights-of-way, that are for an unspecified period of time or unlimited duration are considered permanent land rights. Temporary land rights are those land rights that are for a specified period of time or limited duration.

FN 29 - "Acquired for or in connection with other general PP&E" is defined as land acquired with the intent to construct general PP&E and land acquired in combination with general PP&E, including not only land used as the foundation, but also adjacent land considered to be the general PP&E's common grounds.

FN 29.1 - To the extent consistent with statutory authorities, an entity may withdraw public lands from the public domain for specific uses. For example,

⁴ The term OCS refers to the seabed, subsoil and energy or mineral resources derived therefrom.

an entity may withdraw public land from sale, settlement, or recreational use to expand buffer zones for security or training needs.

- b. Paragraph 26 is amended as follows:

26. **All g General PP&E, other than land and permanent land rights**, shall be recognized as an asset on the balance sheet and recorded at cost. Although the measurement basis for valuing general PP&E remains historical cost, reasonable estimates may be used to establish the historical cost of general PP&E, in accordance with the asset recognition and measurement provisions herein. Cost shall include all costs incurred to bring the PP&E to a form and location suitable for its intended use. For example, the cost of acquiring property, plant, and equipment may include: [no changes to the list that follows]

- c. A paragraph and footnote is inserted following the heading "Expense Recognition" and before existing paragraph 35 as follows:

34A. The cost of acquiring general PP&E land and permanent land rights shall be recognized on the statement of net cost for the period in which the cost is incurred. The cost shall include all costs to prepare general PP&E land or a permanent land right for its intended use (for example, razing a building). In some cases, land may be acquired along with existing structures. If the structure is to be used in operations, the amount related to the structure shall be estimated and capitalized while the amount related to the land shall be expensed. If acquisition of the structure is incidental to the acquisition of the land and the structure is not intended to be used in operations, the cost of the entire acquisition shall be expensed. No amounts for general PP&E land or permanent land rights acquired through donation, devise, 40.1 or judicial process shall be capitalized.

FN 40.1 - Acquisition of general PP&E can also occur due to legal devise or instrument, such as a will or a clause within a will that bequeaths property to an entity.

- d. Paragraph 35 is amended as follows:

35. Depreciation expense is calculated through the systematic and rational allocation of the cost of general PP&E, less its estimated salvage/residual value, over the estimated useful life of the general PP&E. Depreciation expense shall be recognized on all general PP&E,⁴¹ except land and permanent land rights, shall be expensed as incurred ~~of unlimited duration.~~⁴² [no changes to the list that follows]

FN 41 - Software [See SFFAS 10 for standards regarding internally developed software] and temporary land ~~[See SFFAS 10 for standard regarding internally~~

~~developed software~~ rights, while associated with tangible assets, may be classified as intangible assets by some entities. In this event, they would be subject to amortization rather than depreciation. "Amortization" is applied to intangible assets in the same manner that depreciation is applied to general PP&E-tangible assets.

FN 42 - Temporary Land rights, such as easements or rights-of-way, that are for a specified period of time or limited duration shall be depreciated or amortized over that time period.

- e. Footnote 46 of paragraph 44 provides examples of major classes of assets. Footnote 46 is amended as follows:

FN 46 - "Major classes" of general PP&E shall be determined by the entity. Examples of major classes that are depreciated/amortized include buildings and structures, furniture and fixtures, equipment, and vehicles, ~~and land~~.

- 5. This paragraph amends paragraph 40 by providing guidance for establishing opening balances consistent with the amended reporting requirements for G-PP&E land. Because SFFAS 50 first amended this paragraph in SFFAS 6, SFFAS 50, paragraph 13 is also amended to conform to amended paragraph 40 shown below. There are no changes to paragraph 40.a-40.e.ii, 40.g, 40.h.i, and 40.i.i.

40.f. Alternative methods for ~~land and~~ temporary land rights. A reporting entity should choose among the following alternative methods for establishing an opening balance for ~~land and~~ temporary land rights. Because a reporting entity may have multiple component or subcomponent reporting entities selecting different alternative methods, a reporting entity should establish an opening balance based on one, or a combination, of these alternative methods. However, application of a particular alternative method must be consistent within each individual subcomponent reporting entity prior to consolidation into the larger component reporting or reporting entity.

40.f.i. The reporting entity may exclude ~~land and~~ temporary land rights from the opening balance of general PP&E. If this alternative method is was applied, the reporting entity should prospectively capitalize and depreciate or amortize ~~expense future land and~~ temporary land rights ~~acquisitions~~ acquired, beginning in fiscal year 2026.

40.f.ii. Temporary Land ~~and land~~ rights may be recognized in opening balances based on the provisions of the alternative valuation method (deemed cost) provided in paragraph 40.d.

40.h.ii. A component reporting entity electing to apply the provisions of paragraph 40.f.i. to land and **temporary** land rights should disclose this fact and describe the alternative methods used in the first reporting period in which the reporting entity makes an unreserved assertion that its financial statements, or one or more line items, are presented fairly in accordance with GAAP. ~~A component reporting entity electing to exclude land and land rights from its general PP&E opening balances must disclose, with a reference on the balance sheet to the related disclosure, the number of acres held at the beginning of each reporting period, the number of acres added during the period, the number of acres disposed of during the period, and the number of acres held at the end of each reporting period. A reporting entity electing to exclude land and land rights from its general PP&E opening balance should continue to exclude future land and land rights acquisition amounts and provide the disclosures.~~ In the event different alternative methods are applied to land and land rights (as permitted by paragraph 40.f.) by subcomponent reporting entities consolidated into a larger reporting entity, the alternative method adopted by each significant subcomponent should be disclosed.

40.i.ii. When a component reporting entity elects to apply the provisions of paragraph

40.f.i. to land and **temporary** land rights, the U. S. government-wide financial statements should disclose this fact, the number of acres held at the end of each reporting period, an explanation of the election, the identity of the component reporting entity, and a reference to the component reporting entity's financial report.

6. This paragraph amends SFFAS 6 disclosure requirements.

a. Two paragraphs that add disclosure requirements applicable to G-PP&E land are inserted immediately following paragraph 45:

45A. The following RSI information ^{46.1} should be provided regarding G-PP&E land and permanent land rights:

- a. A concise statement defining an entity's federal land, and explaining how land relates to the mission of the entity.
- b. A brief description of the entity's policies for land. Policies for land are the goals and principles the entity established to guide its acquisition, maintenance, use, and disposal of land consistent with statutory requirements, prohibitions, and limitations governing the entity and the land.

c. Land and permanent land rights should be assigned to one of three sub-categories based on predominant use^{461.a} and reported in estimated acres of land. The three sub-categories are commercial use land; conservation and preservation land; and operational land. Where land and permanent land rights have more than one use, the predominant use of the land should be used to sub-categorize the land^{461.b}. The following information should be presented by sub-category of land use:

i. Acres of land. The estimated number of acres at the beginning of each reporting period among the three sub-categories and the estimated number of acres at the end of each reporting period for land and permanent land rights should be provided.

d. If applicable, the amount of estimated acres held for disposal or exchange and their predominant use. For purposes of this Statement, land is considered held for disposal or exchange when the entity has satisfied the statutory disposal authority requirements specific to the land in question.

e. Land rights information should include a general description of the different types of rights acquired by the entity, whether such rights are permanent or temporary, and amounts paid during the year to maintain such rights.

FN 46.1 - Unless otherwise noted, disclosure requirements are limited to the G-PP&E land category and are not required for each of the three subcategories of conservation and preservation land; operational land; and commercial use land.

FN 46.1a - Predominant Use of land. Predominant use is the major or primary current use of an asset during the reporting period and does not include incidental or infrequent uses of the asset. Moreover, predominant use can change between reporting periods. An asset's predominant use should be consistent with the entity's authorizing legislation but may not always be consistent with the original intent or reason why the asset was initially acquired.

FN 46.1b - Aggregation and assignment of land. The level of aggregation of land and permanent land rights used to determine predominant use should be determined by the preparer considering the entity's mission, types of land use and how it manages the assets.

- a. 45B. The financial statement balance sheet should reference a note that discloses information required at paragraph 45A (a through e) about G-PP&E land and

permanent land rights but no asset dollar amount should be shown. Existing display and disclosures^{46.2} should continue during the transition period through fiscal year 2025 and cease in fiscal year 2026 when superseded by the transition of the RSI information to note disclosures. If general PP&E land and stewardship land are presented in separate notes to the financial statements, include cross references between the notes.

FN 46.2 - For G-PP&E land and land rights, existing disclosures are those that are in effect prior to the amendments contained in paragraph 45A. They include disclosures required by paragraph 40.h for those entities electing an alternative method for land and land rights and, if applicable, the minimum G-PP&E disclosure requirements as required by paragraph 45.

- b. The disclosure requirements for the government-wide financial statements at paragraph 45 are amended as follows:

45. [No change to the list that precedes this text.]The ~~above~~ listed disclosure requirements for G-PP&E and G-PP&E land are not applicable to the U.S. Government-wide financial statements. SFFAS 32 provides for disclosure applicable to the U.S. Government-wide financial statements for these activities.

- 7. This paragraph amends SFFAS 6 by inserting additional definitions immediately after paragraph 20 as follows:

20A. Acres of land held for disposal or exchange include land for which the entity has satisfied the statutory disposal authority requirements specific to the land in question.^{24.1} Disposal includes conveyances of federal land to non-federal entities not limited to sale, transfer, exchange, lease, public-private partnership, and donation or any combination thereof.

Footnote 24.1 - Entity decisions to identify and classify land as held for disposal or exchange often require public participation and diverse clearances, such as environmental and economic impact studies, surveys, and appraisals.

20B. Commercial use land sub-category includes land or land rights that are predominantly used to generate inflows of resources (such inflows may be derived from the land itself or activities performed on the land and regardless of whether the use or activity is intended to produce a profit) from non-federal third parties, usually through special use permits, right-of-way grants, and leases. Such inflows may arise from exchange or non-exchange activities and may or may not be considered dedicated collections. Examples include revenue or inflows derived from

- concession arrangements;
- grants for a specific project such as electric transmission lines, communication sites, roads, trails, fiber optic lines, canals, air rights, flumes, pipelines, reservoirs and dams;
- land sales or land exchanges;
- leases;
- permits for public use such as commercial filming and photography, advertising displays, agriculture, recreation residences and camping, recreation facilities, temporary use permits for construction equipment storage and assembly yards, well pumps, and other such uses;
- forest product sales such as timber, or sales arising from national forests and grasslands; and/or
- public-private partnerships.

20C. Conservation and preservation land sub-category includes land or land rights that are predominantly used for conservation or preservation purposes. Conservation and preservation, although closely linked, are distinct terms. Each term involves a certain type or degree of protection. Specifically, conservation is generally associated with the protection and proper use of natural resources, whereas preservation is associated with the protection of buildings, objects, and landscapes from use. Examples of land conserved or preserved for significant natural, historic, scenic, cultural, and recreational resources include the following:

- National parks
- Geological resource sites
- Wildlife and plant life refuges
- Archeological resource sites
- Local Native American or ethnic cultural sites

20D. Operational land sub-category includes land or land rights predominantly used for general or administrative purposes. For example, the following functions performed by entities would be included in this sub-category:

- Military functions include preparing for the effective pursuit of war and military operations short of war; conducting combat, peacekeeping, and humanitarian military operations; and supporting civilian authorities during civil emergencies.
- Scientific functions include conducting and managing research, experimentation, exploration, and operations (including the development of commercial capabilities). Broad scientific fields of study generally include (1) physical sciences (physics, astronomy, chemistry, geology, metallurgy), (2) biological sciences (zoology, botany, genetics, paleontology, molecular biology, physiology), and (3) social sciences (psychology, sociology, anthropology, economics).
- Nuclear functions include managing or regulating the use of nuclear energy, power plants, radioactive materials, radioactive material shipments, nuclear storage, and nuclear reactor decommissioning.
- Other related functions include those that are administrative or other mission related in nature. For example, land used for readiness and training, office building locations, storage, or vacant properties fall under this category.

Amendments to SFFAS 29, Heritage Assets and Stewardship Land

8. This paragraph amends SFFAS 29 to clarify the definition of SL and references to general PP&E.

a. Paragraph 33 is amended as follows:

33. Stewardship Land includes both public domain^{14.1} and acquired land and land rights¹⁵ owned by the Federal Government intended to be held indefinitely. Examples of stewardship land include land reserved, managed, planned, used, or acquired for¹⁶

- a. forests and parks;
- b. recreation and conservation;
- c. wildlife habitat and grazing;

- d. historic landmarks and/or the preservation of pre-historic and historic structures (those listed on or eligible for listing on the National Register of Historic Places);
- e. multiple purpose ancillary revenue generating activity (for example, special use permits, mineral development activities, and timber production); and/or
- f. buffer zones for security, flood management, and noise and view sheds.

FN 14.1 - Public domain land is land that was originally ceded to the United States by treaty, purchase, or conquest in contrast to acquired lands, which have been purchased by, given to, exchanged with, or transferred through condemnation proceedings to the federal government.

FN 15 - Land rights are interests and privileges held by the entity in land owned by others, such as leaseholds, easements, water and water power rights, diversion rights, submersion rights, rights-of-way, mineral rights, and other like interests in land. Land rights such as easements or rights-of-way that are for an unspecified period of time or unlimited duration are considered permanent land rights. Temporary land rights are those land rights that are for a specified period of time or limited duration.

Footnote 16 - Land used or acquired for or in connection with items of general PP&E but meeting the definition of stewardship land should be classified as stewardship land.

- b. Paragraph 35 is amended as follows:

35. Land and land rights meeting the definition of general PP&E established in SFFAS 6, as amended, should be accounted for in accordance with SFFAS 6, as amended.

- c. Paragraph 39 is amended and footnote 20 rescinded as follows:

39. Transfers of stewardship land from one Federal entity to another, does not affect the net cost of operations or net position of either entity. ~~However, in some cases, land included in general PP&E may be transferred to an entity for use as stewardship land. In this instance, t~~ The transferring and recipient entity entities should properly adjust for estimated acres of land information recognize a transfer out of capitalized assets.²⁰

FN 20 - Footnote rescinded by SFFAS 59. ~~SFFA7S, Accounting for Revenue and Other Financing Sources, par. 74 and par. 345-346.~~

9. This paragraph amends SFFAS 29 by rescinding paragraph 40.a-40.d.3 and replacing it with the disclosure requirements to require estimated acres of land and clarify the sub-categorization and reporting of land use. Sub-categorization should be based on predominant use using three new sub-categories. Further, disclosures should provide information regarding land held for disposal and transfers of land.⁵

Paragraph 40 is amended and a new paragraph 40A is added as follows:

40. ~~Entities with stewardship land should reference a note²¹ on the balance sheet that discloses information about stewardship land, but no asset dollar amount should be shown. The note disclosure related to stewardship land should provide the following:~~
The following disclosures^{21-21.1} should be provided for stewardship land and permanent land rights:
- ~~a. A concise statement explaining how it relates to the mission of the entity.~~
 - ~~b. A brief description of the entity's stewardship policies for stewardship land. Stewardship policies for stewardship land are the goals and principles the entity established to guide its acquisition, maintenance, use, and disposal of stewardship land consistent with statutory requirements, prohibitions, and limitations governing the entity and the stewardship land.~~
 - ~~c. A concise description of each major category of stewardship land use. Where parcels of land have more than one use, the predominant use of the land should be considered the major use. In cases where land has multiple uses, none of which is predominant, a description of the multiple uses should be presented. The appropriate level of categorization of stewardship land use should be meaningful and determined by the preparer based on the entity's mission, types of stewardship land use, and how it manages the assets.~~
 - ~~d. Stewardship land should be quantified in terms of physical units. The appropriate level of aggregation and physical units of measure for each major category of stewardship land use should be meaningful and determined by the preparer based on the entity's mission, types of stewardship land use, and how it manages the assets. For each major category of stewardship land use the following should be reported:~~

⁵ Unless otherwise noted, disclosure requirements are limited to the G-PP&E land category and are not required for each of the three sub-categories of conservation and preservation land; operational; and commercial use land.

- ~~1. The number of physical units by major category of stewardship land use for which the entity is the steward as of the end of the reporting period;~~
 - ~~2. The number of physical units by major category of stewardship land use that were acquired and the number of physical units by major category of stewardship land use that were withdrawn during the reporting period; and~~
 - ~~3. A description of the major methods of acquisition and withdrawal of stewardship land during the reporting period. This should include disclosure of physical units (by major category of stewardship land use) of transfers of stewardship land between Federal entities and the number of physical units (by major category of stewardship land use) of stewardship land acquired through donation or devise, if material. In addition, the fair value of stewardship land acquired through donation or devise during the reporting period should be disclosed, if known and material~~
- a. A concise statement defining an entity's federal land, and explaining how stewardship land relates to the mission of the entity.
 - b. A brief description of the entity's policies for stewardship land. Policies for land are the goals and principles the entity established to guide its acquisition, maintenance, use, and disposal of land consistent with statutory requirements, prohibitions, and limitations governing the entity and the land.
 - c. Information of land use by sub-category. Stewardship land and permanent land rights should be assigned to one of three sub-categories based on predominant use^{21.a} and reported in estimated acres of land. The three sub-categories are commercial use land; conservation and preservation land; and operational land. Where stewardship land and permanent land rights have more than one use, the predominant use of the land should be used to sub-categorize the land.^{21.b}
 1. Acres of land. The estimated number of acres at the beginning of each reporting period among the three sub-categories and the estimated number of acres at the end of each reporting period for land and permanent land rights.
 - d. If applicable, the amount of estimated acres of land held for disposal or exchange and their predominant use. For purposes of this Statement, stewardship land is considered held for disposal or exchange when the entity has satisfied the statutory disposal authority requirements specific to the land in question.
 - e. Stewardship land rights information should include a general description of the different types of rights acquired by the entity, whether such rights are permanent or temporary, and amounts paid during the year to maintain such rights.

FN 21 - This standard does not prescribe a specific reference or line item entitled "Stewardship Land" as it may be included with other items for which no dollar amounts are recognized (such as heritage assets and other items that in the future may require similar non-financial disclosure) for presentation. Instead, the standard allows entities flexibility in determining the best presentation.

FN 21.1 - Unless otherwise noted, disclosure requirements are limited to the stewardship land category and are not required for each of the three sub-categories of conservation and preservation land; operational land; and commercial use land.

FN 21.1a - Predominant Use of land. Predominant use is the major or primary current use of an asset during the reporting period and does not include incidental or infrequent uses of the asset. Moreover, predominant use can change between reporting periods. An asset's predominant use should be consistent with the entity's authorizing legislation but may not always be consistent with the original intent or reason why the asset was initially acquired.

FN 21.1b - Aggregation and assignment of land. The level of aggregation of land and permanent land rights used to determine predominant use should be determined by the preparer considering the entity's mission, types of land use and how it manages the assets.

- a. 40A. The financial statement balance sheet should reference a note that discloses information required at paragraph 40 (a through e) about Stewardship land and permanent land rights but no asset dollar amount should be shown. Existing disclosures^{21.2} should continue during the transition period through fiscal year 2025 and cease in fiscal year 2026 when superseded by the transition of the RSI information to note disclosures. If stewardship land and general PP&E land are presented in separate notes to the financial statements, include cross references between the notes.

FN 21.2 - For stewardship land, existing disclosures are those required by paragraph 40, titled "Disclosures and Required Supplementary Information" that are being rescinded (40.a through 40.d.3) effective fiscal year 2026. To the extent practical, duplication of information, such as statements explaining how stewardship land relates to the entity's mission or its SL policies and procedures, should be avoided and should remain as basic (note disclosure) during the transitional period.

- 10. This paragraph amends SFFAS 29 by inserting additional definitions immediately after paragraph 36 as follows:

36A. Acres of land held for disposal or exchange include land for which the entity has satisfied the statutory disposal authority requirements specific to the land in question.^{17.1}

Disposal includes conveyances of federal land to non-federal entities not limited to sale, transfer, exchange, lease, public-private partnership, and donation, or any combination thereof.

Footnote 17.1 - Entity decisions to identify and classify land as held for disposal or exchange often require public participation and diverse clearances, such as environmental and economic impact studies, surveys, and appraisals.

36B. Commercial use land sub-category includes land or land rights that are predominantly used to generate inflows of resources (such inflows may be derived from the land itself or activities performed on the land and regardless of whether the use or activity is intended to produce a profit) from non-federal third parties, usually through special use permits, right-of-way grants, and leases. Such inflows may arise from exchange or non-exchange activities and may or may not be considered dedicated collections. Examples include revenue or inflows derived from

- a. concession arrangements;
- b. grants for a specific project such as electric transmission lines, communication sites, roads, trails, fiber optic lines, canals, air rights, flumes, pipelines, reservoirs and dams;
- c. land sales or land exchanges;
- d. leases;
- e. permits for public use such as commercial filming and photography, advertising displays, agriculture, recreation residences and camping, recreation facilities, temporary use permits for construction equipment storage and assembly yards, well pumps, and other such uses;
- f. forest product sales such as timber, or sales arising from national forests and grasslands; and/or
- g. public-private partnerships.

36C. Conservation and preservation land sub-category includes land or land rights that are predominantly used for conservation or preservation purposes. Conservation and preservation, although closely linked, are distinct terms. Each term involves a certain type or degree of protection. Specifically, conservation is generally associated with the protection and proper use of natural resources, whereas preservation is associated with the protection of buildings, objects, and landscapes from use. Examples of land conserved or preserved

for significant natural, historic, scenic, cultural, and recreational resources include the following:

- National parks
- Geological resource sites
- Wildlife and plant life refuges
- Archeological resource sites
- Local Native American or ethnic cultural sites

36D. Operational land sub-category includes land or land rights predominantly used for general or administrative purposes. For example, the following functions performed by entities would be included in this sub-category:

- a. Military functions include preparing for the effective pursuit of war and military operations short of war; conducting combat, peacekeeping, and humanitarian military operations; and supporting civilian authorities during civil emergencies.
- b. Scientific functions include conducting and managing research, experimentation, exploration, and operations (including the development of commercial capabilities). Broad scientific fields of study generally include (1) physical sciences (physics, astronomy, chemistry, geology, metallurgy), (2) biological sciences (zoology, botany, genetics, paleontology, molecular biology, physiology), and (3) social sciences (psychology, sociology, anthropology, economics).
- c. Nuclear functions include managing or regulating the use of nuclear energy, power plants, radioactive materials, radioactive material shipments, nuclear storage, and nuclear reactor decommissioning.
- d. Other related functions include those that are administrative or other mission related in nature. For example, land used for readiness and training, office building locations, storage, or vacant properties fall under this category.

39. Transfers of stewardship land from one Federal entity to another, does not affect the net cost of operations or net position of either entity. The transferring and recipient entities should properly adjust for estimated acres of land information.²⁰

FN 20 - Footnote rescinded by SFFAS 59

40. The following RSI information^{21-21.1} should be provided for stewardship land and permanent land rights:

- a. A concise statement defining an entity's federal land, and explaining how stewardship land relates to the mission of the entity.
- b. A brief description of the entity's policies for stewardship land. Policies for land are the goals and principles the entity established to guide its acquisition, maintenance, use, and disposal of land consistent with statutory requirements, prohibitions, and limitations governing the entity and the land.
- c. Information of land use by sub-category. Stewardship land and permanent land rights should be assigned to one of three sub-categories based on predominant use^{21.1a} and reported in estimated acres of land. The three sub-categories are commercial use land; conservation and preservation land; and operational land. Where stewardship land and permanent land rights have more than one use, the predominant use of the land should be used to sub-categorize the land.^{21.1b}
- i. Acres of land. The estimated number of acres at the beginning of each reporting period among the three sub-categories and the estimated number of acres at the end of each reporting period for land and permanent land rights.
- d. If applicable, the amount of estimated acres of land held for disposal or exchange and their predominant use. For purposes of this Statement, stewardship land is considered held for disposal or exchange when the entity has satisfied the statutory disposal authority requirements specific to the land in question.
- e. Stewardship land rights information should include a general description of the different types of rights acquired by the entity, whether such rights are permanent or temporary, and amounts paid during the year to maintain such rights.

Footnote 21 - This standard does not prescribe a specific reference or line item entitled "Stewardship Land" as it may be included with other items for which no dollar amounts are recognized (such as heritage assets and other items that in the future may require similar non-financial disclosure) for presentation. Instead, the standard allows entities flexibility in determining the best presentation.

Footnote 21.1 - Unless otherwise noted, RSI information requirements are limited to the stewardship land category and are not required for each of the three sub-categories of conservation and preservation land; operational land; and commercial use land.

Footnote 21.1a - Predominant Use of land. Predominant use is the major or primary current use of an asset during the reporting period and does not include incidental or infrequent uses of the asset. Moreover, predominant use can change between reporting periods. An asset's predominant use should be consistent with the entity's authorizing legislation but may not always be consistent with the original intent or reason why the asset was initially acquired.

Footnote 21.1b - Aggregation and assignment of land. The level of aggregation of land and permanent land rights used to determine predominant use should be determined by the preparer considering the entity's mission, types of land use and how it manages the assets.

40A. The financial statement balance sheet should reference a note that presents RSI information required at paragraph 40 (a through e) about Stewardship land and permanent land rights but no asset dollar amount should be shown. Existing disclosures 21.2 should continue during the transition period through fiscal year 2025 and cease in fiscal year 2026 when superseded by the transition of the RSI information to note disclosures. If stewardship land and general PP&E land are presented in separate notes to the financial statements, include cross references between the notes.

FN 21.2 - For stewardship land, existing disclosures are those required by paragraph 40, titled "Disclosures and Required Supplementary Information" that are being rescinded (40.a through 40.d.3) effective fiscal year 2026. To the extent practical, duplication of information, such as statements explaining how stewardship land relates to the entity's mission or its SL policies and procedures, should be avoided and should remain as basic (note disclosure) during the transitional period.

11. This paragraph amends paragraph 42 of SFFAS 29, which addresses the U.S. government-wide financial statement disclosures. Amendments will now require presentation of estimated acres of land by category. Paragraph 42 is amended and paragraph 42A is added as follows:

42. The U.S. Government-wide financial statement should include the following information:

- a. A concise statement including a general description of the federal government's land explaining how its federal land relates to the mission of the Federal Government.
- b. RSI information of the estimated acres of land by predominant use sub-categories and estimated acres of land held for disposal or exchange by the Federal Government.

-
- c. A general reference to agency reports for additional information about stewardship land, such as agency policies and estimated acres of land.

42A. The U.S. Government-wide financial statement balance sheet should reference a note that presents RSI information about stewardship land and land rights required by paragraph 42, but no asset dollar amounts should be shown. Existing disclosures^{25.1} should continue during the transition period through fiscal year 2025 and cease in fiscal year 2026 when superseded by the transition of the RSI information to note disclosures. If stewardship land and general PP&E land are presented in separate notes to the financial statements, include cross references between the notes.

FN 25.1 - Existing disclosures at paragraph 42 are those which are in effect for reporting entities prior to the amendments contained at paragraphs 42 and 42A. To the extent practical, duplication of information, such as statements explaining how stewardship land relates to the entity's mission or its SL policies and procedures, should be avoided and should remain as basic (note disclosure) during the transitional period.

Amendments to SFFAS 32, Consolidated Financial Report of the United States Government Requirements: Implementing Statement of Federal Financial Accounting Concepts 4 "Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government"

- 12. This paragraph amends SFFAS 32 to revise the government-wide disclosure requirements for property, plant, and equipment. Paragraph 23 is amended and paragraph 23A is added as follows:

23. The U.S. government-wide financial statements should include the following RSI information:

- a. A broad description of PP&E,
- b. For general PP&E land
 - i. A note on the balance sheet that presents RSI information about general PP&E land and permanent land rights which includes:

-
1. A concise statement including a general description of the federal government's land explaining how its federal land relates to the mission of the Federal government.
 2. RSI information of estimated acres by predominant use sub-categories and estimated acres of land held for disposal or exchange by the Federal government
 - c. The cost (excluding land and permanent land rights), associated accumulated depreciation, and book value by major class.
 - d. A general reference to agency reports for additional information about general PP&E and general PP&E land.

23A. The balance sheet should reference a note that presents RSI information^{2.1} about general PP&E land and permanent land rights required by paragraph 23, but no asset dollar amounts should be shown. Existing display and disclosures^{2.2} should continue during the transition period through fiscal year 2025 and cease in fiscal year 2026 when superseded by the transition of the RSI information to note disclosures. If general PP&E land and information to note disclosures. If general PP&E land and stewardship land are presented in separate notes to the financial statements, include cross references between the notes.

Footnote 2.1 - Additionally, such information may include a description of the different uses of land managed by the entity, its predominant activities, condition information, and policy initiatives in effect during the reporting period.

Footnote 2.2 - Existing disclosures at paragraph 23 are those which are in effect for government-wide reporting prior to the amendments contained at paragraph 23A.

Amendments to SFFAS 7, Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting

13. This paragraph amends SFFAS 7 to clarify guidance regarding transfers and donations of land.
 - a. Footnote 14 at paragraph 62, which discusses revenue arising from donations, should include a reference to the amended SFFAS 6, paragraph 34A under the heading "Expense Recognition." Footnote 14 is amended as follows:

FN14 - For the recognition criteria for donated property, plant, and equipment, see SFFAS No. 6, *Accounting for Property, Plant, and Equipment*, para. 30, [34A](#), 62, and 71.

- b. Paragraph 258 discusses non-exchange transactions with the public, specifically donations. This should include G-PP&E land. Paragraph 258 is amended as follows:

258. Donations: except types of property, plant, and equipment that are expensed. - Donations are contributions to the Government, i.e., voluntary gifts of resources to a Government entity by a non-Federal entity.⁵¹ The Government does not give anything of value to the donor, and the donor receives only personal satisfaction. The donation of cash, other financial resources, or nonfinancial resources (except general PP&E land, permanent land rights, and stewardship property, plant, and equipment) is therefore a nonexchange revenue.

- c. Paragraph 259 discusses non-exchange transactions with the public, specifically donations. This should include G-PP&E land. In addition, this paragraph is amended to conform to paragraph 9.d. of SFFAS 23, *Eliminating the Category National Defense Property, Plant, and Equipment*, which rescinded the category "federal mission property, plant, and equipment." Paragraph 259 is amended as follows:

259. The exceptions s are for donations of assets that are expensed rather than capitalized. These include general PP&E land and permanent land rights, stewardship PP&E, ~~consists of Federal mission PP&E~~, heritage assets, and stewardship land. Such PP&E is expensed if purchased, but no amount is recognized if it is received as a donation.⁵² Correspondingly, no revenue is recognized for such donations.

- d. Paragraph 296 and footnote 62 discuss sales of property, plant, and equipment. This should include G-PP&E land and permanent land rights. In addition, footnote 62 is amended to conform to SFFAS 23, paragraph 9.d, which rescinded the category "federal mission property, plant, and equipment." Paragraph 296 and footnote 62 are amended as follows:

296. The entire sales price is a gain if the book value of the asset is zero. The book value is zero (a) if the asset is general property, plant, and equipment (PP&E) that is fully depreciated or written-off or (b) if the asset is general PP&E land, permanent land rights, or stewardship PP&E, for which the entire cost is expensed when the asset is purchased.⁶²

FN 62 - SFFAS No. 6, *Accounting for Property, Plant, and Equipment*, has divided property, plant, and equipment (PP&E) into two basic categories: general PP&E and stewardship PP&E (which consists of ~~federal mission~~

PP&E, heritage assets, and stewardship land). General PP&E other than land and permanent land rights is capitalized and recognized on the balance sheet; general PP&E land, permanent land rights, and stewardship PP&E is are expensed and thus ~~has~~ have no book value. (Stewardship PP&E is presented in a stewardship statement.)

- e. Paragraph 345 discusses intragovernmental transfers of PP&E. This should include G-PP&E land in the requirement. Paragraph 345 is amended as follows:

345. Transfer of property, plant, and equipment without reimbursement: types that are expensed. -Property, plant, and equipment (PP&E) of types that are expensed (i.e., general PP&E land and stewardship PP&E) may be transferred from one Government entity to another. If the asset was classified as either general PP&E land (including permanent land rights) or stewardship PP&E in its entirety by both the transferring entity and the recipient entity, the transfer does not affect the net cost of operations or net position of either entity and, therefore, in such a case it is not a revenue, a gain or loss, or other financing source.

- f. Paragraph 346 discusses intragovernmental transfers of PP&E classified as G-PP&E by the transferor but as SL by the recipient. This should not include the de-recognition requirement for G-PP&E land and permanent land rights. Paragraph 346 is amended as follows:

346. However, if the asset that is transferred was classified as general PP&E (excluding non-capitalized general PP&E land and permanent land rights) for the transferring entity but stewardship PP&E for the recipient entity, it is recognized as a transfer-out (a negative other financing source) of capitalized assets by the transferring entity.

- g. Paragraph 358 discusses transfers of PP&E. This should include G-PP&E. Paragraph 358 is amended as follows:

358. Transfer of property, plant, and equipment without reimbursement: types that are expensed. -Property, plant, and equipment (PP&E) of types that are expensed (i.e., general PP&E land [including permanent land rights] and stewardship PP&E) may be transferred from one Government entity to another. If the asset was classified as either general PP&E land (including permanent land rights) or stewardship PP&E in its entirety by both the transferring entity and the recipient entity, the transfer does not affect the net cost of operations or net position of either entity and therefore in such a case it is not a revenue, a gain or loss, or other financing source.

-
- h. Paragraph 361 discusses donations of PP&E. This should include G-PP&E. In addition, this paragraph is amended to conform to SFFAS 23, paragraph 9.d, which rescinded the category "federal mission property, plant, and equipment." Paragraph 361 is amended as follows:

361. Donation of property, plant, and equipment: types that are expensed.-The acquisition costs of general PP&E land (including permanent land rights), heritage assets, and stewardship land property, plant, and equipment (PP&E) is are recognized as a cost when incurred. ~~Such PP&E consists of Federal mission PP&E, heritage assets, and stewardship land.~~ When such PP&E is donated to the Government, however, no amount is recognized as a cost.⁸¹ Since the donation of such PP&E does not affect the net cost or net position of the recipient entity, it is not a revenue, a gain, or an other financing source.

Amendments to SFFAS 42, Deferred Maintenance and Repairs: Amending Statements of Federal Financial Accounting Standards 6, 14, 29, And 32

14. Paragraphs 13, 15.d, and 15.e are amended to ensure that deferred maintenance and repair (DM&R) information is reported in non-capitalized G-PP&E land.

- a. Paragraph 13 is amended as follows:

13. DM&R should be measured and reported for capitalized general PP&E, non-capitalized general PP&E land (to include permanent land rights), and stewardship PP&E. DM&R also may be measured and reported for general PP&E other than land and permanent land rights that is non-capitalized or fully depreciated ~~general~~ PP&E. DM&R should include funded maintenance and repairs (M&R) that have been delayed for a future period as well as unfunded M&R. DM&R on inactive and/or excess PP&E should be included to the extent that it is required to maintain inactive or excess PP&E in acceptable condition. For example, inactive PP&E may be maintained or repaired either to comply with existing laws and regulations, or to preserve the value of PP&E pending disposal.

- b. Paragraph 15 is amended as follows:

15. At a minimum, the following information should be presented as required supplementary information (RSI) for all PP&E (each category established in SFFAS 6, as amended, should be included) regardless of the measurement method chosen.

Qualitative **(No edits for items 15.a-15.c or 15.f-15.g.)**

-
- d. Whether DM&R relates solely to capitalized general PP&E and non-capitalized general PP&E land, stewardship PP&E, or also to amounts relating to non-capitalized or fully depreciated general PP&E
 - e. Capitalized and non-capitalized general PP&E, and non-capitalized heritage assets, and stewardship land for which management does not measure and/or report DM&R and the rationale for the exclusion

Effective Date

- 15. The scope of this Statement (paragraphs 1-3) is effective for reporting periods beginning after September 30, 2021. The information required at paragraphs 6 and 7 (G-PP&E land), paragraphs 8-10 (stewardship land), paragraph 11 (government-wide stewardship land), and paragraph 12 (government-wide G-PP&E land) should be presented as RSI for fiscal years 2022 through 2025 and transition to note disclosures in fiscal year 2026. Asset dollar amounts for G-PP&E land and permanent land rights should remain on the balance sheet along with existing disclosures through fiscal year 2025 and cease in fiscal year 2026 when superseded by the transition of the RSI information to note disclosures and paragraphs 4, 5, 13, and 14 become effective. Existing display and disclosure (balance sheet reference) for stewardship land should continue through fiscal year 2025 until they are superseded by the requirements at Paragraphs 8-10 beginning in fiscal year 2026.
- 16. It is the Federal Accounting Standards Advisory Board's (FASAB or "the Board") intent that the information required by this Statement transition to basic information in fiscal year 2026 after being reported as RSI for a period of four years. Prior to the conclusion of the four-year RSI period, the Board plans to make any necessary adjustments to facilitate the transition to basic information. Early adoption is not permitted.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting, chapter 7, titled Materiality*, for a detailed discussion of the materiality concepts.

Appendix A: Basis for Conclusions

This appendix discusses the factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement and not the material in this appendix should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. The authoritative sections of the Statements are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

The ensuing paragraphs, beginning with A1 "Project History," discuss in detail the Board's basis for conclusions and agreement with those in the financial reporting community, who expressed the need for uniform accounting guidance that addressed the lack of relevant, reliable, and consistent historical cost information and the application of inconsistent measurement approaches.

Prior to the issuance of this Statement, federal accounting standards required the capitalization of the historical cost of G-PP&E land and disclosures regarding restrictions on the use or convertibility of G-PP&E to include G-PP&E land. Similarly, prior to this Statement federal accounting standards required the expensing of SL for the period in which the acquisition cost was incurred and disclosures on the relationship between SL and the entity's mission, the entity's SL policies, major categories of SL use, and physical units of SL.

The Board determined that the vast holdings and uses of federal land cannot adequately be conveyed to the public through monetary measurements. Specifically, limitations inherent in valuations such as passage of time and inflation make historical cost less relevant to users. Alternative methods needed to routinely appraise or corroborate over 622 million acres of land are impractical and cost prohibitive. Instead, the Board concluded that, consistent with its conceptual framework, reporting acres increases transparency, comparability, consistency, and reliability of land information while either avoiding or at least significantly minimizing burden and costs that would otherwise be borne if monetary measurements were used to recognize land on the balance sheet.

Project History

- A1. The Board added the accounting and reporting of government land project in February 2016 during its three-year plan review. The Board agreed that the project was necessary to address significant differences in accounting treatment and implementation issues arising from SFFAS 6; SFFAS 7;⁶ SFFAS 29; and SFFAS 50. The Board's most notable concerns included the following:
- a. There is limited value in historical/acquisition cost information for capitalized land, given that such information may lose relevance over time due to general inflation, general land appreciation, and environmental harm.
 - b. There is inconsistent reporting of G-PP&E land arising from differences in how opening balances are valued, as permitted by SFFAS 50. That is, reporting entities may exclude land and land rights from opening balances.
 - c. There is incomplete reporting on land where neither the total cost of land nor the total physical quantity of land is consistently reported.
 - d. Some information that is currently reported does not adequately satisfy FASAB's reporting objectives and qualitative characteristics. For example, physical unit grouping (such as number of parks) is not contributing to either the operating performance or stewardship objectives.
 - e. There are inconsistencies between reporting of SL and G-PP&E land.
- A2. SFFAS 6 requires that land and land rights acquired for or in connection with other G-PP&E be capitalized at the cost incurred to bring the assets to a form and condition suitable for use. "Acquired for or in connection with other G-PP&E" is defined as land acquired with the intent to construct G-PP&E. It also includes land acquired in combination with general PP&E, including not only land used as the foundation, but also adjacent land considered to be the G-PP&E's common grounds.
- A3. By contrast, SFFAS 29 defines "stewardship land" as land (including land rights) other than land acquired for or in connection with other G-PP&E. It does not require balance sheet recognition but, instead, requires expensing the land cost when acquired and disclosures regarding policies for land management, categories of land, and physical unit information.

⁶ SFFAS 7 requires that donations made to the government by a nonfederal entity, to include nonfinancial resources such as land or buildings, be recognized (for those inflows of resources that meet recognition criteria for assets) and measured at the estimated fair value of the contribution.

-
- A4. Most recently, SFFAS 50 allows reporting entities to apply alternative methods in establishing opening balances for G-PP&E. Concerning land, the alternative methods include using deemed cost to establish opening balances of G-PP&E land and land rights or excluding them from opening balances with disclosure of acres of land and expensing of future acquisitions.
- A5. The above requirements for both G-PP&E land and SL result in significant differences in accounting treatment for federal land. Specifically, land acquired during the nation's formation may be used in connection with other general PP&E, but it may not (1) have identifiable acquisition costs, (2) be valued at all, or (3) be valued in a way that is similar to G-PP&E land and land rights acquired for similar purposes. G-PP&E only includes land and land rights with an identifiable cost that was specifically acquired for or in connection with construction of general PP&E. The result is disparate treatment of G-PP&E land. Furthermore, SL, which accounts for an estimated 97 percent of all land managed by the federal government, is expensed when acquired, not capitalized, leading to yet another significant difference in land treatment.
- A6. To the extent practical, members requested that future guidance consistently treat all federal land the same regardless of its G-PP&E land or SL distinction. The Board directed staff to identify available options, along with associated benefits and drawbacks. In particular, the Board asked staff to (1) consider user information needs; (2) explore and identify the information agencies use to manage land; (3) identify types of information, such as acres of land, that would help demonstrate the government's stewardship and accountability over federal land; (4) address whether land held for disposal (for example, sale, public-private partnerships, donated to state and local governments) should be valued; and (5) consider whether a uniform land accounting policy is a viable option given initial agency and task force feedback that current land categorizations of SL and G-PP&E land be retained.
- A7. To assist in evaluating options for enhancing the consistency⁷ among existing accounting standards, entity-to-entity comparability, and relevance of information regarding land, the Board established a task force consisting of representation from federal agencies, the commercial sector, and citizen users.⁸ The task force held meetings between June 2016 and April 2017. Participants came from diverse disciplines, such as accounting, auditing, civil engineering, financial reporting, business consulting, and program management. The

⁷ Criticism over consistency has arisen because current standards differ in how entities report land and land rights; for example, G-PP&E land is capitalized, whereas SL is not. As such, some believe that inconsistent accounting standards lead to reporting that is not comparable and obscures how a user can assess an entity's performance over land management.

⁸ Please refer to Appendix E in the original pronouncement for the identification of task force participants.

majority of participants agreed that, among federal report preparers and users, there is significant interest in how agencies manage land on behalf of the public and how this information is communicated in financial statements.

- A8. Due to the divergent views among task force participants, principally between preparers and users, reaching consensus on the major issues proved challenging. To best meet the project goals and objectives, staff, in addition to engaging in task force discussions, initiated fact-finding meetings with three land-holding agencies: the Department of Defense, the Department of Energy, and the Department of the Interior. Notably, retaining the current land categorizations of SL and G-PP&E land was the one area in which preparers and users unanimously agreed.

Development of the Exposure Draft (ED)

- A9. The Board considered its conceptual framework and the divergent task force views in developing its proposal for reporting on land. The Board considered financial and non-financial information (NFI) land reporting options in light of the reporting objectives, qualitative characteristics, cost-benefit considerations, and presentation formats (basic or required supplementary information [RSI]).

It is important to note that a major consideration throughout the Board's deliberations was the guidance in Statement of Federal Financial Accounting Concepts (SFFAC) 5, *Definitions of Elements and Basic Recognition Criteria for Accrual-Basis Financial Statements*. Specifically, paragraph 9 states:

An item that meets the appropriate definition of an element is an asset, liability, revenue, or expense, even if it is not recognized in the accrual-basis financial statements because, for example, it is not measurable or its amount is not material. Unrecognized elements are candidates for disclosure in the notes to financial statements or as supplementary information.

Members agreed with those in the financial reporting community who noted the importance of having consistent accounting standards and agreed that there were limitations inherent in historical cost valuations. Alternative methods needed to routinely appraise or corroborate over 622 million acres of land are impractical and cost prohibitive. Instead, the Board concluded that, consistent with its conceptual framework, reporting acres increases transparency, comparability, consistency, and reliability of land information while either avoiding or at least significantly minimizing burden and costs that would otherwise be borne if monetary measures were used to recognize land on the balance sheet.

To address this, the Board decided to remove such amounts from the balance sheet, expense future acquisitions of land and permanent land rights, treat temporary land rights

similarly to leases, and require NFI (number of acres) disclosures. The SFFAS 29 requirement to exclusively use NFI to report federal SL provides a precedent for this approach. A task force analysis noted that approximately 97.0% (or 603.7 million acres) of all land managed by the federal government is SL, which, under SFFAS 29 is reported as NFI. Furthermore, the Board notes that a portion of the remaining ~3.0% (~19.6 million acres) of land currently classified as G-PP&E land is withdrawn land from the public domain. Had this land not been withdrawn, it would be classified as SL and been subject to the SFFAS 29 requirements for non-recognition and disclosure as NFI.

Due to concerns that the stewardship and operating performance reporting objectives and qualitative characteristics, such as relevance and comparability, were not being met, the Board proposed expensing land and permanent land rights and disclosing acres in a note. Additional key conceptual points leading to the Board's proposal include:

- a. Historical cost of land and permanent land rights is not useful to the majority of users for assessing stewardship⁹ or entity operating performance primarily due to the static nature of the reported dollars (that is, not accounting for inflation or changes in value).¹⁰ In addition, historical cost of land and permanent land rights is not relevant for decision makers.¹¹
 - i. Having considered the input of the task force, exposure draft (ED) respondents, and subject matter experts, the Board also concluded that, although historical cost information of G-PP&E land may be reliable for certain agencies, such information is not reliable at the government-wide level. This is because some agency historical cost records are incomplete or non-existent.
 - ii. Increasing the usefulness and relevance of information can be achieved through the selective use of a measurement attribute (basis) that best reflects the measurable characteristic of an asset or liability. Measurement attributes that are commonly used to assign monetary amounts to financial statement elements, such as assets and liabilities, like land include: fair value, settlement amount, replacement cost, value in use, and fulfillment cost. However, alternative measurement approaches, such as those that are non-financial in nature, can be used to best reflect an element's characteristics. To that end, during deliberations of SFFAS 29 and SFFAS

⁹ SFFAC 1, *Objectives of Federal Financial Reporting*, par. 134-145.

¹⁰ SFFAC 1, par. 122-133.

¹¹ SFFAC 1, par. 161 and SFFAC 7, *Measurement of the Elements of Accrual-Basis Financial Statements in Periods After Initial Recording*, par.7.

50, the Board concluded that number of acres best reflects and communicates land's measurable characteristic, increasing relevance and information usefulness.

- b. Prior analysis of user needs, as confirmed by the land task force, revealed that presenting the historical cost of land in the financial statements is of limited value to users. Although users would often obtain information from other publicly available sources, these other sources do not reflect audited or verified information. The need for audited information was identified by the majority of task force participants.¹²
 - i. In addressing this limitation, the Board concluded that reclassifying G-PP&E land and permanent land rights as a non-capitalized asset, expensing future acquisitions, and increasing disclosure requirements of non-financial land information is more informative to users and best satisfies the Board's stewardship and operating performance reporting objectives. This decision is consistent with SFFAS 50, which permits reporting entities to not capitalize G-PP&E land and land rights under certain conditions.
 - ii. The Board also concluded that if the reporting entity believes that information about the cost of G-PP&E land and permanent land rights is critical to the understanding of the financial statements, such information may be presented in the note disclosure at the reporting entity's discretion without explicit guidance to do so.
- c. Fair value reporting is not cost-beneficial given the vast holdings of land. This is primarily due to the impracticalities associated with valuing land, absent conditions such as demographically comparable sales, active markets or willing buyers, and estimations of the environmental liabilities associated with certain federal land.¹³
 - i. Citizen users on the task force and some ED respondents noted the benefit of fair value estimates of government federal land. They generally noted that, to assess an entity's stewardship and operating performance, fair value estimates of land parcels would help users assess whether such land should be either sold or transferred to state/local governments. However, the Board concluded that fair valuing land parcels would be prohibitive given the impracticalities and costs. The Board concluded, instead, that number of acres would be more informative to the general public, Congress, and agency management.

¹² SFFAC 1, par. 158-159.

¹³ SFFAC 2, *Entity and Display*, par. 73E.g. and SFFAC 5, par. 7.

-
- d. Acres provide a transparent, understandable, and comparable measure across the federal government and allow users to consider how much land was held for particular purposes (operating performance) and how the amount of land held changed over time (stewardship).¹⁴
 - i. The Board realizes that some respondents believe the use of NFI, such as number of acres, to satisfy reporting objectives is relatively unprecedented. However, as previously noted, SFFAS 29 adopted the use of NFI (that is physical unit reporting) to satisfy both reporting objectives and the qualitative characteristics of information in federal reporting. The Board further notes that to address any potential audit challenges related to NFI, the requirements of this Statement are subject to a phased implementation schedule. This will enable the Board to evaluate implementation and identify and address any issues as they arise.
 - e. As discussed in paragraph A9.a.ii, by moving all land to the measurement of acres, the Board concluded that financial statement reporting will better achieve the qualitative characteristics of consistency and comparability. Additionally, moving away from the current mixed measurement attribute model to a uniform acre model increases the qualitative characteristic of understandability. Finally, advancements in geospatial technology facilitate measuring acres more accurately, which contributes to the qualitative characteristic of reliability. The Board concluded that such advancements, assisted by an RSI transition period, will facilitate development of reliable acre information suitable for presentation as basic information.
 - f. The NFI relates to a significant asset (an element of financial reporting) that interests a wide audience. Furthermore, it has a high degree of importance and criteria for reliably and consistently measuring acres, making the information appropriate for note disclosure.¹⁵
 - i. As previously noted, G-PP&E land represents approximately ~3.0% (~19.6 million acres) of land-some of which has been withdrawn from the public domain. As such, were it not withdrawn, such land would have to comply with the SFFAS 29 requirements of non-recognition and use of NFI.

¹⁴ SFFAC 1, par 156, SFFAC 2, par. 73E.e., and SFFAC 4, *Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government*, par. 9

¹⁵ SFFAC 2, par. 73E.

-
- g. The selection of an appropriate measurement attribute in specific circumstances should be based on the reporting objectives, qualitative characteristics, and cost-benefit constraints applicable to the financial information in question.¹⁶
 - i. The Board concluded that attempting to apply a monetary measurement attribute to the government's vast holdings of land would fail to meet cost-benefit considerations, as well as such key qualitative characteristics as understandability, relevance, and comparability. The Board concluded that reclassifying previously capitalized G-PP&E land costs as expenses accompanied by disclosure of acres would best meet the reporting objectives and qualitative characteristics in a cost beneficial manner.
 - h. In conclusion, the Board determined that the vast holdings and uses of federal land cannot adequately be conveyed to the public through monetary measurements. Specifically, limitations inherent in valuations, such as passage of time and inflation, changes in economics (for example, base closures, government relocations), demographic or population shifts (for example, shifting veteran populations, rural development activities), and even climate related issues (for example, coastal floods and forest fires), make it impractical and cost prohibitive to annually corroborate or appraise over 622 million acres. Instead, the Board concluded that, consistent with its conceptual framework, reporting acres increases transparency while either avoiding or at least significantly minimizing burden and reporting costs that would otherwise be borne if traditional (that is, monetary based) valuation methods were used for balance sheet recognition.

Summary of Outreach Efforts and Responses

- A10. The ED was issued April 30, 2018, with comments requested by July 30, 2018. Upon release of the ED, notices and press releases went to the following: the *Federal Register*, *FASAB newsletter*, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, and the *CPA Letter*, the CFO Council, the Council of the Inspectors General on Integrity and Efficiency, the Financial Statement Audit Network, members of both the Federal Real Property Council and Federal Facilities Council, and committees of professional associations generally commenting on EDs in the past.
- A11. This broad announcement was followed by electronic mailings of the ED to the following relevant congressional committees: Senate Energy and Natural Resources and House Natural Resources.

¹⁶ SFFAC 5, par. 8.

A12. FASAB received a total of 18 responses, which are summarized in the following table by respondent type. The majority of respondents generally agreed with the Board's proposal to reclassify G-PP&E land and permanent land rights as a non-capitalized asset and to issue related disclosure requirements. However, some respondents (1) expressed concerns with what they viewed as a departure from universally accepted accounting principles and (2) identified certain issues that could be clarified within the Statement or addressed in the basis for conclusions.

Summary of Respondent Types to the ED

RESPONDENT TYPE	FEDERAL (Internal)	NON-FEDERAL (External)	TOTAL
Preparers and financial managers	13	-0-	13
Users, academics, others	-0-	3	3
Auditors	1	1	2
Total	14	4	18

A13. At the August 2018 Board meeting, the Board decided to extend an invitation to (1) the ED respondents to discuss with the Board their comments on the ED and provide clarification of their responses and (2) additional subject matter experts comprising federal land managers, the audit community, and other interested parties to share their expert perspectives regarding land reporting. Eight ED respondents accepted the Board's invitation and clarified their comments at the October 2018 Board meeting. Five subject matter experts shared their views at the October 2018 Board meeting on a variety of matters related to the land ED.

A14. The Board did not rely on the number in favor of or opposed to a given position. The Board considered each response and weighed the merits of the points raised.

A15. Respondents who agreed with the Board's proposal to reclassify G-PP&E land and permanent land rights noted:

-
- a. The geographic information system (GIS) can be readily adopted to comply with the reporting requirements for acres and satisfy most auditor concerns.
 - b. Valuation of land is too costly and questionable in light of environmental liabilities.
 - c. There will be little financial statement impact to expensing future acquisitions of G-PP&E land and permanent land rights.
 - d. However, respondents who agreed with reclassifying G-PP&E land and permanent land rights also raised key concerns: (1) the incomparability of physical units creates the potential for inconsistent application within agencies, (2) not all agencies have consistent GIS policies throughout their bureaus, and (3) system changes to policies and information technology databases/applications will require additional time and effort to implement.

A16. Respondents who disagreed with reclassifying G-PP&E land and permanent land rights noted the following concerns:

- a. G-PP&E land is an asset that should remain on the balance sheet so as not to distort financial reporting.
- b. The Board's proposal veers from its conceptual framework by over-emphasizing one asset category over all the others.
- c. separating a land value from a building value is complicated,
- d. The ED leads to duplicative reporting because G-PP&E acres are presented in the Federal Real Property Profile as well as in performance reports.
- e. Audit precision and related burdens are problematic because there are no internal controls over acre information systems.
- f. The effect of expensing G-PP&E acquisitions in the statement of net cost will be significant.
- g. Physical units are not meaningful, and the information already exists in other reports.
- h. Many implementation issues will necessitate additional implementation guidance.
- i. Some rate-setting entities use and require historical cost information concerning land.

-
- j. Some agency GIS personnel have existing backlogs that take precedent, such as land disputes that will not allow them to satisfactorily support reporting and audit initiatives.

A17. Subject matter experts provided their views on the proposed land ED, which are summarized as follows:

Comments opposing the ED include the following: Data collection should be commensurate with user needs. In this case, the cost of aggregating land information, given the de-centralized manner in which it is stored, may be cost prohibitive. Using the existing Public Land Statistics report for financial reporting purposes, as contemplated by the ED, would require a potentially cost-prohibitive investment of additional resources. The Public Land Statistics are designed for the general public, not financial reporting purposes. SFFAS 50 provides sufficient reporting flexibilities, making the ED unnecessary. Because land benefits future periods, it should remain on the balance sheet; excluding it will understate the financial position. It is unclear how this proposal would improve financial management, which is the intent behind the CFO Act and the Federal Financial Management Improvement Act.

Comments that were neither in support of nor opposed to the ED include the following: Physical unit information, such as acres, needs context to be useful. Interior bureaus are working to improve the Protected Area Database of the United States and the Surface Management Area data. Agencies should be allowed flexibility to explain their unique missions and land responsibilities. Without clearer materiality guidance, acres or other NFI may be more suitable for RSI. Consideration should be given to presentation formats other than disclosures. The use of agreed upon procedures, rather than audits, should be considered for land information. The preparer transition period should not be underestimated; it could take multiple years for auditors to gain comfort. Performance information, which is not contemplated by the ED, when combined with cost information would allow an assessment of effectiveness and efficiency and would be valuable to users.

A18. Regarding the concern that expensing land and permanent land rights would distort financial reporting, the Board notes that presentation options exist that could mitigate potential distortions to an entity's operating costs brought about by expensing land and permanent land rights acquisitions. For example, material acquisitions might be presented separately as a major program or as costs not assigned to programs. Nevertheless in its re-deliberations of the land ED, the Board concluded that the respondent comments and subject matter expert views indicated a need to reconsider certain disclosure requirements, the proposed implementation approach, and the related timeline. As a result, the following changes were made to the proposed land ED requirements:

- a. Deleting the physical unit disclosure requirements

-
- b. Deleting the requirement to reference DM&R (RSI) presentations
 - c. Limiting the first two disclosure requirements (that is, how land relates to the entity's mission and an entity's policies over land) to the primary categories of SL and G-PP&E land and not to the sub-categories
 - d. Simplifying the "estimated acres" reporting requirement by only requiring that beginning and ending balances be provided
 - e. Clarifying that "acres of land held for disposal or exchange" applies only to land conveyed to non-federal entities
 - f. Clarifying the type of information to be disclosed at the government-wide level
- A19. Concerning the proposed implementation approach and related timeline, the Board agreed that the final Statement should (1) require a specific transition date from RSI to note disclosure, (2) extend the time required for the transition so that the Board would have an opportunity to modify guidance if necessary, and (3) not permit early implementation.

User Needs

- A20. Respondents generally agreed that providing "estimated acres of land" would help ensure that user needs are met. One respondent noted that the information should be first designated as RSI and not moved to basic information until there is sufficient confidence in its reliability. Some respondents noted that to focus only on NFI may not be appropriate unless there is some financial information to which NFI relates.
- A21. As the Board noted in its ED, users want understandable financial information that is verified or audited so that they can participate in the democratic process and engage in discussions about the nation's finances. Specific to land, users desire transparency (for example, fair value estimates or land measured by parcel size or acre) over how much land an entity manages and its uses. As such, the Board concluded that user needs are best met with information that is relevant, reliable, and understandable while meeting cost-benefit considerations. To that end, the Board maintains its position that historical cost information, although reliable in most cases, is not relevant to most users. Given the cost-benefit constraints, number of estimated acres is best suited in meeting user needs.
- A22. Moreover, to increase the reliability of the reporting of acres, the Board agrees with those respondents supporting that (1) acreage be treated as basic information (note disclosure) and (2) an RSI transition period be established prior to transitioning to basic note disclosure. Concerning inclusion of financial information with which acres should relate, the Board notes that entities are free to disclose the cost of G-PP&E land and permanent land

rights in the notes. Nevertheless, consistent with SL requirements, the Board has modified its proposal to now require entities with G-PP&E land and permanent land rights to reference a note on the balance sheet that discloses information about G-PP&E land and permanent land rights, but no asset dollar amount should be shown.

Retaining Property, Plant, and Equipment (PP&E) Categories

A23. The majority of respondents agreed with the Board's proposal to retain the G-PP&E land and SL categories.¹⁷ SFFAS 6 establishes three categories of PP&E: (1) G-PP&E, (2) heritage assets, and (3) SL. It is important to note that categorizing land in accordance with SFFAS 6 is predicated on an entity's intended use of the land at acquisition and not necessarily how the land is actually used during the reporting period. Due to concerns over inconsistent accounting and reporting of federal land, the Board established three sub-categories based on how entities in fact use the land they manage. The three land-use sub-categories are (1) conservation and preservation land; (2) operational land; and (3) commercial use land. Refer to Appendix B for illustrations concerning the three sub-categories. Therefore, users are provided with both the entity's intended use of the land and permanent land rights (that is, primary categories of SL or G-PP&E land) as well as their actual use (predicated on predominant use by sub-category) during the reporting period.

Land Use - Categorizing and Sub-categorizing Land Consistently

A24. To improve the comparability of reporting federal land and the uniformity of disclosures, the Board proposed three sub-categories predicated on land use for both G-PP&E land and SL: (1) conservation and preservation land; (2) operational land; and (3) commercial use land. Concerning the sub-categories, respondents noted that (1) the entity should determine in which sub-category the acres are placed and should not be required to apportion among the sub-categories and (2) the three sub-category definitions appear after the proposed definition of acres of land held for disposal or exchange, making it appear that there are four unique sub-categories rather than three.

A25. The Board notes that the ED explicitly stated that the sub-categorizations would be predicated on predominant use. Predominant use is not a new requirement and was first introduced in SFFAS 29, which was issued on July 7, 2005. Furthermore, concerning G-

¹⁷ The Board proposed retaining these two categories primarily because (1) G-PP&E land and stewardship land are acquired for two separate, distinct purposes, (2) these two land types are often maintained and used in completely different ways, (3) keeping the two types of land separate promotes transparency, consistency, and understandability and (4) eliminating the distinction between the two land types could have adverse consequences to legislative requirements and/or budget appropriations.

PP&E land, the General Service Administration's Federal Real Property Council has established predominant use reporting definitions and requirements since 2005.

- A26. It is important to note that this Statement continues the practice in SFFAS 29 that provides entities with flexibility in determining predominant use. For example, in cases where land, including permanent land rights, has multiple uses, none of which is predominant, the entity may attempt to sub-categorize such land. In so doing, entities may find it practicable to apportion the estimated acres among the sub-categories. Paragraph A35 provides additional information on determining the level of aggregation and assignment of land and permanent land rights used to determine predominant use. To be considered a predominant use, land activities or uses are generally not incidental but are normal and recurring in connection to the entity's mission. Nevertheless, the Board recognizes that future guidance concerning predominant use may be required.
- A27. Regarding acres of land held for disposal or exchange, defined at paragraph 20.A., the Board notes that (1) it did not intend to create a fourth sub-category and that narrative presentation or disclosure of said acres is sufficient to meet the Statement's requirements, (2) entities are free to develop graphical or tabular illustrations, and (3) examples found at Appendix B are intended to aid in the application of these key provisions and not illustrate compliance with all of the proposed disclosure requirements.

Developing Uniform Land Disclosure Requirements

- A28. Although the majority of respondents agreed with the Board's proposed disclosure requirements, some respondents noted that preparer burden and audit efforts would increase. Examples cited include:
- a. Financial reporting systems are not currently designed to capture the newly required information. Acreage information is not expected to be recorded in transaction-based financial accounting and reporting systems. Moreover, this Statement does not require entities to integrate or link property (land) management systems to financial systems solely for the purpose of applying these standards.
 - b. Agencies have spent considerable resources to ensure compliance and auditability; adding more data elements to the reporting requirements contributes to disclosure overload and exacerbates the existing cost burden.
 - c. However, some respondents also believed that increases to preparer burden and audit efforts after initial implementation would be temporary. In response to the Board's implementation timeline, more fully discussed below, the Government Accountability Office may issue auditor guidance and the Office of Management and Budget will update its audit bulletin, as necessary.

A29. In connection with the Board's position to reclassify G-PP&E land and permanent land rights as a non-capitalized asset, the Board concluded that developing uniform accounting and reporting requirements across all land categories not only satisfactorily addresses longstanding issues concerning the reporting over land, but also increases informational value to users. Many of the disclosure requirements have been taken from existing requirements contained in SFFAS 29 (for example, disclosure of how land relates to an entity's mission and its policies over land). Moreover, the Board considered respondent comments as well as interested party views in developing the final disclosure requirements. As a result, the revised disclosure requirements reflect the following changes:

- a. Eliminating physical unit disclosure requirements
- b. Eliminating the DM&R reference requirement
- c. Limiting the first two disclosure requirements (that is, how land relates to the entity's mission and an entity's policies over land) to the primary categories of SL and G-PP&E land and not to the sub-categories
- d. Simplifying the requirement to report estimated number of acres by only requiring the beginning and ending balances be presented
- e. Clarifying that "acres of land held for disposal or exchange" applies only to land satisfying legislative disposal authority requirements intended to be conveyed to non-federal entities
- f. Clarifying that the Board does not require the reporting of Tribal land held in trust. As an amending Statement, the Board considered inclusion of lands held in trust but elected to continue the long-standing exclusion of such lands due to their fiduciary nature.
- g. Clarifying that the Board does not require the reporting of the Outer Continental Shelf (OCS)¹⁸ lands because they do not meet FASAB's definition of land as contained in its handbook, at Appendix E. The definition reads as follows:

Land is the solid part of the surface of the earth. Excluded from the definition of land are the natural resources (that is, depletable resources such as mineral deposits and petroleum; renewable resources such as timber, and the outer-continental shelf resources) related to land.

¹⁸ The Board notes that it interprets the term OCS to include the seabed, subsoil and energy or mineral resources derived therefrom.

Nevertheless, if an entity manages material amounts of OCS acreage, the Board believes that this fact should be disclosed.

h. Clarifying the type of information to be disclosed at the government-wide level

The Board believes that the revised disclosure requirements coupled with a graduated phase-in approach satisfactorily addresses concerns related to preparer burden and audit effort.

Definitions

A30. The majority of respondents agreed with the proposed definitions. As previously noted, the task force recommended that the current land categorizations of SL and G-PP&E land be retained. Pursuant to respondent comments, the Board clarified that "acres of land held for disposal or exchange" applies only to land satisfying legislative disposal authority requirements intended to be conveyed to non-federal entities. Concerning land held for disposal or exchange, disposal authorities are generally designed to permit entities to dispose of or exchange land that is no longer required for a federal purpose. Disposal authority might authorize an entity to sell or lease federal land to a state or municipal government or non-profit entity for educational or community development purposes. Additionally, disposal authority might authorize an entity to exchange federal land for non-federal land. Disposal includes conveyances of federal land not limited to sale, transfer, exchange, lease, public-private partnership, and donation or any combination thereof.

Land Rights

A31. Prior to issuing its ED, the Board concluded that temporary land rights (that is, other than permanent land rights) would not be subject to the new requirements of this Statement. The rationale for excluding temporary land rights was based on the Board's belief that (1) such land rights are intangible assets and should be addressed in an Intangibles project and (2) the cost of separating such land rights from the underlying asset would be prohibitive. Therefore, in SFFAS 6 the Board provided for the recognition of land rights based on the expected service life of the land rights. Specifically, where land rights are for a limited or finite period of time (that is, temporary), the Board provided for amortization/ depreciation of the cost to acquire and maintain such rights. The land rights considered permanent are capitalized along with land. SFFAS 50 provided alternative methods for establishing opening balances. Specifically, paragraph 13 (which amended par. 40 of SFFAS 6) provides reporting entities that met the SFFAS 50 criteria to apply the option to either (1) exclude both land and (all) land rights from the opening balance of G-PP&E or (2) recognize land and land rights in opening balances based on the provisions of the alternative valuation method (deemed cost).

A32. In its ED, the Board proposed to treat land rights with an unlimited or infinite period of time (that is, permanent) consistent with the proposed requirements regarding land acquisitions (that is, expensing) and to continue treating those temporary land rights consistent with SFFAS 6. During re-deliberations and considering respondent comments specific to land rights, the Board reconsidered its proposed amendment allowing entities electing to exclude land and land rights (from the opening balance of G- PP&E pursuant to SFFAS 50) to expense future acquisitions of temporary land rights. As a result, the Board concluded that those entities electing to exclude land and land rights from their opening balances should capitalize and depreciate/amortize temporary land rights prospectively. The Board concluded that this aforementioned requirement increases comparability and consistency by providing a uniform accounting practice relative to all land rights. Furthermore, the Board notes that, unlike permanent land rights, temporary land rights are limited in duration and have a definite useful service life or economic life. As such, the Board believes that accrual based financial statements benefit from the allocation of costs between accounting periods.

Requests for Exceptions to De-recognition

A33. Several respondents noted particular circumstances or cases (for example, rate-setting entities) that would require them to continue capitalizing G-PP&E land and permanent land rights. Others also noted the inability to separate the cost of land from an infrastructure or investment holding's overall cost. As a result, some of these respondents asked for an exception to the de-recognition requirement. The Board reviewed each of the cited instances. It notes that exceptions are not warranted because entities are free to include disclosures of the cost of G-PP&E land and permanent land rights at their discretion without explicit guidance to do so. Additionally, it would be confusing to have some entities reporting G-PP&E land and permanent land rights on the face of the financial statements while other entities exclude land and permanent land rights.

Additionally, if the reporting entity believes the cost of G-PP&E land and permanent land rights are critical to the users of financial statements, such information can be presented in the note disclosure. Concerning inseparable land costs, the Board believes that reasonable estimates can be made to identify infrastructure costs apart from land costs to ensure appropriate accounting and reporting. For example, estimates can be derived from (1) public land records such as property tax assessments or ownership documents, (2) comparable market analyses or appraisals, and (3) comparable or similarly recorded real property holdings or investments.

Balance Sheet References

A34. In providing the note disclosure information required for G-PP&E land and permanent land rights (at SFFAS 6, par. 45A) and SL (at SFFAS 29, par. 40), entities may combine the display and/or disclosure for G-PP&E land and permanent land rights and SL. However, the

category distinctions should remain evident to the reader. That is, although the Board has established uniform disclosure requirements to increase informational value, the existing distinction between G-PP&E land and SL has been retained.

Disclosure requirements for the CFR (contained at SFFAS 32, par. 23 and SFFAS 29, par. 42) may also combine the display and/or disclosure for G-PP&E land and permanent land rights and SL and permanent land rights. In such cases and to the extent possible, direct references to agency reports for additional category information about G-PP&E land and permanent land rights and SL and permanent land rights should be made.

Supporting Documentation

- A35. The Board has continually noted the concerns associated with providing corroborating documentation on historical assets including land. In the basis for conclusions to SFFAS 29 (par. 86-88), the Board briefly discussed the fundamental issues associated with historical assets and SL. In addition, Technical Release (TR) 9, *Implementation Guide for Statement of Federal Financial Accounting Standards 29: Heritage Assets and Stewardship Land*, addresses this difficulty by specifically noting the complexities regarding land. For example, federal land was acquired through (1) ceded territory by the original thirteen colonies, (2) territorial annexations, (3) purchases, and (4) treaties. Acquisitions and disposals of land were not documented like modern land transactions. TR 9 makes the point that records and detailed listings from these periods generally do not exist. As a result, the Board concluded that management's assertion concerning land ownership and its related estimates of acres of land and permanent land rights must be based on non-traditional supporting documentation and reasonable acre estimates, respectively. Consistent with the Board's views on SFFAS 29 and TR 9, for this standard, an entity may estimate acreage based on different underlying sources of data to include traditional and/or geospatial mapping, historical records, surveys, plats, etc., or any combination thereof. Additionally, given the diverse nature of how land has been acquired into the public domain, information from different vintages or time-periods would be expected to affect acreage estimation methods and/or techniques. Additionally, an entity is not expected to adjust its acreage estimates for insignificant amounts of: in-holdings,¹⁹ intra-agency shared lands, or acquisitions or disposal of land. Entity estimates can be based on different underlying sources of data applying different measurement and/or mapping methods and can be deemed reasonable within industry accepted tolerance levels applied at an aggregation level (e.g., by national park or reserve, regional/district office, topography/land cover, etc.) as defined by

¹⁹ In-holdings - An in-holding is privately owned land inside the boundary of a national park, national forest, state park, or similar publicly owned, protected area. Generally, in-holdings result from private ownership of lands prior to the designation of the protected park or forest area, which then end up grandfathered within the legally designated boundary.

management. That is, the level of aggregation and assignment of land and permanent land rights used to determine predominant use may be determined by the preparer considering the entity's mission, types of land use and how it manages the assets (e.g., by national park or reserve, bureau, regional/district office, topography/land cover, etc.). For example, the reporting entity may determine that predominant use is determined by national park or forest. Further, the entity may determine that the predominant use of a national park or forest is conservation and preservation even though some uses of the national park or forest are for operational or commercial use, but are not predominant uses. Appendix B provides illustrative examples of what sub-categories or activities could be included within each land use sub-category.

Some respondents raised the issue that land and permanent land rights may have multiple uses and it may be difficult to sub-categorize its predominant use into one of the three predominant use sub-categories. The Board considered whether there should be an additional use sub-category if preparers encountered challenges in sub-categorizing land and permanent land rights into one of the three sub-categories. The Board believes that providing the preparer and entity management with a predominant use definition and flexibility in determining the level of aggregation of land used to determine predominant use, would improve the ability of reporting entities to determine predominant use. Further, Appendix B provides an illustration of what sub-categories or activities could be included within each land use sub-category. Nevertheless, the Board also recognizes that these are new sub-categories and that unforeseen implementation issues may be encountered. Consequently, during the implementation phase (FY's 2022-2025) of this standard, the Board encourages reporting entities to communicate any challenges as well as suggestions in sub-categorizing land use reporting to the Land Implementation Task Force.

- A36. The Board notes that it (1) does not seek exact precision in determining estimated acres or predominant use assessments and (2) does not intend to direct or prescribe the use of any particular approach.
- A37. The Board concluded that it can facilitate effective reporting on land by (1) providing implementation guidance incorporating aspects of TR 9 and (2) reminding readers that, because most federal land was acquired in a variety of ways and over the nation's early settlement and formation, it is not unreasonable that supporting documentation will be developed using alternative methods and/or take on different forms of corroboration as foreseen by TR 9. For example, ownership can be evidenced by public law, treaties, entity certifications, maintenance or renovation contracts, historical maintenance records, a history of payment of invoices, minutes of meetings, historical databases, initial surveys of land, a history of past/historical practices (for example, the length of time an entity controls the land establishing de facto ownership), or other relevant sources of information. These alternatives may provide acceptable evidence of government ownership. Entities could use the above forms of supporting documentation to reasonably estimate acres or rely on

management tools such as geospatial information. The Board expects preparers to apply a variety of documented methods and techniques in arriving at estimates.

Application of this Statement

A38. Reporting entities are subject to the reporting requirements under paragraph 13 of SFFAS 21, *Reporting Corrections of Errors and Changes in Accounting Principles, Amendment of SFFAS 7, Accounting for Revenue and Other Financing Sources*. Specifically, paragraph 12 of SFFAS 21 states, "For the purposes of this standard, changes in accounting principles also include those occasioned by the adoption of new federal financial accounting standards." Therefore, reporting entities with G-PP&E land deemed to be material should follow the guidance in SFFAS 21, paragraph 13.a-13.c. for all changes in accounting principles:

- a. The cumulative effect of the change on prior periods should be reported as a "change in accounting principle." The adjustment should be made to the beginning balance of cumulative results of operations in the statement of changes in net position for the period that the change is made.
- b. Prior period financial statements presented for comparative purposes should be presented as previously reported.
- c. The nature of the changes in accounting principle and its effect on relevant balances should be disclosed in the current period. Financial statements of subsequent periods need not repeat the disclosure.

SFFAS 21 provides that the adjustment should be made to the beginning balance of cumulative results of operations in the statement of changes in net position for the period that the change is made. Thus, no change would be made to the ending net position of the previous year. The disclosures should be at a high level and briefly describe the effect on beginning net position.

Implementation and Effective Date

A39. The Board proposed in the Exposure Draft issued on April 30, 2018, that the disclosure requirements would begin in fiscal year 2021 as RSI and transition to note disclosures with removal of G-PP&E land and permanent land rights from the balance sheet in fiscal year 2024.

The Board considered respondent comments to the exposure draft and interested party views, noting the time needed for reporting entities to:

-
- a. develop and implement related policies and procedures,
 - b. establish estimates of acres and acres by predominant use sub-category as of the beginning of the first year of implementation,
 - c. develop and maintain supporting documentation,
 - d. develop and implement systems and processes for capturing and recording acreage information (balances and transactions during the year by predominant use sub-category), design and implement appropriate internal controls, and update such systems, processes, and controls as necessary for any updated guidance, and
 - e. validate that the required information is independently verifiable or auditable.

Additionally, the Board considered the time needed for:

- The Board to consider implementation issues (e.g. preparation and audit challenges, updated preparation and audit cost information), and through Board deliberations, determine how to best respond to those issues, and
- Developing and issuing preparer and audit guidance relative to non-financial information.

The Board considered concerns from several respondents and members with respect to the uncertainty of costs associated with preparing and auditing the non-financial information, and the need to obtain better information on implementation challenges and costs.

The Board also considered the potential impacts of the COVID-19 pandemic on agencies' ability to implement this Statement.

In light of the considerations noted above, the Board recognized that additional implementation time was needed to present information in RSI and before transitioning the RSI requirements to the notes. Therefore, the Board extended the presentation in RSI to fiscal year 2022 and the transition of RSI requirements to the notes and the removal of G-PP&E land and permanent land rights from the balance sheet from fiscal year 2024, as proposed in the ED, to fiscal year 2026. The Board believes that the extension should allow adequate time to identify and address implementation challenges, including any cost-benefit considerations, while it is reported as RSI.

Given the potential implementation challenges related to this Statement, the Board agreed to include a separate project on its technical agenda to monitor implementation

challenges, and to assess the need, as appropriate, for actions to address those challenges prior to transition of the RSI requirements to the notes. Consistent with Board principles and practice, such actions may include, among other things, staff guidance, AAPC guidance, interpretations, or additional standards, as determined appropriate based on Board deliberations. The Board intends to establish working groups, comprising stakeholders, including major landholding agencies and users to conduct these assessment and research activities.

In addition, the Board discussed the following proposed timetable, including actions to be taken by preparers and auditors and potential actions to be taken by the Board as well as other entities, as appropriate:

- "Fiscal Years 2022 and 2023: Presentation of total acreage and acreage by predominant use sub-categories as RSI, as well as identification of implementation issues and, as appropriate, Board actions to address them.
- "Fiscal Years 2022 and 2023: GAO plans to develop and issue audit guidance, in cooperation with the Council of the Inspectors General on Integrity and Efficiency (CIGIE), for auditing total acreage and acreage by predominant use sub-categories.
- "Fiscal Years 2023 and 2024: Presentation of total acreage and acreage by predominant use sub-categories as RSI, application of audit procedures to RSI and identification of preparation and audit challenges, and as appropriate, Board actions to address them.
- "Fiscal Year 2025: The Board plans to complete its assessment of remaining implementation issues associated with preparation and audit of the RSI (both total acreage and predominant use sub-categories), and, as appropriate, take actions to address them, before the RSI requirements transition to the notes.

Board Approval

- A40. This Statement was approved with a vote of 7 members in favor of its issuance. Ms. Kearney and Mr. Bell dissented to the issuance of this statement. Their dissents are presented below. Written ballots are available for public inspection at FASAB's offices.
- A41. Ms. Kearney dissents to the issuance of this Statement. She agrees with the goal of the Statement, which is to promote transparency into and accountability for the use of Government land. However, Ms. Kearney shares concerns expressed by major landholding agencies in response to the exposure draft and in subsequent discussions with the Board. Ms. Kearney's concerns are that this Statement does not include an option to classify land

acreage as having multiple uses and that this Statement would require reporting and auditing that has not been demonstrated to be cost-beneficial.

Over two thirds of all of the Government's land²⁰ is required by law²¹ to be managed under principles of multiple use. Requiring agencies to specify a single predominant use for multi-use land would put large land management agencies in the untenable position of having to identify and report a predominant use for land that is inconsistent with the use of the land as specified in statute.

At any particular time, land acreage may have multiple uses. It may be used simultaneously for ranching or logging (commercial), a wildlife habitat (preservation/conservation), and a staff office (operational). In addition, one or more of these uses can change over time, especially following catastrophic events, such as wildfires or hurricanes. Requiring agencies to assign a single predominant use to multi-use land would seem to frustrate rather than further the goals of transparency and accountability.

Ms. Kearney appreciates that the Board intends to monitor implementation of this Statement, including the ability to classify land according to a single predominant use. Ms. Kearney also appreciates that the Board intends to assess the need for further guidance to address any implementation challenges that may arise prior to transitioning the reporting from RSI to basic information. However, Ms. Kearney shares concerns expressed by major landholding agencies that the intended transition from RSI to basic reporting together with the challenges associated with assigning a single predominant use would create a burden on agencies that does not fully justify the cost of collecting, reporting, and auditing the information. Ms. Kearney shares these concerns particularly in light of: (1) the availability to the public of reliable Government land information (e.g., the Bureau of Land Management's Official Federal Land Records website and the U.S. Geological Survey's Protected Areas Database) and (2) the broad range of financial information that is currently reported as RSI under existing FASAB standards, including information about natural resources and deferred maintenance and repairs.

A42. Mr. Bell dissents to the issuance of this Statement. Mr. Bell commends FASAB for its thorough examination of the issue, which encompassed several years. In particular, Mr. Bell acknowledges and appreciates that the Board intends to include a separate project on its technical agenda to monitor implementation challenges, and to assess the need, as

²⁰ See, *Federal Land Ownership: Overview and Data*, the Congressional Research Service, February 21, 2020, which provides information about land acreage managed by the Department of Interior's Bureau of Land Management and the Department of Agriculture's Forest Service, <https://crsreports.congress.gov/product/pdf/R/R42346>.

²¹ See, for example, the Federal Land Management and Policy Act of 1976 and the Multiple Use and Sustained Yield Act of 1960.

appropriate, for actions to address those challenges prior to transition of the RSI requirements to basic reporting as note disclosure.

Mr. Bell supports enhanced transparency in financial reporting, whether such transparency takes the form of financial or non-financial information. However, Mr. Bell shares concerns expressed by some agencies in response to the exposure draft and in subsequent discussions with the Board that the disclosures required by this Statement could potentially create a burden that does not fully justify the cost required to collect, analyze, report, and audit the information needed to comply with this Statement. Of particular concern among these agencies is that this Statement does not include an option to classify land acreage for which a single predominant use cannot practically be: (1) determined or (2) distinguished from other, simultaneous predominant uses across multiple categories ("multi-use"). Certain agencies indicated that substantial acres of federally-owned land are or can be subject to multiple, concurrent uses for different purposes, on both perpetual and periodic bases. As such, in these cases, complying with this Statement's requirement to assign a single "predominant use" could be cost-prohibitive, precipitate undue preparation burden, and result in reporting that is not reasonably reflective of the land's actual use.

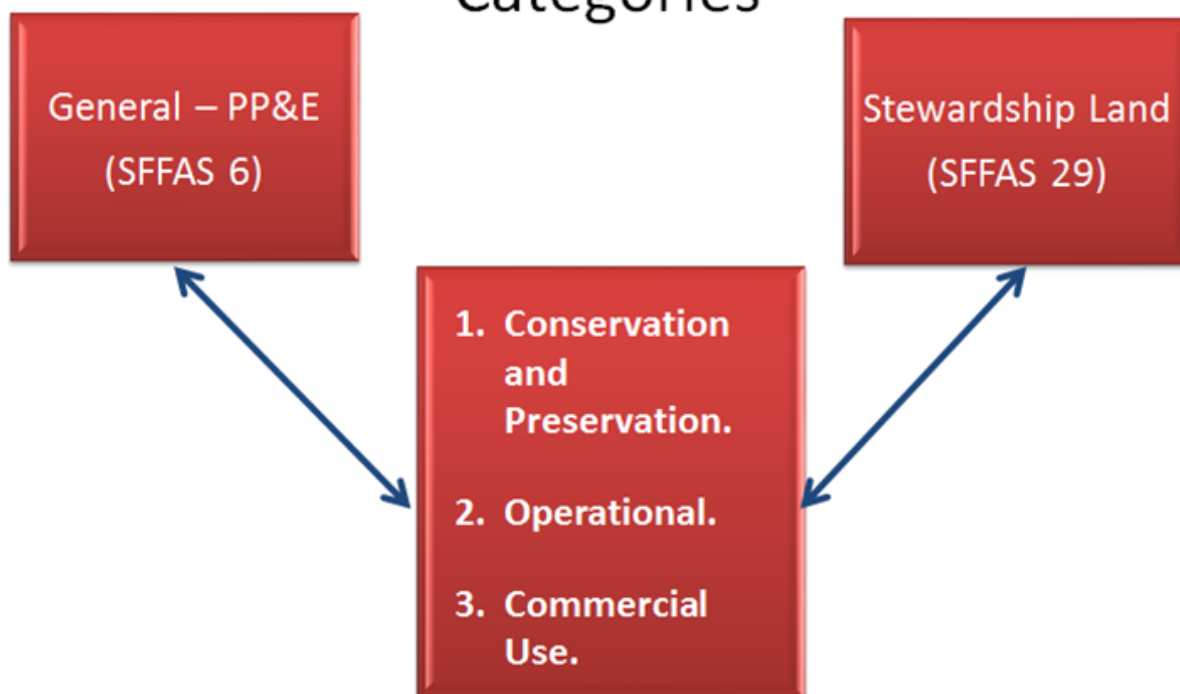

Appendix B: Illustrations

Sub-Categorizing Land - Predicated on Predominant Land-use

This appendix illustrates the application of certain key provisions of this Statement to assist in clarifying their meaning. The following partial sample illustrations at Appendices B-1 through B-2 are intended to aid in the application of these key provisions and not illustrate compliance with all of the disclosure requirements.

The Board has noted the potential need to have additional sub-categories predicated on predominant land-use to complement the land categories currently in use: SL and G-PP&E land. Illustrations demonstrating how the Board envisions the sub-categories complementing the existing requirements follow: Illustrations demonstrating how the Board envisions the sub-categories complementing the existing requirements follow:

Complementing Existing Land Categories

Conservation and Preservation Land Use Sub-categories

The following illustration shows what sub-categories or activities could be included within the conservation and preservation land use sub-category.

Conservation and Preservation Land Use Sub-categories

Operational Land Use Sub-categories

The following illustration shows what sub-categories or activities could be included within the operational land use sub-category.

Commercial Use Land Use Sub-categories

The following illustration shows what sub-categories or activities could be included within the commercial use land use sub-category.

Commercial Use Land Use Sub-categories

Entity	Categorized by Purpose or Intent at Acquisition	Sub-categorized by Predominant Use				Explanatory Comments
	General PP&E Land Acres	Conservation and Preservation	Operational	Commercial Use	Total Land Acres	
Agency X	6,563,954	2,600,000	3,963,954	0	6,563,954	1
Bureau A	2,219,324	0	2,219,324	0	2,219,324	2
Bureau B	863,343	0	863,343	0	863,343	2
G-PP&E Total - Department B	9,646,621	2,600,000	7,046,621	0	9,646,621	

Explanatory Comments

- 1 - **Agency X** has reclaimed 2,600,000 acres of its operational land for conservation/preservation purposes. Although some of the agency's operational land generates commercial revenue, it is incidental to the land's predominant use and its reporting does not change. All land is managed by 12 regional offices and the agency's land is considered to be active (in current use).
- 2 - **Bureaus A and B** maintain land strictly for operational purposes. Bureau A's land portfolio is managed by 2 district offices (DO's) and all land is considered to be active (in current use). Bureau B's land portfolio is managed by a single district office. Pursuant to statutory requirements, 7,200 acres of Bureau B's managed land located in the district's northwest corridor are held for disposal or exchange. All remaining land managed by Bureau B is considered to be inactive (not in current use) awaiting Congressional reviews.

	<u>Entity</u>	Categorized by Purpose or Intent at Acquisition	Sub-categorized by Predominant Use				<u>Explanatory Comments</u>
		<u>Stewardship Land Acres</u>	<u>Conservation and Preservation</u>	<u>Operational</u>	<u>Commercial Use</u>	<u>Total Land Acres</u>	
	Agency X	96,251,797	89,507,814	0	6,743,983	96,251,797	1
	Bureau A	46,932,741	44,512,434	0	2,420,307	46,932,741	2
	Bureau B	40,101,267	40,101,267	0	0	40,101,267	3
	SL Total - Department B	183,285,805	174,121,515	0	9,164,290	183,285,805	

Explanatory Comments

1 - **Agency X** has reclaimed 2,600,000 acres of its operational land for conservation/preservation purposes (see Appendix B-1). Note that the reclaimed land retains its G-PP&E distinction and accordingly, is NOT added to the SL category illustrated above in this Appendix; that is, the land's predominant use is reflected within the G-PP&E category.

The agency been granted authority to generate revenue on additional SL currently sub-categorized as Conservation and Preservation land and as a result, has placed such land in a revenue-generating operating mode. However, because the land only generates an immaterial amount of revenue sporadically during the year, its predominant use is not re-categorized to Commercial Use. All land is managed by 12 regional offices and the agency's land is considered to be active (in current use).

2 - **Bureau A** has been granted authority to generate revenue on all of its SL and required to increase commercial uses where practical.

During the year additional SL has been placed in a revenue generating status and appropriately added to the existing Commercial Use sub-category balance.

All land is managed by 2 regional offices that oversee 100 different watershed projects (e.g., drainage basins and catchments).

Pursuant to statutory requirements, 10,200 acres of Conservation and Prerservation land located at 3 different sites are held for disposal or exchange.

3 - **Bureau B** maintains land strictly for conservation/preservation purposes. Any operational use of the land is incidental and is not considered to be a predominant use.

All land is managed by 2 regional offices that oversee 20 different energy projects (e.g., nuclear, solar, and water).

Entity	Categorized by Purpose or Intent at Acquisition			Sub-categorized by Predominant Use				Explanatory Comments
	Stewardship Land Acres	General PP&E Land Acres	Total Land Acres	Conservation and Preservation	Operational	Commercial Use	Total Land Acres	
Department A	234,889,617	12,362,611	247,252,228	223,145,136	12,362,611	11,744,481	247,252,228	1
Department B	183,285,805	9,646,621	192,932,426	176,721,515	7,046,621	9,164,290	192,932,426	2

Agency 2	75,666,349	3,982,439	79,648,788	37,833,174	3,982,440	37,833,174	79,648,788	4
Bureau 1	5,871,628	8,528,076	14,399,704	5,871,628	6,396,057	2,132,019	14,399,704	5
Total	584,340,145	38,973,786	623,313,931	528,198,199	34,241,768	60,873,964	623,313,931	

Explanatory Comments

- 1 - **Department A** has been granted authority to generate revenue on most of its SL. However, only 11.7 million acres is actively devoted to commercial use. SL which general intermittent or insignificant revenues has been excluded because such land maintains its predominant use as conservation or preservation land. For related details please refer to Department A's annual financial report.
- 2 - **Department B** has also been granted authority to generate revenue on some of its SL but it has also reclaimed 2,600,000 acres of its operational land for conservation or preservation purposes. In addition, 17,400 acres (Bureau A 10,200 conservation and preservation acres and Bureau B 7,200 operational acres) of land are held for disposal or exchange pursuant to statutory requirements. For related details please refer to Department B's annual financial report.
- 3 - **Agency 1** has not been granted any commercial use authority and operates under a strict mandate to preserve land under its care. For related details please refer to Agency 1's annual financial report.
- 4 - **Agency 2** has been granted authority to generate revenue on all of its SL. However, only half or 37.8 million acres is actively devoted to commercial use at any point in time during the reporting period. Although the remaining half is eligible for commercial use it remains in a conservation status because revenues generated are intermittent or insignificant and do not meet the predominant use requirement. For related details please refer to Agency 2's annual financial report.
- 5 - **Bureau 1** maintains buffer zones for national security purposes on land withdrawn from the public domain and also via acquisition from surrounding communities. It has been granted authority to lease, sell or otherwise dispose of operational land. One-quarter or 2.1 million acres of G-PP&E land is predominantly used for commercial purposes. For related details please refer to Bureau 1's annual financial report.

ILLUSTRATION: SFFAS 59, Accounting and Reporting Of Government Land Implementation Timeline

Effective Date: SFFAS 59, par. 15 - 16

The scope of this Statement (paragraphs 1-3) is effective for reporting periods beginning after September 30, 2021. The information required at paragraphs 6 and 7 (G-PP&E land), paragraphs 8-10 (stewardship land), paragraph 11 (government-wide stewardship land), and paragraph 12 (government-wide G-PP&E land) should be presented as RSI for fiscal years 2022 through 2025 and transition to note disclosures in fiscal year 2026. Asset dollar amounts for G-PP&E land and permanent land rights should remain on the balance sheet along with existing disclosures through fiscal year 2025 and cease in fiscal year 2026 when superseded by the transition of the RSI information to note disclosures and paragraphs 4, 5, 13, and 14 become effective. Existing display and disclosure (balance sheet reference) for stewardship land should

continue through fiscal year 2025 until they are superseded by the requirements at Paragraphs 8-10 beginning in fiscal year 2026.

Summary

This Statement of Federal Financial Accounting Standards (SFFAS) amends paragraphs in SFFAS 54, *Leases*; SFFAS 57, *Omnibus Amendments 2019*; SFFAS 5, *Accounting for Liabilities of the Federal Government*; and SFFAS 6, *Accounting for Property, Plant, and Equipment*.

In August 2019, the Accounting and Auditing Policy Committee (AAPC)—which operates under the general oversight of the Federal Accounting Standards Advisory Board (FASAB or "the Board")—undertook a project to develop proposed implementation guidance for SFFAS 54 as a Technical Release. During the course of the project, implementation issues were identified that are best addressed through omnibus amendments to leases guidance, mostly clarifying in nature, rather than through a Technical Release. The issues noted required modifications to the existing Statements to provide clarity and address areas of concern.

This Statement addresses those issues by clarifying and improving consistency throughout SFFAS 54, SFFAS 57, SFFAS 5, and SFFAS 6 with omnibus amendments. It also amends and rescinds certain requirements in SFFAS 54 that were determined to be less likely to yield meaningful information.

Materiality

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial.^{1A} A misstatement, including omission of information, is material if, in

^{1A} Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled Materiality, for a detailed discussion of the materiality concepts.

light of surrounding facts and circumstances, it could reasonably be expected that the judgment of a reasonable user relying on the information would change or be influenced by the correction or inclusion of the information. Materiality should be evaluated in the context of the specific reporting entity. Determining materiality requires appropriate and reasonable judgment in considering the specific facts, circumstances, size, and nature of the misstatement. Consequently, after quantitative and qualitative factors are considered, materiality may vary by financial statement, line item, or group of line items within an entity.

Standards

Scope

1. This Statement applies to federal entities that present general purpose federal financial reports, including the consolidated financial report of the U.S. Government (CFR), in conformance with generally accepted accounting principles (GAAP), as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
2. This Statement amends SFFAS 54, *Leases*; SFFAS 57, *Omnibus Amendments 2019*; SFFAS 5, *Accounting for Liabilities of the Federal Government*; and SFFAS 6, *Accounting for Property, Plant, and Equipment*; by providing necessary technical corrections and clarifications, along with other omnibus changes.

Amendments to SFFAS 54

3. Paragraph 5.a of SFFAS 54 is amended as follows:

5. This Statement does not apply to

- 5.a accounting for leases of assets prior to the commencement of the lease term, such as during ~~under~~ construction periods or ^{2A}

FN 2A - For leases other than short-term leases and intragovernmental leases, the lessee would account for payments prior to commencement of the lease term as advances paid in contemplation of the future receipt of the lease asset. The lessor would account for receipts prior to commencement of the lease term as advances received. These advances would be accounted for in a manner consistent with SFFAS 1, *Accounting for Selected Assets and Liabilities*, par. 57-61, prior to the lease commencement date. Such advances would be considered assets of the lessee and liabilities of the lessor. At lease commencement, the lessee would then reclassify the asset and include it in the measurement of the lease asset in accordance with SFFAS 54 par. 49, and the lessor would reclassify the advances received as unearned revenue in accordance with par. 64.b

4. Paragraph 7 of SFFAS 54 is amended as follows:

7. Short-Term Lease - A short-term lease is a non-intragovernmental lease with a lease term (as defined in par. 14-21) of 24 months or less.

5. Paragraph 10 of SFFAS 54 is amended as follows:

10. Lease Concessions - Lease concessions are rent discounts made by the lessor to entice the lessee to sign a lease. For example, lease concessions may include rent holidays/free rent periods, or reduced rents, or commission credits.

6. Paragraph 20 of SFFAS 54 is amended as follows:

20. At the commencement of a lease term, lessors and lessees should assess all factors relevant to the likelihood that the lessee or lessor will exercise options identified in paragraphs 15-19, whether these factors are contract or agreement based, underlying asset based, market based, or federal specific. The assessment often will require the consideration of a combination of these interrelated factors. Examples of factors to consider include, but are not limited to, the following: ...

7. Paragraph 21.d of SFFAS 54 is added as follows:

21. Lessors and lessees should reassess the lease term only if one or more of the following events occur:

21.d A lease modification that amends the noncancelable period and results in remeasurement in accordance with paragraphs 85-86.

8. Paragraph 22 of SFFAS 54 is amended as follows:

22. A short-term lease is a non-intragovernmental lease with a lease term (as defined in par. 14-21) of 24 months or less.

9. Paragraph 23 of SFFAS 54 is amended as follows:

23. A lessee should recognize short-term lease payments as an expense based on the payment provisions of the contract or agreement and standards regarding recognition of accounts payable and other related amounts. The lessee should recognize an asset if payments are made in advance of the reporting period to which they relate or a liability for rent due ~~if payments are made subsequent to that and unpaid at the end of the reporting period to which they relate.~~ Rental increases, rental decreases, lease incentives, and lease concessions should be recognized when incurred as increases/reductions to lease rental expense. ~~The lessee should recognize lease incentives and lease concessions (for example, a rent holiday period of one or more months free) as reductions of lease rental expense on a straight-line basis over the lease term.~~

10. Paragraph 24 of SFFAS 54 is amended as follows:

-
24. A lessor should recognize short-term lease payments as revenue based on the payment provisions of the contract or agreement and standards regarding recognition of accounts receivable and other related amounts. The lessor should recognize a liability if payments are received in advance of the reporting period to which they relate or an asset for rent due and to be received subsequent to the ~~if payments are received subsequent to that reporting period to which they relate.~~ Rental increases, rental decreases, lease incentives, and lease concessions should be recognized when incurred as increases/reductions to lease rental income. ~~The lessor should recognize any lease incentive or concession (for example, a rent holiday period with one or more months free) as reductions of lease rental income on a straight-line basis over the lease term.~~
11. The SFFAS 60 amendment to paragraph 25 of SFFAS 54 was superseded by a subsequent amendment (SFFAS 61, par. 5).
12. Paragraph 29 of SFFAS 54 is amended as follows:
29. Rental increases/decreases may be fixed in the lease and take place with the passage of time (for example, be based on such factors as anticipated increases/decreases in costs or anticipated appreciation/depreciation in property values, but the amount of the increase/decrease is specified in the lease) or they may be contingent on future events.
13. Paragraph 30 of SFFAS 54 is amended as follows:
30. Rental increases/decreases may also be variable and based on future changes in specific economic factors on which lease payments are based, for example, future sales or usage activity levels or future inflation/deflation (tied to a specific economic indicator where the specific amount of the change is not known).
14. Paragraph 31 of SFFAS 54 is amended as follows:
31. ~~If the lease provides for rental increases, a lessee~~ Rental increases, rental decreases, lease incentives, and lease concessions should be recognized by the lessee and lessor when incurred the expense in the period as increases/reductions to lease rental expense and income, respectively of the increase.
15. Paragraphs 32-33 of SFFAS 54 are rescinded.
16. Paragraph 37.b of SFFAS 54 is amended as follows:
37. Lessees should disclose the following regarding intragovernmental lease activities (which may be grouped for purposes of disclosure):

37.b Annual lease expense in total and by major underlying asset ~~leased PP&E~~ category.

17. Paragraph 38.a of SFFAS 54 is amended as follows:

38. Lessors should disclose the following regarding intragovernmental lease activities (which may be grouped for purposes of disclosure):

38.a A general description of significant leases ~~including a breakdown of the number of leases with federally owned assets and privately owned assets~~

18. Paragraph 39 of SFFAS 54 is amended as follows:

39. At the commencement of the lease term, a lessee should recognize a lease liability and a ~~PP&E~~ right-to-use lease asset (hereinafter referred to as the lease asset), except as provided in paragraphs 22-24 (short-term leases), paragraph 25 (contracts or agreements that transfer ownership), and paragraphs 26-38 (intragovernmental leases).

19. The SFFAS 60 amendment to paragraph 42 of SFFAS 54 was superseded by a subsequent amendment (SFFAS 61, par. 6).

20. Paragraph 51 of SFFAS 54 is amended as follows:

51. If a lease contains a purchase option that the lessee has determined is probable of being exercised, the lease asset should be amortized over the useful life of the underlying asset. ~~In that circumstance~~ However, if the underlying asset is ~~is~~ will be capitalizable and nondepreciable in the reporting period the purchase option is expected to be exercised, such as land, the lease asset should not be amortized. If the underlying asset will be non-capitalizable in the reporting period the purchase option is expected to be exercised, the lease asset should be amortized over the remaining lease term.^{8A}

FN 8A - Once SFFAS 59, *Accounting and Reporting of Government Land*, becomes fully effective, underlying assets that are general PP&E land will become non-capitalizable. For reporting periods prior to this, general PP&E land is capitalizable and nondepreciable.

21. Paragraphs 52-53 of SFFAS 54 are amended as follows:

52. The lease asset generally should be adjusted by the same amount when the ~~corresponding~~ lease liability is remeasured based on paragraphs 44-48. However, if this change reduces the carrying value of the lease asset to zero, any remaining amount should be reported in the statement of net cost as a gain. Changes arising from amendments to a lease contract or agreement should be accounted for under the provisions of paragraphs 80-86 for lease terminations and modifications.

53. ~~Leased assets classified as PP&E are subject to SFFAS 44, *Accounting for Impairment of General Property, Plant, and Equipment Remaining in Use*. The presence of impairment indicators (described in par. 8-15 of SFFAS 44) with respect to the underlying asset may result in a change in the manner or duration of use of the lessee's rights to obtain and control access to economic benefits and services derived from the underlying asset and the application of SFFAS 44. The change in the manner or duration of use of the underlying asset is an indicator that the right of use lease asset may be impaired (SFFAS 44, par. 12). If the underlying asset is impaired, it If impaired, the lease asset should be reduced first for any change in the corresponding lease liability resulting from remeasurement under paragraphs 44-48 of SFFAS 54 or terminations or modifications under paragraphs 80-86 of SFFAS 54. Any remaining amount should be recognized as an impairment loss. Paragraphs 16-25 of SFFAS 44 provide criteria for testing for impairment, along with recognizing, reporting, and disclosing impairment losses. This guidance should be applied to lease assets to the extent that impairment losses exceed any reduction to the lease liability and lease asset that may stem from the impairment.~~

~~FN 9 SFFAS 44, *Accounting for Impairment of General Property, Plant, and Equipment Remaining in Use*, par. 18-25.~~

22. Paragraph 54 of SFFAS 54 is amended as follows:

54. Lessees should disclose the following regarding lease activities (which may be grouped for purposes of disclosure), other than short-term leases, contracts or agreements that transfer ownership, and intragovernmental leases: ...

23. Paragraph 54.a of SFFAS 54 is amended as follows:

54.a A general description of its leasing arrangements, including i- the basis, terms, and conditions on which variable lease payments not included in the lease liability are determined

~~ii. the existence, terms, and conditions of residual value guarantees provided by the lessee~~

24. Paragraph 54.b of SFFAS 54 is amended as follows:

54.b The total amount of lease assets and the related accumulated amortization, to be disclosed separately from other PP&E assets

25. The SFFAS 60 amendment to paragraph 59 of SFFAS 54 was superseded by a subsequent amendment (SFFAS 61, par. 9).

26. Paragraphs 64-65 of SFFAS 54 are amended as follows. The term "deferred revenue" is also replaced by "unearned revenue" elsewhere in SFFAS 54, including paragraphs 55, 83, 86, and 90.

Unearned ~~Deferred~~ Revenue

64. A lessor initially should measure the unearned ~~deferred~~ revenue to include the following:
...

65. A lessor subsequently should amortize ~~recognize~~ the unearned ~~deferred~~ revenue, recognizing it as earned revenue, in a systematic and rational manner over the term of the lease. The unearned ~~deferred~~ revenue generally should be adjusted using the same amount as the change resulting from the remeasurement of the lease receivable as discussed in paragraphs 61-63. However, if the change reduces the carrying value of the unearned revenue to zero, any remaining amount should be reported in the statement of net cost as a loss.

27. Paragraph 67 of SFFAS 54 is amended as follows:

67. Lessors should disclose the following regarding lease activities (which may be grouped for purposes of disclosure), other than short-term leases, contracts or agreements that transfer ownership, and intragovernmental leases: ...

28. Paragraph 69.b of SFFAS 54 is amended as follows:

69. If applicable, the financial report of the U.S. Government should disclose the following regarding its lease activities:

- b. The total amount of lease assets, and the related accumulated amortization, to be disclosed separately from ~~other~~ PP&E assets ...

29. Paragraph 70 of SFFAS 54 is amended as follows:

Lease incentives include lessor payments made to or on behalf of the lessee to entice the lessee to sign a lease. Lease incentives may include up-front cash payments to the lessee, for example, moving costs, termination fees to lessee's prior lessor, or lessor's assumption of the lessee's lease obligation under a different lease with another lessor. Lease concessions are rent discounts made by the lessor to entice the lessee to sign a lease. For example, lease concessions may include rent holidays/free rent periods, or reduced rents, or commission credits.

30. Paragraph 71 of SFFAS 54 is amended as follows:

71. Lease incentives and lease concessions reduce the amount that a lessee is required to pay for a lease. For leases other than short-term leases and intragovernmental leases, ~~Lease incentives and lease concessions that provide payments to, or on behalf of, a lessee at or before the commencement of a lease term are included in initial measurement by directly reducing the amount of the lease asset (par. 49). Lease incentive and lease concession payments to be provided after the commencement of the lease term should be accounted for by lessees and lessors as reductions of lease payments for the periods in which the incentive or concession payments will be provided. Those payments should be measured by lessees consistently with the lessee's lease liability (par. 40-48) and by lessors consistently with the lessor's lease receivable (par. 56-63). Accordingly, lease incentive and lease concession payments to be provided after the commencement of the lease term are included in initial measurement and any remeasurement if they are fixed or fixed in substance, whereas variable or contingent lease incentive or lease concession payments are not included in initial measurement. Lessor improvements that are made to or on behalf of the lessee without additional cost to the lessee should be accounted for by the lessee and the lessor consistent with other lease incentives and lease concessions. As leasehold improvements are paid for (financed) by the lessee, leasehold improvements would not be considered a lease incentive or concession received from the lessor.~~^{10A}

FN 10A - The treatment of lease incentives and lease concessions is addressed in par. 23-24 for short-term leases and par. 31 for intragovernmental leases.

31. Paragraph 93 of SFFAS 54 is amended as follows:

93. In a lease-leaseback transaction, an asset is leased by one party (first party) to another party and then leased back to the first party. The leaseback may involve an additional asset (such as leasing a building that has been constructed by a developer on land owned by and leased back to a federal entity) or only a portion of the original asset (such as leasing back only one floor of a building to the owner). A lease-leaseback transaction should be displayed in the financial statements ~~accounted for as~~ a net transaction. Both parties to a lease-leaseback transaction should disclose the amounts of the lease and the leaseback separately.

Amendments to SFFAS 57, SFFAS 5, and SFFAS 6

32. Paragraphs 7 and 8 of SFFAS 57, *Omnibus Amendments 2019*, are rescinded.

33. Paragraph 15 of SFFAS 57 is amended as follows:

15. Paragraphs 3 through ~~6~~-8, 11, and 12 of this Statement are effective for reporting periods beginning after September 30, 2023. Early adoption is not permitted.

34. Paragraph 43A is added to SFFAS 5, *Accounting for Liabilities of the Federal Government*, as follows:

Contracts or Agreements That Transfer Ownership^{20A}

43A. The amount to be recorded as a liability under a contract or agreement that transfers ownership shall be equal to the amount that would otherwise be recognized as a lease liability at the commencement of the lease term (see SFFAS 54, par. 40-48).

FN 20A - See SFFAS 54, par. 25.

35. Paragraph 18 of SFFAS 6, *Accounting for Property, Plant, and Equipment*, is amended as follows:

18. Property, plant, and equipment also includes:

- ~~assets acquired through capital leases (See paragraph 20), including leasehold improvements;~~ Leasehold improvements;
- Property owned by the reporting entity in the hands of or leased to others (e.g., state and local governments, colleges and universities, or Federal contractors);
- Land rights that do not meet the definition of a lease,¹⁸ and
- Contracts or agreements that transfer ownership^{18A}

FN 18 - "Land rights" are interests and privileges held by the entity in land owned by others, such as ~~leaseholds~~, easements, water and water power rights, diversion rights, submersion rights, rights-of-way, and other like interests in land.

FN 18A - See SFFAS 54, par. 25.

36. Paragraph 19A is added to SFFAS 6 as follows:

19A. Property, plant, and equipment also excludes lease assets and land rights that meet the definition of a lease under SFFAS 54, *Leases*.

37. Paragraph 26A is added to SFFAS 6 as follows:

26A. The cost of general PP&E acquired through a contract or agreement that transfers ownership shall be equal to the amount that would otherwise be recognized as a lease asset at the commencement of the lease term (see SFFAS 54, par. 49).

Effective Date

38. The requirements of this Statement are effective for reporting periods beginning after September 30, 2023.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. The authoritative sections of the Statements are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

- A1. Statement of Federal Financial Accounting Standards (SFFAS) 54, *Leases*, was issued in April 2018 with an effective date for reporting periods beginning after September 30, 2020. The effective date was later amended by SFFAS 58, *Deferral of the Effective Date of SFFAS 54, Leases*, to reporting periods beginning after September 30, 2023.
- A2. In August 2019, the Federal Accounting Standards Advisory Board (FASAB or "the Board") and the Accounting and Auditing Policy Committee (AAPC or "the Committee") commenced projects on their technical agendas to identify implementation challenges and develop guidance related to SFFAS 54.
- A3. The AAPC assembled a large group of task force members—over 100 stakeholders—as a means of crowdsourcing the identification and analysis of a wide breadth of potential SFFAS 54 implementation topics. The task force provided input to project staff by:
 - a. Reviewing project staff's content analysis of questions and answers contained in Governmental Accounting Standards Board (GASB) *Implementation Guide 2019-3, Leases*, and determining the extent to which each question and answer contained therein was applicable in the federal context.¹

¹ The GASB material is copyrighted by the Financial Accounting Foundation (FAF), 401 Merritt 7, P.O. Box 5116, Norwalk, CT 06856-5116, and was used with permission. Complete copies of the documents are available from the FAF.

-
- b. Suggesting implementation topics not addressed in GASB 2019-3.
 - c. Identifying and discussing potential omnibus SFFAS amendment candidates that may need to be issued in tandem with the implementation guidance for purposes of providing clarification or closing loopholes. Such candidates were then relayed to FASAB for its consideration.
 - d. Providing editorial and technical comments and illustrative examples on draft versions of implementation guidance questions and answers developed by staff. The working drafts were developed and reviewed, by topic area, over the course of several task force meetings organized by project staff.
- A4. In June and August 2020, the Board discussed omnibus amendments candidates identified by project staff and the task force to include in the exposure draft. The major points of discussion included:
- a. Clarifying the treatment of assets under construction, including payments prior to the commencement of the lease term, in the context of the scope exclusion enumerated in paragraph 5.a. of SFFAS 54. The Board agreed to make clarifying edits to the scope exclusion in the proposal.
 - b. Potential options for amending paragraph 19.a of SFFAS 54 to require detailed analyses of those cancelable periods that are, in substance, unlikely to be canceled by either the lessee or the lessor. After additional research and discussions, the Board concluded that paragraph 19.a should remain unamended. Board members noted that revising the paragraph would likely result in undue costs and preparer burdens. Moreover, the Board believes that reporting entities and their counterparties often have sufficient disincentives that deter them from prevalently engaging in significant off-balance-sheet financing through use of cancelable periods.
 - c. The Board agreed to propose clarifying amendments to address step rent decreases throughout the Statement.
 - d. The Board agreed to propose the rescission of certain disclosure requirements reflected in paragraphs 38.a and 54.a.ii of SFFAS 54 to alleviate the associated challenges and costs in implementing such requirements. After additional research and deliberations, members agreed that those requirements did not generally meet the qualitative characteristics of useful financial information. For example, members believed that the compilation and presentation of such information would not be consistent, comparable, or provide sufficient feedback or predictive value to decision-makers.

-
- e. The Board agreed to maintain the current discount rate guidance in paragraph 42 of SFFAS 54 and to propose the addition of comparable language for lessors in paragraph 59 with respect to use of estimated incremental borrowing rates when the interest rate of a lease cannot be reasonably estimated.
 - f. The Board agreed to propose numerous clarifying amendments to paragraph 53 of SFFAS 54 to facilitate consistent and correct application of the requirements in SFFAS 54 and SFFAS 44, *Accounting for Impairment of General Property, Plant, and Equipment Remaining in Use*, when impairment indicators are present with respect to assets underlying a lease.
 - g. The Board agreed to propose clarifying amendments related to the classification of lease assets by striking the term "PP&E" in SFFAS 54 and SFFAS 57, *Omnibus Amendments 2019*, in certain locations where use of the term implies that lease assets—rather than the underlying assets—are PP&E. The Board discussed the potential benefits to defining intangible assets but agreed that the most appropriate mechanism for doing so would be in a separate project focused on intangibles. The Board also agreed to propose amendments to SFFAS 6, *Accounting for Property, Plant, and Equipment*, to clarify that PP&E would not include lease assets or land rights that meet the definition of a lease.
-

Summary of Outreach and Responses

- A5. The Board released an exposure draft (ED) proposal on November 2, 2020, for public comment, with comments requested by February 5, 2021. The proposal was released as a joint ED in tandem with an ED for a proposed Federal Financial Accounting Technical Release (TR) to provide implementation guidance on leases. Upon release of the ED, FASAB notified constituents through the FASAB website and listserv, the Federal Register, and FASAB newsletter. FASAB also provided news releases to its press contacts, including various news organizations and committees of professional associations generally commenting on EDs in the past. To encourage responses, a reminder notice was provided to FASAB's listserv near the comment deadline.
- A6. Twenty-five comment letters were received in response to the joint ED. Respondents were generally supportive of the proposed Statement. In response to comment letters, the Board identified and agreed upon several improvements and changes to the proposal. Board comments and changes were coordinated between the Accounting and Auditing Policy Committee (AAPC) and the Board where appropriate to ensure consistency across the concurrent projects.
- A7. Improvements and additional omnibus changes included:

-
- a. Clarifying that short-term leases (par. 22-24 of SFFAS 54) are non-intragovernmental leases with a lease term of 24 months or less. For intragovernmental leases with a lease term of 24 months or less, paragraphs 26-38 of SFFAS 54 apply.
 - b. Clarifying the definition of lease concessions in paragraphs 10 and 70 of SFFAS 54. The Board also elected to remove the requirements to straight-line lease incentives and lease concessions for short-term and intragovernmental leases.
 - c. Removing the implicit requirement in paragraphs 42 and 59 of SFFAS 54 for lessees and lessors to impute interest rates for lease liabilities and lease receivables in response to concerns raised by the task force and respondents. The Board concluded that allowing agencies to use their estimated incremental borrowing rates when an interest rate is not stated in the lease agreement was preferable; particularly in light of implementation and audit challenges that could stem from complex calculations to impute interest rates implicit in leases.
 - d. Clarifying paragraph 51 of SFFAS 54 and its future application as it relates to general PP&E land, as affected by SFFAS 59, *Accounting and Reporting of Government Land*. At the time the Board issued SFFAS 54, general PP&E land was a capitalizable and nondepreciable asset. Once fully effective, SFFAS 59 will result in general PP&E land being non-capitalizable.
 - e. Changing the term "deferred revenue" to "unearned revenue" in paragraphs 64-65 and elsewhere throughout SFFAS 54. Although reporting entities may ultimately elect to use either term depending on guidance provided by central agencies, the Board elected to signal a preference in terminology by modifying the term. Some respondents, members of the Board, and the Board's technical staff viewed the term "unearned revenue" as being more understandable to general users.
 - f. Implementing minor clarifying edits to paragraph 93 of SFFAS 54 regarding the treatment of lease-leasebacks.
 - g. Explicitly including leasehold improvements paid for (financed) by lessees in the definition of property, plant, and equipment.
 - h. Providing a valuation basis in SFFAS 5, *Accounting for Liabilities of the Federal Government*, and SFFAS 6 for contracts or agreements that transfer ownership.
- A8. The Board considered other input provided by respondents that did not result in further modifications to the Statement, but may result in alternative Board actions:

-
- a. Some respondents mentioned the differences in lease criteria under SFFAS 54 for proprietary accounting purposes and Office of Management and Budget (OMB) Circular A-11 for budgetary funding and scoring purposes. In light of these comments, the Board acknowledges that there are differences between proprietary and budgetary accounting. Budgetary and financial accounting information are complementary, but the timing and method of recognition of accounting events are different. Users of general purpose federal financial reports often rely on sources of information other than budgetary information to make decisions. For example, the criteria under SFFAS 54 provides useful financial information regarding the efficiency and effectiveness of the government's management of its assets and liabilities and how those assets are financed, whether through ownership and purchase or through lease contracts and agreements.
 - b. Some respondents and task force members requested additional guidance on intragovernmental leasehold improvements, reimbursable work authorizations, and incremental borrowing rates estimates. Some task force members also requested illustrations. The Board appreciates these requests and intends to address these requests through other pronouncements, such as Interpretations of Federal Financial Accounting Standards and/or through Staff Implementation Guidance.
 - c. One respondent and one Board member suggested that the Board consider clarifying whether SFFAS 4, *Managerial Cost Accounting Standards and Concepts*, as amended, should be applied to intragovernmental leases and, if so, how it should be applied in circumstances when a lessee does not fully reimburse the lessor's full cost. The Board recently reexamined inter-entity cost provisions and amended SFFAS 4 when it issued SFFAS 55, *Amending Inter-entity Cost Provisions*, in May 2018. The Board may elect to revisit the requirements of SFFAS 4, as amended by SFFAS 55, at a later time if deemed necessary and appropriate. Thus far, Board research and outreach have indicated that such circumstances in which an intragovernmental lessee does not fully reimburse the lessor's full cost are infrequent and immaterial. In light of this, along with the need for the preparer community to receive timely implementation guidance and clarifying omnibus amendments to SFFAS 54, the Board elected to forgo additional reexaminations or omnibus actions surrounding this topic at this time.
 - d. One respondent and one Board member suggested that the Board clarify whether sale-leaseback requirements under paragraphs 89-92 of SFFAS 54 apply to intragovernmental transactions. SFFAS 7, *Accounting for Revenue and Other Financing Sources*, paragraph 295, which is cited in a footnote to SFFAS 54, paragraph 89 in defining the scope of transactions that qualify as a sale, is limited to transactions with the public under SFFAS 7. The Board elected to forgo additional omnibus actions surrounding intragovernmental transactions resembling sale-leasebacks at this time. The Board believes that such transactions are infrequent, but

nevertheless intends to address this issue, as appropriate, in subsequent omnibus or other guidance actions after further research is completed.

- e. Some respondents and one AAPC member asked that the Board consider opportunities to provide clarifying omnibus amendments related to the scope and applicability of paragraphs 70-93 of SFFAS 54. The Board carefully considered this input and determined that the scope and applicability of these paragraphs was sufficiently and appropriately clarified in the AAPC's leases implementation guidance under concurrent development for the time being. The Board remains mindful of the desire for clarity and consistent application in interpreting the scope and applicability of these paragraphs to various types of leases (short-term, intragovernmental, and lease assets). The Board agreed to address this topic at a later time. The Board will explore opportunities to address these requests through other guidance (potentially Staff Implementation Guidance) once the resolution of other narrow technical issues (such as paragraph A8.d, above) are determined and resolved.
- A9. The Board is aware that additional omnibus amendments, reexaminations of existing Statements that interact with leases, and additional leases implementation guidance may need be undertaken as entities continue to implement SFFAS 54. The Board's technical staff, along with its leases implementation task force, will continue to identify, analyze, and elevate recommendations to the Board and determine the best course of action. With this in mind, the Board concluded that the omnibus amendments herein, coupled with leases implementation guidance developed by the AAPC, should greatly benefit internal users, external users, and preparers of general purpose financial reports, and address a substantial portion of implementation issues likely to arise as reporting entities prepare to implement SFFAS 54.

Board Approval

A10. This Statement was approved for issuance by all members of the Board.

Summary

This Statement of Federal Financial Accounting Standards (SFFAS) amends certain paragraphs in SFFAS 54, *Leases*, and SFFAS 60, *Omnibus Amendments 2021*.

In August 2019, the Accounting and Auditing Policy Committee—which operates under the general oversight of the Federal Accounting Standards Advisory Board (FASAB or "the Board")—undertook a project to develop proposed implementation guidance for SFFAS 54 as a Technical Release. During the course of the project, implementation issues were identified that are best addressed through omnibus amendments to clarify existing leases guidance rather than through a Technical Release. The issues require modifications to the existing Statements to provide technical clarifications and address areas of concern. A substantial majority of those issues were addressed in SFFAS 60; however, a few outstanding implementation issues required additional research and deliberations. This Statement addresses those outstanding issues by clarifying

- the treatment of purchase options and defaults on payments for purposes of (a) determining the lease term and (b) assessing contracts or agreements that transfer ownership for options to terminate;
- the Board's original intent for discounting lease liabilities and receivables, which should result in a more consistent and comparable application of SFFAS 54 requirements; and
- the applicability of paragraphs 89-92 of SFFAS 54 to intragovernmental sale-leasebacks and disclosure requirements applicable to them.

Materiality

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial.^{1A} A misstatement, including omission of information, is material if, in light of surrounding facts and circumstances, it could reasonably be expected that the judgment of a reasonable user relying on the information would change or be influenced by the correction or inclusion of the information. Materiality should be evaluated in the context of the specific reporting entity. Determining materiality requires appropriate and reasonable judgment in considering the specific facts, circumstances, size, and nature of the misstatement. Consequently, after quantitative and qualitative factors are considered, materiality may vary by financial statement, line item, or group of line items within an entity.

^{1A} Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled Materiality, for a detailed discussion of the materiality concepts.

Standards

Scope

1. This Statement applies to federal entities that present general purpose federal financial reports, including the consolidated financial report of the U.S. Government (CFR), in conformance with generally accepted accounting principles (GAAP), as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
2. This Statement amends SFFAS 54, *Leases*, and SFFAS 60, *Omnibus Amendments 2021*, by providing additional guidance, along with technical corrections and clarifications.

Amendments to SFFAS 54

3. Paragraph 19.b of SFFAS 54 is amended as follows:

19. In determining the lease term for both the lessee and lessor, the following specific provisions should be applied: ...

19.b An option to terminate is an unconditional right that exists within the contract. A provision that gives a lessee or lessor the right to terminate the lease conditional upon certain circumstances or upon the occurrence of certain events, such as the action or inaction of the other party to the lease contract, should not be considered an option to terminate the lease for purposes of determining the lease term. For example, provisions that allow for termination of a lease due to a violation of lease terms and conditions, such as a default on payments, are not considered options to terminate the lease. If the lease provisions allow for the termination of a lease due to (a) the purchase of the underlying asset, (b) the payment of all sums due, or (c) the default on payments, these provisions are not considered options to terminate.

4. Paragraph 19.d is added as follows:

19. In determining the lease term for both the lessee and lessor, the following specific provisions should be applied: ...

19.d If a lessee has the option to purchase the underlying asset during the lease term and the contract is not a contract that transfers ownership (required to be reported in accordance with par. 25), the lease term should exclude the period, if any, after the date at which the option is probable of being exercised.

5. Paragraph 25 of SFFAS 54 and the previously-issued amendment thereto (SFFAS 60, par. 11) are amended as follows:

25. A contract or agreement that (a) transfers ownership of the underlying asset to the lessee by the end of the contract or agreement and (b) does not contain options to terminate (par. 14-19), but that may contain an availability of funds or cancellation clause that is not probable of being exercised (par. 19.c), should be reported as a purchase of that asset by the lessee or as a financed sale of the asset by the lessor.⁵ For this purpose, options to purchase the underlying asset prior to the transfer of ownership are not considered options to terminate.

FN 5 - See SFFAS 6, par. 26A.

6. Paragraph 42 of SFFAS 54 and the previously-issued amendment thereto (SFFAS 60, par. 19) are amended as follows:

42. The future lease payments should be discounted using the interest rate the lessor charges the lessee. If the interest rate is not stated in the lease, the interest rate should be based on the interest rate on marketable Treasury securities at the commencement of the lease term (or at the subsequent financial reporting date in accordance with par. 44), with a similar maturity to the term of the lease ~~lessee's estimated incremental borrowing rate⁷ (the estimated rate that would be charged for borrowing the lease-payment amounts for the lease term) should be used.~~

FN 7—~~A federal lessee's incremental borrowing rate would be the Department of the Treasury borrowing rate for securities of similar maturity to the term of the lease unless the entity has its own borrowing authority.~~

7. Paragraphs 42A-42C are added to SFFAS 54 as follows:

42A. If the interest rate is based on marketable Treasury securities, it should be consistent with the interest rate on marketable Treasury securities at the commencement of the lease term, in accordance with paragraphs 40 and 42 (or the interest rate on marketable Treasury securities on the subsequent financial reporting date, in accordance with par. 46 and 48). The interest rate may be based on a recent interest rate on marketable Treasury securities or historical average interest rate on marketable Treasury securities of a similar maturity to the term of the lease, provided that the interest rate is consistent with the interest rate on marketable Treasury

securities at the commencement of the lease term (or subsequent financial reporting date).

42B. When selecting an interest rate based on marketable Treasury securities of similar maturity to the term of the lease, reporting entities may round up or down to the nearest maturity or interpolate the interest rate for the period between two maturities. The methodology for selecting an interest rate based on marketable Treasury security maturities should be consistent from period to period.

42C. Reporting entities should not extrapolate beyond the longest Treasury maturity when the lease term exceeds it; rather, reporting entities should select the longest Treasury maturity. For example, if the longest Treasury maturity at commencement of the lease term is 30 years, reporting entities should select the 30-year rate as the discount rate for a lease with a 75-year term.

8. Paragraphs 47 and 48 of SFFAS 54 are amended as follows:

47. A lease liability is not required to be remeasured, nor is the discount rate required to be reassessed, solely for a change in the interest rate on marketable Treasury securities ~~lessee's estimated incremental borrowing rate~~.

48. If the discount rate is required to be updated based on the provisions in paragraph 46, the discount rate should be based on the revised interest rate the lessor charges the lessee at the time the discount rate is updated. If that interest rate cannot be readily determined, the interest rate on marketable Treasury securities with a similar maturity to the term of the lease ~~lessee's estimated incremental borrowing rate~~ at the time the discount rate is updated should be used (see par. 42-42C above).

9. Paragraph 59 of SFFAS 54 and the previously-issued amendment thereto (SFFAS, 60 par. 25) are amended as follows:

59. The future lease payments to be received should be discounted using the interest rate the lessor charges the lessee. If the interest rate is not stated in the lease, the interest rate should be based on the interest rate on marketable Treasury securities at the commencement of the lease term (or at the subsequent financial reporting date in accordance with par. 61), with a similar maturity to the term of the lease ~~lessor's estimated incremental borrowing rate should be used.~~^{9A}

FN 9A—A federal lessor's incremental borrowing rate would be the Department of the Treasury borrowing rate for securities of similar maturity to the term of the lease unless the entity has its own borrowing authority.

10. Paragraphs 59A-59C are added to SFFAS 54 as follows:

59A. If the interest rate is based on marketable Treasury securities, it should be consistent with the interest rate on marketable Treasury securities at the commencement of the lease term, in accordance with paragraphs 56 and 59 (or the interest rate on marketable Treasury securities on the subsequent financial reporting date, in accordance with par. 63). The interest rate may be based on a recent interest rate on marketable Treasury securities or historical average interest rate on marketable Treasury securities of a similar maturity to the term of the lease, provided that the interest rate is consistent with the interest rate on marketable Treasury securities at the commencement of the lease term (or subsequent financial reporting date).

59B. When selecting an interest rate based on marketable Treasury securities of similar maturity to the term of the lease, reporting entities may round up or down to the nearest maturity or interpolate the interest rate for the period between two maturities. The methodology for selecting an interest rate based on marketable Treasury security maturities should be consistent from period to period.

59C. Reporting entities should not extrapolate beyond the longest Treasury maturity when the lease term exceeds it; rather, reporting entities should select the longest Treasury maturity. For example, if the longest Treasury maturity at commencement of the lease term is 30 years, reporting entities should select the 30-year rate as the discount rate for a lease with a 75-year term.

11. Paragraph 61 of SFFAS 54 is amended (without amendment to its sub-paragraphs or footnote) as follows:

61. The lessor should remeasure the lease receivable at subsequent financial reporting ~~dates~~ ~~periods~~ if one or more of the following changes have occurred at or before that financial reporting ~~date~~ ~~period~~, based on the most recent lease contract or agreement before the changes,¹⁰ and the changes individually or in the aggregate, are expected to significantly affect the amount of the lease receivable since the previous measurement:

12. Footnote 11 to paragraph 89 of SFFAS 54 is amended as follows:

89. Sale-leaseback transactions involve the sale of an underlying asset by the owner and a lease of the property back to the seller (original owner). A sale-leaseback should include a transaction that qualifies as a sale¹¹ to be eligible for sale-leaseback accounting. A sale-leaseback transaction that does not include a transaction that qualifies as a sale should be accounted for as a borrowing by both the seller-lessee and the buyer-lessor.

FN 11 - See SFFAS 7, Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting, par. 295 (with the public) and par. 314-315 (intragovernmental).

13. Paragraph 92 of SFFAS 54 is amended as follows:

92. A seller-lessee should disclose the terms and conditions of sale-leaseback transactions as part of ~~in addition to~~ the disclosures required of a lessee (par. 37 or 54, as applicable). A buyer-lessor should disclose the terms and conditions as part of ~~provide~~ the disclosures required of a lessor (par. 38 or 67, as applicable).

Effective Date

14. The requirements of this Statement are effective for reporting periods beginning after September 30, 2023. Early adoption is not permitted..

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any Statements that affect this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect subsequent changes. The reader can review the basis for conclusions of amending Statements for the rationale for each amendment.

Project History

- A1. The Federal Accounting Standards Advisory Board (FASAB or “the Board”) issued SFFAS 54, *Leases*, in April 2018 with an effective date for reporting periods beginning after September 30, 2020. The effective date was later amended by SFFAS 58, *Deferral of the Effective Date of SFFAS 54, Leases*, to reporting periods beginning after September 30, 2023.
- A2. FASAB and the Accounting and Auditing Policy Committee (AAPC) commenced projects on their technical agendas to identify implementation challenges and develop guidance related to SFFAS 54.
- A3. The AAPC assembled a large group of task force members—over 100 stakeholders—to identify and analyze numerous SFFAS 54 implementation topics.
- A4. In June and August 2020, the Board discussed omnibus amendments candidates identified by project staff and the task force to include in the exposure draft (ED) of an initial omnibus amendments proposal (the proposal was eventually approved and issued as SFFAS 60, *Omnibus Amendments 2021*). The Board considered input provided by ED respondents and the task force during due process.
- A5. Some respondents and task force members requested additional guidance on the selection and use of incremental borrowing rate estimates to discount lease liabilities and receivables. One respondent suggested that the Board clarify whether sale-leaseback requirements under paragraphs 89-92 of SFFAS 54 apply to intragovernmental

transactions (see SFFAS 60, Basis for Conclusions, par. A8.b and A8.d). The Board decided to address those outstanding issues through subsequent actions.

- A6. Following the issuance of SFFAS 60, the leases implementation task force recommended that the Board clarify numerous aspects of SFFAS 54, paragraphs 42 and 59, which provided for the use of estimated incremental borrowing rates to discount lease liabilities and receivables. These recommendations were consistent with those raised by respondents to the ED of SFFAS 60.
- A7. The Board considered numerous factors when evaluating paragraphs 42 and 59 of SFFAS 54 and developing omnibus amendments:
- a. Elements identified by task force members as requiring additional clarification
 - b. Technical implementation issues for entities with independent borrowing authorities
 - c. Cost-benefit considerations and qualitative characteristics of information in financial reports
 - i. Paragraphs 152-153 of Statement of Federal Financial Accounting Concepts (SFFAC) 1, *Objectives of Federal Financial Reporting*, provide that accounting standards can have many different kinds of effects that must be considered, including effects on the activities of accountants and auditors. It also provides that the Board must be aware of these potential effects when considering the costs and benefits of any given accounting alternative. In this particular context, the Board considered potential effects on costs of implementation, auditability, and consistent application when assessing the level of detail needed.
 - ii. Paragraph 160 of SFFAC 1 provides that reliability can be affected by the degree of estimation in the measurement process and by uncertainties inherent in what is being measured.
 - iii. Paragraph 164 of SFFAC 1 provides that differences among financial reports should be caused by substantive differences in the underlying transactions or organizations rather than by the mere selection of different alternatives in accounting practices.
 - d. Approaches used in the following documents
 - i. SFFAS 33, *Pensions, Other Retirement Benefits, and Other Postemployment Benefits* (par. 28-32)

-
- ii. Governmental Accounting Standards Board (GASB) Statement 87, *Leases*¹
 - iii. Financial Accounting Standards Board Accounting Standards Update 2021-09, *Discount Rate for Lessees that Are Not Public Business Entities*

- A8. The Board discussed its original intent to subject intragovernmental sale-leasebacks to the requirements of paragraphs 89-92 of SFFAS 54. The Board agreed that the original intent was not sufficiently clear due to an absence of references to intragovernmental transaction guidance, including paragraphs 314-315 of SFFAS 7 and paragraphs 37-38 of SFFAS 54.
- A9. In light of these considerations, the Board agreed to propose omnibus amendments to clarify the discounting of lease liabilities and receivables (par. 42, 47-48, and 59 of SFFAS 54) and the scope and applicability of sale-leaseback requirements (par. 89-92 of SFFAS 54) to intragovernmental leases.

Summary of Outreach and Responses

- A10. The Board released an ED proposal on May 9, 2022, for public comment, with comments requested by July 8, 2022. Upon release of the ED, FASAB notified constituents through the FASAB website and listserv, the Federal Register, and FASAB newsletter. FASAB also provided news releases to its press contacts, including various news organizations and committees of professional associations generally commenting on EDs in the past. To encourage responses, a reminder notice was provided to FASAB's listserv near the comment deadline.
- A11. FASAB received 16 comment letters in response to the ED. Respondents were generally supportive of the proposed Statement. In response to comment letters, the Board identified and agreed upon further changes to improve the technical clarity of the proposal and the related guidance in SFFAS 54.
- A12. After consultations with GASB staff regarding implementation issues with GASB Statement 87, *Leases*, the Board elected to implement additional clarifying omnibus amendments in paragraphs 19 and 25. The Board concluded that these amendments will assist reporting entities when determining whether an option to terminate exists and its effect, if any, on the lease term and the identification of contracts or agreements that transfer ownership. The

¹ The GASB material contained in this document is copyrighted by the Financial Accounting Foundation (FAF), 801 Main Ave., P.O. Box 5116, Norwalk, CT 06856-5116, and was used with permission. Complete copies of the document are available from the FAF.

omnibus amendments to these paragraphs are generally consistent with those implemented by the GASB under GASB Statement 99, *Omnibus Amendments 2022*.²

A13. Improvements and additional changes included the following:

- a. Improving consistency in terminology and linkage across interacting paragraphs to enhance clarity of the original omnibus proposals
- b. Clarifying
- c. the treatment of purchase options and defaults on payments for purposes of determining whether or not such provisions represent an option to terminate
- d. Aligning phrasing in paragraphs 44 and 61 of SFFAS 54

A14. The Board considered other input provided by respondents that did not result in further modifications to the Statement:

- a. A few respondents expressed concerns that paragraph 42B and 59B guidance may not be applied consistently to the leases in reporting entities' respective lease portfolios. The Board considered these comments and decided that the criteria for entities to follow *methodologies* consistently from period to period (as provided for under par. 42B and 59B) sufficiently provides for such consistency. The discounting of future lease payments under paragraphs 42-42C and 59-59C inherently involves the application of sound, objective, and reasonable professional judgments when developing and implementing accounting procedures or practices. The Board concluded that these paragraphs help inform those professional judgments, while providing reasonable guardrails in support of the qualitative characteristics of reliability, consistency, and comparability (see SFFAC 1, par. 160, 163-164).
- b. One respondent noted that the options for selecting interest rates could lead to inconsistencies in values between sub-components within larger reporting entities. Inconsistencies between sub-component valuation methods exist in other areas and are not unique to leases. These differences stem from other reasonable differences in sub-component accounting and valuation policies and procedures. As previously mentioned, the Board concluded that this guidance provides sufficient criteria. Additionally, consolidated reporting entities and their sub-components may manage and harmonize their accounting policies at their discretion.

² Ibid.

-
- c. A few respondents requested that the Board directly reference or hyperlink to a source of marketable Treasury securities to facilitate compliance with the requirements. It is not the role of the Board to provide this information in its pronouncements. The Board must be mindful that information sources and hyperlinks can change, thus it cannot provide such information in its pronouncements.

Board Approval

A15. The Statement was approved for issuance by all members of the Board.

Affects	• SFFAS 54, par. 96A-96E
Affected by	None.
Related Guidance	None.

Summary

This Statement of Federal Financial Accounting Standards (SFFAS) amends the implementation section of SFFAS 54, *Leases*, by providing transitional accommodations to reporting entities implementing SFFAS 54 in the area of "embedded leases." "Embedded leases" is a common industry term which generally describes contracts or agreements that contain lease component(s) and nonlease component(s), such as service components, and serve a primary purpose attributable to the nonlease component(s).

Under these amendments, reporting entities may elect not to assess whether contracts or agreements meeting the eligibility criteria for "embedded leases" are or contain lease component(s) as of October 1, 2023, as well as those subsequently entered into or modified through the end of the accommodation period. The contracts or agreements for which this accommodation is applied would be accounted for as nonlease contracts or agreements for their remaining term, unless they are subsequently modified after the end of the accommodation period. The Statement requires reporting entities electing the accommodation to prospectively apply the provisions of SFFAS 54 to lease components of new or modified contracts or agreements meeting the "embedded leases" eligibility criteria-depending on the end of the elected accommodation period-beginning October 1, 2023; October 1, 2024; October 1, 2025; or October 1, 2026.

Leases that do not meet the "embedded leases" eligibility criteria-and those for which the accommodation election is not applied-should follow the implementation provisions of paragraphs 96 and 97 of SFFAS 54. The amendments also require disclosure for reporting entities electing the accommodation.

Materiality

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial.¹ A misstatement, including omission of information, is material if, in light of surrounding facts and circumstances, it could reasonably be expected that the judgment of a reasonable user relying on the information would change or be influenced by the correction or inclusion of the information. Materiality should be evaluated in the context of the specific reporting entity. Determining materiality requires appropriate and reasonable judgment in considering the specific facts, circumstances, size, and nature of the misstatement. Consequently, after quantitative and qualitative factors are considered, materiality may vary by financial statement, line item, or group of line items within an entity.

¹ Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled Materiality, for a detailed discussion of the materiality concepts.

Table of Contents

Summary	1

Appendix C: Abbreviations	16

Standards

Scope

1. This Statement applies to federal entities that present general purpose federal financial reports (GPFFR), including the consolidated financial report of the U.S. Government, in conformance with generally accepted accounting principles (GAAP), as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
2. This Statement amends SFFAS 54, *Leases*, by inserting paragraphs 96A-96E between paragraphs 96 and 97.

Transitional Amendment to SFFAS 54

3. Paragraph 72 of SFFAS 54, *Leases*, acknowledges that lessees and lessors may enter into contracts or agreements that contain both a lease component and a nonlease component. Paragraph 73 provides that the federal entity should account for lease and nonlease components of a contract or agreement separately, unless the contract or agreement meets the exception under paragraph 76 of SFFAS 54.
4. Contracts or agreements that contain both lease component(s) and nonlease component(s), such as service components, and serve a primary purpose attributable to the nonlease component(s), are often viewed in practice as containing "embedded leases."
5. Paragraphs 96A-96E are added to SFFAS 54 as follows:
 - 96A The transitional accommodation applies only to contracts or agreements that meet both of the following criteria:
 - a The contracts or agreements contain nonlease component(s) and may contain lease component(s).
 - b The purpose of the contracts or agreements is primarily attributable to the nonlease component(s), such as service components, based on management's assessment of the nature of the contracts or agreements and professional judgment. The primary purpose attribution to the nonlease

component(s) should not appear to be unreasonable based on the nature of the contracts or agreements and professional judgment.

- 96B For contracts or agreements meeting the paragraph 96A criteria above, a reporting entity may elect to account for such contracts or agreements, including the lease component(s), as nonlease contracts or agreements in their entirety. This election applies to contracts or agreements existing as of October 1, 2023, and/or those subsequently entered into or modified on or prior to September 30, 2026 (end of the accommodation period).^{11A} The entity may elect a shorter accommodation period (contracts or agreements subsequently entered into or modified on or prior to September 30, 2025; September 30, 2024, or those existing as of October 1, 2023). The contracts or agreements under this election should be accounted for as nonleases for their remaining term, unless they are subsequently modified after the end of the accommodation period (see par. 96C below).

FN 11A - Unless the modification affects the primary purpose assessment under par. 96A and results in the primary purpose attribution changing from nonlease component(s) to lease component(s) based on the nature of the modified contract or agreement and professional judgment.

- 96C Entities electing to apply the accommodation should prospectively apply the provisions of SFFAS 54, paragraph 73, to new or modified contracts or agreements meeting the paragraph 96A criteria above that commence after (or become effective after) the accommodation period.^{11B} For lease component modifications effective after the accommodation period that relate to contracts or agreements for which the accommodation was previously applied, the lease terms for such leases would assume that the lease term began as of the effective date of the modification for purposes of initial recognition and measurement.^{11C} For such modifications, the lease liability and lease asset (for lessees) or lease receivable and unearned revenue (for lessors) should initially be measured based on the remaining lease term and associated lease payments.

FN 11B - Unless the modification is reported as a separate lease as provided in par. 84. In such cases, the additional lease would be recognized as a new lease, while the original lease component(s) may continue to be accounted for as a nonlease component under the accommodation without prospective application of par. 73.

FN 11C - Unless the modification is reported as a separate lease under par. 84. See footnote 11B.

- 96D A reporting entity may apply the provisions of paragraphs 96A-96C to groups of contracts or agreements that are reasonably similar in nature. A reporting entity

may select different accommodation periods under paragraph 96B for different groupings of contracts or agreements.

- 96E A reporting entity electing the above transitional accommodation should disclose the election of the transitional accommodation during the reporting period(s) covered by the accommodation period and the reporting period immediately following the accommodation period. The disclosure need not be repeated during subsequent reporting periods.

Effective Date

6. The requirements of this Statement are effective for reporting periods beginning after September 30, 2023.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. The authoritative sections of the Statements are updated for changes. However, this appendix will not be updated to reflect subsequent changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

- A1. The Federal Accounting Standards Advisory Board (FASAB or "the Board") issued SFFAS 54 in April 2018 with an effective date for reporting periods beginning after September 30, 2020. The effective date was later amended by SFFAS 58, *Deferral of the Effective Date of SFFAS 54, Leases*, to reporting periods beginning after September 30, 2023.
- A2. Following the issuance of SFFAS 54, the Board and the Accounting and Auditing Policy Committee (AAPC) commenced projects on their technical agendas to identify implementation challenges and develop guidance related to SFFAS 54.
- A3. The Board and the AAPC have issued the following pronouncements to facilitate implementation of SFFAS 54:
 - a. SFFAS 60: *Omnibus Amendments 2021, Leases-Related Topics I*
 - b. SFFAS 61: *Omnibus Amendments 2023, Leases-Related Topics II*
 - c. Technical Bulletin 2023-1: *Intragovernmental Leasehold Reimbursable Work Agreements*
 - d. Technical Release 20: *Implementation Guidance for Leases*
- A4. In February 2023, the Board received implementation updates from staff regarding implementation experiences and challenges within the federal environment. The Board also

received letters from some reporting entities highlighting implementation challenges that they were experiencing.

- A5. Following an April 2023 clarification discussion, the Board decided to provide transitional accommodations to reporting entities in the area of "embedded leases" based on the research presented by technical staff and additional information provided during the discussion.
- A6. The Board is aware that SFFAS 54 requires entities to identify and evaluate leases, which also improves accountability for their resources and obligations. As noted in paragraph 74 of Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, "accounting can and should contribute to achieving and demonstrating several kinds of accountability, such as
- a. accountability for financial resources;
 - b. accountability for faithful compliance or adherence to legal requirements and administrative policies;
 - c. accountability for efficiency and economy in operations; and
 - d. accountability for the results of government programs and activities, as reflected in accomplishments, benefits, and effectiveness."
- A7. When developing SFFAS 54, the Board made several decisions in the interest of reducing implementation costs associated with contracts or agreements with multiple components, including, but not limited to, provisions regarding the following:
- a. The allowance of a short-term lease exception
 - b. Allocation of the contract price to multiple components of a lease that allows the stated prices to be used if they do not appear to be unreasonable
 - c. Allocation of the contract price to multiple components that allow best estimates to be used for allocation if no separate prices are included in the contract or if the stated prices appear to be unreasonable
 - d. The requirement to treat an entire multiple-component contract as a single lease unit if determining a best estimate is not practicable
 - e. The exclusion of intragovernmental leases from balance sheet recognition and measurement as lease liabilities and corresponding lease assets (for

intragovernmental lessees) and lease receivables and unearned revenues (for intragovernmental lessors)

- f. The deferral of the effective date until fiscal year 2024
 - g. Prospective implementation at transition, as opposed to a retrospective approach
- A8. Many contracts or agreements contain both lease and nonlease (generally, but not always, service) components. The Board expects that lease components for such contracts or agreements with a primary purpose *attributable to the lease components* were generally accounted for separately. However, the Board recognizes that separate accounting for lease and nonlease components may not have been consistently performed by many reporting entities for "embedded leases" (that is, contracts or agreements with a primary purpose *attributable to nonlease components*) under previous GAAP.
- A9. Accordingly, the Board also agreed that reporting entities should have the flexibility to begin recognizing lease liabilities and correspondent lease assets (for lessees) and lease receivables and unearned revenues (for lessors) for lease components of new or modified contracts or agreements meeting the paragraph 96A criteria prospectively beginning in fiscal year 2027, or earlier.
- A10. The Board expects that SFFAS 54 implementation activities, such as assessing control of the underlying assets for component(s) that may be leases and allocating contract prices to lease and nonlease component(s), among other complexities, are likely to be relatively time consuming for contracts or agreements meeting the paragraph 96A criteria ("embedded leases"). Prospective implementation of paragraph 73 for new or modified contracts or agreements meeting the paragraph 96A criteria provides reporting entities electing the accommodation with additional time to (a) focus and prioritize implementation activities for contracts or agreements with a primary purpose attributable to lease components and (b) prepare for prospective implementation of paragraph 73 for new or modified "embedded leases."
- A11. The Board recognizes that reporting entities would need to assess the eligibility of contracts or agreements for the transitional accommodation. In crafting this Statement, the Board carefully considered the level of effort necessary to balance the informational benefits of implementing paragraph 73 while also accommodating the identified implementation challenges associated with "embedded leases." The Statement includes several features to provide that balance:
- a. Allowing reporting entities to assess the primary purpose of contracts or agreements based on their nature and professional judgment, provided that such attributions do not appear to be unreasonable based on those factors. The Board concluded that this

phrasing provides for an appropriate level of preparer discretion and professional judgment.

- b. Allowing reporting entities the flexibility to elect the accommodation period and determine the prospective application date of paragraph 73 for eligible contracts or agreements based on the expected level of time and effort to implement SFFAS 54.
- c. Allowing reporting entities to apply the provisions of paragraphs 96A-96C to groups of contracts or agreements, provided that the nature of the contracts within such groups is reasonably similar.
- d. Limiting resulting disclosures to simply disclosing the election of the transitional accommodation in the reporting period(s) covered by the accommodation period and during the reporting period immediately following the accommodation period. The Board discussed other potential disclosure options, but elected to minimize disclosure burden to provide maximum transitional relief.

A12. The Board expects that most contracts meeting paragraph 96A criteria will have lease terms that are comparatively shorter in relation to contracts with a purpose primarily attributable to lease components (real property leases, for example), given the nature of the related contracts. Accordingly, the Board expects that the perceived benefits of this accommodation outweigh the perceived informational costs.

A13. The Board duly considered alternative accommodations for multiple component contracts when developing the exposure draft (ED) for this Statement. Members considered allowing reporting entities to account for contracts or agreements according to their primary purpose (either lease or nonlease) indefinitely. The design of paragraphs 72-77 of SFFAS 54 underwent extensive research, due process, and deliberations. These unamended paragraphs include considerable design accommodations, which are described in paragraph A7.b-d above.

A14. The Board is also aware that the disclosure requirements of SFFAS 49, *Public-Private Partnerships*, may also apply to contracts that contain "embedded leases." The transitional accommodation will have no bearing on the ongoing applicability of SFFAS 49 disclosure requirements to such contracts.

Summary of Outreach and Responses

A15. The Board released an ED on June 27, 2023, for public comment, with comments requested by July 27, 2023. Upon release of the ED, FASAB notified constituents through the FASAB website and listserv, the Federal Register, and FASAB newsletter. FASAB also

provided news releases to its press contacts, including various news organizations and committees of professional associations generally commenting on EDs in the past. To encourage responses, a reminder notice was provided to FASAB's listserv near the comment deadline.

- A16. FASAB received 21 comment letters in response to the ED. Respondents were generally supportive of the proposed Statement. Respondents generally agreed that the proposals effectively scoped in "embedded leases" and provided a reasonable and balanced level of transitional relief. Some respondents requested further relief, such as lengthening the proposed accommodation period.
- A17. In response to feedback provided in comment letters, the Board agreed to implement further changes:
- a. Aligning the contextual information provided under paragraph 3 with the described provisions of SFFAS 54, paragraph 73. The information provided by paragraph 3 is solely intended to facilitate understanding of the transitional amendments under paragraph 5.
 - b. Extending the maximum accommodation period-end from September 30, 2025, to September 30, 2026.
- A18. The Board considered the following factors when analyzing the length of the accommodation period and related respondent feedback:
- a. Reporting entities may have material "embedded leases." Users of their GPFFRs would benefit from the accountability and transparency associated with separating the lease and nonlease components of multiple component contracts and agreements containing material "embedded leases."
 - b. Financial Accounting Standards Board (FASB) Accounting Standards Codification® (ASC) Topic 840-10-15-17 provided that "[i]f an arrangement contains a lease and related executory costs, as well as other nonlease elements, the classification, recognition, measurement, and disclosure requirements of this Topic shall be applied by both the purchaser and the supplier to the lease element of the arrangement." The Board elected to bring these provisions into SFFAS 54, paragraphs 72-77, based on extensive due process and deliberations.
 - c. The transitional amendments provide significant relief on longstanding requirements brought from ASC 840 into paragraph 73 of SFFAS 54. The accommodations allow reporting entities to prospectively apply the provisions of paragraph 73 to only new or modified contracts or agreements following the accommodation period. The

amendments also allow contracts or agreements existing prior to the accommodation period-end to continue to be accounted for as nonlease, unless they are modified after the end of the accommodation period.

- d. The Board identified a number of concerns and considerations, including several that were raised by respondents, associated with more expansive or permanent accommodation alternatives, such as potential interactions and permanent effects on other topic areas in SFFAS 54 and other Statements.
- A19. The Board also considered the concept of unit of account, which refers to the level of aggregation or disaggregation applicable to one or more components of a contract or agreement to be considered for recognition, measurement, and disclosure in the financial statements and notes.
- A20. Some of the more expansive relief options considered by the Board (and suggested by some respondents) would have provided for contract-level unit of account measurement approaches based on primary purpose on a permanent basis. However, the component-level unit of account measurement approach (as provided for under paragraph 73 of SFFAS 54) provides more useful information to users, as contract components can have heterogeneous measurement attributes and characteristics. Contracts and agreements can also have material lease and nonlease components within them. A contract-level unit of account measurement approach based on primary purpose would introduce high levels of aggregation and subjectivity that may not always faithfully represent the measurable characteristics and underlying substance of the multiple component contracts' economic activity and transactions.
- A21. The Board decided to only provide *transitional* relief based on contract-level primary purpose assessments. The Board believes this will allow reporting entities to more manageably implement SFFAS 54 requirements for "embedded leases" on a transitional basis. The Board concluded this approach will avoid longer term accountability implications associated with permanent contract-level unit of account measurement approach alternatives.
- A22. A few respondents recommended removal of the term "may" from paragraph 96A.a. The Board's intent in using the term "may" is to express the *possibility* that the contract (or group of contracts) *may* contain a lease rather than otherwise implying that a contract (or group of contracts) *must* contain a lease to meet the eligibility criteria. The Board concluded that the level of effort for applying paragraph 96A eligibility criteria should enable efficient application of the transitional accommodation for entities electing to apply it. Requiring that reporting entities *conclusively* identify embedded leases for purposes of determining eligibility would be contrary to the transitional relief objectives of this Statement.

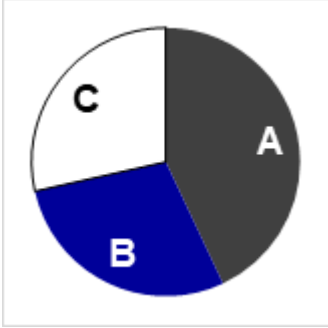

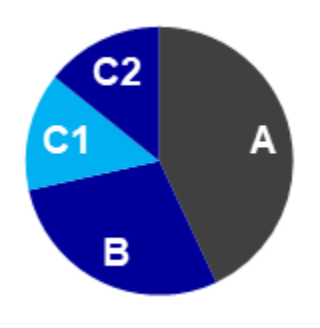

-
- A23. A few respondents suggested paragraph 4 provided a definition of "embedded leases." Paragraph 4 is not intended to define "embedded leases." Similar to paragraph 3, paragraph 4 is solely intended to provide contextual information to facilitate understanding of the transitional amendments under paragraph 5 of this Statement.
- A24. The Board considered other input provided by respondents that did not result in further modifications to the Statement.
- A25. In the ED, four members provided an alternative view aimed at offering practical expedients that would have provided permanent alternatives to the application of paragraphs 73, 85, and 86 of SFFAS 54 for both lessees and lessors. While many respondents expressed support for one or more of the proposals outlined in the alternative view, respondents also highlighted concerns that underscored additional research and due process would be necessary before the Board could consider additional actions. The Board determined that undertaking such research at this time would be contrary to its current objective of offering relief to preparers before the effective date of SFFAS 54.

Board Approval

- A26. This Statement was approved by the Board with a vote of eight members in favor of its issuance and one member, Ms. Johnson, abstaining from the vote.

Appendix B: Non-Authoritative Illustration

- B1. The below non-authoritative illustration is intended to facilitate understanding of the amendments to SFFAS 54 and explain the scope and applicability of paragraphs 96 and 97 and paragraphs 96A-96E on reporting entities' universes of contracts or agreements.

	<p>Many contracts and agreements in the reporting entity's overall universe inherently do not include leases based on their nature (part A of the pie chart). For example, contracts to purchase a capital asset. Such contracts are not subject to SFFAS 54 and would not need to be reviewed for "embedded leases."</p> <p>Some contracts and agreements in the universe are inherently known to serve a primary purpose attributable to lease component(s) (part B of the pie chart). For example, these generally would have been identified as capital or operating lease elements under previous GAAP. These contracts are subject to SFFAS 54 implementation requirements of par. 96 and 97 and their eligibility need not be assessed for the accommodation.</p> <p>Other contracts and agreements in the universe contain nonlease component(s) and may also contain lease component(s). The primary purpose of these contracts or agreements may not be inherently known (part C of the pie chart). These contracts or agreements may or may not meet both of the two criteria under par. 96A.</p>
	<p>Of the contracts or agreements under part C, the primary purpose of many are attributable to nonlease component(s), such as services. These contracts or agreements meet the par. 96A eligibility criteria, provided that the attributions do not appear to be unreasonable based on their nature and professional judgment. Accordingly, they are eligible for the par. 96B-96C accommodation (part C1 of the pie chart).</p> <p>Other contracts or agreements under part C may not have a primary purpose attributable to nonlease component(s) based on their assessed nature and professional judgment. These do not meet par. 96A criteria and, therefore, they are subject to the SFFAS 54 implementation requirements of par. 96 and 97 (part C2 of the pie chart) along with those under part B.</p>

Provisions of par. 96A-96C-including primary purpose assessments-may be applied to groups of contracts or agreements that are reasonably similar in nature, as provided by par. 96D.

Note: The size of the "pie" segments are illustrative and not intended to represent the actual or expected relative volume of contracts or agreements in each respective segment.

Statement of Federal Financial Accounting Standards 63: Omnibus Amendments 2024-1, Amending SFFAS 38, 49, and Technical Bulletin 2011-1

Status

Issued	April 12, 2024
Effective Date	Effective upon issuance
Affects	<ul style="list-style-type: none">• Rescinds SFFAS 38, par. 6 and 31.• Rescinds Technical Bulletin 2011-1, par. 5 and 31.• SFFAS 49, par. 24b.
Affected by	None.
Related Guidance	None.

Summary

This Statement of Federal Financial Accounting Standards (SFFAS) retains the requirement to report oil, gas, and other natural resource information as required supplementary information by rescinding (1) paragraphs 6 and 31 of SFFAS 38, *Accounting for Federal Oil and Gas Resources*, and (2) paragraphs 5 and 31 of Technical Bulletin 2011-1, *Accounting for Federal Natural Resources Other Than Oil and Gas*.

This SFFAS also removes the "where available" exception and provides flexibility for developing estimates in accordance with paragraph 24.b. of SFFAS 49, *Public-Private Partnerships: Disclosure Requirements*.

Materiality

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial.¹ A misstatement, including omission of information, is material if, in light of surrounding facts and circumstances, it could reasonably be expected that the judgment of a reasonable user relying on the information would change or be influenced by the correction or inclusion of the information. Materiality should be evaluated in the context of the specific reporting entity. Determining materiality requires appropriate and reasonable judgment in considering the specific facts, circumstances, size, and nature of the misstatement. Consequently, after quantitative and qualitative factors are considered, materiality may vary by financial statement, line item, or group of line items within an entity.

¹ Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled Materiality, for a detailed discussion of the materiality concepts.

Standards

Scope

1. This Statement applies to federal entities that present general purpose federal financial reports (GPFFRs), including the consolidated financial report of the U.S. Government (CFR), in conformance with generally accepted accounting principles (GAAP), as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
2. This Statement amends the following guidance:
 - a. SFFAS 38, *Accounting for Federal Oil and Gas Resources*
 - b. Technical Bulletin (TB) 2011-1, *Accounting for Federal Natural Resources Other Than Oil and Gas*
 - c. SFFAS 49, *Public-Private Partnerships: Disclosure Requirements*

Amendments To SFFAS 38 and TB 2011-1

3. This paragraph rescinds paragraphs 6 and 31 of SFFAS 38 in their entirety.

~~6. It is the Board's intent that the information required by this Statement transition to basic information after being reported as RSI for a period of three years. Prior to the conclusion of the three-year RSI period, the Board plans to make a determination as to whether the information will transition to basic information as financial statement recognition or note disclosure. This Statement will remain in effect until such time a determination is made.~~

~~31. It is the Board's intent that the information required by this Statement transition to basic information after being reported as RSI for a period of three years. Prior to the conclusion of the three-year RSI period, the Board plans to make a determination as to whether the information will transition to basic information as financial statement recognition or note disclosure. This Statement will remain in effect until such time a determination is made.~~
4. This paragraph rescinds paragraphs 5 and 31 of TB 2011-1 in their entirety.

~~5. It is the Board's intent that the information required by SFFAS 38 transition to basic information after being reported as RSI for a period of three years. Prior to the conclusion of the three-year RSI period, the Board plans to make a determination as to whether the information required by SFFAS 38 will transition to basic information as financial statement recognition or note disclosure. It is anticipated that a similar determination would be made for natural resources other than oil and gas based on agencies' experiences implementing the guidance in this technical bulletin.~~

~~31. It is the Board's intent that the information required by SFFAS 38 transition to basic information after being reported as RSI for a period of three years. Prior to the conclusion of the three-year RSI period, the Board plans to make a determination as to whether the information required by SFFAS 38 will transition to basic information as financial statement recognition or note disclosure. It is anticipated that a similar determination would be made for natural resources other than oil and gas based on agencies' experiences implementing the guidance in this technical bulletin.~~

Amendments to SFFAS 49

5. This paragraph amends paragraph 24.b. of SFFAS 49 as follows:

24.b. A description of federal and non-federal funding of the P3 over its expected life, including the estimated mix of federal and non-federal funding, and, ~~where available~~, the estimated amounts of such funding.^{10A 10B} ~~For any amounts that are not available, the disclosures should indicate such.~~

FN 10A - Such estimated amounts may be specific amounts or a range of amounts of the funding. Disclosure should include the basis for management's estimates (for example, based on contract terms, initial estimates of P3 funding, etc.) as well as any significant uncertainties surrounding the estimates.

FN 10B - Funding, as used here, relates to the amount of contributions of federal and non-federal capital, equity, or debt instruments to the P3 project, but excludes ongoing operating revenues and costs. Such funding may take different forms, such as cash, tangible assets, leaseholds, loans, and/or loan guarantees. In contrast, paragraph 24.c.ii. relates to the federal entity's aggregate cash flows to be received and to be paid over the remaining expected life of the P3, which comprise ongoing operating revenues and costs.

Effective Date

6. The requirements of this Statement are effective upon issuance.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any Statements that affect this Statement. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect subsequent changes. The reader can review the basis for conclusions of amending Statements for the rationale for each amendment.

Project History

Oil, Gas, and Other Natural Resources Reporting

- A1. The Federal Accounting Standards Advisory Board (FASAB or "the Board") issued SFFAS 38 on April 13, 2010. SFFAS 38 requires the value of the federal government's estimated petroleum royalties from the production of federal oil and gas proved reserves to be reported in a schedule of estimated federal oil and gas petroleum royalties. In addition, SFFAS 38 requires the value of estimated petroleum royalty revenue designated for others be reported in a schedule of estimated federal oil and gas petroleum royalties to be distributed to others, as part of a discussion of all significant federal oil and gas resources under management of the entity.
- A2. On July 6, 2011, FASAB issued SFFAS 41, *Deferral of the Effective Date of SFFAS 38*, which deferred the effective date of SFFAS 38 from periods beginning after September 30, 2011, to periods beginning after September 30, 2012.
- A3. Also on July 6, 2011, FASAB issued TB 2011-1, which applies the general principles in SFFAS 38 and requires federal entities to report as required supplementary information (RSI) the value of the federal government's estimated royalties and other revenue from other federal natural resources that are (1) under long-term lease, long-term contract, or other long-term agreement and (2) reasonably estimable as of the reporting date.
- A4. At the time SFFAS 38 and TB 2011-1 were issued, the Board believed that the estimated federal royalty share of proved oil and gas reserves and recoverable reserves of other

natural resources could be reliably estimated and converted to monetary terms and, therefore, could be presented as basic information. However, members wanted to gather more information about the reliability of the valuation methodology before the Board made a final decision on whether the information should be recognized on the face of the financial statements or disclosed in the notes to the financial statements. The Board agreed to require that the information be reported as RSI for three years. Before the end of the three-year RSI period, the Board planned to decide whether the information would transition to basic information as financial statement recognition or note disclosure. The Board acknowledged that new information might become available that would warrant continued reporting as RSI.

- A5. Between 2012 and 2014, FASAB removed the reassessment of the SFFAS 38 reporting requirements as a potential Board project due to other priorities.
- A6. In August 2022, the Board revisited the open-ended reporting requirement in paragraphs 6 and 31 of SFFAS 38 and paragraphs 5 and 31 of TB 2011-1. The Board acknowledged its original intent to transition natural resources reporting from RSI to basic information after three years was based on the belief that over time there would be improvements in certain measurement approaches for valuing royalties from oil and gas proved reserves and recoverable reserves of other natural resources. However, based on discussions with the Department of the Interior, measurement challenges remain.
- A7. Interior's valuation methodology for oil and gas petroleum royalties from federal onshore and offshore oil and gas proved reserves is based on oil and gas proved reserve estimates published by the Department of Energy's Energy Information Administration (EIA). Because the EIA published national oil and gas proved reserve estimates are developed from well operators' estimated proved reserves and are not subject to audit, verifying the proprietary information would be challenging.
- A8. In addition, the EIA oil and gas proved reserve estimates are not separated between federal and non-federal, and, therefore, Interior estimates the federal portion of each state's oil and gas proved reserves using production on federal land. However, production on federal land only provides an indirect correlation in the valuation methodology and thereby increases the associated uncertainties.
- A9. The valuation methodology for estimating the federal royalty share of proved oil and gas reserves assumes 100 percent of the oil and gas proved reserves will be produced over time. Uncertainties about future production affect this assumption, resulting in additional uncertainties.

-
- A10. The Board also considered the oil and gas price fluctuations that may result in significant changes in the asset value of future royalty revenues between reporting periods and the resulting diminished meaningfulness of asset value to users.
- A11. Coal is the only significant federal natural resource reported under the requirements of TB 2011-1. The estimation methodology for royalties from federal coal recoverable reserves relies on assumptions that result in uncertainties and challenges:
- a. The amount of coal in a federal lease is difficult to estimate because the geologic model is based on wide-spaced exploration drilling and necessitates the use of geologic assumptions that may be inaccurate.
 - b. Estimates of recoverable reserves change when assumptions, such as price and mining technology, change.
 - c. The methodology is based on current year production and projected future production until the reserves are 100 percent depleted.
 - d. Coal price fluctuations may result in significant changes in the asset value of future royalty revenue projections between reporting periods.
- A12. One objective of the Board's reexamination of existing standards project is to eliminate or revise unnecessary requirements to reduce reporting burden. The Board concluded that changing the reporting requirements under SFFAS 38 and TB 2011-1 to basic information may add to reporting burden without yielding reporting benefits.
- A13. The Board acknowledged that actual royalties collected and distributed are currently recognized and disclosed in accordance with SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*. The Board concluded that there is no further benefit to recognize future royalties as basic information.
- A14. The Board noted that the Financial Accounting Standards Board and the U.S. Securities and Exchange Commission require reporting of oil and gas reserve quantities and asset value as RSI rather than as basic information.
- A15. Considering the significant measurement uncertainties and associated challenges, the Board concluded that the potential benefits do not justify the cost and added burden to increase the reliability of the oil, gas, and other natural resources information for basic information presentation; therefore, the Board concluded that the SFFAS 38 and TB 2011-1 reporting requirements should remain as RSI.

Public-Private Partnerships

- A16. At the October 2022 Board meeting, staff briefed the Board concerning SFFAS 49 implementation challenges. Staff had met with two federal Inspectors General, a public accounting (audit) firm, and two financial policy accountants to help identify challenges they saw requiring attention. Additionally, staff conducted agency one-on-one meetings as well as training and outreach sessions to help identify potential impediments to SFFAS 49 implementation.
- A17. As a result, staff identified 15 implementation challenges (some of which were deemed beyond the Board's control or overlapping with other noted challenges) that could benefit from additional Board guidance in the form of SFFAS amendments, Interpretations, or other technical guidance. In December 2022, staff assembled an SFFAS 49 public-private partnership (P3) implementation task force to further study implementation issues, such as preparer or auditor challenges, and related Board action that might be necessary. At a January 2023 meeting, the task force concluded that an amendment to paragraph 24.b. might be beneficial.
- A18. Paragraph 24.b. requires "a description of federal and non-federal funding of the P3 over its expected life, including the mix and, where available, the amounts of such funding. For any amounts that are not available, the disclosures should indicate such." Task force representatives noted that paragraph 24.b. of SFFAS 49, which was meant exclusively to allow reporting entities to exclude the amounts of non-federal partner's funding for situations when such information is unavailable, has been inappropriately applied by some reporting entities to exclude reporting of (1) federal partner funding estimates and (2) cash flows required by paragraphs 24.c. and 24.d. Further, task force representatives noted that non-federal partner funding information may have been excluded without reasonable efforts to obtain or estimate the funding information.
- A19. The Board agreed to remove the "where available" exception in paragraph 24.b. to require disclosure of the amounts of non-federal partner funding in all circumstances, regardless of availability, and to avoid potential misapplication of paragraph 24.b. to the amounts of federal funding and other cash flow disclosure requirements. The Board concluded that disclosure of such information is important to inform users as to the amount of funding attributable to each partner within a P3. That is, such amounts invested can affect a user's understanding of the relative risks each partner is undertaking, the relative economic incentives they each bear or share, as well as the overall reasonableness of the P3's expected life. The Board recognizes that non-federal funding information may not always be readily available from the non-federal partners, but reporting entities should be able to estimate it in such circumstances.

Summary of Outreach and Responses

- A20. The Board released an exposure draft (ED) on August 22, 2023, with public comments requested by September 21, 2023. Upon release of the ED, FASAB notified constituents through the FASAB website and listserv, the Federal Register, and FASAB newsletter. FASAB also provided news releases to its press contacts, including various news organizations and committees of professional associations generally commenting on Eds in the past. To encourage responses, a reminder notice was provided to FASAB's listserv near the comment deadline.
- A21. The Board received 14 comment letters in response to the ED. The Board did not rely on the number in favor of or opposed to a given position but considered each response and weighed the merits of the points raised.
- A22. Respondents unanimously agreed with the amendments to SFFAS 38 and TB 2011-1. The Board confirmed its proposal to retain oil, gas, and other natural resource information in RSI.
- A23. However, respondents had mixed views on the proposed amendments to SFFAS 49. The Board considered each response, weighed the merits of the points raised, and ultimately agreed to remove the exception in paragraph 24.b. while providing flexibility on the mix and amounts of federal and non-federal funding required in paragraph 24.b. of SFFAS 49.

Clarification to Paragraph 24.B. of SFFAS 49

- A24. Most respondents generally agreed with the Board's proposal to address the "where available" exception via the proposed amendment or with possible modifications to recognize concerns over complexities and difficulties when estimating the mix and amount of non-federal funding. These respondents noted that management should know the mix and amount of non-federal funding as a result of negotiating the P3 arrangements, evaluating the contract terms, and identifying balances and transactions for accounting purposes. Respondents also noted that reasonable estimates should be available for disclosure and that SFFAS 49's language should not be utilized to circumvent the intent of the disclosures.
- A25. However, respondents who disagreed with the proposed amendment primarily expressed concerns with what they viewed as (a) difficulties when estimating federal and/or non-federal funding when the information is not available and (b) audit implications when information is not reasonably available.

- A26. The Board notes that the majority of respondents, including preparers, agreed that the "where available" exception should be addressed to avoid misapplication. To that end, some respondents suggested that the Board consider making it more difficult to avoid disclosure of private partner funding amounts by clearly noting that the 24.b. exception should not be used to avoid reporting any other paragraph 24 disclosure requirement. To the contrary, other respondents supported the proposed amendment as exposed and expressed concerns with the retention of the "where available" exception even if accompanied by language that would make it more difficult to avoid the appropriate disclosures.
- A27. SFFAS 49 was intended to provide preparers and auditors with flexibility concerning private partner funding amounts for those instances when the entity would be legally or contractually prohibited from disclosing said amounts. However, the Board also concluded that, as some respondents have noted, the mix and amount of both federal and non-federal funding are not only precursors to a P3 arrangement/transaction, but they are also necessary for effective management of such projects. For example, several Office of Management and Budget documents require full life cycle reporting and, specific to P3s, assessments of private partner participation for budget scoring purposes.
- A28. Nevertheless, to strike a balance between user needs and preparer concerns, the Board concluded that estimates of the mix and amounts of federal and non-federal private partner funding should be permitted in the guidance.
- A29. Paragraph 160 of Statement of Federal Financial Accounting Concepts (SFFAC) 1, *Objectives of Federal Financial Reporting*, states that reliability does not imply precision or certainty and that estimates are appropriate for reporting. This paragraph also states that "under certain circumstances, a properly explained estimate provides more meaningful information than no estimate at all." Specific to the operating performance reporting objective, paragraph 132 of SFFAC 1 mentions the use of estimates or ranges of estimates when referring to exposures to loss, which is of significant concern to some users.
- A30. Given that the Board desired a balance between user needs and preparer concerns, it adopted the following clarifying edits to the proposed amendment:
- 24.b. A description of federal and non-federal funding of the P3 over its expected life, including the estimated mix of federal and non-federal funding, and, ~~where available, the estimated amounts of such funding.~~ ^{10A 10B} ~~For any amounts that are not available, the disclosures should indicate such.~~

FN 10A - Such estimated amounts may be specific amounts or a range of amounts of the funding. Disclosure should include the basis for management's estimates (for

example, based on contract terms, initial estimates of P3 funding, etc.) as well as any significant uncertainties surrounding the estimates.

FN 10B - Funding, as used here, relates to the amount of contributions of federal and non-federal capital, equity, or debt instruments to the P3 project, but excludes ongoing operating revenues and costs. Such funding may take different forms, such as cash, tangible assets, leaseholds, loans, and/or loan guarantees. In contrast, paragraph 24.c.ii. relates to the federal entity's aggregate cash flows to be received and to be paid over the remaining expected life of the P3, which comprise ongoing operating revenues and costs.

Using Estimates

- A31. Measuring the mix and amount of federal and non-federal private partner funding amounts may require the use of estimates or approximations. According to SFFAC 5, *Definitions of Elements and Basic Recognition Criteria for Accrual-Basis Financial Statements*, to be recognized an item must be measurable, which means a monetary amount can be determined with reasonable certainty or is reasonably estimable. For this reason, the Board notes that it (1) does not seek precision in determining the mix and amount of federal and non-federal private partner funding and (2) does not intend to direct or prescribe the use of any particular approach.
- A32. The Board notes that estimates often are used in accounting and financial reporting. The presentation of information based on estimation is not new and can be reliable so long as the estimate is reasonable and based on a rational, systematic, and consistent method. The Board has long recognized that the use of estimation necessarily implies the use of professional judgment. This does not negate the value of the estimate to users of the financial information.
- A33. The objective of the federal and non-federal funding disclosure in paragraph 24.b. is to provide information on the relative amounts of funding provided by the P3 parties. This information helps users understand material risks to the federal government. The Board recognized that there may be uncertainty, particularly in estimating the funding provided by non-federal parties. At the same time, the Board concluded that federal entities entering into P3 arrangements or transactions generally have estimates of the relative funding expected to be provided by the parties. This is how federal entities decide to enter into the P3 arrangements. Such initial estimates, adjusted for any material changes in the relative funding by the parties, generally would be sufficient for meeting this disclosure requirement in the absence of more precise estimates. The Board also concluded that the funding estimates need only be updated when there is evidence of a material change in the relative funding by the parties.

Board Approval

A34. This Statement was approved for issuance by all members of the Board.

Statement of Federal Financial Accounting Standard 64: Management's Discussion and Analysis, Rescinding and Replacing SFFAS 15

Status

Issued	September 27, 2024
Effective Date	For reporting periods beginning after September 30, 2025. Early implementation is permitted.
Affects	• SFFAS 15 is rescinded
Affected by	None.
Related Guidance	None.

Summary

This Statement updates the guidance for management's discussion and analysis (MD&A). In 1999, the Federal Accounting Standards Advisory Board (FASAB or "the Board") first published conceptual guidance and standards for preparing the MD&A in Statement of Federal Financial Accounting Concepts (SFFAC) 3, *Management's Discussion and Analysis*, and in Statement of Federal Financial Accountant Standards (SFFAS) 15, *Management's Discussions and Analysis*.

The Board intended for management to refer to both SFFAC 3 and SFFAS 15 to prepare the MD&A because together they contained complete guidance pertaining to both form (how to report information) and content (what information to report). However, reporting entities predominantly referred only to SFFAS 15 because SFFAC 3 was not authoritative. This resulted in segregating information into sections that often resulted in duplicating content throughout MD&A, which was difficult for users to follow and understand.

This Statement improves MD&A guidance by

- merging and updating relevant content from SFFAC 3 and SFFAS 15 based on FASAB's reporting objectives for budgetary integrity, operating performance, stewardship, and systems and controls;
- providing a concise set of principle-based standards that will guide management in preparing a discussion and analysis of the reporting entity's financial position and condition;
- encouraging flexibility for management to efficiently and effectively prepare MD&A content, thus reducing preparer burden in the long run; and

-
- guiding management in the preparation of a balanced, concise, integrated, and understandable MD&A that is useful for all users, including those who are not experts in federal government financial matters.

This Statement rescinds and replaces SFFAS 15, *Management's Discussions and Analysis*.

Materiality

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial.¹ A misstatement, including omission of information, is material if, in light of surrounding facts and circumstances, it could reasonably be expected that the judgment of a reasonable user relying on the information would change or be influenced by the correction or inclusion of the information. Materiality should be evaluated in the context of the specific reporting entity. Determining materiality requires appropriate and reasonable judgment in considering the specific facts, circumstances, size, and nature of the misstatement. Consequently, after quantitative and qualitative factors are considered, materiality may vary by financial statement, line item, or group of line items within an entity.

¹ Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Standards

Scope

1. This Statement applies to federal entities that present general purpose federal financial reports (GPFFRs), including the consolidated financial report of the U.S. Government (CFR), in conformance with generally accepted accounting principles (GAAP), as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
2. A GPFFR in conformance with federal accounting principles should include management's discussion and analysis (MD&A) of the financial statements and related information.
3. MD&A is required supplementary information (RSI).²

Rescission and Replacement of SFFAS 15

4. SFFAS 15, *Management's Discussions and Analysis*, is rescinded in its entirety.
5. SFFAS 15 is replaced with the MD&A standards contained herein.³

Purpose of MD&A

6. The purpose of MD&A is to increase the understandability and usefulness of a reporting entity's GPFFR by summarizing management's insights about its organization and mission; financial position and condition; operating performance, opportunities, and risks; and systems, internal controls, and compliance with applicable laws and regulations. This

² See paragraph 73 of Statement of Federal Financial Accounting Concepts (SFFAC) 6, *Distinguishing Basic Information, Required Supplementary Information, and Other Accompanying Information*, for concepts about RSI.

³ *Omnibus Concepts Amendments 2024* rescinds SFFAC 3 in its entirety. All relevant standard-like content from SFFAC 3 has been adapted in this Statement. In addition, this Statement does not eliminate or otherwise affect SFFAS 37, *Social Insurance: Additional Requirements for Management's Discussion and Analysis and Basic Financial Statements* or SFFAS 52, *Tax Expenditures*.

Statement presents guidance in two categories: 1) *Presenting Information in MD&A* and 2) *Information Discussed and Analyzed in MD&A*

7. *Presenting Information in MD&A* explains **how** management should present a balanced, concise, integrated, and understandable MD&A. *Information Discussed and Analyzed in MD&A* explains **what** types of information management should include in MD&A.

Presenting Information in MD&A

8. To achieve a balanced MD&A, management should include information about events, conditions, trends, or a combination of the three that had or might have a significant positive or negative effect on the reporting entity's financial position, financial condition, or operating performance.
9. To achieve a concise MD&A, management should summarize information that is sufficient to meet the needs of its users. This could be accomplished by
 - a. emphasizing the vital few matters that are necessary to support the information required in *Information Discussed and Analyzed in MD&A* (par. 12 and 13);
 - b. summarizing and referring to relevant detailed information from other areas of the GPFFR;
 - c. summarizing detailed information found in other relevant sources outside of the GPFFR and indicating how that information can be obtained;
 - d. limiting duplicative content within the MD&A; and
 - e. presenting only information that is relevant for the current reporting period.
10. To achieve an integrated MD&A, management should combine financial and nonfinancial information and qualitative and quantitative information to present a comprehensive and unified discussion and analysis.
11. To achieve an understandable MD&A, management should present content in plain language, organize information by related content, and, as appropriate, include charts, tables, graphs, or any combination thereof to enhance the understanding of the MD&A for all users, including those who are not experts in federal government financial matters.

Information Discussed and Analyzed in MD&A

12. MD&A should discuss and analyze the following information about the reporting entity's:

- a. Organization and mission.
- b. Causes of significant changes and trends in financial position as explained by the composition or balances of assets, liabilities, net position, costs, revenues, budgetary resources, and financing sources.
- c. Causes of significant changes and trends in financial condition related to business-type activity, social insurance, long-term fiscal projections, and RSI.
- d. Key performance⁴ results⁵ and their associated costs, such as:
 - i. Performance results that are key to the reporting entity. For example, key performance results could be organized based on responsibility segments as reported on the reporting entity's statement of net cost.
 - ii Actual costs⁶ incurred by the reporting entity to accomplish key performance results.
 - iii. Cost savings, if any, that the reporting entity might experience with the accomplishment of key performance results.
- e. Significant opportunities⁷ identified by management to enhance key performance results, plans to leverage such opportunities, and the potential effect on financial and budgetary results of carrying out those plans.⁸

⁴ Key "performance results" refers to both performance accomplishments and performance challenges. Management uses judgment in identifying what performance results are **key** to the reporting entity.

⁵ The CFR is not required to provide an analysis of consolidated government-wide performance results but may refer to the availability of performance information in agency financial reports.

⁶ If actual costs are not available, the explanation should provide obligations incurred or associated outlays.

⁷ For the purposes of MD&A, "significant opportunities" are anything that may have a significant positive effect on a reporting entity's ability to achieve its performance results. Management should use judgment in determining significant opportunities.

⁸ "Plans" are actions the reporting entity expects to execute in the future.

-
- f. Significant risks⁹ identified by management that have a potentially negative effect on key performance results, plans to mitigate such risks, and the potential effect on financial and budgetary results of carrying out those plans.
13. MD&A should provide management's summary assessment of the effectiveness of the reporting entity's internal controls and financial management systems, and the reporting entity's compliance with applicable laws, regulations, contracts, and grant agreements that are relevant to financial reporting. Such reporting should address internal control weaknesses, systems deficiencies, and instances of noncompliance that have a significant effect on the reporting entity's financial and performance reporting and its plans to address them.
-

Effective Date

14. The requirements of this Statement are effective for reporting periods beginning after September 30, 2025. Early implementation is permitted.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

⁹ For the purposes of MD&A, "significant risks" are the effect of significant uncertainty on a reporting entity's ability to achieve its performance results. Management should use judgment in determining significant risks.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Statement may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this Statement. The authoritative sections of the Statements are updated for changes. However, this appendix will not be updated to reflect subsequent changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

- A1. On June 8, 1999, the Federal Accounting Standards Advisory Board (FASAB or "the Board") published Statement of Federal Financial Accounting Concepts (SFFAC) 3, *Management's Discussion and Analysis*. Although SFFAC 3 was a concepts statement, it included standards-like content to guide reporting entities on what to report in MD&A, along with concepts to guide the Board on developing standards for MD&A. However, SFFACs are nonauthoritative and, therefore, not required by GAAP. To require MD&A in the GPFFR, the Board needed to issue authoritative guidance in an SFFAS.¹⁰
- A2. On August 12, 1999, FASAB published SFFAS 15, *Management's Discussions and Analysis*, which was merely an outline of the standards-like content from SFFAC 3, to require MD&A as part of the GPFFR. The expectation was that preparers would use both SFFAC 3 and SFFAS 15 to prepare the reporting entity's MD&A. However, given that SFFAC 3 is nonauthoritative *other accounting information* as noted in the GAAP hierarchy,¹¹ agencies relied primarily on SFFAS 15 to prepare their MD&As.

¹⁰ According to the Forward in the *FASAB Handbook*, "[C]oncepts are more general than statements on standards and do not contain specific authoritative requirements for federal agencies." According to the Preamble to Statements of Federal Financial Accounting Concepts in the *FASAB Handbook*, concepts provide "guiding principles" for the Board to develop accounting standards. However, many of the concepts in SFFAC 3 contain standards-like language such as (1) "MD&A should address," (2) "MD&A should inform," and (3) "MD&A should concisely explain."

¹¹ SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.

-
- A3. During 2017 and 2018, staff conducted an online survey and in-person round tables for both the risk reporting and reporting model phase I: MD&A and stewardship investments improvements projects.¹² Round table feedback informed the Board that financial statement users found federal entity MD&As to be dense, duplicative, and complex. Round table participants wanted to understand financial performance in the context of the reporting entity's financial position and condition. The MD&A included dense statistical information repeated from the Government Performance and Results Modernization Act (GPRAMA) reporting. This did not provide the performance-related financial information that users wanted.
- A4. In June 2019, the Board added the MD&A project to its agenda to merge work completed by the risk reporting and reporting model phase I: MD&A and stewardship investments improvements projects. The goals of the MD&A project were to
- a. consolidate standards-like content from SFFAC 3 and standards from SFFAS 15 into one principle-based SFFAS for preparing the MD&A;
 - b. reduce preparer burden by streamlining the MD&A;
 - c. require information about a reporting entity's financial position and condition for a financial focus instead of a statistical focus based on GPRAMA reporting; and
 - d. update guidance to discuss and analyze risk plans and mitigation to explain how the reporting entity will respond to opportunities and uncertainties.
-

Development of MD&A Standards

- A5. The Board developed these broad, principle-based MD&A standards based on four years of staff work and extensive Board deliberations, including the development of 11 MD&A reporting objectives and a related vision framework. The Board also conducted an agency pilot to test the application of the objectives and framework.
- A6. The Board identified the 11 MD&A objectives by analyzing the four FASAB reporting objectives from SFFAC 1, *Objectives of Federal Financial Reporting*- budgetary integrity, operating performance, stewardship, and systems and controls-within the context of MD&A. The Board also considered the application of those objectives to SFFAC 3.

¹² The project managers for the risk reporting and reporting model phase I: MD&A and stewardship investments improvements projects received the same feedback while conducting their own round tables in 2018.

-
- A7. The Board then drafted an MD&A vision framework based on the 11 MD&A objectives.
- A8. The Board conducted a pilot to test application of the MD&A objectives and framework, whereby agencies voluntarily followed both to prepare a sample MD&A.
- A9. Fourteen agencies-including eleven Chief Financial Officer Act agencies and three significant consolidation entities-volunteered for the pilot because of their experience with long, burdensome, and/or duplicative MD&As.
- A10. Staff also recruited three additional agencies from the Small Agency Audit Pilot Working Group (hosted by the Department of the Treasury's Bureau of the Fiscal Service) to assess application of the MD&A objectives and vision framework across reporting entities of varying sizes for a total of 17 pilot agencies.
- A11. Staff conducted the pilot from January through March 2021. The 17 pilot agencies created sample MD&As based on their fiscal year 2020 financial statements, using only the MD&A objectives and framework.¹³ As a result, the pilot agencies were able to reduce the length of their MD&A between 50% and 80%. For example, the United States Department of Agriculture reduced its MD&A from 77 to 12 pages and the Federal Trade Commission reduced its MD&A from 46 to 13 pages.
- A12. The Board concluded the pilot results were a good indicator of the potential benefits of applying principle-based guidance to MD&A preparation. The main effects were the preparation of more effective content and reducing preparer burden.
- A13. The pilot included 16 user reviewers, including members of the public, academia, federal workforce, and other specialties, to assess four sample MD&As against the Board's framework and objectives.
- A14. In April 2021, participating agencies and user reviewers recommended that a streamlined MD&A could be accomplished by
- a. providing a comprehensive connection between performance, non-financial and financial information, and systems information while avoiding a silo effect of putting information in separate sections;

¹³ Requirements from the Office of Management and Budget (OMB) Circular A-136, *Financial Reporting Requirements*, and AGA's Certificate of Excellence in Accountability Reporting were not included in the MD&A pilot to allow agencies to test if the MD&A could be streamlined with only the draft MD&A objectives and framework.

-
- b. focusing on key drivers (for example, COVID-19) that affected performance goals, significant changes in financial statement lines, and management's decisions during the reporting period;
 - c. providing concise and tangible examples about the magnitude of risks and current and planned actions to address them;
 - d. including high-level performance goals that support the current leadership agenda instead of low-level metrics;
 - e. including well labeled trend graphs that integrate performance, financial, and budgetary resource information, and written summaries; and
 - f. including more hyperlinks to detailed performance data and other important documents.
- A15. The Board did not receive any negative feedback from the smaller pilot agencies about MD&A reporting burden. In fact, these agencies highlighted the importance of producing an MD&A that focused on transparency and providing users with comprehensive content about the entity's mission and accomplishments, as related to their financial position.
- A16. Based on the results of the MD&A pilot, the Board concluded that the MD&A objectives and vision framework provided a sound foundation for developing these principle-based MD&A standards.

Rescission and Replacement of SFFAS 15

- A17. The Board deliberated extensively as to whether to amend or rescind and replace SFFAS 15. While both SFFAS 15 and the standards herein require similar information, the Board concluded that rescission and replacement is the best option to improve the MD&A guidance.
- A18. This Statement improves the MD&A guidance by providing broad, principle-based MD&A standards that merge and update relevant content from SFFAC 3 and SFFAS 15 based on FASAB's reporting objectives for budgetary integrity, operating performance, stewardship, and systems and control.
- A19. This Statement improves the MD&A guidance by addressing the concerns expressed by users during FASAB's round tables and other outreach from 2017-2018. These users found the MD&A dense, redundant, and complex and wanted financial information about the reporting entity that was easier to understand.

-
- a. According to respondents, SFFAS 15's requirement for multiple, discrete MD&A sections contributed to dense, redundant, and complex MD&A information.
 - b. The Board concluded that by rescinding SFFAS 15, this Statement removes the requirements for discrete sections and provides broad, principle-based standards that allow reporting entities the flexibility to determine how the information is reported.
- A20. Staff's outreach also revealed that financial statement users wanted to remove dense statistical information repeated from GPRAMA reporting and instead preferred cost information about performance.
- a. Preparers included dense statistical information because GPRAMA terminology-Performance Goals, Objectives, and Results-was used in paragraph 2 of SFFAS 15.
 - b. The Board concluded that focusing instead on key performance results and associated costs would reduce redundancy and preparer burden by eliminating the need for reporting entities to prepare GPRAMA statistical information for both budgetary and financial reporting, which are subject to different timeframes.
- A21. Financial statement users also wanted to understand the financial performance in the context of the reporting entity's financial position and condition. The Board concluded that by requiring information about key performance results and associated costs, users would understand what the agency spent in relation to what was achieved, any cost savings for the agency, and any related significant opportunities or risks. The Board concluded that a focus on financial performance would provide users with information as to what affected the reporting entity's financial position and condition.
- A22. The Board concluded that this Statement improves the MD&A guidance by providing a concise set of principle-based standards that will
- a. encourage flexibility for how management can prepare MD&A content;
 - b. help preparers to focus on identifying and explaining the underlying causes of significant changes to and trends in financial statement balances; and
 - c. guide management in how to prepare a balanced, concise, integrated, and understandable MD&A that is useful for all users, including those who are not experts in federal government financial matters, to understand a reporting entity's financial position and condition.

A23. The Board concluded that as reporting entities gain experience in preparing a balanced, concise, integrated, and understandable MD&A, preparer burden should be reduced in the long run-regardless of the reporting entity's size or consolidation status.

Presenting Information in MD&A

A24. The Board intends for the broad, principle-based standards in Presenting Information in MD&A to guide management in how to present a balanced, concise, integrated, and understandable MD&A-the four characteristics of an MD&A.

A25. The Board concluded that a balanced MD&A explains both positive and negative effects to help users understand the important reasons for changes to the reporting entity's financial position, financial condition, and operating performance.

- a. A balanced MD&A also includes trend information over multiple prior reporting periods to help users understand possible positive or negative future effects on amounts reported in the financial statements or supplementary information.
- b. For example, management may discuss and analyze key performance results during the current reporting period or over multiple reporting periods that had a significant (1) positive effect (for example, accomplishments that resulted in reduced costs); or (2) negative effect (for example, challenges that resulted in increased costs) on financial position and financial condition.

A26. The Board concluded that a concise MD&A has the following characteristics:

- a. Emphasizes only the vital few or most important matters that explain information required in the *Information Discussed and Analyzed in MD&A* section.
- b. Summarizes detailed information found within the GPFFR but outside of MD&A with a reference to the GPFFR section. For example, management can provide a reference to a note that is summarized in MD&A.
- c. Summarizes detailed information found in other relevant sources and indicates how that information can be obtained.
- d. Limits duplicative content, such as regulatory or compliance instructions. For example, management can:
 - i. summarize information necessary to understand the reason(s) for significant changes in net cost; and

-
- ii. avoid repeating language from an SFFAS or instructions from Office of Management and Budget (OMB) Circular A-136, Financial Reporting Requirements.
 - e. Presents information that is only relevant to the reporting entity for the current reporting period, which could include trend information.
- A27. The Board concluded that for an MD&A to be integrated it may include quantitative, qualitative, financial, and non-financial information to explain information required in Information Discussed and Analyzed in MD&A.
- A28. An integrated presentation is complementary to one that is balanced and concise but is a distinct quality that emphasizes effectively linking or coordinating various parts into a complete, cohesive discussion. For example, MD&A may include a coordinated discussion of budgetary, financial, and operating performance information when explaining key performance results.
- A29. The Board's intent is that an MD&A be understandable to all users, including those who are not experts in federal government financial matters.
- a. MD&A is understandable when written in plain language to explain management's insights about its financial position, financial condition, operating performance, opportunities, risks, and systems, internal controls, and compliance.
 - b. To achieve an understandable MD&A, management has the flexibility to combine different methods of presenting information that appeal to a variety of users. For example, an understandable MD&A may need to include organizational tools, such as headers, sub-headers, bullet points, or references to other financial reports, and visual aids, such as charts, tables, or graphs, to help explain quantitative information.

Information Discussed and Analyzed in MD&A

- A30. The Board intends for the broad, principle-based standards in *Information Discussed and Analyzed in MD&A* to guide management in **what** information should be included in MD&A. For example, management should explain the organization's mission, causes of significant changes and trends in the reporting entity's financial position, financial condition, key performance results, significant opportunities and risks, as well as a summary assessment of internal controls and compliance with laws and regulations.
- A31. The Board's intent is for MD&A to provide a brief description of the reporting entity's organization and mission to explain key organizational components.

-
- a. Management has the flexibility to determine how much information to include about the mission(s) and organizational components in relation to the size and complexity of the reporting entity.
 - b. For example, a large reporting entity could briefly summarize the reporting entity as a whole, as well as each significant component/agency entity, while a small reporting entity could focus on the entity as a whole.

A32. The Board's intent is for MD&A to explain what caused significant changes in a reporting entity's financial position and condition.

- a. Financial position is typically the account status of an entity's assets, liabilities, and equity positions as reflected on its financial statement. However, for the MD&A, the Board concluded that users would better understand the reporting entity's financial position through management's explanations about significant changes in the composition or the balances of assets, liabilities, net position, as well as costs, revenues, budgetary resources, and financing sources. This would better address users' interest in the use of the reporting entity's budget and other revenue sources to support the accomplishment of its mission(s).
 - i. For example, "support of pandemic-related relief efforts led to a significant decrease of stockpile materials of vaccines by \$\$\$" would be consistent with the Board's intent, whereas "inventory decreased because of a decrease in stockpile materials" would not.
 - ii. For example, "disaster recovery efforts from natural disasters in X area of the country during 20XX significantly increased the cost of X by \$\$\$" would be consistent with the Board's intent, whereas "an unexpected increase in costs deteriorated the financial position" would not.
- b. Financial condition is broader and more forward-looking than financial position.¹⁴ The Board concluded that users will best understand the financial condition of reporting entities through management's explanation about significant changes in business-type activity, social insurance, long-term projections, and RSI.

A33. The Board concluded that MD&A explains what performance results are key to the reporting entity and the associated costs.

¹⁴ SFFAC 1, par. 180.

-
- a. For example, key performance results could be organized based on responsibility segments as reported on the reporting entity's statement of net cost.
 - b. Associated costs are actual costs, or if actual costs are not available, the explanation should include obligations incurred or associated outlays. MD&A explains how key performance accomplishments and challenges affected budgetary or financing resources during the reporting period.
 - c. MD&A focuses on what it costs the agency and its key organizational components to pursue or accomplish key performance results, as well as whether the accomplishment of key performance results resulted in cost savings for the agency.
 - d. However, the reporting of consolidated government-wide key performance results is **not required** in the MD&A of the CFR.
 - i. Paragraph 6 of SFFAC 4, *Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government*, states, "[T]he CFR is a general purpose report that is aggregated from agency reports and tells users where to find information in other formats, both aggregated and disaggregated, such as individual agency reports, agency websites, and the President's Budget."
 - ii. Appendix A in the CFR, *Reporting Entity*, provides references to websites where users can review a reporting entity's discussion of key performance results and challenges.

A34. The Board's intent is for MD&A to explain significant opportunities the reporting entity is managing in relation to performance accomplishments and challenges. For example, what is the reporting entity implementing or what does it plan to implement to leverage opportunities and what are the effects on key performance or financial results?

A35. The Board's intent is for MD&A to explain significant risks the reporting entity is managing in relation to performance accomplishments and challenges. For example, what is the reporting entity implementing or what does it plan to implement to address a significant risk that may have a negative effect on key performance or financial results?

A36. The Board concluded that MD&A provides an assessment of the reliability of the reporting entity's financial information by explaining significant weaknesses in the financial management system, related systems, internal controls, or non-compliance with applicable laws. MD&A should explain whether the reporting entity executed and recorded transactions in accordance with budgetary and financial laws and federal accounting standards to prepare the AFR.

Stewardship Investments

- A37. On June 11, 1996, the Board issued SFFAS 8, *Supplementary Stewardship Reporting*, which included a requirement to report required supplementary stewardship information (RSSI). On September 27, 2019, the Board issued SFFAS 57, *Omnibus Amendments 2019*, which eliminated the requirement for reporting RSSI.
- A38. In paragraphs A7-A10 of the basis for conclusions of SFFAS 57, the Board discussed the comment letters from the 11 respondents. The majority of those responders agreed with eliminating RSSI because users did not use it. The minority of respondents who wanted to continue including RSSI in a separate category believed that distinguishing stewardship information informed users on the extent of investments that provided long-term benefits for the nation.
- A39. Paragraph A11 of SFFAS 57 indicated that the Board would also consider whether to report stewardship investments in MD&A. As part of the MD&A project, the Board reviewed AFRs within the context of this feedback on SFFAS 57. The Board found that most reporting entities have concluded that information about stewardship investment is not significant enough to warrant inclusion in the MD&A. Therefore, the Board chose not to add the requirement that reporting entities should include stewardship investments in MD&A.
- A40. This decision does not preclude preparers from reporting stewardship investment information in MD&A if management concludes this information is relevant or significant to the reporting entity's financial position or condition.

Additional Information

- A41. The Board acknowledges the updates OMB has made to improve MD&A reporting in Circular A-136. However, FASAB establishes GAAP for the federal government through its pronouncements. This Statement will be level-A guidance in the GAAP hierarchy.
- A42. The Board concluded that this Statement has adapted all relevant standard-like content from SFFAC 3. *Omnibus Concepts Amendments* amends MD&A concepts in SFFAC 2, *Entity and Display*, and rescinds MD&A concepts in SFFAC 3 to consolidate MD&A concepts into one SFFAC.
- A43. The Board concluded that this Statement does not eliminate or otherwise affect SFFAS 37, *Social Insurance: Additional Requirements for Management's Discussion and Analysis and Basic Financial Statements* or SFFAS 52, *Tax Expenditures*. The Board concluded that

including the MD&A requirements from these pronouncements may cause duplication of information already required in MD&A.

Summary of Outreach Efforts and Responses

- A44. FASAB issued the exposure draft (ED), *Management's Discussion and Analysis: Rescinding and Replacing SFFAS 15*, on September 7, 2023, with comments requested by December 7, 2023.
- A45. Upon release of the ED, FASAB notified constituents through the FASAB website and listserv, the Federal Register, and FASAB newsletter. FASAB also provided news releases to its press contacts, including various news organizations and committees of professional associations generally commenting on EDs in the past. Staff also provided copies of the ED directly to agencies that were directly affected by the particular issue in prior years. To encourage responses, a reminder notice was provided to FASAB's listserv near the comment deadline.
- A46. FASAB received 19 comment letters from federal entity users, federal entity preparers, federal entity program offices, professional associations, and nonprofit organizations. The Board did not rely on the number in favor of or opposed to a given position but considered each response and weighed the merits of the points raised.
- A47. In response to comment letters, the Board identified and agreed to the following changes to improve the clarity of the proposal:
- a. Added language to the summary to explain the differences and benefits with these standards as compared to SFFAS 15.
 - b. Updated paragraph 9.c to better explain that reporting entities should summarize, and reference additional information found outside the GPFFR and how that information can be obtained.
- A48. The Board agreed to consider implementation guidance and training after the issuance of this Statement.
- A49. FASAB issued the ED with an alternative view because of a member's concerns that SFFAS 15 could be amended instead of rescinded and replaced. The member believed that there were only minor differences between the ED and SFFAS 15 and that the ED was more prescriptive than SFFAS 15.

-
- a. Most respondents agreed with these concerns. However, the comments were incongruent. For example, a respondent commented that it may not be necessary to rescind SFFAS 15 since there are no significant changes. The respondent also said that the proposed standards were probably needed to avoid potential issues with segregating information in the MD&A. Another respondent who indicated agreement with the alternative view also noted that the new standards would be beneficial. Other respondents said the proposal seems to provide more clarity on how to provide the information.
 - b. The Board recognizes the similarity between this Statement and SFFAS 15. However, the Board decided to rescind and replace SFFAS 15 because this Statement presents a broad, principle-based approach through a comprehensive set of standards. This Statement provides flexibility and reduces preparer burden, regardless of a reporting entity's size, and eliminates the SFFAS 15 requirement for sections. This Statement also merges and consolidates standard-like content from SFFAC 3 and standards from SFFAS 15 into one principle-based MD&A SFFAS.
 - c. Another concern the member noted in the alternative view was that the Board should consider tiered reporting for MD&A.
 - d. Many of the respondents agreed with a tiered approach.
 - i. The Board intends for this Statement to provide flexibility for preparing MD&A regardless of a reporting entity's size or consolidation status for the CFR.
 - ii. The Board also concluded that it could discuss tiered reporting as a separate project at a future agenda setting meeting because the scope goes beyond reporting for MD&A. The Board also noted that tiered reporting might be difficult to achieve based on work done by other standard setters, such as the Governmental Accounting Standards Board, and individual reporting entities potentially reporting in a different manner from the CFR.
 - e. The alternative view also noted that training might address streamlining the MD&A.
 - f. Some respondents agreed that additional staff training might benefit in streamlining the MD&A. The Board will consider implementation guidance and training after the issuance of this Statement.

Board Approval

A50. This Statement was approved by the Board with a vote of seven members in favor of its issuance and one member, Ms. Johnson, abstaining from the vote. Although the Board comprises nine members, only eight members were eligible to vote on this Statement due to a Board vacancy. Ballots are available for inspection at the Board's offices.

Summary

The Federal entity's management, as advised by the Justice Department, must determine whether it is probable that a legal claim will end in a loss for the Federal entity and the loss is estimable. If the loss is probable and estimable, the entity would recognize an expense and liability for the full amount of the expected loss. The expense and liability would be adjusted periodically, as necessary, based on any changes in the estimated loss. The Federal entity involved in the litigations shall discuss in a footnote to the financial statements the Judgment Fund's role in the payment of a possible loss.

Once the claim is either settled or a court judgment is assessed against the Federal entity and the Judgment Fund is determined to be the appropriate source for the payment of the claim, the liability should be removed from the financial statements of the entity that incurred the liability and an "other financing source" amount (which represents the amount to be paid by the Judgment Fund) would be recognized. If the Judgment Fund is responsible for only a portion of the claim or settlement, the imputed financing source amount would reflect only that amount to be paid by the Judgment Fund on behalf of the Federal entity. Once the claim is either settled or a court judgment is assessed and the Judgment Fund is determined to be the appropriate source for payment of the claim, the Judgment Fund would recognize an expense and an accounts payable or a cash outlay for the full cost of the loss.

Summary	1
Introduction	3
Interpretation	3
Accounting by the Federal Entity	3
Accounting by the Treasury Judgement Fund	4
Effective Date	4
Appendix A: Basis for Conclusions	5
Appendix B: Illustrative Journal Entries	6

Introduction

1. The Federal Accounting Standards Advisory Board (FASAB) has been asked to clarify Federal accounting standards as they relate to the Treasury Judgment Fund. The Treasury Judgment Fund was established by Congress in the 1950's to pay in whole or in part the court judgments and settlement agreements negotiated by the Justice Department on behalf of agencies, as well as certain types of administrative awards. The Congress established the Judgment Fund as a permanent, indefinite appropriation.
2. The clarification addresses (1) how Federal entities should report the costs and liabilities arising from claims to be paid by the Treasury Judgment Fund and (2) how the Judgment Fund should account for the amounts that it is required to pay on behalf of Federal entities. This interpretation has been prepared on the basis of the following three accounting Standards:
 - Statement of Federal Financial Accounting Standards (SFFAS) Number 4, *Managerial Cost Accounting Concepts and Standards for the Federal Government*
 - Statement of Federal Financial Accounting Standards Number 5, *Accounting for Liabilities of the Federal Government*
 - Statement of Federal Financial Accounting Standards Number 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*.

<p>The provisions of this interpretation need not be applied to immaterial items.</p>

Interpretation

Accounting by the Federal Entity

3. SFFAS No. 5 states that a contingent liability should be recognized when a past event or exchange transaction has occurred; a future outflow or other sacrifice of resources is [probable](#); and the future outflow or sacrifice of resources is measurable. The Federal entity's management, as advised by the Justice Department, must determine whether it is [probable](#)

that a legal claim will end in a loss for the Federal entity and the loss is estimable. If the loss is **probable** and estimable, the entity would recognize an expense and liability for the full amount of the expected loss¹. The expense and liability would be adjusted periodically, as necessary, based on any changes in the estimated loss. The Federal entity involved in the litigations shall discuss in a footnote to the financial statements the Judgment Fund's role in the payment of a possible loss.

4. Once the claim is either settled or a court judgment is assessed against the Federal entity and the Judgment Fund is determined to be the appropriate source for the payment of the claim, the liability should be removed from the financial statements of the entity that incurred the liability and an "other financing source"² amount (which represents the amount to be paid by the Judgment Fund) would be recognized. If the Judgment Fund is responsible for only a portion of the claim or settlement, the imputed financing source amount would reflect only that amount to be paid by the Judgment Fund on behalf of the Federal entity.

Accounting by the Treasury Judgment Fund

5. Once the claim is either settled or a court judgment is assessed and the Judgment Fund is determined to be the appropriate source for payment of the claim, the Judgment Fund would recognize an expense and an accounts payable or a cash outlay for the full cost of the loss. According to SFFAS 4, the imputed financing source amount recognized by the Federal entity and the expense recognized by the Judgment Fund would be eliminated at the Federal consolidated financial report level.

Effective Date

6. This interpretation is effective upon implementation of SFFAS 4 & 5, which become effective for fiscal periods beginning after September 30, 1996.

¹ See paragraph 39 in SFFAS #5 for the complete discussion on "Estimating Contingent Liabilities."

² See paragraph 73 in SFFAS #7 for the complete discussion on "Financing Imputed for Cost Subsidies."

Appendix A: Basis For Conclusions

7. This interpretation is primarily based on the principles of SFFAS 5 and SFFAS 4. The following brief discussion explains the basis for the interpretation in terms of those standards which are the foundation for the interpretation.
8. In accordance with the general principles of the liability standard (SFFAS 5), once a legal claim is filed against a Federal entity, the entity's management should determine the likelihood that the Federal entity will incur a loss related to the claim³, regardless of the fact that the payment may be paid in full or in part by the Judgment Fund. The contingencies⁴ section of SFFAS 5 states that if the likelihood of the contingent loss is remote no reporting is necessary; if the likelihood of the loss is reasonably possible and the amount is measurable the estimated loss should be disclosed; and, *if the likelihood of loss is probable (more likely than not which is a greater than 50% chance of occurrence)* and estimable, the estimated loss must be recognized as a liability. If the probability of the loss is changed at any time prior to payment of the claim, the proper adjustments should be recognized [e.g., from disclosure (reasonably possible) to recognition (*probable*)]. If at any time the estimated loss amount changes, the liability and expense should be adjusted to reflect the change.⁵
9. In accordance with the principles of SFFAS 4⁶, a Federal entity incurring a loss or expense must recognize the full cost of the loss [claim], regardless of who is actually paying the [settlement or judgment] amount. The standard requires the Federal entity incurring a loss or expense to use an estimate of the cost if the actual cost information is not provided. The estimate must be reasonable and should be aimed at determining realistic losses expected.

³ In most cases this determination involves the U.S. Department of Justice.

⁴ A contingency is an existing condition, situation or set of circumstances involving uncertainty as to possible gain or loss to an entity. The uncertainty will ultimately be resolved when one or more future events occur or fail to occur. Resolution of the uncertainty may confirm a gain or loss.

⁵ See paragraphs 35 - 42 in SFFAS #5 for the complete discussion on "Contingencies."

⁶ See paragraphs 89 - 104 and 105 - 115 in SFFAS #4 for the complete discussion on "Full Cost" and "Inter-entity Costs", respectively.

Appendix B: Illustrative Journal Entries

Based on the above noted accounting standards and the generalized events described below, the conceptual journal entries⁷ should be as follows:

Federal entity entries:

The Federal entity's management, through the advisement of the Justice Department, has determined that the probability of the legal claim ending in a loss against the Federal entity is probable and the loss is estimable. The entity would recognize an expense and liability for the full amount of the expected loss. The expense and liability would be adjusted as necessary based on any changes in the estimated loss.

Entry #1:

DR. Expense
CR. Liability—Legal claims

Once the claim is either settled or a court judgment is assessed against the Federal entity and the Judgment Fund is determined to be the appropriate source for payment of the claim, the liability should be removed and an other financing source recognized. If the Judgment Fund is responsible for only a portion of the claim or settlement, the imputed financing source amount would only reflect that amount paid by the Judgment Fund on behalf of the Federal entity.

Entry #2:

DR. Liability—Legal claims
CR. Imputed Financing Source—Expenses Paid by Other Entities*

Treasury Judgment Fund entries:

The claim is either settled or a court judgment is assessed and the Judgment Fund is determined to be the appropriate source for payment.

Entry #3:

DR. Expenses Paid for Other Entities*
CR. Cash or Fund Balance with Treasury

*According to the Cost Accounting Standard, the imputed financing source and expenses paid for other entities amounts would be eliminated at the consolidation level.

⁷Actual journal entries are under the authority of the Standard General Ledger.

Interpretation of Federal Financial Accounting Standards 4: Accounting for Pension Payments in Excess of Pension Expense

Status

Issued	December 19, 1997
Effective Date	For fiscal periods beginning on or after September 30, 1997
Affects	None.
Affected by	None.

Summary

Changes in normal costs due to re-estimates of demographic and economic assumptions should be accounted for by the administrative entity as a change in accounting estimate. The effect of the change should be recognized in current and future years.

When the employer entity's total payment for FERS and CSRS exceeds the related total pension expense as defined in SFFAS No. 5, the entity should account for the excess payment as a transfer-out. The entity should include the transfer-out when determining results of operations on its statement of changes in net position.

Any FERS-related payment that exceeds the FERS-related pension expense should be offset against any imputed financing resulting from a CSRS-related payment being less than CSRS-related pension expense in calculating the amount of the transfer out. Only when the total pension payment exceeds total pension expense would a transfer-out be recognized.

	Page
Summary	1
Introduction	3
Interpretation	4
Scope of Interpretation	7
Effective Date	8
Basis for Conclusions	8

Introduction

1. The Federal Accounting Standards Advisory Board (FASAB) was asked for guidance regarding accounting at the agency level for employer agencies' payments to the pension trust fund when they exceed pension expense (based on an allocation of the total service [or "normal"] cost¹ by the Office of Personnel Management). This is a situation that was not contemplated in Statement of Federal Financial Accounting Standards (SFFAS) No. 5, *Accounting for Liabilities of the Federal Government*.
2. The objective of SFFAS No. 5 (paras. 71-78) is to have employer entities recognize the annual cost of their employees' pensions (pension expense) as measured by the annual normal cost for their employees, less any amounts contributed by the employees (para. 74).
3. The employer entity payment rates for the two major civilian pension systems—the Federal Employees Retirement System (FERS) and the Civil Service Retirement System (CSRS)—are provided in law and are not the same. For FERS, the payment rate is the employer entity's normal cost less the amount contributed by its employees; for CSRS, the payment rate and the pension expense rate under SFFAS No. 5 theoretically would be the same, since both would be based on the same principle: that pension expense and employer payments to the pension trust fund equal normal cost less the employees' contribution. For most CSRS, employer payments to the pension trust fund are by law set at seven percent of salaries which is substantially less than normal costs and therefore also less than pension expense based on normal cost.
4. SFFAS No. 5 explicitly provides the accounting for a situation in which pension expense is more than employer payments to the pension trust fund. The difference between the pension expense and the payment to the plan is to be accounted for by the employer entity as imputed financing.
5. However, due to (1) planning and operational requirements of budgetary administration and (2) recent legislation, the employer entity's FERS pension expense may be less than the FERS-related employer payments to the pension trust fund.
6. The pension expense rate used by civilian employer entities to calculate pension expense is supplied by the administrative entity — in the case of FERS and CSRS, the administrative entity is the Office of Personnel Management (OPM). OPM analyzes the demographic and

¹ "Service cost" and/or "normal costs"—the terms are used synonymously in SFFAS No. 5—are defined in SFFAS No. 5 as that portion of the actuarial present value of pension plan benefits and expenses that is allocated to a valuation year by the actuarial cost method.

economic assumptions periodically and recalculates normal costs (for both FERS and CSRS).²The recalculation was done during FY 1997 and resulted in a lower normal cost for both FERS and CSRS, and OPM has issued a revised FY 1997 pension expense rate based thereon. However, regarding the rate for employer payments to the pension trust fund, OPM allows time for employer entities to adopt the new rate for budgeting purposes during which the prior, higher payment rate will continue to be used by employer entities.

7. In addition, the Balanced Budget Act of 1997 (BBA) increases FERS employees' withholding rate from 1999 through 2001 without correspondingly decreasing the employer entity's payment rate. For example, if FERS normal costs were \$10,000 and the employees' contribution were raised from \$5,000 (as calculated absent BBA) to \$5,500 by the BBA, then the employer's expense according to SFFAS No. 5 should be \$4,500 (\$10,000 - \$5,500). However, the BBA does not allow the employer entity to reduce its payment, and therefore the employer pays what it would have paid without the BBA, \$5,000. The \$500 difference between the \$4,500 SFFAS No. 5 pension expense and the \$5,000 payment to the pension trust fund represents a payment in excess of pension expense.
8. For FY 1997, OPM has indicated that employer entities are unlikely to report total payments to the trust fund in excess of total pension expense (based on normal cost) at the entity-wide level, although it is possible, because the amount of the CSRS contribution deficiency is more than the excess FERS payment. However, OPM believes that it is probable that total payments will exceed total pension expense (based on normal cost less employee contributions) in future years.

Interpretation

9. **Change in Estimate** - Changes in normal costs due to re-estimates of demographic and economic assumptions should be accounted for by the administrative entity as a change in accounting estimate. The effect of the change should be recognized in current and future years.
10. **Payments in Excess of Pension Expense** - When the employer entity's total payment for FERS and CSRS exceeds the related total pension expense as defined in SFFAS No. 5, the entity should account for the excess payment as a transfer-out. The entity should include the transfer-out when determining results of operations on its statement of changes in net position.

² This is separate from OPM's annual recalculation of the actuarial liability which can result in actuarial gains and losses the accounting for which is provided in SFFAS No. 5.

11. Any FERS-related payment that exceeds the FERS-related pension expense should be offset against any imputed financing resulting from a CSRS-related payment being less than CSRS-related pension expense in calculating the amount of the transfer out. Only when the total pension payment exceeds total pension expense would a transfer-out be recognized.

12. Example #1:

- i. if an employer entity calculates total pension expense as \$635,000 reflecting a FERS-related pension expense of \$535,000 and a CSRS-related pension expense of \$100,000,³ and
- ii. it makes a total pension payment to the trust fund — excluding its employees' contribution — of \$630,000 reflecting \$570,000 for its FERS employees and \$60,000 for its CSRS employees,
- iii. then it would off-set the \$35,000 FERS-related excess payment (\$570,000 - \$535,000) against the \$40,000 CSRS-related under payment (\$100,000 - \$60,000) and recognize the net \$5,000 underpayment as an imputed financing as follows:

DR. Pension Expense (FERS \$535,000 + CSRS \$100,000)	635,000
CR. Funds with Treasury (FERS \$570,000 + CSRS \$60,000)	630,000
CR. Imputed Financing (FERS \$35,000 - CSRS \$40,000)	5,000

13. Example #2: Assuming the same facts as in the paragraph immediately above except that the employer entity makes a payment of \$640,000 (\$580,000 FERS-related and \$60,000 CSRS-related) instead of \$630,000, then the entity would recognize a net transfer-out of the amount that the FERS-related excess payment (\$580,000 - \$535,000 = \$45,000) exceeded the CSRS-related under payment (\$100,000 - \$60,000 = \$40,000) as follows:

DR. Pension Expense (FERS \$535,000 + CSRS \$100,000)	635,000
DR. Transfer-out (FERS \$45,000 - CSRS \$40,000)	5,000
CR. Funds with Treasury (FERS \$580,000 + CSRS \$60,000)	640,000

³ The amounts used for CSRS are from the example in SFFAS No. 5, paragraph No. 78.

14. **Administrative Entity Intra-governmental Entries** - The administrative entity should account for funds received from employer entities in excess of the normal cost of pension expense as a transfer-in. The administrative entity should include the transfer-in when determining results of operations on its statement of changes in net position.
15. **Adjusting Entries** - Employer entities that recorded total FERS payments as pension expense during FY 1997 will need to adjust their accounts. The following examples use the amounts from paragraphs 12 and 13 above.
- a. Example #3 - if the entity had originally recorded the following pension expense based on an earlier provided normal cost rate:

DR. Pension Expense (FERS \$570,000 + CSRS \$100,000)	670,000	
CR. Funds with Treasury (FERS \$570,000 + CSRS \$60,000)		630,000
CR. Imputed Financing (CSRS)		40,000

then, when the revised estimate is provided, the entry would recalculate pension expense as \$635,000 (FERS-related \$535,000 + CSRS-related \$100,000) and adjust the accounts accordingly by means of the following two simultaneous entries:

- (1) to reduce pension expense from \$670,000 to \$635,000
(FERS \$535,000 + CSRS \$100,000):

DR. Transfer-out	35,000	
CR. Pension Expense		35,000

- (2) to off-set the transfer-out against imputed financing:

DR. Imputed Financing	35,000	
CR. Transfer-out		35,000

These entries adjust the accounts to the amounts that would have been entered had the original entry reflected the revised normal cost as shown in paragraph 12 above.

- b. Example #4 - Also, if the entity's accounting resulted in a net transfer-out, an adjustment may be necessary. For example, using the illustration in paragraph 13 above, the entity may have originally recorded pension expense based on an earlier provided normal cost rate as follows.

DR. Pension Expense (<i>FERS \$580,000 + CSRS \$100,000</i>)	680,000
CR. Imputed Financing (CSRS)	40,000
CR. Funds with Treasury (<i>FERS \$580,000 + CSRS \$60,000</i>)	640,000

then the adjustments would be the following two simultaneous entries:

- (1) to reduce pension expense from \$680,000 to \$635,000 (*FERS \$535,000 + CSRS \$100,000*):

DR. Transfer-out (<i>FERS \$580,000 - \$535,000 = \$45,000</i>)	45,000
CR. Pension Expense	45,000

- (2) to off-set the transfer-out against imputed financing:

DR. Imputed Financing (CSRS)	40,000
CR. Pension Expense	40,000

These entries adjust the accounts to the amounts that would have been entered had the original entry reflected the revised normal cost as shown in paragraph 13 above.

Scope of Interpretation

16. This interpretation applies to employer entity pension (and, if applicable, to retirement health care) expense, and to administrative entity's receipt of funds from employer entities, accounted for in accordance with SFFAS No. 5.

Effective Date

17. This interpretation should be applied for reporting periods that end on or after September 30, 1997. The FASAB has reviewed and agreed with this interpretation. After this interpretation is signed by the FASAB members who represent the Department of the Treasury, the Office of Management and Budget, and the General Accounting Office, it will be published by OMB and will be effective.

Basis For Conclusions

18. Regarding changes in normal cost estimates, the prospective treatment called for in this interpretation reflects current practice, including APB Opinion No. 20, *Accounting for Changes in Accounting Estimate*, which provides that a change in accounting estimate should be accounted for in the period of change, if the change affects that period only, or in the period of change and future periods if the change affects both.
19. Regarding employer payments to the pension trust fund in excess of pension expense, such payments are not an employer entity expense or an administrative entity revenue. Such payments do not meet the definition of employer pension expense in SFFAS No. 5,⁴ as discussed above, nor do they meet the general definition of expense.⁵ The entity receiving the transfer—in this case an employer payment in excess of pension expense --- does not sacrifice anything of value to obtain the payment, and the transferring entity does not acquire anything of value beyond what it would have gotten had it contributed an amount equalling normal cost less the employees' contribution. Thus, such payments meet the description of "transfer-out" provided in SFFAS No. 7.⁶

⁴ SFFAS No. 5, para. 74.

⁵ See Statements of Federal Financial Accounting Concepts and Standards, Original Statements, "Appendix E: Consolidated Glossary" wherein expenses are defined as:

outflows or other using up of assets or incurrences of liabilities (or a combination of both) during a period from providing goods, rendering services, or carrying out other activities related to an entity's programs and missions, the benefits from which do not extend beyond the present operating period.

⁶ For a description of transfers-in/out, see paragraphs 74 and 344 of SFFAS No. 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*.

Interpretation of Federal Financial Accounting Standards 5: Recognition by Recipient Entities of Receivable Nonexchange Revenue: An Interpretation of SFFAS 7

Status

Issued	December 1998
Effective Date	Upon implementation of SFFAS 7, <i>Accounting for Revenue and Other Financing Sources of the Federal Government and Concepts for Reconciling Budgetary and Financial Accounting</i>
Affects	None.
Affected by	None.

Summary

Entities that receive nonexchange revenue collected on their behalf by another entity should recognize the revenue based on the best available evidence at the time the financial report is prepared. This provision of paragraph 60 of SFFAS 7 is intended to require recognition of the excise tax “true up” of the difference between amounts transferred to trust funds based on estimates by Treasury’s Office of Tax Analysis and the actual amount subsequently determined by IRS. IRS certifies the third quarter actual amount in December. The intent of paragraph 60 is to recognize this “true up” amount as a receivable or payable. The Board did not intend to impose “push down” accounting that would require entities such as trust funds that receive taxes collected on their behalf to recognize a portion of IRS’s net taxes receivable.

Introduction

1. Paragraph 60 of SFFAS 7, Accounting for Revenue and Other Financing Sources, requires entities that receive nonexchange revenue collected for them by other entities to recognize “. . . the net change in any related inter-entity balances between collecting and receiving entities.” The *Internal Revenue Service (IRS)* is the primary collecting entity for the United States Government, although Customs and other entities also collect substantial amounts of nonexchange revenue on behalf of the General Fund and other federal entities. Some of those involved with preparing and auditing IRS’s financial statements have asked whether this should be interpreted to require entities such as trust funds that receive taxes collected on their behalf to recognize a portion of IRS’s net taxes receivable. This is sometimes described as “push down” accounting. The Board did not intend to impose “push down” accounting, as is further explained by this interpretation.

Interpretation

2. Entities that receive nonexchange revenue collected on their behalf by another entity should recognize the revenue based on the best available evidence at the time the financial report is prepared. This provision of paragraph 60 of SFFAS 7 is intended to require recognition of the excise tax “true up” of the difference between amounts transferred to trust funds based on estimates by Treasury’s Office of Tax Analysis and the actual amount subsequently determined by IRS. IRS certifies the third quarter actual amount in December. The intent of paragraph 60 is to recognize this “true up” amount as a receivable or payable.¹

Effective Date

3. The interpretation is effective upon implementation of SFFAS 7.

¹ Certification of the actual amount for the fourth quarter is not currently available from IRS until the end of March, which is too late to be included in the financial statements for the prior fiscal year.

Appendix: Basis For Conclusions

4. The Board understood, when it recommended the standards contained in SFFAS 7, that the information available to IRS and its information systems do not presently permit “push down” accounting as described above. It was not the Board’s intent to establish a standard in this regard that recipient entities could not comply with because of factors outside their control. The recognition, measurement, and disclosure standards in SFFAS 7 for collecting entities such as IRS were designed to provide for accountability and useful information regarding tax revenues from the collecting entities. Therefore, as noted above, this provision of SFFAS 7 is intended only to require recognition of the most recent available “true up” of the difference between amounts of nonexchange revenue transferred to recipient entities based on estimates by Treasury’s Office of Tax Analysis and the actual amount subsequently determined by IRS.
5. One Board member notes that it is not possible to accrue something that is not measurable. He believes that, if the fourth quarter is not measurable, no accrual can be made, and no interpretation is needed. If any entity can “true up” a given tax revenue number, that should be done. That is, it should report the best available information. From this perspective, the standard does not call for more than the best estimate that is possible for a given revenue. This member believes that if someone needs clarification, it should be provided, but the clarification need not be elevated to an interpretation.
6. The Board concluded that, because there is confusion, and because this issue could affect more than one entity, an interpretation would be appropriate to assure that the guidance is readily available to all who need it.

Interpretation of Federal Financial Accounting Standards 6: Accounting for Imputed Intra-departmental Costs: *An Interpretation of SFFAS No. 4* (Rescinded)

Status

Issued	April 18, 2003
Effective Date	For periods beginning after September 30, 2004
Affects	SFFAS 4, <i>Managerial Cost Accounting Standards and Concepts</i>
Affected by	<ul style="list-style-type: none">• SFFAS 30, <i>Inter-Entity Cost Implementation</i>. SFFAS 30 rescinds par. 110 of SFFAS 4• SFFAS 55 rescinded Interpretation 6 in its entirety,

SFFAS 55, *Amending Inter-entity Cost Provisions* rescinded Interpretation 6 in its entirety.

Interpretation of Federal Financial Accounting Standards 7: Items Held for Remanufacture

Status

Issued	March 16, 2007
Effective Date	Effective upon issuance.
Affects	SFFAS 3
Affected by	None.

Summary

Current standards do not provide specific guidance to assist preparers and auditors in the classification, valuation and reporting of items that are in the process of major overhaul or remanufacture for sale or for internal use. This Interpretation identifies acceptable options for classification, valuation and reporting by applying existing standards, in particular Statement of Federal Financial Accounting Standards (SFFAS) 3, *Accounting for Inventory and Related Property*.

Introduction

Purpose

1. Current standards do not provide specific guidance to assist preparers and auditors in the classification, valuation and reporting of items that are in the process of major overhaul or remanufacture for sale or for internal use. This Interpretation identifies acceptable options for classification, valuation and reporting by applying existing standards, in particular Statement of Federal Financial Accounting Standards (SFFAS) 3, *Accounting for Inventory and Related Property*.

Scope

2. This Interpretation applies to reparable parts and subassemblies that are in the process of (or awaiting) inspection, disassembly, evaluation, cleaning, rebuilding, refurbishing and/or restoration to serviceable or technologically updated/upgraded condition. This Interpretation addresses remanufacturing activity for items intended for sale or for internal use. Items held for remanufacture may consist of direct materials (including repairable parts and subassemblies, also referred to as “carcasses” at the Department of Defense (DoD)), and work-in-process where products are restored to serviceable condition and/or improved/upgraded condition for sale or internal use.
3. Long-lasting spare parts were not specifically addressed in SFFAS 3. It is not the intent of this Interpretation to imply that long-term spare parts for issuance without reimbursement should or should not be classified as Operating Materials and Supplies.

Exclusion

4. This Interpretation does not apply to stand-alone items such as entire airplanes, ships, tanks, intercontinental ballistic missiles (ICBMs) or other higher assemblies that function independently.

Materiality

5. The provisions of this Interpretation need not be applied to immaterial items.

Effective Date

6. This Interpretation is effective upon issuance.

Definitions

7. Items "**held for remanufacture**"¹ are in the process of (or awaiting) inspection,² disassembly, evaluation, cleaning, rebuilding, refurbishing and/or restoration to serviceable or technologically updated/upgraded condition. Items held for remanufacture may consist of:
- Direct materials, (including repairable parts or subassemblies, also referred to as "carcasses" at the DoD) and
 - Work-in-process (including labor costs) related to the process of major overhaul, where products are restored to "good-as-new" condition and/or improved/upgraded condition.
8. "Items held for remanufacture" share characteristics with "items held for repair" and items in the process of production and may be aggregated with either class. Management should use judgment to determine a reasonable, consistent and cost-effective manner to classify processes as "repair" or "remanufacture."
9. Items held for remanufacture may be intended for sale (placed in **inventory** held for sale upon completion of remanufacture) or for internal use (issued to a user within the same reporting entity upon completion of remanufacture).

¹Terms appearing for the first time in **bold** are defined in the Glossary, Appendix B of this document.

²The process of inspection may include holding an item until an inspection can be done.

Recognition and Measurement

Items Intended for Sale (Inventory)

10. Inventory items intended for sale that are held for remanufacture may be valued in accordance with either paragraphs 20-22 or paragraphs 32-33 of SFFAS 3.³ For example, paragraph 21 states that “Historical cost shall include all appropriate purchase, transportation and production costs incurred to bring the items to their current condition and location.” Applied to reparable parts and subassemblies returned for credit in the purchase of a serviceable item, historical cost would be the credit, if any, issued to the customer who returned the item to be repaired and any identifiable and chargeable transportation and handling costs. Regardless of the method used, reparable items returned by customers should be initially valued at less than the value of new or fully remanufactured items with similar features and useful lives. As the inspection and remanufacture process takes place, appropriate “production costs” would include normal costs to bring the item to serviceable or upgraded condition.
11. “Abnormal costs” to be excluded would include any costs that are in excess of the cost to purchase and place in service a new item with similar features and useful life. For items that are no longer available on the open market, or which are being upgraded, management should use judgment in determining normal and reasonable costs to be capitalized.
12. Inventory items held for remanufacture share characteristics with inventory held for repair and items in production for sale (direct materials and work-in process) and may be aggregated with either class of items for reporting purposes.

Items Not Intended for Sale (Operating Materials and Supplies)

13. Items held for remanufacture that meet the definition of **Operating Materials and Supplies**, if significant, may be recognized as a category of operating materials and supplies and valued in accordance with paragraphs 32-33 or paragraphs 42-44 of SFFAS 3.
14. Items held for remanufacture that meet the definition of Operating Materials and Supplies should be initially valued at less than the value of new or fully remanufactured items. As the inspection and remanufacture process takes place, appropriate “production costs” would

³ The paragraphs of SFFAS 3 that are cited in this document are displayed in Appendix C.

include normal costs to bring the item to serviceable or upgraded condition. Abnormal costs to be excluded would include any costs in excess of the cost to obtain and place in service a new item with similar features and useful life. The allowance or direct methods may also reasonably be applied to operating materials and supplies.

Disclosure Requirements

Component Entity Report Disclosures

15. The disclosures for inventory items held for remanufacture should conform with paragraph 35 of SFFAS 3.
16. The disclosures for items held for remanufacture that meet the definition of Operating Materials and Supplies should be in accordance with the requirements of paragraph 50 of SFFAS 3. If significant, Operating Materials and Supplies held for remanufacture may be disclosed as a separate category.

Financial Report of the U.S. Government Disclosures

17. For the Financial Report of the U.S. Government, there is no provision for valuation or recognition that is different from requirements for the component level.

The provisions of this Interpretation need not be applied to immaterial items.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by members in reaching the conclusions in this Interpretation. It includes reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others.

Project History

- A1. Accounting for the federal government's physical assets that are held as inventory or as operating materials and supplies is complex and has been addressed in numerous FASAB Standards.⁴ The Board continues to address issues as they arise. In March of 2006, the Department of Defense (DoD) Deputy Chief Financial Officer sent a letter to the Board (see Appendix D) requesting specific guidance for items held for remanufacture.
- A2. The DoD requested that SFFAS 3 be amended to provide standards for inventory held for remanufacture. The DoD noted that the category of inventory "held for repair" is not defined in the standards, and that the valuation methods for "held for repair" in paragraphs 32-33 of SFFAS 3 are not cost effective to apply to items held for remanufacture within the moving average cost method, since the moving average cost of a serviceable item changes continually.

Outreach Activities

- A3. FASAB published the ED on August 1, 2006. Upon release of the ED, notices and/or press releases were provided to: the Federal Register, the FASAB News, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, *Government Accounting and Auditing Update*, the CFO Council, the Financial Statement Audit Network, the Federal Financial Managers Council, and committees of professional associations generally commenting on exposure drafts in the past. During the comment period, FASAB staff also contacted agencies that were likely to have remanufacturing activity to ensure that they were aware of the ED's scope and comment period. FASAB staff also met with representatives of agencies with significant remanufacture activities.

⁴ Inventory: see SFFAS 3; Property Plant & Equipment: see SFFAS 6.

A4. Six written comments were received from the following sources:

Source of comments	Federal (Internal)	Non-Federal (External)
Users, academics, others		1
Auditors	1	
Preparers and financial managers	4	

A5. Among the issues identified by respondents were: items meeting the definition of Property, Plant and Equipment; inconsistent use of numerous acceptable methodologies within an agency; and the difficulty of distinguishing between routine maintenance and minor repair versus remanufacture.

Property, Plant and Equipment

- A6. Paragraph 12 of the Exposure Draft stated that “Parts and subassemblies held for remanufacture that are intended for use, rather than sale, and which meet the definition of Property, Plant and Equipment, should be recognized as a category in Property, Plant and Equipment and should be valued in accordance with SFFAS 6, as amended.”
- A7. More than one respondent objected to this paragraph, stating that it implied that such items should be classified and depreciated as Property, Plant and Equipment and that it would be costly to change the accounting for such items. The respondents noted that the request for guidance focused on (a) the issue that existing FASAB standards do not recognize the existence of Operating Materials and Supplies held for repair or remanufacture, and (b) existing standards imply that only the direct or allowance methods, and not historical cost, are acceptable valuation methods. Accordingly, the scope of the Interpretation has been reduced to address only Inventory and Operating Materials and Supplies that are in the process of repair or remanufacture.

Inconsistent Practice within Agencies

- A8. One respondent noted that there are inconsistent accounting practices within an agency, and that the proposed Interpretation, which points out numerous acceptable options, might exacerbate this problem.

A9. Selecting among acceptable valuation methods and establishing uniformity throughout a reporting entity is a management responsibility. The purpose of the Interpretation is to point out acceptable methods, rather than to make selections on behalf of agencies.

Definition and Exclusions

A10. This Interpretation is limited to reparable parts and subassemblies, which are not specifically addressed in current standards, and for which guidance has been requested by the DoD. This Interpretation does not apply to stand-alone items that function independently; such as entire airplanes, ships, tanks, ICBMs and other stand-alone items. Such items are already addressed in SFFAS 3 and SFFAS 6, as amended.

“Repair” versus “Remanufacture”

A11. There is no “bright line” that distinguishes items held for remanufacture from items held for repair. A clear example of a repair might be a minor or routine servicing that is performed in the field (or “on the shelf” for an item that is for sale). A clear example of remanufacture might be an item that is sent to a central depot for a total overhaul, or for an upgrade that results in the item being assigned a new National Stock Number to indicate the change in the nature of the item. For processes that involve more than the “repair” example above, but less than the “remanufacture” examples, management should use judgment to determine a reasonable, consistent and cost-effective manner to classify processes as “repair” or “remanufacture.”

Inventory Valuation

A12. SFFAS 3 provides basic principles of inventory valuation applicable to both inventory in the process of production for sale and held for repair:

- Historical cost valuation is to be applied to inventory (SFFAS 3, paragraphs 20, 32, 33 and 42),
- Historical cost includes all appropriate purchase, transportation and production costs incurred to bring the items to their current condition and location, (SFFAS 3, paragraphs 21 and 43) and
- Abnormal costs should be expensed when incurred (SFFAS 3, paragraphs 21 and 43).

A13. Given the common objectives described above for the two categories and the absence of clear distinctions between the two categories, the Board does not believe that an amendment is needed. The Board believes that in some circumstances the only thing that distinguishes the remanufacturing process from the production process is that the raw materials include items previously in service.

A14. The Board believes that the intent of paragraphs 17-34 of SFFAS 3 is that an item held for remanufacture should be initially valued at less than the value of a new or serviceable item, and that as the work on the item progresses, the value of the item should be increased accordingly. The Board believes that any of the three methods (the allowance method or the direct method, described in paragraphs 32-33 of SFFAS 3 or the historical production cost method described in paragraphs 21 and 43 of SFFAS 3) would provide results that would meet this objective.

Operating Materials and Supplies Held for Repair or Remanufacture

A15. SFFAS 3 did not anticipate the existence of a significant category of Operating Materials and Supplies held for repair or remanufacture. For example, reparable parts and subassemblies related to tactical munitions may meet the definition of Operating Materials and Supplies. The Board believes that any of the three valuation methods described for inventory in paragraphs A12-A14 above may be reasonably applied to operating materials and supplies.

Effective Date

A16. Interpretations do not have an effective date, as they carry the effective dates of the standard(s) being interpreted.

Board Approval

A17. This interpretation was approved for issuance by all members of the Board.

Appendix B: Glossary

[See consolidated Glossary in Appendix E of this document.]

Appendix C: Relevant Citations of Current Standards

SFFAS 3, *Accounting for Inventory and Related Property*

[20] **Valuation.** Inventory shall be valued at either (1) historical cost or (2) latest acquisition cost.

[21] (1) Historical cost shall include all appropriate purchase, transportation and production costs incurred to bring the items to their current condition and location. Any abnormal costs, such as excessive handling or rework costs, shall be charged to operations of the period. Donated inventory shall be valued at its fair value at the time of donation. Inventory acquired through exchange of nonmonetary assets (e.g., barter) shall be valued at the fair value of the asset received at the time of the exchange. Any difference between the recorded amount of the asset surrendered and the fair value of the asset received shall be recognized as a gain or a loss.

[22] The first-in, first-out (FIFO); weighted average; or moving average cost flow assumptions may be applied in arriving at the historical cost of ending inventory and cost of goods sold. In addition, any other valuation method may be used if the results reasonably approximate those of one of the above historical cost methods (e.g., a standard cost system).

[32] **Inventory Held for Repair.** Inventory held for repair may be treated in one of two ways: (1) the allowance method or (2) the direct method.

(1) Under the allowance method, inventory held for repair shall be valued at the same value as a serviceable item. However, an allowance for repairs contra-asset account (i.e., repair allowance) shall be established. The annual (or other period) credit(s) required to bring the repair allowance to the current estimated cost of repairs shall be recognized as current period operating expenses. As the repairs are made the cost of repairs shall be charged (debited) to the allowance for repairs account.

[33] (2) Under the direct method, inventory held for repair shall be valued at the same value as a serviceable item less the estimated repair costs. When the repair is actually made, the cost of the repair shall be capitalized in the inventory account up to the value of a serviceable item. Any difference between the initial estimated repair cost and the actual repair cost shall be either debited or credited to the repair expense account.

[35] **Disclosure Requirements.**

- General composition of inventory.

-
- Basis for determining inventory values; including the valuation method and any cost flow assumptions.
 - Changes from prior year's accounting methods; if any.
 - Balances for each of the following categories of inventory: inventory held for current sale, inventory held in reserve for future sale, excess, obsolete and unserviceable inventory, and inventory held for repair unless otherwise presented on the financial statements.
 - Restrictions on the sale of material.
 - The decision criteria for identifying the category to which inventory is assigned.
 - Changes in the criteria for identifying the category to which inventory is assigned.

Operating Materials and Supplies

[36] **Definition.** "Operating materials and supplies" consist of tangible personal property to be consumed in normal operations. Excluded are (1) goods that have been acquired for use in constructing real property or in assembling equipment to be used by the entity, (2) stockpile materials, (3) goods held under price stabilization programs, (4) foreclosed property, (5) seized and forfeited property, and (6) inventory.

[37] Operating materials and supplies shall be categorized as (1) operating materials and supplies held for use, (2) operating materials and supplies held in reserve for future use, or (3) excess, obsolete and unserviceable operating materials and supplies. These categories are defined in paragraphs 36, 45, and 47 respectively.

[38] **Recognition.** The consumption method of accounting for the recognition of expenses shall be applied for operating materials and supplies. Operating materials and supplies shall be recognized and reported as assets when produced or purchased. "Purchased" is defined as when title passes to the purchasing entity. If the contract between the buyer and the seller is silent regarding passage of title, title is assumed to pass upon delivery of the goods. Delivery or constructive delivery shall be based on the terms of the contract regarding shipping and/or delivery.

[39] The cost of goods shall be removed from operating materials and supplies (i.e., the asset account) and reported as an operating expense in the period they are issued to an end user for consumption in normal operations.

[40] If (1) operating materials and supplies are not significant amounts, (2) they are in the hands of the end user for use in normal operations, or (3) it is not cost-beneficial to apply the consumption method of accounting, then the purchases method may be applied to operating materials and supplies. The purchases method provides that operating materials and supplies be expensed when purchased.

[41] An end user is any component of a reporting entity that obtains goods for direct use in the component's normal operations. Any component of a reporting entity, including contractors, that maintains or stocks operating materials and supplies for future issuance shall **not** be considered an end user.

[42] **Valuation Under the Consumption Method.** Operating materials and supplies shall be valued on the basis of historical cost.

[43] Historical cost shall include all appropriate purchase and production costs incurred to bring the items to their current condition and location. Any abnormal costs, such as excessive handling or rework costs, shall be charged to operations of the period. Donated operating materials and supplies shall be valued at their fair value at the time of donation. Operating materials and supplies acquired through exchange of nonmonetary assets (e.g., barter) shall be valued at the fair value of the asset received at the time of the exchange. Any difference between the recorded amount of the asset surrendered and the fair value of the asset received shall be recognized as a gain or a loss.

[44] The first-in, first-out (FIFO); weighted average; or moving average cost flow assumptions shall be applied in arriving at the historical cost of ending operating materials and supplies and cost of goods consumed. In addition, any other valuation method may be used if the results reasonably approximate those of one of the above historical cost methods (e.g., a standard cost or latest acquisition cost system).

[50] **Disclosure Requirements.**

- General composition of operating materials and supplies.
- Basis for determining operating materials and supplies values; including the valuation method and any cost flow assumptions.
- Changes from prior year's accounting methods; if any.
- Balances for each of the categories of operating materials and supplies described above.
- Restrictions on the use of material.

-
- The decision criteria for identifying the category to which operating materials and supplies are assigned.
 - Changes in the criteria for identifying the category to which operating materials and supplies are assigned.

Appendix D: Letter from Department of Defense Deputy Chief Financial Officer

OFFICE OF THE UNDER SECRETARY OF DEFENSE
1100 DEFENSE PENTAGON
WASHINGTON, DC 20301-1100

MAR 16 2006

Ms. Wendolyn Comes
Executive Director
Federal Accounting Standards Advisory Board 441 G. Street, N.W.
Washington, DC 20548

Dear Ms. Comes:

The Department of Defense (DoD) is continuing to take steps to implement its financial management improvement plans and accounting processes. In the course of this process, we have taken a critical look at the Department's business process for the repair of inventories, and the applicability of the Statement of Federal Financial Accounting Standard (SFFAS) No. 3 as it relates to inventory repair. In line with this review, we have also researched comparable commercial processes through available web-based literature as well as through direct contact with commercial firms. Subsequent to consideration of all our findings, we have concluded that the Department's repair process is directly comparable to the private sector process typically referred to as "remanufacturing," and that our reparable carcasses (referred to as "cores" in the private sector) acquired in exchange sales for reparable items are similar, if not the same, as "raw materials" or components used in the remanufacturing process. More importantly, we have come to believe that "inventory repair" suggests a misleading process when viewed in the context of rebuilding worn and used carcasses/cores for the primary purpose of providing rebuilt items for new sales. The following paragraphs elaborate on our findings and conclusions.

Based on commercial sourced information noted above, we found that the remanufacturing process had specific characteristics that were virtually parallel regardless of product or entity (i.e., commercial or DoD). Both remanufacturing companies and the DoD acquire worn

carcasses/cores through exchange sales of remanufactured items or newly procured items with financial incentives or credit given for the exchanged cores. Both inspect, disassemble, evaluate, clean, rebuild, refurbish, and restore products to "good-as-new" condition for inclusion as finished goods inventory and for sale to new customers. More importantly, both often enhance products with upgrades which incorporate new technologies, reduce obsolescence, extend useful life, increase safety, and improve reliability.

Regardless of the technical processes, or the definition attached to the process, we believe that certain, fundamental attributes must be considered in the accounting solution when inventory items are repaired:

- First, inventory, by definition, is "held for sale." Since inventory held for sale is typically found on "warehouse shelves," the repair of damaged items in current storage, and the return of those items to the warehouse is a rare or immaterial event.
- Second, since it is rare for on-the-shelf, held-for-sale items to be repaired, we can generally conclude that any large-scale inventory item repair process, whether undertaken by commercial firms or the DoD, will always be a "source-of-supply" process which provides rebuilt or remanufactured items for new sales.
- Third, it can also be concluded that rebuild processes for resale will always involve some form of market-based or incentive-based business process which provide for the return of worn or used carcasses/cores for rebuild. Carcasses/cores then become similar to raw material and, more importantly, should reflect the cost to obtain them.
- Finally, regardless of the name attached to the refurbishment process, i.e., "repair," "rebuild," "remanufacture," or other, a fundamental rule of accounting states that "all costs incurred to place assets into use, or to get inventory items ready for sale, should be capitalized into the cost of the asset."

Despite these attributes, paragraphs 32 and 33 (Inventory Held for Repair) of SFFAS No. 3 provide that entities should charge or credit the difference between actual and estimated repair costs to current period expense. However, when the process is correctly viewed as a process undertaken with the intent of rebuilding returned worn and used cores for subsequent resale, we believe that limiting the application of capitalized repair to estimated repair is not only inappropriate but, in fact, distorts the matching of cost of sales and revenue at time of sale.

Reconciliation of the historical cost requirements in Statement No. 3 with the requirements set forth in paragraphs 32 and 33 are problematic. The SFFAS No. 3 provides that entities value Inventory Held for Sale at historical cost. Paragraph 21 defines historical cost to "include all appropriate purchase, transportation and production costs incurred to bring items to their current condition and location." In addition, commercial accounting principles for inventory cost have always been guided by a fundamental rule of capitalization as stated in Accounting Research Bulletin 43, Chapter 4, Paragraph 5, as follows: "The primary basis of accounting for inventories is cost, which has been defined generally as the price paid or consideration given to acquire an

asset." When applied to inventories, cost means, in principle, the "sum of all applicable expenditures and charges directly or indirectly incurred in bringing an article to its existing condition and location." Paragraphs 32 and 33 of Statement 3, however, impose restrictions on both cost capitalization and the value of carcasses. Paragraphs 32 and 33 require that regardless of the level of effort or cost incurred to rebuild items for resale, rebuild costs must be expensed as period costs if they exceed estimated repair. Secondly, paragraphs 32 and 33 dictate that carcass costs are not independent, but rather are a function of the cost of related serviceable items less estimated repair. This principle ties the value of carcasses to the procurement cost of serviceable items and thus, subjects carcasses to a continuing revaluation unrelated to their cost.

Each year, the Department, through incentive exchange sales from our revolving funds or through directed returns, processes thousands of reparable item returns (i.e., carcasses) for subsequent repair/rebuild. Similarly, thousands of commercial firms obtain cores through exchange sales or through available market purchases for remanufacturing. The objectives of this business process in both instances are to: (1) establish an alternative source of supply that utilizes the main component of the items being rebuilt, and (2) repair/rebuild/remanufacture the carcasses or cores for subsequent resale. From an accounting perspective, we have to believe that commercial firms can only be capitalizing such costs into the cost of the products sold in lieu of period repair expense. It appears clear that reporting repair expenses for large-scale remanufacturing and resale operations would be in conflict with accepted accounting principles, would understate their inventory and cost of goods sold, and would mismatch costs and revenue at the time of sale. Based on these conclusions, and those attributes we summarized previously, the following and remaining paragraphs state our proposals for SFFAS No. 3 inventory repair principles.

We propose that Inventory Held for Repair be revisited in terms of the prevailing business process. As stated in our first and second attributes above, we believe that "inventory repair" per se is a rare event that, if viewed in terms of overall principles, will reveal source-of-supply and resale objectives.

We propose that "repair expense" be subjected to a critical and theoretical review in terms of "inventory repair." Textbook examples of repair expense versus repair capitalization typically make reference to real property and fixed assets. Capitalized repair is matched to revenue through depreciation charges. Since inventory is not depreciated, capitalized repair can, therefore, only match revenue as a part of cost of goods sold. We believe this is the correct answer; however, there is little, if any, accounting guidance in this area.

If it is concluded that large-scale inventory repair is undertaken primarily for the purpose of selling rebuilt/remanufactured items, we then propose that the question of cost capitalization be subjected to the general requirement to capitalize all costs to bring inventory items to the point of sale. We believe this issue should also be subjected to the question of "asset value or life

added" versus the objective of "resale." That is, it can be argued that if repair does not add substantial value or life to an inventory item, then it should be expensed. We believe that the sale objective and the matching of cost of goods sold should be the prevailing factor.

If it is concluded that inventory repair is a rebuild/resell process, we then propose that the valuation of carcasses/cores be independent of the cost of items held for sale. We believe that carcasses should be valued at "cost."

These proposals, depending on your consideration or conclusions, could bring to bear additional changes or findings. For example, recording carcasses at cost and rebuilt items at full cost could negate the need for the allowance method or direct method and potentially revise the implementation adjustments currently stated in Paragraph 34 (i.e., reporting entities which accrued amounts for repair expense under previous standards based on estimated repair costs may be required to make subsequent adjustments for carcasses held at cost without an allowance). Paragraph 17(3) could be revised to include remanufactured components. In addition, it should be kept in mind that this letter addresses only inventory for sale (or repaired for ultimate resale). There are variations of repair and spare parts management in some industries (airlines for example) that repair or rebuild items for internal recycling only. These items, we believe, are accounted for as depreciable assets.

My staff will be pleased to work with you or anyone you deem to be appropriate on the FASAB staff on this issue and will provide any assistance or information that you determine to be necessary. Questions or requirements for additional information can be directed to my point of contact, Mr. Wayne Hudson. Mr. Hudson can be reached by phone at (703) 697-8281 or by e-mail at wayne.hudson@osd.mil.

Sincerely,

Teresa McKay
Deputy Chief Financial Officer

Interpretation of Federal Financial Accounting Standards 8: An Interpretation of Statement of Federal Financial Accounting Standards 56, Classified Activities

Status

Issued	March 15, 2019
Effective Date	Effective upon issuance.
Affects	SFFAS 56
Affected by	None.

Summary

The objective of SFFAS 56 is to balance the need for financial reports to be publicly available with the need to prevent the disclosure of classified national security information or activities in publicly issued General Purpose Federal Financial Reports (GPFFRs). SFFAS 56 allows financial presentation and disclosure to accommodate user needs in a manner that does not impede national security.

SFFAS 56 permits modifications that do not affect net results of operations or net position. In addition, SFFAS 56 allows a component reporting entity to be excluded from one reporting entity and consolidated into another reporting entity, and the effect of the modification may change the net results of operations and/or net position.

Further, Interpretations of SFFAS 56, which may themselves contain classified information, will address the requirements of this and other standards and permit other modifications when needed to prevent the disclosure of classified information. Modifications permitted by SFFAS 56 and future Interpretations may affect the net results of operations and/or net position of those entities applying the Interpretations.

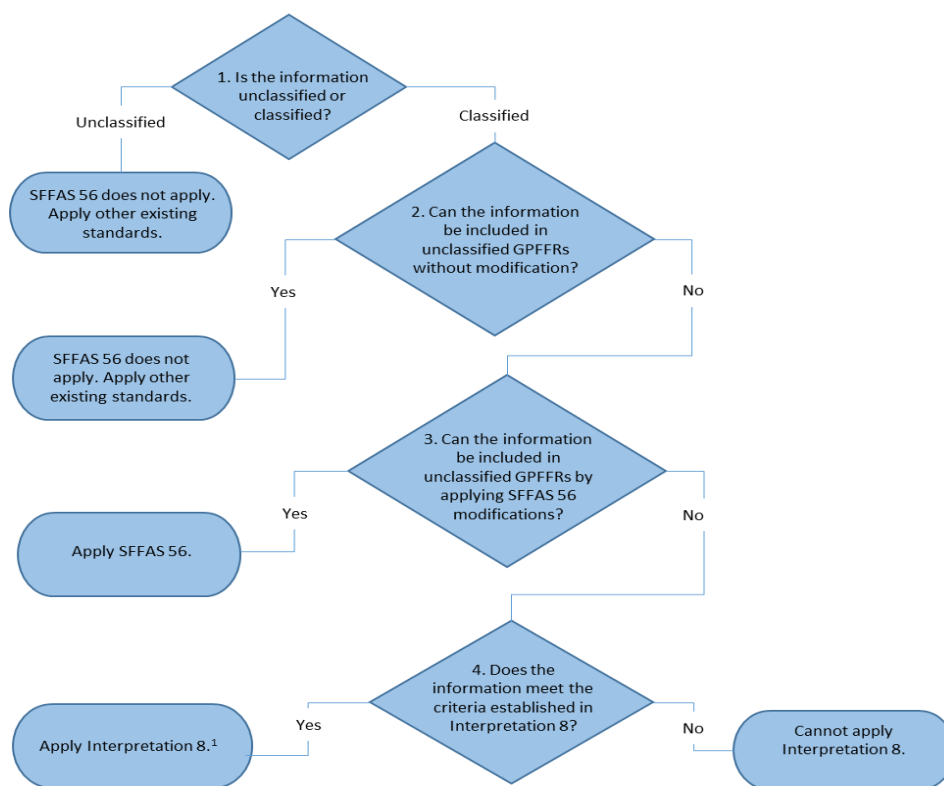

Interpretation 8 is the first classified interpretation of SFFAS 56 that allows modifications to information required by other standards, and the effect of the modifications may change the net results of operations and/or net position.

Interpretation 8 provides a decision chart (see below) illustrating the Board's intended implementation of the Interpretation. The Interpretation does not relieve reporting entities from their requirements and responsibilities to comply with other accounting standards in the appropriate classified environment as it relates to non-public records and reports.

Interpretation 8 will be maintained by FASAB. Due to the classified nature of Interpretation 8, contact FASAB to arrange access to Interpretation 8 as needed. FASAB will provide access to the Interpretation following appropriate security procedures.

Application Decision Chart

Below is a decision chart illustrating the Board's intended implementation of SFFAS 56 and classified Interpretation 8. This guidance does not relieve reporting entities from their requirements and responsibilities to comply with other accounting standards in the appropriate classified environment as it relates to non-public records and reports. This illustration is non authoritative and depicts the process described in the guidance.

¹ The guidance may be applied at the program or transaction level.

Interpretation of Federal Financial Accounting Standards 9, Cleanup Cost Liabilities Involving Multiple Component Reporting Entities: An Interpretation of SFFAS 5 & SFFAS 6

Status

Issued	August 16, 2019
Effective Date	For periods beginning after September 30, 2019. Early implementation is permitted.
Affects	This Interpretation clarifies SFFAS 5 and SFFAS 6 regarding cleanup costs liabilities.
Affected by	None.

Summary

With the issuance of *Statement of Federal Financial Accounting Standards (SFFAS) 47, Reporting Entity*, SFFAS 55, *Amending Inter-entity Cost Provisions*, and Technical Bulletin 2017-2, *Assigning Assets to Component Reporting Entities*, there is a need for additional guidance to assist in the application of cleanup cost liability standards at the component reporting entity level.

This Interpretation provides clarification and guidance regarding cleanup cost liabilities when the component reporting entity responsible for reporting on an asset during its useful life is different from the component reporting entity that will eventually be responsible for settling the liability for the cleanup cost of that asset.

This Interpretation facilitates reporting by component reporting entities by better aligning reporting with their operations.

Materiality

The provisions of this Interpretation need not be applied to information if the effect of applying the provision(s) is immaterial. A misstatement, including omission of information, is material if, in light of surrounding facts and circumstances, it could reasonably be expected that the judgment of a reasonable user relying on the information would change or be influenced by the correction or inclusion of the information. Materiality should be evaluated in the context of the specific reporting entity. Determining materiality requires appropriate and reasonable judgment in considering the specific facts, circumstances, size, and nature of the misstatement. Consequently, after quantitative and qualitative factors are considered, materiality may vary by financial statement, line item, or group of line items within an entity.

Interpretation

Scope

1. This Interpretation applies when a component reporting entity is presenting general purpose federal financial reports (GPFFRs) in conformance with generally accepted accounting principles (GAAP), as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.

INTERPRETATION

General Principles for Component Reporting Entities

2. SFFAS 5, *Accounting for Liabilities of the Federal Government*, paragraph 19 states, "A liability for federal accounting purposes is a probable future outflow or other sacrifice of resources as a result of past transactions or events."
3. Paragraphs 56-57 of SFFAS 47, *Reporting Entity*, provide that component reporting entities' GPFFRs must include all consolidation and disclosure entities for which they are accountable so that both the component reporting entity and government-wide GPFFRs are complete. The GPFFR for the government-wide reporting entity consolidates the component reporting entity GPFFRs and includes information regarding disclosure entities.

56. The government-wide reporting entity is the only federal reporting entity that is an independent economic entity^[footnote omitted] and the inclusion principles are expressed from the perspective of the federal government. However, GPFFRs for the government-wide reporting entity represent a consolidation of component reporting entity GPFFRs. Therefore, component reporting entities must identify and include in their GPFFRs all consolidation entities and disclosure entities for which they are accountable so that both the component reporting entity GPFFRs and government-wide GPFFR are complete.

57. A component reporting entity's GPFFR should include all organizations that would allow the users to hold the component reporting entity's management (such as appointed officials or other agency heads) accountable for implementation of public policy decisions. Inclusion would also reveal the risks inherent in component reporting entity operations, and thereby

enhance accountability to the public. Each component reporting entity is accountable for all consolidation entities^[footnote omitted] and disclosure entities administratively assigned to it.

4. SFFAS 47, paragraph 10 defines component reporting entity as follows:

Component Reporting Entity-"Component reporting entity" is used broadly to refer to a reporting entity within a larger reporting entity.⁷ Examples of component reporting entities include organizations such as executive departments, independent agencies, government corporations, legislative agencies, and federal courts. Component reporting entities would also include sub-components (those components included in the GPFFR of a larger component reporting entity) that may themselves prepare GPFFRs. One example is a bureau that is within a larger department that prepares its own standalone GPFFR.

FN 7 The larger reporting entity could be the government-wide reporting entity or another component reporting entity.

5. In light of SFFAS 5 and SFFAS 47, the following general principles apply for component reporting entities:
- a. liabilities generally should be reported by the component reporting entity for which the future outflow or sacrifice of resources is probable and measurable.
 - b. Liabilities should be recognized by a component reporting entity before being consolidated into the government-wide financial statements.

Guidance on Cleanup Costs

6. SFFAS 6, *Accounting for Property, Plant, and Equipment*, chapter 4: Cleanup Costs¹ provides the definition of cleanup costs and provides that cleanup costs meet the definition and criteria for recognition of liabilities included in SFFAS 5. SFFAS 6, paragraph 91 explains that liabilities should be recognized when three conditions are met:
- a. A past transaction or event has occurred.
 - b. A future outflow or other sacrifice of resources is probable.
 - c. The future outflow or sacrifice of resources is measurable.

¹Cleanup costs are the costs of removing, containing, and/or disposing of (1) hazardous waste from property, or (2) material and/or property that consists of hazardous waste at permanent or temporary closure or shutdown of associated PP&E. (*FASAB Handbook, Appendix E: Consolidated Glossary*)

-
7. SFFAS 6 supplements SFFAS 5² by providing additional guidance regarding cleanup costs. SFFAS 6 associates the recognition of cleanup costs with the life of the related general property, plant, and equipment (PP&E). Paragraph 94 provides for the estimation of cleanup costs when the associated general PP&E is placed in service. Paragraph 97 provides for the recognition of a portion of the estimated total cleanup costs as an expense during each period that the general PP&E is in operation.
 8. SFFAS 6 is based on the assumption that the cleanup cost and the associated general PP&E would be recognized by the same component reporting entity. However, this assumption may be contrary to actual practice.
 9. Some component reporting entities settle liabilities by transferring general PP&E to another component reporting entity designated by law, rule, or administrative regulation to fund the liabilities.³ In such cases,⁴ a component reporting entity that recognizes general PP&E during its useful life may differ from the component reporting entity that will eventually be responsible for the future outflows or other sacrifices of resources required for cleanup costs or funding the cleanup liability. Instead, the component reporting entity receiving the asset upon its removal from service⁵ will be responsible for funding the cleanup cost.
 10. When multiple component reporting entities have distinct responsibilities regarding general PP&E and related cleanup costs, information needed to monitor and update cleanup cost liabilities would typically be more readily available to the component reporting entity that reports the general PP&E. Such component reporting entities settle the cleanup cost liability by transferring the general PP&E for cleanup. Until the component reporting entity recognizing the general PP&E transfers the general PP&E, it should continue to recognize the liability. Upon transferring the general PP&E, it should also transfer the associated liability.

²SFFAS 5 applies to all environmental liabilities not specifically covered in SFFAS 6, including cleanup resulting from accidents or when cleanup is an ongoing part of operations.

³Component reporting entities designated by law, rule, or administrative regulation to fund liabilities are distinguishable from those component reporting entities that may receive excess property and are not responsible for settling the liability.

⁴This Interpretation provides guidance when the cleanup costs and the associated liability are designated to a different component reporting entity than the component reporting entity reporting the general PP&E.

⁵Technical Release (TR) 14, *Implementation Guidance on the Accounting for the Disposal of General Property, Plant, & Equipment*, provides guidance on the disposal, retirement, or removal from service of general PP&E as well as related cleanup costs. It differentiates between permanent and other than permanent removal from service of general PP&E and delineates events that trigger discontinuation of depreciation and removal of general PP&E from accounting records.

-
11. The SFFAS 5 liability recognition criterion that "a future outflow or other sacrifice of resources is probable" should be considered met by the component reporting entity that recognizes the general PP&E during its useful life. In that case, the liability should be reported on the balance sheet of the component reporting entity recognizing the general PP&E until the general PP&E and the associated liability are transferred to another entity for cleanup. At that time, the general PP&E and the liability should be de-recognized by the component reporting entity that recognized them during the general PP&E's useful life and recognized by the component reporting entity that will liquidate the liability. De-recognition and recognition of the general PP&E and liability should be performed in accordance with existing standards.

Effective Date

12. The requirements of this Interpretation are effective for reporting periods beginning after September 30, 2019. Early implementation is permitted.

<p>The provisions of this Interpretation need not be applied to immaterial items.</p>
--

Appendix A: Basis For Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Interpretation. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Interpretation—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Interpretation may be affected by later Statements or pronouncements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent pronouncements that amend this Interpretation. Within the text of the documents, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement or other pronouncement for the rationale for each amendment.

Background

- A1. The Department of Defense (DoD) asked the Federal Accounting Standards Advisory Board (FASAB or "the Board") for guidance regarding accounting for liabilities at the component reporting entity level. Specifically, clarifications were requested about the recognition and measurement standards related to contingent liabilities and cleanup costs. FASAB provides the recognition and measurement standards in SFFAS 5 and SFFAS 6.
- A2. With the issuance of recent pronouncements SFFAS 47, SFFAS 55, *Amending Inter-entity Cost Provisions*, and Technical Bulletin (TB) 2017-2, *Assigning Assets to Component Reporting Entities*, there is a need for additional guidance to assist in the application of the general liability standards and principles. This is especially needed when multiple component reporting entities are involved.
- A3. For example, with the issuance of SFFAS 55, SFFAS 30, *Inter-Entity Cost Implementation: Amending SFFAS 4, Managerial Cost Accounting Standards and Concepts*, and Interpretation 6, *Accounting for Imputed Intra-departmental Costs: An Interpretation of SFFAS No. 4*, are rescinded; therefore, the requirement to impute costs for these activities is eliminated. Further, the Board's intent with TB 2017-2 is to provide flexibility with respect to asset assignment. SFFAS 47 recognizes the complex organizational structure of the federal government and provides a basis for determining which organizations should be included in the reporting entity's GPFFRs. It also provides definitions for reporting entity, component reporting entities, and sub-component reporting entities within the federal government.

-
- A4. Entities requested clarification with respect to the accounting for contingent liabilities when one or more sub-component reporting entities within a single component reporting entity are designated to manage litigation and pay any resulting liabilities on behalf of one or more other sub-component reporting entities.
- A5. Entities also requested guidance regarding cleanup cost liabilities when the component reporting entity responsible for reporting the general PP&E during its useful life is different from the component reporting entity that will eventually be responsible to fund cleanup costs upon disposal of that general PP&E.
- A6. These types of examples and the issuances of the new pronouncements warrant consideration of the need for guidance about how the general liability standards and principles should be applied. Without additional guidance, these situations may lead to inconsistent application of the liability standards and principles.

General Principles for Component Reporting Entities

- A7. Paragraphs 56-57 of SFFAS 47 provide that component reporting entities' GPFFRs must include all consolidation entities and disclosure entities for which they are accountable so that both the component reporting entity and government-wide GPFFRs are complete. The GPFFR for the government-wide reporting entity consolidates the component reporting entity GPFFRs and includes information regarding disclosure entities. SFFAS 47 also provides the definition for component reporting entity.
- A8. In light of SFFAS 5 and SFFAS 47, this Interpretation provides general principles that apply for component reporting entities.

Guidance on Cleanup Costs

- A9. SFFAS 6 provides guidance for recognizing liabilities for cleanup costs, and SFFAS 5 provides guidance for recognizing liabilities from government-related events such as cleanup of environmental damage. FASAB has provided guidance in this area through several technical releases (TRs), but additional guidance is necessary in light of recent pronouncements.
- A10. Challenging issues exist in the application of general standards for large, complex departments, such as DoD, that have numerous components and sub-components. For example, assets may be owned by one component reporting entity but used or funded by another component reporting entity, and the component reporting entity using the asset may not be the component reporting entity responsible for funding cleanup costs. Given the complex responsibilities and relationships among the components of large departments, the second condition of paragraph 91 in SFFAS 6 results in inconsistent application of the

standards. The condition requires that "a future outflow or other sacrifice of resources is probable."

- A11. Additionally, SFFAS 4, *Managerial Cost Accounting Standards and Concepts*, addresses inter-entity costs. Recognition of inter-entity costs by activities that are not business-type activities is not required⁶ with the exception of inter-entity costs for personnel benefits and the Treasury Judgment Fund settlements unless otherwise directed by the Office of Management and Budget. Further, TB 2017-2 provides flexibility so that assets may be assigned by a reporting entity to its component reporting entities on a rational and consistent basis. These new pronouncements provide additional flexibility when considered in conjunction with SFFAS 5 and SFFAS 6.
- A12. SFFAS 6 outlines the requirements for the disposal, retirement, or removal from service of general PP&E. Paragraphs 97-98 of SFFAS 6 outline the requirements for recognition and measurement of disposal-related cleanup costs. TR 14, *Implementation Guidance on the Accounting for the Disposal of General Property, Plant, & Equipment*, addresses implementation guidance that further clarifies existing SFFAS 6 requirements for the disposal, retirement, or removal from service of general PP&E as well as related cleanup costs. The guidance helps differentiate between permanent and other than permanent removal from service of PP&E assets. The guidance recognizes the many complexities involved in the disposal of PP&E and delineates events that trigger discontinuation of depreciation and removal of PP&E from financial reporting.
- A13. Some general PP&E requiring cleanup is transferred to another component reporting entity after being removed from service. An example would be a military service responsible for reporting the general PP&E that will eventually be transferred to the Defense Logistics Agency for cleanup. In such cases, the component reporting entity that recognized the general PP&E during its useful life may not be responsible for future outflows or other sacrifices of resources to settle the liability for cleanup costs. Instead, the component reporting entity receiving the general PP&E for the cleanup has or assumes that responsibility because it was designated by law, rule, or administrative regulation to fund the liability. This does not include component reporting entities that receive excess property and are not responsible for settling the liability.
- A14. For the purpose of meeting the liability definition of cleanup costs at the component reporting entity level (when multiple sub-component reporting entities have distinct responsibilities for general PP&E and for settling the related liability), the condition to determine whether "a future outflow or other sacrifice of resources is probable" can be

⁶SFFAS 55 provides for the continued recognition of significant inter-entity costs by business-type activities. Non business-type activities may elect to recognize other imputed costs.

considered met as long as the liability is reported with the general PP&E until the general PP&E is removed, contained, or disposed of. At that time, the liability would be transferred with the related general PP&E to the component reporting entity responsible for the liability. The entity transferring the general PP&E should ensure supporting documentation for the estimated cleanup costs is provided to the receiving entity.

A15. A general illustration for the entries⁷ to recognize the liability for the cleanup cost and subsequent transfer by the component reporting entity using the general PP&E follows.

As provided in SFFAS 6, the component reporting entity using the general PP&E would recognize the cleanup cost and accrue the liability over time as the asset is used.

DR. Expense
CR. Liability

Upon cleanup, the component reporting entity transfers the liability and related general PP&E to the component reporting entity responsible for liquidating the liability.

DR. Liability
DR. Other Financing Source - Transfer Out
CR. General PP&E

A16. A general illustration for the entry to recognize the general PP&E and the liability by the component reporting entity that will liquidate the liability follows.

DR. General PP&E
CR. Other Financing Source - Transfer In
CR. Liability

Disclosures

A17. Although the Interpretation may result in changes in reporting of cleanup costs when multiple component reporting entities are involved, existing GAAP provides sufficient guidance to ensure proper disclosures regarding these changes in reporting. SFFAS 55 requires component reporting entities to disclose that only certain inter-entity costs are recognized for goods and services received from other federal entities at no cost or at a cost less than the full cost. Component reporting entities should identify the costs of the providing

⁷The journal entries are presented for an understanding of the Interpretation and do not address specific general PP&E transactions or resulting ending balances. In addition, actual journal entries are under the authority of the Standard General Ledger.

entity that are not fully reimbursed and the general nature of other imputed costs recognized in their financial statements. Statement of Federal Financial Accounting Concepts 3, *Management's Discussion and Analysis*, and SFFAS 15, *Management's Discussions and Analysis*, also provide guidance on information to include in the management's discussion and analysis if deemed appropriate.

A18. Given the sufficiency of current disclosure standards and guidance, the Board concluded it is not necessary to address disclosure in this Interpretation. Agencies should consider current standards in deciding whether to disclose the nature of changes in reporting resulting from this Interpretation.

Other

A19. Because FASAB provided the guidance regarding the application of cleanup cost standards through other pronouncements, such as TBs and TRs, additional documents may require updating to ensure conformance and consistency with current GAAP. Therefore, FASAB will make necessary updates to the appropriate documents. Those updates are considered exclusive of the cleanup cost liability issue presented within this Interpretation. Further, those changes or updates must be made in separate GAAP documents to ensure the appropriate level of guidance within the GAAP hierarchy results. Specifically, this pronouncement is an Interpretation; TBs and TRs can only be amended through other TBs and TRs.

Summary of Outreach Efforts and Responses

A20. FASAB issued the exposure draft (ED), *Guidance on Recognizing Liabilities Involving Multiple Component Reporting Entities: An Interpretation of SFFAS 5* on October 17, 2018, with comments requested by January 17, 2019.

A21. Upon release of the ED, FASAB provided notices and press releases to the FASAB subscription email list, the Federal Register, *FASAB News*, *the Journal of Accountancy*, the Chief Financial Officers Council, the Council of the Inspectors General on Integrity and Efficiency, and committees of professional associations generally commenting on EDs in the past (for example, the Greater Washington Society of CPAs and the Association of Government Accountants Financial Management Standards Board).

A22. In addition, to encourage responses, a reminder notice was provided to FASAB's subscription email list on January 8, 2019. However, in light of the partial government shutdown during the comment period, some departments and agencies may not have been able to respond by the deadline; therefore, FASAB extended the comment deadline to March 11, 2019.

A23. FASAB received 15 comment letters from preparers, auditors, professional associations, financial managers, and users of federal financial information. The Board considered responses to the ED at its April 2019 meeting. The Board did not rely on the number in favor of or opposed to a given position. The Board considered each response and weighed the merits of the points raised. The respondents' comments are summarized below.

No Need for Contingent Liability Guidance

A24. As noted in the background section, there had been a request for clarification and guidance regarding reporting contingent liabilities when multiple component reporting entities are involved. Therefore, the ED had proposed clarification for contingent liabilities when one or more sub-component reporting entities within a single component reporting entity are designated to manage litigation and/or pay any resulting liabilities on behalf of one or more other sub-component reporting entities.

A25. However, the majority of respondents disagreed with the proposal that the sub-component reporting entity responsible for managing litigation would have the information needed to recognize contingent liabilities and should therefore report information in accordance with SFFAS 5. Instead, the majority of the respondents believed that the sub-component reporting entity whose actions gave rise to the litigation should report the information in accordance with SFFAS 5.

A26. Respondents that disagreed with the proposal regarding contingent liabilities provided substantial comments and several different reasons for their disagreement. There was not a universal or common theme from the respondents, and responses were fairly general.

A27. In addition to the general disagreement with the proposal, certain respondents noted concern about the effect on reporting for responsibility segments within their consolidated financial statements. The proposal was not intended to affect disaggregated information within a single audited financial statement for a component reporting entity with multiple responsibility segments. However, some stated the same principles would or should apply to assigning costs to responsibility segments. From the comments, it appeared that the proposed contingent liability guidance may not have provided the intended guidance but rather led to greater ambiguity and questions in implementation.

A28. After further consultation with the agency that requested guidance in this area, the agency determined that the effect of receiving contingent liability guidance would be immaterial or minimal. In addition, neither the agency nor any other agency could provide other contingent liability examples that should be considered by the Board.

A29. Based on the comments and discussions with agency representatives, the Board determined that there was no need for guidance in the contingent liability area.

Clarification of Cleanup Guidance

- A30. The majority of respondents agreed that the SFFAS 5 liability recognition criterion that "a future outflow or other sacrifice of resources is probable," should be considered met by the component reporting entity that recognizes the general PP&E during its useful life. In that case, the liability should be reported on the balance sheet of the component reporting entity recognizing the general PP&E until the general PP&E and the associated liability are transferred to another entity designated by law, rule or administrative regulation to fund the cleanup liability.
- A31. One agency respondent disagreed with the proposal because it did not agree that the component reporting entity receiving the asset for cleanup should be responsible for settling the cleanup cost liability. The agency believed it could be interpreted that an agency receiving excess property had assumed responsibility for the environmental liabilities when it accepts the report of excess property, even when it is not responsible for settling the liability. This was not the Board's intent in issuing the Interpretation.
- A32. The Interpretation provides guidance in the specific case when the entity receiving the general PP&E is responsible for settling the liability. As explained in paragraph 10, it provides the following context for the guidance: "Some component reporting entities settle liabilities by transferring general PP&E to another component reporting entity..."
- A33. The Board determined additional clarification may be required to ensure it is clear that the Interpretation is not addressing cases when the entity transferring the general PP&E is still responsible for the liability. The Interpretation provides guidance when the cleanup costs and the associated liability are designated to a different component reporting entity than the component reporting entity reporting the general PP&E. Therefore, the Board added additional language and footnotes to the Interpretation to clarify this point.
- A34. The Board recognizes that, in some cases, the Interpretation may cause a change in reporting of cleanup cost liabilities. However, the Board concluded the Interpretation will provide consistent application of SFFASs and resolve concerns that the community raised.
- A35. Certain respondents provided additional suggestions and editorial comments related to this area. The Board carefully considered respondents' comments and several were adopted.

Other Liability Issues

- A36. The Board recognizes the potential complexities in reporting and recognizing information in accordance with SFFAS 5 when multiple component reporting entities are involved. The Board requested feedback on the possibility of other similar liability situations or scenarios for consideration and whether an additional general liability principle should be included to

address multiple component reporting entities. Respondents did not identify additional examples. Therefore, the Board concluded it is not necessary to provide a general principle.

A37. Although the scope of this Interpretation is only related to cleanup costs, the Board recognizes the potential for other liability issues involving multiple component reporting entities to arise in the future. The Board will consider other specific situations as they arise.

Board Approval

A38. This Interpretation was approved for issuance by all members of the Board.

Interpretation of Federal Financial Accounting Standards 10, Clarification of Non-federal Non-entity FBWT Classification (SFFAS 1, Paragraph 31): An Interpretation of SFFAS 1 and SFFAS 31

Status

Issued	May 10, 2021
Effective Date	Effective upon issuance.
Affects	This Interpretation clarifies SFFAS 1, paragraph 31.
Affected by	None.

Summary

This Interpretation clarifies the classification and presentation of non-federal non-entity Fund Balance with Treasury (FBWT) in paragraph 31 of Statement of Federal Financial Accounting Standards (SFFAS) 1, *Accounting for Selected Assets and Liabilities*. This guidance provides that amounts received in deposit funds from non-federal sources in anticipation of an order (that is, an advance) should be classified as intragovernmental on component reporting entity financial statements.

SFFAS 1, paragraph 31 was amended by SFFAS 31, *Accounting for Fiduciary Activities*, to clarify the definition and reporting for fiduciary amounts on deposit in the U.S. Treasury and to distinguish fiduciary FBWT from federal component reporting entities' FBWT. While making this distinction, the amendment added the phrase "other non-federal non-entity FBWT." This Interpretation clarifies the classification by explaining that the inclusion of "other non-federal non-entity FBWT" in paragraph 31 of SFFAS 1 was intended to provide for similar treatment of activities comparable to fiduciary activities that SFFAS 31 had not identified specifically. This Interpretation clarifies that the Federal Accounting Standards Advisory Board did not intend to require similar treatment for activities that were explicitly excluded from the provisions of SFFAS 31.

Although amounts received in deposit accounts may come from non-federal non-entity sources for unfilled orders, these amounts do not qualify as fiduciary activity because SFFAS 31 specifically excludes unearned revenue from fiduciary activity reporting. Therefore, it would be inconsistent to apply the phrase "other non-federal non-entity" to unearned revenue, including amounts received from non-federal sources for unfilled orders.

Hence, non-federal non-entity amounts received for unfilled orders that are reflected in FBWT should be reported as an intragovernmental asset of the component reporting entity.

Materiality

The provisions of this Interpretation need not be applied to information if the effect of applying the provision(s) is immaterial.¹ A misstatement, including omission of information, is material if, in light of surrounding facts and circumstances, it could reasonably be expected that the judgment of a reasonable user relying on the information would change or be influenced by the correction or inclusion of the information. Materiality should be evaluated in the context of the specific reporting entity. Determining materiality requires appropriate and reasonable judgment in considering the specific facts, circumstances, size, and nature of the misstatement.

Consequently, after quantitative and qualitative factors are considered, materiality may vary by financial statement, line item, or group of line items within an entity.

¹Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled Materiality, for a detailed discussion of the materiality concepts.

INTERPRETATION

Scope

1. This Interpretation applies when a component reporting entity is presenting general purpose federal financial reports (GPFFRs) in conformance with generally accepted accounting principles (GAAP), as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.

Interpretation

2. SFFAS 1, Accounting for Selected Assets and Liabilities, paragraph 31 provides:

A federal entity's fund balance with the Treasury (FBWT) is the aggregate amount of funds in the entity's accounts with Treasury for which the entity is authorized to make expenditures and pay liabilities. FBWT is an intragovernmental item, except for fiduciary or other non-federal non-entity FBWT. From the reporting entity's perspective, the reporting entity's FBWT is an asset because it represents the entity's claim to the federal government's resources. However, from the perspective of the federal government as a whole, it is not an asset; and while it represents a commitment to make resources available to federal departments, agencies, programs and other entities, it is not a liability. In contrast, fiduciary and other non-federal non-entity FBWT is not intragovernmental, and it represents a liability of the appropriate Treasury component and of the federal government as a whole to the non-federal beneficiaries.

3. SFFAS 1, paragraph 31 was amended by SFFAS 31, *Accounting for Fiduciary Activities*, to clarify the definition and reporting for fiduciary amounts on deposit in the U.S. Treasury and to distinguish fiduciary FBWT from federal component reporting entities' FBWT. While making this distinction, the amendment added the phrase "other non-federal non-entity FBWT." The Federal Accounting Standards Advisory Board (FASAB or "the Board") acknowledges that the amendments did not define the phrase "other non-federal non-entity FBWT" within SFFAS 31, and the added phrase may have led to a lack of clarity regarding classification and presentation of non-federal non-entity FBWT.
4. SFFAS 31 amended paragraph 31 of SFFAS 1 as follows (amendments are shown in bold and underscored):

A federal entity's fund balance with the Treasury (**FBWT**) is the aggregate amount of funds in the entity's accounts with Treasury for which the entity is authorized to make expenditures and pay liabilities. **FBWT** is an intragovernmental item, **except for fiduciary or other non-federal non-entity FBWT**. From the reporting entity's perspective, **the reporting entity's FBWT** is an asset because it represents the entity's claim to the federal government's resources. However, from the perspective of the federal government as a whole, it is not an asset; and while it represents a commitment to make resources available to federal departments, agencies, programs and other entities, it is not a liability. **In contrast, fiduciary and other non-federal non-entity FBWT is not intragovernmental, and it represents a liability of the appropriate Treasury component and of the federal government as a whole to the non-federal beneficiaries.**

5. SFFAS 1, paragraph 31 provides that "FBWT is an intragovernmental item, except for fiduciary or other non-federal non-entity FBWT." The standards do not define the phrase "other non-federal non-entity FBWT." This Interpretation clarifies that the inclusion of "other non-federal non-entity FBWT" in paragraph 31 of SFFAS 1 was to provide for similar treatment of activities comparable to fiduciary activities that SFFAS 31 had not identified specifically. The Board did not intend to require similar treatment for activities explicitly excluded from the provisions of SFFAS 31.
6. Federal reporting entities often receive amounts in advance from customers-both federal and non-federal-for unfilled orders including amounts a customer advances for orders that may be placed in the future or deposits made as part of a bid or settlement process. Once received, the funds are deposited into the General Fund of the U.S. Government. Although amounts received in deposit accounts may come from non-federal non-entity sources for unfilled orders, these amounts do not qualify as fiduciary activity because SFFAS 31 specifically **excludes** unearned revenue from fiduciary activity reporting (see par. 13 of SFFAS 31). It would be inconsistent to apply the phrase "other non-federal non-entity" to amounts received in deposit accounts from non-federal sources for unfilled orders.
7. Hence, non-federal non-entity amounts received for unfilled orders (including amounts a customer advances for orders that may be placed in the future or deposits made as part of a bid or settlement process) and deposited into the General Fund of the U.S. Government should be reported as an intragovernmental asset by the component reporting entity.

Effective Date

8. The requirements of this Interpretation are effective upon issuance.

The provisions of this Interpretation need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled Materiality, for a detailed discussion of the materiality concepts.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Interpretation. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Interpretation—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Interpretation may be affected by later Statements or pronouncements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent pronouncements that amend this Interpretation. Within the text of the documents, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement or other pronouncement for the rationale for each amendment.

Background

- A1. Stakeholders (more than one federal reporting entity) requested FASAB to review paragraph 31 of SFFAS 1 and clarify the classification and presentation of FBWT. The request relates to how amounts received in deposit funds from non-federal non-entity sources in anticipation of an order (that is, an advance) should be classified and presented on the financial statements. The non-federal non-entity funds are deposited into the General Fund of the U.S. Government.
- A2. There were questions regarding the presentation of the asset on the balance sheet. While the stakeholders and others agreed that it is a non-entity asset, there were differing views regarding whether it should be classified and presented as an intragovernmental asset (FBWT) or a non-federal asset (governmental) on the balance sheet. As discussed under the section GAAP Guidance, the questions regarding classification came up after the issuance of SFFAS 31 and the resulting amendments to SFFAS 1.
- A3. The primary rationale for treating these advance payments as intragovernmental assets is based on the notion that these deposited amounts are owed by the General Fund of the U.S. Government (FBWT) to the entity responsible for the execution of the underlying agreement or transaction. As discussed in the subsequent sections, the proper classification of this line item is important to ensure there is no double counting of amounts at the government-wide level.

Prevalent Practice

- A4. Most reporting entities (even those that did not request guidance on the issue) report the deposit funds as intragovernmental FBWT on the balance sheet and disclose the portion that is non-entity in the notes to the financial statements. This is consistent with requirements to show non-entity assets separately. Paragraph 26 of SFFAS 1 provides, "Non-entity assets recognized on an entity's balance sheet should be segregated from entity assets. An amount equal to non-entity assets should be recognized as a liability (due to Treasury or other entities) recognized on the balance sheet." Office of Management and Budget (OMB) Circular A-136, *Financial Reporting Requirements*, directs that the distinction be disclosed in the notes, not on the face of the Balance Sheet.
- A5. The Department of the Treasury's Bureau of the Fiscal Service (Fiscal Service) is responsible for prescribing the accounting posting logic for the agencies through the Treasury Financial Manual. Fiscal Service is also responsible for ensuring proper application of intragovernmental eliminations at the government-wide financial reporting level.
- A6. Fiscal Service representatives agreed that non-federal non-entity funds deposited into the General Fund of the U.S. Government should be reported as an intragovernmental asset because agencies are not holding the funds. The funds are being held by the General Fund of the U.S. Government. The General Fund is now a standalone reporting entity in the government. As more fully discussed in the next paragraph, with the General Fund's reporting, the accounting model was made complete for the federal government.
- A7. Simply put, a component reporting entity's FBWT is eliminated with the General Fund's liability for FBWT. As a result, the amount received is reported in the General Fund's financial statements as an asset for the government via the consolidation of the Department of Treasury's financial statements to the government-wide financial statements. It is reported as Cash and Other Monetary Assets. Alternatively, if a reporting entity reported these amounts on a non-federal line on the balance sheet, the asset would be double counted on the government-wide financial statements.
- A8. If the activity was fiduciary in nature, the General Fund identifies the fiduciary deposit funds and records a liability, ensuring that it is not eliminated and is, therefore, reported on the government-wide financial statements.

GAAP Guidance

A9. As noted previously, SFFAS 1, paragraph 31 provides:

A federal entity's fund balance with the Treasury (FBWT) is the aggregate amount of funds in the entity's accounts with Treasury for which the entity is authorized to make expenditures and pay liabilities. FBWT is an intragovernmental item, except for fiduciary or other non-federal non-entity FBWT. From the reporting entity's perspective, the reporting entity's FBWT is an asset because it represents the entity's claim to the federal government's resources. However, from the perspective of the federal government as a whole, it is not an asset; and while it represents a commitment to make resources available to federal departments, agencies, programs and other entities, it is not a liability. In contrast, fiduciary and other non-federal non-entity FBWT is not intragovernmental, and it represents a liability of the appropriate Treasury component and of the federal government as a whole to the non-federal beneficiaries.

A10. As noted, the issue relates to how amounts received in deposit funds from non-federal sources in anticipation of an order should be classified and presented on the financial statements. The non-federal non-entity funds are deposited into the General Fund of the U.S. Government.

A11. The Board acknowledges that the lack of clarity in SFFAS 1 is due to the amendments resulting from SFFAS 31. In addition, the standards do not define the phrase "other non-federal non-entity FBWT" and the added phrase led to ambiguity regarding classification and presentation of non-federal non-entity FBWT.

A12. SFFAS 31 amended paragraph 31 of SFFAS 1 as follows (amendments are shown in bold and underscored): A federal entity's fund balance with the Treasury (**FBWT**) is the aggregate amount of funds in the entity's accounts with Treasury for which the entity is authorized to make expenditures and pay liabilities. **FBWT** is an intragovernmental item, **except for fiduciary or other non-federal non-entity FBWT**. From the reporting entity's perspective, **the reporting entity's FBWT** is an asset because it represents the entity's claim to the federal government's resources. However, from the perspective of the federal government as a whole, it is not an asset; and while it represents a commitment to make resources available to federal departments, agencies, programs and other entities, it is not a liability. **In contrast, fiduciary and other non-federal non-entity FBWT is not intragovernmental, and it represents a liability of the appropriate Treasury component and of the federal government as a whole to the non-federal beneficiaries.**

A13. Regarding the intragovernmental classification, the differing views relate to the phrase "or other non-federal non-entity FBWT." The inclusion of "other non-federal non-entity FBWT" in paragraph 31 of SFFAS 1 was to provide for similar treatment of activities comparable to

fiduciary activities that SFFAS 31 had not identified specifically. As evident in providing for specific exclusions in SFFAS 31, the Board did not want similar treatment for activities that were explicitly excluded from the provisions of SFFAS 31.

- A14. SFFAS 31 provides for certain exclusions from the reporting requirements for fiduciary activities. For example, amounts related to unpaid payroll withholdings and garnishments are excluded from fiduciary reporting. In addition, unearned revenue should not be reported as fiduciary activity.
- A15. While the amounts received in deposit accounts (by reporting entities that submitted the request for guidance) are from a non-federal fund source and deposited for unfilled orders, these amounts do not qualify as fiduciary activity because SFFAS 31 specifically excludes unearned revenue from fiduciary activity reporting (par. 13 of SFFAS 31). In this case, it would be inconsistent to apply the phrase "other non-federal non-entity deposit funds" to this activity. As noted, paragraph 13 of SFFAS 31 provides for this exclusion and specifically states:

Unearned revenue should not be reported as fiduciary activity and should be recognized as a liability in accordance with existing standards.⁸ Assets collected or received by a Federal entity that represent prepayments or advance payments for which the Federal component entity is expected to provide goods or services should not be classified as fiduciary activity. This exclusion applies broadly and applies to amounts a customer advances for orders that may be placed in the future or deposits made as part of a bid or settlement process, even if these amounts are not specifically classified as "unearned revenue" by the entity due to uncertainty about the ultimate realization of the revenue.

FN8 See SFFAS 1, paragraph 85 and SFFAS 7, Accounting for Revenue and Other Financing Sources, paragraph 37.

- A16. Paragraph 49, in the basis for conclusions of SFFAS 31, addresses the specific topic of advances: Similarly, Federal component entities may hold advances received from customers for future sales of goods or services. Such advances represent unearned revenue. One Federal agency, in its written response and oral testimony, noted that certain advances received appear to meet the definition of fiduciary activity. However, this standard excludes unearned revenue from the fiduciary reporting requirements because unearned revenue is a routine operational activity and the Board believes that fiduciary reporting of unearned revenue is not warranted.
- A17. The Board acknowledges that the amended wording may have led to the ambiguity that currently exists. However, this Interpretation clarifies that the underlying goals as intended are consistent regarding FBWT. Specifically, one should consider how FBWT is viewed from the component reporting entity and government-wide perspective in considering how these

relationships are intertwined. In this relationship, FBWT is an intragovernmental asset for the component reporting entity because it represents the entity's claim to the federal government's resources. From the perspective of the federal government as a whole, it is not an asset in that intragovernmental amounts are eliminated in consolidation, and thus, would not appear on the government-wide balance sheet.

Clarification of Non-federal Non-entity FBWT Classification and Presentation

- A18. The Board acknowledges that the lack of clarity in SFFAS 1 is due to the amendments resulting from SFFAS 31. The standards do not define the phrase "other non-federal non-entity FBWT" and the added phrase led to ambiguity regarding classification and presentation of non-federal non-entity FBWT. The Board concluded this Interpretation is the best vehicle to clarify the classification.
- A19. SFFAS 1, paragraph 31 describes a federal entity's FBWT as the aggregate amount of funds in the entity's accounts with Treasury for which the entity is authorized to make expenditures and pay liabilities. The paragraph also states, "FBWT is an intragovernmental item, except for fiduciary or other non-federal non-entity FBWT."
- A20. This Interpretation clarifies that the inclusion of "other non-federal non-entity FBWT" in paragraph 31 of SFFAS 1 was intended to provide for similar treatment of activities that were comparable with fiduciary activity but that had not been identified specifically in SFFAS 31. This Interpretation clarifies that it was not intended to require similar treatment for activities that were explicitly excluded from the provisions of SFFAS 31.
- A21. Federal reporting entities often receive amounts in advance from customers-both federal and non-federal-for unfilled orders including amounts a customer advances for orders that may be placed in the future or deposits made as part of a bid or settlement process. Although amounts received in deposit accounts may come from non-federal non-entity sources for unfilled orders, these amounts do not qualify as fiduciary activity because SFFAS 31 specifically **excludes** unearned revenue from fiduciary activity reporting (see par. 13 of SFFAS 31). Therefore, it would be inconsistent to apply the phrase "other non-federal non-entity" to this activity or amounts received in deposit accounts from non-federal sources for unfilled orders.
- A22. Therefore, non-federal non-entity amounts for unfilled customer orders deposited into the General Fund of the U.S. Government should be reported as an intragovernmental asset by the component reporting entity.
- A23. FBWT is an intragovernmental aggregate account between federal agencies and the General Fund of the U.S. Government. It is where funds are recorded until needed to fulfil

the non-entity orders. This presentation is also consistent with guidance provided by OMB Circular A-136, *Financial Reporting Requirements*.

Summary of Outreach Efforts and Responses

- A24. FASAB issued the exposure draft (ED), *Clarification of Non-federal Non-entity FBWT Classification (SFFAS 1, Paragraph 31): An Interpretation of SFFAS 1 and SFFAS 31*, on October 29, 2020, with comments requested by January 6, 2021.
- A25. Upon release of the ED, FASAB provided notices and press releases to the FASAB subscription email list, the Federal Register, FASAB newsletter, the *Journal of Accountancy*, the *Chief Financial Officers Council*, and committees of professional associations generally commenting on EDs in the past (for example, the Greater Washington Society of CPAs and the Association of Government Accountants Financial Management Standards Board).
- A26. To encourage responses, a reminder notice was provided to FASAB's subscription email list.
- A27. FASAB received 16 comment letters from preparers, auditors, professional associations, and users of federal financial information. The Board considered responses to the ED at its February 2021 meeting. The Board did not rely on the number in favor of or opposed to a given position. The Board considered each response and weighed the merits of the points raised. The respondents' comments are summarized below.
- A28. Respondents generally agreed with the Interpretation. Specifically, respondents generally agreed the Interpretation clarified that non-federal non-entity amounts received for unfilled orders that are reflected in FBWT should be reported as an intragovernmental asset of the component reporting entity. Certain respondents provided minor editorial clarifications that were carefully considered and adopted.
- A29. Although the respondents were in agreement with the proposal, two respondents suggested defining other non-federal non-entity FBWT and one respondent suggested providing examples. The Board considered this beyond the scope of the Interpretation.

Board Approval

- A30. This Interpretation was approved for issuance by all members of the Board.

Interpretation of Federal Financial Accounting Standards 11, Debt Cancellation: An Interpretation of SFFAS 7, Paragraph 313

Status

Issued	November 29, 2021
Effective Date	Effective upon issuance.
Affects	SFFAS 7, par. 313.
Affected by	None.
Related Guidance	

Summary

Issues were raised during audits related to the accounting treatment for debt cancellation that led to the need for review and clarification of paragraph 313 of Statement of Federal Financial Accounting Standards (SFFAS) 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*. SFFAS 7, paragraph 313 provides:

Cancellation of debt.-The debt that an entity owes Treasury (or other agency) may be canceled by Act of Congress. The amount of debt that is canceled (including the amount of capitalized interest that is canceled, if any) is a gain to the entity whose debt is canceled and a loss to Treasury (or other agency). The purpose of borrowing authority is generally to provide an entity with capital rather than to finance its operations. Therefore, the cancellation of debt is not earned by the entity's operations and is not directly related to the entity's costs of providing goods and services. As a result, the cancellation is a nonexchange gain to the entity that owed the debt and a nonexchange loss to the lender.

Statement of Federal Financial Accounting Concepts (SFFAC) 2, *Entity and Display*, paragraph 100 provides that nonexchange activity is reported on the statement of changes in net position (SCNP). When considering paragraph 313 of SFFAS 7 and SFFAC 2 together, this Interpretation clarifies that the standards provide that debt cancellation is a nonexchange activity that should be reported on the SCNP. This Interpretation also clarifies that paragraph 313 of SFFAS 7 should not be interpreted to require that a particular line item¹ "gain" or "loss" be displayed on the SCNP.

¹While in certain standards the Board has determined that requiring a specific line item for display is appropriate, in most standards it is not appropriate because items may need to be displayed separately or be included with other items based on materiality.

In addition to the proprietary accounting and reporting discussed above, budgetary accounting should be considered. As noted in paragraph 313 of SFFAS 7, the cancellation of debt requires an Act of Congress. Each debt cancellation is governed by the particular language used in the enacted legislation canceling the debt. This Interpretation does not provide guidance on budgetary accounting.

Materiality

The provisions of this Interpretation need not be applied to information if the effect of applying the provision(s) is immaterial.² A misstatement, including omission of information, is material if, in light of surrounding facts and circumstances, it could reasonably be expected that the judgment of a reasonable user relying on the information would change or be influenced by the correction or inclusion of the information. Materiality should be evaluated in the context of the specific reporting entity. Determining materiality requires appropriate and reasonable judgment in considering the specific facts, circumstances, size, and nature of the misstatement. Consequently, after quantitative and qualitative factors are considered, materiality may vary by financial statement, line item, or group of line items within an entity.

²Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

	Page
Summary	1
Interpretation	4
Scope	4
Interpretation	4
Effective Date	6
Appendix A: Basis for Conclusions	7
Appendix B: Abbreviations	14

Interpretation

Scope

1. This Interpretation applies when a reporting entity is presenting general purpose federal financial reports (GPFFRs) in conformance with generally accepted accounting principles (GAAP), as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.

Interpretation

2. SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*, paragraph 313 provides:

Cancellation of debt.-The debt that an entity owes Treasury (or other agency) may be canceled by Act of Congress. The amount of debt that is canceled (including the amount of capitalized interest that is canceled, if any) is a gain to the entity whose debt is canceled and a loss to Treasury (or other agency). The purpose of borrowing authority is generally to provide an entity with capital rather than to finance its operations. Therefore, the cancellation of debt is not earned by the entity's operations and is not directly related to the entity's costs of providing goods and services. As a result, the cancellation is a nonexchange gain to the entity that owed the debt and a nonexchange loss to the lender.

3. Paragraph 32 of SFFAS 7, "Appendix B, 'Guidance for the Classification of Transactions,' provides authoritative guidance on which transactions should be classified as exchange transactions and which should be classified as nonexchange transactions or other financing sources." In addition, paragraph 63 of SFFAS 7 states, "The various types of nonexchange revenue are described in Appendix B: Guidance for the Classification of Transactions. Some of these are not specifically mentioned in this standard."
4. Paragraph 313 is part of Appendix B: Guidance for the Classification of Transactions. As noted, the appendix provides authoritative guidance for the classification of major transactions. The Introduction of Appendix B provides the following:

It is intended that these classifications--together with the explanation of these classifications, interpreted in the light of the Standards, the Basis for Conclusions, and the Introduction--will provide guidance for classifying all the financing transactions of the Government, including those that are not specifically listed. It should be understood that while some classifications are unequivocal, others are the result of balancing different considerations.

5. SFFAS 7, Appendix B includes cancellation of debt under Intragovernmental Transactions: Nonexchange transactions-intragovernmental: gains and losses.
6. Statement of Federal Financial Accounting Concepts (SFFAC) 2, *Entity and Display*, paragraph 100 provides that nonexchange activity is reported on the statement of changes in net position (SCNP).
7. When considering SFFAS 7, paragraph 313 and SFFAC 2 together, this Interpretation clarifies that the standards provide that debt cancellation is a nonexchange activity that should be reported on the SCNP.
8. Paragraph 313 of SFFAS 7 provides, "As a result, the cancellation is a nonexchange gain to the entity that owed the debt and a nonexchange loss to the lender." This Interpretation clarifies that paragraph 313 of SFFAS 7 should not be interpreted to require that a particular line item³ "gain" or "loss" be displayed on the SCNP. Rather, this Interpretation requires that debt cancellation activity be included on the SCNP and reporting be consistent with guidance in SFFAS 7, Appendix B. Reporting entity management is responsible for determining the most appropriate line item presentation and display⁴ and related disclosures, such as contextual information about the debt cancellation (for example, the statutory authority cancelling the debt or the reason for the debt), if appropriate.
9. In addition to the proprietary accounting and reporting discussed above, budgetary accounting should be considered by reporting entities. As noted in paragraph 313 of SFFAS 7, the cancellation of debt requires an Act of Congress. Each debt cancellation is governed by the particular language used in the enacted legislation canceling the debt. For example, Congress may provide an appropriation to the agency for the purposes of cancelling the

³While in certain standards the Board has determined that requiring a specific line item for display is appropriate, in most standards it is not appropriate because items may need to be displayed separately or be included with other items based on materiality.

⁴OMB prescribes form and content in OMB Circular A-136, *Financial Reporting Requirements*, based on the requirements and guidance contained in FASAB standards but also may provide more specific detailed instructions. See the Basis for Conclusions paragraphs A21-A22 for additional discussion.

debt or it may cancel the debt without providing an appropriation. This Interpretation does not provide guidance on budgetary accounting.

Effective Date

10. The requirements of this Interpretation are effective upon issuance.

<p>The provisions of this Interpretation need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Interpretation. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Interpretation—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Interpretation may be affected by later Statements or pronouncements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent pronouncements that amend this Interpretation. Within the text of the documents, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement or other pronouncement for the rationale for each amendment. .

Background

A1. The Federal Accounting Standards Advisory Board (FASAB or "the Board") was asked to review paragraph 313 of SFFAS 7, which pertains to debt cancellation, to determine if it needs to be revised. Specifically, issues were raised during audits related to the proper accounting treatment of a cancellation of debt that affected several reporting entities.

Debt Cancellation Example

- A2. The request for guidance was based on an issue where an agency borrowed from the Department of the Treasury (Treasury) resulting in a payable/receivable relationship. Congress canceled debt through legislation and relieved the agency of liability.
- A3. Each debt cancellation is governed by the particular language used in the enacted legislation canceling the debt. For example, Congress may provide an appropriation to the agency for the purposes of cancelling the debt or it may simply cancel the debt without providing an appropriation. In this particular example, the debt was canceled without providing an appropriation.
- A4. Treasury's Bureau of the Fiscal Service (Fiscal Service) is responsible for prescribing the accounting posting logic for the agencies through the Treasury Financial Manual. Fiscal Service is also responsible for ensuring proper application of intragovernmental eliminations at the government-wide financial reporting level. The Office of Management and Budget (OMB) and Treasury determined the posting logic for the debt cancellation scenario described in this Interpretation. Treasury and OMB concurred that a negative surplus

warrant should be used. Per the Fiscal Service guidance, which Treasury and OMB agreed upon, the agency was required to show an increase to Fund Balance with Treasury (FBWT) and a subsequent decrease to FBWT representing debt repayment to implement the cancellation. The posting logic resulted in the agency reporting what appeared like an appropriation provided by the legislation by recording the debt cancellation as a budgetary financing source on its SCNPs.

- A5. However, the reporting entities disagreed on the proper entries. Specifically, the auditors of the agency that was relieved of the liability believed the cancellation of debt should be reported on the SCNPs but recognized as nonexchange gain in accordance with SFFAS 7 because the legislation did not provide for an appropriation. The auditors did not agree with Fiscal Service's prescribed posting logic and identified this treatment as a material weakness. To avoid losing its unmodified opinions on its agency financial report and closing package audits, the agency made the correcting entry required by the auditors to reverse the posting logic and recognize a nonexchange gain on the SCNPs.

GAAP Guidance

- A6. SFFAS 7 paragraph 313 provides:

Cancellation of debt.-The debt that an entity owes Treasury (or other agency) may be canceled by Act of Congress. The amount of debt that is canceled (including the amount of capitalized interest that is canceled, if any) is a gain to the entity whose debt is canceled and a loss to Treasury (or other agency). The purpose of borrowing authority is generally to provide an entity with capital rather than to finance its operations. Therefore, the cancellation of debt is not earned by the entity's operations and is not directly related to the entity's costs of providing goods and services. As a result, the cancellation is a nonexchange gain to the entity that owed the debt and a nonexchange loss to the lender.

- A7. Paragraph 313 is part of Appendix B, Guidance for the Classification of Transactions in SFFAS 7. Appendix B provides authoritative guidance on classifying transactions. Specifically, the appendix provides guidance for the classification of specific transactions based on the standards for accounting for revenue and "other financing sources" and the reasoning behind these standards as explained in the Introduction and the Basis for Conclusions. Cancellation of debt is included under Intragovernmental Transactions: Nonexchange transactions-intragovernmental: gains and losses.
- A8. Not only is the transaction labeled a nonexchange transaction per the Appendix B Table of Transactions in SFFAS 7, but paragraph 313 of SFFAS 7 clearly provides that debt cancellation is nonexchange activity by stating, "As a result, the cancellation is a nonexchange gain to the entity that owed the debt and a nonexchange loss to the lender."

Understanding that debt cancellation is nonexchange activity is very important because it specifies reporting as provided in SFFAC 2.

- A9. The Introduction of SFFAS 7, paragraphs 16-17 provides the following explanation regarding the difference between nonexchange and exchange revenue:

16. The essential differences among exchange revenues, nonexchange revenues, and other financing sources affect the way they are recognized and measured under the accrual method of accounting. Properly classifying these inflows according to their nature, therefore, provides the basis for applying different accrual accounting principles. In addition, proper classification is essential to constructing financial statements that meet the federal financial reporting objectives as they have been described in Statement of Federal Financial Accounting Concepts No. 2, *Entity and Display*.

17. To help meet those objectives, classifications were developed to determine what specific kinds of revenue should be deducted from the cost of providing goods and services by the reporting entities. Only revenue classified as exchange revenue should be matched with costs. Nonexchange revenue and other financing sources are not matched with costs because they are not earned in the operations process. Because they are inflows that finance operations, nonexchange revenues and other financing sources should be classified in accordance with other rules and should be recognized only in determining the overall financial results of operations for the period. This differs from the focus used in the private sector, where the focus is on net income for business organizations, and on changes in net assets for not-for-profit organizations. It is also a different focus from that used previously in reporting on U.S. Government operations. Under the old federal accounting standards, the focus was on matching all of an entity's financing with incurred expenses to report "net results of operations" which generally was not useful in evaluating performance. The new focus is on costs -both gross and net-which are useful in evaluating performance on many levels.

- A10. Paragraph 21 of SFFAS 7 provides further explanation regarding nonexchange revenue and why it should not be reported with net costs as follows:

Nonexchange revenue transactions do not require a Government entity to give value directly in exchange for the inflow of resources. The Government does not "earn" the nonexchange revenue. The cost that nonexchange revenue finances falls on those who pay the taxes and make the other nonexchange payments to the Government. The different character of nonexchange revenues requires that they be distinguished from exchange revenues. They should, therefore, be shown in a way that does not obscure the entity's net cost of operations.

A11. SFFAC 2, paragraph 100 provides that nonexchange activity is reported on the SCNP. Therefore, previous Boards were clear that debt cancellation activity is nonexchange and should be reported on the SCNP.

A12. It should also be noted that paragraph 133 of SFFAS 7 states:

Gains and losses are recognized rather than revenues and expenses in order to differentiate unusual or nonrecurring transactions for evaluating an entity's performance or setting its prices. Material gains and losses are expected to be infrequent. They would normally be of a type that management would want to be considered in appraisals of its operations.

A13. Further, the Board also discussed the relationship between revenues and gains in SFFAC 5, *Definitions of Elements and Basic Recognition Criteria for Accrual-Basis Financial Statements*, as follows:

55. Existing standards or established practice may indicate that certain increases and decreases in assets should be reported as gains and losses, rather than revenues and expenses. Use of the terms *gains and losses* generally serves to highlight particular features of certain revenues and expenses, such as their unusual or non-recurring nature or their having resulted from peripheral or incidental activities of an entity.

56. The definitions of revenue and expense in this Statement include items that might be reported as gains and losses. Gains and losses are considered subsets of revenues and expenses, rather than distinct elements, just as capital assets and financial assets are considered subsets of assets. Whether certain kinds of revenues and expenses should be reported as gains and losses and, if so, under what circumstances, is beyond the scope of this Statement.

A14. SFFAS 7 also provides discussion of budgetary accounting as it pertains to meeting the objectives of federal financial reporting. For example, SFFAS 7, Introduction paragraphs 23-26 discuss the budgetary accounting perspective. SFFAS 7, paragraphs 77-82 discuss budgetary accounting and current disclosures. In addition, paragraphs 203-223 of the Basis for Conclusions provide further rationale and explanation of SFFAS 7 specific to budgetary principles, the budget process, and its link to proprietary accounting.

Nonexchange Activity Reported on Statement of Changes in Net Position

A15. When considering SFFAS 7 and SFFAC 2 together, GAAP clearly provides that debt cancellation is nonexchange activity that should be reported on the SCNP. It is important to note that paragraph 313 of SFFAS 7 provides, "As a result, the cancellation is a nonexchange gain to the entity that owed the debt and a nonexchange loss to the lender."

- A16. However, the Board recognizes that there could be uncertainty conceptually with respect to applying "gain" and "loss" to intragovernmental transactions. The Board believes the previous Board was clear in its intent by classifying debt cancellation as nonexchange. However, valid concerns were raised regarding the potential ambiguity of the terms "gain" and "loss" in the context of intragovernmental transactions, and therefore, the Board believed it important to clarify that ambiguity through this Interpretation.
- A17. This Interpretation clarifies that paragraph 313 of SFFAS 7 should not be interpreted to require that a line item "gain" or "loss" be displayed on the SCNP, only that debt cancellation activity be included on the SCNP.
- A18. While in certain standards the Board has determined that requiring a specific line item for display is appropriate, in most standards it is not appropriate because items may need to be displayed separately or be included with other items based on materiality or presentation. Instead, most standards allow reporting entities flexibility in determining the best presentation. The Board did not prescribe specific line items for display in paragraph 313 of SFFAS 7. Reporting entity management is responsible for determining the most appropriate presentation and display. Judgment, as well as consideration of materiality, is required and is specific to each reporting entity.
- A19. In addition to the proprietary accounting and reporting discussed above, budgetary accounting should be considered by reporting entities. As noted in paragraph 313 of SFFAS 7, the cancellation of debt requires an Act of Congress. Each debt cancellation is governed by the particular language used in the enacted legislation canceling the debt. For example, Congress may provide an appropriation to the agency for the purposes of cancelling the debt or it may simply cancel the debt without providing an appropriation.
- A20. As noted, this Interpretation does not provide guidance on budgetary accounting. OMB, in coordination with Treasury, provides guidance on budgetary accounting⁵ for debt cancellation based upon language provided in the legislation canceling the debt and based upon budget concepts. OMB Circular A-11, *Preparation, Submission, and Execution of the Budget*, provides instructions on, among other things, budget execution, including guidance on the apportionment and reappportionment process, a report on budget execution and budgetary resources (SF 133), and a checklist for fund control regulations. In addition, the Treasury Financial Manual is Fiscal Service's official publication of policies, procedures, and instructions concerning financial management in the federal government.

⁵See paragraphs 23-26 and paragraphs 77-82 of SFFAS 7 for discussion about budgetary information and the budgetary accounting perspective. In addition, paragraphs 203-223 of the Basis for Conclusions provides further rationale and explanation of SFFAS 7 specific to budgetary principles, the budget process and its link to proprietary accounting.

OMB A-136 Form and Content

- A21. OMB specifies the form and content of agency financial statements, pursuant to its authority under the Chief Financial Officers Act of 1990, as amended (31 U.S.C. § 3515(d)) through issuance of Bulletins and Circulars. OMB prescribes form and content in OMB Circular A-136, *Financial Reporting Requirements*, based on the requirements and guidance contained in FASAB standards but also may provide more specific detailed instructions.
- A22. As part of the research on this project, FASAB coordinated with OMB and determined that certain changes to the form and content requirements provided for the SCNP in A-136 ensure clarity and consistency with GAAP. Specifically, eliminating the sub-categories "Budgetary Financing Sources" and "Other Financing Sources (Nonexchange)" presented under the Cumulative Results on the SCNP simplifies the presentation and thereby enhances the clarity.

Disclosures

- A23. The Board considered whether this Interpretation should clarify disclosures. The Board believed it important to remind users that management is responsible for reporting, presentation, and display. Therefore, this includes consideration of additional disclosures. The reporting entity may believe it relevant to provide readers information about debt cancellation and the impact⁶ of the debt cancellation.

Summary of Outreach Efforts and Responses

- A24. FASAB issued the exposure draft (ED), *Debt Cancellation: An Interpretation of SFFAS 7, Paragraph 313*, on May 25, 2021, with comments requested by July 23, 2021.
- A25. Upon release of the ED, FASAB notified constituents through the FASAB website and listserv, the Federal Register, and FASAB newsletter. FASAB also provided news releases to its press contacts, including various news organizations and committees of professional associations generally commenting on EDs in the past. Staff also provided copies of the ED directly to agencies that were directly impacted by the particular issue in prior years.

⁶For example, if a cancellation of debt is for a business-type activity and it prevents the reporting entity from having to increase future charges for goods or services, the reporting entity should disclose this. In addition, a summary of the impact of the cancellation on the reporting entity, the lender, and current and future users of the goods or services could be provided.

A26. To encourage responses, a reminder notice was provided to FASAB's listserv near the comment deadline.

A27. FASAB received 17 comment letters from preparers, auditors, professional associations, and users of federal financial information. The Board considered responses to the ED at its August 2021 meeting. The Board did not rely on the number in favor of or opposed to a given position. The Board considered each response and weighed the merits of the points raised. The respondents' comments are summarized below.

A28. The majority of respondents generally agreed with the Interpretation. Specifically, respondents generally agreed the Interpretation clarified that the standards provide that debt cancellation is a nonexchange activity that should be reported on the SCNP. The Interpretation also clarifies that paragraph 313 of SFFAS 7 should not be interpreted to require that a particular line item "gain" or "loss" be displayed on the SCNP.

A29. One respondent disagreed with certain aspects of the proposal and requested clarification on reporting the restructuring of debt and other aspects of paragraph 313 of SFFAS 7. The Board carefully considered the comments but deemed the referenced transactions outside of the scope of the Interpretation. Certain respondents provided minor editorial clarifications that were carefully considered and incorporated.

Board Approval

A30. This Interpretation was approved for issuance by all members of the Board.

Federal Accounting Standards Advisory Board	3
Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance	3

1. On October 19, 1999, the Council of the American Institute of Certified Public Accountants (AICPA) adopted an amendment to Rule 203 of the AICPA's Code of Professional Ethics. This amendment recognized accounting standards published by the Federal Accounting Standards Advisory Board as generally accepted accounting principles (GAAP) for federal financial reporting entities. The amendment recognized FASAB as the source of GAAP for federal entities. Consequently, the Federal Accounting Standards Advisory Board has authorized its staff to prepare FASAB Technical Bulletins to provide timely guidance on certain financial accounting and reporting problems of federal financial reporting entities. This Bulletin describes the purpose and scope of FASAB Technical Bulletins, the procedures for issuing them, and related background information.
2. The FASAB anticipates that it will communicate primarily through the issuance of Statements and Interpretations. Such pronouncements may require extensive due process, including appointing task forces and holding public hearings. The FASAB also recognizes the need for providing timely guidance to financial statement preparers and attestors for both currently emerging and existing problems.
3. To provide timely guidance within the context of the standard FASAB procedures, Technical Bulletin procedures provide for both due process (more limited in scope and within a tighter minimum time frame than provided for Statements and Interpretations) and review by FASAB members.
4. FASAB Technical Bulletins provide guidance for applying FASAB Statements and Interpretations and resolving accounting issues not directly addressed by them. The following kinds of guidance may be provided in a Technical Bulletin:
 - a. Guidance to clarify, explain, or elaborate on an underlying Statement or Interpretation,
 - b. Guidance to address areas not directly covered by existing Statements or Interpretations,
 - c. Interim guidance on problems in applying an existing Statement or Interpretation currently under study by the FASAB, or
 - d. If applicable, guidance for applying FASB or GASB standards to federal activities.
5. The FASAB staff analyzes an accounting or reporting problem that comes to the FASAB's attention to determine whether the problem may be resolved by issuing a FASAB Technical Bulletin. Generally, a Technical Bulletin can provide guidance if the problem can be resolved within the following guidelines:
 - a. The guidance is not expected to cause a major change in accounting practice.

-
- b. The administrative cost involved in implementing the guidance is not expected to be significant to most affected entities.
 - c. The guidance does not conflict with a broad fundamental principle or create a novel accounting practice.

Generally, a FASAB Statement or Interpretation is more appropriate than a Technical Bulletin if any of these guidelines is not met.

- 6. FASAB members will be provided with copies of all draft Technical Bulletins before their release for comment by interested parties. Within 15 days of sending the draft TB to FASAB members, the Executive Director will review any member comments and consult with members on any issues identified. Based on the comments and consultation, the Executive Director will determine if a majority of members do not object to the proposed Technical Bulletin.
- 7. If a majority of the FASAB members do not object, the Executive Director will release the proposed Technical Bulletin to selected knowledgeable persons for comment. Those persons include members of the CFO Council, the President's Council on Integrity and Efficiency, the Joint Financial Management Improvement Program, CPA firms, and others the Executive Director and members of FASAB believe should be consulted. Proposed Bulletins will be publicized by electronic communication with interested parties and by posting to FASAB's World Wide Web site during an exposure period of at least 15 days.¹ The FASAB will maintain a public record of proposed Bulletins and all written comments received. The public record will be available for inspection at the FASAB's offices.
- 8. All comments received on draft Technical Bulletins will be given to the Board for its consideration at a public meeting before final issuance. A Bulletin will not be issued if a majority of the FASAB members object either to the guidance in it or to communicating that guidance in a Technical Bulletin.
- 9. The FASAB may support use of a Technical Bulletin because the nature of the accounting issue addressed and the guidance provided do not, in its judgment, warrant more extensive due process. If the appropriateness of issuing a Technical Bulletin is in doubt, the FASAB may choose instead to issue a Statement or Interpretation or take other action as it deems appropriate.

¹Determination of the length of the exposure period will depend on the nature and urgency of the issue. The Board generally prefers that exposure periods be longer than the minimum required and expects that normally exposure periods will be for at least 30 days.

-
10. Each Technical Bulletin will specify an effective date and transition provisions for initial application. While the FASAB expects that most Technical Bulletins will be applied prospectively, Technical Bulletins may require retroactive application if appropriate in the circumstances.
 11. The FASAB monitors the procedures for issuing FASAB Technical Bulletins and may modify these procedures from time to time. Any modification will be announced publicly.
 12. FASAB Technical Bulletins are generally in question-and-answer format and are published with this legend:

The Federal Accounting Standards Advisory Board has authorized its staff to prepare FASAB Technical Bulletins to provide timely guidance on certain financial accounting and reporting problems, in accordance with section III. I. 5 of the Board's rules of procedure, as amended and restated through October 1, 1999 and the procedures described in FASAB Technical Bulletin 2000-1, Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance. The provisions of Technical Bulletins need not be applied to immaterial items.

The FASAB has reviewed this Technical Bulletin and a majority of its members do not object to its issuance.

Technical Bulletin 2002-1: Assigning to Component Entities Costs and Liabilities that Result from Legal Claims Against the Federal Government

Status

Issued	July 24, 2002
Effective Date	for periods ending after September 30, 2001
Affects	None.
Affected by	None.
Related Guidance	Interpretation 2, <i>Accounting for Treasury Judgment Fund Transactions</i>

Summary

This technical bulletin is intended to clarify the required reporting of costs and liabilities resulting from legal claims (i.e., judgments and settlements) against the Federal government. Standards issued by FASAB have precedence over other authoritative guidance for Federal entities. This technical bulletin supplements any relevant Federal standards, but is not a substitute for and does not take precedence over the standard.

This technical bulletin requires that all liabilities and costs related to legal claims (i.e., judgments and settlements) must be attributed to the component entities responsible for the programs or activities that contributed to the claims, or to their successor component entities. This attribution follows the general principle that all transactions or events reported on the consolidated statements should be attributed to some Federal component entity.

Technical Guidance	4
Issue	4
General Principles	4
Implementation	5
Appendix A: Basis For Conclusions	6

Introduction

- 3.^A Some Federal entities have requested guidance on assigning costs and liabilities resulting from legal claims (i.e., judgments and settlements) against the Federal government when one or more Federal entities are involved in the litigation. General guidance for the accounting and reporting of costs and liabilities resulting from legal claims against the Federal government is provided in Statement of Federal Financial Accounting Standards (SFFAS) Number 4, *Managerial Cost Accounting Concepts and Standards for the Federal Government* (SFFAS 4) and Statement of Federal Financial Accounting Standards Number 5, *Accounting for Liabilities of the Federal Government* (SFFAS 5).

Effective Date

4. This technical bulletin is effective for reporting periods beginning after September 30, 2001.

Background

5. This issue is based primarily on the provisions required in the following Federal standards: SFFAS Number 4, *Managerial Cost Accounting Concepts and Standards for the Federal Government* and SFFAS Number 5, *Accounting for Liabilities of the Federal Government*.
6. SFFAS 4 provides a full cost standard that states: "Reporting entities should report the full costs of outputs in general purpose financial reports. The full cost of an output produced by a responsibility segment is the sum of (1) the costs of resources consumed by the segment that directly or indirectly contribute to the output, and (2) the costs of identifiable supporting services provided by other responsibility segments within the reporting entity and by other reporting entities." SFFAS 4 also provides a costing methodology standard which states in part, "The full costs of resources that directly or indirectly contribute to the production of outputs should be assigned to outputs through costing methodologies or cost finding techniques that are most appropriate to the segment's operating environment and should be followed consistently." In discussing cost assignment, SFFAS 4 provided the following principles in the order of preference:
- a. Directly tracing costs wherever economically feasible;

^AThe pronouncement begins with par. 3 because par. 1 and 2 were the Executive Summary in the Exposure Draft.

-
- b. Assigning costs on a cause-and-effect basis; and
 - c. Allocating costs on a reasonable and consistent basis.
7. SFFAS 5 requires that entities recognize a liability for a past event or exchange transaction that has occurred when a future outflow or other sacrifice of resources is probable and the future outflow or sacrifice of resources is measurable. "Probable" refers to that which can reasonably be expected or is believed to be more likely than not on the basis of available evidence or logic, with the exception of pending or threatened litigation and unasserted claims. For pending or threatened litigation and unasserted claims, "probable" implies that the future confirming event or events are likely to occur. [As amended by paragraphs 10 and 11 of SFFAS 12, *Recognition of Contingent Liabilities arising from Litigation: An Amendment of SFFAS 5, Accounting for Liabilities of the Federal Government*]. SFFAS 5 also requires that contingent liabilities be recognized when probable and measurable.

Technical Guidance

Issue

8. What reasonable cost assignment principles should be applied when it is not clear where the liability and cost related to legal claims (i.e., judgments and settlements) should be reported because (a) the actions of Federal component entities¹ contribute to a legal claim having been filed against the Federal government or (b) a Federal component entity disputes that its actions contributed to the legal claim having been filed against the Federal government?

General Principles

9. All liabilities and costs must be attributed to the component entities responsible for the programs or activities that contributed to the claims or to their successor component

¹The term "component entity" is used to distinguish between the U. S. Federal government and its components. The U. S. Federal government is composed of organizations that manage resources and are responsible for operations, i.e., delivering services. These include major departments and independent agencies, which are generally divided into sub organizations, i.e., smaller organizational units with a wide variety of titles, including bureaus, administrations, agencies, and corporations. (SFFAC No. 2, *Entity and Display*, paragraphs 11-12) Use of "component entity" in this technical bulletin is only intended to distinguish between the U.S. Federal government's consolidated financial statements and financial statements of its components.

entities. This attribution follows the general principle that all transactions or events reported on the consolidated statements should be attributed to some Federal component entity.

Implementation

10. The following hierarchy of cost assignment principles should be applied when the actions of one or more Federal component entities contribute to a legal claim having been filed against the Federal government or when a Federal component entity disputes that its actions contributed to the legal claim having been filed against the Federal government and it is not clear where the liability and cost should be reported.

- a. The component entities should apply the cost methodology principles provided in SFFAS 4 in the following order of preference:

- (1) Directly tracing costs wherever economically feasible;
- (2) Assigning costs on a cause-and-effect basis; and
- (3) Allocating costs on a reasonable and consistent basis.

The component entities should seek advice from the appropriate legal counsel (Office of the General Counsel, Department of Justice, etc.) about pertinent legal matters and other factors that could be relevant to assigning costs. The management of the component entities involved should work together to resolve the issues before moving on to step (b.) below.

- b. If a reasonable cost assignment or allocation cannot be determined, as outlined in step (a.) above, the component entities should seek guidance from OMB's Office of Federal Financial Management (or its successor division) and recognize costs and liabilities as directed by OMB. In addition, all component entities involved should disclose the information concerning the nature of the costs and/or liability², the problems of assigning the costs to the component entities involved, and the estimated total liability among all the component entities involved.

The provisions of this Technical Bulletin need not be applied to immaterial items.

² See specific disclosure requirements in Interpretation 2 paragraph 3 and SFFAS 5 paragraphs 40-42.

Appendix A: Basis For Conclusions

11. This appendix summarizes some of the considerations deemed significant in reaching the conclusions in this technical bulletin. It includes the reasons for accepting certain approaches and rejecting others. Some factors had greater weight than other factors.
12. The issue raised in this technical bulletin is:
What reasonable cost assignment principles should be applied when it is not clear where the liability and cost related to legal claims (i.e., judgments and settlements) should be reported because (i) the actions Federal component entities contribute to a legal claim having been filed against the Federal government or (ii) a Federal component entity disputes that its actions contributed to the legal claim having been filed against the Federal government?
13. The Accounting and Auditing Policy Committee (AAPC) of FASAB originally proposed that in those rare instances, when allocating to one or more specific entities does not appear to be appropriate, OMB could allocate the costs directly to the consolidated financial statements of the U.S. government. However, a majority of the Board did not agree with the AAPC proposal and concluded that all costs and liabilities must be reported at the component level before flowing into the consolidated statements. Thus, the AAPC's proposed guidance was not issued as a technical release.
14. This Technical Bulletin exposure draft was issued in March 2002. During the 30-day comment period 12 comment letters were received. Eight of the respondents either said they agreed with or had no comment on the proposed guidance. Three other respondents commented on specific sections of the guidance and one additional respondent disagreed with the proposed guidance. The respondents' comments are summarized below. The Board does not simply rely on the number of respondents in favor of or opposed to a given position. The Board considers the arguments in each response and weighs the merits of the points raised. Information about respondent's views is provided only as a means of summarizing the comments.

	Federal	Non-federal
Users, academics, and others	2	1
Auditors	6	
Preparers and financial managers	3	

Respondents made the following individual comments:

-
- a. the initial assessment of the probability of a legal liability should be made by the respective legal counsel but legal counsel should not make accounting decisions;
 - b. the attribution of liabilities to existing agencies for the activities of long-defunct federal instrumentalities, like the WWII entities, will overstate the apparent cost associated with that agency or its programs.

Based on the respondent's comment letters the Board reiterated the following conclusions.

With regard to the concern that legal counsel would not be in the position of offering accounting advice to agencies with respect to appropriate cost accounting methodology, the TB directs the component entities only to consult with legal counsel on information that may be relevant to determining the cost assignment.

With regard to legal costs of long-defunct Federal entities, the TB specifically states that component entities be responsible for their own claims as well as those of their successor component entities and that in those cases where the entities no longer exist, footnote disclosures are available for further explanations.

- 15. The Board's position is that all costs and liabilities must be attributed to component entities; that is, entities other than the U. S. Federal government as a whole. In general, the Board believes that the consolidated financial statements of the U. S. Federal government are a summation of component entity financial statements with appropriate intragovernmental eliminations.
- 16. Staff reviewed with the Board the possibility of reporting those unassigned costs and liabilities on the Treasury Judgment Fund (TJF)³ financial statements. Staff and the Board believe TJF should not bear the responsibility of recording all unassigned legal costs, as each component entity should accumulate and report the costs of its own activities. In addition, the TJF is merely the funding mechanism for many of the legal settlements and judgments against the Federal government.
- 17. Therefore, staff concluded that entities should first apply the cost methodology principles provided in SFFAS 4 and that all legal costs must be allocated to a component entity, whether those costs are paid by the entity or by the Treasury Judgment Fund. This principal is consistent with those outlined in the Interpretation 2, *Accounting for Treasury Judgment Fund Transactions*. However, in instances when it is impossible for component entities to

³In 1956, Congress enacted a permanent, indefinite appropriation ("the Judgment Fund") for the payment of final judgments that were "not otherwise provided for" (i.e. which cannot legally be paid from any existing appropriation or fund). Payments from the judgment appropriations may be made only upon certification by Financial Management Service, Department of the Treasury. Treasury's role is to "oversee" the use of this appropriation.

agree on a reasonable cost assignment or allocation basis, the entities should recognize costs and liabilities as directed by OMB. In addition, the Federal entities involved will be required to fully disclose all pertinent information related to the legal costs.

Technical Bulletin 2002-2: Disclosures Required by Paragraph 79(g) of SFFAS 7 Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting

Status

Issued	September 19, 2002
Effective Date	Immediate
Affects	Paragraph 79(g) of SFFAS 7 <i>Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting</i>
Affected by	None.

Table of Contents

	Page

Question	3
Response	3
Effective Date	4
Appendix A: Basis For Conclusions	5

References

SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*, paragraphs 77-79.

Question

1. Paragraph 77 of SFFAS 7 calls for presentation of certain material budgetary information by federal financial reporting entities “whose financing comes wholly or partially from the budget:
 - a. total budgetary resources available to the reporting entity during the period;
 - b. the status of those resources (including ‘obligations incurred’);
 - c. outlays.”
2. Paragraph 79(g) of SFFAS 7 calls for disclosure of “explanations of any material differences between the information required by paragraph 77 and the amounts described as ‘actual’ in the *Budget of the United States Government*” (also known as the “President’s Budget”).
3. If a federal financial reporting entity issues financial statements for a given fiscal year before the President’s Budget with actual numbers for the same fiscal year is published, what disclosure, if any, should the reporting entity make pursuant to paragraph 79(g) of SFFAS 7?

Response

4. The reporting entity should disclose that the President’s Budget with actual numbers for the fiscal year has not yet been published, explain when it is expected to be published, and indicate where it will be available. The information called for by paragraph 79(g) for the prior fiscal year should be included in the current financial report (unless it was included the entity’s prior report, as will be the case in the first year in which the financial report is published before the President’s Budget).
5. For example, a department that issued its financial report for FY 2001 in March of 2002 would have included the information called for by paragraph 79(g) in that report, because

the President's Budget with that information had been published before the department's financial report was published. If the department publishes its financial report for FY 2002 in December 2002, the department would disclose that the President's Budget with actual numbers for the fiscal year had not yet been published, explain when it is expected to be published, and indicate where it will be available. There would be no need to disclose the information called for by paragraph 79(g) with respect to FY 2001, because that information had already been reported in the FY 2001 report. If the department then publishes its financial report for FY 2003 in December 2003, that report would include the information called for by paragraph 79(g) with respect to FY 2002.

Effective Date and Transition

6. The provisions of this Technical Bulletin are effective immediately.

The provisions of this Technical Bulletin need not be applied to immaterial items.
--

Appendix A: Basis for Conclusions

7. When SFFAS 7 was published in 1996, federal entities that published financial reports typically did so well after the *Budget of the United States Government* (also known as “the President’s Budget”) was published. Since 1996, several federal entities have improved their financial accounting and reporting practices to the point where they can publish financial reports before the President’s Budget is available. Most, if not all federal reporting entities are expected to do this in future years.
8. The disclosure called for by paragraph 79(g) is informative and addresses the objective of budgetary integrity, but it would be inappropriate to delay publication of the entire financial report until the President’s Budget with actual numbers for the fiscal year is published. In such circumstances, the intent of paragraph 79(g) can best be accomplished as described in paragraph 4.
9. Pursuant to FASAB’s procedures for exposing a technical bulletin (TB), the proposed TB was distributed by e-mail to federal Chief Financial Officers and Inspectors General. The proposed TB was also posted on FASAB’s World Wide Web site (www.fasab.gov), and notices were sent to everyone on FASAB’s e-mail list. FASAB received 18 responses. Most supported the proposed TB or expressed no comment. Four suggested clarifying language or expressed concerns that implied a need for clarification. Accordingly, paragraph 5 was added to illustrate the effect of applying the Technical Bulletin.
10. The Board reviewed the proposed TB and the comments at its meeting on August 8, 2002. The TB was revised as discussed in paragraph 9 and distributed to the Board. FASAB’s Executive Director determined that a majority of the FASAB did not object to the TB as revised, and accordingly posted the TB to www.fasab.gov.

Technical Bulletin 2003-1: Certain Questions and Answers Related to the Homeland Security Act of 2002

Status

Issued	June 13, 2003
Effective Date	for periods ending after September 30, 2002
Affects	None.
Affected by	None.

Summary

- I. This technical bulletin answers certain questions arising from the creation of the Department of Homeland Security and other transfers of operations between federal entities directed by the Homeland Security Act of 2002. Standards issued by the Federal Accounting Standards Advisory Board (FASAB) have precedence over other sources of generally accepted accounting principles for Federal entities. This technical bulletin supplements any relevant Federal standards, but is not a substitute for and does not take precedence over standards and interpretations issued by FASAB.
- II. The primary effects of this technical bulletin are that:
 - a. Legacy entities will segregate the net costs of continuing and transferred operations, and recognize a transfer-out for assets and liabilities transferred. Segregation of the net cost is required for both current and prior period net cost.
 - b. Transferred entities will segregate the net costs of continuing and transferred operations for components of the transferred entity that (1) were not transferred from the legacy entity or (2) subsequent to the creation of the Department of Homeland Security were no longer included in the transferred entity's operations. Transferred entities will recognize a transfer-out for assets and liabilities transferred. Segregation of the net cost is required for both current and prior period net cost.
 - c. Department of Homeland Security and other receiving entities will recognize assets and liabilities received at book value¹ and recognize a "transfer-in." Financial statements based on the transfers and actual operations subsequent to the transfer will be presented.

¹"Book value" is the net amount at which an asset or liability is carried on the books of account (also referred to as carrying value or amount). It equals the gross or nominal amount of any asset or liability minus any allowance or valuation amount.

-
- III. Guidance on segregating the net costs of continuing and transferred operations is consistent with Financial Accounting Standard 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*. Guidance on transfers of assets and liabilities is consistent with Statement of Federal Financial Accounting Standards 7, *Accounting for Revenue and Other Financing Sources*.

Appendix C: Excerpt From Financial Accounting Standard 144, <i>Accounting For The Impairment Or Disposal Of Long-lived Assets</i>	17

Introduction

1. The Homeland Security Act of 2002 impacts many federal entities in varying ways. The purpose of this Technical Bulletin is to provide accounting and reporting guidance for legacy, transferred and receiving entities. The guidance is based largely on Financial Accounting Standard (FAS) 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, modified to fit the circumstances of federal entities. The objective is to provide comparable information for entities affected by the HS Act to the extent feasible.

Effective Date

2. This technical bulletin is effective for reporting periods beginning after September 30, 2002.

Technical Guidance

Scope

3. **What entities' accounting practices are addressed in this Technical Bulletin?**
4. This guidance is limited to transfers of functions², personnel, assets, and liabilities resulting from the Homeland Security Act of 2002 (HS Act³). The following types of entities affected by the HS Act are addressed:
 - a. "Receiving entity" refers to an entity to which functions are transferred.
 - b. "Legacy entity" refers to an entity from which a smaller entity or specific function is being transferred.

² The HS Act provides for the transfer of functions, personnel, assets, and liabilities. The term "functions" includes authorities, powers, rights, privileges, immunities, programs, projects, activities, duties, and responsibilities. The term "operations" is more commonly used in accounting literature and is sometimes used as a substitute for "functions" in this document.

³Public Law 107-296, 116 Stat. 2135, November 25, 2002.

-
- c. “Transferred entity” refers to an entity preparing stand-alone financial statements consolidated with a legacy entity’s financial statements prior to transfer and with a receiving entity’s financial statements after transfer.⁴
-

APB 20 Is Not Applicable

5. **Should receiving, legacy, and/or transferred entities apply Accounting Principles Bulletin (APB) 20 (par. 12 and 35) guidance for a change in entity? (See Appendix B, page 21, for the relevant text of APB 20)**
6. No. APB 20 should not be applied to any of the changes resulting from transfers of functions among federal entities due to the HS Act.
-

FAS 144 is Applicable

Accounting by Legacy Entities

7. **Should legacy entities apply Financial Accounting Standard (FAS) 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*,⁵ in accounting for and reporting on components of the entity⁶ transferred to receiving entities? (See Appendix C, page 17, for the relevant text of FAS 144)**
8. Yes. FAS 144 par. 41 to 44 and 47(a)⁷ should be applied by legacy entities with the exception of par. 43 guidance requiring recognition of a gain or loss on disposal (see par. 12

⁴ Guidance is provided for transferred entities because it is possible that functions would be transferred back to the legacy entity. The Office of Management and Budget (OMB) plan for Department of Homeland Security (DHS) specifically provides that “any functions of those entities that are not directly related to securing the homeland will continue to be allocated to the agencies and subdivisions in which they are currently incorporated.”

⁵ This Technical Bulletin addresses questions related to applying FAS 144 to a federal reporting entity. While this Technical Bulletin discusses many aspects of applying FAS 144, it does not provide a comprehensive illustration.

⁶ FAS 144, par. 41 states that “a component of an entity comprises operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity.”

⁷ Paragraph 47(a) requires the following disclosure: A description of the facts and circumstances leading to the expected disposal, the expected manner and timing of that disposal, and, if not separately presented on the face of the statement, the carrying amount(s) of the major classes of assets and liabilities included as part of a disposal group.

through 14 below). While FAS 144 uses the term “discontinued operations”, legacy entities should use the term “Transferred Operations” as appropriate.⁸

9. In reporting the “results of operations of the component” for current and prior periods as required by par. 43 of FAS 144 (see page 17), what information should the legacy entities report?
10. For all periods presented, legacy entities should report material amounts of gross cost, exchange revenue, and net cost for transferred or discontinued components of the entity (as defined by par. 41 of FAS 144 - see page 17). In some cases, functions may be discontinued or transferred but may not be “components of the entity” as defined in par. 41 of FAS 144. If functions are not “components of the entity” there is no requirement to separately report the function’s results of operations under FAS 144.
11. The Statement of Net Cost should present a sub-total for “Net Cost of Continuing Operations” immediately before the presentation of amounts related to transferred and/or discontinued operations. All elements related to transferred and/or discontinued operations should be appropriately labeled. For example, for transferred operations:

Net Cost of Continuing Operations		\$XX
Transferred Operations:		
Cost of Transferred Operations	\$ XX	
Exchange Revenue from Transferred Operations	XX	
Net Cost of Transferred Operations		XX
Net Cost		\$XX

12. What amount should legacy entities report for the transfer of assets and liabilities?

⁸All affected entities are components of the Federal Government as a whole. Thus, all statements should clearly distinguish between operations that are transferred versus truly “discontinued.” While the operations may be discontinued at one entity – they may be continued at another entity. Thus, the term “transferred” may be more appropriate.

-
13. SFFAS 7, par. 74, provides that transfers between entities without reimbursement should be recognized as “transfers-in⁹ or out” on the Statement of Changes in Net Position. The amount transferred is equivalent to the book value¹⁰ of all assets and liabilities transferred.
14. This SFFAS 7 guidance precludes application of FAS 144’s requirement that gains and losses be included in the results of operations of discontinued or transferred operations (FAS 144, par. 37 and 43).
- 15. Does FAS 144 require legacy entities to segregate the Statements of Budgetary Resources and Financing between continuing and transferred and/or discontinued operations?**
16. No. There are no FAS 144 requirements that would apply to the Statements of Budgetary Resources and Financing.¹¹

Accounting by Transferred Entities

- 17. Should a transferred entity preparing its own financial statements apply FAS 144 par. 41 through 44 and 47(a) to reporting on discontinued or transferred components of the entity?**
18. Yes. If a transferred entity had material components (as defined by FAS 144 par. 41) that were not also transferred with the rest of the entity, the transferred entity should apply FAS 144, par. 41 through 44 and 47(a) and par. 10 and 11 above and report separately the results of continuing and transferred operations.¹²
- 19. What additional disclosures should a transferred entity preparing free-standing entity-level financial statements provide?**

⁹It is possible to have a negative transfer-out at the legacy entity because liabilities transferred may exceed assets transferred.

¹⁰“Book value” is the net amount at which an asset or liability is carried on the books of account (also referred to as carrying value or amount). It equals the gross or nominal amount of any asset or liability minus any allowance or valuation amount.

¹¹ While these statements may be affected by transactions related to the HS Act, this Technical Bulletin provides guidance on application of FAS 144 in light of existing federal guidance. FAS 144 requirements relate primarily to exchange transactions as well as events associated with operations. Thus, FAS 144 requirements do not extend to these statements.

¹² For example, an entity may transfer to DHS “except for” certain functions that remain with the legacy entity. If these un-transferred functions are carried out by a component of the entity as defined in FAS 144 par. 41 and the associated amounts are material, the related revenues and costs would be reported under “transferred operations” per par. 11.”

20. Transferred entities should disclose:

- a. a description of the facts and circumstances leading to the transfer,
- b. the timing of the transfer,
- c. significant changes in its operations as a result of the transfer, and
- d. the net cost attributable to the transferred entity's pre-transfer operations (this amount is equal to the amount the legacy entity would report as "net cost of discontinued or transferred operations" per par. 10 above).

Accounting by Receiving Entities

21. How will receiving entity financial statements report on the transfer of components and functions from legacy entities?

- 22. Receiving entities will recognize assets and liabilities based on the legacy entities' book values at the time of transfer. SFFAS 7, par. 74 provides guidance for transfers-in and requires that transferred assets be recognized by the receiving entity at the legacy entity's book value.¹³
- 23. The net effect of the assets and liabilities received will be recognized as a "transfer-in" on the receiving entity's Statement of Changes in Net Position. Note that it is possible to have a negative transfer-in at the receiving entity because liabilities transferred may exceed assets transferred.
- 24. Receiving entities will prepare financial statements based on the transfers and actual operations subsequent to the transfer.

The provisions of this Technical Bulletin need not be applied to immaterial items.

¹³ The net amount at which an asset or liability is carried on the books of account (also referred to as carrying value or amount). It equals the gross or nominal amount of any asset or liability minus any allowance or valuation amount.

Appendix A: Basis For Conclusions

25. The Federal Accounting Standards Advisory Board has authorized its staff to prepare FASAB Technical Bulletins to provide timely guidance on certain financial accounting and reporting problems, in accordance with section III. I. 5 of the Board's rules of procedure, as amended and restated through October 1, 1999 and the procedures described in FASAB Technical Bulletin 2000-1, *Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance*. The provisions of Technical Bulletins need not be applied to immaterial items.
26. An exposure draft was issued March 21, 2003 and the Board considered responses to the exposure draft at its April 24, 2003 public meeting. The FASAB has reviewed this Technical Bulletin and a majority of its members do not object to its issuance.
27. This appendix discusses some factors considered significant by staff in reaching the conclusions in this Technical Bulletin. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the technical guidance section---not the material in this appendix---should govern the accounting for specific transactions, events or conditions

APB 20 Is Not Applicable

28. APB 20 defines a "change in entity" as:

This type [of accounting change] is limited mainly to (a) presenting consolidated or combined statements in place of statements of individual companies, (b) changing specific subsidiaries comprising the group of companies for which consolidated financial statements are presented, and (c) changing the companies included in combined financial statements. A different group of companies comprise the reporting entity after each change. (Financial Accounting Standards Board, Original Pronouncements, Change in Reporting Entity (par. 12))

29. APB 20 requires restatement when a "change in entity" occurs. Restatement means the "recasting of a previously determined (and published) balance sheet or operating statement, and its republication where there has been a substantial change in accounting principles or policies." (Kohler's Dictionary for Accountants) For private-sector entities a complete set of comparable financial statements for an individual reporting entity is critical to lending and

investing decisions.¹⁴ The current and prior period financial statements assist in discerning the earning power and credit-worthiness of entities thus trends in assets, liabilities and results of operations are essential.

30. Federal financial reporting objectives do not focus on the earning power or credit worthiness of the component entities of the government. Instead, federal financial reporting objectives focus on:
- a. Compliance with laws and regulations governing the use of resources (budgetary integrity);
 - b. Evaluating the service efforts and accomplishments of a reporting entity (operating performance) as well as the entity's management of assets and liabilities;
 - c. Assessing the government's financial position and changes in its financial position (stewardship); and
 - d. Assuring that systems and controls support compliance with laws and regulations (systems and controls).
31. Restatement may obscure information about the changes directed by the HS Act since restatement would portray financial information as if the event occurred prior to its enactment and effective date. Portraying the actual results of operations including actual transfers of assets and liabilities for which an entity is legally accountable is most consistent with federal reporting objectives. Thus, staff does not believe restatement aids in meeting federal financial reporting objectives.

¹⁴ FASB Concepts Statement 1: Objectives of Financial Reporting by Business Enterprises states that:

—Financial reporting should provide information that is useful to present and potential investors and creditors and other users in making rational investment, credit, and similar decisions. The information should be comprehensible to those who have a reasonable understanding of business and economic activities and are willing to study the information with reasonable diligence.

—Financial reporting should provide information to help present and potential investors and creditors and other users in assessing the amounts, timing, and uncertainty of prospective cash receipts from dividends or interest and the proceeds from the sale, redemption, or maturity of securities or loans. Since investors' and creditors' cash flows are related to enterprise cash flows, financial reporting should provide information to help investors, creditors, and others assess the amounts, timing, and uncertainty of prospective net cash inflows to the related enterprise.

—Financial reporting should provide information about the economic resources of an enterprise, the claims to those resources (obligations of the enterprise to transfer resources to other entities and owners' equity), and the effects of transactions, events, and circumstances that change its resources and claims to those resources.

-
32. Further, staff does not believe that comparable financial statements for all affected entities could result from the restatement envisioned by APB 20. Staff does not believe that the changes required by the HS Act are “changes in entity” as defined in APB 20. APB 20 describes a change in entity as “changing specific subsidiaries for which consolidated financial statements are presented.” The APB 20 description does not fit all of the changes required by the HS Act. The HS Act requires concurrent changes within entities that are transferred as well as realignment of entities and operations that are part of a single larger entity both before and after the change.
33. Respondents to the March 21, 2003 exposure draft supported the staff’s assertion that APB 20 is not applicable. Some respondents suggested that the scope of the Technical Bulletin be expanded so that APB 20 would not be applied to any future changes at the federal level. Staff has not incorporated this suggestion but has recommended that the Board consider it when an opportunity to address new issues arises in the future.

Applicability of FAS 144

34. FAS 144 addresses discontinued operations and provides for separate reporting of the results of operations associated with discontinued operations. The standard provides a definition of “component of an entity” (FAS 144, par. 41, see page 17) as well as criteria for determining if the activity of the component has been discontinued (FAS 144, par. 42, see page 17).
35. Under the HS Act, functions may be discontinued at the legacy entity, but not discontinued by the government-as-a-whole. Therefore, the term “transferred” operations should be substituted for “discontinued” operations when appropriate. This will ensure that the reader does not conclude that the government has stopped performing certain functions.¹⁵
36. FAS 144 provides guidance that – in the private sector – results in segregation of critical information directly linked to operations that are either continuing or discontinued. Application of FAS 144 to entities affected by the Homeland Security Act of 2002 will result in:
- a. Legacy and transferred entities providing comparable financial information for continuing operations by separately identifying the net cost of continuing and transferred operations on the face of the Statement of Net Cost for all periods presented; and

¹⁵ “Discontinued operations” may be appropriate in the event that material functions are discontinued.

-
- b. Receiving entities preparing Statements of Net Cost based on the actual operations subsequent to the transfer.
37. This will result in the most useful presentation since it produces a consistent and understandable result across all entities.
38. Respondents to the March 21, 2003 exposure draft supported the staff's assertion that FAS 144 is applicable. Some respondents suggested that the scope of the Technical Bulletin be expanded so that FAS 144 would be applied to any future changes at the federal level. Staff has not incorporated this suggestion but has recommended that the Board consider it when an opportunity to address new issues arises in the future.

Respondents' Request for Guidance on General PP&E Transfers

39. Some respondents asked for specific guidance on the transfer of general property, plant, and equipment (PP&E). The questions posed were:
- a. Should a capitalization threshold be applied to the book value upon transfer?
 - b. Should the acquisition date be adjusted to the transfer date?
 - c. Should the gross book and associated accumulated depreciation be recorded or should the PP&E be booked at "net"?
40. Staff has not incorporated guidance on these questions in this Technical Bulletin. The questions posed are procedural in nature. Staff believes management may determine the most effective procedures to accomplish the initial recognition of the book value of general PP&E and its depreciation during the operating period.

Respondents' Request for Guidance on the Statements of Custodial Activity and Changes in Net Position

41. Some respondents asked whether collections for which the collecting function was transferred should be separately disclosed on the face of or in notes to the Statement of Custodial Activity. Staff has not included in this Technical Bulletin this requirement or expressed a preference for the suggested display. However, staff notes that there is nothing precluding the suggested treatment. Staff did not believe the issue was controversial enough to suggest a proposed resolution.
42. Some respondents suggested that the Statement of Changes in Net Position also should present separate amounts for continuing and transferred (or discontinued) operations. While this proposal may be explored at a future time, staff does not believe it would be appropriate

to impose this requirement through a Technical Bulletin. Technical Bulletins receive minimal due process. Thus, limitations are placed on the types of requirements that may be imposed in a Technical Bulletin.

43. Technical Bulletin 2000-1 provides that staff may pursue an issue through a Technical Bulletin if:
- a. the guidance is not expected to cause a major change in accounting practice. (TB 2000-1, par. 5a)
 - b. the administrative cost involved in implementing the guidance is not expected to be significant to most affected entities. (TB 2000-1, par. 5b)
 - c. the guidance does not conflict with a broad fundamental principle or create a novel accounting practice. (TB 2000-1, par. 5c)
44. In this case, staff elected to rely on practices developed through full due process in other domains by searching GAAP for non-governmental entities for relevant requirements. FAS 144 was found to be the best fit for this circumstance. In relating the FAS 144 guidance to the federal reporting model, staff was mindful that FAS 144 provisions are applicable to revenues, expenses, gains and losses resulting from exchange transactions and related events. Staff found that the elements for which FAS 144 requires segregation aligned with the elements presented on the Statement of Net Cost.
45. Staff does not believe that FAS 144 requirements extend logically to financing sources presented on the Statement of Changes in Net Position. Thus, FAS 144 would not support a requirement that federal entities segregate continuing and transferred/discontinued financing sources.
46. In addition, the federal reporting model requires entities to report net cost by program while reporting financing sources for the entity as a whole. Staff believes that requiring the Statement of Changes in Net Position to present information for a transferred/discontinued “component of an entity” is arguably a major change in practice from aggregated to disaggregated financing information.
47. Therefore, staff believes segregation of the Statement of Changes in Net Position warrants greater due process than that provided through a Technical Bulletin and has not incorporated the respondents’ suggestions in this Technical Bulletin.

Statement of Budgetary Resources

48. As mentioned in par. 44, FAS 144 does not require segregation of information beyond the results of continued and discontinued operations. Since the Statement of Budgetary Resources does not report the results of operations, FAS 144 would not support a requirement that federal entities segregate elements of the Statement of Budgetary Resources between continuing and transferred/discontinued budgetary and reconciling elements. For reasons similar to those provided in paragraphs 42 through 46, staff does not believe this Technical Bulletin should require segregation of the elements of this statement.
49. Staff also notes that the Statement of Budgetary Resources presents information intended to support the “budgetary integrity” reporting objective. This reporting objective provides that “Federal financial reporting should assist in fulfilling the government’s duty to be publicly accountable for monies raised through taxes and other means and for their expenditure in accordance with the appropriations laws that establish the government’s budget for a particular fiscal year and related laws and regulations.”(SFFAC 1, par. 112)
50. Thus, the information presented on the Statement of Budgetary Resources relates to compliance with budgetary provisions including reporting on transfers of budgetary resources associated with the HS Act. It also relates to the current availability of budgetary resources. It is less clear that the Statement of Budgetary Resources is intended to provide information needed to determine whether financing sources will be “continuing.” In addition, SFFAS 7, par. 79 currently requires extensive disclosures relating to legislative actions affecting resources provided to entities. Thus, staff does not believe that immediate changes to the Statement of Budgetary Resources are needed to ensure that federal financial reporting objectives are met.
51. Generally, staff believes that existing guidance in accounting standards, guidance from the Office of Management and Budget regarding the Statement of Budgetary Resources (e.g., OMB Circular A-11 which is referenced by SFFAS 7, par. 78), and other operational guidance will assist in resolving some of the other issues raised by respondents.

Statement of Financing

52. SFFAS 7 indicates that the purpose of the Statement of Financing is:

.. to explain how budgetary resources obligated during the period relate to the net cost of operations for that reporting entity. This information should be presented in a way that clarifies the relationship between the obligation basis of budgetary accounting and the accrual basis of financial (i.e., proprietary) accounting. By explaining this relationship through a reconciliation, the statement provides information necessary to understand how

the budgetary (and some nonbudgetary) resources finance the cost of operations and affect the assets and liabilities of the reporting entity. (SFFAS 7, par. 95)

53. Staff does not believe that SFFAS 7 envisioned explanations of these relationships in greater detail than the “reporting entity” level. To impose a greater disaggregation would, in staff’s opinion, require greater due process than afforded for a Technical Bulletin.

Unique Federal Guidance Sought by Some Respondents

54. Some respondents agreed that the result of applying FAS 144 was desirable but asserted that standards tailored to the unique federal environment and reporting model should be developed. Staff believes this Technical Bulletin provides important guidance in response to an immediate need. Given the limited due process associated with Technical Bulletins, staff believes that – in this case – it was appropriate to rely on non-federal accounting standards to support a solution that fits the circumstances and meets federal reporting objectives.

Effective Date

55. The effective date of this Technical Bulletin -- for reporting periods beginning after September 30, 2002 -- is necessary due to the timing of the HS Act. Staff does not routinely issue pronouncements that are effective in the period issued but must do so in this case to provide timely guidance.

Appendix B: Accounting Principles Board Opinion 20

Excerpt From FASB's Original Pronouncements

Changes in Accounting Principles
Change in Reporting Entity

APB20

12. One special type of change in accounting principle results in financial statements which, in effect, are those of a different reporting entity. This type is limited mainly to (a) presenting consolidated or combined statements in place of statements of individual companies, (b) changing specific subsidiaries comprising the group of companies for which consolidated financial statements are presented, and (c) changing the companies included in combined financial statements. A different group of companies comprise the reporting entity after each change.
35. Disclosure. The financial statements of the period of a change in the reporting entity should describe the nature of the change and the reason for it. In addition, the effect of the change on income before extraordinary items, net income, and related per share amounts should be disclosed for all periods presented. Financial statements of subsequent periods need not repeat the disclosures. (Paragraphs 56 to 65 and 93 to 96 of APB Opinion No. 16, Business Combinations, describe the manner of reporting and the disclosures required for a change in reporting entity that occurs because of a business combination.)

Appendix C: Excerpt From Financial Accounting Standard 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*

FAS144

41. For purposes of this Statement, a component of an entity comprises operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity. A component of an entity may be a reportable segment or an operating segment (as those terms are defined in paragraph 10 of Statement 131), a reporting unit (as that term is defined in Statement 142), a subsidiary, or an asset group (as that term is defined in paragraph 4).
42. The results of operations of a component of an entity that either has been disposed of or is classified as held for sale shall be reported in discontinued operations in accordance with paragraph 43 if both of the following conditions are met: (a) the operations and cash flows of the component have been (or will be) eliminated from the ongoing operations of the entity as a result of the disposal transaction and (b) the entity will not have any significant continuing involvement in the operations of the component after the disposal transaction. (Examples 12-15 of Appendix A illustrate disposal activities that do or do not qualify for reporting as discontinued operations.)
43. In a period in which a component of an entity either has been disposed of or is classified as held for sale, the income statement of a business enterprise (or statement of activities of a not-for-profit organization) for current and prior periods shall report the results of operations of the component, **including any gain or loss recognized in accordance with paragraph 37** [emphasis added], in discontinued operations. The results of operations of a component classified as held for sale shall be reported in discontinued operations in the period(s) in which they occur. The results of discontinued operations, less applicable income taxes (benefit), shall be reported as a separate component of income before extraordinary items and the cumulative effect of accounting changes (if applicable). For example, the results of discontinued operations may be reported in the income statement of a business enterprise as follows:

Income from continuing operations before income taxes		\$XXXX
Income taxes		XXX
Income from continuing operations ²⁴		\$XXXX
Discontinued operations (Note X)		
Loss from operations of discontinued Component X (including loss on disposal of \$XXX)	XXXX	
Income tax benefit	XXXX	
Loss on discontinued operations	XXXX	
Net income		\$XXXX

²⁴This caption shall be modified appropriately when an entity reports an extraordinary item or the cumulative effect of a change in accounting principle or both in accordance with Opinion 20. If applicable, the presentation of per-share data will need similar modification.

A gain or loss recognized on the disposal shall be disclosed either on the face of the income statement or in the notes to the financial statements (paragraph 47(b)).

44. Adjustments to amounts previously reported in discontinued operations that are directly related to the disposal of a component of an entity in a prior period shall be classified separately in the current period in discontinued operations. The nature and amount of such adjustments shall be disclosed. Examples of circumstances in which those types of adjustments may arise include the following:
- The resolution of contingencies that arise pursuant to the terms of the disposal transaction, such as the resolution of purchase price adjustments and indemnification issues with the purchaser
 - The resolution of contingencies that arise from and that are directly related to the operations of the component prior to its disposal, such as environmental and product warranty obligations retained by the seller
 - The settlement of employee benefit plan obligations (pension, postemployment benefits other than pensions, and other postemployment benefits), provided that the settlement is directly related to the disposal transaction.²⁵

²⁵Paragraph 3 of FASB Statement No. 88, Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits, defines settlement as "a transaction that (a) is an irrevocable action, (b) relieves the employer (or the plan) of primary responsibility for a pension benefit obligation, and (c) eliminates significant risks related to the obligations and the assets used to effect the settlement." A settlement is directly related to the disposal transaction if there is a demonstrated direct cause and effect relationship and the settlement occurs no later than one year following the disposal transaction, unless it is delayed by events or circumstances beyond an entity's control (refer to paragraph 31).

Reporting Disposal Gains or Losses in Continuing Operations

45. A gain or loss recognized for a long-lived asset (disposal group) classified as held for sale that is not a component of an entity shall be included in income from continuing operations before income taxes in the income statement of a business enterprise and in income from continuing operations in the statement of activities of a not-for-profit organization. If a subtotal such as "income from operations" is presented, it shall include the amounts of those gains or losses.

Reporting a Long-Lived Asset or Disposal Group Classified as Held for Sale

46. A long-lived asset classified as held for sale shall be presented separately in the statement of financial position. The assets and liabilities of a disposal group classified as held for sale shall be presented separately in the asset and liability sections, respectively, of the statement of financial position. Those assets and liabilities shall not be offset and presented as a single amount. The major classes of assets and liabilities classified as held for sale shall be separately disclosed either on the face of the statement of financial position or in the notes to financial statements (paragraph 47(a)).

Disclosure

47. The following information shall be disclosed in the notes to the financial statements that cover the period in which a long-lived asset (disposal group) either has been sold or is classified as held for sale:
- a. A description of the facts and circumstances leading to the expected disposal, the expected manner and timing of that disposal, and, if not separately presented on the face of the statement, the carrying amount(s) of the major classes of assets and liabilities included as part of a disposal group
 - b. The gain or loss recognized in accordance with paragraph 37 and if not separately presented on the face of the income statement, the caption in the income statement or the statement of activities that includes that gain or loss
 - c. If applicable, amounts of revenue and pretax profit or loss reported in discontinued operations
 - d. If applicable, the segment in which the long-lived asset (disposal group) is reported under Statement 131.
48. If either paragraph 38 or paragraph 40 applies, a description of the facts and circumstances leading to the decision to change the plan to sell the long-lived asset (disposal group) and

its effect on the results of operations for the period and any prior periods presented shall be disclosed in the notes to financial statements that include the period of that decision.

Examples 12–15—Reporting Discontinued Operations

A24. The results of operations of a component of an entity that either has been disposed of or is classified as held for sale shall be reported in discontinued operations if (a) the operations and cash flows of the component have been (or will be) eliminated from the ongoing operations of the entity as a result of the disposal transaction and (b) the entity will not have any significant continuing involvement in the operations of the component after the disposal transaction (paragraph 42). Examples 12–15 illustrate disposal activities that do or do not qualify for reporting as discontinued operations.

Example 12

A25. An entity that manufactures and sells consumer products has several product groups, each with different product lines and brands. For that entity, a product group is the lowest level at which the operations and cash flows can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity. Therefore, each product group is a component of the entity.

A26. The entity has experienced losses associated with certain brands in its beauty care products group.

- a. The entity decides to exit the beauty care business and commits to a plan to sell the product group with its operations. The product group is classified as held for sale at that date. The operations and cash flows of the product group will be eliminated from the ongoing operations of the entity as a result of the sale transaction, and the entity will not have any continuing involvement in the operations of the product group after it is sold. In that situation, the conditions in paragraph 42 for reporting in discontinued operations the operations of the product group while it is classified as held for sale would be met.
- b. The entity decides to remain in the beauty care business but will discontinue the brands with which the losses are associated. Because the brands are part of a larger cash-flow-generating product group and, in the aggregate, do not represent a group that on its own is a component of the entity, the conditions in paragraph 42 for reporting in discontinued operations the losses associated with the brands that are discontinued would not be met.

Example 13

A27. An entity that is a franchiser in the quick-service restaurant business also operates company-owned restaurants. For that entity, an individual company-owned restaurant is the lowest level at which the operations and cash flows can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity. Therefore, each company-owned restaurant is a component of the entity.

- a. The entity has experienced losses on its company-owned restaurants in one region. The entity decides to exit the quick-service restaurant business in that region and commits to a plan to sell the restaurants in that region. The restaurants are classified as held for sale at that date. The operations and cash flows of the restaurants in that region will be eliminated from the ongoing operations of the entity as a result of the sale transaction, and the entity will not have any continuing involvement in the operations of the restaurants after they are sold. In that situation, the conditions in paragraph 42 for reporting in discontinued operations the operations of the restaurants while they are classified as held for sale would be met.
- b. Based on its evaluation of the ownership mix of its system-wide restaurants in certain markets, the entity commits to a plan to sell its company-owned restaurants in one region to an existing franchisee. The restaurants are classified as held for sale at that date. Although each company-owned restaurant, on its own, is a component of the entity, through the franchise agreement, the entity will (1) receive franchise fees determined, in part, based on the future revenues of the restaurants and (2) have significant continuing involvement in the operations of the restaurants after they are sold. In that situation, the conditions in paragraph 42 for reporting in discontinued operations the operations of the restaurants would not be met.

Example 14

A28. An entity that manufactures sporting goods has a bicycle division that designs, manufactures, markets, and distributes bicycles. For that entity, the bicycle division is the lowest level at which the operations and cash flows can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity. Therefore, the bicycle division is a component of the entity.

A29. The entity has experienced losses in its bicycle division resulting from an increase in manufacturing costs (principally labor costs).

- a. The entity decides to exit the bicycle business and commits to a plan to sell the division with its operations. The bicycle division is classified as held for sale at that date. The operations and cash flows of the division will be eliminated from the ongoing operations

of the entity as a result of the sale transaction, and the entity will not have any continuing involvement in the operations of the division after it is sold. In that situation, the conditions in paragraph 42 for reporting in discontinued operations the operations of the division while it is classified as held for sale would be met.

- b. The entity decides to remain in the bicycle business but will outsource the manufacturing operations and commits to a plan to sell the related manufacturing facility. The facility is classified as held for sale at that date. Because the manufacturing facility is part of a larger cash-flow-generating group (the bicycle division), and on its own is not a component of the entity, the conditions in paragraph 42 for reporting in discontinued operations the operations (losses) of the manufacturing facility would not be met. (Those conditions also would not be met if the manufacturing facility on its own was a component of the entity because the decision to outsource the manufacturing operations of the division will not eliminate the operations and cash flows of the division [and its bicycle business] from the ongoing operations of the entity.)

Example 15

- A30. An entity owns and operates retail stores that sell household goods. For that entity, each store is the lowest level at which the operations and cash flows can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity. Therefore, each store is a component of the entity.
- A31. To expand its retail store operations in one region, the entity decides to close two of its retail stores and open a new “superstore” in that region. The new superstore will continue to sell the household goods previously sold through the two retail stores as well as other related products not previously sold. Although each retail store on its own is a component of the entity, the operations and cash flows from the sale of household goods previously sold through the two retail stores in that region will not be eliminated from the ongoing operations of the entity. In that situation, the conditions in paragraph 42 for reporting in discontinued operations the operations of the stores would not be met.

Technical Bulletin 2006-1: Recognition and Measurement of Asbestos-Related Cleanup Costs

Status

Issued	September 28, 2006
Effective Date	For fiscal periods beginning after September 30, 2012
Affects	None.
Affected by	Technical Bulletin 2009-1, par. 2 and Technical Bulletin 2011-2, par. 2, amended the effective date in par. 50.

Summary

- I. This technical bulletin clarifies the required reporting of liabilities and related expenses arising from asbestos-related cleanup costs. Standards issued by FASAB have precedence over other authoritative guidance for federal entities. This technical bulletin supplements any relevant federal standards, but is not a substitute for and does not take precedence over standards and interpretations issued by FASAB.
- II. Prior to this technical bulletin, most federal entities had recognized liabilities for the removal of asbestos that posed an immediate health threat (i.e., friable asbestos), but many federal entities had not prepared an estimate of cleanup costs for the future removal of asbestos that did not pose an immediate health threat (i.e., nonfriable asbestos). Therefore, it was determined that additional guidance was needed to clarify that entities need to estimate all asbestos-related cleanup costs and not just those costs related to asbestos that requires immediate cleanup.
- III. The primary effects of this technical bulletin are that:
 - a. Federal entities will (1) estimate both friable and nonfriable asbestos-related cleanup costs and (2) recognize a liability and related expense for those costs that are both probable and reasonably estimable, consistent with the current guidance in Statement of Federal Financial Accounting Standards (SFFAS) 5, *Accounting for Liabilities of the Federal Government*; SFFAS 6, *Accounting for Property, Plant, and Equipment*, Chapter 4: Cleanup Costs; and Technical Release (TR) 2, *Determining Probable and Reasonably Estimable for Environmental Liabilities in the Federal Government*.
 - b. Federal entities will disclose information related to friable and nonfriable asbestos-related cleanup costs that are probable but not reasonably estimable in a note to the financial statements, consistent with SFFAS 5, SFFAS 6, and TR 2.

SFFAC	Statement of Federal Financial Accounting Concepts
SFFAS	Statement of Federal Financial Accounting Standards
TR	Technical Release

Introduction

1. The purpose of this technical bulletin is to clarify the responsibility of all federal entities to report liabilities and related expenses arising from asbestos-related cleanup costs. This technical bulletin clarifies and elaborates on, but does not change, guidance previously provided in Statement of Federal Financial Accounting Standards (SFFAS) 5, *Accounting for Liabilities of the Federal Government*; SFFAS 6, *Accounting for Property, Plant, and Equipment*, Chapter 4: Cleanup Costs; and Technical Release (TR) 2, *Determining Probable and Reasonably Estimable for Environmental Liabilities in the Federal Government*.

Technical Guidance

Scope

- 2. What entities are affected by this technical bulletin?**
3. This guidance affects all federal entities that own buildings, facilities, ships, or other tangible property, plant, and equipment (PP&E) that contain any form of asbestos.
- 4. What accounting practices are addressed in this technical bulletin?**
5. This guidance clarifies the responsibility of all federal entities to report liabilities and expenses for asbestos-related cleanup costs and to disclose related information in the notes. Asbestos-related cleanup costs include cleanup costs related to both friable and nonfriable asbestos-containing material.
- 6. What is excluded from this technical bulletin?**
7. This guidance regarding asbestos-related cleanup costs does not include naturally occurring asbestos (NOA) that can be found in soil, rocks and mines. NOA is contained in land, and land is considered to have an indefinite useful life. Therefore, NOA would appropriately be accounted for under the requirements of SFFAS 5.
8. This guidance does not pertain to contaminants or asset retirement obligations other than asbestos.

Background

9. What is asbestos?

10. Asbestos is a widely used, mineral-based material that is resistant to heat and corrosive chemicals (see sample list of asbestos-containing materials at Appendix C: Asbestos-Containing Materials). Typically, commercial asbestos appears as a whitish, fibrous material which may release fibers that range in texture from coarse to silky; however, airborne fibers that can cause health damage may be too small to see with the naked eye.
11. Section 112 of the Clean Air Act (CAA) requires the U. S. Environmental Protection Agency (EPA) to develop and enforce regulations to protect the general public from exposure to airborne contaminants that are known to be hazardous to human health. Asbestos was one of the first hazardous air pollutants regulated under Section 112. On March 31, 1971, EPA identified asbestos as a hazardous pollutant, and on April 6, 1973, EPA first promulgated the Asbestos National Emissions Standards for Hazardous Air Pollutants (NESHAP) in 40 CFR Part 61. The purpose of the asbestos NESHAP is to protect the public from asbestos emissions from certain sources.
12. Under the asbestos NESHAP, asbestos is categorized as either friable (any material containing more than 1 percent asbestos that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure) or nonfriable (any material containing more than 1 percent asbestos that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure). Friable asbestos poses more of an immediate health risk than nonfriable, but both forms must be properly contained and disposed of during repair, renovation, demolition, or other disturbance of the property. The terms friable and nonfriable are further defined in Appendix D: Definitions. From this point on in the document, the term asbestos or asbestos-containing materials will refer to both friable and nonfriable unless stated otherwise.
13. Exposure to asbestos can cause asbestosis (scarring of the lungs resulting in loss of lung function that often progresses to disability and to death); mesothelioma (cancer affecting the membranes lining the lungs and abdomen); lung cancer; and cancers of the esophagus, stomach, colon, and rectum.

14. What are cleanup costs?

15. Cleanup costs are the costs of removing, containing, and/or disposing of (1) hazardous waste from property, or (2) material and/or property that consists of hazardous waste at permanent or temporary closure or shutdown of associated PP&E. (SFFAS 6, par. 85)

-
16. Hazardous waste is a solid, liquid, or gaseous waste, or combination of these wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may cause or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness or pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, disposed of, or otherwise managed. (SFFAS 6, par. 86)
 17. Cleanup may include, but is not limited to, decontamination, decommissioning, site restoration, site monitoring, closure, and postclosure costs. (SFFAS 6, par. 87)

18. What are asbestos-related cleanup costs?

19. Asbestos-related cleanup costs are the costs of removing, containing, and/or disposing of (1) asbestos-containing materials from property, or (2) material and/or property that consists of asbestos-containing material at permanent or temporary closure or shutdown of associated PP&E.¹
20. While the term “hazardous waste” used in SFFAS 6, Chapter 4, par. 86 was informed by consulting environmental laws such as the Resource Conservation Recovery Act (RCRA), the general use of the term in federal accounting standards should not be construed as limiting the application of the standards solely to those materials meeting the definition of “hazardous waste” under RCRA. While asbestos is not explicitly listed as “hazardous waste” under RCRA, asbestos is listed as a hazardous air pollutant under the CAA and as a hazardous substance under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). Therefore, the term “hazardous waste” as defined in SFFAS 6 and referenced in paragraph 16 of this technical bulletin includes asbestos for purposes of proper accounting treatment.

21. Why is this guidance being issued?

22. In March 2006, representatives from two CFO Act agencies informed FASAB staff that their independent public accountant (IPA) indicated that the agencies needed to reconsider their accounting for nonfriable asbestos for fiscal year 2006. The agencies noted that they had recognized an estimated liability for removal of asbestos posing an immediate health threat (i.e., friable), but had not prepared an estimate for the future removal of asbestos that does not pose an immediate health threat (i.e., nonfriable). The issue arose as a result of the Financial Accounting Standards Board’s (FASB) issuance of FASB Interpretation No. 47, *Accounting for Conditional Asset Retirement Obligations* (FIN 47) in March 2005. Prior to

¹ Temporary closure or shutdown would also include the scheduled closure or shutdown of PP&E in order to conduct cleanup activities.

FIN 47, organizations following FASB standards did not consistently recognize liabilities for nonfriable asbestos. The agencies cited this inconsistency as well as the inconsistency among all federal agencies as the basis for not recognizing liabilities for nonfriable asbestos.

23. FIN 47 clarifies that the term conditional asset retirement obligation as used in FASB Statement No. 143, *Accounting for Asset Retirement Obligations*, refers to a legal obligation to perform an asset retirement activity in which the timing and (or) method of settlement are conditional on a future event that may or may not be within the control of the entity. FIN 47 provides that the obligation to perform the asset retirement activity is unconditional even though uncertainty exists about the timing and (or) method of settlement. Accordingly, FIN 47 requires that an entity recognize a liability for the fair value of a conditional asset retirement obligation if the fair value of the liability can be reasonably estimated.
24. The issuance of FIN 47 prompted the agencies' IPA to revisit the guidance in SFFAS 5; SFFAS 6, Chapter 4: Cleanup Costs; and TR 2. FASAB staff conducted a conference call with several of the IPA's representatives, during which time the IPA's representatives communicated their concern that, under existing guidance in SFFAS 5, SFFAS 6, and TR 2, federal entities are not consistently reporting liabilities for asbestos-related cleanup costs.

Federal Entities Should Estimate Asbestos-Related Cleanup Costs and Recognize a Liability and Related Expense for those Costs that are Probable and Reasonably Estimable

General PP&E

Cleanup Cost Estimates

25. Should federal entities estimate asbestos-related cleanup costs?

26. Yes, federal entities should continue to follow the guidance contained in SFFAS 5, SFFAS 6, and TR 2 related to estimating obligations² for cleanup costs. Asbestos-related cleanup costs, as defined in paragraph 19, shall be estimated when the associated PP&E is placed

² The term obligation is used in this bulletin with its general meaning of a duty or responsibility to act in a certain way. It does not mean that an obligation of budgetary resources is required for a liability to exist in accounting or financial reporting or that a liability in accounting or financial reporting is required to exist for budgetary resources to be obligated.

in service. The estimate shall be included as part of the “estimated total cleanup cost.” (SFFAS 6 par. 94)

27. The estimate shall contemplate: (a) the cleanup plan, including level of restoration to be performed, current legal or regulatory requirements,³ and current technology; and (b) current cost which is the amount that would be paid if all equipment, facilities, and services included in the estimate were acquired during the current period. (SFFAS 6 par. 95)
28. Estimates shall be revised periodically to account for material changes due to inflation or deflation and changes in regulations, plans and/or technology. New cost estimates should be provided if there is evidence that material changes have occurred; otherwise estimates may be revised through indexing. (SFFAS 6 par. 96)
29. **Are there any costs that may be excluded from the estimate of asbestos-related cleanup costs?**
30. Yes, it is possible for certain types of nonfriable asbestos-containing material to remain nonfriable indefinitely; therefore, the estimate does not need to include nonfriable asbestos-containing roofing, flooring, siding, and other materials that when repaired, renovated, removed, contained, disposed of, or otherwise disturbed do not become friable and do not require additional costs above and beyond normal repair, renovation, removal, containment, or disposal costs to prevent them from becoming friable. However, if there are additional costs incurred to prevent the nonfriable asbestos-containing material from becoming friable or if it could potentially become friable as part of the repair, renovation, removal, containment, or disposal process, such costs should be included in the estimate of asbestos-related cleanup costs.

Liabilities

31. Should federal entities recognize a liability for asbestos-related cleanup costs?

32. Yes, federal entities should recognize a liability for asbestos-related cleanup costs if the liability is deemed to be both probable⁴ and reasonably estimable. If the item is deemed to be probable, but not reasonably estimable, it should be disclosed in the notes to the financial statements, consistent with SFFAS 5, SFFAS 6, and TR 2.

³ Laws and regulations approved as of the balance sheet date, regardless of the effective date of those laws and regulations, shall be considered.

⁴ Per SFFAS 5, par. 33, probable is defined as “that which can reasonably be expected or is believed to be more likely than not on the basis of available evidence or logic.”

-
33. For assets placed in service after implementation of this technical bulletin, accumulation of the liability shall begin on the date that the PP&E is placed into service, continue in each period that operation continues, and be completed when the PP&E ceases operation [either permanently or temporarily]. (SFFAS 6 par. 98)
34. As reestimates are made, the cumulative effect of changes in total estimated asbestos-related cleanup costs related to current and past operations shall be recognized as expense and the liability adjusted in the period of the change in estimate (SFFAS 6 par. 99). In certain scenarios, such as when cleanup costs have been fully expensed, the reestimate may result in a credit to expense for that year.
35. As asbestos-related cleanup costs are paid, payments shall be recognized as a reduction in the liability for asbestos-related cleanup costs. These include the cost of PP&E or other assets acquired for use in cleanup activities. (SFFAS 6 par. 100)

Expenses

- 36. Should federal entities recognize the related expenses for asbestos-related cleanup costs?**
37. Yes, a portion of estimated total asbestos-related cleanup costs shall be recognized as expense during each period that general PP&E is in operation. This shall be accomplished in a systematic and rational manner based on use of the physical capacity of the associated PP&E whenever possible. If physical capacity is not applicable or estimable, the estimated useful life of the associated PP&E may serve as the basis for systematic and rational recognition of expense and accumulation of the liability. (SFFAS 6 par. 97)
38. For assets placed in service after the effective date of this technical bulletin, recognition of the expense shall begin on the date that the PP&E is placed into service, continue in each period that operation continues, and be completed when the PP&E ceases operation [either permanently or temporarily]. (SFFAS 6 par. 98)
- 39. Are federal entities required to account for liabilities related to general PP&E that are already in service at the date of implementation of this technical bulletin in the same manner as assets placed in service after implementation of this technical bulletin?**
40. No, two implementation approaches have been provided for liabilities related to general PP&E that are already in service at the date of implementation of this technical bulletin: (1) A liability shall be recognized for the portion of the estimated total cleanup cost that is attributable to that portion of the physical capacity used or that portion of the estimated useful life that has passed since the PP&E was placed in service. The remaining cost shall be recognized in a systematic and rational manner based on use of the physical capacity of

the associated PP&E, whenever possible. (2) In situations where the related PP&E has been in service for a substantial portion of its estimated useful life, management may instead elect to recognize the estimated total cleanup cost as a liability upon implementation of this technical bulletin (this approach may only be used if costs are not intended to be recovered primarily through user charges). (SFFAS 6 pars. 104 and 97)

41. The offsetting charge for any liability for asbestos-related cleanup costs related to general PP&E in service at the date of implementation shall be made to net position of the entity. The amount of the adjustment shall be shown as a “change in accounting principle” in any statement of changes in net position that may be required. (SFFAS 6 par. 105 and SFFAS 21, *Reporting Correction of Errors and Changes in Accounting Principles, Amendment of SFFAS 7, Accounting for Revenue and Other Financing Sources*, pars. 12-13)

Stewardship PP&E (Heritage Assets and Stewardship Land)

42. How should federal entities report asbestos-related cleanup costs related to stewardship PP&E (Heritage Assets and Stewardship Land)?

43. Consistent with the treatment of the acquisition cost of stewardship PP&E (i.e., expensing in the period placed in service), the total estimated asbestos-related cleanup costs shall be recognized as expense in the period that the stewardship asset is placed in service and a liability established. (SFFAS 6 par. 101)
44. The liability shall be adjusted when the estimated total asbestos-related cleanup costs are reestimated. Adjustments to the liability shall be recognized in expense as part of “changes in estimated cleanup costs from prior periods.” (SFFAS 6 par. 102) In certain scenarios, such as when cleanup costs have been fully expensed, the reestimate may result in a credit to expense for that year.
45. As asbestos-related cleanup costs are paid, payments shall be recognized as a reduction in the liability for asbestos-related cleanup costs. These include the cost of PP&E or other assets acquired for use in cleanup activities. (SFFAS 6 par. 103)
46. For stewardship PP&E that are in service at the date of implementation of this technical bulletin, the liability for asbestos-related cleanup costs shall be recognized and an adjustment made to the net position of the entity. The amount of the adjustment shall be shown as a “change in accounting principle” in any statement of changes in net position that may be required. The amounts involved shall be disclosed. (SFFAS 6 par. 106 and SFFAS 21 pars. 12-13)

Note Disclosures

47. With regard to asbestos-related cleanup costs, what should federal entities disclose in the notes to the financial statements?

48. Entities should disclose the following:

- a. The sources (applicable laws and regulations) of asbestos-related cleanup requirements. The U.S. government-wide financial statements need not disclose the sources of cleanup requirements. (SFFAS 6 par. 107 and SFFAS 32, *Consolidated Financial Report of the United States Government Requirements: Implementing Statement of Federal Financial Accounting Concepts 4 "Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government,"* par. 12d)
- b. The method for assigning estimated total asbestos-related cleanup costs to current operating periods (e.g., physical capacity versus passage of time). The U.S. government-wide financial statements need not disclose the method for assigning estimated cleanup costs to current operating periods. (SFFAS 6 par. 108 and SFFAS 32 par. 12e)
- c. For asbestos-related cleanup costs associated with general PP&E, the unrecognized portion of estimated total asbestos-related cleanup costs (i.e., the estimated total asbestos-related cleanup costs less the cumulative amounts charged to expense at the balance sheet date). SFFAS 32 provides for disclosure requirements for the U.S. government-wide financial statements regarding the unrecognized portion of estimated total cleanup cost associated with general PP&E. (SFFAS 6 par. 109 and SFFAS 32 pars. 12f and 25)
- d. Material changes in total estimated asbestos-related cleanup costs due to changes in laws, technology, or plans shall be disclosed. In addition, the portion of the change in estimate that relates to prior period operations shall be disclosed. The U.S. government-wide financial statements need not disclose material changes in total estimated cleanup costs due to changes in laws, technology, plans, or the portion of the change in estimate that relates to prior period operations. (SFFAS 6 par. 110 and SFFAS 32 par. 12g)
- e. The nature of estimates and the disclosure of information regarding possible changes due to inflation, deflation, technology, or applicable laws and regulations. The U.S. government-wide financial statements need not disclose the nature of estimates and information regarding possible changes due to inflation, deflation, technology, or applicable laws and regulations. (SFFAS 6 par. 111 and SFFAS 32 par. 12h)

-
49. For asbestos-related cleanup costs that are deemed to be probable but not reasonably estimable, the entity should disclose the presence of asbestos in its facilities and the inability to reasonably estimate an amount of the total cleanup costs.⁵ SFFAS 32, par. 25, provides for disclosure requirements related to cleanup costs for the U.S. government-wide financial statements.

Effective Date

50. This technical bulletin is effective for reporting periods beginning after September 30, 2012. Earlier adoption is encouraged.

The provisions of this Technical Bulletin need not be applied to immaterial items.
--

⁵ For example, asbestos may be contained within walls, flooring, or roofing and is inaccessible without destroying or weakening the existing structure or disturbing the asbestos, which would be undesirable. Without experience with a similar site and/or conditions, it may not be possible for the entity to reasonably estimate the cost to remove and dispose of the asbestos contained therein.

Appendix A: Basis for Conclusions

The Federal Accounting Standards Advisory Board has authorized its staff to prepare FASAB technical bulletins to provide timely guidance on certain financial accounting and reporting problems, in accordance with the Board's rules of procedure, as amended and restated through December 2003, and the procedures described in FASAB Technical Bulletin 2000-1, "*Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance*." The provisions of technical bulletins need not be applied to immaterial items.

This appendix discusses some factors considered significant by staff in reaching the conclusions in this technical bulletin. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the technical guidance section – not the material in this appendix – should govern the accounting for specific transactions, events or conditions.

- A1. In March 2006, a representative from one of the CFO Act agencies informed FASAB staff that its IPA requested that the agency reconsider its accounting for nonfriable asbestos-related cleanup costs for fiscal year 2006. The agency contacted FASAB due to the extensive work that would be required to estimate its liability for nonfriable asbestos-related cleanup costs and the implications for other federal agencies. The agency estimates that it has approximately 3,300 – 6,000 facilities that contain nonfriable asbestos that are not already included as part of its material environmental disposal liability calculation.
- A2. FASAB staff was also contacted by a second CFO Act agency regarding the same issue. This second agency, which utilizes the same IPA as the first agency, stated that it was planning to prepare an estimate of its fiscal year 2006 asbestos liability for both friable and nonfriable asbestos-related cleanup costs absent guidance from the FASAB to the contrary.
- A3. FASAB staff contacted the IPA directly and spoke with its representatives about the rationale for requesting the agencies to estimate a liability for nonfriable asbestos-related cleanup costs. The IPA representatives stated that the agencies had previously cited the inconsistency in reporting of these liabilities by federal entities and organizations that followed FASB standards as the basis for not recognizing a liability for nonfriable asbestos-related cleanup costs. The IPA representatives also stated that the issuance of FASB Interpretation No. 47, *Accounting for Conditional Asset Retirement Obligations* (FIN 47), prompted it to revisit this obligation that federal entities have for future cleanup of asbestos because FIN 47 eliminated some of the inconsistency that the agencies had cited and required entities that follow FASB standards to recognize a liability for nonfriable asbestos.

In addition, the IPA representatives questioned whether existing FASAB pronouncements⁶ would already require that both friable and nonfriable costs be recognized in the financial statements. The IPA representatives also stated that they believe there is a divergence in practice across the federal government, with some agencies reporting a liability for both friable and nonfriable asbestos-related cleanup costs in past years, while others have recognized only liabilities for friable cleanup costs.

- A4. The agencies and the IPA representatives requested that the FASAB reconfirm existing guidance or issue new guidance on whether federal entities are required to recognize a liability for future cleanup of nonfriable asbestos.
- A5. FIN 47, which was issued in March 2005, clarifies that the term conditional asset retirement obligation as used in FASB Statement No. 143, *Accounting for Asset Retirement Obligations*, refers to a legal obligation to perform an asset retirement activity in which the timing and (or) method of settlement are conditional on a future event that may or may not be within the control of the entity. FIN 47 states that the obligation to perform the asset retirement activity is unconditional even though uncertainty exists about the timing and (or) method of settlement. Accordingly, FIN 47 requires that an entity recognize a liability for the fair value of a conditional asset retirement obligation if the fair value of the liability can be reasonably estimated.
- A6. FIN 47 states that “uncertainty about whether performance will be required does not defer the recognition of an asset retirement obligation because a legal obligation to stand ready to perform the retirement activities still exists, and it does not prevent the determination of a reasonable estimate of fair value because the only uncertainty is whether performance will be required.”⁷ Application of FIN 47 clarifies that performance need not be probable and, therefore, may result in the recognition of more asset retirement obligations than if the determination were based on probability of performance. FIN 47 is effective no later than the end of the fiscal year ending after December 15, 2005.
- A7. FIN 47, Appendix A, examples 3 and 4, contain specific examples that apply to cleanup of asbestos. Whether the facilities were acquired before or after the environmental regulations were put into place, the underlying requirement is the same. With regard to asbestos, Appendix A of FIN 47, states “Although the timing of the performance of the asset retirement activity is conditional on the factory undergoing major renovations or being demolished, existing regulations create a duty or responsibility for the entity to remove and dispose of

⁶SFFAS 5, SFFAS 6, and TR 2

⁷FIN 47, par. 5a.

asbestos in a special manner, and the obligating event occurs when the regulations are put in place [or the entity acquires the factory].” FIN 47 specifically states, “Although the entity may decide to abandon the factory and thereby defer settlement of the obligation for the foreseeable future, the ability to defer settlement does not relieve the entity of the obligation. The asbestos will eventually need to be removed and disposed of in a special manner, because no building will last forever.”

- A8. Accounting for cleanup costs is specifically addressed in SFFAS 6, Chapter 4, as well as TR 2. The standards for cleanup costs in SFFAS 6 supplement the accounting requirements for liabilities in SFFAS 5, which requires that liabilities shall be recognized when three conditions are met: a past transaction has occurred, a future outflow or other sacrifice of resources is probable, and the future outflow or sacrifice of resources is measurable. SFFAS 6, Chapter 4, requires that cleanup costs be estimated and charged to expense during each period that general property, plant, and equipment is in operation. TR 2 is intended to assist federal entities in determining probable and reasonably estimable liabilities related to their environmental cleanup responsibilities.
- A9. SFFAS 6 addresses cleanup costs from federal operations known to result in hazardous waste. SFFAS 6 provides guidance when cleanup occurs at the end of the useful life of the PP&E or at regular intervals (scheduled phase cleanup) during that life. SFFAS 5 applies to all environmental liabilities not specifically covered in SFFAS 6, including cleanup resulting from accidents or where cleanup is an ongoing part of operations. TR 2 offers guidance on determining probable and reasonably estimable for environmental liabilities. The estimation of a liability for asbestos-related cleanup costs is not explicitly addressed by SFFAS 5, SFFAS 6, or TR 2, but staff believes it is covered under the requirements of these pronouncements.
- A10. One key notion contained in FIN 47 that is not stated as explicitly in either SFFAS 6 or TR 2 is the notion that “no building will last forever”; it would be hard to support a claim that the federal government will be able to maintain a building forever without having to eventually cleanup the asbestos contained therein. The federal government is subject to the same laws and regulations regarding control and abatement of air pollution as nongovernmental entities.⁸ Therefore, if one were to agree that the notion of probability of settlement applies to infinity rather than the foreseeable future, it is probable (more likely than not) that the federal government will be required to meet any legal obligations at some point in the future for the cleanup of asbestos in all of its facilities, whether they are sold, renovated, or demolished or collapse. Based on SFFAS 5 and 6 and TR 2, the question then becomes whether the federal liability for cleanup of asbestos is reasonably estimable.

⁸ Toxic Substances Control Act (15 USC 2619) and Clean Air Act (42 USC 7418)

- A11. TR 2, Section 2, provides guidance on determining “reasonably estimable” environmental liabilities. This guidance recommends completion of a remedial investigation/feasibility study upon which to base an estimate and/or experience with similar site and/or conditions. Estimated costs should be based on the cleanup plan, assuming current technology and current cost. These costs can include the costs to remove, contain, and/or dispose of the hazardous waste requiring cleanup. The SFFAS 5 measurement attribute – settlement cost (best represented by the current cost to cleanup) – differs significantly from the FIN 47 measurement attribute – fair value. Fair value incorporates the effects of uncertainty. Staff believes that settlement cost is more difficult to measure since it does not allow for different outcomes, each of which may be just as likely as the others.
- A12. In the case of estimating asbestos-related cleanup costs in federal facilities, consideration needs to be given to the reasonable availability of relevant and reliable data upon which to base an estimate, the needs of the report users, the objective of reporting such information, and the materiality involved.
- A13. As noted in paragraph 5, asbestos-related cleanup costs includes cleanup costs related to both friable and nonfriable asbestos-containing material. Under the asbestos NESHAP, friable asbestos is currently required by law to be removed, contained, and properly disposed of in the context of a demolition or renovation of a covered facility. There is no immediate requirement for the federal government to remove nonfriable asbestos in good condition that is not currently posing a health threat. However, the future repair, removal, renovation, demolition or other disturbance of asbestos-containing material may cause the asbestos to become friable and, because of limitation on the life of PP&E other than land, it is inevitable that these actions will occur. Thus, the event triggering the liability is the existence of asbestos in federal property, plant, and equipment, not a legal requirement to remove, contain, or dispose of the asbestos. Therefore, the accounting treatment for asbestos provided for in this technical bulletin is based on the best estimate of the costs that will be incurred in the future for removal, containment, or disposal of asbestos that exists in federal property, plant, and equipment as of the reporting date. The ability of the federal government to sell the federal property, plant, and equipment or otherwise dispose of it in the future without incurring any asbestos-related cleanup costs may affect measurement of the liability but does not negate the existence of the liability as of the reporting date.
- A14. It is important to note that the requirement to estimate a liability for asbestos-related cleanup costs and the requirement to actually perform asbestos-related cleanup are two completely separate requirements. It is not within the scope or the intent of accounting standard-setters to establish what asbestos-related cleanup will be required and when. This must be determined by reference to applicable law. Furthermore, this technical bulletin does not intend to imply that recognizing a liability for asbestos-related cleanup costs in any way reflects a judgment about the legal obligation of the federal government for asbestos-related

cleanup. The purpose of this technical bulletin is to provide guidance that will result in the more consistent and timely recognition of an accounting liability.

A15. In the past, some federal entities have cited the inconsistency in reporting of asbestos-related liabilities by federal entities and organizations that followed FASB standards as the basis for not recognizing a liability for nonfriable asbestos-related cleanup costs. Therefore, the effective date of this technical bulletin – for reporting periods beginning after September 30, 2009 – is established to allow federal entities the time to complete remedial investigation/feasibility studies or take similar steps in order to comply with this guidance. Earlier adoption is encouraged.

A16. A draft concepts statement, *Definition and Recognition of Elements of Accrual-Basis Financial Statements*, is currently under consideration by the Board and was issued as an exposure draft in early June 2006. This concepts statement proposes new definitions of five elements of accrual-basis financial statements – asset, liability, revenue, expense, and net position. These new definitions, if issued as final, would be used as the building blocks for new standards issued by the Board in the future. However, since the concepts statement will go through extensive due process before being finalized and subsequently used to develop new standards, this technical bulletin is being issued under the existing standards for the federal government. If changes are made to the cleanup standards in the future, the consideration of asbestos-related cleanup costs would be incorporated into the new standards accordingly.

A17. The exposure draft, Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*, was issued June 1, 2006 with comments requested by June 30, 2006. Upon release of the exposure draft, notices and press releases were provided to The Federal Register, *FASAB News*, *The Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, *the CPA Letter*, *Government Accounting and Auditing Update*, the CFO Council, the Presidents Council on Integrity and Efficiency, Financial Statement Audit Network, the Federal Financial Managers Council, and committees of professional associations generally commenting on exposure drafts in the past. To encourage responses, reminder notices were provided to the FASAB Listserv on June 20th and June 29th.

A18. Eleven comment letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others	1	3
Auditors	0	1
Preparers and financial managers	6	0

A19. In addition to the official count in paragraph A18, two federal agencies wrote that they had reviewed the exposure draft and determined that it required no changes or did not have a major impact to their current reporting practices.

A20. The Board considered responses to the exposure draft at its July 27, 2006 board meeting. The majority of the respondents agreed with the proposed guidance. Specific concerns raised by respondents related to asbestos being considered a hazardous waste, the lack of legal requirements to remove nonfriable asbestos in good condition, applicability of the technical bulletin to naturally occurring asbestos and other contaminants, and the issue of liability recognition versus note disclosure. Most concerns raised by respondents related to definition and scope of the proposed guidance. Clarifying language was added to address these concerns.

A21. Several respondents that were strongly opposed to the proposed guidance argued that because there is no legal requirement to cleanup nonfriable asbestos, it is not appropriate to estimate a liability for nonfriable asbestos. The Board has agreed that while legal enforceability may provide additional evidence that a liability exists, it is not a prerequisite. The guidance in this technical bulletin is requiring that the entity estimate the economic impact that the existence of asbestos has on the financial position of the entity. Therefore, if asbestos is present in any form in an entity's PP&E at year-end, the entity is required to estimate the costs that will be incurred at any point in the future to comply with all related laws and regulations regarding the asbestos already in existence as of the reporting date. The entity is only required to prepare a best estimate of costs that will eventually be incurred. The entity is not required to estimate costs for cleanup of asbestos that will never occur (e.g., nonfriable asbestos that will never become friable). Language was added to clarify the intent of the guidance.

A22. One respondent to the exposure draft stated that the technical bulletin should make a distinction between the treatment of cleanup costs for heritage assets and multi-use heritage assets. Based on a review of existing standards, it was noted that SFFAS 6 (as originally pronounced) provided for capitalization of certain costs related to multi-use heritage assets as general PP&E. In addition, SFFAS 6, Chapter 4, Cleanup Costs, differentiated between stewardship PP&E and general PP&E for purposes of estimating cleanup costs but did not specifically reference multi-use heritage assets. Although not explicitly stated, staff believes that it was the intent of the previous Board that the cleanup cost standards for general PP&E apply to all assets classified as general PP&E, including multi-use heritage assets.

A23. The Board has reviewed this technical bulletin, and a majority of its members do not object to its issuance.

Appendix B: Illustration of Asbestos-Related Cleanup Costs

This appendix illustrates one method of complying with the guidance in this technical bulletin.⁹ The example shown in this appendix is for illustrative purposes only. Applying this technical bulletin may require consideration of estimated cost components other than those shown here.

Example of Accounting for Asbestos-Related Cleanup Costs

B1. A federal facility (general PP&E) was placed in operation in 1970. While the federal entity had previously recognized cleanup costs for friable asbestos, no recognition of nonfriable asbestos-related cleanup cost was made under past accounting policy. At the end of 2006, the entity adopts the accounting policies presented in this technical bulletin.

The following assumptions apply:

- The facility has an expected useful life of 50 years;
- The containment and removal of asbestos is required by state, local and Federal laws when the site is renovated, repaired, permanently or temporarily closed down, or otherwise disturbed; and,
- 2006 cost estimates are based on current cost for 2006.

RECOGNITION OF LIABILITY AMOUNTS FOR 2006 (Dollars in thousands)

Estimated Total Cleanup Cost Based on Current Cost in 2006

The federal entity estimates the following total cleanup costs related to the containment and removal of nonfriable asbestos in its facility:

Inspection	\$ 1,000
Sampling and Testing	10,000
Feasibility Study	5,000
Containment of Asbestos During Removal	12,000
Disposal of Asbestos	20,000
TOTAL ESTIMATED CLEANUP COST	\$48,000

⁹The formulas used in this illustration are taken from SFFAS 6, Appendix D – *Illustration of Cleanup Cost*.

Calculation of Liability Amount to be Recognized upon Implementation

At the end of 2006, the estimated total cleanup costs were \$48 million. The following calculations show the amounts that should have been recognized at the end of 2006 if the technical bulletin had been in effect since the facility began operation on October 1, 1970:

$(a \times b/c) - d = I$ where,

a = total cleanup cost estimated as of end of period

b = cumulative capacity used at end of period¹⁰

c = total estimated capacity¹¹

d = amount previously recognized as expense – beginning of period

I = liability to be recognized at the end of 2006

$$(\$48,000 \times 36/50) - \$0 = I$$

$$\$48,000 \times .72 - \$0 = I$$

$$\$34,560 = I$$

Dr. Change in Accounting Principle \$34,560

Cr. Cleanup Liability \$34,560

To recognize estimated cleanup liability.

SUMMARY:

Financial Statement	2006
Change in Accounting Principle	\$34,560
Liability	\$34,560

¹⁰ If recognition of the costs is based on the passage of time rather than physical capacity, the cumulative amount of time passed since the associated PP&E began operating shall be substituted.

¹¹ If recognition is based on the passage of time, the estimated useful life of the associated asset shall be substituted.

Note regarding the second implementation approach:

If the entity elects to use the second implementation approach from paragraph 40 (recognition of the full liability amount upon implementation of the technical bulletin), the following entry would be made:

Dr. Change in Accounting Principle	\$48,000
Cr. Cleanup Liability	\$48,000

This approach can only be used if the related PP&E has been in service for a substantial portion of its estimated useful life and costs are not intended to be recovered primarily through user charges.

Calculation of Annual Expense and Accrued Liability Amounts

In years 2007 through 2020, the following calculation shows the amount to be recognized annually:

$$\begin{aligned} (a \times b/c) &= I \\ (\$48,000 \times 1/50) &= I \\ (\$48,000 \times .02) &= I \\ \$960 &= I \end{aligned}$$

Dr. Cleanup Expense	\$960
Cr. Cleanup Liability	\$960

To recognize estimated cleanup liability.

If the facility is renovated prior to 2020 (estimated end of useful life), the difference in the recognized liability and the total amount of the cleanup costs would be recognized as expense in the period of cleanup.

Payment of Cleanup Costs

One of the following entries would be made when cleanup costs are eventually incurred and subsequently paid, based on actual cleanup costs:

If cleanup costs equal outstanding liability (i.e., \$48,000):

Dr. Cleanup Liability	\$48,000
Cr. Fund Balance with Treasury	\$48,000

If cleanup costs are less than outstanding liability (i.e., \$43,000):

Dr. Cleanup Liability	\$48,000
Cr. Fund Balance with Treasury	\$43,000
Cr. Cleanup Expense	\$ 5,000

If cleanup costs are more than outstanding liability (i.e., \$50,000):

Dr. Cleanup Liability	\$48,000
Dr. Cleanup Expense	\$ 2,000
Cr. Fund Balance with Treasury	\$50,000

Appendix C: Asbestos-Containing Materials

Note: The following list does not include every product/material that may contain asbestos. It is intended as a general guide to show which types of materials may contain asbestos.

Sample List of Potential Asbestos-Containing Materials

Cement Pipes	Elevator Brake Shoes
Cement Wallboard	HVAC Duct Insulation
Cement Siding	Boiler Insulation
Asphalt Floor Tile	Breaching Insulation
Vinyl Floor Tile	Ductwork Flexible Fabric Connections
Vinyl Sheet Flooring	Cooling Towers
Flooring Backing	Pipe Insulation (corrugated air-cell, block, etc.)
Acoustical Plaster	Heating and Electrical Ducts
Decorative Plaster	Electrical Panel Partitions
Textured Paints/Coatings	Electrical Cloth
Ceiling Tiles and Lay-in Panels	Electric Wiring Insulation
Spray-Applied Insulation	Chalkboards
Blown-in Insulation	Roofing Shingles
Fireproofing Materials	Roofing Felt
Taping Compounds (thermal)	Base Flashing
Packing Materials (for wall/floor penetrations)	Thermal Paper Products
High Temperature Gaskets	Fire Doors
Laboratory Hoods/Table Tops	Caulking/Putties
Laboratory Gloves	Adhesives
Fire Blankets	Wallboard
Fire Curtains	Joint Compounds
Elevator Equipment Panels	Vinyl Wall Coverings
Construction Mastics (floor tile, carpet, ceiling tile, etc.)	Spackling Compounds

Technical Bulletin 2009-1: Deferral of the Effective Date of Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*

Status

Issued	September 22, 2009
Effective Date	Effective upon issuance.
Affects	Technical Bulletin 2006-1, par. 50, by replacing the year "2009" with "2011."
Affected by	Technical Bulletin 2011-2, par. 2, deferred the effective date of Technical Bulletin 2006-1 for an additional year to fiscal periods beginning after September 30, 2012.

Summary

This Technical Bulletin defers for two years the effective date of Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*. The guidance in Technical Bulletin 2006-1 will be effective for periods beginning after September 30, 2011.

Table of Contents

Summary	1
Technical Guidance	3

Amendment of Technical Bulletin 2006-1	3
Effective Date	3
Appendix A: Basis for Conclusions	4
Appendix B: Abbreviations	8

Technical Guidance

Scope

1. This guidance affects all federal entities that own buildings, facilities, ships, or other tangible property, plant, and equipment (PP&E) that contain any form of asbestos and present general purpose financial reports in conformance with Statement of Federal Financial Accounting Standards 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.

Amendment of Technical Bulletin 2006-1

2. The effective date of the guidance on recognition and measurement of asbestos-related cleanup costs provided in par. 50 of Technical Bulletin 2006-1 is amended as follows:

This Technical Bulletin is effective for reporting periods beginning after September 30, ~~2009~~2011. Earlier adoption is encouraged.

Effective Date

3. This Technical Bulletin is effective upon its issuance.

The provisions of this Technical Bulletin need not be applied to immaterial items.

Appendix A: Basis for Conclusions

The Federal Accounting Standards Advisory Board has authorized its staff to prepare FASAB Technical Bulletins to provide timely guidance on certain financial accounting and reporting problems, in accordance with the Board's rules of procedure, as amended and restated through April 2004, and the procedures described in FASAB Technical Bulletin 2000-1, "*Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance*." The provisions of Technical Bulletins need not be applied to immaterial items.

This appendix discusses some factors considered significant by staff in reaching the conclusions in this Technical Bulletin. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the technical guidance section – not the material in this appendix – should govern the accounting for specific transactions, events or conditions.

- A1. In March 2009, FASAB staff members received a request from the federal agency members of the Accounting and Auditing Policy Committee (AAPC) disposal subgroup, excluding the audit representatives, that the implementation of Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*, be delayed until October 1, 2011 because of the reporting complexity, limited resources, and shifting priorities within the federal government due to the American Recovery and Reinvestment Act (ARRA). This request was not supported by all members of the AAPC disposal subgroup.
- A2. The request stated that when Technical Bulletin 2006-1 was released with an effective implementation date for reporting periods after September 30, 2009, federal agencies began to evaluate their ability to estimate their asbestos-related cleanup cost liability. The subgroup's research into facility management practices has shown that agencies do not track asbestos in buildings, structures, or equipment except on a limited basis. Asbestos in building materials is only federally-regulated under limited conditions. Most asbestos is regulated by states resulting in decentralized data collection and management to address state-specific requirements. Additionally, there is limited guidance available on the collection and reporting of asbestos-related cleanup costs. For example, there is some confusion as to whether federal agencies will be able to model costs or whether they will need to assess each building and structure individually. Once AAPC completes and releases its implementation guidance on asbestos-related cleanup costs, agencies will need to develop agency-specific guidance, collect data, and prepare their cost estimates. In many cases, new or substantially modified tracking systems may be required.
- A3. The request also noted that federal agencies now face the implementation of ARRA and its impact on federal land managers. For example, the Department of the Interior (DOI) has received more than \$3 billion for infrastructure and other projects. This is a two-year

funding that must be executed for creating jobs and boosting the economy. Many of the facility, engineering, and environmental staff that would work to develop asbestos cost estimates are now committed to executing this historic endeavor and would not be able to shift priorities to work on asbestos-related liability estimates.

- A4. In considering the subgroup's request for delayed implementation of Technical Bulletin 2006-1, FASAB staff reviewed deferrals the FASAB has made in the past and discussed Technical Bulletin 2006-1 and the subgroup request at length with representatives from DOI's National Park Service, Office of Environmental Policy and Compliance, and Office of Finance; the Government Accountability Office; and the Department of State.
- A5. When staff originally proposed Technical Bulletin 2006-1, the Board questioned why staff was providing such a long implementation period for a standard that was already in effect; the Technical Bulletin restates the requirements in Statement of Federal Financial Accounting Standards (SFFAS) 6, *Accounting for Property, Plant and Equipment*, and specifically applies them to asbestos. Staff had responded that there was some conflicting guidance in place that had resulted in inconsistent reporting among agencies.¹ The extended implementation period was established to provide federal entities with the time to incorporate the resource requirements into their budget requests and complete remedial investigation / feasibility studies or take similar steps in order to comply with the guidance.
- A6. However, there are several agencies that have been actively working toward compliance with the Technical Bulletin since it was issued in September 2006 and are encountering significant difficulties and unanswered questions. It was expressed to staff that the sheer volume of buildings and structures involved in the estimates is overwhelming. According to the fiscal year 2007 Federal Real Property Report published by GSA in May 2008, there are nearly 1,000,000 federal buildings and structures with a replacement value of over \$1.5 trillion. The top five in number belong to Army (233,000), Interior (163,000), Navy (153,000), Air Force (149,000), and Transportation (59,000) and comprise 82 percent of the total buildings and structures.
- A7. The individuals that staff spoke with have significant concerns about developing a methodology that will be accepted by the auditors and are working with limited resources. Agencies have encountered trouble finding contractors to assist them with developing estimates due to a number of factors, including conflict of interest concerns and a general lack of knowledge about where to begin. One of the primary reasons for the difficulties is due to the contingent nature of the cleanup requirements and other unknowns. Federal regulations do not require tracking of nonfriable asbestos and may not require removal even at the time of building renovation or demolition, depending on the material's condition and

¹ EITF 89-13, Accounting for the Cost of Asbestos Removal

the disposal method. In addition, the inability to visibly determine the presence of non-friable asbestos or validate its absence is a significant unknown, which some believe can not be adequately supported without testing. In discussions with staff, federal agency representatives also expressed that a good asbestos estimation model is not available to meet their purposes; many of the models out there require extensive input information and are more useful in developing a cost estimate once the extent of asbestos contamination is already known (i.e., post-survey). Agencies have received quotes on the additional costs that would be incurred to add nonfriable asbestos to condition assessment surveys (e.g., \$2,000,000) and are hesitant to commit to the expense.

- A8. Agencies have questioned whether they can eliminate from the population those buildings and structures of a smaller size that would incur significantly less asbestos cleanup costs but are uncertain whether that would be acceptable or not. Some agencies have thought about lumping like facilities together (i.e., lumping warehouses together and office buildings together) and then obtaining data on one percent of each grouping of facilities and extrapolate the data across the groupings; however, they again question whether this methodology would be acceptable to the auditors. One agency, which has approximately 20,000 structures, has invested more than \$550,000 in contract costs to have approximately three percent of its structures estimated. From reviewing the initial contract costs and anticipating some economies of scale, the agency estimates spending between \$350 to \$500 per asset using the contractor's approach. Having only recently received the initial results from the contractor, the agency is reviewing the information to determine next steps, including data usability for modeling. The agency remains concerned about the overall implementation cost.
- A9. In addition, staff is aware that the AAPC disposal subgroup is working on implementation guidance for the Technical Bulletin which may prove helpful to agencies in supporting their estimation methodologies and consistently reporting asbestos cleanup costs. Staff would encourage that this guidance be issued as quickly as possible to provide agencies with sufficient time to utilize it.
- A10. While staff understands agencies' concerns about the reporting complexity, limited resources, and shifting priorities within the federal government due to ARRA, the most compelling reason for deferral of the effective date is the forthcoming implementation guidance being developed by the AAPC. Therefore, staff recommends that the effective date of Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*, be deferred for two years to provide federal agencies with additional time to resolve implementation issues that have been identified since Technical Bulletin 2006-1 was issued.
- A11. The exposure draft, *Deferral of the Effective Date of Technical Bulletin 2006-1, Recognition and Measurement of Asbestos-Related Cleanup Costs*, was issued June 4, 2009, with

comments requested by July 17, 2009. Upon release of the exposure draft, notices and press releases were provided to the Federal Register; *FASAB News*, the *Journal of Accountancy*, *AGA Today*, *The CPA Journal*, *Government Executive*, *The CPA Letter*, and *Government Accounting and Auditing Update*; the CFO Council, the Council of the Inspectors General on Integrity and Efficiency, the Financial Statement Audit Network, and the Accounting and Auditing Policy Committee's General Property, Plant, and Equipment Task Force; committees of professional associations generally commenting on exposure drafts in the past; and past respondents to Technical Bulletin 2006-1 and others who had expressed an interest in the issue. To encourage responses, a reminder notice was provided to our Listserv on July 16, 2009.

A12. Seventeen comment letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		2
Auditors	2	
Preparers and financial managers	13	

A13. The Board considered responses to the exposure draft at its August 27, 2009, public meeting. Sixteen of the 17 respondents were in favor of deferring the effective date. One respondent did not comment on the proposal. Since there was no opposition to the deferral proposal in the ED, staff recommended that the proposal be issued as final.

A14. The Board has reviewed this Technical Bulletin, and a majority of its members do not object to its issuance.

Technical Bulletin 2011-1: Accounting for Federal Natural Resources Other than Oil and Gas

Status

Issued	July 6, 2011
Effective Date	For periods beginning after September 30, 2013
Affects	None.
Affected by	SFFAS 63, par. 4, rescinded par. 5 and 31.

Summary

Technical Bulletin 2011-1 clarifies that federal entities should report the value of the federal government's estimated royalties and other revenue from federal natural resources that are (1) under lease, contract or other long-term agreement and (2) reasonably estimable as of the reporting date in required supplementary information (RSI), consistent with the guidance contained in Statement of Federal Financial Accounting Standards 38, *Accounting for Federal Oil and Gas Resources*.

The guidance in this technical bulletin requires supplementary information and is effective for periods beginning after September 30, 2013. Earlier implementation is encouraged. It is the Board's intent that the information required by SFFAS 38 transition to basic information after being reported as RSI for a period of three years. Prior to the conclusion of the three-year RSI period, the Board plans to make a determination as to whether the information required by SFFAS 38 will transition to basic information as financial statement recognition or note disclosure. It is anticipated that a similar determination would be made for natural resources other than oil and gas based on agencies' experiences implementing the guidance in this technical bulletin.

Introduction

Purpose

1. Statement of Federal Financial Accounting Standards (SFFAS) 38, *Accounting for Federal Oil and Gas Resources*, requires the value of the federal government's **estimated petroleum royalties**¹ from the production of federal oil and gas **proved reserves** to be reported in required supplementary information (RSI) as part of a discussion of all significant **federal oil and gas resources** under management by the entity.
2. This technical bulletin clarifies that federal entities should report the value of the federal government's estimated royalties and other revenue for other **federal natural resources**² that are (1) under long-term lease, long-term contract or other long-term agreement³ and (2) **reasonably estimable** as of the reporting date in RSI, consistent with the guidance contained in SFFAS 38 for federal oil and gas proved reserves.

Materiality

3. The provisions of this technical bulletin need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Effective Date

4. The guidance in this technical bulletin is effective for periods beginning after September 30, 2013. Earlier implementation is encouraged.

¹ Terms defined in the Glossary or Appendix C are shown in **bold-faced type** the first time they appear.

²The term "federal natural resources" should be viewed with its general meaning as defined in the glossary.

³ The shortened phrase "lease, contract, or other long-term agreement" is used throughout the remainder of this document to refer to all such long-term arrangements. Long-term is defined as longer than five years and applies to the original term of outstanding leases, contracts, or other long-term agreements as of the reporting date.

-
5. [Paragraph 5 was rescinded by SFFAS 63, Omnibus Amendments 2024-1, paragraph 4.]
-

Technical Guidance

Scope

6. **What entities are affected by this technical bulletin?**
7. This guidance applies to federal entities that (a) manage federal natural resources and (b) prepare general purpose federal financial reports, including the consolidated financial report of the U.S. Government, in conformance with SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board (FASB)*.
8. **What accounting practices are addressed in this technical bulletin?**
9. This guidance clarifies the responsibility of federal entities to report the value of the federal government's estimated royalties and other revenue from federal natural resources under lease, contract or other long-term agreement in RSI, consistent with the guidance contained in SFFAS 38 for federal oil and gas resources.
10. **What are federal natural resources?**
11. Federal natural resources are resources that occur in nature (including **nonrenewable natural resources** and **renewable natural resources**) and meet all of the following criteria:
- a. the federal government may exercise sovereign rights over the resources with respect to exploration and exploitation,
 - b. the federal government has the authority to derive revenues from the resources for its use, and
 - c. the resources are contained on federal lands or the federal government substantially manages and/or controls⁴ the resources.⁵

⁴ "Substantially manages and/or controls" means that the federal government manages and/or controls access to the economic benefits to be derived from the resources and, therefore, can obtain them and deny or regulate the access of other entities to them (Statement of Federal Financial Accounting Concepts (SFFAC) 5, par. 22). This criterion would not be met if the federal government's role is limited to the custodian of collections. For example, royalties collected by the federal government from resources produced from Indian lands on behalf of individual Indians and Indian tribal organizations from leases that are negotiated and signed by the individual Indians and Indian tribal organizations are considered custodial in nature and not federal resources.

⁵ Adapted from SFFAS 38.

Required Supplementary Information (RSI)

12. **How should federal entities apply the general principles of SFFAS 38 to the different types of federal natural resources other than oil and gas that are under management by the entity?**
13. Federal entities are required to apply the general principles of SFFAS 38 through the guidance provided in this technical bulletin and report the value of the federal government's estimated royalties and other revenue from nonrenewable resources that are (1) under lease, contract or other long-term agreement and (2) reasonably estimable as of the reporting date. This is consistent with SFFAS 38 requirements for reporting on federal oil and gas proved reserves.⁶
14. Federal entities are not required to, but may, apply the guidance in this technical bulletin and report the estimated value of other federal natural resources, including renewable natural resources, **electromagnetic spectrum**, or other nonrenewable resources that are not under lease, contract, or other long-term agreement.
15. The narrative discussion required in paragraph 27f should include those federal natural resources that are significant to the reporting entity but not required to be reported in the schedule described in paragraph 17 (for example, they are not measurable⁷ or not under lease, contract, or other long-term agreement).

Component Entity RSI

16. **What should be reported in component entity RSI for federal natural resources other than oil and gas?**
17. The value of the federal government's estimated royalties and other revenue from the reporting entity's federal natural resources that are (1) under lease, contract or other long-term agreement and (2) reasonably estimable as of the reporting date should be reported in a schedule in RSI as part of a discussion of the significant federal natural resources under management by the entity (SFFAS 38, paragraph 15).

⁶ While SFFAS 38 does not specifically address other types of federal natural resources, the Board believes that SFFAS 38 should be considered when applying the hierarchy of generally accepted accounting principles to other types of federal natural resources (SFFAS 38, paragraph 9).

⁷ As used in SFFAC 5, paragraph 5, the term measurable means that a monetary amount can be determined with reasonable certainty or is reasonably estimable.

18. The value of the federal government's estimated royalties and other revenue from the reporting entity's federal natural resources under lease, contract, or other long-term agreement should be reported by major types of natural resources. Resources may be further divided by subtype of commodity and calculated separately if material differences would otherwise result. Each of the individual calculations should be reported separately and summed together to arrive at the reporting entity's total estimated natural resources under lease, contract, or other long-term agreement (SFFAS 38, paragraph 21).
19. If a majority of the reporting entity's estimated revenue from natural resources under lease, contract, or other long-term agreement is designated to be distributed to others, the value of the revenue to be distributed should be estimated and reported in a schedule of estimated revenue to be distributed to others (SFFAS 38, paragraph 25).
20. **How should the value of federal natural resources be determined?**
21. The estimates that are developed should approximate the **present value** of future receipts of federal natural resources that are (1) under lease, contract or other long-term agreement and (2) reasonably estimable as of the reporting date. The estimates should be based on the best information available at fiscal year-end, or as close to the fiscal year-end as possible (SFFAS 38, paragraph 17).
22. Discount rates as of the reporting date for present value measurements of federal natural resources should be based on interest rates on **marketable Treasury securities** with maturities consistent with the cash flows being discounted (SFFAS 38, paragraph 18).
23. The reporting entity's estimates should reflect its judgment about the outcome of events based on past experience and expectations about the future. Estimates should reflect what is reasonable to assume under the circumstances. While the entity's own assumptions about future cash flows may be used, the entity should review assumptions used generally in the federal government as evidenced by sources independent of the reporting entity, for example, those used by the Bureau of Economic Analysis for the National Income and Product Accounts. If the entity's own assumptions do not reflect data that are consistent with sources independent of the reporting entity, an explanation of why the entity's own assumptions are preferred should be provided (SFFAS 38, paragraph 19).
24. The preferred measurement method for valuing the reporting entity's federal natural resources is the present value of future receipts on federal natural resources that are (1) under lease, contract or other long-term agreement and (2) reasonably estimable as of the reporting date using a risk-free discount rate as described in paragraph 22; however, alternative methods for measuring **fair value** or current price may be acceptable if it is not reasonably possible to estimate present value of future federal receipts using the methodology described in paragraphs 21 through 24 (SFFAS 38, paragraph 22)⁸.

25. Once established, the estimation methodology should be consistently followed and explained in the financial reports. If environmental or other changes would provide for the development of an improved methodology, the nature and reason for the change in methodology, as well as the effect of the change, should be explained (SFFAS 38, paragraph 23).

26. What else should be reported?

27. The reporting entity should provide the following as a narrative⁹ to the schedules presented as RSI:

- a. A concise statement explaining how the management of the reporting entity's federal natural resources is important to the overall mission of the entity.
- b. A brief description of the entity's stewardship policies for federal natural resources (e.g., the guiding principles established to: assess resource areas; offer those resources to interested developers; sell and assign leases to winning bidders; administer the leases; collect bonuses, rents, and royalties; and distribute the collections consistent with statutory requirements, prohibitions, and limitations governing the entity).
- c. A narrative describing the estimation methodology used to calculate the value of the federal reporting entity's natural resources under lease, contract, or other long-term agreement. At a minimum, the narrative explanation should include a "plain English" explanation of the measurement attribute or method, the significant assumptions incorporated into the estimate, and any significant changes to the estimation methodology, including the underlying assumptions, from the prior year. As required by paragraph 25, the nature and reason for any changes, as well as the effect of the changes, should be explained.
- d. A reference to the source reports used to calculate the value of the federal reporting entity's estimated natural resources under lease, contract, or other long-term

⁸Calculating the present value of future federal receipts employs the use of a number of estimates; unforeseen circumstances may result in situations where it is not possible for the entity to reasonably estimate the present value of future federal receipts. In these situations, it may be possible to estimate current price. Current price, sometimes referred to as a "fresh-start" or "remeasured" price, is a general term for various attributes measured as of a financial statement date subsequent to the period of initial recognition, including replacement price, market price, and settlement price.

⁹ Quantitative data is not required to be reported as part of the narrative discussion unless specifically required as part of a display that accompanies the narrative discussion (for example, in par. 27e, where quantitative information is required in display format).

agreement.

- e. A narrative describing and a display showing the sales volume, the sales value, the royalty or other revenue, and the estimated value of **royalty relief** or other **foregone revenue**, if any, that resulted from the extraction and removal of federal natural resources under management by the reporting entity for the reporting period.
- f. A narrative describing other significant natural resources under management by the federal reporting entity that are not required to be reported in the schedule described in paragraph 17 (for example, they are not measurable¹⁰ or not under lease, contract, or other long-term agreement). The narrative should be sufficient to enable the financial statement reader to gain an understanding of the full extent of significant natural resources under management by the entity, including resources contained on land that has been legislatively or administratively withdrawn from leasing (SFFAS 38, paragraph 28).

Consolidated Financial Report of the U.S. Government RSI

- 28. **With regard to federal natural resources other than oil and gas, what should be reported in the consolidated financial report of the U.S. Government?**
- 29. The governmentwide entity should provide the following information related to federal natural resources in RSI as part of a discussion of the significant federal natural resources under management by the federal government:
 - a. A concise statement explaining the nature and valuation of federal natural resources.
 - b. The asset value of federal natural resources under lease, contract, or other long-term agreement by the types identified for use in calculating the value of the federal government's estimated royalties and other revenue from natural resources under lease, contract, or other long-term agreement as of the end of the reporting period (see paragraph 18). Related groups of resources that do not warrant classification and presentation in separate categories should be aggregated.
 - c. A reference to specific agency reports for additional information about federal natural resources (SFFAS 38, paragraph 29).

¹⁰ See footnote 7.

Effective Date

30. This technical bulletin is effective for periods beginning after September 30, 2013. Earlier implementation is encouraged.
31. [Paragraph 31 was rescinded by SFFAS 63, Omnibus Amendments 2024-1, paragraph 4.]

<p>The provisions of this Technical Bulletin need not be applied to immaterial items.</p>

Appendix A: Basis for Conclusions

The Federal Accounting Standards Advisory Board has authorized its staff to prepare FASAB technical bulletins to provide timely guidance on certain financial accounting and reporting problems, in accordance with the Board's rules of procedure, as amended and restated through December 2003, and the procedures described in FASAB Technical Bulletin 2000-1, "*Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance*." The provisions of technical bulletins need not be applied to immaterial items.

This appendix discusses some factors considered significant by staff in reaching the conclusions in this technical bulletin. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the technical guidance section – not the material in this appendix – should govern the accounting for specific transactions, events or conditions.

Project History

- A1. In April 2010, FASAB issued SFFAS 38, *Accounting for Federal Oil and Gas Resources*. SFFAS 38 requires the value of the federal government's estimated petroleum royalties from the production of federal oil and gas proved reserves to be reported in a schedule of estimated federal oil and gas petroleum royalties. SFFAS 38 also requires the value of estimated petroleum royalty revenue designated for others to be reported in a schedule of estimated federal oil and gas petroleum royalties to be distributed to others. These schedules are to be presented in required supplementary information (RSI) as part of a discussion of all significant federal oil and gas resources under management by the entity.
- A2. Federal lands contain a variety of natural resources that are not specifically addressed by SFFAS 38, including coal, gold, and silver, as well as timber and grazing rights. Originally, the Board intended to address each category of resources in separate phases as noted in paragraph A2 of SFFAS 38. Although in principle a broader application was desirable to several Board members, the majority believes that the Board has already devoted a substantial amount of time to the oil and gas standard and developing additional guidance for the other types of resources would significantly delay implementation of a broad standard. Therefore, because federal oil and gas resources represent the most significant portion of all federal natural resources, the majority of members felt it was important to begin recognizing them as soon as possible.
- A3. Nonetheless, the majority of the members believe that the standards developed for federal oil and gas resources may serve as a good general framework for other categories of

federal natural resources.¹¹ Therefore, while SFFAS 38 does not specifically address other types of federal natural resources, the Board believes that SFFAS 38 should be considered when applying SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*, to other types of federal natural resources. As a result, while not explicitly encouraging agencies to recognize other categories of natural resources, the Board explicitly states that SFFAS 38 does not require or preclude entities from reporting information about other types of federally-owned natural resources; however, members believe SFFAS 38 should be considered in conjunction with SFFAS 7, *Accounting for Revenue and Other Financing Sources*, when applying SFFAS 34 to other types of federally-owned natural resources.¹²

- A4. During deliberations on SFFAS 38, the Board explicitly directed staff to apply the requirements of SFFAS 38 to other types of natural resources through the issuance of a technical bulletin. In doing so, the board members noted that the technical bulletin comment period would provide federal entities with an opportunity to comment on the standards as they would apply to the specific natural resources under their management.

Components of Federal Natural Resources

- A5. *Figure 1, Components of Federal Natural Resources Other than Oil and Gas*, presented on the next page identifies the universe of federal natural resources (total resources). Total resources incorporate “original in-place” resources, that is, resources in the earth before human intervention. The components are first separated into “undiscovered resources” and “discovered resources.”
- A6. The terms in Figure 1 are defined in Appendix C: Technical Terms under the subheading “Definitions of Federal Natural Resources Components and Subcomponents.”

¹¹ SFFAS 34, Paragraph 7.

¹² SFFAS 7, par. 45, requires, in instances where there are virtually no costs incurred in earning exchange revenue, that federal entities recognize the revenue as a financing source on the statement of changes in net position, rather than the statement of net cost (SFFAS 38, Paragraph 9).

Figure 1 – Components of Federal Natural Resources Other than Oil and Gas

Accounting Treatment	Components of Federal Natural Resources Other than Oil and Gas							
	Undiscovered Resources			Discovered Resources				
	Non-Recoverable	Recoverable		Not Available for Sale or Lease		Available for Sale or Lease		
		Undiscovered Conventionally Recoverable Resources	Undiscovered Economically Recoverable Resources	Legislatively Withdrawn	Administratively Withdrawn	Other	Planned to be Offered	Under Contract but Not Conveyed ¹³
Existing Accounting Treatment Before SFFAS 38								Bonus bid, rent, royalty and other revenue accounted for by reporting entity either as (1) exchange revenue on the SNC or as (2) as a financing source on the CFR and reporting entity SOCNP ¹⁴
New Accounting Treatment Based on SFFAS 38				<ul style="list-style-type: none"> Provide a narrative disclosure in Required Supplementary Information (RSI) of the full extent of natural resources under management by the reporting entity, including resources contained on land that has been legislatively or administratively withdrawn from leasing 			<ul style="list-style-type: none"> Revenue continues to be accounted for as either exchange revenue on the SNC or a financing source on the SOCNP Various RSI disclosures 	
							Not Reasonably Estimable	Reasonably Estimable ¹⁵
								<ul style="list-style-type: none"> Asset value and revenue to be distributed to others reported as RSI

Renewable Resources

A7. Staff believes that it may not be appropriate to apply the guidance in this Technical Bulletin to renewable natural resources. Based on staff's review of the major characteristics of renewable resources, renewable resources may not be similar enough to oil and gas royalties that an appropriate analogy can be made under the principles contained in SFFAS 38. For example, costs to develop certain renewable resources may be incurred by the

¹³ "Under Contract" encompasses lease, contract, or other long-term agreement. "Not Conveyed" refers to the portion of actual resources under contract that have not yet been physically extracted or removed from federal lands.

¹⁴ SNC = statement of net cost, CFR = consolidated financial report of the U.S. Government, and SOCNP = Statement of Operations and Changes in Net Position.

¹⁵ Under contract and reasonably estimable is substantially equivalent to "proved reserves" under SFFAS 38.

federal government while revenues may relate to annual production rather than extraction of long-standing reserves. Such revenue-producing renewable resources that result in exchange revenue that is matched against the economic cost of operations may not benefit from the additional reporting requirements of SFFAS 38. Therefore, federal entities are not required to, but may, apply the guidance in this technical bulletin to renewable natural resources.

Electromagnetic Spectrum

- A8. Staff believes that auctions of the electromagnetic spectrum may not be similar enough to oil and gas royalties that an appropriate analogy can be made under the principles contained in SFFAS 38. The spectrum is closer to a renewable resource in that it is inexhaustible in duration but limited in the amount of spectrum that is available per unit of time. Proceeds from auctions of the spectrum are not received on a consistent basis from year to year since the need for auction depends on the mutual exclusivity of the applications received in any given year (for example, auction proceeds were \$16.8 billion, \$1.8 billion, \$13.9 billion, and \$104 million in fiscal years 2009, 2008, 2007, and 2006, respectively). In addition, the asset that is being sold is the right to use the spectrum for a period of time, similar to a standard operating lease; nothing is being used up or depleted. Furthermore, auction proceeds are one-time payments made by each auction's winner; they are not made over the course of a lease, contract, or other long-term agreement. Therefore, federal entities are not required to, but may, apply the guidance in this technical bulletin to the electromagnetic spectrum.
- A9. The Board decided to add accounting for the electromagnetic spectrum to its list of potential projects for consideration at future agenda-setting sessions. If the project is selected for the agenda, the Board would determine if additional guidance is warranted (see SFFAS 7 paragraphs 145, 278 and 279). As of the issuance of this technical bulletin, this potential project has not been added to the Board's five-year agenda.

Other Natural Resources

- A10. The guidance in this technical bulletin applies the general principles of SFFAS 38 to other natural resources where staff believes an analogy can be drawn. While staff thought it was appropriate to limit the guidance of this technical bulletin to those resources that most closely analogized with federal oil and gas proved reserves, federal entities may believe that additional reporting on other natural resources under its management is appropriate. Therefore, federal entities are not required to, but may, apply the guidance in this technical bulletin to other natural resources that are not under lease, contract, or other long-term agreement.

Due Process

A11. The Exposure Draft (ED), Technical Bulletin 2011-1, *Accounting for Federal Natural Resources Other Than Oil and Gas*, was released on January 5, 2011, with comments requested by January 31, 2011.

A12. Upon release of the ED, notices and press releases were provided to the FASAB email listserv, the Federal Register, *The Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, *the CPA Letter*, *Government Accounting and Auditing Update*, the CFO Council, the Council of Inspectors General on Integrity and Efficiency, and the Financial Statement Audit Network, and committees of professional associations generally commenting on exposure drafts in the past (e.g., Greater Washington Society of CPAs, AGA Financial Management Standards Board).

A13. This broad announcement was followed by direct e-mailings of the press release to:

- a. Relevant congressional committees: Senate Committee on Energy and Natural Resources, Senate Committee on Finance, House Committee on Financial Services, and House Committee on Natural Resources;
- b. Public interest groups and think tanks: Alliance to Save Energy, the Brookings Institution, the Cato Institute, the Center on Budget and Policy Priorities, Citizens Against Government Waste, The Concord Coalition, The Heritage Foundation, National Parks Conservation Association, Natural Resources Defense Council, OMB Watch, Resources for the Future, the Sierra Club, the Urban Institute, and World Resources Institute;
- c. Respondents to SFFAS 38 and related EDs (or their successors);
- d. Agencies that manage and/or account for federal natural resources: Department of the Interior (DOI) Office of the Secretary; DOI Bureau of Land Management ; DOI Bureau of Ocean Energy Management, Regulation and Enforcement; DOI U.S. Geological Service; Department of Agriculture (USDA), Deputy CFO; and USDA Forest Service.

A14. To encourage responses, reminder notices were provided to the FASAB email listserv on January 28, 2011, and February 8, 2011.

Comment Letters

A15. Eight comment letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others	0	2
Auditors	1	0
Preparers and financial managers	5	0

A16. Responses to the exposure draft were considered at the February 24, 2011, public Board meeting. Staff did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board and staff considered the arguments in each response and weighed the merits of the points raised. The respondents' comments are summarized below.

A17. Respondents generally agreed with the proposed guidance; the respondents that expressed the most reservations are the ones that would need to determine whether they have material natural resources that are (1) under lease, contract, or other long-term agreement and (2) reasonably estimable as of the reporting date. Staff does not believe that an agency's current inability to determine materiality should be a barrier to issuing the proposal because it would seem that agencies that are leasing the federal government's natural resources over a long period of time (greater than five years) should have a reasonable idea of the amount that the federal government should be receiving for those nonrenewable natural resources assuming stable economic conditions and where the reasonably estimable hurdle is overcome. If the agencies do not know whether something is material or not, federal financial reporting objectives such as being able to determine whether the federal government is being a good steward cannot be met.

A18. One of the respondents stated that they do not believe the information is reasonably estimable. If the information is not reasonably estimable, it would not meet one of the primary requirements for being included in the schedule (under lease, contract, or other long-term agreement **and reasonably estimable as of the reporting date**) and would only need to be included in the narrative discussion proposed in paragraph 27f.

A19. One respondent stated that significant audit costs could be incurred by providing information to the auditor that confirms "immateriality" and "completeness" especially if information is not centrally available. Because materiality assessments require both qualitative and quantitative judgments, specific guidance limiting preparer and auditor considerations of information would not be appropriate.

A20. One respondent stated that the technical bulletin should explain the rationale for using the five-year term as the basis for the definition of “long-term.” Staff selected a five-year term based on the definition of “long-term assumptions” that was established in SFFAS 33, *Pensions, Other Retirement Benefits, and Other Postemployment Benefits: Reporting the Gains and Losses from Changes in Assumptions and Selecting Discount Rates and Valuation Dates*, which states, “Assumptions are considered long-term if the underlying event about which the assumption is made will not occur for five years or more.”

Meeting with DOI Representatives

A21. At the February meeting, several board members expressed significant concern about the potential cost of the proposal based on DOI’s letter and the conflicting views presented by DOI bureaus. The members asked for additional information from DOI.

A22. Staff asked DOI to clarify its response to the Exposure Draft and invited representatives from DOI to the April meeting to allow the board members to ask questions about DOI’s response.

A23. As a result of DOI’s revised response received on April 15, 2011, and its meeting with the Board, it was determined that DOI had interpreted the technical bulletin as requiring an estimate of the entire asset instead of just the estimated inflows to the federal government. Board members believe, and DOI confirmed, that it should be able to obtain this information by reviewing the actual lease agreements and developing an estimate based on the terms of the leases. DOI stated that it believes it can gather the information but would like to have until 2014 to implement the requirements of the technical bulletin because its resources are already dedicated to implementation of SFFAS 38 and rolling out a new core financial system. Staff agreed with a fiscal year 2014 implementation date and revised the effective date accordingly.

Board Review

A24. The Board has reviewed this Technical Bulletin, and a majority of its members do not object to its issuance.

Appendix C: Technical Terms

The terms explained in Appendix C have specific application to federal natural resources and may be useful in applying the requirements of this Technical Bulletin.

Definitions of Federal Natural Resources Components and Subcomponents

Provided below are definitions used in this technical bulletin to describe federal natural resource components and subcomponents.¹⁶ This section of Appendix C defines the terms used in *Figure 1 – Components of Federal Natural Resources Other than Oil and Gas*.

Undiscovered Resources

Resources surmised to exist on the basis of broad geologic knowledge and theory.¹⁷

- **Undiscovered Non-Recoverable Resources** – The portion of undiscovered federal natural resources not currently considered to be recoverable. A portion of these resources may become recoverable in the future as commercial circumstances change, technological developments occur, or additional data are required.
- **Undiscovered Recoverable Resources** – The portion of undiscovered federal natural resources that are estimated to exist in favorable geologic settings.¹⁸
 - Undiscovered Conventionally Recoverable Resources: The portion of undiscovered federal natural resources that is producible, using present or reasonably foreseeable technology, without any consideration of economic feasibility.
 - Undiscovered Economically Recoverable Resources: The portion of undiscovered federal natural resources that is economically recoverable under imposed economic scenarios.

¹⁶ Unless otherwise noted, definitions in this section were adapted from SFFAS 38, Appendix D: Technical Terms.

¹⁷ Adapted from the Energy Information Administration (EIA) Glossary, available at <http://www.eia.doe.gov/glossary/>; last accessed October 4, 2010.

¹⁸ Ibid.

Discovered Resources

Resources whose location and quantity are known or estimated from specific geologic evidence.

- Not Available for Sale or Lease – Resources that are not available for sale or transfer because they have been legislatively or administratively withdrawn.
 - Legislatively withdrawn resources: Those resources that by law can not be offered for transfer to private entities (e.g., resources in Wilderness Areas, National Parks, and Recreation Areas).
 - Administratively withdrawn resources: Those resources in areas which by law could be offered for transfer to private entities, but which have been administratively withdrawn. Such resources could be made available for future transfer by administrative decision without change in law (e.g., locatable minerals in scenic or recreational areas).
- Available for Sale or Lease – Those resources that are available for sale or transfer because they have not been legislatively or administratively withdrawn.
 - Planned to be offered: Resources planned to be offered are those resources for which it has been determined that specific types of resources in specific locations or within specific areas will be made available for sale or transfer to private entities (e.g., areas open to claims under the Mining Law of 1872).
 - Under contract but not conveyed: Resources “under contract” are resources that have been offered for sale through a lease, contract, or other long-term agreement but have not yet been conveyed to the purchaser.
 - *Reasonably Estimable*: Reasonably estimable resources under contract but not yet conveyed are those resources that are under lease, contract, or other long-term agreement; known to exist as of year-end; and for which the value can be reasonably estimated.
 - *Not Reasonably Estimable*: Not reasonably estimable resources under contract but not conveyed are those resources that are under lease, contract, or other long-term agreement; known to exist as of year-end; but for which the value cannot be reasonably estimated.
 - Other: Other resources available for sale are those resources which are neither restricted by law nor administratively withdrawn, are outside of areas for which there are contracts to convey a resource, and are outside of areas for which the determination has been made to offer the resource for sale.

End of the terms in Figure 1 that are defined under the subheading "Definitions of Federal Natural Resources Components and Subcomponents."

Other Definitions

Electromagnetic Spectrum: The range of electromagnetic radio frequencies (waves per second) used to transmit sound, data, and video across the country. It carries voice between cell phones, television shows from broadcasters to the television, and online information from one computer to the next, wirelessly. The electromagnetic spectrum includes (from longest wavelength to shortest): radio waves, microwaves, infrared, optical (or visible), ultraviolet, x-rays, and gamma-rays.¹⁹

Estimated Petroleum Royalties: The estimated end-of-period value of the federal government's royalty share of proved oil and gas reserves from federal oil and gas resources.

Federal Natural Resources: Federal natural resources are resources that occur in nature (including nonrenewable and renewable natural resources) and meet all of the following criteria: (a) the federal government may exercise sovereign rights over the resources with respect to exploration and exploitation; (b) the federal government has the authority to derive revenues from the resources for its use; and, (c) the resources are contained on federal lands or the federal government substantially manages and/or controls the resources.²⁰

Federal Oil and Gas Resources: Oil and gas resources over which the federal government may exercise sovereign rights with respect to exploration and exploitation and from which the federal government has the authority to derive revenues for its use. Federal oil and gas resources do not include resources over which the federal government acts as a fiduciary for the benefit of a non-federal party.

Foregone Revenue: Foregone revenue is the reduction, modification, or elimination of any royalty or other fee to operators to promote development, increase production, or encourage production of marginal resources on certain leases or categories of leases.²¹

Nonrenewable Natural Resources: Resources that cannot be easily made or "renewed," such as oil, natural gas, and coal.²²

¹⁹ Federal Communications Commission.

²⁰ Adapted from SFFAS 38.

²¹ Adapted from definition of royalty relief from 43 U.S.C. § 1337(a).

Proved Reserves: For crude oil and gas, proved reserves are the estimated quantities that geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions. For lease condensate and natural gas plant liquids, proved reserves are the estimated quantities demonstrated with reasonable certainty to be recoverable in future years in conjunction with the production of proved gas reserves, under existing economic and operating conditions. The total quantity of proved reserves is calculated by adding the quantity of reserves reported as revisions and adjustments, net of sales and acquisitions, total recoveries and deducting estimated production during the report year.

Renewable Natural Resources: Resources that are naturally replenishing but flow-limited. They are virtually inexhaustible in duration but limited in the amount of resources that are available per unit of time. Renewable resources include, but are not limited to, timber, biomass, hydropower, geothermal energy, solar, wind, water, fish, wildlife, ocean thermal, wave action, and tidal action.²³ The opposite of renewable is depletable, which refers to resources that are diminished after use, such as coal, oil, and gas.

Royalty Relief: Existing statutes authorize DOI to grant royalty relief to operators on the production of oil and gas resources from federal oil and gas leases. Royalty relief is the reduction, modification, or elimination of any royalty to operators to promote development, increase production, or encourage production of marginal resources on certain leases or categories of leases.²⁴

Technical Bulletin 2011-2: Extended Deferral of the Effective Date of Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*

Status

Issued	September 22, 2011
Effective Date	Effective upon issuance.
Affects	Technical Bulletin 2006-1, par. 50, by replacing the year "2011" with "2012."
Affected by	None.

Summary

This Technical Bulletin extends the deferral of the effective date of Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*, by one year. The guidance in Technical Bulletin 2006-1 will be effective for reporting periods beginning after September 30, 2012.

Table of Contents

Summary	1
Technical Guidance	3
Scope	3
Amendment of Technical Bulletin 2006-1	3
Effective Date	3
Appendix A: Basis for Conclusions	4
Appendix B: Abbreviations	10

Technical Guidance

Scope

1. This guidance affects all federal entities that own buildings, facilities, ships, or other tangible property, plant, and equipment (PP&E) that contain any form of asbestos and present general purpose federal financial reports in conformance with generally accepted accounting principles, as defined by Statement of Federal Financial Accounting Standards 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.

Amendment of Technical Bulletin 2006-1

2. The effective date of the guidance on recognition and measurement of asbestos-related cleanup costs provided in par. 50 of Technical Bulletin 2006-1 is amended as follows:

This technical bulletin is effective for reporting periods beginning after September 30, ~~2011~~2012. Earlier adoption is encouraged.

Effective Date

3. This Technical Bulletin is effective upon its issuance.

<p>The provisions of this Technical Bulletin need not be applied to immaterial items.</p>

Appendix A: Basis for Conclusions

The Federal Accounting Standards Advisory Board has authorized its staff to prepare FASAB Technical Bulletins to provide timely guidance on certain financial accounting and reporting problems, in accordance with the board's rules of procedure, as amended and restated through April 2004, and the procedures described in FASAB Technical Bulletin 2000-1, *Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance*. The provisions of Technical Bulletins need not be applied to immaterial items.

This appendix discusses some factors considered significant by staff in reaching the conclusions in this Technical Bulletin. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the technical guidance section – not the material in this appendix – should govern the accounting for specific transactions, events or conditions.

Background

- A1. On April 15, 2011, staff received a formal letter from the U.S. Department of the Interior (DOI or Interior), requesting that the board revisit Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*, to consider permitting agencies to report the estimated asbestos-related cleanup liability in required supplementary information (RSI) for several fiscal years until more data becomes available to make a more reliable estimation for asbestos-related cleanup costs.
- A2. The request stated, "To comply with the requirements of [Statement of Federal Financial Accounting Standards (SFFAS)] 6 and [Technical Bulletin] 2006-1, the Department of the Interior (Interior) began compiling cost data related to the cleanup of friable and non-friable asbestos. To date, Interior has surveyed more than 3,000 buildings and structures at a cost of more than \$2.5 million. Interior owns approximately 160,000 buildings and structures. To estimate the total asbestos-related cleanup costs for this large inventory of real property, Interior has chosen the cost modeling approach based on existing survey data. The modeling approach, though the least costly of all methodologies, poses several problems for Interior. First, the cost factor developed based on existing surveys is not representative for all asset types. Actual surveys performed by Interior were primarily on buildings, and Interior owns more than 106,000 structures, for which little or no actual cleanup data is available. Second, although Federal Accounting Standards Advisory Board (FASAB) allows the use of information from industry-specific cost estimation publications or standardized costs factors developed for each state, there is little or no actual asbestos cleanup data available for certain asset groups. For example, there is no actual asbestos-related cleanup data available for monuments and other types of heritage assets owned by Interior."

- A3. DOI's request went on to state, "In order to continue with this approach, Interior would need to perform a significant number of additional surveys for certain assets groups and this presents a major challenge. In light of current resource constraints, coupled with probable future budget cuts, the requirement to complete additional surveys would impose a significant financial hardship for Interior. We also need to consider the impact to our financial statements audit. Interior will likely face hurdles with our external auditors due to the inability to dedicate more resources to the performance of more surveys. Because of resources constraints, Interior may experience adverse action during the financial statement audit once [Technical Bulletin] 2006-1 becomes effective as written."
- A4. Members had an opportunity to ask representatives from DOI questions about its request at the April 28, 2011, board meeting during a separate discussion related to Technical Bulletin 2011-1, *Accounting for Federal Natural Resources Other than Oil and Gas*. At that meeting, several of the board members agreed that they would like to have a status of what other agencies were doing before they made a decision on it.
- A5. In addition to obtaining more specific information on DOI's methodology and its facilities, staff performed the following research and outreach regarding reporting for asbestos-related liability costs following the April 28, 2011, FASAB meeting:
- a. Researched and reviewed how other federal agencies (entities that primarily apply standards issued by the nongovernmental Financial Accounting Standards Board (FASB) and early implementers of FASAB requirements) have reported asbestos-related liability costs;
 - b. Researched and reviewed how respondents to FASB Interpretation No. (FIN) 47, *Accounting for Conditional Asset Retirement Obligations* (now FASB Accounting Standards Codification (ASC) 410-20), *Asset Retirement Obligations*, and others, have reported asbestos-related liability costs;
 - c. Sent a poll on agency readiness for implementation of Technical Bulletin 2006-1 to Agriculture, Commerce, Defense, Energy, General Services Administration, Health and Human Services, Homeland Security, Housing and Urban Development, DOI, Justice, Labor, National Aeronautics and Space Administration, National Science Foundation, State, Transportation, Treasury, Veterans Affairs, the Financial Statement Audit Network listserv, and participants of the Accounting and Auditing Policy Committee Asbestos Subgroup;
 - d. Organized an agency roundtable on implementation of Technical Bulletin 2006-1 to provide an opportunity for the federal community to:

-
- i. learn about others' experiences and methodology for estimating asbestos cleanup costs per the requirements of:
 - 1. FASAB SFFAS 6, *Accounting for Property, Plant, and Equipment, Chapter 4, Cleanup Costs*; and Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*; and,
 - 2. FASB ASC 410-20, *Asset Retirement Obligations*
 - ii. discuss best practices and issues surrounding the implementation of Technical Bulletin 2006-1; and,
- e. Actively sought participants that would be willing to share different methodologies and best practices related to reporting of asbestos-related liabilities at the roundtable.
- A6. Based on staff's research and outreach, the majority of agencies believe they have taken the steps necessary to implement Technical Bulletin 2006-1 for fiscal year 2012. However, of the agencies responding to staff's readiness poll, the three agencies that responded that they would not be ready for a 2012 implementation data, collectively own over 60% of the total number of buildings and over 49% of the total square footage reported on the fiscal year 2009 Federal Real Property Statistics Report.¹
- A7. At the June 22, 2011, meeting, staff briefed FASAB board members on the results of its research and outreach and answered questions related to DOI's request and staff's recommendation. A representative from DOI who was observing the meeting responded to members' questions about the current status of its efforts and plans for implementation.
- A8. DOI is actively working towards developing a reasonable estimate of their asbestos-related liabilities, but has formally requested a little more time to finalize it. In addition, several other agencies that collectively own over half of the federal real property are not yet prepared for a 2012 implementation. With the information shared at the June 2011 FASAB roundtable on implementation of Technical Bulletin 2006-1 and the expectation that the Chief Financial Officers (CFO) Council will lead an effort to coordinate implementation through the sharing of relevant data and experience, staff believes DOI and other federal agencies will be better positioned to more effectively implement the reporting requirements. The planned joint efforts will likely lead to more cost effective implementation as well as more comparable results. To allow time for such efforts, a fiscal year 2013 implementation date is needed.

¹ Available online at GSA.gov.

A9. For those reasons, staff recommends that the effective date of Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*, be deferred for one additional year to enable DOI and other agencies to finalize their methodology and develop an estimate. Early implementation is strongly encouraged.

A10. In addition, to ensure that issues arising during the implementation effort are identified timely, staff plans to host an additional roundtable in early 2012.

Exposure Draft

A11. The exposure draft, *Extended Deferral of the Effective Date of Technical Bulletin 2006-1, Recognition and Measurement of Asbestos-Related Cleanup Costs*, was issued July 13, 2011, with comments requested by August 3, 2011. Upon release of the exposure draft, notices and press releases were provided to The Federal Register, *FASAB News*, *The Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, *the CPA Letter*, and *Government Accounting and Auditing Update*, The CFO Council, the Council of Inspectors General on Integrity and Efficiency, and the Financial Statement Audit Network, and, committees of professional associations generally commenting on exposure drafts in the past.

A12. To encourage responses, a reminder notice was provided to our Listserv on August 2, 2011.

Comment Letters

A13. Thirteen comment letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		1
Auditors		
Preparers and financial managers	12	

A14. The Board considered responses to the exposure draft at its August 24, 2011, meeting. Eleven of the 13 respondents were in favor of deferring the effective date. Two respondents did not comment on the proposal. Since there was no opposition to the deferral proposed in the ED, staff recommended that the proposal be issued as final.

A15. One respondent questioned whether there was a need for such a standard since there are vast differences between agencies and a “one size fits all” approach may not be the best one. The respondent suggested that FASAB consider deferring final implementation of Technical Bulletin 2006-1 until the ongoing efforts of FASAB and the CFO Council to

coordinate implementation of Technical Bulletin 2006-1 are complete. Staff believes deferring until the CFO Council coordinates could further delay implementation as other priorities arise. Staff recommends issuing the one-year deferral.

A16. Another respondent commented that, in order for an environmental liability (EL) to be present, there must be an existing law or regulation that requires cleanup. The respondent stated that, since asbestos is not currently required to be cleaned up until it becomes friable, non-friable asbestos is not an EL. The respondent asked for clarification and clear guidance on how non-friable asbestos could result in an EL. Staff notes that the Basis for Conclusions (BfC) of Technical Bulletin 2006-1 includes a discussion regarding why there is an accounting liability for cleanup of non-friable asbestos even though there is no EL for cleanup of asbestos until it becomes friable. The accounting liability is based on the FIN 47 (ASC 410-20) premise that "no building lasts forever." The difference between the two liabilities is further discussed in pars. A13 and A14 from the BfC in Technical Bulletin 2006-1:

A13. As noted in paragraph 5, asbestos-related cleanup costs includes cleanup costs related to both friable and nonfriable asbestos-containing material. Under the asbestos NESHAP [National Emissions Standards for Hazardous Air Pollutants], friable asbestos is currently required by law to be removed, contained, and properly disposed of in the context of a demolition or renovation of a covered facility. There is no immediate requirement for the federal government to remove nonfriable asbestos in good condition that is not currently posing a health threat. However, the future repair, removal, renovation, demolition or other disturbance of asbestos-containing material may cause the asbestos to become friable and, because of limitation on the life of PP&E other than land, it is inevitable that these actions will occur. Thus, the event triggering the liability is the existence of asbestos in federal property, plant, and equipment, not a legal requirement to remove, contain, or dispose of the asbestos. Therefore, the accounting treatment for asbestos provided for in this technical bulletin is based on the best estimate of the costs that will be incurred in the future for removal, containment, or disposal of asbestos that exists in federal property, plant, and equipment as of the reporting date. The ability of the federal government to sell the federal property, plant, and equipment or otherwise dispose of it in the future without incurring any asbestos-related cleanup costs may affect measurement of the liability but does not negate the existence of the liability as of the reporting date.

A14. It is important to note that the requirement to estimate a liability for asbestos-related cleanup costs and the requirement to actually perform asbestos-related cleanup are two completely separate requirements. It is not within the scope or the intent of accounting standard-setters to establish what asbestos-related cleanup will be required and when. This must be determined by reference to applicable law. Furthermore, this technical bulletin does not intend to imply that recognizing a liability for asbestos-related cleanup costs in any way reflects a judgment about the legal obligation of the federal government for asbestos-related cleanup. The purpose of this technical bulletin is to provide guidance that will result in the more consistent and timely recognition of an accounting liability.

A17. Another respondent noted overall agreement with the one-year deferral but stated that the Board should adopt DOI's request that the information be reported as RSI in addition to the one-year deferral. This suggestion cannot be adopted through a technical bulletin since it would require an amendment to an existing Statement of Federal Financial Accounting Standards.

A18. The Board has reviewed this Technical Bulletin, and a majority of its members do not object to its issuance.

Technical Bulletin 2017-1: Intragovernmental Exchange Transactions

Status

Issued	November 1, 2017
Effective Date	Effective upon issuance.
Affects	This TB clarifies SFFAS 5 and SFFAS 7 regarding intragovernmental exchange transactions.
Affected by	None.

Summary

This Technical Bulletin (TB) clarifies existing standards regarding intragovernmental exchange transactions. Statement of Federal Financial Accounting Standards (SFFAS) 5, *Accounting for Liabilities of the Federal Government*, and SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*, define exchange transactions and exchange revenue respectively. However, neither fully addresses the unique nature of intragovernmental transactions. This TB provides guidance to aid in determining whether intragovernmental arrangements are exchange transactions. Specifically, it addresses whether value has been sacrificed and received by the parties to a transaction. Generally, if both parties agree that value has been exchanged (that is, each asserts that value is received and sacrificed), identify the nature of the value received and sacrificed, and demonstrate exchange of something of value, then the transaction should be considered an exchange transaction. This is true even if there is a significant difference in the values exchanged or between the value received and the cost incurred to obtain the value.

This TB improves the reporting of revenue and cost information by ensuring that transactions are appropriately classified. It also reduces the barriers to and cost of adopting generally accepted accounting principles.

Materiality

The provisions of this TB need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Summary	1
Technical Guidance	3
Scope	3
Effective Date	7
Appendix A: Basis for Conclusions	8

Technical Guidance

Scope

1. **What reporting entities are affected by this Technical Bulletin (TB)?**
2. This guidance applies to all reporting entities that present general purpose federal financial reports (GPFFRs) in conformance with generally accepted accounting principles (GAAP) as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
3. **What accounting practices are addressed in this TB?**
4. This TB guides identification of intragovernmental exchange transactions. This TB does not address recognition and measurement of exchange transactions.
5. **When one federal entity (the providing entity) arranges for a third-party to perform services for another federal entity (the receiving entity) (for example, outsourcing such as arranging for an office lease for another federal entity) and both the providing and the receiving entity sacrifice and receive value in the transaction, is the entire transaction an exchange transaction?**
6. Yes, if the transaction meets the definition of an exchange transaction then the entire transaction is an exchange transaction.¹ Therefore, the providing entity should record exchange revenue for the full amount the providing entity billed to the receiving entity;² the receiving entity should record expense and/or a capitalized asset consistent with GAAP for the full amount payable to the providing entity. This is true even if the providing entity does not fully recover its administrative costs or plays only a minor role in the transaction. For example, the service provided may be limited to coordinating funding, facilitating transactions, negotiating contracts, and/or providing other related arrangements.

¹As discussed in paragraph 10, if both parties agree that value has been exchanged (that is, each asserts that value is received and sacrificed), identify the nature of the value received and sacrificed, and demonstrate exchange of something of value, then the transaction should be considered an exchange transaction.

²The providing entity incurs the costs of providing the service such as paying contractors, employees, and other resources providers. The receiving entity then pays the providing entity.

-
7. SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*, paragraph 33 defines exchange revenue as "inflows of resources to a Government entity that the entity has earned. They arise from exchange transactions, which occur when each party to the transaction sacrifices value and receives value in return." The full amount billed to customers should be recognized as exchange revenue. Even when the service is limited, such as being an intermediary to third-parties, amounts received are appropriately classified as exchange revenue. The providing entity earns the full amount of the payment by ensuring that the receiving entity's criteria are met. Exchange transactions contrast with nonexchange transactions where no value is expected or received by one of the parties.
 8. Further, both the providing and receiving entity should report the full cost of the transaction. SFFAS 4, *Managerial Cost Accounting Standards and Concepts*, as amended requires entities generally to recognize the full cost. Paragraph 108 adds "If an entity provides goods or services to another entity, regardless of whether full reimbursement is received, the providing entity should continue to recognize in its accounting records the full cost of those goods or services." Recognizing the full cost facilitates an assessment of the performance of both entities. For example, the full cost of outsourced services is relevant to assessing how well the providing entity performed its role regarding the outsourced services. For the receiving entity, the full cost is relevant to assessing the efforts undertaken during the reporting period.
 9. **Is it necessary to consider whether the overall value to each party in the arrangement is approximately equal or whether the value to each party is approximately equal to the cost in determining whether the transaction is an exchange transaction?**
 10. No, SFFAS 7 requires only that some value is received and sacrificed by both parties to qualify as an exchange transaction. Also, SFFAS 7 acknowledges that intragovernmental arrangements are between parties under common control; such arrangements are non-market transactions.³ For non-market transactions, the value received in return for the revenue given may not be equivalent. Generally, if both parties agree that value has been exchanged (that is, each asserts that value is received and sacrificed), identify the nature of the value received and sacrificed, and demonstrate exchange of something of value, then the transaction should be considered an exchange transaction. This is true even if there is a significant difference in the values exchanged or between the value received and the cost incurred to obtain the value. Further, whether or not the providing entity incurs net revenue or net cost as a result of the transaction does not affect the classification.

³SFFAS 7, par. 46(b).

11. SFFAS 7, paragraph 111 recognizes that exchange transactions may "occur between entities within the Government, sometimes as stipulated by law and in other cases by mutual agreement." Consequently, classification as an exchange transaction is not dependent on whether the transaction is stipulated by law, policy, or by mutual agreement of the parties.

12. What does "sacrifice value" mean?

13. Value may be sacrificed in many ways including by:

- a. making a payment
- b. providing something of value (such as an item of property)
- c. performing a service (such as consulting, advising or informing another party), or
- d. arranging a contract or agreement or coordinating funding on behalf of another party.⁴

14. In some cases, the value sacrificed may not be measurable. In addition, the act of sacrificing value may provide value to both parties. For example, providing a consulting service may result in knowledge of benefit to both parties to the transaction as well as to others. The inability to measure the value sacrificed and the fact that the good or service is of continuing value to the provider, and possibly to others, does not mean the transaction is not an exchange transaction. As an exchange transaction, recognition of cost (or capitalized asset) and revenue should be based on the applicable standards. That is, it is not necessary to establish the "value" exchanged in order to recognize cost and/or revenue.⁵

15. What types of value may be considered sacrificed and received for an intragovernmental transaction to be classified as an exchange transaction?

16. As noted earlier, intragovernmental transactions are between parties under common control; such arrangements are non-market transactions. If the parties agree that value has been exchanged, identify the nature of the value exchanged, and demonstrate that the exchange occurred then the transaction qualifies as an exchange transaction. Government operations are increasingly integrated; particularly where common goals require a

⁴SFFAS 4, par. 106-107.

⁵For example, SFFAS 4, par. 15 defines "cost" as "the monetary value of resources used or sacrificed or liabilities incurred to achieve an objective, such as to acquire or produce a good or to perform an activity or service."

coordinated effort. Each party to a transaction should assess whether the transaction provides value.⁶

17. The party's classification of the transaction is particularly important because exchange transactions affect the gross and net cost of each reporting entity. If a party improperly identifies the transaction as a non-exchange transaction, the amounts would be reported on the statement of changes in net position which would misstate net cost during the reporting period. To avoid misstating net cost, a reporting entity's assertion that value was sacrificed and received when combined with identification of the nature and receipt of that value should result in classification as an exchange transaction.
18. Parties considering whether they sacrificed and received value may consider value that is:
 - a. direct (such as goods or services made available to them through the actions of the other party);
 - b. indirect (such as goods or services made available to support their mission as a result of the actions of the other party);
 - c. tangible (such as property, plant, or equipment);
 - d. intangible (such as information systems, written materials, or information);
 - e. quantitative (such as a specific amount of a good or service); or
 - f. qualitative (such as guidance or advice that may not be measurable).
19. The benefits of a transaction may not be exclusively for the parties to the transaction. Notwithstanding this fact, the transaction should be classified as an exchange transaction as long as the providing and receiving entities agree that they sacrifice and receive value of an identified nature as a result of the transaction.
20. Further, reimbursements for certain goods and services may be made by some but not all entities benefitting from such goods and services. The failure of some to make reimbursements does not affect the transaction between the parties.

⁶Note that this TB should be applied in determining whether a transaction is exchange or non-exchange for purposes of applying GAAP. It does not determine treatment for budgetary purposes. The budgetary term "transfer" is broad and may include transactions appropriately classified as exchange transactions for GAAP purposes. Treatment of a transaction as a budgetary transfer does not preclude its classification as an exchange transaction under GAAP. Guidance regarding classification for budgetary purposes is provided by the Office of Management and Budget.

Effective Date

21. The requirements of this TB are effective upon issuance.

The provisions of this Technical Bulletin need not be applied to immaterial items.
--

Appendix A: Basis for Conclusions

The Federal Accounting Standards Advisory Board has authorized its staff to prepare Technical Bulletins to provide timely guidance on certain financial accounting and reporting problems, in accordance with the Board's rules of procedure, as amended and restated through December 2003, and the procedures described in FASAB Technical Bulletin 2000-1, "Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance." The provisions of Technical Bulletins need not be applied to immaterial items.

This appendix discusses some factors considered significant by staff in reaching the conclusions in this Technical Bulletin. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the technical guidance section--not the material in this appendix--should govern the accounting for specific transactions, events or conditions.

This guidance may be affected by later documents. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that affect this guidance. Within the text of the documents, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

- A1. In 2014, the Department of Defense (DoD) requested the Federal Accounting Standards Advisory Board's (FASAB or "the Board") consideration of a project after identifying several financial reporting areas of concern and related audit challenges. The Board agreed to undertake a project to address these areas by providing practical guidance within the framework of existing accounting standards and, where necessary, by providing the appropriate guidance to address issues not clearly addressed within the framework of existing accounting standards.
- A2. This Technical Bulletin (TB) is proposed in response to a request for guidance related to certain intragovernmental transactions. The guidance addresses transactions among components that DoD performs throughout execution of its mission that cannot be addressed effectively without further guidance. Also, it is believed that this guidance may assist other federal entities in applying existing accounting standards to similar transactions.
- A3. This TB addresses how to identify intragovernmental exchange transactions. DoD raised these questions regarding receipts resulting from Economy Act⁷ orders. One question is whether to record exchange revenue for only the portion of goods/services provided to other

⁷The Economy Act (31 U.S.C. 1535) authorizes agencies to enter into agreements to obtain supplies or services from another agency.

agencies that the agency performs itself or for the total cost recovered from other agencies including the reimbursement of costs of goods/services outsourced to other Federal agencies or vendors. This guidance is not limited to Economy Act orders because GAAP applies based on the substance of a transaction rather than the form.

- A4. This TB does not address recognition and measurement of exchange transactions. Existing standards adequately address the timing of recognition as well as the amount to be recognized.

Exchange Transactions

- A5. SFFAS 5, *Accounting for Liabilities of the Federal Government*, paragraph 23 states that "an exchange transaction arises when each party to the transaction sacrifices value and receives value in return. There is a two-way flow of resources or of promises to provide resources." In the specific case DoD refers to, DoD is arranging for a lease on behalf of another entity. Administrative services provided by DoD are a small part of the overall service associated with the lease.
- A6. Nonetheless, the providing entity (DoD) receives value through the payments from the receiving entity and sacrifices value through incurring the cost to acquire the good or service from the third-party for the receiving entity. The receiving entity receives value through the good or service provided by the providing entity and sacrifices value through payments to the providing entity. The full amount of the transaction qualifies as an exchange transaction.
- A7. The providing entity should record the full amount billed to the receiving entity as exchange revenue and the receiving entity should record the total amount it is billed as an expense or capitalized asset consistent with GAAP. The transaction does not qualify as a transfer-in/out--a nonexchange transaction--because some value is identified by both parties as being sacrificed and received (or acquired). In contrast, per SFFAS 5, paragraph 24, "a nonexchange transaction arises when one party to a transaction receives value without directly giving or promising value in return."
- A8. The specific case presented raises the question of whether the recovery of the cost of services the providing entity "outsources to other Federal agencies and/or commercial vendors" should be reported as a transfer-in rather than as exchange revenue. Presumably, if it was appropriate to classify the recovery of the cost as a transfer-in then the corresponding cost for the outsourced services would be classified as a transfer-out to ensure that all the outsourced amounts were excluded from the Statement of Net Cost. This issue is directly addressed in SFFAS 4, paragraphs 108-109. Specifically, paragraph 108 states "If an entity provides goods or services to another entity, regardless of whether full reimbursement is received, the providing entity should continue to recognize in its

accounting records the full cost of those goods or services. The full costs of the goods or services provided should also be reported to the receiving entity by the providing entity."

- A9. SFFAS 4 does not make a distinction between full cost paid for administrative services versus costs paid to other federal agencies or commercial vendors. Treating the recovery of third-party amounts as transfers-in and the associated costs as transfers-out would be contrary to the guidance in SFFAS 4 intended to reveal the full costs on both the providing and receiving entities' Statements of Net Cost.
- A10. SFFAS 7 does not require an assessment of the value given and received by each party in exchange transactions because the standards do not define exchanges as being of approximately equal value. In intragovernmental transactions, the providing entity may or may not provide a significant amount of value in relation to the contract. Even when the value of the administrative services is small in relation to the third-party services or the providing entity is not reimbursed or not fully reimbursed for its administrative services, the providing entity is to report the full cost of the transaction⁸ and recognize exchange revenue for any amounts billed. For example, the providing entity may simply place an order under an existing contract or prepare funding documents.
- A11. In fact, the parties to the transaction may not be permitted to establish fair value exchanges. When an entity provides goods and services that consist of arranging a contract, such as a lease agreement with a commercial vendor, the entity may be reimbursed for the contract cost as well as an administrative fee, for an amount less than these two cost components, or for an amount more than these two cost components. Nonetheless, the full reimbursement qualifies as exchange revenue. Therefore, the providing entity recognizes exchange revenue for the total amount billed. SFFAS 7 does not provide guidance regarding the value given or received. As noted above, intragovernmental transactions are between parties under common control; such arrangements are non-market transactions and, therefore, may present unique challenges regarding the sacrifice and receipt of value between entities under common control. This TB provides that the parties to the transaction should determine whether value was sacrificed and received, identify the nature of those values, and demonstrate the exchange occurred (see par. 16).
- A12. In addition, the TB discusses unique circumstances such as exchanges of value where other parties also benefit from the transaction. For example, FASAB is funded by its sponsors in a joint effort to provide accounting standards for use by all federal reporting entities. Clearly, each sponsor believes value is provided but it would provide little value to determine whether that value equals the amount of funding for the Board and how that value might be affected by the fact that all reporting entities--including entities not providing

⁸SFFAS 4, par. 108.

funding to the Board--receive the accounting standards. Notwithstanding the delivery of accounting standards to all federal agencies, each sponsor should recognize the funding provided as a cost consistent with this being an exchange transaction. Treatment of the funding as a transfer-out, as if this was a non-exchange transaction, would misstate the cost to each party.

Summary of Outreach Efforts and Responses

- A13. The exposure draft (ED), *Intragovernmental Exchange Transactions*, was issued September 5, 2017, with comments requested by September 29, 2017.
- A14. Upon release of the ED, FASAB provided notices and press releases to the FASAB subscription email list, the Federal Register, *FASAB News*, the *Journal of Accountancy*, the Chief Financial Officers Council, the Council of the Inspectors General on Integrity and Efficiency, and committees of professional associations generally commenting on EDs in the past (for example, the Greater Washington Society of CPAs and the Association of Government Accountants Financial Management Standards Board).
- A15. 16 comment letters were received from preparers, auditors, professional associations, individuals and users of federal financial information. The Board considered responses to the exposure draft at its October 2017 meeting. Staff did not rely on the number in favor of or opposed to a given position. Staff considered each response and weighed the merits of the points raised. The respondents' comments are summarized below.
- A16. The majority of respondents generally agreed with the proposed guidance. Specifically, respondents believed the TB provided guidance to aid in determining whether intragovernmental arrangements were exchange transactions. One respondent neither agreed nor disagreed with the proposal. Certain respondents provided minor suggestions and editorial comments that were incorporated into the final guidance or addressed in the basis for conclusions.
- A17. One respondent that disagreed stated the proposed guidance has the potential to cause a major change in accounting practice, conflicts with SFFAS 7 (Appendix B) and 4, and introduces new criteria for determining when accounting events occur. As a result, the respondent believes it would be challenging for agencies and auditors to know what transactions the technical guidance applies to versus other FASAB standards.
- A18. FASAB staff considered carefully the potential that a major change in practice could result from this guidance. Based on initial research and positive feedback from 12 respondent federal departments and agencies, staff concluded that the guidance fills a void in the literature without causing a major change.

- A19. FASAB staff also considered whether the guidance conflicts with SFFAS 7, Appendix B. Appendix B provides guidance for the classification of transactions including intragovernmental transactions but the guidance does not adequately address the receipt and sacrifice of value. For example, par. 315 identifies "intragovernmental sales of goods and services by a fund other than a revolving fund" as instances when "the cost of providing goods or services is defrayed in whole or in part by selling the goods or services provided. Each party receives and sacrifices something of value. The proceeds are exchange revenue." The technical bulletin aids in determining when each party receives and sacrifices something of value. In doing so, it augments but does not conflict with SFFAS 7.
- A20. Certain respondents requested that there be an explanation of how this proposed guidance would be affected by the exposure draft, *Amending Inter-entity Cost Provisions*⁹ if it is approved by the Board. The proposal would amend existing standards by limiting the reporting of inter-entity costs to business-type activities. However, personnel benefits and Treasury Judgment Fund settlements are required to be imputed by GAAP standards other than SFFAS 4, and those standards ensure they continue to be imputed by all reporting entities. Further, the modifications proposed in the exposure draft include the option for future recognition of other inter-entity costs if the Office of Management and Budget decides to do so. Staff believes it is most appropriate to state the receiving entity "should record the total amount it is billed as an expense or capitalized asset consistent with GAAP" as this would be accurate going forward.¹⁰
- A21. Certain respondents requested clarity regarding if the receiving entity is directly billed¹¹ by the vendor. Staff notes that that paragraph 13 explains the ways value may be sacrificed [making a payment, providing something of value, performing a service, or arranging a contract or agreement or coordinating funding on behalf of another party] and paragraph 18 explains the type of value that should be considered [direct, indirect, tangible, intangible, quantitative, and qualitative]. If no value is sacrificed, such as for amounts directly billed to and paid by the receiving entity, then the transaction would not meet the definition of an exchange transaction.

⁹*Amending Inter-entity Cost Provisions* was released for comment on September 1, 2017 with comments requested November 30, 2017.

¹⁰Specifically, the phrase "consistent with GAAP" would apply to reporting entities required or not required to impute costs. It would also be relevant before and after *Amending Inter-entity Cost Provisions* is deliberated by the Board, and remain true if the proposal is approved or not. At this time staff cannot state if *Amending Inter-entity Cost Provisions* will be approved by the Board.

¹¹For example, the receiving entity's funds may be directly placed on a contract; therefore the providing entity does not bill the receiving entity.

Board Review

A22. The Board has reviewed this Technical Bulletin, and a majority of members do not object to its issuance.

Technical Bulletin 2017-2: Assigning Assets to Component Reporting Entities

Status

Issued	November 1, 2017
Effective Date	Effective upon issuance.
Affects	This TB clarifies SFFAS 6 regarding which component reporting entity should report an asset.
Affected by	None.

Summary

Assets may be owned by one component of a larger reporting entity, such as a department, but used and/or funded by another component of the same entity. Individual standards addressing asset recognition and related reporting do not provide detailed guidance to resolve the question of which component reporting entity should report an asset. This is especially challenging for large, complex departments, such as the Department of Defense, that have numerous components and sub-components.

This Technical Bulletin (TB) provides guidance to address areas not directly covered in existing Statements and clarifies existing standards. The TB provides that assets may be assigned by a reporting entity to its component reporting entities on a rational and consistent basis. For example, an asset may be assigned to the component reporting entity holding legal title, funding the asset, using the asset in its operations, or on another rational and consistent basis. There should be a process in place to ensure all assets within a reporting entity are assigned. The TB provides that assets may only be assigned by a component reporting entity to its own sub-component reporting entities (such as bureaus, components, or responsibility segments within the same larger reporting entity or department).

This TB facilitates reporting for large and complex organizations so that reporting is better aligned with their operations and results in less costly financial reporting by permitting the reporting entity to align reporting with established funding and governance structures. This TB also reduces the barriers to and cost of adopting generally accepted accounting principles.

Materiality

The provisions of this TB need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Technical Guidance

Scope

1. **What reporting entities are affected by this Technical Bulletin?**
2. This guidance applies to all component reporting entities that present general purpose federal financial reports (GPFFRs) in conformance with generally accepted accounting principles (GAAP) as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
3. **What accounting practices are addressed in this Technical Bulletin?**
4. This Technical Bulletin (TB) provides guidance regarding which component reporting entity should report an asset, the related depreciation, and deferred maintenance and repairs. This TB does not provide guidance regarding recognition of expenses related to use of an asset such as fuel for vehicles.
5. **Are there certain assets that are excluded from this guidance?**
6. Yes, the Fund Balance with Treasury is excluded from this guidance. In addition, any assets that are not assets of the reporting entity cannot be assigned by the reporting entity to its component reporting entities.
7. **How should assets be assigned to component reporting entities?**
8. Assets may be assigned by a reporting entity to its component reporting entities on a rational and consistent basis. For example, an asset may be assigned to the component reporting entity holding legal title, funding the asset, using the asset in its operations, or on another rational and consistent basis. Different bases may be used for assigning different assets. A policy for assigning assets to component reporting entities should be established, documented and followed consistently. There should be a process in place to ensure all assets within a reporting entity are assigned. In addition, assets may only be assigned by a component reporting entity to its own sub-component reporting entities (such as bureaus, components, or responsibility segments within the same larger reporting entity or department).¹

¹In the year of implementation, assets assigned to another component reporting entity should be treated as transfers of assets per SFFAS 7, *Accounting for Revenue and Other Financing Sources*.

-
9. **Is there additional guidance as to what constitutes a reporting entity, a component reporting entity, and a sub-component reporting entity?**
10. Yes, SFFAS 47, *Reporting Entity*, provides the framework for determining what organizations (for example, component reporting entities or sub-components) should be included in the reporting entity's GPFFRs for financial accountability purposes. SFFAS 47 also provides that "component reporting entity" is used broadly to refer to a reporting entity within a *larger reporting entity*.² Examples of component reporting entities include organizations such as executive departments, independent agencies, government corporations, legislative agencies, and federal courts. Component reporting entities also include *sub-components* (those components included in the GPFFR of a larger component reporting entity) that may themselves prepare GPFFRs. One example is a bureau that is within a larger department that prepares its own standalone GPFFR.

Disclosure Requirements

11. Reporting entities should describe the policies used to assign significant assets.

Effective Date

12. The requirements of this TB are effective upon issuance.

The provisions of this Technical Bulletin need not be applied to immaterial items.
--

²The larger reporting entity could be the government-wide reporting entity or another component reporting entity.

Appendix A: Basis for Conclusions

The Federal Accounting Standards Advisory Board (FASAB or "the Board") has authorized its staff to prepare Technical Bulletins to provide timely guidance on certain financial accounting and reporting problems, in accordance with the Board's rules of procedure, as amended and restated through December 2003, and the procedures described in FASAB Technical Bulletin 2000-1, "Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance." The provisions of Technical Bulletins need not be applied to immaterial items.

This appendix discusses some factors considered significant by staff in reaching the conclusions in this Technical Bulletin. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the technical guidance section-not the material in this appendix-should govern the accounting for specific transactions, events or conditions.

This guidance may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this guidance. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

Department of Defense Implementation Guidance Request Project

- A1. Since 2014, the Department of Defense (DoD) has requested the FASAB's consideration of several financial reporting areas of concern. While DoD continues its efforts to comply with the Chief Financial Officers Act of 1990 (as amended), it has noted certain challenges. The Board agreed to undertake this project to address an issue that was not addressed within the framework of existing accounting standards.
- A2. Assets may be owned by one component of a large department but used and/or funded by another component. Individual Statements addressing asset recognition and related reporting do not provide detailed guidance to resolve the question of which component reporting entity should report an asset as well as related amounts such as deferred maintenance and repair.
- A3. This is especially challenging for large, complex departments such as DoD that have numerous component reporting entities and sub-components. Many specialized components provide services to other components of DoD. There are many complex

relationships among the components and sub-components of DoD. In addition, law may prohibit one component from owning assets; instead, another component owns the assets and hosts the component using the assets. In such cases, there may or may not be a financial transaction related to use of the assets.

- A4. For example, this situation presents itself when one service, such as the U.S. Navy, has possession and use of a helicopter that was purchased (owned) by the U.S. Air Force. In using the helicopter, the Navy alters the state of the equipment by making major improvements that extend the useful life and increase its capabilities. If the Air Force carries the base asset, is it appropriate for the Navy to carry the improvement? Alternatively, it may be more appropriate for the Air Force to recognize the entire asset, including improvements funded by the Navy. There are numerous examples such as this regarding relationships among the components and sub-components of DoD, shared ownership of assets, improvements, and maintenance of such equipment.
- A5. This Technical Bulletin (TB) is intended to provide guidance to address areas not directly covered in existing Statements. This technical guidance clarifies existing standards by providing that assets may be assigned to component reporting entities within a larger component reporting entity on a rational and consistent basis. For example, an asset may be assigned to the component reporting entity holding legal title, funding the asset, using the asset in its operations, or on another rational and consistent basis.
- A6. Reporting entities should establish and document a policy for assigning assets to component reporting entities and follow it consistently. In the year of implementation, assets assigned to another component reporting entity should be treated as transfers of assets per SFFAS 7, *Accounting for Revenue and Other Financing Sources*. Any change in such policy would be reported in accordance with SFFAS 21. There should be a process in place to ensure all assets within a reporting entity are assigned. In addition, assets may only be assigned by a component reporting entity to its own sub-component reporting entities (such as bureaus, components, or responsibility segments within the same larger reporting entity or department).
- A7. This TB is permissive and does not require any agency to change accounting practices. The flexibility may be useful for other federal agencies with complex structures or multiple sub-components.
- A8. Appendix B: Illustration offers a non-authoritative diagram that may be useful in understanding the application of this guidance.

Summary of Outreach Efforts and Responses

- A9. The exposure draft (ED), *Assigning Assets to Component Entities*, was issued September 12, 2017, with comments requested by October 13, 2017.
- A10. Upon release of the ED, FASAB provided notices and press releases to the FASAB subscription email list, the Federal Register, *FASAB News*, *the Journal of Accountancy*, the Chief Financial Officers Council, the Council of the Inspectors General on Integrity and Efficiency, and committees of professional associations generally commenting on EDs in the past (for example, the Greater Washington Society of CPAs and the Association of Government Accountants Financial Management Standards Board).
- A11. 12 comment letters were received from preparers, auditors, professional associations, individuals and users of federal financial information. The Board considered responses to the exposure draft at its October 2017 meeting. Staff did not rely on the number in favor of or opposed to a given position. Staff considered each response and weighed the merits of the points raised. The respondents' comments are summarized below.
- A12. The majority of respondents (8 out of 12) generally agreed with the proposed guidance. Specifically, respondents believed the TB provided guidance to address areas not directly covered in existing Statements and clarifies that assets may be assigned by a reporting entity to its component reporting entities on a rational and consistent basis. One respondent neither agreed nor disagreed with the proposal. Three respondents disagreed with the proposal. Certain respondents provided minor suggestions and editorial comments that were incorporated into the final guidance or addressed in the basis for conclusions.
- A13. FASAB staff considered carefully the potential that a major change in practice could result from this guidance. Based on initial research and positive feedback from 7 respondents, staff concluded that the guidance fills a void in the literature without causing a major change. Specifically, this guidance is permissive and does not require any agency to change accounting practices. It is meant to afford flexibility for federal agencies with complex structures.
- A14. Two respondents that disagreed stated the proposed guidance has the potential to cause a change in accounting practice and conflicts with Statement of Federal Financial Accounting Concepts 5, *Definitions of Elements and Basic Recognition Criteria for Accrual-Basis Financial Statements*. Although concepts statements guide the Board's development of accounting and reporting standards, the GAAP hierarchy provides that statements of federal financial accounting concepts are not GAAP. Instead, concepts statements constitute "other literature" and may only be relied upon by financial statement preparers and auditors to resolve specific accounting issues in the absence of GAAP literature.

-
- A15. SFFAC 5, paragraphs 10 through 16 discuss at a conceptual level associating elements with an entity. Based on these concepts, an asset would be recognized by the component reporting entity having a comprehensive relationship to it. If there is no component reporting entity having a comprehensive relationship, then the asset should be reported by the component reporting entity most responsible for managing it. Currently, individual standards addressing asset recognition and related reporting do not provide detailed guidance useful to resolving the question of what entity should report the asset as well as related amounts such as deferred maintenance and repair.
- A16. Staff does not agree that this TB conflicts with SFFAC 5. This TB provides guidance that would be helpful in resolving assignment of asset questions that were not readily resolved through consideration of concepts level guidance. For complex departments with many specialized sub-component reporting entities, there would be many cases for which there is no component reporting entity having a comprehensive relationship to the asset. This TB makes explicit that reporting entities should establish a policy for assigning assets. While judgment may be exercised to determine which component reporting entity is most responsible for managing such assets, this TB provides that such judgments should be systematic and rational.
- A17. Two respondents that disagreed requested clarification of the use of transfers as detailed in SFFAS 7, *Accounting for Revenue and Other Financing Sources*. Staff added a footnote to clarify the difference between an asset assignment and asset transfer.
- A18. The majority of respondents (9 out of 12) also agreed that reporting entities should describe the policies used to assign significant assets. One respondent neither agreed nor disagreed with the proposal. Two respondents that disagreed with the proposed disclosure requirements stating the proposed requirement would increase the amount of disclosures and related costs. Staff notes this guidance is permissive and does not require any agency to change accounting practices. It is meant to afford flexibility for federal agencies with complex structures; the disclosure requirements are for policies used to assign *significant* assets.

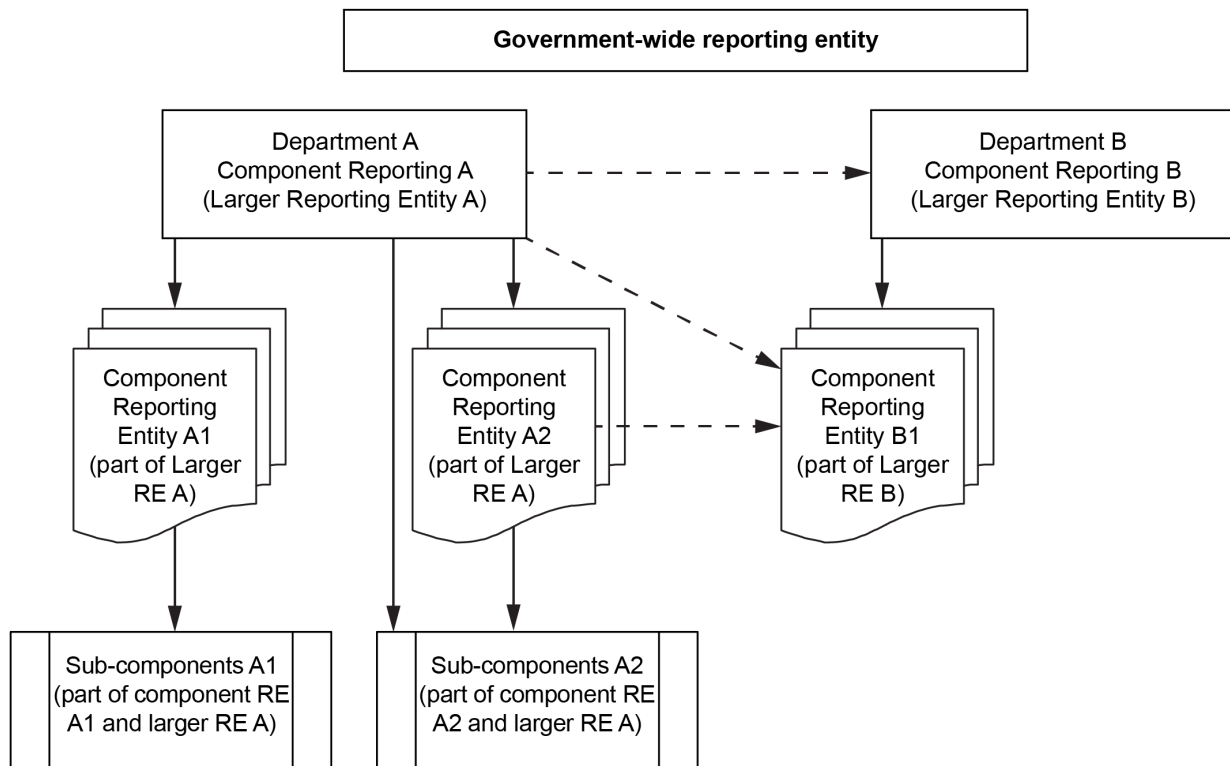

Board Review

- A19. The Board has reviewed this Technical Bulletin, and a majority of members do not object to its issuance.

Appendix B: Illustration

This diagram illustrates how the provisions of this Technical Bulletin could be applied to organizations. It is presented for illustrative purposes only and is nonauthoritative. It does not:

1. represent actual organizations,
2. provide a thorough analysis of all the facts and circumstances that are needed to reach a conclusion in practice,
3. indicate a preferred method of analyzing facts and circumstances, and
4. substitute for the application of professional judgment to actual facts and circumstances.

Source: GAO.

Assets may only be assigned by a component reporting entity (Department) to its own sub-component reporting entities (such as bureaus, components, or responsibility segments within the same larger reporting entity or department). In the illustration, this would represent assignments connected with a solid line.

Assets may not be assigned to component (or sub-component) reporting entities that are not part of the same larger reporting entity. This would prohibit assigning assets across departments. In the illustration, these are depicted with a dashed line.

Technical Bulletin 2020-1: Loss Allowance for Intragovernmental Receivables

Status

Issued	February 20, 2020
Effective Date	Effective upon issuance.
Affects	This TB clarifies SFFAS 1, paragraphs 40-52 by providing that recognition of losses applies to both intragovernmental receivables and receivables from nonfederal entities.
Affected by	None.

Summary

This Technical Bulletin (TB) clarifies existing standards regarding accounts receivable and related recognition standards and reporting. Statement of Federal Financial Accounting Standards (SFFAS) 1, *Accounting for Selected Assets and Liabilities*, establishes the definition, recognition, measurement, and disclosure requirements for accounts receivable. SFFAS 1 provides for two types of receivables: receivables from federal entities, or intragovernmental receivables, and receivables from nonfederal entities. It requires separate reporting of the two types of receivables.

This TB clarifies SFFAS 1 by establishing that even though SFFAS 1 identifies the two types of receivables, the absence of explicit guidance distinguishing between the accounting of intragovernmental receivables and receivables from nonfederal entities does not mean the standards only apply to receivables from nonfederal entities. This TB also clarifies that recognition of losses, provided in paragraphs 40-52 of SFFAS 1, applies to both intragovernmental receivables and receivables from nonfederal entities.

The TB also clarifies SFFAS 1 by explaining the allowance approach is not a "write-off" of a receivable. Rather, it is a method for reporting an amount that the entity believes is realizable by requiring only accounts receivable, net of an allowance, to be reported on the financial statements. An allowance recognized in a reporting entity's financial statements does not alter the underlying statutory authority to collect the receivable or the legal obligation of the other intragovernmental entity to pay.

This TB facilitates consistent reporting of accounts receivable in accordance with generally accepted accounting principles.

Materiality

The provisions of this TB need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Technical Guidance	4
Scope	4
Effective Date	6
Appendix A: Basis for Conclusions	7
Appendix B: Abbreviations	13

Technical Guidance

Scope

1. **What reporting entities are affected by this Technical Bulletin (TB)?**
2. This guidance applies to all reporting entities that present general purpose federal financial reports (GPFFRs), including the consolidated financial report of the U.S. Government (CFR), in conformance with generally accepted accounting principles (GAAP) as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
3. **What accounting practices are addressed in this TB?**
4. This TB clarifies standards regarding accounts receivable and related recognition standards and reporting.
5. **Does the absence of explicit guidance distinguishing between the accounting of intragovernmental receivables and receivables from nonfederal entities in the accounts receivable standards in SFFAS 1, *Accounting for Selected Assets and Liabilities*, mean the standards only apply to receivables from nonfederal entities?**
6. No, the absence of explicit guidance distinguishing between (or not specifically referring to both) the accounting for intragovernmental receivables and receivables from nonfederal entities in the accounts receivable standards does not mean that the standards only apply to receivables from nonfederal entities.
7. Paragraph 40 of SFFAS 1 states, "The accounting standard for accounts receivable is set forth below." The standards provided in SFFAS 1 continue to refer to "accounts receivable" as such.
8. SFFAS 1 acknowledges that there are two types of receivables and provides for separate reporting in paragraph 42 as follows: "**Separate reporting.** Receivables from federal entities are intragovernmental receivables, and should be reported separately from receivables from nonfederal entities." Similarly, SFFAS 1 distinguishes between entity and non-entity receivables.
9. However, in making this distinction in paragraph 42, SFFAS 1 does not imply that the accounts receivable standards will distinguish between intragovernmental receivables and

receivables from nonfederal entities for other areas, such as recognition of loss allowances or disclosures. Instead, SFFAS 1 consistently refers to "receivables" or "accounts receivable" when discussing both types of receivable, just as it addresses recognition of receivables prior to identifying the two types of receivables for separate reporting in paragraph 42. The Federal Accounting Standards Advisory Board (FASAB or "the Board") made the distinction only when discussing the separate reporting. Therefore, other than where indicated, references to "receivables" and "accounts receivable" incorporate both intragovernmental receivables and receivables from nonfederal entities.

- 10. Does the guidance regarding recognition of losses provided in paragraphs 40-52 of SFFAS 1 apply to both intragovernmental receivables and receivables from nonfederal entities?**
11. Yes, guidance regarding recognition of losses provided in paragraphs 40-52 of SFFAS 1 applies to both intragovernmental receivables and receivables from nonfederal entities. As discussed in the previous question, the absence of explicit guidance distinguishing between the accounting for intragovernmental receivables and receivables from nonfederal entities in the accounts receivable standards of SFFAS 1 does not mean the standards only apply to receivables from nonfederal entities.
12. The accounts receivable standards in SFFAS 1 primarily refer to "receivables" and do not distinguish between specific types, with the exception of paragraph 42, which provides for separate reporting. SFFAS 1 details the recognition of receivables, the recognition of loss allowances, and disclosure by referring to "receivables" and not distinguishing between intragovernmental receivables and receivables from nonfederal entities. Paragraph 42 is the only paragraph that distinguishes between intragovernmental receivables and receivables from nonfederal entities by providing for the separate reporting of them.
- 13. Is there additional guidance regarding recognition of losses for intragovernmental receivables that should be considered, especially when a statute or law requires that the receivable be reimbursed?**
14. Where appropriate, the allowance for estimated uncollectible amounts should be recognized to reduce the gross amount of receivables to its net realizable value (that is, allowance approach). It is important to consider that the standard is to assess whether amounts recognized are realizable and that the allowance approach does not necessarily result in a "write-off" of a receivable. Instead, it is an adjustment needed to estimate the receivable to its net realizable value for reporting purposes.
15. In paragraph 131 of SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*, the Board acknowledges in

the basis for conclusions that an allowance for intragovernmental receivables may be appropriate, but may not always be needed:

16. The factors and criteria that are considered regarding intragovernmental receivables and recognition of losses should be documented in the reporting entity's departmental policy.
17. As explained, SFFAS 1 requires only accounts receivable, net of an allowance, to be reported on the financial statements. It does not require the write-off of a receivable. Further, recognizing an allowance on a reporting entity's financial statements does not alter the underlying statutory authority to collect the receivable or legal obligation of the other intragovernmental entity to pay. For example, intragovernmental receivables may represent payments that are required by statute, but this statutory requirement does not, in itself, eliminate the need of reporting an allowance for financial statement presentation.
18. Reporting entities are encouraged to disclose information that would provide transparency and explain intragovernmental receivables, such as what the receivables represent and efforts made to collect them.

Effective Date

19. The requirements of this TB are effective upon issuance.

The provisions of this Technical Bulletin need not be applied to immaterial items.
--

Appendix A: Basis for Conclusions

The Federal Accounting Standards Advisory Board (FASAB or "the Board") has authorized its staff to prepare Technical Bulletins to provide timely guidance on certain financial accounting and reporting problems, in accordance with the Board's rules of procedure, as amended and restated through October 2010, and the procedures described in FASAB Technical Bulletin 2000-1, "Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance." The provisions of Technical Bulletins need not be applied to immaterial items.

This appendix discusses some factors considered significant by staff in reaching the conclusions in this Technical Bulletin. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the technical guidance section-not the material in this appendix-should govern the accounting for specific transactions, events or conditions.

This guidance may be affected by later Statements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Statements that amend this guidance. Within the text of the Statements, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement for the rationale for each amendment.

Project History

Department of the Treasury Request

- A1. The Department of the Treasury (Treasury) raised a concern regarding the recognition of losses against intragovernmental receivables (for example, receivables stemming from transactions among federal entities). Treasury did not believe it was appropriate for a reporting entity to recognize a loss allowance for intragovernmental receivables, particularly in cases where the balances are required by statute to be repaid.
- A2. Treasury provided the example that it makes judgment claim payments on behalf of many federal reporting entities. Although reporting entities are required, in many cases by statute, to reimburse Treasury for some payments, many of these reimbursements are not made in a timely manner-raising questions about collectability.
- A3. SFFAS 1 indicates that losses should be recognized when it is more likely than not that some or all of the balance will not be collected. Treasury requested FASAB to review SFFAS 1 and provide clarifying guidance, noting the language in SFFAS 1 is vague. Specifically, Treasury believed SFFAS 1, paragraph 44 was not clear as to its application to intragovernmental receivables, implying that there could be a delineation in the application of allowance for doubtful accounts intragovernmental receivables from nonfederal entities.

-
- A4. Specifically, Treasury interpreted the absence of explicit guidance to mean FASAB has no specific view on intragovernmental receivables or did not intend to include it in the guidance for recognition of losses. Treasury further interpreted the absence of explicit guidance to mean that the accounting for and reporting of losses on intragovernmental receivables should be predicated on the inherent nature of those receivables-occurring between and among components of a single, legal entity and, in some cases, subject to statutory requirements. Consequently, Treasury issued a policy memo and the Bureau of the Fiscal Service made system changes to preclude agencies from reporting an allowance for losses of intragovernmental receivables to ensure consistent treatment government-wide.
- A5. However, some auditors raised concerns that Treasury's proposed policy (and system change) was inconsistent with GAAP. Therefore, certain agencies, based on concerns raised by auditors, could not conclude that there was adequate justification to change the accounting policy as suggested by Treasury.
- A6. As a result, Treasury requested FASAB to review this issue. At a minimum, Treasury believed that the intent of SFFAS 1, with respect to the accounting for and reporting of losses on intragovernmental receivables, was unclear. The Board agreed that guidance would resolve any uncertainty regarding SFFAS 1.

Current Standards

- A7. SFFAS 1 provides the accounting standards for accounts receivable and related recognition and reporting standards in paragraphs 40-52 as follows:

Accounts Receivable

40. Accounts receivable arise from claims to cash or other assets. The accounting standard for accounts receivable is set forth below.

41. **Recognition of receivables.** A receivable should be recognized when a federal entity establishes a claim to cash or other assets against other entities, either based on legal provisions, such as a payment due date, (e.g., taxes not received by the date they are due), or goods or services provided. If the exact amount is unknown, a reasonable estimate should be made. [See SFFAS 7, paragraph 53 for more.]

42. **Separate reporting.** Receivables from federal entities are intragovernmental receivables, and should be reported separately from receivables from nonfederal entities.

43. **Entity vs. Non-entity receivables.** Receivables should be distinguished between **entity receivables** and non-entity receivables. Entity receivables are amounts that a federal

entity claims for payment from other federal or nonfederal entities and that the federal entity is authorized by law to include in its obligational authority or to offset its expenditures and liabilities upon collection. **Non-entity receivables** are amounts that the entity collects on behalf of the U.S. government or other entities, and the entity is not authorized to spend. Receivables not available to an entity are non-entity assets and should be reported separately from receivables available to the entity.

44. **Recognition of losses due to uncollectible amounts.** Losses on receivables should be recognized when it is more likely than not that the receivables will not be totally collected. The phrase more likely than not means more than a 50 percent chance of loss occurrence.

45. An allowance for estimated uncollectible amounts should be recognized to reduce the gross amount of receivables to its net realizable value. The allowance for uncollectible amounts should be reestimated on each annual financial reporting date and when information indicates that the latest estimate is no longer correct.

46. **Measurement of losses.** Losses due to uncollectible amounts should be measured through a systematic methodology. The systematic methodology should be based on analysis of both individual accounts and a group of accounts as a whole.

47. **Individual account analysis.** Accounts that represent significant amounts should be individually analyzed to determine the loss allowance. Loss estimation for individual accounts should be based on (a) the debtor's ability to pay, (b) the debtor's payment record and willingness to pay, and (c) the probable recovery of amounts from secondary sources, including liens, garnishments, cross collections and other applicable collection tools.

48. The allowance for losses generally cannot be based solely on the results of individual account analysis. In many cases, information may not be available to make a reliable assessment of losses on an individual account basis or the nature of the receivables may not lend itself to individual account analysis. In these cases, potential losses should be assessed on a group basis.

49. **Group analysis.** To determine the loss allowance on a group basis, receivables should be separated into groups of homogeneous accounts with similar risk characteristics.

50. The groups should reflect the operating environment. For example, accounts receivable can be grouped by: (a) debtor category (business firms, state and local governments, and individuals), (b) reasons that gave rise to the receivables (tax delinquencies, erroneous benefit payments, trade accounts based on goods and services sold, and transfers of defaulted loans to accounts receivable), or (c) geographic regions (foreign countries, and domestic regions). Within a group, receivables are further stratified by risk characteristics.

Examples of risk factors are economic stability, payment history, alternative repayment sources, and aging of the receivables.

51. Statistical estimation by modeling or sampling is one appropriate method for estimating losses on groups of receivables. Statistical estimation should take into consideration factors that are essential for estimating the level of losses, including historical loss experience, recent economic events, current and forecast economic conditions, and inherent risks.

52. **Disclosure.** Agencies should disclose the major categories of receivables by amount and type, the methodology used to estimate the allowance for uncollectible amounts, and the total allowance.

- A8. The previous Board was consistent in the accounts receivable standards language in SFFAS 1. SFFAS 1 consistently refers to "receivables" or "accounts receivable" because the asset being discussed is Accounts Receivable. Therefore, these terms are used when discussing recognition of receivables, recognition of loss allowances, and disclosures.
- A9. The only time the distinction is made between intragovernmental receivables and receivables from nonfederal entities is in paragraph 42 of SFFAS 1, which is specific to the separate reporting of receivables. Therefore, there is no indication that a distinction would be made in other circumstances.

Other Factors Considered

- A10. While FASAB staff understand Treasury's position, staff concluded that this position does not justify recommending that the Board revise current standards. Current standards require the allowance approach and that is not a "write-off" of a receivable. Instead, it is an adjustment needed to estimate the amount that is realizable. The factors and criteria that are considered regarding intragovernmental receivables and recognition of loss allowances may be complex.
- A11. An allowance in a reporting entity's financial statements does not alter the underlying statutory authority to collect the receivable or legal obligation of the other intragovernmental entity to pay. For example, intragovernmental receivables may represent payments that are required by statute. However, the statutory requirement for payment of intragovernmental receivables does not, in itself, eliminate the need for an accounts receivable allowance for financial statement presentation, and the recognition of an allowance does not eliminate the need for the payment or collection of the receivable.
- A12. Therefore, it is important that a reporting entity policy regarding allowances and criteria for assessing collectability be documented. Reporting entities should consult with appropriate

government-wide offices to ensure proper monitoring, follow-up, and other practices are followed to the fullest extent practicable and comply with government-wide efforts to ensure timely payment and collection of intragovernmental receivables.

- A13. Reporting entities are encouraged to disclose information that would provide transparency and explain intragovernmental receivables, as appropriate. For example, in an effort to demonstrate accountability, reporting entities may choose to disclose information about their efforts to collect, secure funding to settle legally enforceable claims, and resolve disputes, if applicable. Reporting entities may also disclose material receivable amounts by reporting entity, an aging of receivables, and a narrative explanation regarding the allowances, if appropriate, including the reason for the allowances (for example disputed amounts or stated intent to not pay).

Summary of Outreach Efforts and Responses

- A14. The exposure draft (ED), *Loss Allowance for Intragovernmental Receivables*, was issued August 30, 2019, with comments requested by October 1, 2019.
- A15. Upon release of the ED, FASAB provided notices and press releases to the FASAB subscription email list, the Federal Register, the FASAB newsletter, the Journal of Accountancy, the Chief Financial Officers Council, the Council of the Inspectors General on Integrity and Efficiency, and committees of professional associations generally commenting on EDs in the past (for example, the Greater Washington Society of CPAs and the Association of Government Accountants Financial Management Standards Board).
- A16. Fourteen comment letters were received from preparers, auditors, professional associations, and users of federal financial information. The Board considered responses to the ED at its October 2019 meeting. Staff did not rely on the number in favor of or opposed to a given position. Staff considered each response and weighed the merits of the points raised. The respondents' comments are summarized below.
- A17. Respondents generally agreed with the proposed guidance. Specifically, respondents generally believed the TB clarifies guidance covered in existing Statements. The respondents generally agreed that the absence of explicit guidance distinguishing between the accounting of intragovernmental receivables and receivables from nonfederal entities in SFFAS 1 does not mean the standards only apply to receivables from nonfederal entities.
- A18. Respondents also generally agreed that the TB clarifies that recognition of losses provided in paragraphs 40-52 of SFFAS 1 applies to both intragovernmental receivables and receivables from nonfederal entities. In addition, it clarifies that an allowance recognized in

a reporting entity's financial statements does not alter the underlying statutory authority to collect the receivable or legal obligation of the other intragovernmental entity to pay.

A19. Although certain respondents agreed with the guidance, some expressed concern about the unresolved intragovernmental eliminations issue. There is much complexity regarding intragovernmental receivables and payables between federal entities. Further, the issues the federal government faces when there are differences prevents proper elimination during the preparation of the consolidated financial statements. Specific guidance regarding the elimination process and the related communications between federal agencies regarding the receivable/payable process should come from central federal agencies (Treasury and the Office of Management and Budget) and not contradict FASAB standards. The TB encourages reporting entities to disclose information that would provide transparency and explain intragovernmental receivables.

A20. Two respondents that noted agreement with the proposals suggested the guidance should provide examples of when a loss for an intragovernmental receivable should be recognized. Similarly, one respondent that disagreed stated that a loss allowance should not apply to a particular type of transaction. Developing and documenting criteria for evaluating collectability of intragovernmental receivables is more appropriate by management in departmental policy or guidance. In addition, there is an element of judgment regarding collectability of receivables and this cannot be prescribed or included in specific examples. The guidance in the TB does not mandate an allowance for doubtful accounts for any particular account to be recorded; it requires that an assessment be made.

Board Review

A21. The Board has reviewed this Technical Bulletin, and a majority of members do not object to its issuance.

SFFAS	Statement of Federal Financial Accounting Standards
TB	Technical Bulletin

Technical Bulletin 2023-1: Intragovernmental Leasehold Reimbursable Work Agreements

Status

Issued	March 17, 2023
Effective Date	For periods beginning after September 30, 2023.
Affects	Clarifies SFFAS 54 for applying SFFAS 54 and other relevant SFFAS to intragovernmental leasehold reimbursable work agreement transactions.
Affected by	None.

Summary

This Technical Bulletin provides accounting and reporting requirements for intragovernmental leasehold reimbursable work agreements (often referred to in practice as reimbursable work authorizations). These agreements have features that require supplementary guidance for purposes of implementing paragraphs 72-79 and 26-38 of Statement of Federal Financial Accounting Standards (SFFAS) 54, Leases, in a manner consistent with SFFAS 4, *Managerial Cost Accounting Standards and Concepts*, and other existing Board Statements.

Intragovernmental leasehold reimbursable work agreements are agreements whereby one reporting entity (the provider-lessor) acquires, constructs, improves, and/or alters an underlying asset that is or will be leased to another reporting entity (the customer-lessee) and the customer-lessee agrees to reimburse the provider-lessor for direct and indirect costs for the acquisition, construction, improvement, and/or alteration. These reimbursable costs are beyond what may be included in the tenant improvement allowances of the lease agreement for the related underlying asset.

This Technical Bulletin requires the following approach for agreements in which the provider-lessor is expected to derive a significant level of residual economic benefits and services from the reimbursable work:

- Customer-lessees are to recognize an intragovernmental reimbursable work asset for the reimbursable acquisition, construction, improvement, and/or alteration costs.
- Provider-lessors are to recognize the resulting leasehold improvement (or property, plant, and equipment [PP&E]) and an intragovernmental unearned reimbursable work revenue liability for reimbursable acquisitions, construction, improvements, and/or alterations provided to the customer-lessee on a reimbursable basis.

Accounting for the substance of these agreements inherently involves professional judgment in determining which reporting entity should report the leasehold improvement asset-particularly in situations when both parties may derive economic benefits and services from the reimbursable work over the useful life of the resulting PP&E. This Technical Bulletin assists reporting entities with recognizing the appropriate types of assets and liabilities embodied under these intragovernmental leasehold reimbursable work agreements in a similar manner.

Materiality

The provisions of this Technical Bulletin need not be applied to information if the effect of applying the provision(s) is immaterial.¹ A misstatement, including omission of information, is material if, in light of surrounding facts and circumstances, it could reasonably be expected that the judgment of a reasonable user relying on the information would change or be influenced by the correction or inclusion of the information. Materiality should be evaluated in the context of the specific reporting entity. Determining materiality requires appropriate and reasonable judgment in considering the specific facts, circumstances, size, and nature of the misstatement. Consequently, after quantitative and qualitative factors are considered, materiality may vary by financial statement, line item, or group of line items within an entity.

¹ Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Technical Guidance

Scope and Applicability

Scope

1. **Which reporting entities are affected by this Technical Bulletin?**
2. This Technical Bulletin applies to federal entities that present general purpose federal financial reports (GPFFRs) in conformance with generally accepted accounting principles (GAAP), as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
3. **What accounting practices are addressed in this Technical Bulletin?**
4. This Technical Bulletin provides guidance for accounting for and reporting of **intragovernmental leasehold reimbursable work agreements** (as defined under par. 14).²
5. These agreements have features that require supplementary accounting guidance for purposes of implementing paragraphs 72-79 and 26-38 of SFFAS 54, *Leases*, in a manner consistent with SFFAS 4, *Managerial Cost Accounting Standards and Concepts*.
6. **What is excluded from this Technical Bulletin?**
7. This Technical Bulletin does not apply to reimbursable leasehold work agreements with non-federal entities. Such contracts and agreements should be reviewed by reporting entity lessees (and lessors) in accordance with paragraphs 78-79 of SFFAS 54 and considered when measuring the lease asset (unearned lease revenue) in accordance with paragraphs 49 (and par. 64) and 72-77 of SFFAS 54.

²Terms defined in the glossary are shown in **boldface** the first time they appear.

Scope and Applicability of Paragraphs 20-31

8. **How should customer-lessees and provider-lessors determine the applicability of paragraphs 20-31 of this Technical Bulletin and recognize leasehold improvement assets accordingly?**
9. Paragraphs 20-31 of this Technical Bulletin do not apply to intragovernmental reimbursable leasehold work agreements for which the associated leasehold improvement asset is recognized by the **customer-lessee**. Paragraphs 10-13 of this Technical Bulletin provide principles for determining which party (the customer-lessee or **provider-lessor**) should recognize the leasehold improvement asset (property, plant, and equipment [PP&E]).
10. Normally, for intragovernmental reimbursable leasehold work agreements, the customer-lessee is expected to be the predominant beneficiary of the acquisition, construction, improvement, and/or alteration to the underlying asset, and paragraphs 20-31 do not apply.
 - a. The customer-lessee should recognize the leasehold improvement—which is a type of PP&E asset under paragraph 18 of SFFAS 6, *Accounting for Property, Plant, and Equipment*—in accordance with SFFAS 6 (and par. 34 of SFFAS 54) for these types of agreements.
 - b. The provider-lessor would not be expected to derive significant residual economic benefits or services from such reimbursable work under these types of agreements. The provider-lessor should expense the costs incurred for the reimbursable work and recognize the amounts received as reimbursement as intragovernmental revenue. The provider-lessor should account for the underlying asset other than the leasehold improvement (recognized by the customer-lessee in these types of agreements) in a manner consistent with paragraph 66 of SFFAS 54 and SFFAS 6.
11. However, for acquisitions, construction, improvements, and/or alterations under an intragovernmental reimbursable leasehold work agreement with an expected useful life beyond the remaining lease term and for which the provider-lessor is expected to derive a significant level of residual economic benefits and services from the reimbursable work, the customer-lessee would not be considered the predominant beneficiary, and paragraphs 20-31 would apply.
 - a. For these types of agreements, the customer-lessee should follow the guidance under paragraphs 20-25 (rather than par. 10-10.a above).

-
- b. The provider-lessor should follow the guidance under paragraphs 26-31 (rather than par. 10, 10.b above) for these types of agreements. The provider-lessor should account for the underlying asset, including the leasehold improvement (or PP&E) asset, in a manner consistent with paragraph 66 of SFFAS 54 and SFFAS 6.
- 12. The determination of whether the customer-lessee is expected to be the predominant beneficiary must be made in a manner that is consistent with the lease contract or agreement, its lease term (par. 14-21 of SFFAS 54), the nature of the reimbursable work, the terms of the reimbursable work agreement, the expected residual economic benefits and services at the end of the lease term, and the extent to which any residual economic benefits and services would likely be derived from the leasehold improvement (or PP&E) asset by the provider-lessor following the end of the lease term—either in future lease agreements or through other means.
 - 13. Assets arising from intragovernmental reimbursable leasehold work agreements should be recognized between customer-lessees and provider-lessors on a rational and consistent basis.

Definitions

- 14. **Intragovernmental leasehold reimbursable work agreement** - An agreement whereby one reporting entity (the provider-lessor) acquires, constructs, improves, and/or alters an underlying asset that is or will be leased to another reporting entity (the customer-lessee), and the customer-lessee agrees to reimburse the provider-lessor for direct and indirect costs for the acquisition, construction, improvement, and/or alteration. The reimbursement of such acquisitions, construction, improvements, and/or alterations are beyond what may be included in the rent or tenant improvement allowances provided for in a lease agreement for the related underlying asset.
- 15. **Customer-lessee** - The reporting entity paying for the acquisition/construction of, or improvements and/or alterations to, the underlying asset provided by the provider-lessor on a reimbursable basis.
- 16. **Provider-lessor** - The reporting entity providing the acquisition/construction of, or improvements and/or alterations to, the underlying asset to the customer-lessee on a reimbursable basis.

Intragovernmental Leasehold Reimbursable Work Agreements Meeting Paragraph 11 Criteria - Recognition, Measurement, and Disclosures

17. **What types of rights and obligations are established under reimbursable leasehold work agreements that might give rise to recognizable assets and liabilities?**
18. These agreements establish a right for the customer-lessee to derive economic benefits and services from the goods and services provided and the subsequent use of the underlying asset and improvements thereto for costs paid for through the reimbursable leasehold work agreement (hereinafter referred to as the intragovernmental leasehold reimbursable work asset).
19. These agreements also establish an obligation for the provider-lessor to acquire, construct, improve, and/or alter the underlying asset for the customer-lessee and to provide access to the resulting economic benefits and services over the shorter of the remainder of the lease term, or useful life of the underlying asset or improvements/alterations thereto (hereinafter referred to as intragovernmental unearned reimbursable work revenue).

Customer-Lessees

20. **How should customer-lessees account for intragovernmental leasehold reimbursable work agreements?**
21. Customer-lessees should initially recognize an intragovernmental reimbursable work asset for the amount payable for reimbursable work acquisition, construction, improvement, and/or alteration costs (in a manner congruous with par. 27 of SFFAS 54 requirements for recognizing prepaid rent assets).
22. Customer-lessees should amortize the intragovernmental reimbursable work asset in a systematic and rational manner over the shorter of (a) the remainder of the lease term or (b) the useful life of the underlying asset acquired/constructed or improvements/alterations thereto associated with the reimbursable work. The amortization of the intragovernmental reimbursable work asset should commence when the customer-lessee has access to economic benefits and services resulting from the reimbursable work and be reported as amortization expense.

-
23. Coordination with the provider-lessor on asset amount and subsequent amortization can facilitate the elimination of inter-entity balances and costs in a manner consistent with paragraphs 108-113 of SFFAS 4.³
24. **What should customer-lessees disclose in the notes regarding intragovernmental leasehold reimbursable work agreements and how do such disclosures relate to SFFAS 54 (par. 37) disclosure requirements?**
25. Customer-lessees should disclose a general description of significant reimbursable work agreement activities. Such disclosures may be separate from or incorporated within the general description disclosures provided for under paragraph 37.a of SFFAS 54.

Provider-Lessors

26. **How should provider-lessors account for intragovernmental leasehold reimbursable work agreements?**
27. Provider-lessors should initially recognize an intragovernmental unearned reimbursable work revenue liability for the amount receivable for reimbursable work acquisitions, construction, improvements, and/or alterations (in a manner congruous with par. 28 of SFFAS 54 for prepaid rent liabilities).
28. Provider-lessors should recognize the intragovernmental reimbursable work revenue in a systematic and rational manner over the shorter of (a) the remainder of the lease term or (b) the useful life of the underlying asset acquired/constructed or improvements/alterations thereto associated with the reimbursable work. Revenue recognition should commence when the provider-lessor provides access to the economic benefits and services resulting from the reimbursable work.
29. Coordination with the customer-lessee on revenue recognition can facilitate the elimination of inter-entity balances and earned revenues in a manner consistent with paragraphs 108-113 of SFFAS 4.⁴

³Par. 108-113 of SFFAS 4 provide for sharing cost information, recognizing inter-entity expenses and assets (and corresponding revenues and liabilities) when appropriate for purposes of recognizing the full cost of goods and services provided for inter-entity business-type activities, and the elimination of inter-entity balances and transactions.

⁴Ibid.

30. What should provider-lessors disclose in the notes regarding intragovernmental leasehold reimbursable work agreements and how do such disclosures relate to SFFAS 54 (par. 38) disclosure requirements?

31. Provider-lessors should disclose a general description of significant reimbursable work agreement activities. Such disclosures may be separate from or incorporated within the general description disclosures provided for under paragraph 38.a of SFFAS 54.

Implementation

32. Intragovernmental leasehold reimbursable work agreements unexpired at the beginning of the reporting period in which the Technical Bulletin is implemented should be recognized and measured using the facts and circumstances that exist at the beginning of the reporting period.
33. Entities should report the effect of implementing this Technical Bulletin on existing intragovernmental leasehold reimbursable work agreements prospectively in accordance with paragraph 13 of SFFAS 21, *Reporting Correction of Errors and Changes in Accounting Principles, Amendment of SFFAS 7, Accounting for Revenue and Other Financing Sources*. Accordingly, any changes in assets or liabilities should be treated prospectively. The change should be accounted for in the period of implementation and applicable future periods. No adjustments should be made to previously reported expenses or revenue.

Effective Date

34. The requirements of this Statement are effective for reporting periods beginning after September 30, 2023. Early adoption is not permitted.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

The Federal Accounting Standards Advisory Board (FASAB or “the Board”) has authorized its staff to prepare Technical Bulletins to provide timely guidance on certain financial accounting and reporting problems, in accordance with the Board’s Rules of Procedures, as amended and restated through October 2010, and the procedures described in FASAB Technical Bulletin 2000-1, *Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance*. The provisions of Technical Bulletins need not be applied to immaterial items.

This appendix discusses some factors considered significant by staff in reaching the conclusions in this Technical Bulletin. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the proposed technical guidance section—not the material in this appendix—would govern the accounting for specific transactions, events, or conditions.

This Technical Bulletin may be affected by later Statements or pronouncements. The FASAB Handbook is updated annually and includes a status section directing the reader to any pronouncement that affects this Technical Bulletin. Within the text of the Technical Bulletins, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect subsequent changes. The reader can review the basis for conclusions of amending Statements or other pronouncements for the rationale for each amendment.

Project History

- A1. The Federal Accounting Standards Advisory Board (FASAB or “the Board”) issued SFFAS 54 in April 2018 with an effective date for reporting periods beginning after September 30, 2020. The effective date was later amended by SFFAS 58, *Deferral of the Effective Date of SFFAS 54, Leases*, to reporting periods beginning after September 30, 2023.
- A2. FASAB and the Accounting and Auditing Policy Committee (AAPC) commenced projects on their technical agendas to identify implementation challenges and develop guidance related to SFFAS 54.
- A3. The AAPC assembled a task force to identify and analyze numerous SFFAS 54 implementation topics.
- A4. FASAB has received several requests from reporting entities and task force members for further guidance and clarification on accounting for reimbursable work authorizations tied to leases.

-
- A5. The Board received an educational update from staff and subject matter experts at significantly affected reporting entities in April 2022. The update included a presentation on the accounting issues, the purposes of reimbursable work authorizations and the underlying legislative authorities permitting them, examples of reimbursable work authorization transactions, and staff's accounting literature review on the topic.
- A6. The Board and staff appreciate that intragovernmental leasehold reimbursable work agreements are complex and may, at times, have material effects on GPFFRs.
- A7. The Board generally agreed that a Technical Bulletin proposal would be an appropriate publication under the Rules of Procedure, as it would provide guidance for implementing paragraphs 72-79 and 26-38 of SFFAS 54 in a manner consistent with SFFAS 4. Staff concluded that this Technical Bulletin reduces burden by more directly explaining the applicability of this guidance to intragovernmental leasehold reimbursable work authorizations.
- A8. This Technical Bulletin reflects that intragovernmental leasehold work agreements and lease agreements represent an agreement combination under paragraphs 78-79 of SFFAS 54 and should be treated accordingly.
- A9. This Technical Bulletin addresses areas not covered directly under SFFAS 54, paragraphs 11-12 and 34-35, in the context of intragovernmental leasehold reimbursable work agreements. Specifically, the guidance addresses recognition of leasehold improvement or lessor improvement assets (PP&E) and considerations when determining which reporting entity should account for that PP&E.
- A10. Paragraphs 11-12 of SFFAS 54 provide definitions related to improvements of leased property. Paragraph 11 of SFFAS 54 provides that leasehold improvements are paid for (financed) by lessees, while paragraph 12 of SFFAS 54 provides that lessor improvements are paid for (financed) by lessors.
- A11. Paragraph 18 of SFFAS 6 provides that PP&E includes leasehold improvements and property owned by the reporting entity and leased to others.
- A12. Normally, the amounts paid by the customer-lessee on leasehold improvements to assets underlying intragovernmental leases are capitalized by the customer-lessee and depreciated over the shorter of the life of the improvements or lease term. Likewise, the amounts received are normally recognized as revenue by the provider-lessor.⁵ In these

⁵ Consistent with SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*.

situations, the cost of leasehold improvements are expensed by the provider-lessor. Generally, for leasehold improvements to assets underlying intragovernmental leases, there are no significant residual economic benefits or services expected to be derived from the improvements after the end of the lease term.

A13. For certain intragovernmental leasehold reimbursable work agreements, however, the provider-lessor is expected to derive a significant level of residual economic benefits and services from the improvements after the end of the lease term. In such cases, the Board and staff concluded that such improvements meeting these two conditions are, in substance, lessor improvements. In making this determination, the Board considered the following:

- a. The provider-lessor and the federal government as a whole receive residual economic benefits and services from the improvements after the end of the lease term.
- b. Such treatment would allocate the cost of the improvements over the useful life of the asset, which extends beyond the lease term.

A14. Assuming improvements meeting the two conditions above are recognized as lessor improvements, another consideration is how the customer-lessee's payment(s) should be recognized by each party. The Board concluded that the payment(s), in substance, are an intragovernmental lessee prepaid rent for the customer-lessee and advance rent for the provider-lessor, consistent with paragraphs 27-28 of SFFAS 54. In making this determination, the Board considered the following points:

- a. Intragovernmental revenue and expenses would be more balanced.
- b. Under this approach, the customer-lessee would recognize the costs of improvements over the periods in which the related benefits are derived.
- c. Under this approach, the provider-lessor would recognize revenue from improvements over the periods in which they are earned.

A15. The Board also agreed that the Technical Bulletin should clearly articulate the scope of the guidance, which is intended solely for accounting and reporting related to reimbursable work agreements for acquisitions, construction, improvements, and/or alterations to underlying assets of *intragovernmental leases*. The guidance does not apply to other circumstances (for example, other types of reimbursable work authorizations that are not intragovernmental leasehold reimbursable work agreements). For similar reasons, the Board and staff decided it best to avoid use of the term "reimbursable work authorizations" in the technical guidance section. Rather, staff elected to use the term "intragovernmental

leasehold reimbursable work agreements.” Use of this term is intended to clarify the scope of the guidance.

- A16. The Board did not wish to change accounting practices for the preponderance of intragovernmental leasehold reimbursable work agreements, which are situations in which the customer-lessee is expected to be the predominant or sole beneficiary of the reimbursable work on the underlying asset and recognize the related leasehold improvement in accordance with SFFAS 6. Paragraphs 20-31 of this Technical Bulletin address the accounting treatment for situations in which the provider-lessor is expected to derive significant residual economic benefits from the reimbursable work, thereby precluding the customer-lessee from being the predominant or sole beneficiary and recognizing the related PP&E. In these situations, the reimbursable work typically involves major changes to the core underlying asset, such as adding a new wing to a leased building or constructing a building. In these situations, it is more appropriate for the provider-lessor to retain accountability for the related PP&E and for both parties to be accountable for the resulting rights and obligations under the agreement, as discussed under paragraphs 17-19.
- A17. Staff is aware that the determinations of whether the customer-lessee will be the predominant beneficiary of the reimbursable work (with the provider-lessor being expected to derive an insignificant amount of, if any, residual economic benefits) is a matter of professional judgment. In some cases, the nature of the intragovernmental reimbursable work and lease agreements, uncertainties, and other factors may result in high levels of subjectivity in professional judgment. Understanding this, the Technical Bulletin provides factors to consider when making such determinations.
- A18. Certain task force members suggested that the guidance allow the provider-lessor (oftentimes the General Services Administration) to control and/or serve as the sole determiner of whether or not the customer-lessee will be the predominant beneficiary, given its experience in providing reimbursable work to many customer-lessees. The Board and its staff cannot provide such guidance, as this would compromise customer-lessee reporting entities’ control over their GPFFRs.

Summary of Outreach and Responses

- A19. The Board released an exposure draft (ED) proposal on September 19, 2022, for public comment, with comments requested by November 4, 2022. Upon release of the ED, FASAB notified constituents through the FASAB website and listserv, the Federal Register, and FASAB newsletter. FASAB also provided news releases to its press contacts, including various news organizations and committees of professional associations generally commenting on EDs in the past. To encourage responses, a reminder notice was provided to FASAB's listserv near the comment deadline.

A20. FASAB received 18 comment letters in response to the ED. Respondents were generally supportive of the proposed Technical Bulletin. In response to the comment letters, the Board identified and agreed upon further changes to improve the structural and technical clarity of the proposal, including

- a. clarifying edits to improve the organization of the document, including revisions to section headers and the addition of sub-headers; and
- b. additional edits to further enhance the structural clarity of the guidance and further explain the scope and applicability provisions.

A21. A few respondents requested that the Board define the terms "more-than-insignificant" and/or "predominant beneficiary." The Board decided to remove the term "more-than-insignificant" based on those requests. The Board also elected to further explain the relevant factors to consider when assessing projected residual economic benefits. The Board concluded that these enhancements would facilitate reasonably consistent and comparable practitioner assessments and agreements between customer-lessees and provider-lessors, while also allowing practitioners to exercise their professional judgments based on relevant factors, including materiality. Staff concluded that practitioners should consider relevant qualitative factors when implementing the Technical Bulletin, such as the likelihood of elimination differences accumulating to material elimination differences at the consolidated level or other significant errors at the component reporting entity level (for either party).

A22. One respondent recommended that the Board consider whether the Financial Accounting Standards Board tentative decision on leasehold improvements associated with leases between entities under common control was a preferable approach. The Board elected to continue with the proposed approach, given its consistency with existing practice.

A23. Some respondents expressed concerns that proposed language regarding establishing, documenting, and adhering to policies for reaching agreement with trading partners- including those pertaining to criteria for assessing recognition of intragovernmental assets and corresponding liabilities- may raise audit-related questions concerning failure to comply with GAAP when customer-lessees and provider-lessors do not agree on the conclusions reached by the other party. The Board generally agreed with these concerns and elected to remove the language. The Board and staff continue to believe that establishing, documenting, and consistently following policies for negotiating with intragovernmental trading partners in a manner consistent with the Technical Bulletin guidance can help mitigate intragovernmental elimination differences. For this reason, the Board elected to retain the general statements under paragraphs 23 and 29. These paragraphs do not represent recognition, measurement, or disclosure criteria, nor are they instructive in nature.

These paragraphs are merely intended to encourage coordination and facilitate consistent application of the related recognition and measurement criteria.

Board Review

A24. The Board has reviewed this Technical Bulletin, and a majority of members do not object to its issuance.

Appendix B: Abbreviations

AAPC	Accounting and Auditing Policy Committee

Technical Bulletin 2024-1: Seized and Forfeited Digital Assets

Status

Issued	June 21, 2024
Effective Date	Effective upon issuance.
Affects	Clarifies guidance in SFFAS 3, par. 57-78, for seized and forfeited digital assets.
Affected by	None.
Related Guidance	TR 4, <i>Reporting on Non-Valued Seized and Forfeited Property</i>

Summary

This Technical Bulletin (TB) clarifies existing standards for seized and forfeited digital assets. Statement of Federal Financial Accounting Standards (SFFAS) 3, *Accounting for Inventory and Related Property*, provides guidance for seized and forfeited property. However, guidance is needed to clarify the existing reporting requirements regarding the unique characteristics of digital assets that the Board did not consider when developing SFFAS 3.

Specifically, this TB clarifies that SFFAS 3 requirements in paragraphs 57-78 apply to seized and forfeited digital assets. The TB further clarifies that reporting entities should treat central bank digital currencies as monetary instruments and all other digital assets as nonmonetary property when applying the requirements of SFFAS 3. This TB also provides clarifying guidance for measuring market value and applying SFFAS 3 disclosure requirements for seized and forfeited digital assets.

Materiality

The provisions of this TB need not be applied to information if the effect of applying the provision(s) is immaterial.¹ A misstatement, including omission of information, is material if, in light of surrounding facts and circumstances, it could reasonably be expected that the judgment of a reasonable user relying on the information would change or be influenced by the correction or inclusion of the information. Materiality should be evaluated in the context of the specific reporting entity. Determining materiality requires appropriate and reasonable judgment in considering the specific facts, circumstances, size, and nature of the misstatement.

¹ Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Consequently, after quantitative and qualitative factors are considered, materiality may vary by financial statement, line item, or group of line items within an entity.

Technical Guidance

Scope

1. **What reporting entities are affected by this Technical Bulletin (TB)?**
2. This TB applies to reporting entities that present general purpose federal financial reports in conformance with generally accepted accounting principles, as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
3. **What accounting practices are addressed in this TB?**
4. This TB provides guidance to address areas not directly covered in existing Statements by clarifying guidance for accounting for and reporting of seized and forfeited digital assets. Reporting guidance for seized and forfeited property is currently addressed in paragraphs 57-78 of SFFAS 3, *Accounting for Inventory and Related Property*. However, the Board determined that additional guidance was needed to clarify the existing reporting requirements for the unique characteristics of digital assets, which the Board did not consider when developing SFFAS 3.
5. **What is excluded from this TB?**
6. This TB does not apply to any digital asset transactions other than for seized and forfeited property transactions, as addressed by SFFAS 3, paragraphs 57-78.

Definitions and Applicability

7. **What are digital assets?**
8. **Digital assets**² are electronic representations of value and operate as part of a complex and interconnected digital ecosystem. **Crypto assets**, to include **cryptocurrencies**, are a common subset of digital assets that use cryptographic techniques and distributed ledger

² Terms defined in the glossary are shown in boldface the first time they appear.

technology. Digital assets also include but are not limited to **stablecoins, non-fungible tokens, central bank digital currencies, security tokens, and privacy coins.**

9. **How do digital assets apply to seized and forfeited property in the federal government?**
10. Paragraph 59 of SFFAS 3 defines seized property as "property of others in the actual or constructive possession of the custodial agency." Seized property may include digital assets that the government has taken possession of, typically as a consequence of an alleged violation of law. Some reporting entities deal with a wide range of seized and forfeited digital assets.
11. Paragraph 68 of SFFAS 3 defines forfeited property as "(1) property acquired through forfeiture proceedings; (2) property acquired by the government to satisfy a tax liability; and (3) unclaimed and abandoned merchandise." Seized digital assets are generally considered forfeited when title has passed to the U.S. government. Typically, the forfeited digital assets are sold for monetary proceeds.

Reporting Considerations

12. **Should reporting entities treat seized and forfeited digital assets as monetary or nonmonetary property when applying reporting guidance in SFFAS 3?**
13. SFFAS 3 provides different reporting requirements for seized and forfeited property based on whether the property in question is considered monetary or nonmonetary.
14. Paragraph 61 of SFFAS 3 states, "Seized monetary instruments shall be recognized as seized assets when seized. In addition, a liability shall be established in an amount equal to the seized asset value." Paragraph 62 of SFFAS 3 states, "Seized property other than monetary instruments shall be disclosed in the footnotes"
15. Paragraph 69 of SFFAS 3 states, "Monetary instruments shall be reclassified from seized monetary instruments to forfeited monetary instruments when forfeited. ... When the asset is recorded, revenue shall be recognized in an amount equal to the value of the monetary instrument and the associated liability for possible remittance shall be removed." Paragraph 70 of SFFAS 3 addresses recognition of forfeited nonmonetary property by stating "property shall be recorded with an offsetting deferred revenue when forfeiture judgment is obtained." Meanwhile paragraph 72 states, "Revenue from the sale of property shall be recognized when the property is sold."

-
16. For purposes of applying the seized and forfeited property guidance in paragraphs 57-78 of SFFAS 3, reporting entities should treat central bank digital currencies as monetary instruments and treat all other digital assets as nonmonetary property.
 17. Central bank digital currencies are a form of digital money, denominated in the national unit of account that is a direct liability of the central bank. Therefore, central bank digital currencies are typically considered official digital forms of government-backed money that essentially serve the same purposes as physical cash.³
 18. Except for central bank digital currencies, digital assets are not considered **fiat money** because they are not issued by a government entity nor are their values backed by the stability and credit worthiness of a government entity. Additionally, digital assets, other than central bank digital currencies, do not typically possess all monetary characteristics. That is, they are not effective as a unit of account, medium of exchange, or store of value.⁴
-

Measurement

19. **Are there special considerations with determining market value for seized and forfeited digital assets?**
20. Some reporting entities have raised concerns about whether management can accurately measure market value for digital assets. Many forms of digital assets are not bought or sold in a typical market. Furthermore, digital asset markets that do exist are sometimes not well established or regulated and could therefore quote volatile and unreliable values. Reporting inaccurate and/or unreliable market values for seized and forfeited digital assets could result in financial information that is misleading and/or lacks relevance.
21. Paragraph 63 of SFFAS 3 states, "Seized property shall be valued at its market value when seized or, if market value cannot be readily determined, as soon thereafter as reasonably possible. Market value shall be based on the value of the property assuming an active market exists for the property."⁵

³ As of the issuance date of this TB, the U.S. government does not have a central bank digital currency.

⁴ It is possible for a government's fiat money, whether in physical or digital form, to lose its store of value role due to economic and geopolitical factors, such as hyperinflation. When applying this guidance, reporting entities should treat foreign central bank digital currencies as monetary instruments in the same way they would a foreign government's physical fiat currency.

⁵ Paragraphs 69-70 of SFFAS 3 also require market value reporting for forfeited property.

-
22. Footnote 6 of SFFAS 3 states, "'Market value' is the estimated amount that can be realized by disposing of an item through arm's length transactions in the marketplace or the price (usually representative) at which bona fide sales have been consummated for products of like kind, quality, and quantity in a particular market at any moment of time. For investments in marketable securities, the term refers to the per-unit market price of a security times the number of units of that security held."
23. For purposes of applying the seized and forfeited property guidance in paragraphs 57-78 of SFFAS 3, reporting entities should report a market value for seized and forfeited digital assets based on a publicly observable active market for the specific digital asset. An active market is an established market in which transactions occur with sufficient frequency and volume to provide pricing information on an ongoing basis. A publicly observable market is a market that is widely visible to anyone.
24. "Readily determined" generally means that a market value can be established with reasonable effort. Due to the inherent volatility and risk associated with most digital asset markets, reporting entities should report a market value only if management can determine that a publicly observable active market exists for the specific digital asset. Management should apply judgment in determining the most appropriate publicly observable active market to reference for valuing each digital asset. If available, management could use different active markets for valuing different types of digital assets.
25. It is reasonable that it could require more time and effort to determine a market value for seized and forfeited digital assets than it would for seized or forfeited property associated with more liquid, regulated, and established markets. It is also reasonable that a market value cannot be readily determined for some seized and forfeited digital assets if a publicly observable active market does not exist.
26. Reporting entities should translate seized and forfeited foreign central bank digital currencies into U.S. dollars at the relevant exchange rate.

Disclosure Requirements

27. **What information should reporting entities disclose about seized and forfeited digital assets?**
28. Reporting entities should apply the disclosure requirements of paragraphs 66 and 78 of SFFAS 3 for seized and forfeited digital assets, respectively. SFFAS 3 requires reporting entities to disclose the dollar value and quantity of seized and forfeited property by the type of property. SFFAS 3 does not require reporting entities to disclose specific quantitative or qualitative information about individual digital asset seizures or forfeitures.

-
29. If a reporting entity is not able to readily determine a market value for the seized or forfeited digital asset pursuant to paragraphs 19-26 of this TB, the reporting entity should still apply the other SFFAS 3 disclosure requirements.

Effective Date

30. The requirements of this TB are effective upon issuance.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts.</p>
--

Appendix A: Basis for Conclusions

The Federal Accounting Standards Advisory Board (FASAB) has authorized its staff to prepare Technical Bulletins to provide timely guidance on certain financial accounting and reporting problems, in accordance with the Board's Rules of Procedures, as amended and restated through August 2023, and the procedures described in FASAB Technical Bulletin 2000-1, *Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance*. The provisions of Technical Bulletins need not be applied to immaterial items.

This appendix discusses some factors considered significant by staff in reaching the conclusions in this Technical Bulletin. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the proposed technical guidance section-not the material in this appendix-would govern the accounting for specific transactions, events, or conditions.

This Technical Bulletin may be affected by later Statements or pronouncements. The FASAB Handbook is updated annually and includes a status section directing the reader to any pronouncement that affects this Technical Bulletin. Within the text of the Technical Bulletins, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect subsequent changes. The reader can review the basis for conclusions of amending Statements or other pronouncements for the rationale for each amendment.

Project History

- A1. The Federal Accounting Standards Advisory Board (FASAB or "the Board") issued SFFAS 3 in 1993. Paragraphs 57-78 of SFFAS 3 provide reporting requirements for seized and forfeited property. The Board subsequently issued Technical Release 4, *Reporting on Non-Valued Seized and Forfeited Property*, in 1999 to establish that an analysis of changes for all material non-valued seized property should be disclosed in the financial statement footnotes in the same manner as prescribed for non-valued forfeited property.
- A2. The Board had planned to deliberate reporting guidance needs for digital assets as part of the software technology project scope. However, as seized and forfeited digital assets have become more significant in recent years, the Board has received several requests from reporting entities and auditors for further guidance and clarification on applying the existing seized and forfeited property reporting requirements in SFFAS 3 to new and unique characteristics of digital assets.
- A3. Digital assets were not originally contemplated when FASAB issued SFFAS 3, and the Board has never previously issued guidance pertaining to digital assets. The Board is not

aware of any other significant uses of digital assets in the federal government. Some reporting entities have indicated purchasing an immaterial amount of cryptocurrency for operational purposes.

- A4. Staff convened a working group to draft and propose a TB for the Board's consideration. Staff consulted extensively with preparers and auditors that deal with seized and forfeited digital assets.
- A5. The Board agrees that in accordance with paragraph 4 of TB 2000-1, *Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance*, a TB is an appropriate publication to address the identified reporting issues. This TB clarifies and elaborates upon seized and forfeited property guidance in paragraphs 57-78 of SFFAS 3 to address the unique nature of digital assets. The TB does not apply to any digital asset transactions other than for seized and forfeited property. The Board believes this TB reduces preparer burden regarding uncertainties in applying SFFAS 3 requirements and facilitates reporting consistency for seized and forfeited digital assets.
- A6. For this TB, the Board referred to external sources to describe the characteristics and general nature of digital assets. The 2023 *Economic Report of the President* describes digital assets as electronic representations of value that operate as part of a complex and interconnected digital ecosystem.⁶ The report categorizes digital assets as either crypto assets or central bank digital currencies.
- A7. Crypto assets, such as cryptocurrencies, stablecoins, and non-fungible tokens, typically represent digital financial products or unique digital property that use cryptographic techniques and distributed ledger technology to process transactions and track ownership through decentralized networks. Central bank digital currencies are a form of digital money of a sovereign nation and act as legal tender, similar to physical cash. Unlike crypto assets, central bank digital currencies typically exist on a digital platform run by a central authority, such as a central bank, which settles transactions in real time.
- A8. Whether digital assets are categorized as crypto assets or central bank digital currencies, the Board believes they represent intangible forms of value in which ownership and transactions are tracked through decentralized or centralized digital networks. Some reporting entities deal with a wide range of different types of seized and forfeited digital assets. This TB does not specifically exclude any type of digital asset from applying to the reporting requirements in SFFAS 3.

⁶ Council of Economic Advisers, *2023 Economic Report of the President*, (March 2023), 237-272.

-
- A9. Other standard setters, regulators, academics, and legislators have considered whether digital assets generally possess monetary properties or more closely relate to financial securities, derivatives, investments, intangible assets, or some combination thereof. This TB does not address this issue but considers only whether to categorize digital assets as monetary or nonmonetary property for the purposes of applying the reporting requirements in SFFAS 3.
- A10. Executive Order 14067 defines central bank digital currencies as a form of digital money or monetary value, denominated in the national unit of account that is a direct liability of the central bank.⁷ Furthermore, the 2023 *Economic Report of the President* and the Board of Governors of the Federal Reserve System explain that central bank digital currencies are similar to cash.⁸ Central bank digital currencies essentially represent digital forms of fiat currency and resemble cash and other monetary assets as described in Statement of Federal Financial Accounting Concepts 2, *Entity and Display*, and SFFAS 1, *Accounting for Selected Assets and Liabilities*. Therefore, reporting entities should treat central bank digital currencies as monetary instruments when applying SFFAS 3.
- A11. Except for central bank digital currencies, research indicates that all other types of digital assets do not represent monetary value. This is primarily because digital assets, other than central bank digital currencies, are not issued by a sovereign nation's central bank nor is their value backed by the stability and creditworthiness of the government entity issuing it.
- A12. Furthermore, the 2023 *Economic Report of the President* describes how crypto assets (which are digital assets other than central bank digital currencies) are typically treated as speculative investments and do not serve typical monetary purposes as effectively as sovereign money. For example, crypto assets are not an effective unit of account because they do not offer benchmarks to compare the value of goods and services without first being converted to a fiat currency, such as the dollar. Additionally, crypto assets are not an effective medium of exchange due to the lack of entities that accept them as a form of payment and because crypto assets do not possess the same characteristics that give fiat money strength and legitimacy, such as backing by a sovereign nation's institutions and legal system. Finally, crypto assets do not typically represent a stable store of value, which is required to serve effectively as money, due to their substantial market value volatility.

⁷ The White House, *Ensuring Responsible Development of Digital Assets*, Executive Order 14067 (March 9, 2022), section 9(b).

⁸ Board of Governors of the Federal Reserve System, *Money and Payments: The U.S. Dollar in the Age of Digital Transformation* (January 2022).

Summary of Outreach and Responses

- A13. The Board released an exposure draft (ED) proposal on March 4, 2024, with public comments requested by April 18, 2024. Upon release of the ED, FASAB notified constituents through the FASAB website and listserv, the Federal Register, and FASAB newsletter. FASAB also provided news releases to its press contacts, including various news organizations and committees of professional associations generally commenting on EDs in the past. To encourage responses, a reminder notice was provided to FASAB's listserv near the comment deadline.
- A14. FASAB received 15 comment letters in response to the ED. Respondents generally agreed with the proposed guidance. In response to the comment letters, the Board agreed to further edits to improve the structure and clarity of the guidance.
- A15. Some respondents noted that digital asset market values are especially volatile and requested that the Board provide guidance addressing whether reporting entities should periodically revalue and/or account for impairment losses for seized and forfeited digital assets. SFFAS 3 guidance does not require periodic revaluation or impairment loss accounting for seized and forfeited property, and the Board concluded this TB does not need to clarify this point further for seized and forfeited digital assets.
- A16. One respondent suggested that certain stablecoins could be considered monetary instruments because they are highly liquid and easily convertible to cash. The Board notes that some stablecoins are pegged to the U.S. dollar and therefore are designed to have a more stable store of value. Additionally, there could be other current or future digital assets backed by reserve monetary assets, such as the U.S. dollar or foreign currencies. However, the Board concluded that reporting entities should not report seized and forfeited stablecoins as monetary instruments because even digital assets that peg to the U.S. dollar, or a foreign currency, are not fiat money issued and backed by a government entity, nor are they currently effective as a unit of account or medium of exchange as discussed in paragraph A12. Furthermore, the Board concluded that paragraph 16 of this TB is clear that reporting entities should account for only central bank digital currencies as monetary instruments and all other digital assets, including U.S. dollar and foreign currency pegged stablecoins, as nonmonetary property when applying SFFAS 3. Therefore, the Board elected to retain the guidance as proposed in the ED.
- A17. One respondent suggested that limiting reporting entities to only measuring market value for seized and forfeited digital assets based on a publicly observable active market could result in reporting and audit challenges if a particular digital asset market fluctuates between active and inactive. The Board notes that this TB only clarifies existing reporting requirements in SFFAS 3, which does not require market valuation based on inactive markets. Therefore, the Board concluded this technical guidance should not provide a new

reporting requirement to measure value based on an inactive market specifically for digital assets. Furthermore, the Board concluded it could be burdensome for preparers to measure seized and forfeited digital assets based on inactive markets and could lead to inaccurate information that is irrelevant and/or misleading to users. The Board believes that paragraphs 23-26 of this TB reduce preparer burden and improve user benefits by clarifying and explaining how management should use reasonable effort to measure seized and forfeited digital assets using only publicly observable active markets for the specific digital asset. Therefore, the Board elected to retain the guidance as proposed in the ED.

A18. Some respondents requested that the proposed TB clarify other specific measurement challenges relating to seized and forfeited digital assets, including

- a. providing examples of what would not meet the definition of a publicly observable active market in accordance with paragraph 23 of the TB;
- b. providing an authoritative source for identifying valid central bank digital currencies;
- c. providing guidance on the factors that reporting entities should consider when determining the most appropriate publicly observable active market for each digital asset in accordance with paragraph 24 of the TB; and
- d. providing guidance prescribing the day and time that reporting entities should measure the market value of digital assets upon seizure and forfeiture.

A19. The Board elected not to address these measurement issues in this TB because the Board concluded these questions require more prescriptive guidance based on situation-specific details that would best be addressed by agency policy and management judgment using the clarifying guidance in paragraphs 19-26 in this TB. Digital asset markets are very dynamic, and the Board concluded that addressing the items in paragraph A18 in this TB would result in authoritative guidance that is too rigid and would quickly become outdated.

Board Review

A20. The Board has reviewed this TB, and a majority of members do not object to its issuance.

Appendix B: Abbreviations

ED	Exposure Draft
FASAB	Federal Accounting Standards Advisory Board
SFFAS	Statement of Federal Financial Accounting Standards
TB	Technical Bulletin

Appendix C: Glossary

The terms explained in Appendix C have specific application to this TB and may be useful in applying the guidance.

Digital asset

Digital assets are electronic representations of value and operate as part of a complex and interconnected digital ecosystem.

Crypto asset

Crypto assets are a common subset of digital assets that use cryptographic techniques and distributed ledger technology, such as blockchain.

Cryptocurrency

Cryptocurrency is a crypto asset that is promoted to be an alternative payment instrument.

Central bank digital currency

Central bank digital currencies are a type of digital asset that are a form of digital money or monetary value, denominated in the national unit of account that is a direct liability of the central bank.

Fiat money

Fiat money is currency that is issued and backed by a government entity as legal tender. The value of fiat money is derived from supply and demand as a medium of exchange and the stability of the government backing it. This differs from money that is backed by a tangible commodity, such as gold, which sets the standard of its value.

Non-fungible tokens

Non-fungible tokens (NFTs) are crypto assets that are not interchangeable. Each NFT is unique and often contains a pointer to a digital object, such as an image file.

Privacy coins

Privacy coins are cryptocurrencies with enhanced features to reduce traceability.

Stablecoins

Stablecoins are crypto assets that are backed by a portfolio of underlying assets and claimed to have a stable exchange value with these assets.

Security tokens

Security tokens are digital forms of financial instruments that represent ownership in another asset, such as real estate or equity in a company.

Federal Financial Accounting and Auditing Technical

Release 1: Audit Legal Representation Letter Guidance

Status

Issued	March 1, 1998
Effective Date	For fiscal periods beginning after September 30, 1997
Affects	None.
Affected by	None.
Related Guidance	Interpretation 2, <i>Accounting for Treasury Judgment Fund Transactions: An Interpretation of SFFAS 4 and SFFAS 5</i>

Summary

Management of the Federal reporting entity is responsible for adopting policies and procedures to identify, evaluate and account for litigation, claims and assessments as a basis for the preparation of financial statements, including those handled by outside legal counsel. Management is responsible for reporting loss contingencies in accordance with the requirements of Statement of Federal Financial Accounting Standards No.5. This may require consultation by management and its legal department with DOJ, as well as other outside legal counsel.

The auditor should request that management send a letter of audit inquiry to legal counsel with whom management has consulted concerning litigation, claims and assessments. Management of the Federal reporting entity and its legal department are responsible for providing the auditor with a legal representation letter.

Table Of Contents

	Page
Summary	1
Issue	3
Background	3
Recommended Implementation Guidance	3
References	5

Issue:

Who should be the source of audit legal representation letters in cases where Department of Justice attorneys are handling legal matters on behalf of other Federal reporting entities?

Background:

This issue was raised by the Department of Justice (DOJ) in relation to Interpretation No. 2, *Accounting for Treasury Judgment Fund Transactions*, issued by the Federal Accounting Standards Advisory Board (FASAB), however it is applicable to any situation where outside legal counsel is handling legal matters on behalf of a Federal reporting entity.

FASAB Interpretation No. 2 states that "the Federal entity's management, as advised by the Justice Department, must determine whether it is probable that a legal claim will end in a loss for the Federal entity and the loss is estimable." DOJ is concerned that the language in the Interpretation will lead agencies to conclude that DOJ is the sole source of audit legal representation letters in cases where DOJ attorneys are handling legal matters on behalf of other Federal reporting entities.

Recommended Implementation Guidance

Management of the Federal reporting entity is responsible for adopting policies and procedures to identify, evaluate and account for litigation, claims and assessments as a basis for the preparation of financial statements in accordance with the requirements of the Chief Financial Officers Act of 1990 and the Government Management Reform Act of 1994. These include litigation, claims and assessments handled by legal counsel outside of the Federal reporting entity's legal department.

Management of the Federal reporting entity is responsible for ensuring that loss contingencies, including those arising from litigation, claims and assessments, are presented in the financial statements in accordance with the requirements of Statement of Federal Financial Accounting Standards No.5, *Accounting for Liabilities of the Federal Government*. This may require consultation by management and its legal department with DOJ, as well as other outside legal counsel, to ensure the accuracy and completeness of the presentation of matters related to litigation, claims and assessments in the Federal reporting entity's financial statements. Such consultation may include requesting a list of pending litigation, claims and assessments from DOJ or other outside legal counsel.

A representation letter from legal counsel to the auditor, in response to a letter of audit inquiry from management to legal counsel, is the auditor's primary means of corroborating the information furnished by management concerning the accuracy and completeness of litigation, claims and assessments. The auditor should request that management send a letter of audit

inquiry to legal counsel with whom management has consulted concerning litigation, claims and assessments. A materiality limit for the legal representation letter is generally established in the letter of audit inquiry, based on an understanding between management and the auditor.

Management of the Federal reporting entity and its legal department are responsible for providing the auditor with a legal representation letter. The legal representation letter should cover all litigation, claims and assessments pertaining to the Federal reporting entity, including matters handled by DOJ or other outside legal counsel on behalf of the Federal reporting entity.

The legal representation letter provided to the auditor by the Federal reporting entity's legal department, or "inside counsel", may provide sufficient evidential matter for the auditor. In certain circumstances the auditor may also need supporting legal representation from outside counsel. Section AUI 337.26 of the AICPA Codification of Statements on Auditing Standards provides the following guidance for situations where inside counsel is handling litigation, claims and assessments either exclusive of or in conjunction with outside counsel:

Audit inquiry letters should be sent to those lawyers, which may be either inside or outside lawyers, who have the primary responsibility for, and knowledge about, particular litigation, claims and assessments. If inside counsel is handling litigation, claims and assessments exclusively, their evaluation and response ordinarily would be considered adequate. Similarly, if both inside and outside lawyers have been involved in the matters, but inside counsel has assumed primary responsibility for the matters, inside counsel's evaluation may well be considered adequate. However, there may be circumstances where litigation, claims and assessments involving substantial overall participation by outside lawyers are of such significance to the financial statements that the auditor should consider obtaining the outside lawyers' response that they have not formulated a substantive conclusion that differs in any material respect from inside counsel's evaluation, even though inside counsel may have primary responsibility.

In those circumstances where the auditor determines that a legal representation letter is needed from DOJ, or other outside legal counsel, to support the Federal reporting entity's legal representation letter, the Federal reporting entity's management, in conjunction with its legal department, would request such representation in a letter of audit inquiry. The Federal reporting entity would provide DOJ with its description and evaluation of the possible outcome of the case in question, and request that the DOJ lawyer respond directly to the auditor. If the Federal reporting entity is not sufficiently knowledgeable of the case to provide a description and evaluation, the DOJ lawyer would be requested to provide a description and evaluation directly to the auditor. Such requests to DOJ should be case specific and directed to the lead DOJ lawyer handling the case. To meet the reporting deadlines for audited financial statements, there should be early coordination between the auditor and the Federal reporting entity's management and legal department to determine whether supporting legal representations will be needed from DOJ.

The legal representation letter provided to the auditor by the legal department of the Federal reporting entity requires an assertion as to the completeness of the list of litigation, claims and assessments, including matters handled by DOJ or other outside legal counsel on behalf of the Federal reporting entity. The auditor's consideration of this completeness assertion is based primarily on the assessed effectiveness of the Federal reporting entity's internal control structure for identifying, evaluating and accounting for litigation, claims and assessments. The auditor also may need to request additional information from the Federal reporting entity, or DOJ or other outside legal counsel, to obtain evidence about the completeness assertion. Such requests to DOJ or other outside legal counsel should be made through management of the Federal reporting entity. Further, the auditor should consider whether the audit scope is limited by the inability to obtain sufficient competent evidential matter regarding the completeness assertion for litigation, claims and assessments.

Federal Financial Accounting And Auditing Technical Release 2: Determining Probable and Reasonably Estimable for Environmental Liabilities in the Federal Government

Status

Issued	March 15, 1998
Effective Date	For fiscal periods beginning after September 30, 1997
Affects	None.
Affected by	<ul style="list-style-type: none">• SFFAS 12: definitional change for “probability”.• SFFAS 11: rescinded Federal Mission PP&E

Summary

This technical release provides guidance to federal agencies in determining probable and reasonably estimable liabilities related to their environmental cleanup responsibilities in accordance with applicable GAAP, including but not limited to SFFAS 5, and 6; Interpretation 9; Technical Bulletin 2006-1, 2017-2; and applicable TRs. Section 1 assists reporting entities in determining whether its environmental contamination meets the definition of probable (i.e., a future outflow of resources will be required to clean up the contamination). Section 2 offers guidance in quantifying an agency's liability for cleanup.

Readers should incorporate both deferred maintenance and repairs (DM&R) guidance and asset impairment (AI) guidance. Specifically, SFFAS 40 and SFFAS 42 will assist entities in consistently reporting estimated DM&R costs associated with agency environmental cleanup responsibilities. SFFAS 44 will assist entities in determining the existence of any potential asset impairment indicators.

Table Of Contents

	Page
Summary	1
Introduction	3
Section 1: Determining “probable” environmental liabilities	4
Section 2: Determining “reasonably estimable” environmental liabilities	9
Appendix I: Relevant Laws	17

Introduction

Federal agencies are required to recognize a liability when a future outflow or other sacrifice of resources as a result of past transactions or events is “probable” and “reasonably estimable.” This technical release is intended to assist federal agencies in determining probable and reasonably estimable liabilities related to their environmental cleanup responsibilities.

Agencies that must deal with environmental contamination should first refer to the hierarchy of accounting standards contained in the current Office of Management and Budget (OMB) Bulletin on “Form and Content of Agency Financial Statements” for guidance. Standards issued by Government Accountability Office (GAO) and OMB have precedence over other authoritative guidance for federal entities. This technical release supplements the relevant federal standards, but is not a substitute for and does not take precedence over the standards.

This technical release includes two sections and an appendix. Section 1 will help an agency determine whether its environmental contamination meets the definition of probable (i.e., a future outflow of resources will be required to clean up the contamination). Section 2 offers guidance in quantifying an agency’s liability for cleanup. Appendix I lists key laws and regulations relating to environmental contamination.

Scope

This technical release offers guidance based on Statements of Federal Financial Accounting Standards (SFFAS), and draws on information from other literature. The applicable federal standards are:

SFFAS No. 6, *Accounting for Property, Plant, and Equipment*

SFFAS No. 5, *Accounting for Liabilities of the Federal Government*

SFFAS No. 6¹ addresses cleanup costs from federal operations known to result in hazardous waste. SFFAS No. 6 provides guidance when cleanup occurs at the end of the useful life of the property, plant, and equipment (PP&E) or at regular intervals (scheduled phase cleanup) during that life.

¹The recognition and measurement provided in SFFAS #6 are subject to the criteria for recognition of liabilities included in SFFAS #5. That is, liabilities shall be recognized when the following conditions are met:

- a past transaction or event has occurred,
- a future outflow or other sacrifice of resources is probable, and
- the future outflow or sacrifice of resources is measurable.

SFFAS No. 5, *Accounting for Liabilities of the Federal Government*, applies to all environmental liabilities not specifically covered in SFFAS 6, including cleanup resulting from accidents or where cleanup is an ongoing part of operations.²

Section 1: Determining “Probable” Environmental Liabilities

Description of Issue

An agency is required to recognize a liability for environmental cleanup costs as a result of past transactions or events when a future outflow or other sacrifice of resources is probable and reasonably estimable.³ Concerns have been raised about when costs associated with environmental damage meet the [probable](#) and reasonably estimable criteria. [Probable](#) is related to whether a future outflow will be required.⁴ This section addresses only the “[probable](#)” part of this requirement; reasonably estimable will be addressed in Section 2.

Key Determinants and Positions

Various key factors (tests) must be considered in determining whether a future outflow of resources from a federal agency for environmental cleanup is [probable](#). The factors are:

1. Likely Contamination,
2. Government Related and Legally Liable,
3. Government Acknowledged Financial Responsibility,

²In the case of cleanup as an ongoing part of operations [i.e., the operation or activity generates hazardous waste that is cleaned up as it is created (e.g., hospitals regularly dispose of hazardous materials)], a liability may not need to be recognized if the need to cleanup and the full cleanup occur in the same reporting period. However, the total cost of cleanup should be recognized in the period the cleanup need arises. Refer to footnote 15 for further information.

³This Release generally discusses “sites” or “contamination” when referring to environmental contamination. However, property, plant and equipment that requires cleanup (because of damaging the environment when being used or at time of disposal) is included in the scope. A further discussion of issues related to PP&E, including recognizing a liability for PP&E already in service, is included in Section 2 under the heading “Guidance for Active Sites.”

⁴This Release uses SFFAS No. 5’s definition of “[probable](#),” which is “[more-likely-than-not](#)” (see par. 33 of SFFAS No. 5). This Release applies the contingent liability criteria (i.e., probable, reasonably possible, and remote) from SFFAS No. 5 to all environmental liability estimates, whether or not they meet the criteria (see par. 36 of SFFAS No. 5). [See SFFAS 12 regarding the definition of probable.]

3a. Monies Appropriated/Transaction Occurred, and

4. No Known Remediation Technology Exists.

Diagram 1.1 illustrates the above tests. These tests for probability assume that a past transaction or event has occurred (i.e., past or present operation, contribution and/or transportation of waste), and apply to both active and closed sites. A narrative discussion of each of these tests for probability follows on Diagram 1.1.

Diagram 1.1: Determination of Probable Environmental Liabilities

^a See discussion on “due care”.

^b If *no known technology exists*, then it would be probable to the extent of any required study costs, costs associated with containment, or any other monies obligated or spent. However, given that the actual remediation is not feasible, the actual remediation costs would not meet the probable criteria.

Diagram 1.1 shows that there are two primary tracks for determining whether a federal agency's environmental responsibilities meet the [probable](#) criterion. The first track is when contamination is known, is related to federal government operations, and represents a legal liability. The second track is when the federal government knows of contamination, and although the contamination is not government related and the government is not legally liable, the government acknowledges financial responsibility for cleanup. For both tracks, if no known technology exists, then the probability criterion is met only to the extent of likely expenditures (e.g., for study costs and containment). A more detailed discussion of the various components of Diagram 1.1 follows.

1. **Likely Contamination:** If the agency has exercised due care in determining the presence of contamination and as a result, believes it is unlikely that contamination (for which it is responsible) exists, then the probability criterion is not met. However, if the relevant agency is aware of contamination, having used the due care criteria (see below), then the agency must determine whether the contamination is government related and the federal government (i.e., the agency) is legally liable.

Due care refers to a reasonable effort to identify the presence or likely presence of contamination. Due care is considered to be exercised if an agency has effective policies and procedures in place to routinely attempt to identify contamination and forward that information to the responsible agency official. Procedures that are evidence of the exercise of due care may include, but are not limited to, the following:

- review of recorded chain-of-title documents (including restrictions, covenants and any possible liens) and good faith inquiry and investigation into prior uses of the property;
- investigation of aerial photographs *that are available through government agencies* that may reflect prior uses;
- analyses to estimate the existence of uninvestigated sites based on information from known sites;
- inquiry into records *that are available* from federal, state, and/or local jurisdictions that show whether there has been a release or potential release of hazardous substances on the property (and adjacent property, if suspected contaminators exist);
- visual site inspection of any portions of the property where environmental contamination is likely or suspected, and
- investigation of complaints regarding abnormal health conditions.

-
2. **Government Related and Legally Liable**⁵. As it relates to environmental damage/contamination, government related events are those where a governmental entity either *caused* contamination (i.e., contribution of waste) or is otherwise related to it in such a way that it is legally liable to clean up the contamination. If the agency believes it is more likely than not that it will be legally liable, then the probability criterion is met.⁶
 3. **Government Acknowledged Financial Responsibility**: If environmental contamination is not government related, then the agency, under its statutory programmatic authority, must determine whether it is authorized to formally accept financial responsibility for cleanup.⁷ If the government does not accept financial responsibility, then the probability criterion is not met.
 - 3a. **Monies Appropriated/Transaction Occurred**: If an agency accepts financial responsibility under No. 3 above,⁸ then the agency determines the extent of probability based on appropriation or authorization legislation and whether a transaction has occurred causing another party to expect payment (e.g., contractor has performed cleanup of a site). For example, if the federal government has acknowledged responsibility for cleaning up a site, the cost of which is at \$10 million, and \$2 million has been appropriated but only \$1 million in services have been rendered, probable is only met to the extent of \$1 million. In the case of government acknowledged events, both conditions (i.e., appropriations or authorization and transaction executed) must exist for the probability criterion to be met.
 4. **No Known Remediation Technology Exists**: In the case of a government related event, where there is no known technology to clean up a particular site, then known costs, for which the entity is responsible, such as a remedial investigation/feasibility study (RI/FS) and/or costs to contain the contamination, meet the probability test. With no known

⁵Legally liable is defined, generally, as any duty, obligation or responsibility established by a statute, regulation, or court decision, or where the agency has agreed, in an interagency agreement, settlement agreement, or similar legally binding document, to assume responsibility for cleanup costs. Legal liability should be determined in consultation with the entity's legal counsel. [See American Bar Association's (ABA) Statement of Policy Regarding Lawyers Responses to Auditors' Request for Information (December 1975). Also see American Institute of Certified Public Accountants (AICPA) Professional Standards, Auditing Standards (AU) Section 337C -- source SAS No. 12.]

⁶Federal entities should consider the Environmental Protection Agency's (EPA) National Priorities List [which identifies "potentially responsible parties" (PRP)] when determining probability.

⁷"The Federal government has broad responsibility to provide for the public's general welfare. The Federal government has established programs to fulfill many of the general needs of the public and often assumes responsibilities for which it has no prior legal obligation." Statement of Federal Financial Accounting Standards No. 5, ¶ 30.

⁸This Release does not propose a position regarding environmental contamination caused by natural disasters which may become the responsibility of the Federal Emergency Management Agency's (FEMA).

remediation technology, actual remediation is not feasible and therefore the outflow of resources for remediation is not probable.

Section 2: Determining “Reasonably Estimable” Environmental Liabilities

Description of Issue

An agency is required to recognize a liability for environmental cleanup costs resulting from past transactions or events when a future outflow or other sacrifice of resources is probable and reasonably estimable. Concerns have been raised about *when* costs associated with environmental damage meets the probable and reasonably estimable criteria. Reasonably estimable relates to the ability to reliably quantify in monetary terms the outflow of resources that will be required. This section addresses only the “reasonably estimable” part of this requirement; probable was addressed in Section 1.⁹

Key Determinants and Positions

Various key factors (tests) should be considered in determining whether future outflows of resources can be reasonably estimated. The factors are:

1. Completion of a Remedial Investigation/Feasibility Study (RI/FS)¹⁰ or other Study,
2. Experience with Similar Site and/or Conditions, and
3. Availability of Remediation Technology.

These tests for reasonably estimable are applied after a transaction or event has occurred that meets the definition of “probable” as discussed in Section 1; tests apply to both active and closed sites. The analysis should consider all significant sites, with the information rolled up into an entitywide estimate. Cost estimates should be based on current technology. Diagram 2.1 on

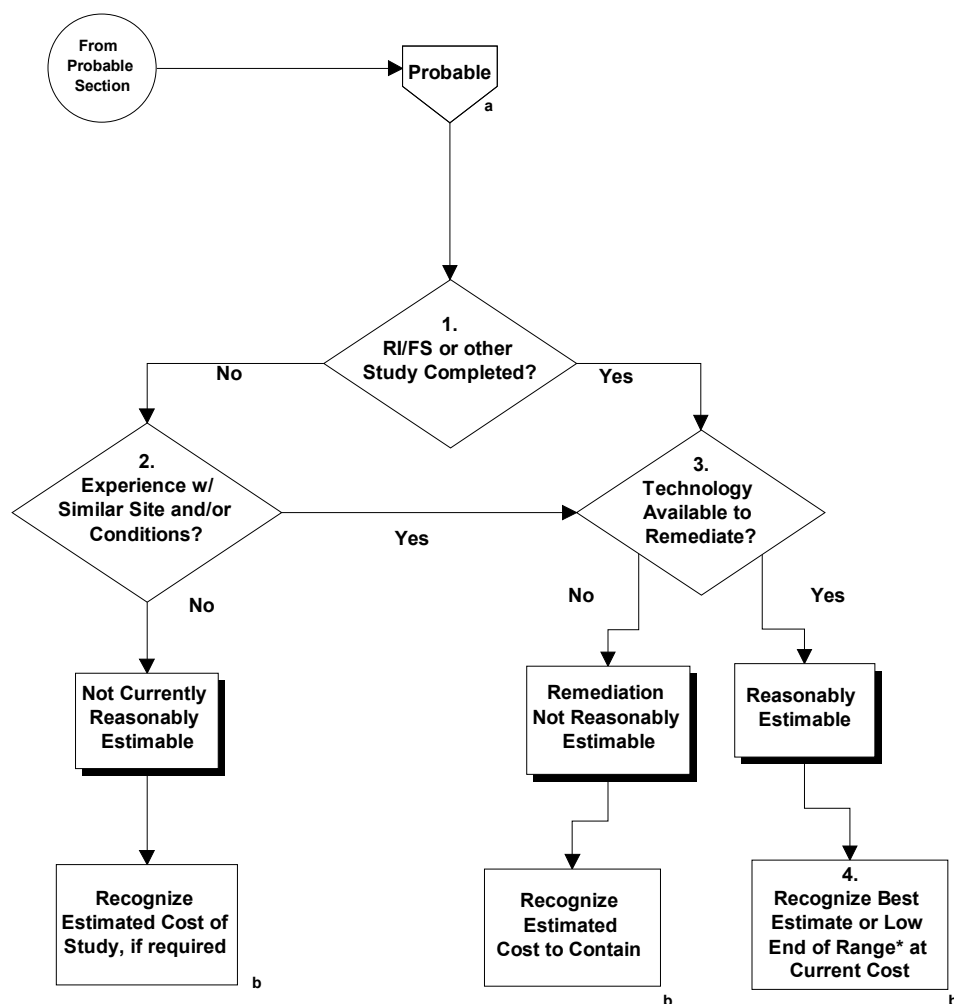

⁹Disclosure requirements when the criteria for reasonably estimable are not met are as follows:

- the nature of the environmental damage and
- an estimate of the possible liability, an estimate of the range of the possible liability, or a statement that such an estimate cannot be made.

¹⁰A remedial investigation/feasibility study (RI/FS) is a comprehensive environmental data collection and site characterization study (RI) that evaluates alternative cleanup actions and recommends one (FS).

page 10 illustrates the application of these tests. A discussion of each of the three tests follows Diagram 2.1. The discussion concludes with issues related to quantification of the estimate and guidance for active sites. Overall, it must be emphasized that every effort should be made to develop an estimate.

Diagram 2.1: Determination and Quantification of Reasonably Estimable Environmental Liabilities

*Low end of range could be containment, if containment is chosen as the option to be pursued.

^a Probable refers to track 1 (government related) which is found in Section 1. Track 2 (government acknowledged) is not applicable.

^b With all tracks, see SFFAS #6 PAR. 107-111 and SFFAS #5 par. 40-42 for disclosure requirements.

Diagram 2.1 begins with the assumption that costs associated with environmental damage has already met the test for probable. This is a direct continuation of the left-side track of Diagram 1.1 on the definition of probable (i.e., the agency has met probable under government related and is legally liable; see Section 1). As it relates to the “probable” second track (i.e., government acknowledged), probable is only met to the extent that monies have been appropriated or authorized (through authorization legislation) and costs have been incurred (e.g., services rendered). In these situations, a definitive dollar figure has already been determined and an estimate is not required. Therefore, the following discussion refers to determining whether something is “reasonably estimable” only as it relates to government related and legally liable.

1. **Completion of RI/FS or other Study:** The first test in determining whether costs are reasonably estimable is to ascertain whether there is a completed study upon which to base an estimate. For example, if a remedial investigation/ feasibility study (RI/FS) has been completed for a particular site, the RI/FS would form the basis upon which to begin estimating the liability.

The fact that an agency does not have a *departmentwide* comprehensive study completed does not exempt an agency from making its best effort to estimate a liability for financial statement purposes, or for recognizing a liability for that portion of its obligation that can be estimated.

If the results of the study indicate that no contamination exists, then probability is not met and the decision process of Diagram 2.1 should be considered complete.

2. **Experience With Similar Site and/or Conditions:** If no study has been completed, the next test is to determine whether a site appears to be similar to any other site or condition where experience has been gained through either a completed study or actual remediation. Similar sites or conditions could be related to other federal entities or private sector corporations. A “site” is defined as a physical place where contamination has occurred. A “location” can be composed of many sites; a site can contain many “conditions.” It may be practical for an agency to combine similar conditions or sites into one large site or location.

If there is a similar site or condition with experience gained (through actual cleanup and/or a completed study to compare), the estimate for recognizing a liability for a site could be based on the similar experience or conditions. In addition, the estimated cost of a future study (if required) should be recognized. Future studies could result in improved estimates.

If there is no comparable site and/or condition, remediation costs for a site would not be considered reasonably estimable at that time, but the agency would recognize the anticipated cost of conducting a future study, if required, plus any other identifiable costs.

-
3. **Availability of Remediation Technology:** Assuming a study has been completed, or an agency or other entity has experience with a similar site and/or condition as noted above, the next test is whether there is technology available to remediate a site. If no remediation technology exists, then remediation costs would not be reasonably estimable, but the agency would be required to recognize the costs to contain the contamination and any other relevant costs, such as costs of future studies.

If technology is available, then remediation costs are reasonably estimable, and the agency would recognize the best estimate at current cost. If no amount within a range of estimates is a better estimate than any other amount, the minimum amount in the range would be recognized. If the estimate is based on similar site criteria, the agency would also recognize the anticipated cost of its own RI/FS or other study, if required.

In certain instances, the RI/FS or other study may conclude that even though technology *does* exist to remediate, containment should be considered as one of the options by the agency. If the agency has yet to make a decision and they may in fact choose containment rather than remediation, and assuming containment is not precluded by other involved parties (i.e., by EPA, individual states and/or local jurisdictions), the agency would consider the estimated cost of containment when calculating the estimated costs to be recognized or disclosed. The agency would calculate an amount to be recognized based on the type and length of containment required.¹¹

If management has not determined what remedial action should be taken for a contaminated *active* site, the cost of containment at the end of the facility's useful life, plus the cost of a study, if not yet done, should be considered as the low end of the range of future estimated cleanup costs.

4. **Quantification of the Estimate:** According to paragraph 39 of the SFFAS No. 5 on contingent liabilities, the estimated liability may be a specific amount or a range of amounts.¹² If some amount within the range is a better estimate than any other amount within the range, that amount is recognized. If no amount within the range is a better

¹¹RCRA (Resource Conservation and Recovery Act) regulations require owners of hazardous waste disposal facilities to implement post-closure maintenance and monitoring activities for a minimum of 30 years. When developing estimates of these operation and maintenance (O&M) costs, EPA generally assumes that O&M activities will be required for 30 years. In most instances, containment costs should be determined on the basis of a minimum of 30 years. It would be expected that in the case of nuclear contamination, different tri-party agreements, technical problems, or other circumstances may lead to the use of a substantially longer time frame than for typical RCRA or CERCLA (Comprehensive Environmental Response Compensation and Liability Act of 1980) sites.

¹²This Release uses SFFAS No. 5's definition of "probable," which is "more likely than not" (see par. 33 of SFFAS No. 5). This Release applies the contingent liability criteria (i.e., probable, reasonably possible, and remote) from SFFAS No. 5 to all environmental liability estimates, whether or not they meet the criteria (see par. 36 of SFFAS No. 5).

estimate than any other amount, the minimum amount in the range is recognized. According to SFFAS No. 6, ¶ 95, estimated costs should be based on the cleanup plan, assuming current technology and current cost.

Changes in environmental liability estimates related to PP&E should be accounted for in accordance with SFFAS No. 6. For general PP&E, SFFAS No. 6 requires that the portion of the re-estimate related to current and prior periods be recognized as an expense in the period of the change. For stewardship PP&E, SFFAS No. 6 requires that the change in estimate be expensed for the incremental costs identified in the reestimate and the liability adjusted in the period of the change.

Where an agency is one of several potentially responsible parties (PRP's) under CERCLA and management has determined that more likely than not the agency is legally liable, the agency should include an estimated liability for its:

- (1) allocable share of the liability for a specific site, and
- (2) share of amounts related to the site that will not be paid by other PRP's.¹³

If an agency shares responsibility with nongovernmental PRP's for a government related event, the agency should recognize the share that management believes it is more likely than not the agency is legally liable for.¹⁴ Where the federal government shares responsibility with nongovernmental PRP's and agency management has decided to accept the nongovernmental PRP's share of the responsibility for the damage (i.e., a government acknowledged event), the agency would *also* recognize a liability for the PRP's share once the criteria of appropriation or authorization legislation and a transaction have occurred, causing another party to expect payment (e.g., contractor has performed site cleanup).

Guidance for Active Sites

Thus far, this technical release has dealt with costs for *past* environmental contamination of property, plant, and equipment (PP&E) related to active and closed sites. In addition, SFFAS No. 6 outlines accounting treatment for *future* environmental contamination of PP&E at active sites.

¹³AICPA Statement of Position (SOP) 96-1, *Environmental Remediation Liabilities*, page 43 par. 6.2.

¹⁴If management determines that an agency should assume responsibility for a portion of another PRP's share of the liability, the agency may recognize a receivable from the other PRP when the federal entity establishes a claim to cash or other assets against the other PRP based on the related legal provisions (i.e., a legal instrument, such as a settlement agreement, or other objective, verifiable information). Losses on receivables should be recognized when it is more likely than not that the receivables will not be collected in total.

The following shows how environmental cleanup costs¹⁵ for active sites should be recognized for general and stewardship PP&E under SFFAS No. 6.

General PP&E

There are two implementation methods for general PP&E in service at the effective date of the standard. Under the first method, the agency would estimate the total cleanup costs (based on current cost to perform the cleanup)¹⁶ that will be required at the end of the PP&E's useful life. The agency would recognize the estimated cost as a prior period adjustment for the portion of the total estimated cleanup costs related to that portion of the *PP&E's useful life that has already expired*.

To illustrate, assume implementation of SFFAS No. 6 on October 1, 1996. Using the illustration below, and assuming a facility was placed in service at the beginning of fiscal year 1992 with a 20-year useful life, the agency would first estimate the total costs (based on current cost) required to clean up the contaminated facility at the presumed plant closure at the end of fiscal year 2011 (\$20 billion). From that estimate (as of October 1, 1996), the amount that relates to that portion of the PP&E's useful life that has already expired (4/20 of \$20 billion, or \$4 billion) would be charged to net position and the fiscal year 1996 prorata portion would be charged to expense.

¹⁵Costs referred to in this section are for decontamination and decommissioning (D&D) only, not operating costs. D&D costs are those incurred after plants or equipment become inactive and require cleanup. Operating costs are period costs that flow through the *Statement of Operations and Changes in Net Position*. A liability is not recognized for operating costs.

¹⁶Current cost should be based on existing laws, technology and management plans (SFFAS No. 6, paragraph 188).

Beginning with fiscal year 1997, the agency would annually recognize a prorata portion of the estimated total cleanup costs based on the remaining useful life of the subject PP&E. In our example, for fiscal year 1997, for this plant (with an estimated remaining useful life of 15 years), the agency would recognize 1/15 of the total estimated remaining cleanup cost of \$15 billion, or \$1 billion. The probable criterion was met under Diagram 1.1 once the PP&E was placed in service. The reasonably estimable criterion was met with the agency's development of an overall estimate of total cleanup costs using the process indicated in Diagram 2.1. Consequently, each years' allocation of cleanup costs is both probable and reasonably estimable, thus requiring the agency to recognize a liability. The allocation method used for cleanup costs, as described above, is similar to depreciation of general PP&E.

Changes in estimates of cleanup costs should be accounted for in accordance with the SFFAS No. 6, which requires that the cumulative effect of changes in total estimated cleanup costs related to current and past operations be recognized as expense, and the liability adjusted in the period of the change in estimate.

SFFAS No. 6 allows a second method for recognizing cleanup cost related to general PP&E in service at the effective date of the standard. The alternative method provides that "if costs are not intended to be recovered primarily through user charges, management may elect to recognize the estimated total [ultimate] cleanup cost as a liability upon implementation of the standard."¹⁷

¹⁷SFFAS No. 6 paragraph 104

For general PP&E placed in service after the effective date of the standard, the agency should estimate the total cleanup costs¹⁸ related to the PP&E and recognize annually a prorata portion of the costs over the life of the asset. Expense recognition shall begin on the date that the PP&E is placed into service.

Because contaminate land does not have a useful life and is not depreciated, it should be treated the same as the facility that is located on the land. For land contaminated in the past, a liability should be recognized for the total estimated cleanup costs. For land expected to be contaminated in the future due to ongoing operations, a portion of estimated total cleanup costs shall be recognized as expense during each period that the associated general PP&E is in operation. If no facility is associated with the land, the land should be treated as stewardship PP&E. SFFAS No. 6 provides guidance for stewardship PP&E (see the following paragraph for a brief summary of stewardship PP&E).

Stewardship PP&E

Stewardship PP&E includes [federal mission PP&E](#)¹⁹, heritage assets, and stewardship land. For stewardship PP&E *already in service*, according to SFFAS No. 6, on the day the standard is adopted or upon early implementation, the agency would charge net position through a prior period adjustment and recognize a liability for the full amount of the estimated ultimate cleanup costs. For new stewardship PP&E, the agency would recognize an expense and a liability for the total amount of estimated ultimate cleanup costs when the PP&E is placed in service. As with general PP&E, the probable criteria would be determined under Diagram 1.1 at the time the standard is adopted or new PP&E is placed in service. Likewise, the reasonably estimable criteria for the total ultimate cleanup costs would be determined based on Diagram 2.1. However, unlike general PP&E, stewardship PP&E is fully expensed once acquisition costs are incurred. SFFAS No. 6 calls for the entire ultimate cleanup costs to be expensed when the PP&E is placed in service.

The provisions of this Technical Release need not be applied to immaterial items.

¹⁸According to SFFAS #6 paragraph 95 the estimate shall contemplate:

- the cleanup plan, including
 - level of restoration to be performed,
 - current legal or regulatory requirements, and
 - current technology; and
 - current cost which is the amount that would be paid if all equipment, facilities, and services included in the estimate were acquired during the current period.

¹⁹The FASAB is currently developing an exposure draft that proposes to change the term "federal mission PP&E" to "national defense PP&E" and to alter the definition. [SFFAS No. 11]

Appendix I - Relevant Laws

This appendix lists some of the laws that relate to environmental cleanup. It is not intended to be a comprehensive list of all pertinent laws. Federal agencies should check with their Office of General Counsel to determine which laws are applicable to their agency.

- I. Principal Environmental Laws to Which Federal Facilities Are Subject
 - A. Comprehensive Environmental Response Compensation and Liability Act of 1980 (CERCLA, or Superfund), and subsequent amendments
 - 1. Administered by EPA
 - 2. Established a program to identify sites (National Priorities List)
 - a. Typically abandoned or inactive sites
 - b. Can be applied to sites still in operation
 - 3. Set up trust fund to cover costs (with attempts to recover)
 - 4. Detailed standards for remediation and settlement provisions and authorized criminal sanctions
 - 5. Entities may have “joint and several” liability for cleanup
 - B. Resource Conservation and Recovery Act (RCRA)
 - 1. Permits issued by EPA for facilities used or being used to manage hazardous waste (includes generating, treatment, storage, and disposal)
 - 2. Covers both closed and active facilities
 - C. Clean Air Act
 - D. Clean Water Act
- II. Other Environmental Laws
 - A. Safe Drinking Water Act
 - B. Toxic Substances Control Act
 - C. Federal Insecticide, Fungicide, and Rodenticide Act
 - D. Pollution Prevention Act 1990
 - E. Federal Facilities Compliance Act
 - F. Nuclear Regulatory Act and its amendments
 - G. Emergency Planning and Community Right-to-Know Act
- IV. State laws
 - A. For federal cleanup activities, state standards can apply, which are at least as stringent as federal laws
- V. Foreign Laws
 - A. As applicable

Federal Financial Accounting And Auditing Technical Release 3 (Rescinded): Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act

Status

Issued	July 31, 1999
Effective Date	For fiscal periods beginning after September 30, 1998
Affects	None.
Affected by	Technical Releases 3-Revised and 6 rescinded Technical Release 3 in its entirety.

Summary

This technical release amends the guidance for auditors to audit credit subsidy estimates provided in Technical Release 3: *Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act* (TR3), July 1999. The original technical release (July 1999) contained both audit and accounting guidance. Technical Release 6 contains only the guidance for preparing estimates.

Introduction

1. The purpose of this technical release is to amend the guidance for auditors to audit credit subsidy estimates provided in Technical Release 3: *Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act* (TR3), July 1999. The original technical release (July 1999) contained both audit and accounting guidance. The most significant changes made in this amended TR 3 are 1) the removal of the preparation guidance from this amended TR to only include the audit guidance and 2) procedural changes updating the document to reflect new guidance and changes in terminology in the area of credit reform (e.g., SFFAS 18 & 19; and OMB Circular A-11). Concurrent with the issuance of this amended technical release on auditing guidance, Technical Release 6 is being issued and will contain only the guidance for preparing estimates.
2. Readers of this technical release should first refer to the hierarchy of accounting standards in Statement on Auditing Standards (SAS) 91, Federal Generally Accepted Accounting Principles Hierarchy (or see AU411).
3. This technical release includes sections on:
 - Planning the Credit Subsidy Audit
 - Testing Internal Control
 - Substantive Testing of Subsidy Estimates
4. It also presents four appendices on:
 - Acceptable Sources of Documentation for Subsidy Estimates and Reestimates
 - Technical Glossary
 - Summary of Reestimate Requirements
 - Summary of Reporting Requirements
5. This technical release does not address loan asset sales and does not provide complete guidance for administrative expenses and pre-1992 direct loans and loan guarantees. Guidance on these areas can be found in SFFAS Nos. 2, 18, & 19 and OMB Circular No. A-11 and OMB Bulletin No. 01-09. Additional guidance on loan asset sales will be addressed separately in the future.

Background

6. This technical release is designed to provide guidance on the audit of credit subsidy estimates. There are three parts of subsidy: initial subsidy, modifications of subsidy and reestimates of subsidy. This technical release discusses audit methods, both internal control and substantive procedures, that may be used to audit credit subsidy estimates, modifications and reestimates. As complex and varied as credit subsidies are within Government, auditor judgment is essential to implementing this guidance. This technical release also provides guidance on acceptable sources of documentation for subsidy estimates and reestimates.

Accounting and Budgeting Guidance

7. Federal agencies are required to account for direct loans and loan guarantees in accordance with Statement of Federal Financial Accounting Standards No. 2, *Accounting for Direct Loans and Loan Guarantees* (SFFAS No. 2), SFFAS No. 18, *Amendments to Accounting Standards for Direct Loans and Loan Guarantees*, and SFFAS No. 19, *Technical Amendments to Accounting Standards for Direct Loans and Loan Guarantees*.
8. OMB Circulars A-11 *Preparation, Submission, and Execution of the Budget* and A-129 *Policies For Federal Credit Programs and Non-Tax Receivables* provide guidance to agencies on definitions, procedures and rules for calculating subsidy estimates and reestimates for the President's Budget and modification cost estimates, obligation of budget authority for the credit program's cost, and credit and receivables policy.
9. The Credit Subsidy Calculator (CSC) is a computer program provided to the agencies to calculate the cost of direct loans and loan guarantees using the agencies' cash flow estimates. The OMB Circular A-11 requires that all agencies with credit programs must use the CSC to discount the credit subsidy estimate and reestimate cash flows that they are responsible for generating.

Materiality

10. The provisions of this guidance need not be applied to immaterial items.

Effective Date

11. The guidance outlined in this technical release is effective immediately.

Audit Tests for Direct Loan and Loan Guarantee Subsidy Estimates

12. The overall purpose of auditing the subsidy estimation and re-estimation process is to provide reasonable assurance that the reported credit program receivables and related foreclosed property and related allowance for subsidy, liabilities for loan guarantees, and subsidy expense, are reasonably stated in the financial statements and provide reliable and useful information for decision makers. Since the audit should be conducted in three phases--planning, internal control, and substantive testing--this technical release is organized in the same way. Due to the complexity of credit subsidy estimates, thorough planning is key to an effective and efficient audit. The auditor must also assess the agency's internal control and the risk of errors and irregularities that may cause a material misstatement in the financial statements. Based on this assessment, the auditor can determine the nature, timing, and extent of substantive testing to determine whether the credit subsidy estimate is reasonable in the context of the financial statements taken as a whole.

Planning the Credit Subsidy Audit

13. The audit of credit subsidy estimates should be considered in conjunction with other audit areas, e.g., claims, insurance in force, foreclosed property, premium receipts, and loan sales. In this way, the auditor will be able to leverage off the other audit areas to maximize audit efficiency and effectiveness. When planning the audit of credit subsidy estimates, the auditor must consider the budget preparation process, which generally occurs during the same time as the planning phase, and the impact audit adjustments may have on the budget submission. When planning the nature, timing, and extent of the audit of credit subsidy estimates, the auditor is encouraged to perform the review and testing of the cash flow models, as described throughout this section, early in the audit process. By performing these audit procedures early in the agency's audit, any necessary adjustments to the cash flow model can also be made in time to be included in the budget cash flow model. In this way, the audit of the credit subsidy estimates will fulfill the intent of paragraph 17 in SFFAS No. 2 which states that "The Board recognizes the value of having financial accounting support the budget. It endorses the logic underlying credit reform, and it recommends that

accounting standards for credit be consistent with budgeting under credit reform.” Auditors are encouraged to use their judgment when determining the nature, timing, and extent of tests that will be performed. Not all of the tests contained in this Technical Release will be applicable to all credit programs.

14. During the planning phase, the auditor should focus on four primary objectives: (1) understanding the agency's credit subsidy estimate process, (2) identifying key estimate assumptions, (3) identifying material and high risk credit programs, and (4) assessing inherent risk and the effects of information technology on inherent risk.

Understanding the Credit Subsidy Estimate Process

15. Without a thorough understanding of the agency's credit subsidy estimate process, the auditor is unable to efficiently and effectively audit the loans receivable and the related allowance, the liability for loan guarantees, and the subsidy expense, in accordance with applicable auditing standards. To gain an understanding of the credit subsidy process, the auditor should
 - a. Review the documented subsidy estimation procedures to gain an understanding of the process, including the types of underlying data used to develop cash flow assumptions, key formulas used in cash flow worksheets, and the person responsible for each phase of the process.
 - b. Identify significant external and internal factors that may affect the credit subsidy process. External factors may include economic conditions, current political climate, and relevant legislation. Internal factors may include the size of the agency's budget and accounting staff, qualifications of key personnel, turnover of key personnel, and systems capabilities.
 - c. Develop a high-level understanding of the agency's use of information technology, how information technology affects the subsidy estimate process, and which systems should be included with the general and application control review.¹

¹ The auditor should actively coordinate general and application control reviews of financial management systems to ensure that they focus on controls over key cash flow reports such as defaults or prepayments as well as the controls over the cash flow spreadsheets. Further, the auditor should consider evaluating controls over the agency's use of the OMB Credit Subsidy Calculator. For a detailed discussion of the audit procedures related to the OMB Credit Subsidy Calculator, refer to the Report of Independent Accountants and Independent Verification and Validation (Y2K) Documents Pertaining to the Credit Subsidy Calculator, available on OMB's Federal Credit Support Page prepared by the Budget Analysis Branch: <http://www.omb.gov/credit>. These audit procedures have been included in this technical release in summary form.

-
- d. Determine, with the assistance of a systems audit specialist as necessary, whether systems-related controls are likely to be effective.² If controls are not likely to be effective, the auditor should determine the impact on control risk, appropriately adjust substantive testing, and focus on testing the effectiveness of manual controls during the internal control phase of the audit.
16. The auditor may gather planning information through different methods such as observing agency operations, interviewing agency staff, reviewing procedures manuals, and conducting walk throughs. In addition, the auditor may gather information from relevant reports, including prior year financial statements, Federal Managers' Financial Integrity Act (FMFIA) reports and supporting documentation, Inspector General and internal audit reports, and congressional hearings and reports.

Identifying Key Assumptions

17. One way for the auditor to maximize audit efficiency is to focus on the key assumptions, i.e., those assumptions that have the greatest impact on the credit subsidy rate and hence, the credit subsidy amount. To identify key assumptions, the auditor should evaluate and retest selected areas of management's credit subsidy sensitivity analysis. For example, in performing this analysis, agency management may have varied the subsidy estimate assumptions by a fixed amount, such as 10 percent in either direction, and was thus able to identify the degree to which the subsidy rate was sensitive to different assumptions. These assumptions often require greater audit effort because minor variations may have material effects on the subsidy amount. The auditor should review this sensitivity analysis carefully and retest selected portions as necessary to gain comfort with management's work before relying on it. In resetting the agency's sensitivity analysis, the auditor should consider recalculating the impact that changes in key assumptions have on a credit program's subsidy amounts.
18. When identifying key assumptions, additional consideration should also be given to those assumptions that fluctuate significantly. These assumptions may be more difficult to predict, and their normal fluctuation may materially affect the credit subsidy amount even though the credit subsidy amount may not change significantly during the sensitivity analysis. For example, prepayments may be difficult to predict since historically they fluctuated ten percent or more over the past five years. Thus, even though the auditor did not identify prepayments as a key assumption during the review of the agency's sensitivity analysis,

² Although the actual testing of technical system-related controls should generally be performed by a systems audit specialist, the financial statement audit team should participate in identifying and testing general controls, user controls, and application controls to tentatively conclude on the effectiveness of systems-related controls.

prepayments should be considered a key assumption because their normal fluctuation may materially affect the credit subsidy amount.

19. If management has not performed sensitivity analysis of the credit subsidy assumptions, the auditor may consider performing a sensitivity analysis or other analysis to identify the key cash flow assumptions. This analysis will allow the auditor to focus on key areas and will increase the auditor's efficiency in the substantive testing phase of the audit.

Identifying Material and High Risk Credit Programs for Internal Control and Substantive Testing

20. In order for the auditor to maximize efficiency and effectiveness when selecting programs for internal control testing and substantive testing, the auditor should focus efforts on material programs. Generally, material programs have higher inherent risk than immaterial programs. Materiality is defined in Financial Accounting Standards Board Statement of Financial Concepts No. 2, Qualitative Characteristics of Accounting Information, as "the magnitude of an omission or misstatement of accounting information that, in the light of surrounding circumstances, makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or misstatement." Thus, items of little importance are less likely to affect the financial statement users' judgment. Materiality has both qualitative and quantitative factors, since certain types of relatively immaterial misstatements from a quantitative standpoint could be significant for other reasons. For example, some programs that are immaterial in amount could be sensitive because of Congressional interest.
21. According to Statement on Auditing Standard 47, AU Section 312, Audit Risk and Materiality in Conducting an Audit, "audit risk and materiality, among other matters, need to be considered together in determining the nature, timing, and extent of auditing procedures and in evaluating the results of those procedures." The following list includes some of the factors that the auditor should consider in determining which direct loan or loan guarantee programs are material and/or high risk and therefore should be selected for testing.
- The amount of subsidy expense for a given program,
 - The dollar value of the program's direct loans on the balance sheet,
 - The dollar value of the program's loan guarantees and their related liability for default,
 - The dollar amount of subsidy expense, magnitude of transactions, and variance of past reestimates,
 - Past audit experience for the program,
 - The auditor's preliminary assessment of risk,
 - Recent significant changes in economic conditions,

-
- The complexity of the program (the number, size, and technical difficulty of the loans),
 - The age of the program (new programs may have more risk than older established programs, other things being equal),
 - The degree to which sub-recipients, contractors, and private lenders make decisions about implementing the program, and
 - Congressional and other public policy interest in a given program.
22. This list is designed to assist the auditor in identifying material and/or high-risk programs. The above list is not designed to replace professional judgment. For example, a credit program could have a relatively small subsidy expense because the agency nets gross subsidy expense components with offsetting fees, in accordance with SFFAS No. 2 and the Credit Reform Act. However, the auditor should not focus solely on the net subsidy expense. Rather, the auditor should consider the gross amounts of the subsidy expense and fees, the total loans receivable, and/or the total liability for loan guarantee account when determining whether the program is material.
23. Past audit experience should be considered since it may indicate that the program should be retested again this year when, for example, significant internal control weaknesses were discovered in the prior year's audit. Conversely, past audit experience may allow the auditor to reduce the level of current year testing for the program. Factors that should be considered in determining the appropriate level of detailed substantive testing for material programs include:
- The number of years since the last time the program was included in internal control and substantive testing,
 - The results of the preliminary assessment of risk,
 - Changes in economic events that affect the current cash flow assumptions,
 - The level of employee turnover, and
 - Changes in program characteristics, terms of credit, or implementation.
24. Finally, when inherent risk is low and the agency's control environment is strong, the auditor may consider testing credit programs on a rotating basis. In determining whether rotational testing is appropriate, the auditor should consider (1) the results of prior audit experience, (2) the length of time since the program was tested, (3) the materiality of the program, and (4) the auditor's assessment of inherent and control risk.
25. Upon completion of the internal control testing, the auditor may wish to revise the assessment of which programs are material and/or high risk. For example, the auditor's preliminary risk assessment may not be supported by the results of the internal control testing. When the results of the internal control testing lead the auditor to conclude that the internal control is not operating effectively, the auditor may revise the risk assessment for

programs originally expected to have low risk. As a result, the auditor should include these programs in the detailed substantive testing. On the other hand, the auditor may decide to reduce the extent of detailed substantive testing for a material program based on the results of internal control testing.

Assessing Inherent Risk and the Effects of Information Technology

26. Based on the auditor's understanding of the credit subsidy estimation process, the auditor identifies specific inherent risks³ and control environment weaknesses. To identify inherent risk factors, the auditor generally focuses on (1) the nature of the agency's program, (2) prior history of audit adjustments, and (3) the nature of material transactions. The nature of an agency's program may increase inherent risk. For example, some loan guarantee programs may be more susceptible to errors because of loans issued and serviced by third parties. Significant audit adjustments in previous audits often identify problem areas that may continue to result in financial statement misstatements. Accounts involving subjective management judgments, such as credit subsidy estimates and the liability for loan guarantees, are usually higher risk than those involving objective determinations.
27. Information Technology can also introduce inherent risk factors. The auditor should assess systems-related factors and determine the overall impact of information technology on inherent risk. For example, unusual or non-routine transactions generally increase inherent risk. Programs or systems developed to estimate credit subsidy amounts, e.g., the agency's cash flow spreadsheets, may not be subjected to the same procedures and controls as EDP programs and systems developed to process routine transactions. The degree of existence and completeness of the audit trail may also increase inherent risk. The audit trail demonstrates how a specific transaction was initiated and processed. Some EDP financial management systems are designed so that the audit trail exists only for a limited period, only in electronic format, or only in summary form. Uniform processing of transactions may also increase inherent risk because a programming error will consistently misstate transactions. For example, if an agency misstates a cash flow assumption, such as defaults, recoveries, or the interest rate, in a cash flow spreadsheet that has been electronically linked to other cash flow spreadsheets, the error will affect all of the linked cohorts or programs. As a result, the auditor must be aware that some errors may be systemic rather than isolated incidents and the auditor should be careful to distinguish between the two.

³ Inherent risk is the susceptibility of a financial statement assertion to a material misstatement, assuming that there are no related internal controls. Financial statement assertions are representations by management that are embodied in financial statement components. See Codification of Statements on Auditing Standards, AU Section 326.

Testing Internal control

28. As noted above, the auditor should select material programs for internal control and detailed substantive testing. In this way, the auditor will more effectively and efficiently focus audit efforts on the programs that are most significant to the users of the financial statements. In some instances, more than one program will utilize the same system of internal control. Thus, the auditor would need only test the system once to gain assurance on all related programs. This section provides guidance for the auditor to use in evaluating the agency's internal control for material and/or high-risk credit programs so that the auditor can determine the nature, timing, and extent of substantive tests to perform on credit reform related accounts such as subsidy expense, allowance for subsidy, and liabilities for loan guarantees. The auditor needs to evaluate the agency's internal control before updating the preliminary assessment of the control risk.⁴
29. Due to the complexity of credit reform, it is necessary for the auditor to obtain a good understanding of the internal control components to design effective substantive tests. If, after evaluating the agency's internal control, the auditor assesses control risk at a high level, the auditor will need to obtain most, if not all, of the audit assurance from substantive tests. Thus, the auditor will need to expand the level of detailed substantive testing. However, if the auditor determines that control risk is low based on the evaluation of the agency's internal control, the auditor has more assurance concerning the accuracy of the information generated within that structure. Thus, the auditor may be able to reduce the level of detailed substantive testing.
30. Internal control is a process--affected by an agency's management⁵ and other personnel--to provide reasonable assurance regarding the achievement of reliable financial reporting, effective and efficient operations, and compliance with applicable laws and regulations. Internal control consists of the control environment, control activities, information and communication, risk assessment, and monitoring. The auditor should consider the following when obtaining an understanding of the agency's internal control.

⁴ Control risk is the risk that a material misstatement could occur in a financial statement assertion and will not be prevented, detected, and corrected on a timely basis by the entity's internal control structure.

⁵ In this technical release, the term "agency management" is used in the same context as it is used in OMB Circular A-123 and may include any individual Federal manager responsible for ensuring that credit reform is implemented efficiently and effectively to achieve intended program results. Agency management could include, but is not limited to, the Chief Financial Officer, Director of Budget, and Controller.

Assessing the Control Environment

31. The control environment sets the tone of an organization, influencing the control consciousness of its people. It is the foundation for all other components of internal control, providing the discipline and structure. When assessing the control environment, the auditor should consider management's philosophy and operating style (done elsewhere in the audit) and generally perform the following steps for the material programs' systems of internal control.
- a. Determine whether the same estimation process was used for other programs by comparing the documented procedures between programs. If the same process was used between programs, the results of the internal control testing for this program may help the auditor gain comfort with other programs.
 - b. Determine how management assures itself that established procedures and internal control have been consistently implemented among the various divisions/branches responsible for preparing subsidy expense estimates.
 - c. Determine how management assures itself that the historical data used as the basis for the subsidy amounts accurately supports the cash flow assumptions.
 - d. Determine whether the agency has the appropriate supporting documentation for key assumptions as outlined in Appendix A of this technical release.
 - e. Determine how management assures itself that assumptions or data requirements which are based on conditions affecting multiple programs and cohorts are uniformly applied. For example, identify and test the controls in place that management relies on to ensure that:
 - Similar assumptions are made concerning economic conditions for a particular business sector where both direct and guaranteed credit programs are delivered,
 - Historical data for subsidy expense components are consistently collected and interpreted among similar programs, and
 - Options chosen for the OMB Credit Subsidy Calculator properly reflect the specific characteristics of the applicable credit program.
 - f. Review management's comparison of projected cash flows to actual cash flows from the accounting department. Determine whether management (1) appropriately identified material variances and the cause of these variances, (2) performed trend analysis of the credit subsidy components, (3) adjusted future cash flow estimates of those cohorts to reflect these variances, (4) determined whether there was a flaw in the cash flow spreadsheet that caused the variance and, if so, determined the impact this flaw had on all cohorts, and (5) reestimated subsequent years' subsidy amounts, as appropriate.

-
- g. Determine whether the agency is appropriately using the latest version of the OMB Credit Subsidy Calculator by recalculating the subsidy rate with the agency's estimated cash flows.⁶
 - h. If applicable, determine whether waivers were obtained from OMB for years in which subsidy reestimates were not performed in accordance with OMB guidance.
 - i. Determine how management assures itself that the agency used the proper scale for the cash flow spreadsheets. Some program subsidy rates, particularly those for programs disbursing over several years, may be influenced significantly by the scale for cash flow values. Therefore, management should determine whether an appropriate scale has been used so that rounding to three decimal places has no significant effect on the cash flow spreadsheet values and the subsidy rate.
 - j. Determine how management assures itself that the agency has appropriately prepared cash flows using a cohort basis or disbursement year basis. For example, when a program disburses over more than one year, the auditor should determine whether the agency used a disbursement year basis. If the agency used a cohort basis, the auditor should determine why the agency did not use a disbursement year basis and whether the use of cohort level cash flows has had a material effect on the subsidy calculation. If the effect is material, the auditor should recommend that the agency prepare cash flows on a disbursement year basis to eliminate the problem.
 - k. Determine whether agencies have controls over access to the OMB Credit Subsidy Calculator, e.g., confirmation of passwords, and determine whether these controls adequately protect the model from unauthorized use and corruption.

Control Activities

- 32. Control activities are the policies and procedures designed to ensure that management directives are carried out. Control activities have various objectives and are applied at various organizational and functional levels. Control activities can include physical controls, segregation of duties, performance reviews, and information processing. When assessing management's assignment of responsibility and delegation of authority for ensuring the efficient and effective implementation of credit reform, the auditor should consider doing the following.
 - a. Assess management's control methods for monitoring and following up on the agency's ability to prepare reliable subsidy estimates by reviewing, on a test basis for material programs, management's comparison of projected net cash flows with actual cash flows to determine whether over time projected cash flows are becoming more representative of actual cash flows and whether reestimates are the result of

⁶ A copy of the model is available from OMB's Budget Analysis Branch.

-
- controllable factors (technical cash flow assumptions) or uncontrollable factors (discount rate assumptions).
- b. Verify that the cash flow assumptions that the agency used in developing its cash flow estimates were reviewed and approved by the appropriate agency management.
 - c. Determine how management assures itself of the reliability and logic flow in formulas and mathematical functions within agency initial cash flow worksheets.
 - d. Assess the internal control used by management to ensure that changes made to cash flow spreadsheet formulas are appropriate. For example, if changes made to one cash flow spreadsheet need to be carried forward to other spreadsheets, determine whether this is done automatically or if each spreadsheet must be updated individually. Assess the risk of errors being introduced during this process.
 - e. Determine whether management has a systematic process in place to identify significant changes in economic or other assumptions that will affect subsidy rates of existing cohorts. Determine whether management has a systematic process in place to calculate the differences between actual and estimated cash flows and the possible effect of these differences on the future cash flows of existing cohorts. Determine whether this process assesses the materiality of these changes on the cash flow estimates and the subsidy expense and appropriately concludes whether reestimates are required under OMB guidance. In evaluating potential changes in cash flow assumptions, the process should assess the impact that various factors may have on the program (which also may affect subsidy rates), such as:
 - Legislative program changes,
 - Administrative program changes,
 - Environmental changes,
 - Operational changes, e.g., a reduction in employees because of budgetary constraints that would impact the servicing of loans,
 - War, and
 - International economic factors.
 - f. Determine how management assesses the impact of changes in laws or regulations on the reliability of estimates. For example, a legislative program change may include provisions about maturity or type of borrowers that are outside the scope of past agency experience or may include program changes that shift the composition of new lending toward more or less risky borrowers. Stratification of the portfolio by risk category may enable management to assess the effect of the changes on the estimates. If the agency's databases do not permit such stratification, the uncertainty associated with the estimates may increase.
 - g. Determine whether management has a systematic process in place to estimate the effect of the factors considered in paragraph (e) above on the cash flows of new cohorts.

-
33. Once specific controls related to the above activities have been identified, additional tests should be designed to ensure that the agency's controls are operating as designed. The auditor should consider using dual purpose testing to combine the internal control testing with substantive testing as appropriate. Dual purpose testing is discussed in more detail in the section on substantive testing of subsidy estimates in this technical release.

Information and Communication

34. The quality of system-generated information affects management's ability to prepare reliable financial reports. Communication involves providing an understanding of individual roles and responsibilities pertaining to internal control over financial reporting. The auditor should obtain an understanding of (1) the classes of transactions in the agency's operations that are significant to credit reform accounting in accordance with Treasury case studies, (2) how those transactions are initiated, (3) the accounting records, supporting information, and specific accounts in the financial statements involved in the processing and reporting of the transactions, (4) the accounting process involved from the initiation of a transaction to its inclusion in the financial statements, and (5) the financial reporting process used to prepare the agency's financial statements, including significant accounting estimates and disclosures. When assessing controls over information and communication, the auditor should consider doing the following:
- a. Identify and test the controls in place designed to ensure that appropriate personnel are made aware of any concerns that result from reviewing key cash flow assumptions and comparing estimated to actual cash flows as well as the actions taken to resolve the concerns and update the subsidy estimate as appropriate.
 - b. Determine whether internal control are in place to ensure that the data supporting the cash flow identifiers⁷ used in the spreadsheets are appropriate and consistent with the description of the identifier contained in the applicable user's guide of the OMB Credit Subsidy Calculator. Effective internal control are needed to ensure that disclosures concerning the amount of subsidy expense related to interest differential (direct loans), interest supplement (loan guarantees), defaults (net of recoveries), fees, and other are reasonable. For example, the auditor should identify and test controls designed to ensure that the amount estimated for recoveries is based on reliable, complete information from the agency's past experience. For example, the auditor should also identify and test controls designed to ensure that, when compiling the information upon which the estimate is made, transactions have been properly classified as a recovery

⁷ Cash flow identifiers are listed in the document, "How to organize cash flow estimates in a spreadsheet file," which is available on the Federal Credit Support Page (<http://www.omb.gov/credit>). The document includes various elements the agency must consider when estimating net cash flows, such as disbursements, principal payments, interest payments, fees and other income, defaults, etc.

- rather than a reduction in the amount of another cash identifier such as "defaults" or "losses other than default."
- c. Determine whether controls are in place to ensure that all applicable credit program cash flows are addressed in the subsidy estimation process. For example, cash flows should be estimated for all transaction types that affect Standard General Ledger Account nos. 1399, Allowance for Subsidy, and 2180, Loan Guarantee Liability. Conversely, transactions in unrelated accounts should be excluded from the subsidy calculation. To test these controls, the auditor should consider reviewing the cash flow worksheet input and the program description to determine whether all applicable cash flow types have been included. In addition, the auditor should review the transaction types included in the Allowance for Subsidy and the Liabilities for Loan Guarantees accounts on a test basis to determine whether these transactions are appropriate.

Risk Assessment

35. The risk assessment process is an internal process used by the agency to (1) identify and analyze the relevant risks to achieving its objectives and (2) develop a plan to mitigate the identified risk. The auditor should obtain sufficient knowledge of the agency's risk assessment process to understand how management identifies, evaluates, and mitigates risks relevant to developing reliable credit subsidy estimates. In evaluating the risk assessment process, the auditor should determine if management developed a strategic plan with goals and objectives for ultimately improving the reliability of estimates. The auditor should determine whether this plan addresses (1) clearly defining the data requirements, (2) developing an effective information store and modeling methods as described in issue paper 96-CR-7 Model Credit Program Methods and Documentation for Estimating Subsidy Rates and the Model Information Store, available from the AAPC web page (<http://fasab.gov/aapc/cdreform/othercrddoc.htm>), (3) improving the methods of estimating cash flows, and (4) step-by-step resource allocations and target completion dates to meet the goals and objectives of the strategic plan. Also the auditor should assess management's progress at meeting the plan's goals and the targeted completion dates.

Monitoring

36. Management should monitor controls to determine whether they are operating as intended and that they are modified as appropriate for changes in conditions. Monitoring is a process that assesses the quality of internal control performance over time. OMB Circular A-123, Management Accountability and Control, is issued under the authority of the Federal Managers' Financial Integrity Act (FMFIA) of 1982 and provides guidance to federal managers on improving the accountability and effectiveness of federal programs and operations by establishing, assessing, correcting, and reporting on management controls. During federal financial statement audits, the auditor is required to assess the agency's compliance with the FMFIA. The auditor should obtain sufficient knowledge of the major

types of activities the entity uses to monitor internal control over financial reporting, including how those activities are used to initiate corrective actions. When assessing control risk, the auditor should be cognizant of any material weaknesses reported in the agency's FMFIA report that relate to the efficient and effective implementation of credit reform.

Substantive Testing of Subsidy Estimates

37. Agencies are required by SFFAS No. 2 to account for subsidies at the cohort level in their accounting systems. This information is then aggregated for inclusion in the financial statements. As previously noted, footnote information related to credit programs is typically reported at the fund or program level and the total subsidy expense for the year is divided among three categories: the current year's direct loans or loan guarantees, modifications, and reestimates. The subsidy expense for the current year's direct loans or loan guarantees is segregated into four categories consisting of interest differential or supplement, defaults, fees, and other. The auditor needs to gain assurance about these cost categories at the aggregated fund/program level; however, it is difficult for the auditor to apply adequate procedures for summary amounts which represent numerous cohorts. It would be difficult to explain variations in aggregated amounts without addressing the more detailed cohort level. Determination of what level to disaggregate subsidy information for the purposes of an audit will vary for each agency and will be contingent on current practice and available information.

General Approach to Substantive Testing

38. The following four steps provide a general approach for performing substantive testing. Detailed guidance on implementing these four general steps follows. The nature, timing, and extent of substantive tests will be significantly influenced by the auditor's assessment of the internal control environment. **This section is written under the premise that the agency has established effective internal control.** The next section includes a discussion of the impact of ineffective controls on the nature, timing, and extent of substantive testing as well as the impact on the audit opinion.
- a. Select a representative sample of cohorts for detailed testing, for those material programs selected for internal control testing.⁸

⁸ Professional standards stated in AU Section 350.24 that "sample items should be selected in such a way that the sample can be expected to be representative of the population. Therefore, all items in the population should have an opportunity to be selected."

-
- b. Test sampled cohort estimates to determine whether the credit reform process is working as defined and whether the account balance is reasonably stated.
 - c. Perform analytical review procedures to gain assurance that the estimates are reasonable for lines of business, funds, programs, or cohorts not selected for detail testing.
 - d. Conclude on audit differences identified during the test work and determine the financial statement impact.

Impact of Ineffective Internal control on Substantive Testing

- 39. The auditor's assessment and conclusions regarding the effectiveness of the agency's internal control structure, including computer security and the effectiveness of edits and other system controls, will significantly impact the level of substantive testing. If the agency's internal control structure is not effective (i.e., does not adequately reduce the risk that a material misstatement related to credit reform in the financial statements would be detected and corrected), the auditor will need to design substantive tests to gain assurance on the account balance and propose audit adjustments as necessary.
- 40. For example, if there is no system in place to trigger reestimates, the auditor will need to review management's comparison of actual cash flows for material programs to projected cash flows to search for and identify material variances. In addition, the auditor will need to determine whether the agency identified other factors that may materially affect future cash flows, e.g., economic downturn, program changes, or drought, and may require a reestimate. If the budgeted to actual cash flow comparison was not done by the agency, the auditor should consider performing this analysis based on resource availability. Based on the auditor's analysis of the identified variances and other changes that may affect future cash flows, the auditor should determine whether a reestimate is necessary and urge the agency to calculate the reestimate. Once the reestimate is made, the auditor is then able to assess the impact of the reestimate on the financial statements.
- 41. If in the auditor's opinion (1) the internal control weaknesses are so significant that the subsidy expense is likely to be materially misstated, (2) resource constraints make it unreasonable for the auditor to conduct the level of substantive testing necessary to determine the possible audit adjustments, or (3) resource constraints at the agency make it unreasonable to calculate all the necessary material reestimates and include them in the financial statements, the auditor would likely be required to modify the audit opinion. For example, the monitoring process to determine whether reestimates are necessary is a key internal control. Without effective monitoring, the agency may not have reasonable assurance that material reestimates will be made timely and the auditor would need to expand the level of substantive testing. When an agency does not (1) reestimate credit subsidies for the most recently completed fiscal year and include the reestimate in the current year's financial statements or (2) provide assurance that there is no material

financial statement impact (as specified in TR 6 paragraphs 47 – 58), the auditor should consider modifying the audit opinion.

42. When assessing the financial statement impact of subsequent events related to credit subsidies, the auditor should follow the guidance in AU Section 342.13 for events occurring after the reestimate date but before the end of fieldwork. In addition, auditors should consider AU Sections 508.19 and .29 - .32 when assessing the effect of uncertainties on the agency's financial statements and the auditor's opinion.

Selecting the Sample of Cohorts

43. The procedures for selecting a sample of cohorts depend upon the type of information to be gleaned from the sample and the desired precision of sample estimates. The sampled cohort is tested to determine whether the credit reform process is working as defined and more specifically, whether the related balance sheet and statement of net cost line items are reasonably stated. In order to gain audit efficiencies, the auditor should consider utilizing dual purpose testing⁹ for a representative sample of cohorts selected from material credit programs. In this way, the auditor will be able to gain assurance from the same sample that both the internal control structure is effective and that the account balance is reasonably stated in relation to the financial statements taken as a whole. When more than one program utilizes the same system of internal control, the auditor should only test the system once to gain assurance on all related programs and their cohorts. To utilize representative sampling, the auditor must select sample items in such a way that each item in the population has an opportunity to be selected and the estimators are appropriate for the selection methods. In this way, the sample and the resulting estimate or projection are expected to be representative of the population from which the sample was selected. In addition, sufficient sample sizes are necessary in order for the auditor to arrive at meaningful conclusions.
44. The auditor may wish to stratify the population of cohorts into homogeneous groups prior to selecting the sample to improve sampling efficiency. For example, the auditor may stratify the cohort population into the following three significant groups: (1) material cohorts of such a magnitude that the auditor will test them all, (2) material cohorts that the auditor will sample for testing, and (3) immaterial cohorts that will be subjected to analytical review procedures. For some agencies, the small number of cohorts may prohibit using this sampling approach. In these instances, the auditor should focus on selecting a representative sample in a nonstatistical manner, i.e., using auditor's judgment to select

⁹ Dual purpose testing often improves audit efficiency by performing multiple audit procedures on a single sample, e.g., internal control attribute and substantive testing.

material cohorts for testing to obtain sufficient coverage of the balance being audited or doing a 100 percent sample.

45. Alternatively, when the agency's control environment is strong and inherent risk is low, the auditor may test cohorts on a rotating basis. In determining whether rotational testing is appropriate, the auditor should consider (1) the results of prior audit experience, (2) the length of time since the cohort was tested, (3) the materiality of the cohort in terms of the relative effect of the cohort on total program expenditures or the size of the program in absolute dollars, and (4) the auditor's assessment of inherent and control risk. The auditor may wish to score these factors in determining the cohort's relative risk. Based on the cohort's score, the auditor may establish a rotation matrix for substantive testing. For example, all cohorts above a predetermined score would be considered high risk and selected for substantive testing while other cohorts below this score could be tested on a rotating basis.

Testing Sampled Cohorts

46. Professional standards call for the auditor to "analyze historical data used in developing the assumptions to assess whether the data are comparable and consistent with data of the period under audit, and consider whether such data are sufficiently reliable for the purpose."¹⁰ In the planning phase, the auditor identified the key assumptions as those whose variation had the greatest impact on the subsidy rate or which varied significantly. Based on this work, and the results of the internal control analyses, the auditor should be able to focus on the key assumptions. However, these key assumptions may be tested in conjunction with the audit of other financial statement line items. For example, the default rate assumption for guaranteed loans can be tested as part of the audit of claim payments, recovery rate assumptions can be tested during the audit of foreclosed property, fees can be audited in conjunction with insurance premium or other cash receipts, and prepayments can be audited during the audit of insurance in force. In these cases, the auditor must carefully plan the audit samples for these areas in order to include information that will be applicable to the credit subsidy audit and gather sufficient evidence for the auditor to determine the reasonableness of the credit subsidy. For example, when auditing credit subsidy default, prepayment, and recovery assumptions, it is important to determine for which cohort the claim payment was made.
47. The following are examples of the types of tests the auditor can perform on a representative sample of cohorts selected for dual purpose testing:

¹⁰ Codification of Statements on Auditing Standards, AU Section 342, Auditing Accounting Estimates.

-
- a. Collect projected cash flow worksheets used for budget execution and the most recent reestimates for each cohort selected for testing to determine whether the program assumptions are utilized at the cohort level. Trace and compare key cash flow assumptions to the agency's supporting data, including reports on defaults, prepayments, recoveries, etc.
 - b. Verify the reliability of the data used in developing the assumptions and ensure that key assumptions are sufficiently reliable by
 - Comparing the reports to similar reports tested in related audit areas to assess consistency and
 - Tracing summary reports to historical supporting documentation, on a test basis, to determine whether the reports are complete and accurate.
 - c. Determine whether management used reasonable and systematic methods to project key cash flow assumptions by reviewing, assessing, and recalculating, on a test basis, key portions of the cash flow worksheets.
 - d. Based on the results of system-related control tests, the auditor should consider obtaining an appropriate, unmodified version of the OMB Credit Subsidy Calculator, downloading the agency's cash flows into this version, and comparing the output to the agency's subsidy calculation. In performing these procedures, it is important for the auditor to use the same cash flows as those used to calculate the subsidy rate. Thus, the auditor should verify that the file name, range name, and the date and time the spreadsheet was last changed matches the information on the model output. If differences are identified through this comparison, the auditor should consider recalculating the subsidy rate using the agency's data and an appropriate copy of the model.¹¹ Differences between the auditor's recalculated rate and the agency's rate should be investigated and explained.
 - e. The auditor should review the OMB Credit Subsidy Calculator output to determine whether any warning messages are listed and, if so, to determine why the situation causing the warning message was not resolved and whether not eliminating the error could have any impact on the subsidy rate calculation. Also, if applicable, auditors should determine whether the suppression of any error messages was appropriate by checking the agency's cash flow spreadsheet to determine whether the "suppress warnings" command was used and assess the impact these suppressed error messages could have on the subsidy rate.
 - f. The auditor should determine whether the OMB Credit Subsidy Calculator options that were selected properly reflect specific characteristics of the applicable credit program. For example, the OMB Credit Subsidy Calculator options for the timing of principal and interest payments for direct loan programs and the timing of commitments and

¹¹ A copy of the model is available on OMB's Federal Credit Support Page (<http://www.omb.gov/credit>) or from OMB's Budget Analysis Branch.

-
- disbursements by the private lender of a loan guaranteed should agree with the program's credit terms.
- g. Verify that reestimates were performed under the conditions specified in Technical Release 6. Determine whether reestimates were performed in addition to those required in Technical Release 6. For example, reestimates required for budgetary purposes may not be material to the financial statements.
 - h. Determine that these reestimates were completed, included in the financial statements, and submitted to OMB.
 - i. Determine whether the re-estimation process included adjustments to subsequent years' estimates of cash flows for this cohort.
 - j. Determine why reestimates were not calculated¹² and included in the financial statements, if applicable. When reestimates are not prepared for the most recently completed fiscal year, the agency must document the reason for forgoing the reestimate otherwise required in Circular A-11 and SFFAS No. 2 and provide the necessary supporting documentation to OMB and the auditor. The documentation should address the requirements prescribed in Technical Release 6.
 - k. Trace interest rates to approved OMB rates to ensure that interest expense and income are calculated in accordance with OMB Circular A-11.
 - l. Determine if the reestimates recorded in the accounting records were submitted to OMB.
 - m. Determine whether modifications occurred as defined in SFFAS No. 2 and OMB Circulars A-11 and whether the modification cost was estimated.
 - n. Verify whether the cash flows and discount rates used to calculate the pre-modification and post-modification values of the direct loans (or values of the loan guarantee liability) were determined appropriately.
 - o. Verify whether the modification cost was submitted to OMB, recorded in the accounting records, and included in the financial statements.

Analytical Review Procedures

- 48. Analytical review procedures can be performed on lines of business, funds, programs, or cohorts not selected for detailed testing. Generally, these procedures consist of comparing recorded balances of subsidy expense, fund balance with Treasury, debt owed to Treasury, credit program receivables and related foreclosed property, and the liabilities for loan guarantees, with the auditor's expectations. The basic premise of analytical review

¹² OMB has established a four-step process, outlined in Circular A-11, for agencies to calculate technical reestimates for the budget less often than every fiscal year—subject to OMB approval. However, this guidance does not allow agencies to omit material technical reestimates from the current year financial statements or to postpone including material technical reestimates in the financial statements until a subsequent year. Conversely, the OMB process may require agencies to make technical reestimates for the budget that are not material to the financial statements.

procedures is that plausible relationships among data may be expected to continue unless conditions are known that would change the relationship. Based on the results of the analytical review procedures outlined below, some programs may be selected for detail substantive testing. In applying analytical review procedures, the auditor should consider the following procedures.

- a. Based on the information gathered during the internal control phase of the audit, including the auditor's understanding of the estimation process and economic events affecting the period under review, develop an expectation or estimate of what the recorded amount should be. For example, the auditor could compute an estimate of the subsidy expense by using averages as an overall test of reasonableness, i.e., average loans outstanding, average interest rate, average default rate, and average fees. Compare the results of the auditor's estimate to the actual recorded balance to identify significant differences that require investigation. When making estimates of an account balance, the auditor should assess the reliability of the data used and the impact faulty data could have on the auditor's expectation of the subsidy amount.
- b. Compare the subsidy amounts for lines of business, funds, programs, or cohorts not selected for sampling for three or more years to identify trends and significant fluctuations in the subsidy rates.
- c. Obtain explanations for these fluctuations from management to determine whether the fluctuations are reasonable. Scan¹³ cash flow worksheets/reports to search for unusual items and investigate significant fluctuations.
- d. Corroborate management's explanations as necessary. Corroboration generally consists of reviewing related supporting documentation or obtaining explanations from accounting or budget personnel or from the appropriate program department. These explanations should be quantified and address the direction and magnitude of the event causing the fluctuation.
- e. If the explanation and/or corroborating evidence do not adequately explain the fluctuation, the auditor should consider
 - Increasing the precision in the auditor's expectations,
 - Increasing the extent of detailed testing for the cohorts discussed above and not relying on the analytical procedures, or
 - Treating the difference as a misstatement.
- f. Review and recalculate selected portions of the agency's trend analysis of the credit subsidy expense components to determine whether the agency identified and explained unusual or significant fluctuations in interest, defaults, fees, and other. If the agency has not done the credit subsidy component trend analysis, the auditor should

¹³ Although scanning is not usually considered an analytical procedure on its own, this technique could be used to investigate unusual fluctuations in subsidy amounts or corroborate management's explanation of variances between projected cash flows and actual cash flows.

consider performing this analysis. Once unusual or significant fluctuations have been identified, the auditor should obtain and corroborate management's explanation.

Compliance with Laws and Regulations

49. By using the audit approach described in this technical release, the auditor will test compliance with the Federal Credit Reform Act of 1990, as amended. Thus, no separate audit procedures are necessary to test compliance with this act.

Concluding on the Reasonableness of Estimates

50. Statement on Auditing Standard No. 57 Auditing Accounting Estimates, AU 342, states that the auditor evaluates the reasonableness of accounting estimates in relationship to the financial statements taken as a whole. It goes on to state:

"Since no one accounting estimate can be considered accurate with certainty, the auditor recognizes that a difference between an estimated amount best supported by the audit evidence and the estimated amount included in the financial statements may be reasonable, and such difference would not be considered to be a likely misstatement. However, if the auditor believes the estimated amount included in the financial statements is unreasonable, he should treat the difference between that estimate and the closest reasonable estimate as a likely misstatement and aggregate it with other likely misstatements. The auditor should also consider whether the difference between estimates best supported by the audit evidence and the estimates included in the financial statement, which are individually reasonable, indicate a possible bias on the part of the entity's management. For example, if each accounting estimate included in the financial statements was individually reasonable, but the effect of the difference between each estimate best supported by the audit evidence was to increase income, the auditor should reconsider the estimates taken as a whole."

51. Uncertainties, among other qualitative aspects of information in financial reports, are discussed in Statement of Federal Financial Accounting Concepts (SFFAC) No. 1, *Objectives of Federal Financial Reporting*. According to SFFAC No. 1, "Reliability [of financial information] does not imply precision or certainty, but reliability is affected by the degree of estimation in the measurement process and by uncertainties inherent in what is being measured." Thus, an amount reported in the financial statements may be "fairly stated," but still imprecise. In addition, SFFAC No. 1 states that "Financial reporting may need to include narrative explanations about underlying assumptions and uncertainties inherent in this process. Under certain circumstances, a properly explained estimate provides more meaningful information than no estimate at all." In other words, imprecision of accounting estimates can be overcome, to some extent, by appropriate financial statement disclosures. In determining whether (1) the credit program receivables and related foreclosed property and the liabilities for loan guarantees line items on the balance sheet, (2) the subsidy expense included in the statement of net costs, and (3) related footnote disclosures regarding credit reform are reasonably stated, the auditor must evaluate and carefully consider all of the audit evidence gathered, including the results of

the internal control testing, system reviews, detailed substantive testing, analytical review procedures, as well as the above authoritative guidance.

The provisions of this Technical Release need not be applied to immaterial items.

Appendix A: Acceptable Sources of Documentation for Subsidy Estimates and Reestimates

52. Documentation must be provided to support the assumptions used by the agency in the subsidy calculations. This documentation will not only facilitate the agency's review of the assumptions, a key internal control, it will also facilitate the auditor's review. Documentation should be complete and stand on its own, i.e., an independent person could perform the same steps and replicate the same results with little or no outside explanation or assistance. If the documentation were from a source that would normally be destroyed, then copies should be maintained in the file for the purposes of reconstructing the estimate.
53. Management should ensure that the following documentation is available for initial subsidy estimates, reestimates, and modifications of existing credit programs:
1. Procedures for calculating the subsidy estimate,
 2. Review and approval process of the subsidy estimate, including the sign-off procedure within the agency,
 3. Calculation of the recorded subsidy estimates, including the underlying assumptions and cash flow model,
 4. Historical supporting documents used in the underlying assumptions,
 5. Documentation of relevant supporting actual cash and economic experience (including the date and source of reports, and how recently the data were updated), which may include:
 - Cash reports on historical performance,
 - Historical data and trends, citing sources of information and relevant time frame,
 - Sensitivity analysis or other analysis that identifies the most critical factors,
 - Reports from the accounting or management systems showing trends
 - Actuarial studies,
 - Experience of other agencies with similar programs,
 - Emergencies (acts of God) or legislated changes (acts of Congress), such as changes in the program terms, maximum allowable loan amount, total program size, or characteristics of the credit program's borrower population, and
 - Economic and/or industry data and subsequent analyses, including industry studies, journal articles, trade papers, and third party studies.¹⁴
 6. Documentation of relevant program design factors, which may include:
 - Program definition including fees, grace period, term to maturity, borrower interest rates, legal definitions, and enabling or enacted legislation,

¹⁴For example, past data may document the historical relationship between interest rates, whereas an independent study may demonstrate how trends in past data are expected to change in the future.

-
- Legislation or regulations changing the terms, maximum allowable loan amount, total program size, or characteristics of the credit program's borrower population,
 - Program eligibility requirements,
 - Lender agreements detailing the terms of the guarantee, and
 - Borrower contracts outlining the terms and conditions of the loan or guarantee.
54. Management should ensure that the following documentation is available for new programs or changes to existing programs that may not have historical supporting documentation for cash flow assumptions and spreadsheets. In the absence of valid and relevant historical experience as the support for cash flow assumptions, the agency should document the basis for cash flow assumptions. Typical support will include:
- Relevant experiences from other agencies, including documentation of why another agency's experience is relevant, as well as similarities and differences (particularly possible biases) between the other agency's experience and the changes to existing programs or new programs,
 - Extrapolation from subsets of prior program activity, e.g., while prior loans were not targeted for single heads of households, it may be possible to identify prior loans that were made to single heads of households and the experience of such loans in prior records.
 - Assumptions used by underwriters for the purposes of determining eligibility, loan approval, or credit scoring.
 - Private sector proxies for risk, such as bond ratings to assess default risk, may be used when there is no relevant Federal Government experience. For example, an agency may consider using bond ratings for a state agency that finances similar loan programs, such as education, farm, or housing, with bonds.
 - Extrapolations from private sector lending experience including documentation explaining why this experience is applicable to the agency's credit program and possible biases for which an adjustment is needed, e.g., different borrower characteristics.
 - Expert opinion may also be used as an interim measure to support cash flow assumptions. In these cases, the agency must document the expert's qualifications, such as professional or academic certification or length of experience, as well as the basis of the stated opinion. In addition, the following documents should be maintained in support of the expert's opinion:
 - Memos from conversations with outside experts,
 - Reports and studies on similar industry conditions,
 - Minutes from internal meetings describing the basis for any assumptions or changes in assumptions, and
 - Previous studies conducted by the expert, including industry studies, journal articles, and third party studies.

Appendix B: Technical Glossary

Allowance for Subsidy

See Direct Loan Subsidy Allowance Account definition.

Assumptions

basic beliefs about the future operating and functional characteristics of the loan or group of loans or loan guarantees. Types of assumptions include:

Cash flow assumptions - all known and/or forecasted information about the characteristics and performance of a loan or group of loans or loan guarantees. Examples include estimates of loan maturity, borrower interest rate, default/delinquency rate, timing of defaults, overall impact of changes in economic factors, etc.

Model assumptions - determinations of how cash flow assumptions are applied through the life of the cohort. For example, determining whether the entire assumed amount of defaults should be applied in 1 year or whether a constant or variable proportion of the assumption value should be allocated to each year. The allocation of cash flows over time is the selected model form and is just as influential as the cash flow assumptions.

Case level

each individual loan or guarantee within a cohort.

Cash flow stream

the agency's projection of the dollar amount for the scheduled cash flows and deviations from scheduled cash flow items for each year over the life of the cohort.

Cash flows

Estimates of payments to or from the Government over the life of a loan or group of loans or loan guarantees. For direct loans, these may include: loan disbursements, repayments of principal, payments of interest, and any other payments such as prepayments, fees, penalties, and other recoveries. For loan guarantees, these may include: payments by the Government to cover defaults and delinquencies, interest subsidies, payments to the Government, such as origination and other fees, penalties and recoveries, and any other payments.

Cohort

all direct loans or loan guarantees of a program for which a subsidy appropriation is provided for a given fiscal year, even if disbursements occur in subsequent years. For direct loans and loan guarantees for which a subsidy appropriation is provided for one fiscal year, the cohort will be defined by that fiscal year. For direct loans and loan guarantees for which multi-year or no-year appropriations are provided, the cohort will be defined by the year of obligation.

Direct Loan Subsidy Allowance Account

the balance maintained in the general ledger that represents the difference between the current outstanding loans receivable balance and the present value of estimated cash outflows minus the present value of the estimated cash inflows over the remaining life of the direct loans. The subsidy allowance is subtracted from the loans receivable balance when calculating the net loans receivable balance. A similar account may also be used for defaulted guaranteed loans.

Econometrics

the application of statistical methods to the estimation of economic relationships.

Financing Account

the non-budgetary account or accounts associated with each credit program account that holds balances, receives the subsidy cost payment from the credit program account, and includes all other cash flows to and from the Government resulting from post-1991 direct loans or loan guarantees. Each program account is associated with one or more financing accounts,

depending on whether the account makes both direct loans and loan guarantees (separate financing accounts are required for direct loans and loan guarantees).

Fund

an aggregation of programs into a common grouping consistent with how the Congress provides appropriations - i.e., the program and financing accounts together and, if needed, the negative subsidy receipt accounts. (This term has other meanings in different contexts.)

Inputs

in the context of Federal credit, cash flow data elements used to develop spreadsheet calculations.

Internal control

an integral component of an organization's management that provides reasonable assurance regarding the achievement of reliable financial reporting, effective and efficient operations, and compliance with applicable laws and regulations. Internal control consists of the control environment, risk assessment, control activities, information and communication and monitoring.

Key assumptions

assumptions that have been established, through sensitivity analysis or other means, to be the elements that have a large impact on estimates, and thus are the most important factors in determining the cost of a loan or group of loans or loan guarantees.

Liability for Loan Guarantees Account

the balance maintained in the general ledger that represents the present value of estimated cash outflows minus the present value of the estimated cash inflows over the remaining life of the outstanding loan guarantees.

Liquidating Account

the budget account that includes all cash flows to and from the Government resulting from pre-1992 direct loans or loan guarantees, unless they have been modified and transferred to a financing account.

Negative Subsidy Receipt Account

the budget account for the receipt of amounts paid from the financing account when there is a negative subsidy cost for the original estimate or a downward reestimate. For mandatory programs, negative subsidies and downward reestimates may be credited directly to the program account as offsetting collections from non-Federal sources.

OMB Credit Subsidy Calculator

computer software developed by OMB for discounting cash flows in estimating credit subsidies. It uses agency cash flow inputs to compute the net present value at the point of disbursement and the subsidy rate associated with those cash flows.

Program

in the context of Federal credit, an aggregation of cohorts which are linked by common terms, conditions, regulations, and/or mission goals; often a sub-division of a fund or the budgetary financing account.

Program Account

the budget account into which an appropriation to cover the subsidy cost of a direct loan or loan guarantee program is made and from which such cost is disbursed to the financing account. Program accounts usually receive a separate appropriation for administrative expenses.

Risk category

subdivisions of a cohort of direct loans or loan guarantees into groups of loans that are relatively homogeneous in cost, given the facts known at the time of obligation or commitment. Risk

categories will group all loans obligated or committed for a program during the fiscal year that share characteristics predictive of defaults or other costs. All cohort level guidance in this technical release also applies to risk categories when they are used.

Service or line of business

an aggregation of funds into a common grouping: for example, grouping funds into single family or multifamily designations. The following example is provided to illustrate the relationship the above terms have to each other and show how they may be aggregated for financial statement purposes. Agencies should consult applicable OMB guidance to determine what level of aggregation is most appropriate and acceptable.

Business line or service: Farm Service Agency

Fund:

- A.CCC Export Guarantees
- B.Agricultural Credit Insurance Fund

Program:

- B1.Farm Ownership Loans
- B2.Farm Operating Loans, subsidized
- B3.Farm Operating Loans, unsubsidized

Cohort:

- B3a.FY 1992 Farm Operating Loans, unsubsidized
- B3b.FY 1993 Farm Operating Loans, unsubsidized
- B3c.FY 1994 Farm Operating Loans, unsubsidized
- B3d.FY 1995 Farm Operating Loans, unsubsidized
- B3e.FY 1996 Farm Operating Loans, unsubsidized

Risk category:

- B3e1.FY 1996 Farm Operating Loans, unsubsidized, Southwest Region
- B3e2.FY 1996 Farm Operating Loans, unsubsidized, Northeast Region

Case:

- B3aiFiscal year 1992 unsubsidized loan to farmer A
- B3aiiFiscal year 1992 unsubsidized loan to farmer B

Appendix C: Summary of Reestimate Requirements

The table below summarizes the reestimate requirements for the budget and financial statement presentations.

	Budget	Financial Statement
Interest Rate Reestimate	<i>Frequency:</i> At least one time when the cohort is 90 percent disbursed - regardless of financial statement materiality. In addition, reestimates should be recorded in the Budget whenever made for financial statement purposes.	<i>Frequency:</i> Whenever the change in the interest rate materially affects the financial statements or, if no material change occurs prior to the cohort being 90 percent disbursed, at least one time when the cohort is 90 percent disbursed.
	<i>Timing:</i> At the end of the fiscal year.	<i>Timing:</i> Typically as of the end of the fiscal year.
Technical Reestimate	<i>Frequency:</i> Annually unless a different plan is approved by OMB - regardless of financial statement materiality. In addition, reestimates should be recorded in the Budget whenever made for financial statement purposes.	<i>Frequency:</i> Any year when material. Also, agencies must disclose significant subsequent events after the reestimate date in the financial statement footnotes.
	<i>Timing:</i> At the end of the fiscal year unless otherwise approved by OMB.	<i>Timing:</i> Typically as of the end of the fiscal year. Also, agencies must disclose if the reestimate was calculated at a time other than the end of the fiscal year.

Appendix D: Summary of Selected Reporting Requirements¹⁵

Principal Statements	Credit Reform Information Presented
Balance Sheet	Credit program receivables and related foreclosed property, net of related subsidy allowance Liabilities for loan guarantees
Statement of Net Cost	Subsidy expense will be included as part of the gross program costs (present value of fees will be included as an offset in calculating subsidy expense rather than recording actual collection of fees as revenue) Interest revenue and interest expense
Statement of Changes in Net Position	Appropriations received (subsidy) and appropriations used
Statement of Budgetary Resources	Appropriations received (subsidy), borrowing authority, offsetting collections (examples: Collection of fees, principal, interest, subsidy from program account) and obligations (subsidy to financing account, direct loans, interest supplements, default claims) and offsetting receipts (example: negative subsidy or downward reestimate received by general fund receipt account)
Statement of Financing	Reconcile net obligations to net cost using components from the Statements of Budgetary Resources, Changes in Net Position and Net Cost. Examples of reconciling items include upward/downward reestimates of subsidy expense, offsetting collections pertaining to fees and obligations

¹⁵Refer to FASAB Standards for a complete listing of accounting and reporting requirements. The requirements in the Standards may be supplemented by guidance provided in OMB Bulletin 01-09 and OMB Circular A-11.

Note Disclosures	Credit Reform Information Presented
<p>Direct Loans (and Defaulted Guaranteed Loans) by Program or Fund</p> <p>*Presentation by Program or Fund required by OMB Bulletin 01-09. Summary	1
Discussion of Issues	5
Implementation Guidance	5
Attachment: Measurement Of Non-valued Items	6
Appendix A: Glossary [See Consolidated Glossary in Appendix E]	7

Introduction

Guidance for the accounting and reporting of seized and forfeited property held by Federal entities is provided in the Statement of Federal Financial Accounting Standard No. 3, *Accounting for Inventory and Related Property* (SFFAS No. 3), issued in October 1993. This Technical Release is intended to clarify the required reporting of non-valued seized and forfeited property.

Agencies that must deal with non-valued seized and forfeited property should first refer to the hierarchy of accounting standards contained in the current Office of Management and Budget (OMB) Bulletin on "Form and Content of Agency Financial Statements" for guidance. Standards issued by Government Accountability Office (GAO) and OMB have precedence over other authoritative guidance for federal entities.¹ This technical release supplements the relevant federal standards, but is not a substitute for and does not take precedence over the standards.

This Technical Release includes a discussion of the issues and recommended implementation guidance that is intended to clarify the reporting of non-valued seized and forfeited property. This guidance also provides more detailed terminology relating to the measurement of these non-valued items (see Appendix A ... [See consolidated glossary in Appendix E of this document] for the list of terms).

Background

Federal entities implementing this standard have raised numerous questions requiring clarification of the reporting of non-valued seized and forfeited property. Numerous Federal entities' missions include the task of seizing non-valued property. Bureaus within the Departments of the Treasury and Justice are most directly affected by this issue.

Non-valued property either does not have a legal market in the United States, or does not have a salable value to the Federal government. These items may be abandoned, embargoed, prohibited, sensitive, or seized for forfeiture. Examples of such items could include illegal drugs, counterfeit currencies and monetary instruments, and firearms, which the Federal government, as a matter of law or policy, does not return to the owner or sell upon forfeiture. Federal agencies that seize these types of items have had difficulty in applying the concept of materiality and in the reporting of these types of items since they do not have monetary value. Consequently, Federal agencies have independently determined what types of non-valued property should be disclosed

¹The Federal Accounting Standards Advisory Board recommends accounting concepts and standards to its principals; the Department of the Treasury, the Office of Management and Budget, and the General Accounting Office. If all three principals approve a recommendation it is issued by OMB and GAO.

in the financial statements under SFFAS No. 3 and the units of measure, resulting in inconsistent disclosures between agencies and disclosures that lacked meaningful information.

While non-valued seized property does not have a monetary value to the Federal government, the sensitive nature of much of this type of property requires the same level of accountability and security as valued property, if not more. Agencies should ensure that their systems of internal control are adequate to provide sufficient accountability and security over this property in order to meet the reporting requirements provided in SFFAS No. 3.

SFFAS No. 3 prescribes that seized property shall be accounted for in the financial records of the entity that is operating as the central fund (see SFFAS No. 3, para. 60). Central funds are established to finance the costs of the seizure, management, and disposition of property, and to receive the proceeds from the sale or disposition of that property. However, since non-valued items do not have a financial value, the central fund is not responsible for reporting these items.² Accordingly, the seizing or custodial entity is responsible for maintaining sufficient internal records to maintain control over these items and would have reporting responsibility for non-valued items.

Chapter 3 of the Statement of Federal Financial Accounting Concepts No. 1, *Objectives of Federal Financial Reporting* (SFFAC No. 1), identifies the users of Federal financial reports and their information needs. Federal financial report users need information to assess the accountability, stewardship, and operating performance of Federal agencies and programs. To address the information needs of Federal financial report users, Chapter 4 of SFFAC No. 1 defines the objectives of financial reporting as budgetary integrity, operating performance, stewardship, and systems and control. The discussion of these objectives emphasizes the concepts of the entity's control over, accountability of, and accomplishment of Federal programs and activities.

Furthermore, to provide additional useful perspective, SFFAS No. 3 includes a discussion on the concept of materiality. Specifically, the concept of materiality includes both quantitative and qualitative considerations. Thus, an item that is not considered material from a quantitative standpoint may be considered qualitatively material. Accordingly, items would be considered qualitatively material if the judgment of a person relying on the information presented about such items would be influenced by the omission or misstatement of information presented about those items. SFFAS No. 3 states that an item that is not considered material from a quantitative standpoint may be considered qualitatively material if it would influence or change the judgment of the financial statement user. It should be noted that SFFAS No. 3 also clearly states that items of a sensitive nature held by an entity that are not considered material to the entity's financial statements need not be reported.

²This is generally because the central fund does not take custody of nonvalued items.

Discussion of Issues

The disclosure requirements for seized and forfeited property are outlined in paragraphs 66 and 78 of SFFAS No. 3. Among the requirements is a footnote disclosure to contain: a description of the composition of the property; the methods of valuing the property; restrictions on the use of forfeited property; changes from prior year accounting methods, if any; and an analysis of changes in seized and forfeited property. The analysis of changes in seized and forfeited property should provide the dollar value and number of properties on hand at the beginning of the year, seizures and forfeitures made during the year, property disposed of and method of disposition, and property on hand at the end of the year. This information should be presented by type of property where material.

While SFFAS No. 3 provides adequate guidance for reporting seized and forfeited items with a financial value, the standard has not been interpreted and applied consistently with respect to non-valued items. Paragraph 148 of SFFAS No. 3 states that the standard was revised to address the disclosure requirements for non-valued items. For these items, the standard does not require the reporting of financial value, but it clearly requires the disclosure of all material forfeited property, including those items with no financial value. However, the standard does not address the disclosure of non-valued seized items. As a result, some reporting entities with seizing authority disclose non-valued seized items, and others do not. Clarification of the standard as it relates to non-valued seized items is needed to ensure consistent implementation.

With numerous professional disciplines involved in activities related to the seizure and reporting of non-valued items, some terminology has different meanings depending on whether it is used in a legal, accounting, or program management context. To provide for consistent and meaningful reporting, clarified definitions and standard units of measure are necessary.

Implementation Guidance

An analysis of changes for all material non-valued seized property should be disclosed in the financial statement footnotes in the same manner as prescribed for non-valued forfeited property.

The definitions in **Appendix A** ... [See consolidated glossary in Appendix E of this document] provide for consistent and meaningful reporting among Federal agencies that seize and/or forfeit non-valued items. The units of measurement for non-valued items provided in the **Attachment** are also designed to facilitate consistency in reporting among agencies. It is recognized that some agencies may be currently reporting in different measurement units and may be unable to convert their units of measurement for FY 1999 reporting. Such agencies may continue to report on their current basis for FY 1999 but should conform with the units of measurement provided in the Attachment for FY 2000 and subsequent years.

Attachment: Measurement Of Non-valued Items

Category	Standard Unit Of Measurement
Illegal Drugs	
Cannabis	Kilograms
Cocaine	Kilograms
Heroin	Kilograms
Methamphetamine/Amphetamine	Various
Other Categories ³	Various
Firearms and Explosives	
Legal Firearms	Number
Illegal Firearms	Number
Ammunition	Rounds
Explosives	Number
Counterfeit	
Currency - Completed (U.S. & Foreign)	Number of counterfeit bills
Credit Cards	Number
Other (e.g., other counterfeit monetary instruments)	Number

Note: This is not intended to be an all-inclusive list. Other categories should be considered as appropriate.

The provisions of this Technical Release need not be applied to immaterial items.

³Other categories include material amounts of other drugs seized, to be separately reported by liquid weight, dry weight, tablets, or other appropriate measurement.

Related Guidance	Technical Release No. 3 (Revised): Auditing Estimates for Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act – <i>Amendments to Technical Release No. 3 Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act</i>

Summary

This technical release amends the implementation guidance for agencies to prepare and report credit subsidy estimates provided in Technical Release 3: *Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act* (TR3), July 1999. The original technical release (July 1999) contained both audit and accounting guidance. Technical Release 3 (revised) contains only the guidance for auditing estimates.

OMB Role	5
Preparing Direct Loan and Loan Guarantee Estimates	6
Appendix A: Technical Glossary	21
Appendix B: Summary of Selected Reporting Requirements	27

Introduction

1. The purpose of this technical release is to amend the implementation guidance for agencies to prepare and report credit subsidy estimates provided in Technical Release 3: *Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act* (TR3), July 1999. The most significant changes made between the original TR3 and this amended TR are as follows:
 - a. Removal of the audit guidance from this amended TR to only include the preparation guidance.
 - b. Clarification of OMB's role in the credit subsidy estimation and re-estimation process. OMB has statutory authority over subsidy estimates in the Budget but has delegated the authority to calculate those estimates to the agencies. This document outlines guidance and tools provided by OMB for entities to use during their calculations of the credit subsidy estimates. The guidance also states that OMB provides economic assumptions to be used in the estimation and re-estimation of subsidies.
 - c. Credit subsidy reestimates may now include 6 months of actual data and 6 months of projected estimates. This would be a change from the current requirement of 9 months of actual data and 3 months of projected estimates.

The original Technical Release 3 (July 1999) contained audit guidance, as well as accounting guidance. Concurrent with the issuance of this technical release on accounting guidance, Technical Release 3 is being amended to contain only the audit guidance.

2. Readers of this technical release should first refer to the hierarchy of accounting standards in Statement on Auditing Standards (SAS) 91, Federal Generally Accepted Accounting Principles Hierarchy (or see AU411). This technical release supplements the relevant accounting standards, but is not a substitute for and does not take precedence over the standards. This Technical Release is intended to facilitate consistency between the budgetary and financial statement presentation of subsidy estimates; however, fair presentation of subsidy estimates in the financial statements may be different from that in the President's Budget.
3. Federal agencies are required to account for direct loans and loan guarantees in accordance with Statement of Federal Financial Accounting Standards No. 2, *Accounting for Direct Loans and Loan Guarantees* (SFFAS No. 2), SFFAS No. 18, *Amendments to Accounting Standards for Direct Loans and Loan Guarantees*, and SFFAS No. 19, *Technical Amendments to Accounting Standards for Direct Loans and Loan Guarantees*. In developing the financial accounting standards in SFFAS No. 2, the Board recognized "the value of having financial accounting support the budget" and recommended that "accounting standards for credit be consistent with budgeting under credit reform." Further,

the Board stated that "as more experience is gained, some modifications may be made in budgetary requirements. It is the intention of the Board that so long as the modifications are made on a credit reform basis and do not materially affect the basic recognition and measurement principles embodied in the accounting standards, accounting practices for direct loans and loan guarantees should change as needed in order to be consistent with the budget."¹ This technical release provides guidance on acceptable accounting practice in light of current budgetary requirements.

4. This technical release includes sections on:
 - OMB's role in the Subsidy estimation and re-estimation process and
 - Preparing Direct Loan and Loan Guarantee Subsidy Estimates
5. It also presents two appendices on:
 - Technical Glossary and
 - Summary of Selected Reporting Requirements
6. This technical release does not address loan asset sales and does not provide complete guidance for administrative expenses and pre-1992 direct loans and loan guarantees. Guidance on these areas can be found in SFFAS Nos. 2, 18, & 19 and OMB Circular No. A-11 and OMB Bulletin No. 01-09. Additional guidance on loan asset sales will be addressed separately in the future.

Background

7. Since the Credit Reform Act of 1990 was passed, agencies have struggled with the numerous challenges in implementing the various provisions of the act--especially formulating credit subsidy estimates. This technical release is designed to provide guidance on the preparation of credit subsidy estimates. There are three parts of subsidy: initial subsidy, modifications of subsidy and reestimates of subsidy. A goal of this technical release is to provide implementation guidance that will ensure greater financial statement consistency with the accounting standards set forth in Statement of Federal Financial Accounting Standards (SFFAS) No. 2, *Accounting for Direct Loans and Loan Guarantees*, SFFAS No. 18, *Amendments to Accounting for Direct Loans and Loan Guarantees*, and SFFAS No. 19, *Technical Amendments to Accounting for Direct Loans and Loan Guarantees*.²

¹ SFFAS No. 2, paragraph 17. Also see SFFAS No. 2 paragraph 66.

² Authoritative guidance for the recognition of many transactions under credit reform is also included in SFFAS No. 7, *Accounting for Revenue and Other Financing Sources*, Appendix B, "Guidance for the Classification of Transactions," paragraphs 362-365 and 368 - 369.

-
8. The technical release begins with a discussion of the OMB's role in the credit subsidy estimation and re-estimation process. It continues by addressing procedures for preparing estimates and reestimates—including acceptable interim alternatives in the absence of the ideal data store and estimation methods. This technical release also provides guidance on acceptable sources of documentation for subsidy estimates and reestimates.

Materiality

9. The provisions of this guidance need not be applied to immaterial items.

Effective Date

10. The guidance outlined in this technical release is effective immediately.

OMB Role

11. Under the Federal Credit Reform Act of 1990, as amended, OMB is responsible for subsidy estimates published in the President's Budget. OMB has delegated the authority to the agencies to calculate estimates but retains the responsibility and final approval of subsidy estimates, reestimates, and modification cost estimates. For agencies that have credit programs, OMB provides guidance and specific tools for credit budgeting.
12. OMB Circulars A-11 Preparation, Submission, and Execution of the Budget and A-129 Policies For Federal Credit Programs and Non-Tax Receivables provide guidance to agencies on definitions, procedures and rules for calculating subsidy estimates and reestimates for the President's Budget and modification cost estimates, obligation of budget authority for the credit program's cost, and credit and receivables policy.
13. The Credit Subsidy Calculator (CSC) is a computer program provided to the agencies to calculate the cost of direct loans and loan guarantees using the agencies' cash flow estimates. The OMB Circular A-11 requires that all agencies with credit programs must use the CSC to discount the credit subsidy estimate and reestimate cash flows that they are responsible for generating.

-
14. OMB provides spreadsheets and instructions to calculate reestimates and interest paid and received for financing accounts.³
 15. Each year, in preparing the President's Budget, OMB provides agencies with a set of economic assumptions that must be used when determining budget estimates. Some of these assumptions, such as gross domestic product (GDP), are used for both credit programs and others. For credit programs specifically, the economic assumptions include the discount rates, which are derived from the Treasury yield curve, used to calculate subsidy estimates. The discount rates are built into the most recent version of the CSC. Prior year actual discount rates and credit related assumptions are available from OMB ten business days prior to the close of the fiscal year.

Preparing Direct Loan and Loan Guarantee Estimates

16. Preparing reliable and timely direct loan and loan guarantee subsidy estimates must be a joint effort between the budget, CFO and program offices at each agency. These offices should work together to ensure that the procedures and internal control⁴ outlined in this section are implemented and operating as designed. However, some agencies may not be able to effectively implement all of these procedures, since they have not yet developed the ideal data stores or methods of estimation necessary. Therefore, until the required information on all cash disbursements and collections related to direct or guaranteed loans can be collected at the case level and summarized, by cohort and program, the acceptable alternatives identified in this technical release will need to be utilized to provide the necessary information for developing subsidy estimates.
17. Agencies must accumulate sufficient relevant and reliable data on which to base cash flow projections. It is important to note that agencies should prepare all estimates and reestimates based upon the best available data at the time the estimates are made. Agencies should prepare and report reestimates of the credit subsidies, in accordance with SFFAS No. 2, 18, and 19, to reflect the most recent data available as discussed in the reestimate section of this technical release. The OMB Circular A-11 also provides guidance

³ The CSC and spreadsheets for calculating reestimates and financing account interest are available on the Federal Credit Support Page (<http://www.omb.gov/credit>).

⁴ Internal control is an integral component of an organization's management that provides reasonable assurance regarding the achievement of reliable financial reporting, effective and efficient operations, and compliance with applicable laws and regulations. Internal control consists of the control environment, risk assessment, control activities, information and communication and monitoring.

on reestimating credit subsidies. Guidance on the types of supporting documentation that is acceptable is found in paragraphs 20 - 22 of this technical release.

18. In certain limited instances, informed opinion may be used to support cash flow projections in the absence of historical data. Informed opinion refers to the judgment of agency staff or others who make subsidy estimates based on their programmatic knowledge and/or experience without using a fully satisfactory information store and, in some cases, without using an econometric or other statistical model. Informed opinion may be used only as a last resort when relevant historical data and/or modeling capabilities are not available. This could occur when a new program has been established or when the Congress has changed an existing program in ways that cannot be represented by historical data. Informed opinion should therefore be used as an interim method only, and the agency should develop an action plan to establish an information store, appropriate models, and supporting documentation.
19. Certain conditions must be met before informed opinion will be considered an appropriate source of information. First, the expert's qualifications, such as professional or academic certification or length and kind of experience, must be assessed. Then, the basis of the stated opinion must be articulated and documented in detail. For example, a statistician may be best qualified to determine the appropriate kind of model for estimated cash flows using limited or imperfect data. Most importantly, the expert must document why that particular projection is appropriate for that particular program.
20. Documentation must be provided to support the assumptions used by the agency in the subsidy calculations. This documentation will not only facilitate the agency's review of the assumptions, a key internal control, it will also facilitate the auditor's review. Documentation should be complete and stand on its own, i.e., a knowledgeable independent person could perform the same steps and replicate the same results with little or no outside explanation or assistance. If the documentation were from a source that would normally be destroyed, then copies should be maintained in the file for the purposes of reconstructing the estimate.
21. Management should ensure that the following documentation is available for initial subsidy estimates, reestimates, and modifications of existing credit programs:
 1. Procedures for calculating the subsidy estimate,
 2. Review and approval process of the subsidy estimate, including the sign-off procedure within the agency,
 3. Calculation of the recorded subsidy estimates, including the underlying assumptions and cash flow model,
 4. Historical supporting documents used in the underlying assumptions,

-
5. Documentation of relevant supporting actual cash and economic experience (including the date and source of reports, and how recently the data were updated), which may include:
- Cash reports on historical performance,
 - Historical data and trends, citing sources of information and relevant time frame,
 - Sensitivity analysis or other analysis that identifies the most critical factors,
 - Reports from the accounting or management systems showing trends
 - Actuarial studies,
 - Experience of other agencies with similar programs,
 - Emergencies (acts of God) or legislated changes (acts of Congress), such as changes in the program terms, maximum allowable loan amount, total program size, or characteristics of the credit program's borrower population, and
 - Economic and/or industry data and subsequent analyses, including industry studies, journal articles, trade papers, and third party studies.⁵
6. Documentation of relevant program design factors, which may include:
- Program definition including fees, grace period, term to maturity, borrower interest rates, legal definitions, and enabling or enacted legislation,
 - Legislation or regulations changing the terms, maximum allowable loan amount, total program size, or characteristics of the credit program's borrower population,
 - Program eligibility requirements,
 - Lender agreements detailing the terms of the guarantee, and
 - Borrower contracts outlining the terms and conditions of the loan or guarantee.
22. Management should ensure that the following documentation is available for new programs or changes to existing programs that may not have historical supporting documentation for cash flow assumptions and spreadsheets. In the absence of valid and relevant historical experience as the support for cash flow assumptions, the agency should document the basis for cash flow assumptions. Typical support will include:
- Relevant experiences from other agencies, including documentation of why another agency's experience is relevant, as well as similarities and differences (particularly possible biases) between the other agency's experience and the changes to existing programs or new programs,
 - Extrapolation from subsets of prior program activity, e.g., while prior loans were not targeted for single heads of households, it may be possible to identify prior loans that were made to single heads of households and the experience of such loans in prior records.

⁵ For example, past data may document the historical relationship between interest rates, whereas an independent study may demonstrate how trends in past data are expected to change in the future.

-
- Assumptions used by underwriters for the purposes of determining eligibility, loan approval, or credit scoring.
 - Private sector proxies for risk, such as bond ratings to assess default risk, may be used when there is no relevant Federal Government experience. For example, an agency may consider using bond ratings for a state agency that finances similar loan programs, such as education, farm, or housing, with bonds.
 - Extrapolations from private sector lending experience including documentation explaining why this experience is applicable to the agency's credit program and possible biases for which an adjustment is needed, e.g., different borrower characteristics.
 - Expert opinion may also be used as an interim measure to support cash flow assumptions. In these cases, the agency must document the expert's qualifications, such as professional or academic certification or length of experience, as well as the basis of the stated opinion. In addition, the following documents should be maintained in support of the expert's opinion:
 - Memos from conversations with outside experts,
 - Reports and studies on similar industry conditions,
 - Minutes from internal meetings describing the basis for any assumptions or changes in assumptions, and
 - Previous studies conducted by the expert, including industry studies, journal articles, and third party studies.

Overall CFO/Budget Procedures and Internal Control

23. Document the procedures and flow of information used in developing the agency's subsidy estimates at a high level, e.g., flow chart with supporting narrative. These documents should be used to establish consistent procedures for developing the subsidy estimates across funds/programs/cohorts. These documents should also include a discussion of who is responsible for each step of the estimate as well as the review and approval process followed. Documented procedures are necessary to communicate information on the subsidy estimation and re-estimation process to employees as well as other interested parties, such as auditors and OMB examiners. Also, when employee turnover is experienced, these documented procedures will provide vital information for new employees on how to complete reliable, well supported estimates of the costs of credit programs.
24. Document the agency's cash flow model(s) used, the rationale for selecting the specific methodologies, and the degree of calibration⁶ within the model(s). Also, document the

⁶ Calibration is the degree of precision within the model, i.e., the model's ability to accurately predict the cash flows of a given credit program. The degree of calibration within the model can be documented by charts or graphs showing projected cash flows versus the actual cash flows by year and cohort. This document would analyze the variance between projected cash flows and actual cash flows over time.

sources of information, the logic flow, and the mechanics of the model(s) including the formulas and other mathematical functions. In addition, document the controls over the model(s) used by the agency in preparing cash flow worksheets. Further, document that the cash flow model(s) reflect the terms of the loan contracts and, in a loan guarantee program, the loan guarantee contracts. Additional details regarding internal control are discussed in the specific fund/program procedures and controls section of the technical release.

25. For agencies that have not yet implemented the ideal data store or implemented the estimation methods described in the Model Credit Program Methods and Documentation for Estimating Subsidy Rates and The Model Information Store (issue paper 96-CR-7), available from the AAPC web page (<http://fasab.gov/aapc/cdreform/othercrddoc.htm>), document management's strategic plans towards improving the agency's information store and estimation methods. This strategic plan should include who is responsible for various aspects of the plan and milestone dates for significant plan segments. Finally, it should document the progress at achieving the plan goals.
26. Ensure that general data and assumptions applicable to more than one cohort are used consistently for current year estimates and reestimates. For example, the overall economic conditions should be consistent for all cohorts within a program for a given fiscal year or management should document the reasons for the deviations, e.g., different economic assumptions could appropriately vary for specific geographic regions.
27. Ensure that estimates and all key assumptions used in preparing the budget and financial statements have been coordinated with both the program and accounting offices.
28. Management should assess the impact of changes in laws or regulations on the reliability of estimates and should ensure that the cash flow model reflects these changes. For example, a legislative program change may include provisions about maturity or type of borrowers that are outside the scope of past agency experience or may include program changes that shift the composition of new lending toward more or less risky borrowers.
29. The budget and accounting offices should work together to ensure that cash flow models are updated to reflect the actual cash flows and terms of the loan program recorded in the accounting records. Where material differences exist between the initial budgetary estimate and the actual cash flows, the differences should be investigated and reestimates and/or adjustments to the model should be made as required.⁷ Actual obligations, disbursements, recoveries, and receipts should be recorded on a case-by-case basis. The detail of these

⁷ Reestimates may not be required in all cases where material differences exist between the initial budgetary estimate and the actual cash flows. For example, if offsetting differences exist in cash flows, such as positive difference in default recoveries and a negative difference in fees, a reestimate may not be necessary.

transactions should be reflected in the accounting records. However, when this level of detailed information is not available, it may be necessary for the agency to record transactions on another basis. For example, agencies may only receive information in summary from entities that actually make the loans that the Government guarantees. As a result, the agency may need to estimate cash flows based on a detailed analysis of the loan portfolio as a whole and allocate program level cash receipts and disbursements to individual cohorts on an appropriate basis. The basis for this allocation should be clearly documented. Transactions may also be recorded based on estimates derived from representative samples of loans, and/or related transactions, e.g., sampling of loan receipts to allocate cash receipts to cohorts.

30. Interest expense and income should be calculated in accordance with guidance from OMB. Discount rates used should be based on the authorized rates from OMB.
31. The agency should have an audit trail from individual transactions to the subsidiary ledgers to the general ledger. This will ensure that cash transactions can be identified by type so that they may be identified by subsidy expense component. SFFAS No. 18 states: "Reporting entities... should disclose for each program ...the subsidy expense by components as defined in paragraphs 25 through 29 [SFFAS No. 2], recognized for the direct or guaranteed loans disbursed in those years [current reporting year and the preceding reporting year]..."
32. When a direct loan or loan guarantee is modified as defined by SFFAS No. 2 (additional guidance provided in the OMB Circular A-11), the nature of the modification, the estimated effect on cash flows, and key assumptions should be documented in the same way as the original subsidy estimate. Modifications do not include routine administrative workouts of troubled individual loans or actions that are permitted within the existing contract terms.⁸
33. Ensure that the financial statements consolidate the activity of the program accounts, the financing accounts, and, if needed, the negative subsidy receipt accounts. Negative subsidy receipt accounts are established for programs that have negative subsidies or downward subsidy reestimates (except certain programs classified in the budget as mandatory).

⁸ Neither the Federal Credit Reform Act as enacted in 1990 nor its amendments in the Balanced Budget Act of 1997 explicitly states that modifications do not include routine administrative workouts. However, the definition of modification in the 1990 Act was interpreted as excluding routine administrative workouts, and the definition in the 1997 amendments is interpreted in the same way. This interpretation is consistent with paragraph 44 of SFFAS No. 2. Further, the Joint Explanatory Statement of the Committee of Conference on H.R. 2015, the Balanced Budget Act of 1997, states that "workouts are not assumed to be included in the definition of modifications. The conference agreement does not change the treatment of workouts as implemented under the Federal Credit Reform Act of 1990."

-
34. Cash flow spreadsheets should be prepared on a cohort or disbursement year basis, as appropriate. Cash flow spreadsheets prepared on a cohort basis include one line for each cash flow type (for example, principal payments, fees, or defaults). Cash flow spreadsheets prepared on a disbursement year basis include one line per disbursement year for each cash flow type (for example, principal payments associated with first year disbursements, principal payments associated with second year disbursements, etc.). The documentation for the Credit Subsidy Calculator provides details on how to indicate that a particular cash flow line is associated with a particular disbursement. When loan disbursements occur over multiple years, cash flow spreadsheets prepared on a disbursement year basis will produce a more precise subsidy calculation. However, when agencies are unable to provide this level of detail, combinations of multiple disbursement years may be used as an approximation.
35. Establish security over access to the OMB Credit Subsidy Calculator to adequately protect it from unauthorized use and corruption. For example, agency management should establish procedures to ensure that the desktop workstations where the OMB Credit Subsidy Calculator resides are password protected. In addition, the data used as input or generated as output should also be safeguarded and reviewed for errors.

Specific Fund/Program Procedures and Controls

36. Procedures in place should ensure that cash flow estimates for budgetary and financial statement reporting purposes are based on actual cash flows in previous years to the extent it is appropriate. Agencies should compare budgeted to actual cash flows to ensure that the cash flow models reflect the actual cash flows from the accounting records. Where material differences exist between the initial budgetary estimate and the actual cash flows, the differences should be investigated and reestimates and/or adjustments should be made as required.⁹ Changes in key factors and assumptions used as a baseline (e.g., disbursement rates, default rates, recovery rates, time periods, etc.) must be explained, supported, and documented. For example, recoveries have averaged a given percentage for the past four years and this recovery rate had been consistently used in preparing cash flow worksheets. However, during the past year, events have occurred which have increased the recovery rate and these events are expected to continue in the future. As a result, the agency may decide to use a recovery rate above the historical average.

⁹Reestimates may not be required in all cases where material differences exist between the initial budgetary estimate and the actual cash flows. For example, if offsetting differences exist in cash flows such as a positive difference in default recoveries and a negative difference in fees, a reestimate may not be necessary.

37. Sensitivity analysis (or other testing of the agency cash flow models used in developing the subsidy estimates) should be performed to identify which cash flow assumptions have the greatest impact on the credit subsidy rate. To perform sensitivity analysis, management must first identify the root of each cash flow assumption¹⁰ to ensure that all subsequently related formulas and assumptions are adjusted appropriately. Generally, each root assumption should be individually adjusted by a fixed proportion (e.g., plus and minus 10 percent), and the revised cash flows run through the OMB Credit Subsidy Calculator to determine the assumption's effect on the subsidy rate. Timing assumptions for defaults, recoveries, prepayments, etc. should also be adjusted by a fixed amount (e.g., plus and minus one year). The recovery assumption should be adjusted along with the timing of recovery assumption to ensure that a realistic relationship between these two assumptions continues to exist, i.e., to test the sensitivity of recoveries, the default timing assumption must also be adjusted to ensure that the recovery occurs after the default. Those assumptions that caused the largest change in the subsidy rate are determined to be the key cash flow assumptions.
38. Key assumptions, identified by the sensitivity analyses that are utilized in the process of developing estimates, should be documented including the rationale, justification, and source of supporting documentation.
39. The accounting office should maintain detailed subsidiary accounting records by program, cohort, risk category (if applicable) and case (individual direct loan or loan guarantee).
40. The cash flow estimation process, including all underlying assumptions, should be reviewed and approved at the appropriate level including revisions and updates to the original model. Cash flow models should be tested for reliability as part of the approval process by comparing estimated cash flows to actual cash flows and assessing the model's ability to replicate a credit program's performance.
41. The agency should do trend analysis of the credit subsidy expense components, i.e., interest, defaults, fees, and other. When unusual fluctuations are identified, they should be investigated and explained.
42. The agency must document the options used in the OMB Credit Subsidy Calculator and the reasons those options were selected.¹¹

¹⁰ The root of the cash flow assumption is the starting point for the assumption, i.e., there are no preceding formulas or related inputs that would affect the assumption.

¹¹ OMB contracted with an independent public accounting firm to review the OMB Credit Subsidy Calculator's compliance with the Credit Reform Act. Results of the audit may be obtained from the applicable OMB program examiner or OMB's Budget Analysis Branch.

-
43. The agency should determine whether the proper dollar scale (e.g., whole dollars, hundreds, thousands, etc.) for the cash flow spreadsheets was used. Some program subsidy rates, particularly those for programs disbursing over several years, may be influenced slightly with the scale of the program. Therefore, management should determine whether rounding to three decimal places has no significant effect on the cash flow spreadsheet values and the subsidy rate.
 44. The agency should determine whether the OMB Credit Subsidy Calculator options selected properly reflect specific characteristics of the applicable credit program. For example, the OMB Credit Subsidy Calculator option for the timing of principal and interest payments for direct loan program and the timing of commitments and disbursements by the private lender of a loan guaranteed should agree with the program's credit terms.
 45. The agency should review the OMB Credit Subsidy Calculator output to determine whether any warning messages are listed and determine why the situation causing the warning message was not resolved and whether not eliminating the error could have any impact on the subsidy rate calculation. Also, if applicable, the agency should determine whether the suppression of any error messages was appropriate by checking the agency's cash flow spreadsheet to determine whether the "suppress warnings" command was used and assess the impact these suppressed error messages could have on the cash flows.
 46. The agency should review trends in the direct loan subsidy allowance account balance and/or the liability for loan guarantees account balance as compared to the outstanding balances of loans and/or guarantees. Any unusual fluctuations identified should be investigated and explained. When unusual fluctuations occur, an analysis by cohort may be helpful to identify the causes.

Reestimates

47. OMB Circular A-11 has established criteria for when agencies should calculate credit subsidy reestimates for the budget. It states that "interest rate reestimates of the subsidy cost of a cohort of direct loans or loan guarantees must be made when a cohort has substantially disbursed (i.e., when at least 90 percent of the direct loans or guaranteed loans have been disbursed.) The computation should be made after the close of the fiscal year in which this criterion is met, unless a later time within the same fiscal year is approved by the OMB representative with primary budget responsibility for the credit account"; and that "technical reestimates of the subsidy cost of a cohort of direct loans or loan guarantees must be made after the close of each fiscal year as long as the loans are outstanding, unless a different plan is approved by the OMB representative with primary budget responsibility for the credit account. The different plan might be with regard to the time when reestimates are made within the year or the frequency of reestimates." If the plan

allows technical reestimates to be made less frequently than every year, it should require technical reestimates to be made for any year when any one of four conditions is met.¹² The period for which reestimates are to be calculated includes the first year that loans were disbursed. Reestimates are calculated as of the end of the fiscal year regardless of when the actual computation is performed.

48. SFFAS No. 2 states that "the subsidy cost allowance for direct loans and the liability for loan guarantees are reestimated each year as of the date of the financial statements. Since the allowance or the liability represents the present value of the net cash outflows of the underlying direct loans or loan guarantees, the re-estimation takes into account all factors that may have affected the estimate of each component of the cash flows, including prepayments, defaults, delinquencies and recoveries.¹³ Any increase or decrease in the subsidy cost allowance or the loan guarantee liability resulting from the reestimates is recognized as a subsidy expense (or a reduction in subsidy expense) as of the end of the fiscal year to which it applies. Reporting the subsidy cost allowance of direct loans (or the liability of loan guarantees) and reestimates by component is not required." SFFAS No. 7, paragraphs 362-363, states that "[a] negative subsidy..." or "...downward subsidy reestimate is recognized as a direct reduction in expense, not as a revenue, gain, or other financing source." In addition, SFFAS No. 18 requires that the interest rate and technical reestimates be disclosed separately for each program.
49. The table below summarizes the reestimate requirements for the budget and financial statement presentations.

¹² These four conditions are: (1) based on periodic schedules established in coordination with OMB, (2) when a major change in actual versus projected activity is detected, (3) when a material difference is detected through monitoring "triggers" developed in coordination with OMB, and (4) when a cohort is being closed out.

¹³ OMB has an alternative method of computing reestimates, the "balances approach," which compares (a) the net present value of the best current estimate of the remaining cash flows with (b) the net balance owed to Treasury (for direct loan programs) or the net balance on deposit with Treasury (for loan guarantee programs). In estimating the net present value of the remaining cash flows, agencies would still need to estimate future cash flows based on actual experience with cash flows to date and forecasts of other factors. They would therefore still need to maintain historical cash flow data, at the subsidy component level, to analyze the sources of error in the estimates of cash flows for past periods.

	Budget	Financial Statement
Interest Rate Reestimate	<u>Frequency:</u> At least one time when the cohort is 90 percent disbursed - regardless of financial statement materiality. In addition, reestimates should be recorded in the Budget whenever made for financial statement purposes.	<u>Frequency:</u> Whenever the change in the interest rate materially affects the financial statements or, if no material change occurs prior to the cohort being 90 percent disbursed, at least one time when the cohort is 90 percent disbursed.
	<u>Timing:</u> At the end of the fiscal year.	<u>Timing:</u> Typically as of the end of the fiscal year.
Technical Reestimate	<u>Frequency:</u> Annually unless a different plan is approved by OMB - regardless of financial statement materiality. In addition, reestimates should be recorded in the Budget whenever made for financial statement purposes.	<u>Frequency:</u> Any year when material. Also, agencies must disclose significant subsequent events after the reestimate date in the financial statement footnotes.
	<u>Timing:</u> At the end of the fiscal year unless otherwise approved by OMB.	<u>Timing:</u> Typically as of the end of the fiscal year. Also, agencies must disclose if the reestimate was calculated at a time other than the end of the fiscal year.

50. An interest rate reestimate of the subsidy cost of a cohort of direct loans or loan guarantees is made for the difference between (a) the interest rate assumed in the President's budget for the fiscal year in which the subsidy is obligated, and (b) the actual annual interest rates prevailing during the years of disbursement. OMB Circular A-11 instructs that an interest rate reestimate should be made when the cohort is 90 percent disbursed.¹⁴ However, when an interest rate change has occurred that would materially affect the financial statements,

¹⁴ If the interest rate assumption is a key assumption, agencies should consider using sensitivity analysis, as discussed in the section entitled *Specific Fund/Program Procedures and Controls*, to determine whether the change in interest would have a material effect on the financial statements. To do this, agencies would need to repeatedly adjust the interest rate by predetermined increments, e.g., plus or minus 100 basis points, and re-run the revised cash flows through the OMB Credit Subsidy Calculator to determine the impact on the subsidy rate. Agencies should then multiply the revised subsidy rate by the assumed disbursement amount, to calculate financial statement impact. As a result, agencies will be able to document the amount of interest rate change that would be necessary, under an assumed disbursement amount, to materially affect the financial statements.

agencies should calculate the interest rate reestimate and include the reestimate in the current year's financial statements.

51. A technical reestimate of the subsidy cost of a cohort of direct loans or loan guarantees is made for all changes in assumptions other than discount rates. If OMB has approved a plan that permits an agency to make technical reestimates less often than annually, the agency should monitor the indicators specified in that plan to determine whether a reestimate is needed for other reasons: in particular, because it is needed to comply with other parts of that plan and/or because the reestimate has a material financial statement impact.
52. An agency that does not plan to perform technical reestimates annually must establish a systematic process to determine each year whether a reestimate is necessary and, if material to the financial statements as a whole, the reestimate must be reflected in the current year's financial statements. If an acceptable monitoring process is not in place, reestimates must be made annually for the financial statements. An acceptable process would generally include the following:
 - a. *A comparison between actual experience to date and the assumptions that had been previously used for the period to date.* -- An acceptable process would regularly (but not less than annually) compare the actual cash flows, by subsidy component, reported by the accounting office at the program level to those used in the previous budget estimates.
 - b. *Differences between the current best estimate of future cash flows and the assumptions that had been previously used.* -- An acceptable process would also include procedures that identify and systematically monitor significant economic and other assumptions underlying cash flows in order to determine whether changes have occurred in the expected future cash flows that make a reestimate necessary. The significant assumptions would be expected to differ from program to program according to each program's own attributes. Economic changes could include, for example, recessions, changes in interest rates, and changes in the market value of collateral or international economic factors (such as trade disruptions). Other changes could include, for example, legislative or administrative program changes (of the kind that do not meet the OMB Circular A-11 definition of a modification), operational changes (such as reduction in staff because of budgetary constraints that would affect loan servicing), environmental changes, or war. The impact of these changes on the estimates of future cash flows (and, if necessary, the cash flow models) must be assessed and documented.
 - c. *Special emphasis for programs that have peak periods* - Where applicable, an acceptable monitoring process should provide extra emphasis during periods when cohorts are experiencing significant increases or decreases in defaults, prepayments, recoveries, or other cash flows. For example, suppose for one particular program historical experience has demonstrated that a cohort usually experiences increased

defaults starting in year three which peak in years 6 through 8. Historical experience has further demonstrated that defaults decline steadily beginning in year nine, until a stabilized rate is reached in years 13 through 30. During years 3 through 13, the agency's monitoring efforts should compare actual cash flows for defaults reported by the accounting department to estimated default cash flows as a way of validating the default cash flow assumption and determining whether a reestimate or adjustment to the overall rate or timing is necessary. However, once the monitoring system has demonstrated that the cohort has stabilized and no significant unusual events have occurred, it is less likely that annual reestimates would be necessary.

53. In years for which reestimates are made, they should normally be made as of September 30 of the reporting period using a data base that is complete through the same date. If OMB has approved a plan to make reestimates at another time during the year, this will be acceptable for financial statement purposes if the following conditions are met:
 - a. The technical reestimate of the subsidy cost is made for a 12-month period ending not earlier than March 31, using actual transaction data through March 31 of the reporting year. Agencies may also use actual transaction data beyond the March 31 date through to the end of the reporting period. The reestimated subsidy cost is compared with the previous estimate of the subsidy cost for the year ended September 30.¹⁵ The difference is the amount of the reestimate. Alternatively, for the last two quarters of the fiscal year (or for a portion of this period), agencies may estimate those quarters' cash flows on a reasonable basis e.g., the last two quarters' cash flows from the previous fiscal year, or if the cash flows are relatively uniform, two quarters of the originally estimated cash flows, or the average cash flows of the previous two quarters. For cohorts with an interest rate reestimate, the interest rate reestimate and a revised technical reestimate¹⁶ would be calculated after September 30 using actual interest rates.
 - b. In order to use this approach, agencies must ensure that the monitoring process described previously includes monitoring major events occurring during the third and fourth quarters that could have a significant impact on the subsidy reestimate. If such an event is identified, an adjustment to the reestimate of the affected cohorts may be necessary.
 - c. Agencies may be unable to calculate, and reflect in the financial statements, a reestimate for major events occurring during the third and fourth quarters because, at this point, the effects of the major event may not yet be determinable. In this case,

¹⁵ See footnote 12 for a discussion of the "balances approach" for calculating reestimates.

¹⁶ A revised technical reestimate in this context is limited to the change in the reestimate due to revised discount rates and not to any difference in cash flows.

agencies must disclose such events in the footnotes as a potential material uncertainty. The disclosure will further acknowledge that this/these event(s) will be taken into consideration in making the reestimate for the following year or once the impact of the events is determinable.

- d. This policy, when adopted by an agency, with OMB's approval, will be disclosed in the footnotes to the agency's financial statements.
54. If OMB has approved a plan to make reestimates at another time during the year that does not meet the conditions detailed in paragraph 47 above, its financial statement impact should be evaluated. The conditions listed in paragraph 47 are just one acceptable scenario that details the steps that agencies should perform to ensure that the financial statements are materially correct. Agencies may develop alternative procedures to ensure financial statements are fairly presented without performing a full reestimate as of the date of the financial statements. The agency and OMB examiner may wish to collaborate in developing the alternative procedures that will best address each individual agency's workload, the needs of the budget, financial statements, and all applicable standards.
55. If the most recent estimated cash flows of a cohort are different from the actual experience, these differences and the reasons for these differences may affect the future estimated cash flows of that cohort. The effects on the future cash flows of that cohort need to be assessed and included in the reestimate, and the reasons for the estimated effects need to be documented.
56. Reestimates for any of the reasons in this section should be completed, submitted to OMB, and included in the current year's financial statements, on a timely basis.¹⁷ If OMB has approved a plan that permits an agency to make technical reestimates less often than annually, written documentation of the plan and OMB's approval should be obtained. If a technical reestimate is not made in a particular year, documentation should explain why that is consistent with the approved plan and provide assurance (in the ways specified above) that the lack of a technical reestimate would not have a material financial statement impact.¹⁸

¹⁷ Fair presentation of subsidy estimates in the financial statements may differ from estimates in the budget.

¹⁸ OMB has established a four-step process, outlined in OMB Circular A-11, that allows for calculating budgetary technical reestimates for the budget at times other than the beginning of each fiscal year following the year in which the initial disbursement was made, as long as the loans are outstanding (subject to OMB approval). However, this does not allow agencies to omit material reestimates from the current year financial statements or to postpone including material technical reestimates in the financial statements until a subsequent year. Conversely, the OMB process may require agencies to make technical reestimates for the budget that are not material to the financial statements.

-
57. Reestimates submitted by the budget office to OMB should be recorded in the accounting records. The agency should have an audit trail from individual transactions to the subsidiary ledgers to the general ledger. This will ensure that cash transactions can be identified by type so that they may be identified by subsidy expense component. SFFAS No. 18 states: "Reporting entities... should disclose for each program ...the subsidy reestimates by components as defined in paragraph 32 [SFFAS No. 2] for those years [current reporting year and the preceding reporting year]."
58. If the cause of the reestimate affects the cash flows of future cohorts, the assumptions used to produce cash flow estimates and/or the method of estimating cash flows should be revised appropriately for the budget estimates of future cohorts.

<p>The provisions of this Technical Release need not be applied to immaterial items.</p>
--

Appendix A: Technical Glossary

Allowance for Subsidy

See Direct Loan Subsidy Allowance Account definition.

Assumptions

basic beliefs about the future operating and functional characteristics of the loan or group of loans or loan guarantees. Types of assumptions include:

Cash flow assumptions - all known and/or forecasted information about the characteristics and performance of a loan or group of loans or loan guarantees. Examples include estimates of loan maturity, borrower interest rate, default/delinquency rate, timing of defaults, overall impact of changes in economic factors, etc.

Model assumptions - determinations of how cash flow assumptions are applied through the life of the cohort. For example, determining whether the entire assumed amount of defaults should be applied in 1 year or whether a constant or variable proportion of the assumption value should be allocated to each year. The allocation of cash flows over time is the selected model form and is just as influential as the cash flow assumptions.

Case level

each individual loan or guarantee within a cohort.

Cash flow stream

the agency's projection of the dollar amount for the scheduled cash flows and deviations from scheduled cash flow items for each year over the life of the cohort.

Cash flows

Estimates of payments to or from the Government over the life of a loan or group of loans or loan guarantees. For direct loans, these may include: loan disbursements, repayments of principal, payments of interest, and any other payments such as prepayments, fees, penalties, and other recoveries. For loan guarantees, these may include: payments by the Government to cover defaults and delinquencies, interest subsidies, payments to the Government, such as origination and other fees, penalties and recoveries, and any other payments.

Cohort

all direct loans or loan guarantees of a program for which a subsidy appropriation is provided for a given fiscal year, even if disbursements occur in subsequent years. For direct loans and loan guarantees for which a subsidy appropriation is provided for one fiscal year, the cohort will be defined by that fiscal year. For direct loans and loan guarantees for which multi-year or no-year appropriations are provided, the cohort will be defined by the year of obligation.

Direct Loan Subsidy Allowance Account

the balance maintained in the general ledger that represents the difference between the current outstanding loans receivable balance and the present value of estimated cash outflows minus the present value of the estimated cash inflows over the remaining life of the direct loans. The subsidy allowance is subtracted from the loans receivable balance when calculating the net loans receivable balance. A similar account may also be used for defaulted guaranteed loans.

Econometrics

the application of statistical methods to the estimation of economic relationships.

Financing Account

the non-budgetary account or accounts associated with each credit program account that holds balances, receives the subsidy cost payment from the credit program account, and includes all other cash flows to and from the Government resulting from post-1991 direct loans or loan guarantees. Each program account is associated with one or more financing accounts,

depending on whether the account makes both direct loans and loan guarantees (separate financing accounts are required for direct loans and loan guarantees).

Fund

an aggregation of programs into a common grouping consistent with how the Congress provides appropriations - i.e., the program and financing accounts together and, if needed, the negative subsidy receipt accounts. (This term has other meanings in different contexts.)

Inputs

in the context of Federal credit, cash flow data elements used to develop spreadsheet calculations.

Internal control

an integral component of an organization's management that provides reasonable assurance regarding the achievement of reliable financial reporting, effective and efficient operations, and compliance with applicable laws and regulations. Internal control consists of the control environment, risk assessment, control activities, information and communication and monitoring.

Key assumptions

assumptions that have been established, through sensitivity analysis or other means, to be the elements that have a large impact on estimates, and thus are the most important factors in determining the cost of a loan or group of loans or loan guarantees.

Liability for Loan Guarantees Account

the balance maintained in the general ledger that represents the present value of estimated cash outflows minus the present value of the estimated cash inflows over the remaining life of the loan guarantees.

Liquidating Account

the budget account that includes all cash flows to and from the Government resulting from pre-1992 direct loans or loan guarantees, unless they have been modified and transferred to a financing account.

Negative Subsidy Receipt Account

the budget account for the receipt of amounts paid from the financing account when there is a negative subsidy cost for the original estimate or a downward reestimate. For mandatory programs, negative subsidies and downward reestimates may be credited directly to the program account as offsetting collections from non-Federal sources.

OMB Credit Subsidy Calculator

computer software developed by OMB for discounting cash flows in estimating credit subsidies. It uses agency cash flow inputs to compute the net present value at the point of disbursement and the subsidy rate associated with those cash flows.

Program

in the context of Federal credit, an aggregation of cohorts which are linked by common terms, conditions, regulations, and/or mission goals; often a sub-division of a fund or the budgetary financing account.

Program Account

the budget account into which an appropriation to cover the subsidy cost of a direct loan or loan guarantee program is made and from which such cost is disbursed to the financing account. Program accounts usually receive a separate appropriation for administrative expenses.

Risk category

subdivisions of a cohort of direct loans or loan guarantees into groups of loans that are relatively homogeneous in cost, given the facts known at the time of obligation or commitment. Risk

categories will group all loans obligated or committed for a program during the fiscal year that share characteristics predictive of defaults or other costs. All cohort level guidance in this technical release also applies to risk categories when they are used.

Service or line of business

an aggregation of funds into a common grouping: for example, grouping funds into single family or multifamily designations. The following example is provided to illustrate the relationship the above terms have to each other and show how they may be aggregated for financial statement purposes. Agencies should consult applicable OMB guidance to determine what level of aggregation is most appropriate and acceptable.

Business line or service: Farm Service Agency

Fund:

- A. CCC Export Guarantees
- B. Agricultural Credit Insurance Fund

Program:

- B1. Farm Ownership Loans
- B2. Farm Operating Loans, subsidized
- B3. Farm Operating Loans, unsubsidized

Cohort:

- B3a. FY 1992 Farm Operating Loans, unsubsidized
- B3b. FY 1993 Farm Operating Loans, unsubsidized
- B3c. FY 1994 Farm Operating Loans, unsubsidized
- B3d. FY 1995 Farm Operating Loans, unsubsidized
- B3e. FY 1996 Farm Operating Loans, unsubsidized

Risk category:

- B3e1. FY 1996 Farm Operating Loans, unsubsidized, Southwest Region
- B3e2. FY 1996 Farm Operating Loans, unsubsidized, Northeast Region

Case:

- B3ai Fiscal year 1992 unsubsidized loan to farmer A
- B3aii Fiscal year 1992 unsubsidized loan to farmer B

Appendix B: Summary of Selected Reporting Requirements¹⁹

Principal Statements	Credit Reform Information Presented
Balance Sheet	Credit program receivables and related foreclosed property, net of related subsidy allowance Liabilities for loan guarantees
Statement of Net Cost	Subsidy expense will be included as part of the gross program costs (present value of fees will be included as an offset in calculating subsidy expense rather than recording actual collection of fees as revenue) Interest revenue and interest expense
Statement of Changes in Net Position	Appropriations received (subsidy) and appropriations used
Statement of Budgetary Resources	Appropriations received (subsidy), borrowing authority, offsetting collections (examples: Collection of fees, principal, interest, subsidy from program account) and obligations (subsidy to financing account, direct loans, interest supplements, default claims) and offsetting receipts (example: negative subsidy or downward reestimate received by general fund receipt account)
Statement of Financing	Reconcile net obligations to net cost using components from the Statements of Budgetary Resources, Changes in Net Position and Net Cost. Examples of reconciling items include upward/downward reestimates of subsidy expense, offsetting collections pertaining to fees and obligations

¹⁹ Refer to FASAB Standards for a complete listing of accounting and reporting requirements. The requirements in the Standards may be supplemented by guidance provided in OMB Bulletin 01-09 and OMB Circular A-11.

Note Disclosures	Credit Reform Information Presented
<p>Direct Loans (and Defaulted Guaranteed Loans) by Program or Fund</p> <p>*Presentation by Program or Fund required by OMB Bulletin 01-09. Federal Financial Accounting and Auditing Technical Release 7: Clarification of Standards Relating to the National Aeronautics and Space Administration's Space Exploration Equipment

Status

Issued	May 25, 2007
Effective Date	Immediately
Affects	None.
Affected by	None.

Summary

The purpose of this technical release is to provide technical guidance to the National Aeronautics and Space Administration (NASA) regarding the accounting treatment of NASA's space exploration equipment for financial reporting purposes. At issue is whether it is permissible to treat the acquisition or development costs of any of this equipment as research and development costs. The objective of this technical release is to provide guidance to NASA on the application of the current FASAB standards.

Introduction

Purpose

1. The purpose of this technical release is to provide technical guidance to the National Aeronautics and Space Administration (NASA) regarding the accounting treatment of NASA's space exploration equipment for financial reporting purposes. At issue is whether it is permissible to treat the acquisition or development costs of any of this equipment as research and development costs. Three specific questions were posed to the AAPC by NASA in reference to the issue. The objective of this technical release is to provide guidance to NASA on the application of the current FASAB standards.

Scope

2. This technical release guidance is limited to transactions involving NASA's space exploration equipment. However, the guidance related to the application of the Generally Accepted Accounting Principles (GAAP) hierarchy applies broadly to all federal entities.
3. Readers of this technical release should first refer to the hierarchy of accounting standards in Statement on Auditing Standards (SAS) 91, Federal GAAP (or see AU411). This technical release supplements the relevant accounting standards, but is not a substitute for and does not take precedence over the standards.

Effective Date

4. This technical release is effective immediately.

Background

Overview

5. On July 12, 2006, NASA wrote to the AAPC requesting guidance for the accounting treatment of the National Aeronautics and Space Administration (NASA) space exploration equipment. With a series of changes to the accounting standards governing space exploration equipment, including the reclassification of Federal Mission Property in SFFAS 23 *Eliminating the Category National Defense Property, Plant, and Equipment*, NASA found existing guidance unclear regarding the accounting classification of space exploration equipment. This resulted in inconsistent and sometimes contradictory opinions from NASA's auditors.
6. In the letter to the AAPC, NASA posed three questions that it deemed central to resolving the ambiguity in the existing Federal Accounting Standards Advisory Board (FASAB) standards. These questions are as follows:
 1. Does the hierarchy of accounting principles for federal entities permit NASA to apply the SFAS 2, in determining whether space exploration equipment should be expensed as a period expense?
 2. Can space exploration equipment that does not meet the criteria for General Property, Plant & Equipment (PP&E) as defined in the FASAB Statement of Federal Financial Accounting Standards (SFFAS) 6, *Accounting for Property, Plant and Equipment*, be treated as a period expense?
 3. Does SFFAS 6 currently limit all items previously categorized as "space exploration equipment" to General PP&E?
7. The AAPC formed a task force to address NASA's questions and agreed to provide a Technical Release to guide NASA in the implementation of the standards.

Related Accounting Literature

8. In its original form, SFFAS 6 defined Federal Mission PP&E to include "space exploration equipment" and required that it be expensed. Subsequently, SFFAS 11 amended SFFAS 6, changing the classification of "space exploration equipment" to General PP&E and required

that it be capitalized. Most recently, in May 2003, SFFAS 23 rescinded SFFAS 11 and modified SFFAS 6. The related accounting literature are as follows:

Federal Accounting Standards Advisory Board Accounting Standards:

- a. SFFAS 6, *Accounting for Property, Plant, and Equipment*
- b. SFFAS 8, *Supplementary Stewardship Reporting*
- c. SFFAS 11, *Amendments to Accounting for Property, Plant, and Equipment*
- d. SFFAS 23, *Eliminating the Category National Defense Property, Plant and Equipment*
- e. Staff Implementation Guidance (SIG) 23.1, *Guidance for Implementation of SFFAS 23, Eliminating the Category National Defense Property, Plant, and Equipment*

Financial Accounting Standards Board Accounting Standards:

- f. SFAC 6, *Elements of Financial Statements*
- g. SFAS 2, *Accounting for Research and Development Costs*

Technical Guidance

9. This guidance is presented as responses to the three questions posed by NASA to the AAPC, with questions two and three combined.
10. **Does the hierarchy of accounting principles for federal entities permit NASA to apply the SFAS 2, *Accounting for Research and Development Costs*, in determining whether space exploration equipment should be expensed as a period expense?**
11. Yes. The American Institute of Certified Public Accountants (AICPA) Statement on Auditing Standards Number 91, *The Meaning of Present Fairly in Conformity with Generally Accepted Accounting Principles*, (integrated into AICPA Professional Standards, AU 411.15) provides that “in the absence of a pronouncement covered by rule 203 or another source of established accounting principles, the auditor of financial statements of a federal government entity may consider other accounting literature, depending on its relevance in the circumstances.” Other accounting literature includes the FASB Statements of Financial Accounting Standards and Interpretations.
12. SFFAS 8 addresses accounting for Research and Development Costs. SFFAS 8 provides that “Expenses included in calculating net cost for research and development programs that are intended to increase or maintain national economic productive capacity or yield other future benefits be reported as investments in research and development in required supplementary stewardship information accompanying the financial statements of the Federal Government and its component units.” SFFAS 8, however, does not define “expenses” in the context of calculating the net cost of research and development programs. Nor do other FASAB standards specifically address recognition of research and development costs or the elements of costs that would be identified with research and development activities. However, SFFAS 23 acknowledges that the Board considered concerns about the treatment of the costs of research, testing, development, and evaluation (RTD&E) for the Department of Defense but decided that issues related to these costs can and should be addressed in the context of existing basic principles and practices. Thus, preparers have in turn looked to other authoritative literature for guidance.
13. SFAS 2 describes activities that typically would be included in and the elements of costs to be identified with research and development. Other federal agencies have turned to SFAS 2 for needed authoritative guidance. Specifically, SFAS 2 provides that the costs of materials, equipment or facilities acquired or constructed for a particular research and development project and that have no alternative future uses are treated as research and development costs in the period.

-
14. While SFFAS 8 is the principal authoritative source on accounting for research and development costs by federal agencies, this standard may be supplemented in order to address some of the differing research and development efforts by federal agencies. Accordingly, consistent with the provisions of AU 411.15, federal agencies may consider the provisions of SFFAS 8 together with the provisions of SFAS 2 in making a determination about accounting for research and development costs.
15. **Can space exploration equipment that does not meet the criteria for General PP&E as defined in the SFFAS 6 be treated as a period expense? Does SFFAS 6 currently limit all items previously categorized as “space exploration property” as General PP&E?**
16. The criteria for determining whether an item is capitalized as PP&E are outlined in SFFAS 6, paragraph 17. The typical characteristics of general PP&E are outlined in SFFAS 6, paragraph 23.
17. In its original form, SFFAS 6 defined Federal Mission PP&E to include “space exploration equipment” and required that it be expensed. Subsequently, SFFAS 11 amended SFFAS 6 to redefine “Federal Mission PP&E” as “National Defense Property, Plant and Equipment.” SFFAS 11 also included explanatory language which specified that space exploration equipment was to be accounted for as general PP&E. Most recently, in May 2003, SFFAS 23 rescinded SFFAS 11 in its entirety and modified SFFAS 6 to require that National Defense Property, Plant and Equipment be capitalized as General Property, Plant, and Equipment. We realize that these changes could have caused some preparers and auditors uncertainty regarding how to apply the resulting guidance in accounting for “space exploration equipment;” however, the hierarchy of accounting literature provides a means to access literature to be relied on in determining an appropriate treatment.
18. SIG 23.1, issued to clarify the intent of the FASAB in its issuance of SFFAS 23, stated that, “assets being recognized due to the implementation of SFFAS 23 should be characterized in accordance with the asset definitions in SFFAS 6 *and other accounting standards.*” The genesis of the guidance was the narrow reading of the provision of SFFAS 23, which stated that ... “The amendments in this Statement... Classify all assets previously considered to be National Defense Property, Plant, and Equipment as general PP&E and the provisions for general PP&E ... contained in SFFAS 6, as amended, are to be applied.” The essence of the guidance was to point out that the FASAB’s intent was to have preparers follow existing standards in the classification of assets. It was not the FASAB’s intent to require that preparers follow SFFAS 6 without regard to the nature of the underlying asset. Accordingly, the concept discussed in SIG 23.1 should be applied, i.e., the definitions included in the accounting standards may be used to determine the classification and treatment of “space exploration equipment” and not limited to the category of General PP&E, but be categorized in accordance with the definitions of SFFAS 6 and other accounting standards.

-
19. The FASAB standards in and of themselves do not preclude the expensing of space exploration equipment; as stated, the characteristics of the transactions or events should govern accounting treatment.

The provisions of this Technical Release need not be applied to immaterial items.

Appendix A: Basis for Conclusions

- A1. NASA's request for guidance is based their need for clarification on the specific accounting guidance on the classification of space exploration equipment. The need for clarification is based on the many changes in the standards related to property, plant, and equipment. In 1995, SFFAS 6 originally defined space exploration equipment as Federal Mission PP&E. In 1998, FASAB classified space exploration equipment as PP&E in SFFAS 11 and also replaced the definition of Federal Mission Property with National Defense (ND) PP&E. In 2003, SFFAS 23 rescinded SFFAS 11 in its entirety and reclassified ND PP&E as General PP&E. In addition to eliminating the category ND PP&E, this rescission purged the term "space exploration equipment"¹ from the authoritative literature.
- A2. In 2004, the Department of Defense (DoD) questioned whether the FASAB actually intended to require that all items falling under the ND PP&E definition in SFFAS 23 be classified as General PP&E. DoD submitted a discussion paper in July 2004 to the FASAB staff. As a result, SIG 23.1 was released. Under this guidance, ND PP&E was not limited to the category of General PP&E. SIG 23.1 states that "assets being recognized due to the implementation of SFFAS 23 should be categorized in accordance with asset definitions in SFFAS 6 and other accounting standards... any items not properly classified as General PP&E should be valued in a manner consistent with definitions in existing standards to determine the relevant asset class."
- A3. The Committee believes that NASA, in making determinations about the accounting treatment of transactions and events, should use its judgment in applying the standard that most appropriately reflects the characteristics of the transactions or events. One purpose of the hierarchy established in the AICPA Statement on Auditing Standards 91 is to permit other accounting literature to be considered in the absence of specific guidance in the FASAB standards. If it is determined that "space exploration equipment" meets the criteria for capitalization and has predominant characteristics of property, plant and equipment, then the accounting requirements in SFFAS 6 should be applied; however if the costs incurred for space exploration equipment are more similar to the R&D activities specified in SFFAS 8 and SFAS 2, then NASA should apply these standards to its space exploration equipment. The FASAB standards in and of themselves do not preclude the expensing of space exploration equipment; as stated, the characteristics of the transactions or events should govern accounting treatment. NASA's current accounting policy is to classify all theme assets as General PP&E and capitalize them. If it is determined that NASA should change

¹ "Space exploration equipment" included items intended to operate above the atmosphere for space exploration purposes, and any specially designed equipment to aid, service, or operate other equipment engaged in the exploration of space. (See SFFAS 6, par. 52.)

its current accounting policy, it should document that the accounting policy selected is preferable and the reasons therefore.

A4. One comment letter was received from the following source:

	FEDERAL (Internal)	NON- FEDERAL (External)
Users, academics, others	0	1
Auditors	0	0
Preparers and financial managers	0	0

The one respondent agreed with the guidance as it was written and added the following comments. "The hierarchy of accounting standards provides for the use of FASB standards in this case. SFAS 2 also covers the subject in sufficient detail to enable NASA to apply it to its research and development costs."

Technical Release 8: Clarification of Standards Relating to Inter-Entity Costs (Rescinded)

Status

Issued	February 20, 2008
Effective Date	Immediately
Affects	None.
Affected by	TR 19 rescinded TR8 in its entirety.

Summary

TR 19, Recission of Technical Release 8 rescinded TR 8 in its entirety.

Technical Release 9: Implementation Guide for Statement of Federal Financial Accounting Standards 29: Heritage Assets and Stewardship Land

Status

Issued	February 20, 2008
Effective Date	Immediately
Affects	None.
Affected by	SFFAS 42.

Summary

This technical release is intended to assist federal entities in reporting information on heritage assets (HA) and stewardship land (SL) in accordance with new federal accounting standards. Federal entities are required to report descriptive, non-financial information on HA/SL as basic information in their financial reports, in accordance with Statement of Federal Financial Accounting Standards (SFFAS) 29, *Heritage Assets and Stewardship Land*.

Introduction

Purpose

1. This technical release is intended to assist federal entities in reporting information on heritage assets (HA) and stewardship land (SL) in accordance with new federal accounting standards. This technical release supplements relevant federal accounting standards, but is not a substitute for and does not take precedence over the accounting standards issued by FASAB.
2. Federal entities are required to report descriptive, non-financial information on HA/SL as basic information in their financial reports, in accordance with Statement of Federal Financial Accounting Standards (SFFAS) 29, *Heritage Assets and Stewardship Land*.
3. Prior to issuing SFFAS 29, information on HA/SL was reported as Required Supplementary Stewardship Information (RSSI). SFFAS 29 reclassifies all HA/SL information as basic financial information, except for condition information, which is reclassified as Required Supplementary Information (RSI) and may be reported with deferred maintenance information. The standard also requires that entities reference a note on the balance sheet that discloses information about HA/SL, but no asset dollar amount should be shown. Instead, the minimum reporting requirements for note disclosure include a description of major categories, physical unit information for the end of the reporting period, physical units added and withdrawn during the period, and a description of the methods of acquisition and withdrawal.
4. SFFAS 29 also requires two new disclosures for HA/SL: entity stewardship policies and an explanation of how HA/SL relate to the mission of the entity. The standard also includes the requirements for the Consolidated Financial Report of the U.S. Government (CFR). The CFR provides for a general discussion and directs users to the applicable entities' financial statements for more detailed information on HA/SL. This technical release focuses specifically on HA/SL. It does not address other types of Property, Plant, and Equipment (PP&E).
5. This technical release is organized into four sections:
 - Section I *Materiality Considerations* describes an approach for considering materiality that is common to entities as they apply the materiality concept to HA/SL. It includes qualitative factors to consider in making materiality judgments about HA/SL.
 - Section II *Identification, Categorization, and Quantification* discusses issues related to identifying HA/SL and describes how the standard allows entities "flexibility" in

determining the format and level of detail to report relevant and reliable information in note disclosures. It also explores factors affecting the level of detail such as management's selection of categories for reporting and choice of physical units within categories, as portrayed in various examples. In addition, a discussion of supporting documentation is included.

- Section III *Assessing and Reporting Condition* discusses approaches for meeting condition reporting requirements for HA/SL. This section provides guidance for identifying criteria to assess condition, discusses sources of information to support reporting, and provides examples of reporting condition.
- Section IV *Government-Wide Reporting* discusses the balance sheet note reference and a note disclosure of HA/SL information in the U.S. Government-wide financial statement.

Scope

6. Readers of this technical release should first refer to the hierarchy of accounting standards in Statement on Auditing Standards (SAS) 91, Federal Generally Accepted Accounting Principles Hierarchy (or see AU411). This technical release supplements the relevant accounting standards, but is not a substitute for and does not take precedence over the standards.

Effective Date

7. The effective date for implementation of the Technical Release is for periods beginning after September 30, 2008. Earlier implementation is encouraged.

The provisions of this Technical Release need not be applied to immaterial items.

Background

8. FASAB determined that information on HA and SL (except for condition) should be basic financial information because (1) information on these assets is essential to fair presentation and understanding of the entity's financial condition; (2) accountability for HA/SL requires more audit scrutiny than would be afforded if these assets were addressed through RSI; and (3) this classification is consistent with existing standards issued by the Governmental

Accounting Standards Board (GASB) for reporting on art and historical treasures, and Financial Accounting Standards Board (FASB) for reporting on collections, other works of art, and historical treasures.¹ Reporting condition of HA/SL as RSI is appropriate because the information is experimental in nature and the manner of assessing and reporting this information is inconsistent.²

Transition from RSSI to Basic/RSI Information

9. The reclassification from RSSI to basic financial information for HA/SL is being phased in as required by SFFAS 29. **The phase-in approach requires full implementation of SFFAS 29 for reporting periods beginning after September 30, 2008.** Items a and b are new note disclosures and are to be reported as basic financial information beginning in periods after September 30, 2005; items c through f temporarily move to RSI in periods after September 30, 2005 before being reported as basic financial information.
- a. A statement explaining how HA/SL relate to the mission of the entity
 - b. A description of the entity's stewardship policies
 - c. A description of major categories
 - d. Physical unit information for the end of the reporting period
 - e. Physical units added and withdrawn during the year
 - f. A description of the methods of acquisition and withdrawal
10. Effective dates for transitioning the above HA/SL information **from RSI** to basic financial information (i.e., a note disclosure to the financial statements) begin for periods:³
- After September 30, 2007 for items c and d,
 - After September 30, 2008 for items e and f.

¹ SFFAS 29, par. 54.

² SFFAS 29, par. 57.

³ See SFFAS 29 for details on the phase-in of disclosure requirements being reported as basic information.

Section I. Materiality Considerations

11. In the interest of meaningful and cost effective information, managers of HA/SL information need to understand and apply the concept of materiality in order to decide what is material and what is not. Key issues are (1) what is the appropriate level of detail and aggregation for reporting HA/SL information and (2) how should materiality be applied to assets that are not reported in dollar amounts?
12. In developing the entity's disclosures, management should identify meaningful levels of aggregation by determining whether assets are material enough to warrant classification in separate categories. Regardless of the level of detail or aggregation, the entity should support its financial statements with internal accounting policies listing the chosen criteria and methods of aggregation and classification.
13. Materiality has both quantitative and qualitative characteristics. Traditional materiality judgments about financial information are primarily quantitative and are focused on dollar amounts. However, the fact that HA/SL are not reported in dollars requires special attention to qualitative factors such as the nature of the related assets and the circumstances in which the materiality judgment is made.
14. Management's consideration of materiality is a matter of professional judgment and is influenced by (1) the information necessary to demonstrate accountability for HA/SL, (2) the needs of a reasonable person who will rely on the principal financial statements, and (3) cost-benefit justifications. This approach incorporates two fundamental values of federal financial reporting: accountability and decision usefulness.

Accountability and Decision Usefulness

15. As the standard-setting body for the federal government, FASAB stated that there are two fundamental values that provide the foundation for governmental accounting and financial reporting: "accountability" and its corollary, "decision usefulness."⁴ FASAB explained that "Because a democratic government should be accountable for its integrity, performance, and stewardship, it follows that the government must provide information useful to assess that accountability."

⁴ Statement of Federal Financial Accounting Concepts (SFFAC) 1, *Objectives of Federal Financial Reporting*, par. 71.

-
16. Under an “accountability concept” of materiality, management uses its professional judgment to decide, on behalf of users, what information is needed to demonstrate accountability over HA/SL in accordance with federal accounting concepts and standards. Materiality is then evaluated in relation to the information considered necessary for accountability. In essence, the accountability concept of materiality considers the information needed to answer such questions as, are the assets important to the entity’s mission or to the Nation? Are the assets highly visible, vulnerable, or controversial? And, is the government effectively managing and safeguarding assets?⁵
17. Traditional definitions of materiality for financial information center on “decision usefulness,” a concept that relates to the needs of a reasonable person who relies on reported information to make decisions. The focus on decision usefulness originated from the primary objective of financial reporting for business enterprises established by FASB: “Financial reporting should provide information that is useful to present and potential investors and creditors and other users making rational investment, credit, and similar decisions.”⁶
18. However, in the federal government, the HA/SL information that users need in order to make informed decisions is evolving since agencies are still in the early stages of reporting. Users’ needs will likely become more clearly identified as the required disclosures are made available and attract users who rely on it for making decisions.⁷ In the meantime, attempting to make materiality determinations about HA/SL information based solely on undetermined user needs (i.e., decision usefulness) is an uncertain approach. Therefore, for HA/SL, the current focus for considering materiality should be based on accountability. Citizens want assurances that the HA/SL entrusted to the government are protected and used for the purposes intended.⁸ Congress, executives, and program managers need to demonstrate to those to whom they are accountable that they have, in fact, protected those resources and used them well.

⁵ SFFAC 1, par. 105 states, “The federal government derives its just powers from the consent of the governed. It therefore has a special responsibility to report on its actions and the results of those actions. ...Providing this information to the public, the news media, and elected officials is an essential part of accountability in government.”

⁶ Source: FASB’s Statement of Financial Concepts No. 1: *Objectives of Financial Reporting by Business Enterprises*, par. 34.

⁷ See SFFAC 1, par. 75-87; SFFAC 4, par. 6-9; and SFFAS 6, Basis for Conclusions, par. 123 for a summary of the users of federal financial reports and their stewardship information needs.

⁸ “Citizens” include individual citizens as well as citizen intermediaries (i.e., the general news media and more specialized users such as trade journals); public interest and advocacy groups; state and local legislators and executives; and analysts from corporations, academe, and elsewhere. According to SFFAC 1, par. 76 and SFFAC 4 par. 7, “Citizen intermediaries devote more time to reading, analyzing and interpreting more detailed information that they analyze, summarize and pass on to Citizens for further application.” (SFFAC 4, par. 16)

Measurement Issues

19. For the federal government HA/SL, there is no unifying theme upon which to base quantitative measures of materiality, such as, total assets or total expenses because there is no common unit of measure, such as dollars, that can be used to evaluate the effect of omissions and misstatements among HA/SL categories. In other words, HA/SL management's focus is on whether in the aggregate the categories reported for HA/SL are a complete presentation of HA/SL for which the entity is accountable. For example, management might report quantities for five separate and dissimilar categories of HA such as 6,000 linear feet of archival documents, 4,000 cubic feet of archeological artifacts, 2,500 paleontological items, 1,000 pieces of artwork, and 500 geological specimens. These diverse categories have different measurement attributes that are not readily quantifiable in monetary units.
20. Therefore, each entity should identify and apply the qualitative factors that will govern their HA/SL note disclosure. Choosing qualitative materiality factors is a practical means to achieve straightforward and consistent reporting procedures for stewardship assets. The intent is that management should do what is reasonable to report information about the entity's HA/SL yet avoid costly and burdensome reporting of unnecessary detail.

Qualitative Factors to Consider

21. Reporting information about HA/SL should reflect the entity's stewardship processes and responsibilities for managing stewardship assets. Such reporting can be accomplished, in part, by analyzing the entity's mission as part of determining which asset categories are material and warrant separate classification and presentation. As mentioned previously, factors to be considered, among others, are whether the asset categories are viewed as "important to the nation" or to the mission of the entity, and whether the assets are "visible, vulnerable, or controversial." Other factors to consider include whether the entity has significant operations, programs or activities related to the management of the HA/SL. Additionally, consideration should be given to whether HA/SL have characteristics or qualities that have widespread public interest.

Financial Presentation, Disclosure and Meaningful Aggregation

22. Inherent in preparing financial statements in conformity with GAAP, management makes financial reporting assertions about HA/SL, generally in five broad categories: existence, completeness, rights and obligations, valuation, and presentation and disclosure. As stated in the Basis for Conclusions section of SFFAS 29, "... the Board believes that the agencies

are in the best position to determine the most meaningful level of presentation. The Board believes that ultimately the presentation depends upon the specifics of the entity – its mission, the types of HA, how it manages and materiality considerations.”⁹

23. As supported by the Basis for Conclusions for SFFAS 29,¹⁰ management must differentiate between (a) detailed records that may be needed for management control and safeguarding purposes, and (b) presentations that are material for stewardship note disclosures. Entities may track individual assets and asset categories for control purposes that do not warrant separate presentation in their stewardship note disclosures. For example, under the Real Property Initiative of the President’s Management Agenda, agencies are required to record information about assets in the *Federal Real Property Profile* database. This information is viewed as an asset manager’s tool and may provide estimates on a large scale to generally depict the government’s assets.
24. Management’s consideration of materiality should focus on identifying *meaningful levels of aggregation* for reporting; i.e., determining which HA/SL warrant classification and presentation in separate categories. For example, are the assets unique, especially important and of exceptional interest?
25. In order to meet the reporting objectives of SFFAS 29, consistent with the financial reporting assertions, and with a focus on meaningful aggregation, management should analyze the entity’s HA/SL:
- For significant HA/SL that are considered meaningful for aggregation, establish separate categories and disclose the number of physical units¹¹ in each category.
 - If immaterial “entities may omit heritage asset and SL information.”¹²
26. In summary, the agency is in the best position to determine the appropriate level of fair presentation, aggregation and physical units of measure for presenting each major category based on the entity’s mission, the types of HA/SL, and how it manages its assets. Such determinations are highly subjective and require the use of professional judgment.

⁹ SFFAS 29, Basis for Conclusions, par. 79.

¹⁰ SFFAS 29, Basis for Conclusions, par. 85.

¹¹ “Particularly for collection-type heritage assets, it may be more appropriate to define the physical unit as a collection, or a group of assets located at one facility, and then count the number of collections or facilities.” (SFFAS 29, footnote 10).

¹² SFFAS 29, Basis for Conclusions, par. 101.

Section II. Identification, Categorization, and Quantification

27. SFFAS 29 provides considerable latitude on identifying, categorizing, and quantifying footnote information on HA/SL. The Board provides broad guidance, and allows flexibility for each entity to determine what constitutes relevant and reliable information for its individual HA/SL.¹³ Reporting requirements for HA/SL include acquisitions, withdrawals, and ending balances expressed in physical units. SL physical units are by major categories of use¹⁴ whereas HA physical units are by major category.¹⁵ HA/SL (1) should be reported with a note reference on the balance sheet with no asset dollar amount shown and (2) costs associated with HA/SL must be recognized in the statement of net cost (SNC) for the period in which the costs are incurred. Also non-financial information on HA/SL (including multi-use HA) must be reported in the note disclosure.
28. Multi-use HA requires additional descriptive information in the heritage asset note disclosure, with cross references directing the reader from the balance sheet to the note disclosure. Multi-use HA are to be reported in both the principal financial statements (in dollars) as general PP&E and in the heritage asset note disclosure (in physical units).¹⁶ This reporting and note disclosure would not be considered duplicative as each category is considered unique for this reporting purpose.
29. Additionally, agencies should document the identification, categorization, and quantification reasoning in their internal accounting policies and procedures to ensure the consistent reporting for all similar HA/SL.

Identification

General Issues

30. A primary issue in implementing SFFAS 29 is determining whether land is SL or General PP&E land; and whether an asset is a heritage asset, a multi-use heritage asset, or General

¹³ SFFAS 29, par. 79 – 85.

¹⁴ SFFAS 29, par. 40 d.

¹⁵ SFFAS 29, par. 25 d.

¹⁶ SFFAS 29, par. 27 and 29.

PP&E. Making each determination correctly is fundamental to accounting and reporting for HA/SL.

31. SFFAS 29 broadly characterizes HA/SL as generally expected to be preserved indefinitely. In addition to the definitions of HA/SL contained in the standard, HA/SL are significant to the nation's history and culture. Being listed on the National Register of Historic Places, although not considered a required criterion for identifying HA,¹⁷ may indicate that the asset is HA. Other ways to identify HA/SL include specific designations set forth by authoritative bodies such as Congress, the President, or an agency head as well as cultural protection laws, regulations, or other cultural asset protection standards. Also, HA/SL may have characteristics or qualities that are of widespread public interest.
32. Once HA/SL have been identified, each entity must determine the most appropriate level to report these assets for purposes of the required note disclosure. This reporting depends on the types of HA/SL, the entity's mission, materiality considerations, and the entity's ability to classify such assets consistently from year to year.
33. The following HA, multi-use HA, and SL examples illustrate how some PP&E could be identified as HA or SL. However, the examples are for illustrative purposes only and their disclosures are not mandatory. The examples are not all-encompassing and agencies may identify other more useful and relevant criteria to identify HA/SL. Appendix C provides examples of footnote disclosures.

Heritage Assets

Heritage Asset Examples

34. Example 1: Historic and prehistoric structures may be identified as HA because historic structures are significant to the nation and are associated with the important people and history of the nation.¹⁸ They are constructed works consciously created to serve some human activity or purpose. These structures include buildings, monuments, dams, canals, stockades, fences, defensive works, temple mounds, kivas, ruins of all structural types, and outdoor sculptures.

¹⁷SFFAS 29, par. 15 and 16.

¹⁸ An example of such a site is the U.S. DOE Nevada Test Site on which various archeological sites have been identified. Most were left by the ancestors of the present-day Indian tribes, Paiutes and Shoshones. These sites include rock shelters, brush houses, fire pits for cooking, and artifacts on ground surfaces.

-
35. Example 2: National historic landmarks possess exceptional value or quality in illustrating or interpreting the heritage of the United States in history, architecture, archeology, technology, and culture. They possess a superior location, design, setting, materials, and workmanship. They are districts, sites, buildings, structures, or objects of national significance possessing exceptional value in commemorating or illustrating the history of the United States. The Historic Sites Act of 1935 authorizes the Secretary of the Interior to grant this designation as the federal government's official recognition of the national importance of historic properties.
36. Example 3: A cultural landscape is identified as a HA because of its natural and cultural significance. A cultural landscape is a geographic area, including both natural and cultural resources, associated with an historic event, activity, or person. These landscapes may contain trails, trees, waterways, or structures but are combined into one unit by their designation and collectively viewed as one HA. There are four general types of cultural landscapes: historic sites, historic designed landscapes, historic vernacular landscapes, and ethnographic landscapes.¹⁹
37. Example 4: Museum or library collections may be identified as HA because they may have historical significance and/or cultural, educational or artistic importance. These collections comprise objects or materials that have been gathered and maintained for exhibition or use. These items could include exhibit pieces, artifacts, published materials, and/or other literary content in any format.

¹⁹ One example of a cultural landscape is Fort Bragg. This cultural landscape is unique because of its continued use for defense related purposes and the influences to the landscape that result from defense related activities.

Another example that encompasses three overlapping cultural landscapes is the Department of Energy (DOE) Hanford site. The first landscape represents a rich archeological and ethnographic landscape that has existed for more than 10,000 years where local American Indian tribes still revere the area for its spiritual and cultural importance, as they continue the traditions practiced by their ancestors.

The second landscape embodies the experiences of the immigrants who started arriving in the mid-19th century. Following the explorers and fur traders who passed through the area were miners, ranchers, and then farmers. In 1943, the U.S. Government acquired the land for a secret wartime project and approximately 1,500 families were forced to move. Today, the former residents and their families recall the homes they had to leave and see the remains of their farms and towns as symbols of the sacrifice they made to the war effort.

The third landscape is associated with World War II and the subsequent Cold War. The government acquired the land in 1943 to build large industrial facilities to produce plutonium, which served a vital role in the nation's defense. Hanford's mission expanded during the Cold War era to include research and development activities associated with the peaceful uses of atomic energy. Today, the remains of the facilities and legacy wastes document an important part of the nuclear age story.

Multi-use Heritage Assets

38. A HA that serves two purposes, for example, a heritage function and a government operations function, should be considered a multi-use HA and classified as general PP&E if the predominant use (not the incidental use) of the asset is in general government operations.²⁰ Entities should consider the predominant use of a HA in determining the appropriate accounting treatment.

Multi-use Heritage Asset Examples

39. Example 1: Assets in the Nation's capital that are currently identified as multi-use heritage assets include the Department of the Treasury and the Government Accountability Office (GAO) buildings. The main Treasury Building is used predominately for agency operations but also has historical significance as evidenced by its National Historic Landmark status. The GAO building qualifies as a multi-use heritage asset because it is listed in the National Register of Historic Places, and it is being used in general government operations.
40. Example 2: The Hoover Dam's predominant use is an operational dam providing hydro power, recreation, and water supply. It is also a National Historic Landmark and a museum facility. Therefore, it is considered a multi-use heritage asset.
41. Example 3: A Supervisor's Office for a National Forest is identified as a multi-use heritage asset because it provides administrative office space for Forest Service personnel who manage operations of the forest. While its predominant use is for administrative office space, the office is also listed on the National Register of Historic Places because of its age and unique log architectural design.
42. Examples 4 and 5 below describe assets that are not multi-use heritage assets because they do not meet the definition of HA or are exempt from classification as multi-use HA.
43. Example 4: The Punta Gorda Lighthouse is an operational lighthouse that is capitalized and reflected on the balance sheet. Even though the lighthouse is a contributing property to an historic site and has attributes that are considered historically valuable, these attributes are common to many other historic structures in the country. Management has determined that the lighthouse is not a multi-use heritage asset, because according to the managing agency's internally documented procedures for identifying heritage assets, the lighthouse does not meet the necessary level of historic significance for disclosure.

²⁰ SFFAS 29, par. 18.

-
44. Example 5: The Jefferson National Expansion Memorial (St. Louis, MO) has incidental administrative offices and shop space located in the memorial. In this case, the memorial should be reported as a heritage asset.

Stewardship Land

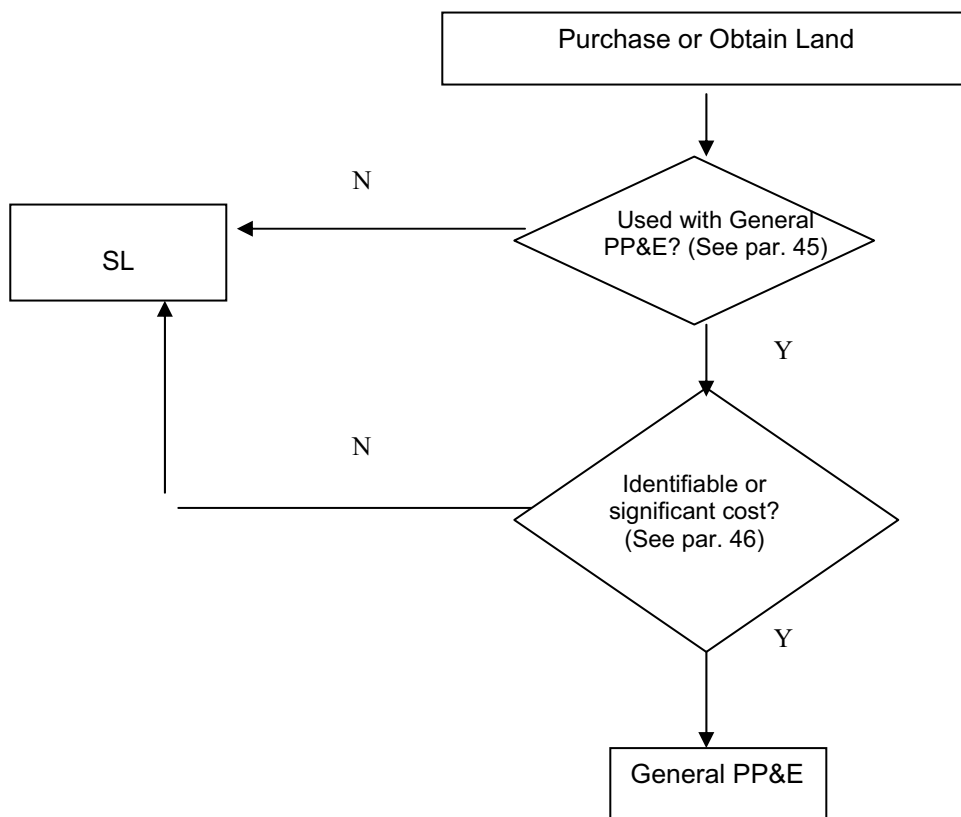

45. Entities commonly classify land by using a two-step process. First by determining whether the land meets the criteria for general PP&E land or SL. Land is considered general PP&E if it is "acquired for or in connection with items of general PP&E."²¹ SL is land and land rights owned by the federal government but not acquired for or in connection with items of general PP&E.²²
46. If land meets the criteria for general PP&E, then determine if the land has an identifiable cost.²³ If land does not have an identifiable cost or where cost is nominal or insignificant, it is SL, regardless of whether it is "acquired for or in connection with other general PP&E." The following chart provides implementing guidance for interpreting par. 25 of SFFAS 6 and par. 35 and 36 of SFFAS 29.

²¹ SFFAS 6, par. 25. The phrase "acquired for or in connection with" is defined as including "land acquired with the intent to construct general PP&E and the land acquired in combination with general PP&E, including not only land used as the foundation, but also adjacent land considered to be the general PP&E's common grounds," according to SFFAS 29, footnote 16.

²² SFFAS 29, par. 33 and 36.

²³ Examples where land would have an unidentifiable, nominal, or insignificant cost would include federally owned lands that were part of the Louisiana Purchase in 1803 (Louisiana, Arkansas, Oklahoma, Missouri, Iowa, Kansas, Nebraska, South Dakota, Montana, and parts of Minnesota, Wyoming, and Colorado), the Gadsden Purchase in 1853 (parts of Arizona and New Mexico), and the Oregon Territory where American title was established in 1846 by the Spanish-American Compromise (Washington, Oregon, and part of Idaho). These lands do not have an identifiable cost because the land was acquired at nominal cost (in current dollar value) or at no cost at all. These lands are part of the originally constituted America's "public domain" land. Much of this land is no longer under federal ownership. What remains under federal ownership today is generally referred to as the "public lands."

The concept of "identifiable cost" in determining whether land is stewardship land does not apply to situations where land logically would have an identifiable cost but that cost is unknown due to inadequate accounting, weak or no internal controls, or other imprudent actions.

Stewardship Land Examples

47. Example 1: In order to establish a military base, testing ground, or firing range, an agency receives a transfer²⁴ of federal land that was originally part of large territories of "public domain" land that the Nation acquired at nominal cost. This public domain land, acquired by transfer from another federal entity, does not have an identifiable cost. Therefore, this public domain land is SL, regardless of how the agency uses it. In this case, the land would be categorized and reported as SL for financial reporting purposes.
48. Conversely, if land were purchased for or in connection with construction of a military base, testing ground, or firing range, it would have an identifiable cost and should be included in general PP&E. In this case, the land would be reported on the balance sheet with a dollar value along with other capital assets.

²⁴ See SFFAS 29, par. 39 and 40.d. (3) for the discussion on SL transfers.

49. Example 2: Agency 1 has been granted specific legislative authority to sell tracts of land that were originally public domain land (currently classified as SL) to the public and to retain a portion of the proceeds²⁵ from those sales to purchase environmentally sensitive tracts of land from the public in locations prescribed by the enabling legislation. The purchased land may be retained and managed by Agency 1 or it may be transferred to another federal agency (Agency 2) for management of the SL (e.g., for use as wildlife habitat, forest production, or other SL use). At the point when the sale and purchase transactions occur, the cost/value of the land sold and purchased is known. However, this SL is not associated with general PP&E and therefore is classified as SL.
50. In this example, Agency 1 would report a reduction in the quantity of SL reflecting the disposal (sale) transaction. When land is subsequently purchased, Agency 1 would show an increase in the quantity of SL reflecting the purchase transaction. If the purchased land is transferred to Agency 2, Agency 1 would show a reduction in the quantity of SL reflecting the transfer to Agency 2 for management. Agency 2 would reflect an increase in its quantity of SL. No monetary amounts relating to land would be reported on the balance sheet.
51. When each agency develops its footnote disclosures, the actual increase or decrease in categories and/or physical units depends on how each agency in the example chooses to categorize and quantify its SL. In this example, Agency 1 has a “multiple-use” category²⁶ and quantifies its land by management unit. As such, if a management unit were reduced or increased in size but not eliminated or created, there would be no net change in its reporting. Agency 2 has a major category of use of conserving, protecting, and enhancing fish and wildlife and their habitats. Agency 2 quantifies its land by refuge. If the increase in land does not create a new refuge, then Agency 2 would also show no net change in its reporting.
52. Example 3: An agency purchases land for \$300,000 that is to be added to a wildlife refuge for wildlife habitat. In this example, the land has an identifiable cost, but it was not acquired for or in connection with general PP&E. Therefore, it does not qualify as general PP&E land. Thus, the land is SL and the \$300,000 purchase price would be expensed in the year of acquisition.²⁷ In this example, if the reporting unit (wildlife refuge) was increased in size, but the increase did not create a new refuge, then the entity would show no net change in its

²⁵ Generally speaking, federal agencies can sell and purchase land. However, without specific legislative authority, they cannot retain proceeds from the sales of land for any agency purpose. Proceeds from the sale of land would normally be transferred to the General Fund of the Treasury.

²⁶ An example of “multiple-use” land is when legislation requires the use of multiple natural resources (i.e., domestic livestock grazing, fish and wildlife development, mineral exploration and production, rights-of-way, outdoor recreation, and timber production) related to the SL and no single use is predominant.

²⁷ In accordance with SFFAS 29, par. 37.

reporting related to SL units. However, if the agency reports by units, such as acreage, it would reflect an increase in units.

Categorization

53. SFFAS 29 emphasizes reporting on asset categories, rather than individual assets²⁸ such that reporting should be by major category for HA and major category of use for SL.²⁹ Moreover, entities should determine the appropriate level of detail for their categorization. Related groups of assets that do not warrant classification and presentation in separate categories should be aggregated.³⁰

General Issues

Designation of Categories

54. The determination of which HA/SL warrant presentation in separate categories is related to whether they are material based on management's judgment. As described in the section on *Materiality Considerations*, management's consideration of materiality for HA/SL focuses on meaningful levels of aggregation for the stewardship note disclosures.

Establishing the Level of Reporting Detail

55. The appropriate information for reporting HA/SL can vary from one entity to another, as well as from a component entity to the consolidated entity. The level of detail of the information presented depends, in part, on the mission of the entity, the types of stewardship assets, how the entity manages the assets, and the materiality of the assets in question.³¹ For example, an agency with stewardship as its primary mission might choose to report more extensive and detailed categories than an agency that does not have a stewardship

²⁸ SFFAS 29, par. 25.c. and 40.c.

²⁹ The phrase "major category of land use" is not specifically defined in SFFAS 29. However, based on the definition of land (the solid part of the surface of the earth), one might reasonably assume that the land functions as the foundation for natural resources and as a basin for water resources (water being a natural resource). It is the natural resources that land-management agencies manage, and it is the resources for which they authorize use. Hence, the phrase "major category of land use" can be implied to mean "major category of resource use."

³⁰ Aggregation of assets into categories could be compared to or likened to identifying "major classes" of assets. SFFAS 6 provides examples of major classes for general PP&E in footnote 63. These include, among others, buildings and structures, furniture and fixtures, equipment, vehicles, and land.

³¹ See Section on *Materiality Considerations*.

mission. It is important to clarify that agencies may establish levels of detail for HA/SL and manage them for control purposes in a manner that is different from how they categorize and aggregate them for financial reporting purposes.

56. Also, some HA/SL categories overlap because they are defined in ways that result in certain assets, such as landscape monuments, being reported as both HA and SL. However, such reporting is not duplicative because the type of information reported for each category is different. For example, while a landscape monument might count as one item in the category of HA, the land supporting the monument could be included in the physical units under SL.³² The *Craters of the Moon National Monument and Preserve* might be reported as HA and the vast expanse of land under the monument reported with the many tracts of land managed by the district.

Heritage Assets

57. SFFAS 29³³ requires that entities categorize HA by “major category.” Major categories can be defined in many ways such as:

- The characteristics or attributes that make them unique, e.g., historical, natural, cultural, educational, artistic, or architectural;
- Designations of significance by experts or government leaders;
- The nature of the items such as collectible or non-collectible;
- Structural or non-structural; and
- Asset use such as transportation, dwellings, shipping, ghost towns, military, farming, burial, and many others.

58. Some examples of categories of HA, which are not intended to be all encompassing, include:

- Monuments,
- Landmarks,
- Landscapes,
- National Parks,
- Museums,
- Cemeteries,
- Libraries, and
- Districts or Regions.

³² In accordance with SFFAS 29, par. 17.

³³ Par. 25 item c.

Heritage Asset Examples

59. Example 1: Pompeys Pillar is categorized as a national landmark that is both HA and SL. This landmark is a rock outcropping, a massive natural block of sandstone and a major landmark along the route of the Lewis and Clark Expedition. Because of its historical significance, (including Clark's signature carved on its surface), it is included in the National Historic Landmarks Program and therefore considered an HA. The National Park Service categorizes Pompeys Pillar as a National Historic Landmark property type of "landscape – natural feature." The managing agency has determined the physical unit to be the number of landmarks in this category.
60. Example 2: Some national monuments are included in HA categories because of their historic or natural attributes and because sometimes they contain aspects of both. An example is the Grand Staircase-Escalante National Monument,³⁴ which has primarily landscape attributes. This monument's vast and austere landscape embraces a spectacular array of scientific and historic resources. This high, rugged, and remote region, where bold plateaus and multi-hued cliffs run for distances that defy human perspective, was the last place in the continental United States to be mapped. Today, this unspoiled natural area remains a frontier, a quality that greatly enhances the monument's value for scientific study. In this example the managing agency has categorized the physical unit to be monuments therefore, this asset would be considered one unit under the monuments category.³⁵
61. Example 3: The Statue of Liberty³⁶ and Ellis Island National Monument³⁷ are identified as HA because of their historical significance. Ellis Island was incorporated as part of the Statue of Liberty National Monument on May 11, 1965. The entity has selected "National

³⁴ Grand Staircase also has a long and dignified human history; it is a place where one can see how nature shapes human endeavors in the American West, where distance and aridity have been pitted against our dreams and courage. The monument presents exemplary opportunities for geologists, paleontologists, archeologists, historians, and biologists.

³⁵ Congress granted the President authority to designate national monuments in the Antiquities Act of 1906, which specifies that the law's purpose is to protect "objects of historic or scientific interest." In addition to national monuments created through presidential action, Congress establishes national monuments by passing a law to create each individual monument with its own purpose (generally to protect natural or historic features).

³⁶ The Statue of Liberty was dedicated on October 28, 1886, and was designated a National Monument on October 15, 1924. Located on 12-acre Liberty Island in New York Harbor, the Statue of Liberty was a gift of international friendship from the people of France to the people of the United States and is one of the most universal symbols of political freedom and democracy.

³⁷ Ellis Island was incorporated as part of the Statue of Liberty National Monument on May 11, 1965. Between 1892 and 1954, approximately 12 million steerage and third class steamship passengers, who entered the United States through the port of New York, were legally and medically inspected at Ellis Island.

Monuments” as a HA reporting category and appropriately reports these HA in that category.

62. Example 4: An agency has archeological sites distributed across large tracts of agency managed lands. The lands have a very diverse topography and accessibility is difficult. These assets are evaluated as to their significance, have distinct public value, and they are recognized for research potential yielding scientific information or supporting management decision-making, interpretation, education, or economic benefits. Thus, management has categorized them as HA. These HA are actively maintained within the agency’s stewardship program. This agency’s management has made a determination that to receive “significant” or “priority” status, the HA must also meet one or more of the following agency recognition criteria:

- Official designation;
- Prior financial investment in preservation, protection, interpretation, or use; or
- An agency approved management plan.

Stewardship Land

63. Where parcels of land have more than one use, the predominant use of the land should be considered the major use. In cases where land has multiple uses, none of which is predominant, a description of the multiple uses should be presented in note disclosure. The appropriate level of categorization of SL use should be meaningful and determined by management based on the entity’s mission, types of SL use, and how it manages the assets.

Stewardship Land Examples

64. Example 1: An example of a multiple-use category includes SL for which legislation prescribes the multiple use that will be achieved or authorized on the same tract(s) of land including, but not limited to domestic livestock grazing, fish and wildlife development and utilization, mineral exploration and production, rights-of-way, outdoor recreation, and timber production.³⁸
65. Because the legislation requires “multiple-use” of all of the natural resources related to the SL, with no single use being predominant, the major category of use is “multiple.” However, a description of the multiple uses should be presented. Categorization of SL could be disclosed by geographic management unit, such as a state or region or perhaps a lower level management unit such as a field, district, or area jurisdiction. The management units

³⁸SFFAS 29 par. 34 and footnote 17 specifically exclude the natural resources related to the land.

could be reported consistent with the manner in which they are managed, that is, by a specific land use plan (or management plan), which specifies how the natural resources related to the land will be used over a long-term period (i.e., one or more decades).

66. Example 2: SL is categorized as recreational when this is the predominate use of the land. Within this category, the physical units could be reported as a region, park, district, or other field unit jurisdiction.
67. Example 3: SL can also be categorized by function. Land can support such activities as education, transportation systems, and farming and grazing. For example, the mission of an agency may be to enhance the quality of life, promote economic opportunity, and carry out responsibilities to protect and improve trust assets such as providing schools and other opportunities for learning. Physical units within this category could be reported as townships, parcels, tracts, acres, or other units.
68. Example 4: An agency manages lands (that were formally public domain lands and were withdrawn)³⁹ for the purpose of constructing statutorily-authorized federal water projects and their associated canals, laterals, and drains to (a) provide water for agricultural, municipal, and industrial uses; (b) maintain flood control; and (c) generate power. In this federal water projects category, the number of units could be the number of major projects consisting of numerous related divisions, units, features, or facilities.

Quantification

General Issues

69. SFFAS 29 requires HA/SL to be quantified in physical units, rather than in monetary terms.⁴⁰ However, SFFAS 29 does not define the term "physical units" or specify which physical units should be used to quantify the variety of HA/SL categories and subcategories held by federal entities. Accordingly, quantities may be reported in a manner consistent with data available from existing management systems.
70. Physical units could consist of: items to be counted such as monuments, museum collections, facilities housing museum collections, parcels, tracts, sites, regions, districts, locations, management units; or units of measure such as inches, linear feet, square or

³⁹ "Withdrawal" of public lands means the removal or withholding of public land, by statute or Secretarial Order, from operation of some or all of the public land laws.

⁴⁰ SFFAS 29, par. 25 and 40.

cubic area (feet or yards), acres, miles, or kilometers. There may be other metrics to use in quantifying HA/SL not listed here.

71. However, counting physical items may not be necessary, particularly for collection-type HA, such as books and records contained in libraries. It may be appropriate to define the physical unit as a collection, or a group of assets located at one facility, and then count the number of collections or facilities. For SL, it may be appropriate to define the physical unit as regions or areas (where regions and areas are management jurisdictions) and then count and disclose the number of regions, areas, or acres, depending on the relevance of the metric used and the cost/benefit of capturing the information.
72. The above discussion highlights the need for management to differentiate between (a) detailed records that may be needed for management control and safeguarding purposes, and (b) financial statement reporting purposes for note disclosures. Many entities have stewardship responsibilities and control systems that can be traced to public laws or administrative rules. As good stewards, they may track individual assets and asset categories for control purposes that do not warrant separate presentation or disclosure in their financial reports. On the other hand, agencies also need to determine if there are legal or regulatory requirements for reporting HA/SL in the financial statements. Regardless of how the entity chooses to disclose, reporting should be done consistently. Also, as noted in SFFAS 29 par. 82 of the Basis for Conclusions, management should document its reasoning for the categorization and unitization.

Heritage Asset Examples

73. The following examples represent potential approaches for quantifying heritage assets in the footnote disclosure.
74. Example 1: Wild and Scenic is a river designation that can be bestowed by Congress. In this example, the agency manages multiple Wild and Scenic rivers and quantifies them in terms of the number of rivers. This presentation is at a higher level of aggregation than is required to meet management objectives, which may include the number of river miles, types of river miles (i.e., recreational, scenic, or wilderness), river segments, and other aspects of river management needed to fulfill mandates required by public laws and regulations.

75. Example 2: Similarly, national scenic trails are congressionally designated. An entity may report the number of trails it manages even though it may not manage the entire length of certain trails.⁴¹ Additional data on these trails, such as the portion of each trail the entity is responsible for managing, exists within their management systems but does not have to be reported in the financial footnote disclosure. However, the entity may choose whether to report this supplemental data in its financial report as other supplementary information.
76. Example 3: Certain National Historic Landmarks are congressionally designated. An entity may choose to report only the number of landmarks under this category, even though these landmarks may contain multiple properties within each landmark. Another entity which also reports National Historic Landmarks may instead choose to report the properties within each landmark. Both of these reporting methods are acceptable under SFFAS 29.
77. Example 4: Archives, which include, but are not limited to, paper records and manuscripts, could be reported in cubic feet such as 238 million cubic feet or 211 collections. In terms of archived electronic documents, the disclosure could be to report such records in number of logical data such as 30 million or 830 collections.
78. Example 5: Museum items discovered on SL and managed in connection with HA include, but are not limited to, dinosaur bones, fossilized remains or traces of dinosaurs, herbarium specimens, mammals, insects, cultural objects depicting early human occupation, architecture, engineering, and American history. The museum items are maintained and managed to professional standards by federal and non-federal repositories. The entity has determined that it will report these assets based on the number of facilities (repositories) housing the museum items (collections). This categorization is suitable for the entity given the latitude allowed by SFFAS 29 regarding reporting relevant and reliable information on aggregation of units.

Stewardship Land Example

79. Reporting for each major category of SL use should include physical units by major category of use.

Example 1: An agency is organized largely by the states in which it has management responsibility for SL. Within each state there are jurisdictions that are smaller management units sometimes identified as field offices or districts. Within a field office there are smaller management units identified as area offices. This agency has selected the field office level as the “physical unit” for reporting its accountability over SL. This physical unit was selected

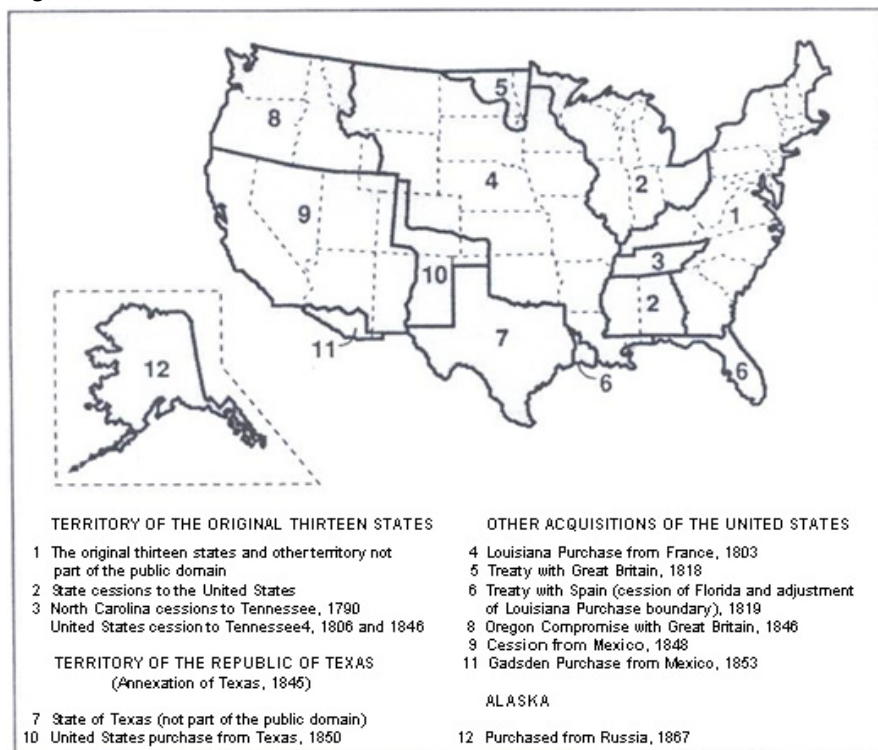

⁴¹ Many trail systems consist of segments managed by one or more federal agencies as well as by non-federal entities. For purposes of this example, each federal agency would be responsible for disclosing that which it manages.

because the agency usually develops its land use plans at this level although certain parcels of land within a field office may require a distinct plan separate from the rest of the management unit. The agency has 118 field offices and based on its assessment, it is most appropriate to report 118 physical units of SL.

Supporting Documentation

80. In the Basis for Conclusions of SFFAS 29, par. 86-88, the FASAB briefly discusses the fundamental problems associated with providing corroborating documentation to auditors on historical assets which predate the effective date of the standard, and were acquired in an environment in which the historical records were not required to be retained and therefore may not exist or be inadequate. The following section addresses some of the complexities associated with documenting America's stewardship lands and heritage assets.

Figure 1:

81. The public domain once stretched from the Appalachian Mountains to the Pacific. Of the approximate 1.8 billion acres of public land acquired by the United States, about two-thirds went to individuals, corporations, and the states. The remaining public domain was set

aside for national forests, wildlife refuges, national parks and monuments, and other public purposes.

82. The majority of the public domain that remains today is stewardship land. As identified in the above graphic, this land was acquired through various purchases and cessions prior to 1870. During these early periods (1776 to the early/mid 1900s) few envisioned the need for the kinds of records, documents, and statistics that are required today. Acquisitions and disposals of land, whether from purchase, cession, or treaty, were not documented in the same manner as land transactions in more modern times. For example, as identified in item 6 of the above graphic, the boundary of the Louisiana Purchase was not well defined which led to a dispute between Spain and the United States resulting in the boundary adjustment of 1819. Surveys of the public land east of the Mississippi River began in 1785. Two years later, survey of only 4 ranges (about 144 square miles) had been completed. Much of the stewardship land remains unsurveyed today.
83. Definitive documentation on the majority of these lands is not available; therefore management must choose alternative methods of satisfying management's assertions for these assets. For assessing land, for example, these alternatives could mirror areas defined in the "Categorization" section of this document, such as the number of areas of recreational use, geographic management areas, and federal water projects of fish hatcheries.
84. HA also have many of the same documentation problems since antiquities laws and preservation acts did not go into effect prior to artifacts having been collected and preserved. Many of these assets may reside in federal and nonfederal repositories. However, records and detailed listings from these periods generally do not exist. In more recent times, legislation has strengthened the laws and rules regarding preservation and documentation over these assets.⁴²

Methodology for Developing Supporting Documentation

85. Ideally, agencies should have a historical file evidencing ownership of HA/SL. But, when original property records or other documentation (for example, deeds, tax assessments, insurance records, etc.) for HA/SL do not exist, a methodology needs to be employed in

⁴² For example, The Antiquities Act of 1906 provides authority for the President to establish National Monuments and gives authority to the Secretaries of Agriculture and Interior to issue permits for investigation and collection of resources from federal land and for collections . . . to be made for permanent preservation in public museums; The Museum Properties Management Act of 1955 authorizes the Secretary of the Interior through the National Park Service to preserve objects found within individual national parks; and the National Historic Preservation Act of 1966 directs the Secretary of the Interior to promulgate regulations that ensure that significant prehistoric and historic artifacts and associated records are deposited in an institution with adequate long-term curatorial capabilities.

order to develop alternative documentation to support management's assertions of federal ownership. For example, maintenance or renovation contracts, historical maintenance records or a history of payment of invoices, minutes of meetings, historical data bases, surveys of land records, a history of past/historical practices (e.g., establishing defacto ownership), or other relevant sources of information may provide acceptable alternative evidence of government ownership of HA/SL.

Section III. Assessing and Reporting Condition

Statement of Federal Financial Accounting Standards 42, Deferred Maintenance and Repairs, Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32, rescinded the requirement to report condition information regarding heritage assets and stewardship land as RSI. The following guidance offers insights regarding condition assessments and factors that may influence reporting of deferred maintenance and repairs information. The guidance has not been updated to conform to the new standards and should be considered other literature until revised implementation guidance, if any is provided.

Assessing Condition

86. The condition⁴³ of HA/SL is to be reported as RSI unless it is reported elsewhere in the report containing the basic financial statements.⁴⁴ For consistency, condition should generally be reported for asset categories, rather than for individual assets.⁴⁵ However, the assessment of condition for HA/SL, which have a unique nature and specialized use, does not always lend well to traditional physical assessments such as “good,” “fair,” and “poor.”⁴⁶ Such assessments are usually applied to items of general PP&E that break, wear out, or become obsolete while in service.
87. Traditional condition assessments or evaluations typically compare the current condition of an operating asset (such as a piece of equipment) against its original condition. As such, traditional condition assessments provide some indication of an asset’s status in its useful life cycle, i.e. the asset’s ability to perform as planned for the expected period of time. However, unlike items of general PP&E whose utility is expended over time in order to

⁴³ SFFAS 29 par. 41 footnote 22 gives a detailed explanation of condition, and par. 57 discusses the reasons for reporting condition as RSI. In addition, SFFAS 6 par. 77, 78, and 81 and footnotes 58 and 62 provide some insight into condition.

⁴⁴ SFFAS 29 footnote 11 states in part: “Condition is the physical state of an asset. The condition of an asset is based on an evaluation of the physical status/state of an asset, its ability to perform as planned, and its continued usefulness.”

⁴⁵ See par. 81 and 84 of SFFAS 29 for more details.

⁴⁶ For example, the existing state of the Liberty Bell (i.e., cracked and unable to ring) does not necessarily mean that the condition of the bell is poor.

produce goods or services, HA/SL generally have an unlimited or indeterminate useful life or are expected to be preserved indefinitely.

88. Agencies may assess the condition of HA/SL as a function of their day-to-day operations and document condition through periodic assertion/assessment statements provided by their field office managers. In order to make these assessments, management should consider developing criteria or guidelines to enable agencies to assess condition.
89. Agencies also need to evaluate the cost and benefits of doing **condition assessment surveys**. Such things as cycling the assessments on a rotating basis, the frequency of assessments (i.e., every 3 or 5 years) and the criteria and methodology used for making such assessments need to be considered. Management needs to document the procedures and methodology used on a consistent basis.
90. Although it is not possible to explicitly cover every circumstance that may arise, the examples presented in this technical release are intended to provide preparers with a broad range of acceptable methods for assessing and reporting condition consistent with the purposes intended by SFFAS 29. This technical release provides the foundation for preparers to exercise judgment in formulating their course of action.

Develop Criteria for Assessing Condition

91. The appropriate criteria for assessing condition depend on factors such as the agency's mission, the nature of the assets, the purpose for which they are managed, and their intended use. The criteria that are used by an agency to assess condition should be explained in suitable detail in RSI.
92. An agency could determine the condition of some of its HA/SL through site monitoring. The agency leverages its resources through partnerships with state, local, tribal organizations, other law enforcement personnel, and other volunteers under the direction of agency scientists to monitor thousands of sites annually. The heritage and stewardship land sites are visually inspected using previously prepared maps, photos, current land uses, site forms, and other baseline data to monitor and document changes and determine trends and condition of the site as compared to the condition when the site was first discovered. At-risk sites are usually monitored more frequently than sites that have remained stable.

Reporting Condition

93. According to SFFAS 29, par. 26, 27, and 41:

Entities should report the condition of the heritage assets (and stewardship land) (which may be reported with the deferred maintenance information) as required supplementary information. Entities should include a reference to the condition and deferred maintenance information if reported elsewhere in the report containing the basic financial statements. Entities should disclose that multi-use heritage assets are recognized and presented with general PP&E in the basic financial statements and that additional information for the multi-use heritage assets is included with the heritage assets information.

Heritage Assets

94. Condition information for HA and the different categories of HA should fit the particular situation and circumstances. The emphasis should be on evaluating the efforts to preserve HA in the same state as when they were discovered. Additionally, for some categories condition information should be reported on individual HA, while condition information for other categories is more appropriately reported for a collection.
95. The primary focus for museum collections is preservation. Great attention is given to: (1) stabilizing objects in the condition in which they were received; and (2) preventing further deterioration. Documenting facility preservation procedures to "**safeguard**" assets (i.e., adequately protected, properly managed, and not materially degraded while under government care) may be more appropriate than assessing individual objects as having good, fair, or poor condition.⁴⁷
96. As previously noted, HA are generally expected to be preserved indefinitely.⁴⁸ However, this expectation needs to be tempered with the understanding that all physical things will ultimately deteriorate. For example, in the restoration of the historic flag, "Old Glory," the painstakingly careful work to remove the flag from an old linen backing could have caused some damage to the flag itself. Moreover, many of the flag's woolen threads are already cracked as a result of flapping in the wind, aging, and exposure to light. The goal of safeguarding is to preserve HA for as long as possible, and to manage their condition in accordance with their intended use and not to unduly hasten their deterioration.⁴⁹

⁴⁷ The Basis for Conclusions to SFFAS 6 highlights the importance of safeguarding HA/SL.

⁴⁸ SFFAS 29, par. 16.

⁴⁹ SFFAS 6, Basis for Conclusions, par. 125 states that the government "...must demonstrate that it is being an appropriate steward for these assets..." and must be able to answer basic questions such as "Is the government effectively managing and safeguarding its assets?" Note disclosures should answer this question. However, the assertion that HA are safeguarded is a significant statement that implies management controls are operating effectively, and entities making this assertion should have a credible basis for doing so.

Heritage Asset Examples

97. Example 1: An Indian cliff dwelling may be discovered with only three remaining walls. The fact that the wooden roof has long since rotted away and one wall has fallen due to climatic conditions over many years does not mean that the remaining structure should be judged to be in poor condition. The original function of the cliff dwelling as living quarters is no longer relevant, but it must now be viewed in terms of its archeological value. Thus such a structure may be viewed to be in “acceptable” or “satisfactory” condition because either its particular state indicates that it will be preserved indefinitely or any necessary intervention has been accomplished to avoid further deterioration. Should there be a real possibility that another wall could collapse due to erosion from climatic conditions; the condition may be evaluated as “needs intervention” or “threatened.”
98. Example 2: The condition of museum collections may be evaluated in terms of a specific facility’s methodology used to preserve the assets, (i.e., the facility curating the museum collection), rather than by individual assets or collections.⁵⁰ For example, pre-historic pottery that is retrieved from an archeological dig in broken pieces cannot be classified as being in “poor” condition. The original function of the pottery as a container to store water is no longer relevant, but rather it must be viewed in terms of its value to understand a pre-historic culture. However, the item could deteriorate beyond the condition in which it was found through improper care.
99. Museum collections unlike other HA are curated in a special facility. The criteria for reporting museum collection condition information is based directly on the facility housing the museum collection itself, because the facility determines whether the collection, as a whole, is in stable condition. Numerous factors such as temperature, relative humidity, and dust and pest control are used to evaluate facilities to determine their ability to minimize any deterioration that could happen to its contents.⁵¹ Consequently, a museum collection housed in a facility meeting museum conservation professional standards may be properly viewed as being in “acceptable” condition. A museum collection housed in a sub-standard facility can be viewed as being in a state “requiring intervention.”

Rehabilitation of HA

100. Rehabilitation of a HA, to make possible a compatible use for that asset through repair, alterations, and additions while preserving those portions or features that convey its historic,

⁵⁰ SFFAS 29, par. 16 and par. 81.

⁵¹ This methodology is consistent with standard professional museum practice as recommended by museum conservators and museum associations.

cultural, or architectural values, may turn it into a multi-use heritage asset. Condition information would not be based on comparing the asset to its original, new state, nor to its state at the time it was first recorded or documented by archaeologists, but would rather be based on comparing the asset to its condition at the time it was originally rehabilitated. In this example, the rehabilitation work and resulting use in government operations moves the asset from the HA category to a multi-use HA category and as a result, it is reported as general PP&E. As such, the cost of the rehabilitation work would be capitalized and the property would be reported on the balance sheet with an appropriate value.

101. Some former HA have been recreated at the same site, and according to the same design using contemporary materials, as the original assets. Some of these recreations are not HA while some others have been determined to complement or add to the significance of the site and any condition information on the recreation may fall within the purview of general PP&E or HA depending upon its classification.

Stewardship Land

102. Based on guidelines and criteria established by agencies for assessing condition, a key to the evaluation of land is whether it is capable of fulfilling its primary use. For example, land condition could be considered acceptable when it is capable of supporting one or more of its authorized uses. On the other hand, land condition may be considered unacceptable when intervention is needed due to environmental contamination that will cause humans or wildlife to be injured by virtue of their proximity to the contaminated land. Under such circumstances, readers would be referred to the environmental cleanup liability note in its financial statements for information as applicable.
103. The following discussion describes some of the relevant factors that exist as to why it is difficult to apply the concept of "condition"⁵² to the definition of land provided in the standard.⁵³
104. Land exists as a result of thousands, millions, or billions of years of events such as volcanoes, earthquakes, fire, floods, erosion, collisions with cosmic debris, and so on. These are all natural events that are both creative and destructive. They formed the land and may also cause its destruction. Agencies are not able to easily assess the durability, obsolescence, or quality of design and/or construction of land like agencies do for constructed assets.

⁵² SFFAS 29 par. 41, footnote 22.

⁵³ A solid part of the surface of the earth exclusive of depletable and renewable natural resources.

105. Land is also not subject to factors, such as accidents, catastrophes, disasters, and obsolescence within the same context as constructed assets because the physical state of land endlessly changes based on the forces of nature. Some natural forces have immediate effects on the asset, others, take weeks, months, or years, and still others, such as climatic changes or major geological events can produce a very long term effect. The concepts of “performing as planned,” “continued usefulness” and “performance capability” are difficult to apply to land. Land does not perform, it exists, recycles, and changes form depending on forces of nature.

106. The following provide examples of why the effects of natural occurrences of nature on the land are unpredictable.

- A lightning strike sparking a wildland fire would not have impact on the land itself but could devastate a plant community in a matter of minutes. However, that same fire could produce an invigorating effect on the plant community over the long term.
- Yellowstone National Park was so designated, in part, because of its geologic activity. The underlying volcanism that makes the park unique by producing hot springs, geysers, etc., will likely cause an immense change in its landscape at some point in the future.
- Under normal or average conditions, some soil erosion occurs due to flooding because of wind and water action on all land. In an event such as a flash flood, erosion occurs at an accelerated rate, even leaving the formation of gullies with unstable banks as vegetation cover is swept away in a flood. Heavy rains with a movement of water across a naturally barren landscape can lead to short-term undesirable effects. However, in the long term, gullies are stabilized by the vegetation that grows back and become the natural course for water to take in future years when rainfall occurs. These natural processes (erosion and stabilization) occur with or without human intervention and may not be "prevented" by any "condition" of the land.
- Drought is inevitable and has tremendous ecological and socioeconomic consequences. Both short-term and long-term droughts significantly impact natural resources and human lives. During short droughts, the lack of moisture typically causes reduced plant and animal productivity. Persistent droughts, characterized as several consecutive years with below average precipitation, are more infrequent but may be widespread and can result in significant economic and ecological stress and ecosystem alterations.
- When short or long-term droughts subside and precipitation returns to normal or above normal levels, the vegetative resource can respond dramatically and the land can quickly return to its natural state. Various desirable (and sometimes undesirable seeds) that have been lying dormant in the soil for years will germinate and vegetative growth can be extensive. Such was the case in

Arizona in 2005. After a 7-plus year drought, the rains came at the right time and native vegetation flourished; so much that during 2006 there were many fire hazards.

107. Agencies do not typically perform maintenance on land. Unlike constructed assets, land does not meet the definition/description of maintenance--the act of keeping fixed assets in acceptable condition. Maintenance includes preventive maintenance, normal repairs, replacement of parts and structural components, and other activities needed to preserve an asset so that it continues to provide acceptable services and achieves its expected life. The type of activity (maintenance) as described herein is not scheduled, performed, or deferred on land.
108. While condition is not easily applied to land, it can be readily applied to constructed changes to the land that require recurring maintenance, such as a constructed marsh specifically built to provide habitat. Another example is land that has been contaminated by the release of hazardous substances or land that has been used to store, treat, or dispose of hazardous wastes. This information should already be disclosed in the notes to the financial statements as environmental liabilities and could be referenced in the stewardship note.

Stewardship Land Examples

109. Example 1: An agency has a mission of conserving, protecting, and enhancing fish and wildlife and their habitats. Accordingly, the ability of the agency's land to provide integrated habitat and life support for permanent resident populations and for migratory populations might provide a criterion to evaluate its condition. For example, does the land support sufficient vegetation to provide habitat for native species or are coastal or other marshes sufficient to support migratory bird populations? The agency would evaluate its land against these criteria and the results of this evaluation may be that the condition of the land is sufficient to support the mission of the agency (i.e., the land provides integrated habitat and life support for permanent resident populations and for migratory populations) and such condition would be disclosed. If the agency had constructed habitat by changing the land and if that constructed habitat required recurring maintenance that either was or was not performed, then the condition of the constructed habitat could be disclosed.
110. Example 2: An agency manages a small portion of the land under federal ownership for which it is required to clean up contamination resulting from past waste disposal practices, leaks, spills, and other past activity, which have created a public health or environmental risk. The contaminated sites covering about 10% of the agency's SL have resulted from nuclear-powered aircraft carriers, submarines, and other nuclear ships or from the stockpile of lethal or incapacitating chemical warfare agents and munitions. These contaminated sites that make the surface of the earth uninhabitable by people would be listed in the

environmental cleanup liability notes to the agency's financial statements. The SL condition disclosure could identify these areas and report their condition as unacceptable.

111. The condition of the agency's non-contaminated lands might be disclosed as sufficient to support the mission of the agency based on the agency evaluating this land in relation to its mission. If insufficient budgetary resources or other intervening factors prevented the mitigation of the environmental contamination, the agency would disclose this information (as applicable) in its environmental cleanup liability note to the financial statements and could reference that note in its stewardship note disclosure. The agency would also report the estimated cost of environmental cleanup as deferred maintenance in accordance with environmental liability standards.⁵⁴

⁵⁴ Standards for determining and reporting deferred maintenance are contained in SFFAS 6, which requires disclosures related to the condition and the estimated cost to remedy deferred maintenance of PP&E.

Section IV: Government-Wide Reporting

SFFAS 29 requires a balance sheet note reference and a note disclosure of HA/SL information in the U.S. Government-wide financial statement. The government-wide balance sheet should reference a note that discloses information about stewardship land and heritage assets, but no asset dollar amount should be shown. The note disclosure should include a brief statement explaining how HA/SL relates to the mission of the federal government; a description of its predominant uses; and a general reference to agency reports for additional information about HA/SL. The Government-wide financial statement should also disclose that multi-use heritage assets are recognized and presented with general PP&E in the basic financial statements and that additional information for the multi-use heritage assets is included with the heritage assets information.

Appendix A: Basis for Conclusions

- A1. The HA/SL taskforce that developed this technical release was comprised of over a dozen different entities, varying in size, with experts in the field who had significant responsibility for heritage assets and/or stewardship land. The taskforce approached this implementation guide project by addressing the specific areas in SFFAS 29 that focus on identification, categorization, quantification and condition of these assets. The taskforce believed that the most meaningful information to guide preparers was through examples of how entities currently or in the past have identified, categorized and quantified heritage assets and stewardship land, as well as how they assessed their condition.
- A2. This technical release provides a variety of examples that are representative of the many types of stewardship assets in existence. In addition, this technical release provides numerous ways to disclose heritage assets and stewardship land since SFFAS 29 allows entities considerable latitude and flexibility in achieving the objective of relevant and reliable information for users.
- A3. Typically standards or technical releases do not address materiality. The taskforce believes that since no dollar amounts are assigned to these assets and that traditional materiality judgments about financial information are primarily quantitative and focused on dollar amounts that materiality needed to be addressed. Thus, the taskforce provided an approach for considering materiality to give preparers implementation guidance in applying materiality to heritage assets and/or stewardship land.
- A4. As a result of the taskforce deliberations, it reached a consensus on the material presented in this technical release.
- A5. The exposure draft, *Implementation Guide for Statement of Federal Financial Accounting Standards 29: Heritage Assets and Stewardship Land*, was issued June 11, 2007 with comments requested by August 13, 2007. Four comment letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others	0	1
Auditors	0	0
Preparers and financial managers	3	0

A6. The Committee considered responses to the exposure draft at its September 27, 2007 AAPC meeting. The majority of the respondents agreed with the proposed guidance. Specific concerns were raised by several respondents related to developing supporting documentation when property records do not exist. The Committee believes there are number of ways to develop acceptable alternative documentation to support management's assertions of federal ownership of heritage assets and stewardship land. Par. 85 is revised to address these concerns. In addition, clarifying language was added to par. 45-46 to help preparers in determining whether land meets the criteria for general PP&E land, stewardship land, and land rights as defined in SFFAS 29. Also, the technical release has been revised to highlight that the examples used in assessing and reporting condition provide a broad range of acceptable methods consistent with the purposes and intent of SFFAS 29. Finally, clarifying edits, revisions, and helpful examples were added to address commentators concerns.

Appendix B: Excerpts from SFFAS 29 Heritage Assets and Stewardship Land

See SFFAS 29, par. 1-105.

Appendix C: Illustrative Disclosures

PLEASE NOTE: Appendix C illustrates Heritage Assets and Stewardship Land disclosures at the component entity level. These illustrative disclosures may only include selected portions of a full disclosure as required by SFFAS 29. These illustrations are considered non-authoritative guidance and are not required to be followed.

Footnote Disclosure

Heritage Assets:

Example 1: (Par. 25 a. and b. of SFFAS 29)

The Library of Congress classifies its collections as HA: assets with historical, cultural, educational, artistic or natural significance. Its mission is to maintain a universal collection and provide access for current and future generations. The Library's collection development policies are designed to fulfill its responsibilities to serve (1) the Congress and United States government as a whole, (2) the scholarly and library community, and (3) the general public. Written collection policy statements ensure that the Library makes every effort to possess all books and library materials necessary to the Congress and various offices of the United States government to perform their duties; a comprehensive record, in all formats, documenting the life and achievement of the American people; and a universal collection of human knowledge embodying primarily in print form the records of other societies, past and present.⁵⁵

Copyright deposits are a major source of the Library's collections of Americana. The Library also acquires materials by purchase, transfer from other federal agencies, gift, domestic and international exchange, or by provisions of state and federal law. Many of these materials are foreign publications. Various preservation methods are used to maintain the collections, and disposals occur only for the exchange and gift of unwanted or duplicate copies.

Stewardship Land:

Example 2: (Par. 40 a. - d. of SFFAS 29)

⁵⁵ Clinical medicine and technical agriculture are the responsibilities of the National Library of Medicine and National Agricultural Library, respectively.

Agency X meets its mission by managing the lands and their various resources so that they are utilized in the combination that will best meet the needs as well as the enjoyment of both present and future generations of the American people. These resources include both natural and cultural HA of scenic, scientific, and historical value. The management of the lands and their associated HA are the essence of the Agency's mission.

The agency has been entrusted with stewardship responsibility for the management of natural resources on and beneath America's SL as legislated through P.L. 94-579. Land use plans, developed with public involvement, are the mechanism by which use and levels of use are determined. The agency is required to develop, maintain, and, when appropriate, revise land use plans that divide the land into tracts or areas.

The agency's stewardship mission is to be environmentally responsible for commercial and non-commercial uses of the natural resources (depletable and renewable) associated with SL. P.L. 94-579 prescribes the uses that will be achieved or authorized on the land. The agency has 4 major categories of use: multiple; recreation; cultural, schools, and housing; and reclamation/irrigation. (The agency will provide a description of each major category of use in its note disclosure.)

1. Multiple use:
 - a. Grazing:
 - b. Wildlife:
 - c. Minerals:
 - d. Rights-of-Way:
 - e. Recreation:
 - f. Timber:
2. Recreation:
3. Cultural, Schools, and Housing:
4. Reclamation/Irrigation:

The agency reports its physical units of SL by management unit. The "management unit" jurisdictions represent the management level at which specific management plans are developed and implemented to manage the natural resources related to the land for both present and the future periods.

Agency A Stewardship Lands as of September 30, 200X

Category of Use	200W Balance	200X Additions Note 1	200X Withdrawals Note 1	200X Net Change	200X Balance	Condition Note 2
Multiple Use	118	2	3	-1	117	Acceptable
Recreation	388				388	Acceptable
Cultural/Schools/ Housing	79	1		1	80	Acceptable
Reclamation/ Irrigation	221		1	-1	220	Acceptable
Total	806	3	4	-1	805	

Note 1: Describe the major methods of acquisition and withdrawal of SL during the reporting period.

Note 2: Describe what constitutes acceptable and unacceptable condition.

Example 3: American Battle Monuments Commission

Significant Accounting Policies (Par. 25 a.- d. of SFFAS 29)

Heritage Assets (could be combined with Property and Equipment note)

The Commission's stewardship policies are designed to be responsive to the overall mission of the Commission to design, construct, and maintain cemeteries and memorials. Heritage Assets are assets possessing significant cultural, architectural, or aesthetic characteristics. The Commission considers its cemeteries, federal memorials, monuments, and markers acquired through purchase or donation to be non-collection HA. HA are acquired through purchase or donation, are accounted for in the Commission's property records, and are not presented in the balance sheet. Withdrawals of HA are recorded upon formal agreement with recipients. Additional disclosure on individual heritage asset cemeteries and memorials are found in the Schedules of HA presented as unaudited supplementary information. Cemetery land is owned by the foreign countries in which cemeteries are located and is provided to the United States in perpetuity.

Heritage Assets

Heritage assets are significant to the mission of the Commission. The Commission presents its HA in three categories; cemeteries, federal memorials, and nonfederal memorials. Changes in HA for fiscal year 20XX were as follows:

	Cemeteries	Federal Memorials	Non-Federal Memorials
Beginning of Year 10-1-XX	24	25	4
Number Acquired, Fiscal Year XX	0	0	2
Number Withdrawn, Fiscal Year XX	0	0	0
End of Year 9-30-XX	24	25	6

The Commission assumed responsibilities for private memorials for the 147th Engineer Battalion and the 507th Parachute Infantry Regiment during fiscal year 20X2. Through September 30, 20X2, Commission cemeteries contain over 131,000 interments. Over 94,000 Honored War Dead, whose remains were not recovered, are memorialized in the cemeteries and federal memorials that encompass over 1,600 acres. This land is provided to the Commission through host agreements with foreign countries for permanent use as cemeteries and memorials.

Required Supplemental Information (RSI) Disclosure (Par. 26 of SFFAS 29)

The following illustrates sample disclosure of condition information for the American Battle Monuments Commission under SFFAS 29. Disclosure of condition information is also illustrated for the Library of Congress. However, agencies may develop and use other disclosures to fit their circumstances as deemed necessary.

Example 4: American Battle Monuments Commission

Condition assessment surveys, using a five-point scale of one (excellent) to five (very poor), identify needed future maintenance and repair projects at cemeteries and memorials in order to maintain real property and heritage assets in an acceptable condition of three (fair) or better. These surveys are reviewed and updated at least annually by the Commission's engineering staff. In addition, engineering projects identified improvements in cemetery irrigation, drainage,

roads, parking areas, and buildings. As of September 30, 20XX, the Commission has identified a total of 333 maintenance, repair, and improvement projects, with an estimated cost of \$15.8 million, to be performed in future years, subject to available funding.

Example 5: Library of Congress

The Library of Congress has the world's largest library collection, including research materials in over 450 languages and various media. Providing access to this collection inevitably puts it at risk and could impair the Library's ability to serve the Congress and other users in the future. However, the collections exist to be used, and management accepts the responsibility of mitigating risk to the collections at the same time it fulfills its mission of service to the Congress and the nation. Therefore, the Library has chosen to balance the usage of the collection with the long-term preservation requirements of the collections.

As of September 30, 20XX, the collections were determined to be in a useable condition for fulfilling its service mission. During fiscal 20XX, only a very small percentage of materials were removed from the collection because of damage caused by use and/or deterioration of the medium. The ultimate useful life of a library item varies by its medium (e.g., book, film, tape, manuscript, disk), and the manner in which it is used and stored.

The Library employs a variety of methods to prolong the useful life of its deteriorating materials, including:

- The establishment of adequate environmental storage conditions
- The usage of binding or other methods to house items
- The mass deacidification of print materials
- The use of surrogates in serving the collections to the public
- The reformatting of collections to other media

The Library has inadequate temperature and humidity control in some collections storage areas; inadequate space for appropriate storage of collections materials; insufficient space for reformatting the acetate negative collection; and insufficient funds for reformatting. These conditions cannot be fully addressed with current funds and physical plant. The move of collections into the storage facility at Fort Meade, Maryland, is serving to remedy many of these difficulties for books and paper-based materials, and the acquisition of the National Audio-Visual Conservation Center in Culpepper, Virginia, is a major step in the preservation of film and other media.

Technical Release 10: Implementation Guidance on Asbestos Cleanup Costs Associated with Facilities and Installed Equipment

Status

Issued	June 2, 2010
Effective Date	Upon issuance
Affects	None.
Affected by	Technical Release 21 Technical Release 23

Summary

This technical release provides implementation guidance regarding the consistent application of TB-2006-1 as it relates to asbestos cleanup costs associated with facilities and installed equipment. Many federal agencies continue to struggle with interpreting and implementing a cost effective implementation methodology and it is apparent that guidance is needed to ensure consistent reporting of asbestos cleanup liabilities. Accordingly, this guidance has been updated to help ensure agencies recognize cleanup cost associated with asbestos in accordance with applicable GAAP, including but not limited to SFFAS 5, 6, 40, 42 and 44; Interpretation 9; Technical Bulletin 2006-1, 2017-2; and applicable TRs.

This guidance provides additional clarification by providing a framework for identifying assets containing asbestos, assessing the asset to collect information and/or develop key assumptions in applying acceptable methodologies to estimate asbestos cleanup costs for federal facilities and installed equipment.

Table of Contents

Summary	1
Scope	4
Effective Date	4
Technical Guidance	3
Appendix A: Basis for Conclusions	11
Appendix B: Illustrations -- Examples of Practice	12

1-8 Paragraphs 1 through 8 were rescinded by Technical Release 21.

Technical Guidance

Scope

- 8A. Readers of this Technical Release (TR) should first refer to the hierarchy of accounting standards in Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This TR supplements the relevant accounting standards but is not a substitute for and does not take precedence over the standards.
- 8B. This guidance is limited to federal real property^{5A} that contains any form of asbestos. It provides additional clarification of federal GAAP for identification and recognition of asbestos-related cleanup costs and a methodology for identifying and recognizing asbestos liabilities associated with federal properties.

Methodology for Identifying and Estimating Cleanup Costs Associated with Asbestos

9. The following methodology is for identifying and estimating cleanup costs associated with asbestos. The methodology, described below and illustrated in Diagram 1, was developed on the premise that federal entities must recognize a liability when a future outflow or other sacrifice of resources as a result of past transactions or events is "probable" and "reasonably estimable." How this approach will be executed is at the discretion of the individual federal agency.

¹⁻⁵ Footnotes were rescinded by Technical Release 21.

^{5A} For the purpose of this document, real property is defined as federal facilities and installed equipment within general PP&E, heritage, and stewardship categories. It includes 1) leasehold improvements, 2) real property owned by the reporting entity in the hands of or leased to others (for example, state and local governments, colleges and universities, or federal contractors), and 3) real property acquired through contracts or agreements that transfer ownership (see SFFAS 6, par. 18). Installed equipment "fixture" is defined in GAO-08-978SP, Volume III, Third Edition of the Principles of Appropriation Law (13-199) as those equipment items that are (1) permanently attached to the realty, or (2) if not permanently attached, (a) it is necessary and indispensable to the completion and operation of the building, or (b) the structure was designed and built for the purpose of housing the equipment.

-
10. The following steps may be taken to identify real property^{5B} that may contain asbestos.
- a. Review inventory listing of all real property.
 - b. Identify and eliminate all real property or group of real properties⁶ on the list that are not expected to contain asbestos. Document the basis for elimination such as:
 - i. Asbestos survey results, or other records indicating the real property(ies) or group of real properties is not likely to contain asbestos (e.g., the manufacture date for items not likely to contain asbestos could be considered);
 - ii. Records indicating all asbestos was previously removed from the real property(ies); or
 - iii. Asset type is not likely to have asbestos or not required to be surveyed for asbestos (e.g., railroad tracks, power lines, airfield pavements, roads, sidewalks, and land).⁷
 - c. Property remaining on the list should be expected to contain asbestos.
11. Once steps have been taken to identify real properties that are expected to contain asbestos, each real property or group of real properties should be assessed to collect the information in paragraphs a and b below. For purposes of developing asbestos cleanup cost estimates, reasonable assumptions⁸ can be made in some cases to make up for a lack of actual data.

^{5B}Interpretation 9, *Cleanup Cost Liabilities Involving Multiple Component Reporting Entities: An Interpretation of SFFAS 5 & SFFAS 6*, provides clarification and guidance regarding cleanup cost liabilities for component reporting entities when the component reporting entity responsible for reporting on an asset during its useful life is different from the component reporting entity that will eventually be responsible for settling the liability for the cleanup cost of that asset. Technical Bulletin 2017-2, *Assigning Assets to Component Reporting Entities*, provides that assets may be assigned by a reporting entity to its component reporting entities on a rational and consistent basis.

⁶Real property may be sorted into groups by category, type, and/or locations. Examples of categories might include buildings, and other structures. Examples of types might include railroad tracks, power lines, and sidewalks. Locations may be facilities or sites recently built and known to be asbestos free. A combination of categories, types, and/or locations may also be used.

⁷In accordance with TB 2006-1, paragraph 6, this guidance regarding asbestos-related cleanup costs does not include naturally occurring asbestos (NOA) that can be found in soil, rocks and mines. NOA is contained in land, and land is considered to have an indefinite useful life. Therefore, NOA would appropriately be accounted for under the requirements of SFFAS 5.

-
- a. The scope of asbestos removal required at real property(ies) renovation, disposal or demolition by determining the:
 - i. Most likely method of real property renovation or demolition (e.g., use of heavy equipment, implosion/explosion, or manual methods); and
 - ii. Federal, state and local regulatory requirements governing asbestos management to identify added costs to standard demolition (e.g., asbestos surveys, sampling, removal, and non-routine materials management). Regulatory requirements must be considered to identify additional cost considerations that may differ by location such as extent of asbestos surveys, sampling, removal, and non-routine materials management.
 - b. The amount, type, location, and expected condition of asbestos and asbestos containing materials in the real property or group of properties by referring to available records, to include records of comparable assets in the same asset class, reasonable surveys of the real property(ies) and/or real property construction information.
 - c. If the information above is either not available or not sufficient to support assumptions in lieu of actual data, yet the existence of asbestos has been identified in paragraph 10 above, then the removal of asbestos may be considered probable but not reasonably estimable at that time. The existence of asbestos and a statement that such an estimate cannot be made should be disclosed in the notes to the financial statements.⁹ The agency should estimate and recognize any other identifiable costs (e.g., asbestos survey).
12. If sufficient information is available to develop a cleanup cost estimate or support key assumptions needed for the cost estimate, then one of the following estimating methodologies can be used for each real property or group of real properties to estimate cost of removal, containment or disposal.
- a. A property-specific cost estimate based on survey data (most accurate, if available); or
 - b. An extrapolation of historical cost or cost estimates for asbestos cleanup of similar real property(ies); or

⁸Assumptions include renovation or demolition method, the quantity and quality of asbestos to be removed (paragraphs 11. a and b) and other information that affects cost (e.g., asbestos survey, sampling, removal, and non-routine materials management). As additional information becomes available, the federal entity should reevaluate its key assumptions and make necessary adjustments to the cost estimate and liability.

⁹TB 2006-1, par. 49.

-
- c. A cost model¹⁰ used for an individual real property or group of similar real properties and information from industry-specific cost estimation publications or standardized cost factors developed for each state; or
 - d. Other reasonable methodologies.
13. Once the estimated asbestos cleanup cost associated with the removal, containment or disposal of the real property has been determined, that cost should be recognized and reported in accordance with relevant GAAP.¹¹
14. If the asbestos cleanup cost cannot be estimated using any of the methodologies in paragraph 12, the agency should estimate and recognize any other identifiable costs (e.g., asbestos survey) as outlined in TR 2 (*Section 2: Determining "Reasonably Estimable" Environmental Liabilities – (2.) Experience with Similar Site and /or Conditions*).
15. In accordance with SFFAS 6, paragraph 96, "Estimates shall be revised periodically to account for material changes due to inflation or deflation and changes in regulations, plans and/or technology. New cost estimates should be provided if there is evidence that material changes have occurred; otherwise estimates may be revised through indexing."¹² As additional information becomes available, key assumptions should be re-evaluated, cost estimate revised, and necessary adjustments made to the liability recognition.

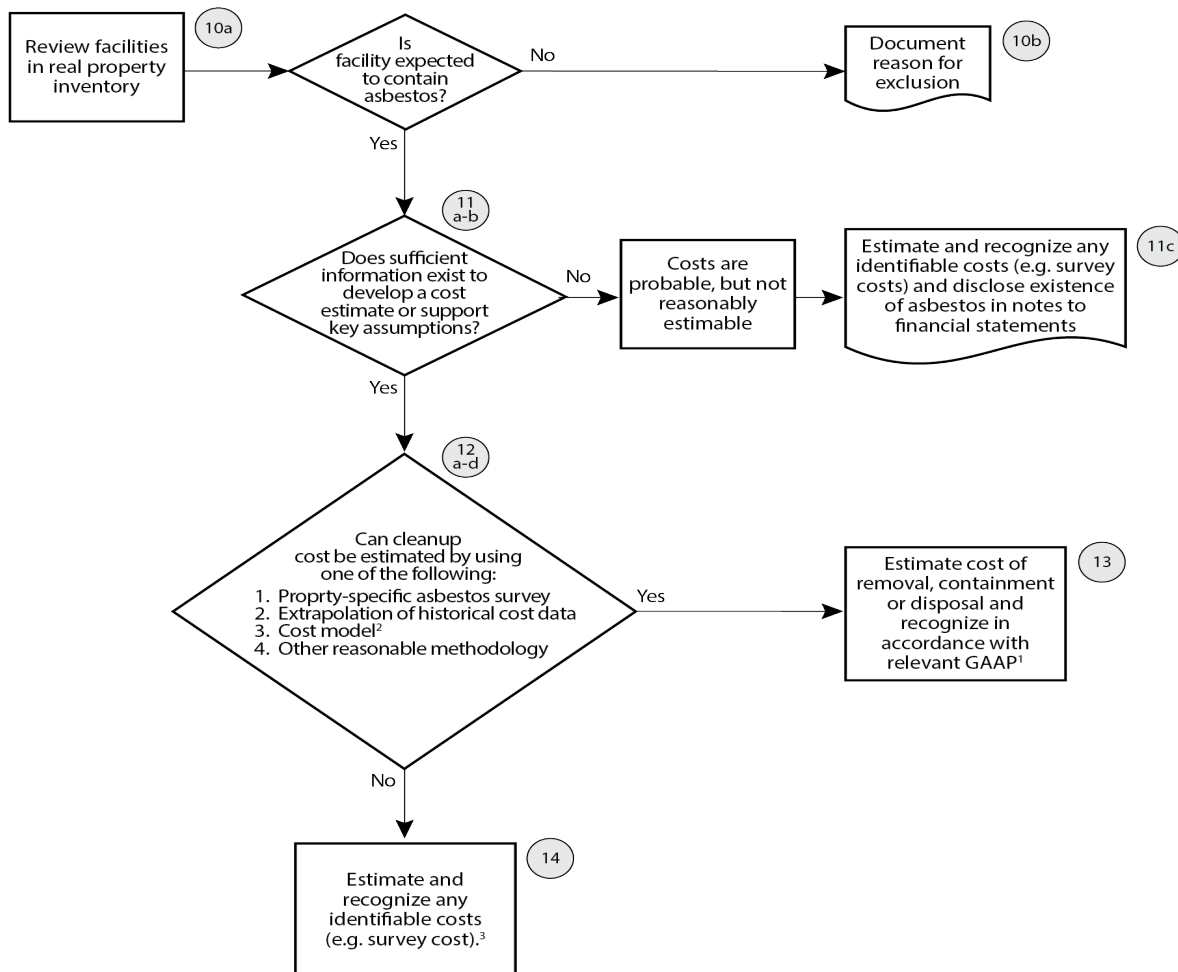

¹⁰ A cost model is a framework upon which an estimating methodology is developed. The model may use mathematical equations to convert resource data into cost data and require users to enter a minimal amount of information to generate cleanup cost estimates.

¹¹ Relevant GAAP includes but is not limited to SFFAS 5, 6, 40, and 42; Interpretation 9; TB 2006-1, TB 2017-2; and related TRs.

¹² TB 2006-1, paragraph 34: As reestimates are made, the cumulative effect of changes in total estimated asbestos-related cleanup costs related to current and past operations shall be recognized as expense and the liability adjusted in the period of the change in estimate (SFFAS 6 par. 99). In certain scenarios, such as when cleanup costs have been fully expensed, the reestimate may result in a credit to expense for that year.

Diagram 1: General Approach to Determining, Estimating and Recognizing Asbestos Cleanup Costs

(Circles correlate to Sections of document)

¹ Relevant GAAP includes but is not limited to SFFAS 5, 6, 40, and 42; Interpretation 9; Technical Bulletin 2006-1, 2017-2; and related TRs.

² A cost model is a framework upon which an estimating methodology is developed. The model may use mathematical equations to convert resource data into cost data and require users to enter a minimal amount of information to generate cleanup cost estimates.

³ In estimating and recognizing identifiable costs, see SFFAS 44, *Accounting for Impairment of General Property, Plant, and Equipment Remaining in Use*, to determine if indicators of potential impairment exist.

-
16. The guidance in SFFAS 40, *Deferred Maintenance and Repairs: Definitional Changes*, SFFAS 42, *Deferred Maintenance and Repairs: Amending Statements of Federal Financial Accounting Standards* 6, 14, 29, and 32, and SFFAS 44, *Accounting for Impairment of General Property, Plant, and Equipment Remaining in Use*, may also be relevant when considering the impact of asbestos cleanup on financial reporting.
17. The appendices (that include non-authoritative illustrations and examples) of TR 10 are not updated for amendments.^{12A} Therefore, readers are cautioned to refer to the paragraphs above for guidance that could impact the accompanying non-authoritative illustrations and examples.

Effective Date

18. This TR is effective upon issuance.

The provisions of this Technical Release need not be applied to immaterial items.

^{12A}The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent pronouncements that amend a pronouncement. For example, within the text of a Technical Release, the guidance sections are updated for changes. However, appendices are not updated to reflect subsequent changes. The reader can review the basis for conclusions of the amending pronouncements for the rationale for each amendment.

Appendix A: Basis for Conclusions

Background

- A1. In January 2008, the Accounting and Audit Policy Committee (AAPC), established the General Property, Plant, & Equipment (G-PP&E) Task Force to assist in developing implementation guidance for federal G-PP&E as it relates to SFFAS 6, *Accounting for PP&E*, SFFAS 23, *Eliminating the Category National Defense Property Plant, & Equipment*, and other related G-PP&E Guidance developed by the FASAB. The task force includes federal agency representatives who are experiencing G-PP&E implementation issues and those who have G-PP&E implementation best practices to share with the federal community.
- A2. The AAPC G-PP&E task force was divided into four subgroups that will each address a set of related issues. Each subgroup meets separately on a regular basis to discuss its set of issues and report back to the full task force on its progress towards the development of implementation guidance. The four subgroups are:
- G-PP&E Acquisition
 - G-PP&E Use
 - G-PP&E Disposal
 - G-PP&E Records Retention
- A3. This guidance was developed by the Disposal subgroup. The subgroup included members from the following federal agencies:
- Department of Defense
 - Department of Energy
 - Department of the Interior
 - Government Accountability Office
 - General Services Administration
 - National Aeronautics and Space Administration

Recognition versus Disclosure of Asbestos Cleanup Costs

- A4. An asbestos cost estimate is developed in accordance with the methodology outlined in TR 2 once the existence of the asbestos is determined. If the asbestos is probable, the entity must determine whether the costs can be reasonably estimated. Asbestos cost estimates

rely on information such as the amount, type, and condition of asbestos in the property, the disturbance activity, and the federal, state and local asbestos regulations. This information is not always available due to: a) absence of environmental or legal driver to track the existence of asbestos; b) asbestos embedded in materials not visible through observation; and c) changes in regulatory restrictions on the use of asbestos in materials. For purposes of developing asbestos cleanup cost estimates, assumptions can be made in some cases to make up for a lack of actual data. When reasonable assumptions and associated estimates (i.e. supported by industry best practices) cannot be made, the presence of asbestos and the inability to reasonably estimate an amount of the total cleanup costs should be disclosed in the agency's notes to the financial statements.

Asbestos Cleanup Cost Estimation Approach

- A5. Cost estimates for future asbestos cleanup are dependent on information that is often not discovered until closer to initiation of a renovation or demolition project. As a result, cost estimates may be based on key assumptions that become more accurate as an asbestos cleanup project is planned. Thus, the methodology presented offers several options for developing cost estimates depending on the availability of asbestos information (i.e., cost model for individual or grouped properties, extrapolation of historical costs, property-specific cost estimate based on survey data). The methodology incorporates refinement of the cost estimate as better and relevant information becomes available over the life of the asset. Once a renovation or disposal project is planned and detailed asbestos surveys are conducted as dictated by environmental regulation, environmental liabilities should more accurately reflect future asbestos cleanup costs.

Reasonable Cost Estimate

- A6. Management is responsible for making the accounting estimates included in the financial statements. Estimates are based on subjective as well as objective factors and, as a result, judgment is required to estimate an amount at the date of the financial statements. Management's judgment is normally based on its knowledge and experience about past and current events and its assumptions about conditions it expects to exist and courses of action it expects to take. An entity's internal control may reduce the likelihood of material misstatements of accounting estimates. The entity should consider the following factors when developing a reasonable cost estimate:
1. Accumulation of relevant, sufficient, and reliable data on which to base an accounting estimate.
 2. Preparation of the accounting estimate by qualified personnel.

3. Adequate review and approval of the accounting estimates by appropriate levels of authority, including:
 - Review of sources of relevant factors
 - Review of development of assumptions
 - Review of reasonableness of assumptions and resulting estimates. Evaluate whether the assumptions are consistent with each other, the supporting data, relevant historical data, and industry data
 - Consideration of the need to use the work of specialists
 - Consideration of changes in previously established methods to arrive at accounting estimates
 - Consideration of changes in the business or industry that may cause other factors to become significant to the assumptions
4. Comparison of prior accounting estimates with subsequent results to assess the reliability of the process used to develop estimates.
5. Consideration by management of whether the resulting accounting estimate is consistent with the operational plans of the entity.

A7. The AAPC released the exposure draft (ED), *Implementation Guidance on Asbestos Cleanup Costs Associated with Facilities and Installed Equipment* on September 3, 2009. Upon release of the ED, notices and/or press releases were provided to: The Federal Register, the *FASAB News*, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, and committees of professional associations commenting on past exposure drafts.

A8. Nine letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		2
Auditors		
Preparers and financial managers	7	

A9. AAPC received a comment on the exposure draft requesting clarification on whether removal of asbestos could be classified as part of normal operations, when performed

during maintenance, repairs or alterations that occur over the life of the building, and therefore the cost of removal could be accounted for as an operating expense and not a liability. Although the building maintenance and repair occurs periodically over the life of an asset, any asbestos contained in a specific asset may not be periodically removed and/or contained at every scheduled repair and/or maintenance activity. Therefore, the removal of asbestos should not be accounted for as a routine operating expense. Further, in accordance with TB 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*, paragraph 30, "it is possible for certain types of nonfriable asbestos-containing material to remain nonfriable indefinitely; therefore, the estimate does not need to include nonfriable asbestos-containing roofing, flooring, siding, and other materials that when repaired, renovated, removed, contained, disposed of, or otherwise disturbed do not become friable and do not require additional costs above and beyond normal repair, renovation, removal, containment, or disposal costs to prevent them from becoming friable. However, if there are additional costs incurred to prevent the nonfriable asbestos-containing material from becoming friable or if it could potentially become friable as part of the repair, renovation, removal, containment, or disposal process, such costs should be included in the estimate of asbestos-related cleanup costs."

Appendix B: Illustrations -- Examples of Practice

The examples shown in this appendix are for illustrative purposes only. The explanations and illustrations are presented to show how the standards may be applied but are not standards themselves. These illustrations are general in nature and may not apply to specific cases that appear similar but have unique circumstances.

The following examples illustrate the estimation of asbestos-related clean up costs associated with future repair/renovation or demolition projects at the time the asset is placed in service

I. Evaluating Asbestos Cleanup Costs Associated with Real Property Repair or Renovation:

A federal entity recognizes the potential to repair or renovate real property during the course of its operating life. For real property containing asbestos, the asbestos plan states that measures must be taken to contain and properly dispose of the asbestos if the materials become damaged or need to be removed.

- a. When the asset is placed into service or the entity first reports asbestos cleanup costs for a given real property, the following considerations may apply:

- An asbestos survey performed on the real property that requires repair indicates that the blown-in attic insulation and the ceiling tiles contain asbestos.
 - A review of the federal and state requirements indicate that regardless of renovation or demolition method, the attic insulation and ceiling tiles will likely require removal in accordance with asbestos regulations.
 - There is cost information available for removing, containing, and disposing of similar asbestos-containing materials.
- b. Based on the information above and in accordance with TR 2, since asbestos containing materials are present, the probability requirement of recognizing a cleanup liability is satisfied. Also, since there is information about the cost of removal, containment and disposal of the asbestos, the cost associated with asbestos cleanup is reasonably estimable. The federal entity must estimate the asbestos-related cleanup costs to be incurred while conducting the repair or renovation, plus the cost of cleaning up the asbestos remaining in the real property at the time of demolition, where reasonably estimable. These estimated costs would then be recognized as a liability according to the guidance in SFFAS 6, paragraph 104.

II. Evaluating Asbestos Cleanup Costs Associated with Real Property Demolition:

A federal entity acquires an asset that is suspected to contain asbestos. Federal accounting standards require that federal entities estimate the liability associated with asbestos removal, containment, or disposal when the asset is placed in service.

- a. At the acquisition date, the following is determined:
- There is no evidence or certification that the asset is asbestos-free. As some construction material utilized at the time the asset was built had been found to contain asbestos, it is therefore probable that asbestos may be present in the real property being assessed;
 - The condition of materials suspected to contain asbestos was not surveyed by the previous owner;
 - No asbestos survey or other assessment has been performed to estimate the type, location, or extent of asbestos in the real property;
 - There are no assets that are similar in size, age and functionality that could be used to obtain information about the type, location, or extent of asbestos in the similar assets;
 - There are no current reliable factors or parameters to be applied to a relevant asbestos liability estimation model; and

-
- It is not possible to determine the extent of the existence of asbestos without destroying or weakening the existing structure or disturbing potential asbestos, which would be undesirable.
- b. Based on the information above and in accordance with TR 2, the presence of asbestos in the real property satisfies the probability requirement of liability recognition. However, the cost of removal, containment, and disposal of the asbestos is not reasonably estimable at this time. The existence of asbestos and a statement that such an estimate cannot be made should be disclosed. In this case, the federal entity must estimate a liability for conducting an asbestos survey and any other identifiable associated cost, recognize that liability in accordance with the guidance in SFFAS 6, paragraph 104, and disclose information about the real property in the notes to the financial statement. Also, as relevant information about the real property and its asbestos become available, the federal entity should reconsider its key assumptions and use an acceptable estimation technique (i.e., cost model or similar real property) to develop a reasonable estimate of asbestos cleanup costs.

Technical Release 11: Implementation Guidance on Cleanup Costs Associated with Equipment

Status

Issued	June 2, 2010
Effective Date	Upon issuance
Affects	None.
Affected by	Technical Release 21.

Summary

This technical release provides steps that can be followed to help federal entities recognize cleanup costs in accordance with applicable GAAP standards, including but not limited to SFFAS 5, 6, 40, 42 and 44; Interpretation 9; Technical Bulletin 2006-1, 2017-2; and applicable TRs. The guidance will also assist federal entities to provide reasonable estimates of cleanup costs associated with the disposal of equipment assets, when required. The guide focuses on cleanup of hazardous waste associated with equipment. It focuses on when cleanup costs should be recognized as an environmental liability and when it should be expensed as a cost of routine operation. In addition the guide includes two examples - one example is associated with equipment cleanup when a liability should be recognized and one is associated with equipment cleanup when the costs should be expensed as routine operations.

1.-7. Paragraphs 1 through 7 were rescinded by Technical Release 21.

Technical Guidance

Scope

- 7A Readers of this Technical Release (TR) should first refer to the hierarchy of accounting standards in Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This TR supplements the relevant accounting standards but is not a substitute for and does not take precedence over the standards.

Cleanup Costs Associated with Equipment^{5A} at Disposal

8. Cleanup costs should be recognized in accordance with all relevant GAAP. In accordance with SFFAS 6, the cleanup costs are the costs of removing, containing, and disposing of (1) hazardous waste from property, or (2) material and/or property that consists of hazardous waste⁶ at permanent or temporary shutdown of the associated equipment asset. If the hazardous waste cleanup is unique to the equipment closure (either temporarily or permanently), disposal, or decommissioning, then the cleanup costs, as defined above, shall be estimated when the associated equipment asset is placed in service. Recognition of the expense and accumulation of the environmental liability shall begin on the date that the equipment asset is placed into service, continue in each period that operation continues, and be completed when the equipment asset ceases operation.⁷ A portion of estimated

¹⁻⁴ Footnotes 1-4 were rescinded by Technical Release 21.

⁵ Footnote 5 was rescinded by Technical Release 21.

^{5A} Equipment is defined in Appendix D.

⁶ SFFAS 6 paragraph 86: Hazardous waste is a solid, liquid, or gaseous waste, or combination of these wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may cause or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness or pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, disposed of, or otherwise managed.

⁷ SFFAS 6 paragraph 98: Recognition of the expense and accumulation of the liability shall begin on the date that the PP&E is placed into service, continue in each period that operation continues, and be completed when the PP&E ceases operation.

total cleanup costs shall be recognized as expense during each period that the equipment is in operation.^{8 9} In accordance with SFFAS 5, the liability is recognized when a future outflow or other sacrifice of resources as a result of past transactions or events is probable and reasonably estimable. In addition, TR 2 outlines several key factors (tests) that must be considered in determining whether a future outflow of resources from a federal entity for environmental cleanup is probable and can be reasonably estimable. Further, Interpretation 9, *Cleanup Cost Liabilities Involving Multiple Component Reporting Entities: An Interpretation of SFFAS 5 & SFFAS 6*, provides clarification and guidance regarding cleanup cost liabilities for component reporting entities when the component reporting entity responsible for reporting on an asset during its useful life is different from the component reporting entity that will eventually be responsible for settling the liability for the cleanup cost of that asset. Technical Bulletin 2017-2, *Assigning Assets to Component Reporting Entities*, provides that assets may be assigned by a reporting entity to its component reporting entities on a rational and consistent basis.

Example of Practice -- Cleanup Costs Associated with Equipment at Disposal:

Determination of hazardous waste cleanup liability associated with equipment disposal at the time equipment is being placed in service.

9. As the entity assesses the probability of future outflows of resources for environmental cleanup associated with the equipment disposal, the following factor should be considered. Does the acquisition or any other relevant information (e.g. operating records, experience with similar assets, etc.) identify materials that are used or created within the process that would constitute a hazardous waste at disposal? If the future outflows of resources for environmental cleanup are not probable, then the criterion for recognition of a liability is not established.¹⁰
10. If the future outflows of resources for environmental cleanup are probable then the entity must assess whether the hazardous waste associated with the newly acquired equipment will be regulated and/or managed the same as other routine operational waste (i.e. routinely disposed using the same method) at the federal facility, or will it be uniquely managed.

⁸ SFFAS 6 paragraph 97: A portion of estimated total cleanup costs shall be recognized as expense during each period that general PP&E is in operation. This shall be accomplished in a systematic and rational manner based on use of the physical capacity of the associated PP&E (e.g., expected usable landfill area) whenever possible. If physical capacity is not applicable or estimable, the estimated useful life of the associated PP&E may serve as the basis for systematic and rational recognition of expense and accumulation of the liability.

⁹ SFFAS 6 paragraph 104 provides additional instructions for initial implementation of SFFAS 6 and for liabilities related to assets in service at the effective date of this standard.

¹⁰ Technical Release 2 establishes guidance for when costs associated with environmental damage meet the probable and reasonably estimable criteria.

-
11. As the entity assesses the reasonable estimability of future outflows of resources for environmental cleanup related to equipment disposal, the entity should consider whether liability can be estimated for removing, containing, and/or disposing of the hazardous waste.¹¹
 12. If the future outflow of resources for environmental cleanup related to the equipment disposal are probable, and it is determined that the hazardous waste associated with the newly acquired equipment is **not** routinely removed and disposed during equipment operation; and the costs of removal or containment and/or disposal of the hazardous waste associated with disposal of the equipment can be reasonably estimated (estimates may include a study, if required), then the requirement of equipment disposal cleanup liability recognition has been satisfied and the federal entity must recognize an environmental liability for these estimated costs in accordance with SFFAS 6, paragraph 98. (See illustration in Diagram 1.)¹²

Cleanup Costs Associated with Equipment during Ongoing Operations

13. In accordance with SFFAS 6, paragraph 93,¹³ if such cleanup is an ongoing part of operations, the costs are to be accounted for in accordance with SFFAS 5, *Accounting for Liabilities of the Federal Government*, and are not subject to the recognition guidance provided in SFFAS 6, chapter 4 (par. 97 and 98). SFFAS 5 applies to all environmental liabilities not specifically covered in SFFAS 6, including cleanup resulting from accidents or when cleanup is an ongoing part of operations. Any accrued liability/payable and associated operating expense should be recognized in the period the cleanup occurs as part of ongoing operations.

¹¹ SFFAS 6 Note 68: The unit of analysis for estimating liabilities can vary based on the reporting entity and the nature of the transaction or event. The liability recognized may be the estimation of an individual transaction or event; or a group of transactions and events. For example, an estimate of the cleanup costs could be made on a facility by facility basis, or an entity by entity basis.

¹² In accordance with SFFAS 6, paragraph 96, "Estimates shall be revised periodically to account for material changes due to inflation or deflation and changes in regulations, plans and/or technology. New cost estimates should be provided if there is evidence that material changes have occurred; otherwise estimates may be revised through indexing." As additional information becomes available, the agencies must re-evaluate assumptions, revise cost estimates, and make necessary adjustments to the liability recognition.

¹³ SFFAS 6, paragraph 93: Other cleanup costs, such as those resulting from accidents or where cleanup is an ongoing part of operations, are to be accounted for in accordance with liability standards and are not subject to the recognition guidance provided in this standard. This guidance does not apply to these other types of cleanup since the cleanup effort is not deferred until operation of associated PP&E ceases either permanently or temporarily.

-
14. In many cases, hazardous wastes removed and disposed at decommissioning, shutdown and/or disposal of equipment are the same as those managed as part of the periodic routine maintenance and day-to-day operations, as determined by the regulatory requirements and method of managing the waste. For instance, the costs of removing and disposing of hazardous waste (e.g., batteries, cleaning solvents, motor oil) incurred as part of periodic routine maintenance of equipment over its useful life, are generally expensed and the associated liability/payable is recognized as the costs are incurred. The cost of removing and disposing of the same routine maintenance hazardous waste at the time of equipment disposal would likewise be expensed and associated liability is recognized when incurred.

Example of Practice -- Cleanup Costs Associated with Equipment during Ongoing Operations: Determination of hazardous waste cleanup during ongoing operations of the equipment (routine hazardous waste disposal)^{13A} at the time the equipment is being placed in service.

15. As the entity assesses the probability of future outflows of resources for environmental cleanup related to the equipment, the following factor should be considered. Does the acquisition or any other relevant information (e.g. operating records, experience with similar assets, etc.) identify materials that are used or created within the process that would constitute a hazardous waste at disposal? If the probability of future outflows of resources for environmental cleanup is not met, then the criterion for recognition of a liability is not established.¹⁴
16. If the future outflows of resources for environmental cleanup are probable, then the entity must assess whether the hazardous waste associated with the newly acquired equipment will be regulated and/or managed the same as other routine operational waste at the federal facility or will it be uniquely managed.
17. If the future outflows of resources for environmental cleanup related to the equipment disposal are probable and it is determined that the hazardous waste associated with the newly acquired equipment is regulated and/or managed the same as other routine operational wastes, then the costs of removal, containment and/or disposal of the routine wastes associated with disposal of this equipment asset are to be recognized, in accordance with the liability standards, in the period that the removal, containment and/or disposal of routine wastes occurs. These costs are **not** subject to the recognition guidance provided in SFFAS 6, paragraph 98. (See illustration in Diagram 1 below.)

^{13A} Routine hazardous waste disposal is defined in Appendix D.

¹⁴ Technical Release 2 establishes guidance for when costs associated with environmental damage meet the probable and reasonably estimable criteria.

-
18. The guidance in SFFAS 40, *Deferred Maintenance and Repairs: Definitional Changes*, SFFAS 42, *Deferred Maintenance and Repairs: Amending Statements of Federal Financial Accounting Standards 6, 14, 29, and 32*, and SFFAS 44, *Accounting for Impairment of General Property, Plant, and Equipment Remaining in Use*, may also be relevant
- when defining, measuring, and reporting estimated cleanup costs that are considered deferred and
 - when considering the existence of any potential asset impairment indicators.
19. The appendices (that include non-authoritative illustrations and examples) of TR 11 are not updated for amendments.^{14A} Therefore, readers are cautioned to refer to the paragraphs above for guidance that could impact the accompanying non-authoritative illustrations and examples.

Effective Date

20. This TR is effective upon issuance.

^{14A} The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent pronouncements that amend a pronouncement. For example, within the text of a Technical Release, the guidance sections are updated for changes. However, appendices are not updated to reflect subsequent changes. The reader can review the basis for conclusions of the amending pronouncements for the rationale for each amendment.

Diagram 1: Recognizing Environmental Liabilities for Equipment Disposal in Compliance with relevant GAAP
(Circles correlate to Sections of document)

The provisions of this Technical Release need not be applied to immaterial items.

Appendix A: Basis for Conclusions

- A1. In January 2008, the Accounting and Audit Policy Committee (AAPC) established the General Property, Plant, & Equipment (G-PP&E) task force to assist in developing implementation guidance for federal G-PP&E as it relates to SFFAS 6, *Accounting for PP&E*, SFFAS 23, *Eliminating the Category National Defense Property Plant, & Equipment*, and other related G-PP&E guidance developed by the FASAB. The task force includes federal agency representatives who are experiencing G-PP&E implementation issues and those who have G-PP&E implementation best practices to share with the federal community.
- A2. The G-PP&E task force was divided into four subgroups that will address a set of related issues. The subgroups meet separately on a regular basis to discuss their set of issues and report back to the full task force on its progress towards the development of implementation guidance. The four sub-groups are
- G-PP&E Acquisition
 - G-PP&E Use
 - G-PP&E Disposal
 - G-PP&E Records Retention
- A3. This guidance was developed by the Disposal subgroup. The subgroup included members from the following federal agencies:
- Department of Defense
 - Department of Energy
 - Department of the Interior
 - Government Accountability Office
 - General Services Administration
 - National Aeronautics and Space Administration
- The subgroup included accountants, program managers, and functional PP&E experts. The program managers gave the subgroup the perspective of how the standards come into play on a day-to-day basis.
- A4. The scope of the implementation guidance is to address cleanup costs associated with equipment as it applies to SFFAS 1, 5, 6 and TR 2. The technical release focuses on when to recognize clean-up of hazardous waste associated with equipment as an environmental liability and when to expense as a routine operational cost. The technical release is separated into two sections – one addressing when SFFAS 1 should be applied and the other when SFFAS 6 should be applied. In addition, the technical release includes two

examples – one example is associated with hazardous waste cleanup not routinely managed and disposed of, which includes liability recognition (e.g., PCB removal and disposal during ship decommissioning) and the other example is associated with hazardous waste cleanup routinely managed and disposed of, which includes expensing of the costs being accounted for as an operational expense (e.g., removal of dry cleaning solvents).

- A5. This technical release provides steps that can be followed to help federal entities consistently apply existing standards to assist in providing consistent, accurate and meaningful information.
- A6. In January 2009 the Disposal subgroup of the G-PP&E task force presented a draft equipment cleanup issue paper to the AAPC for review. The committee asked the subgroup to better clarify when the equipment cleanup cost should be recognized as a liability and when the costs should be expensed as routine operations. The Committee also asked the subgroup to include an additional example in the technical release for a naval ship to show the distinction between the disposal of hazardous waste during the normal operations of the ship and the disposal of hazardous waste unique to decommissioning the ship. In May the subgroup returned to the AAPC with a revised version of the implementation guidance that included the requested clarifications as well as the ship example. The members provided some additional comments to the subgroup on the technical release and agreed to review a pre-ballot exposure draft of the guidance before the July AAPC meeting and then have a ballot exposure draft available at the July meeting.
- A7. The AAPC released the exposure draft (ED), *Implementation Guidance on Cleanup Costs Associated with Equipment* on September 3, 2009. Upon release of the ED, notices and/or press releases were provided to: The *Federal Register*, the *FASAB News*, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, and committees of professional associations commenting on past exposure drafts.
- A8. Ten letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		2
Auditors		
Preparers and financial managers	8	

A9. AAPC received a comment on the exposure draft requesting clarification on financial transactions and reporting requirements for cleanup costs associated with permanent versus temporary shutdown of the asset. Further, the respondent requested the exposure draft to be changed to only report cleanup costs associated with permanent shutdown of equipment. SFFAS 6 paragraph 85¹⁵ requires reporting of cleanup costs associated with both temporary and permanent shutdown of assets. In addition, the AAPC G-PP&E, Disposal Sub-group is in the process of defining triggering events and associated financial transactions for permanent and temporary shutdown and/or closure of G-PP&E. Additional guidance related to financial transactions and accounting for cleanup costs at the time the asset is permanently and/or temporarily closed and/or shutdown will be provided as a result of that effort.

¹⁵ Cleanup costs are the costs of removing, containing, and/or disposing of (1) hazardous waste from property, or (2) material and/or property that consists of hazardous waste at permanent or temporary closure or shutdown of associated PP&E.

Appendix B: Illustrations

The examples shown in this appendix are for illustrative purposes only. The explanations and illustrations are presented to show how the standards may be applied but are not standards themselves. These illustrations are general in nature and may not apply to specific cases that appear similar but have unique circumstances.

Example 1: Decommissioning of Used Perchloroethylene Dry Cleaning Equipment

A dry cleaning operation uses the hazardous material perchloroethylene (perc). Perc is a colorless liquid with mild odor used primarily as a dry cleaning solvent. Perc is highly volatile; 80-85% of the chemical used annually is released into the atmosphere with only 1% to water. The greatest health risk presented by perc is inhalation by industry workers. Studies of industry workers indicate a “probable” linkage between prolonged exposure and certain cancers.

Drycleaners typically recycle used solvent on-site which creates several hazardous wastes. Although the quantities of waste have been greatly reduced through recycling, hazardous waste will continue to be removed and disposed as long as the hazardous solvent is used in the operation. In addition, leaks and spills represent a significant potential environmental hazard.

Table 1 presents the hazardous waste removed and disposed of from dry cleaning operations throughout the life of the asset and at decommissioning. The second and third columns of the table list the regulatory categorization (i.e., EPA Hazardous Waste code), and method for managing the waste, respectively. The fourth column indicates if the hazardous waste is

regulated and managed in a manner that is routine to the operations or unique to decommissioning and disposing of the equipment at the end of its useful life.

Table 1. Hazardous Waste from Dry Cleaning Operations and Decommissioning					
Waste	EPAHW Code	Waste Management Method	Routine/ Unique	Accounting Practice	Rationale
Spent Solvent	F002 ¹ , D039 ²	Reuse/recycle on-site or Ship to TSDF ³	Routine	Operational expense (SFFAS 1)	Reuse/recycle exempts waste or same waste/mgmt as operational
Used Filter Cartridges	F002, D039	Ship to TSDF	Routine	Operational expense (SFFAS 1)	Same waste/mgmt as operational
Distillation Residues	F002, D039	Ship to TSDF	Routine	Operational expense (SFFAS 1)	Same waste/mgmt as operational
Cooked Powder Residues	F002, D039	Ship to TSDF	Routine	Operational expense (SFFAS 1)	Same waste/mgmt as operational
Unused Perc	D039	Reuse/recycle on-site or return to distributor	Routine	Operational expense (SFFAS 1)	Reuse/recycle exempts waste
Wastewater from equipment cleaning	F002, D039	Ship to TSDF	Routine	Operational expense (SFFAS 1)	Same waste/mgmt as operational

Key:

¹F002: Represents waste containing the class of solvent that includes perchloroethylene.

²D039: Represents waste containing the specific solvent, perchloroethylene.

³TSDF: Facility permitted for Treatment, Storage, and Disposal of RCRA hazardous waste.

All hazardous waste from this equipment falls under the same regulatory requirements (F002, D039) and waste management method (ship to TSDF), or it is recycled and not disposed as a hazardous waste. The hazardous waste removed at decommissioning is the same as waste

from ongoing operations and managed the same, as determined by the regulatory requirements. Thus, the cost associated with removal and disposal of the waste produced at decommissioning is recognized as a liability/payable and operational expense in the period incurred in accordance with the guidance provided in SFFAS 6, paragraph 93 and SFFAS 1.

Example 2: Ship Disposal

The disposal of ships belonging to federal agencies is a significant event within asset lifecycle management. Extensive planning and acquisition of services is required to prepare for the retirement of these large-scale assets. Ship disposal may occupy 6 months to 1 year scheduling time of the shipyard's drydock space. Removal of hazardous materials from the ship requires careful planning since the presence of water in and around the ship provides a transport media for hazardous materials to the environment and for human exposure.

In the late 1990's, the U.S. Navy conducted a pilot study to evaluate the feasibility and cost associated with retiring ships, focusing on processes and costs for hazardous material removal. Four separate contractors performed complete ship disposal, using customized processes and in accordance with the environmental regulatory standards of their respective States.

Tables 2 and 3 present the waste streams managed during the disposal operation and identify whether the waste regulation and management is operationally routine or unique to the disposal process. The fifth column indicates if the costs should be accrued as a liability over the life of the asset (i.e., estimated at the time the asset is placed into service and recognized over the life of the asset) in accordance with SFFAS 6, paragraph 98, or expensed and recorded as a payable when the cost is incurred in accordance with SFFAS 1. The tables present high and low volume wastes, respectively, based on the experience of the contractors from the study.

Table 2. High Volume/Cost Waste Streams

Waste	Source of Waste	Waste Management Method	Routine/ Unique	Accounting Practice	Rationale
Asbestos-containing materials (ACM)	Pipe and hull insulation and cloth, liner, mastic, plastic foam, gaskets	Disposal in ACM approved landfill ¹⁶	Unique	Accrued Liability (SFFAS 6, paragraph 98)	Unique operation and disposal of regulated waste.
PCB Containing Waste	Cable coatings, felt backing, paint, rubber products	PCB removal under TSCA; Disposal as Solid or TSCA regulated waste. ¹⁷	Unique	Accrued Liability(SFFAS 6, paragraph 98)	Unique operation and disposal; TSCA ¹⁸ requires PCB removal from metal prior to further processing.
Waste Oil (Petroleum products)	Fuel, lube oil, hydraulic oil	Recover and recycle.	Routine	Operational Expense (SFFAS 1)	Recovery of useful materials (e.g., metal, fuel) is not a liability.

¹⁶One contractor disposed electrical cables with asbestos-containing sheathings in their entirety, thereby greatly increasing the volume of ACM waste. Others removed the sheathings to recycle the copper cables. Also, some managed all thermal insulation as ACM rather than sample to determine exact amounts.

¹⁷Contractors in States that did not adopt EPA's PCB "Mega Rule" need to sample and dispose all PCB waste as TSCA regulated waste. Other States that did adopt the rule allow disposal of PCB Bulk Product Waste (BPW) in a (non-hazardous) Solid Waste Landfill.

¹⁸Toxic Substance Control Act (TSCA) effective 1/1/77 authorizes EPA to control any substance that was determined to cause unreasonable risk to public health or the environment.

Table 3. Low Volume/Cost Waste Streams

Waste	Source of Waste	Waste Management Method	Routine/Unique	Accounting Practice	Rationale
Mercury	Fluorescent light tubes, fire detectors, tank level indicators	Universal waste recycling.	Routine	Operational Expense (SFFAS 1)	Routine recycling.
RCRA-hazardous paint coatings on metal	Ship transducers, ballast, paint coatings	Transferred to scrap metals recycler, RCRA exempt.	Routine	Operational Expense (SFFAS 1)	Routine recycling of useful materials.
Equipment with RCRA-hazardous materials	Contained in equipment	Sale and reuse with disclosure to buyers	Routine	Operational Expense (SFFAS 1)	Recovery of useful materials (e.g., metal, fuel) is not liability.
CFCs	Small refrigerators, water coolers, small freezer units	Sale or reuse; CFC recycled by authorized subcontractor.	Routine	Operational Expense (SFFAS 1)	Routine recycling.

Note to Tables 2 & 3:

Estimated costs associated with two of the high volume wastes (i.e., PCB and asbestos-containing wastes) from ship decommissioning and disposal should be accrued as a financial liability over the asset's useful life as they are non-routine wastes not otherwise managed over the life of the asset. Costs associated with the remainder of the wastes would be accounted for as operational expense in the period incurred in accordance with the guidance provided in SFFAS 6, paragraph 93 and SFFAS 1. These wastes are either routinely recycled materials due to their inherent value (e.g., fuel, oil, CFCs), sold, or routinely disposed as universal waste (e.g., fluorescent lights, batteries, gauges).

However, as stated upfront in this example, ship decommissioning is a unique operation due to increased risk and need for specialized services and space. In addition, the environmental costs incurred by individual contractors vary due to factors such as State and local regulation,

technical approach to ship disposal, and waste identification and management processes. As a result, the federal agency's management will likely need to make environmental liability determinations based on planned disposal operations for the asset or group of assets, using the examples provided in this document as a guide.

TSCA	Toxic Substances Control Act
TSDF	Treatment Storage Disposal Facility

Appendix D: Glossary

Environmental Liability

An environmental liability is a probable, measurable and reasonably estimable future outflow or expenditure of resources that exist as of the financial reporting date for environmental cleanup costs resulting from past transactions or events.

Equipment

Equipment is any tangible, nonexpendable, personal property having a useful life of more than one year and an acquisition cost of \$5,000 or more per unit. (34 CFR 80.3).

Probable

That which can reasonably be expected or believed to be more likely than not on the basis of available evidence or logic but which is neither certain nor proven. (FASAB Consolidated Glossary 2009).

Reasonably Estimable

The ability to reliably quantify in monetary terms the outflow of resources that will be required. (TR 2)

Routine Hazardous Waste Disposal

Disposal of hazardous waste that is regulated and managed the same as hazardous waste disposed of from day-to-day operations and on a regular basis.

Useful Life

The normal operating life in terms of utility to the owner. (FASAB Consolidated Glossary 2009)

Technical Release 12: Accrual Estimates for Grant Programs

Status

Issued	August 4, 2010
Effective Date	For fiscal periods beginning after September 30, 2010.
Affects	None.
Affected by	None.

Summary

This technical release addresses materiality considerations, risk assessment, and procedures for estimating accruals for grant programs, including acceptable procedures until sufficient relevant and reliable historical data is available for new grant programs or changes to existing programs. This technical release also provides guidance on acceptable sources of documentation for grant accrual estimates; internal controls, including monitoring of internal controls and validation of grant accrual estimates; training of grantees; and monitoring of grantee reporting.

Appendix C: Relevant Citations of Existing Guidance	20
Appendix D: AAPC Grants Accounting Task Force	23

Introduction

Purpose

1. A series of roundtables in April 2009 indicated that guidance for estimating accruals for grant programs would be helpful for agencies. Specifically, agencies indicated a need for guidance that describes a cost-effective framework for developing reasonable estimates of accrued grant liabilities.

Scope

2. This Technical Release (TR) applies to **grants**¹ that are paid by a federal entity to a non-federal entity. This TR does not apply to contracts or other purchases of goods or services. This TR does not establish new reporting requirements. This TR does not affect reporting in the Budget of the United States or special-purpose reports such as those required by law or regulation to be prepared in accordance with guidance other than generally accepted accounting principles.

Effective Date

3. This technical release is effective for periods beginning after September 30, 2010, with earlier implementation encouraged.

¹ Terms first appearing in **bold** are defined in the glossary.

Background

Overview

4. This TR addresses materiality considerations, risk assessment, and procedures for estimating accruals² for grant programs, including acceptable procedures until sufficient relevant and reliable historical data is available for new grant programs or changes to existing programs. This TR also provides guidance on acceptable sources of documentation for grant accrual estimates; internal controls, including monitoring of internal controls and validation of grant accrual estimates; training of grantees; and monitoring of grantee reporting.

Related Accounting Literature

5. Related accounting standards are listed below. Relevant excerpts are provided in *Appendix C: Relevant Citations of Existing Guidance*.
 - a. Statement of Federal Financial Accounting Standards (SFFAS) 1, *Accounting for Selected Assets and Liabilities*,
 - b. SFFAS 3, *Accounting for Inventory and Related Property*,
 - c. SFFAS 5, *Accounting for Liabilities of the Federal Government*,
 - d. SFFAS 21, *Reporting Correction of Errors and Changes in Accounting Principles, Amendment of SFFAS 7, Accounting for Revenue and Other Financing Sources*
 - e. Statement of Federal Financial Accounting Concepts (SFFAC) 5, *Definition of Elements and Basic Recognition Criteria for Accrual-Basis Financial Statements*

² Agencies must recognize and report balances due to or advanced to grantees at the end of the reporting period. Adjustments are needed to provide for eligible expenses that grantees have incurred as of the reporting date but have not yet reported to the agencies. Since these adjustments are based upon estimates, they are referred to as "accrual estimates" in this guidance. In particular:

- Advances: Amounts issued as advances must be adjusted, even if grantees have not yet reported expenses incurred. (See SFFAS 1, *Accounting for Selected Assets and Liabilities*, par. 57-59.)
- Accounts Payable: Where there is no advance or no remaining advance, agencies must estimate amounts payable to grantees. (See SFFAS 5, *Accounting for Liabilities of the Federal Government*, par. 24-25.)

Technical Guidance

Definitions

6. **Grants:** 31 USC Section 6304 defines grants as follows: An executive agency shall use a grant agreement as the legal instrument reflecting a relationship between the United States Government and a State, a local government, or other recipient when (1) the principal purpose of the relationship is to transfer a thing of value to the State or local government or other recipient to carry out a public purpose of support or stimulation authorized by a law of the United States instead of acquiring (by purchase, lease, or barter) property or services for the direct benefit or use of the United States Government; and (2) substantial involvement is not expected between the executive agency and the State, local government, or other recipient when carrying out the activity contemplated in the agreement.³

Materiality Considerations and Risk Assessment

7. SFFAS 3, paragraph 14, states that “the accounting and reporting provisions of...standards should be applied to all items that would influence or change the users’ judgment of the entity’s efficiency and effectiveness and its compliance with laws and regulations in a material manner.”⁴ In particular, management should consider the materiality of the grant program relative to the agency’s statement of net cost.
8. The following list includes some of the factors that management should consider in determining which grant programs may have a higher risk of material misstatement that might cause financial statement users to make incorrect assessments regarding the efficiency and effectiveness of the program:
- a. the degree of variance between past estimates and the program’s actual operating cost (if applicable)

³31 USC Section 6302 excludes the following from the definition of a grant agreement: agreements under which is provided only -

- (A) direct United States Government cash assistance to an individual;
- (B) a subsidy;
- (C) a loan;
- (D) a loan guarantee; or
- (E) insurance.

⁴ SFFAS 3, paragraph 14. See Attachment 1 for the full discussion of materiality from SFFAS 3.

-
- b. significant findings reported in past program audits (if applicable)
 - c. the age of the program (other factors being equal, mature programs may have less risk than newer programs)
 - d. Congressional and other public policy interest in a given program
- 9. For grant programs that are immaterial to the statement of net cost and/or that have a lower risk of misstatement, management might consider validating estimates less frequently.
 - 10. Management should apply cost-benefit considerations to the process of estimating accruals for grant programs.
-

Preparing Accrual Estimates for Grant Programs

- 11. Preparing reliable and timely accrual estimates for grant programs must be a joint effort between the budget, financial, and program offices at each agency. These offices should work together to ensure that the procedures and internal control recommendations⁵ outlined in this TR are implemented and operating as designed. However, some agencies may not be able to effectively implement all of these procedures, because they have not yet developed the necessary data stores and/or methods for preparing grant accrual estimates. Therefore, until sufficient relevant historical information on grant programs is available, the alternatives outlined in this TR should be utilized for developing grant accrual estimates.
- 12. Agencies should document and maintain support for the data and assumptions used to develop grant accrual estimates. The documentation will facilitate the agency's review of the assumptions, a key internal control, and will also facilitate the auditor's testing of the estimates. Documentation should be complete and stand on its own, i.e., a knowledgeable independent person could perform the same steps and replicate the same results. If the documentation were from a source that would normally be destroyed, then copies should be maintained in the file for the purpose of reconstructing the estimates.

⁵ Internal control is an integral component of an organization's management that provides reasonable assurance regarding the achievement of reliable financial reporting, effective and efficient operations, and compliance with applicable laws and regulations. Internal control consists of the control environment, risk assessment, control activities, information and communications and monitoring. Source: Summarized from *Internal Control Integrated Framework*, issued by the Committee of Sponsoring Organizations (COSO), consisting of the American Institute of CPAs (AICPA), the Institute of Management Accountants (IMA), the Institute of Internal Auditors (IIA), Financial Executives International (FEI), and the American Accounting Association (AAA). See http://www.aicpa.org/audcommctr/toolkitsnpo/Internal_Control.htm (accessed 3-12-2010)

-
13. For both existing grant programs and new or modified grant programs, management's documentation of relevant program design factors may include:
- a. program definition including legislation
 - b. legislation or regulations changing the terms, maximum grant amount, total program size, or characteristics of the grantee population
 - c. program eligibility requirements
 - d. grant agreements detailing the terms and conditions of the grants

Preparing Accrual Estimates for Existing (Mature) Grant Programs

14. Agencies must accumulate sufficient relevant and reliable data on which to base accrual estimates. Each agency should prepare grant accrual estimates based upon the best available data at the time the estimates are made. Guidance on the types of supporting documentation of procedures that are acceptable for existing (mature) grant programs is found in paragraphs 13 and 15 of this document.
15. For existing programs, management should ensure that adequate documentation is available for accrual estimates relating to existing grant programs. Typical support documentation may include:
- a. procedures used for calculating the estimate
 - b. documentation for the review and approval process for the estimate
 - c. support for the calculation of the estimate, including the underlying assumptions used
 - d. historical data supporting the assumptions
 - e. relevant documentation of supporting actual cash and/or accrual experience (including the date and source of reports, whether grantees reported on a cash or accrual basis, and how recently the data were updated). The documentation may include:
 - i. historical data and trends, citing sources of information and relevant time frame
 - ii. an analysis that identifies the most critical factors
 - iii. trend analysis developed from reports from the accounting or program management systems

-
- iv. evidence of experience by other agencies with similar programs
 - v. evidence of emergencies or legislated changes, such as changes in program terms, program size, or characteristics of grant recipients
 - vi. evidence of other relevant factors that may be identified by grant program managers
- f. explanation of any sampling process used, including, if applicable, treatment of grant programs with different payment patterns, and/or legislation
 - g. explanation of the calculation concept used, such as simple linear regression, statistical analysis, or other appropriate method
 - h. procedures for error checking, including procedures to validate the completeness and accuracy of the underlying data used in preparing the accrual estimate
 - i. procedures for monitoring/validation subsequent to the end of the reporting period

Preparing Accrual Estimates for New Grant Programs or Changes to Existing Grant Programs

- 16. In the absence of sufficient relevant and reliable historical data on which to base accrual estimates, agencies should prepare estimates based upon the best available data at the time the estimates are made. Paragraphs 13 and 19 of this document provide guidance on acceptable types of supporting documentation.
- 17. In certain limited instances, informed opinion may be used to support grant accrual estimates in the absence of sufficient relevant and reliable historical data. Informed opinion refers to the judgment of agency staff or others who make estimates based on their programmatic knowledge and/or experience without using a fully satisfactory information store and, in some cases, without using an econometric or other statistical model. Informed opinion may be used only as a last resort when relevant and reliable historical data and/or modeling capabilities are not available. This could occur when a new program has been established or when the Congress has changed an existing program in ways that cannot be represented by historical data. Informed opinion should therefore be used as an interim method only, and the agency should develop an action plan to establish an information store, appropriate models, and supporting documentation.
- 18. If an expert is used, the expert's qualifications, such as professional or academic certification or length and kind of experience, must be assessed. The basis of the stated opinion must be articulated and documented in sufficient detail to allow review and

validation by independent sources, including independent auditors. For example, a statistician may be best qualified to determine the appropriate model for grant accrual estimates using limited or imperfect data.

19. Management should ensure that adequate documentation is available for grant accrual procedures for new programs or changes to existing programs that do not have historical supporting documentation. In the absence of relevant and reliable historical experience as the support for estimates, the agency should document the basis for accrual estimates. Typical support may include:
 - a. relevant experience from other programs within the reporting agency or programs at other agencies, including documentation of why another agency's experience is relevant, as well as similarities and differences (particularly possible biases) between the other agency's experience and the new programs or changes to existing programs of the agency relying on the experience of the other agency
 - b. extrapolation from subsets of prior program activity, e.g., while prior grants were not specifically targeted to a certain pool of grantees, it may be possible to identify prior activity with grantees with the same or similar characteristics to the targeted pool
 - c. information from program managers regarding grantee activity and spending patterns
20. When expert opinion is used as an interim measure, the agency should document the expert's qualifications, such as professional or academic certification or length of experience, as well as the basis for the stated opinion. In addition, the following documents should be maintained in support of the expert's opinion:
 - i. reports and studies on relevant issues
 - ii. minutes from internal meetings and other relevant communications describing the basis for any assumptions or changes in assumptions
21. An illustrative decision tree diagram of the grant accrual process is displayed in Figure 1 of *Appendix B: Illustrative Decision Tree Diagrams for Developing and Validating Grant Accruals*.

Internal Controls: Developing Grant Accrual Estimates

22. Management should ensure that adequate internal control procedures are in place. Procedures in place should ensure that grant accrual estimates are based on historical transactions in previous years to the extent that relevant and reliable historical data exists.

-
23. Documented procedures are important to communicate relevant information on the grant accrual estimation to employees and management as well as other interested parties, such as auditors. As an agency experiences employee turnover, these documented procedures can provide vital information for new employees on how to complete reliable, well supported grant accrual estimates. Such documentation may be used to establish consistent procedures for developing grant accrual estimates across grant programs with similar characteristics.
24. Internal control documentation may include:
- a. documentation of the procedures and flow of information used in developing grant accrual estimates, e.g., flow chart with supporting narrative
 - b. a discussion of who is responsible for each step of the estimate as well as the review and approval process followed
 - c. the model(s) used, the rationale for selecting the specific methodologies, and, for programs with sufficient historical data, the degree of calibration within the projected spending model(s)⁶
 - d. the sources of information, the logic flow, and the mechanics of the model(s), including the formulas and other mathematical functions
 - e. detailed subsidiary accounting records by grant program
 - f. an audit trail from individual transactions to the subsidiary ledgers to the general ledger
 - g. an assessment of the impact of changes in law or regulations on the reliability of estimates and should ensure that the grant accrual estimate model reflects these changes
 - h. an assessment of the impact of subsequent events on the entity's grant accrual estimates (Some subsequent events may require adjustments to the financial

⁶ Calibration is the degree of precision within the model, i.e., the model's ability to accurately predict the trends of expenses incurred for a given grant program. The degree of calibration within the model can be documented by charts or graphs showing projected expenses incurred versus the actual expenses incurred by reporting period. This document would analyze the variance between projected and actual expenses incurred by grantees.

statements while others may require disclosure in the notes to the financial statements.⁷⁾

- i. a trend analysis of grant accrual estimates from year to year, and results of investigations of unusual fluctuations that are identified

Monitoring Internal Controls

25. Management should monitor controls to determine whether they are operating as intended and that they are modified as appropriate for changes in conditions. Monitoring is a process that assesses the quality of internal controls performance over time. The Office of Management and Budget (OMB) Circular A-123, *Management's Responsibility for Internal Control*, is issued under the authority of the Federal Managers' Financial Integrity Act (FMFIA) of 1982 and provides guidance to federal managers on improving the accountability, efficiency and effectiveness of federal programs and operations by establishing, assessing, correcting, and reporting on management controls. Circular A-123⁸ provides that:

Instead of considering internal control as an isolated management tool, agencies should integrate their efforts to meet the requirements of the FMFIA with other efforts to improve effectiveness and accountability. Thus, internal control should be an integral part of the entire cycle of planning, budgeting, management, accounting, and auditing. It should support the effectiveness and the integrity of every step of the process and provide continual feedback to management.

Federal managers must carefully consider the appropriate balance between controls and risk in their programs and operations. Too many controls can result in inefficient and ineffective government; agency managers must ensure an appropriate balance between the strength of controls and the relative risk associated with particular programs and operations. The benefits of controls should outweigh the cost. Agencies should consider both qualitative and quantitative factors when analyzing costs against benefits.⁹

⁷See requirements in SFFAS 39, *Subsequent Events: Codification of Accounting and Financial Reporting Standards Contained in the AICPA Statements on Auditing Standards*, August 4, 2010.

⁸ OMB Circulars are not applicable to legislative and judicial branch entities. However, the general principles are appropriate for federal reporting entities in the legislative and judicial branches.

⁹ OMB Circular A-123, December 21, 2004, Section I, page 5.

Validation of Grant Accrual Estimates

26. As part of agencies' internal control procedures to ensure that grant accrual estimates for the basic financial statements were reasonable, agencies should validate grant accrual estimates by comparing the estimates with subsequent grantee reporting.
27. When subsequently validating the reasonableness of accrual estimates, an agency does not need to obtain data¹⁰ from 100% of grantees in order to validate the reasonableness of grant accrual estimates. For example, agencies may validate estimates based upon:
 - a. grantee data that represents a majority of the total grant portfolio, or
 - b. data from a statistically valid sampling of the total grantee portfolio.
28. When developing grant accrual estimates, agencies only have access to data that is available at the time. The nature and reliability of available grant data varies widely and, because of the relationship between the grantor and the grantee, is often only indirectly influenced by management. The validation process includes an understanding that estimates are inherently uncertain, and that management must use judgment in determining:
 - a. whether differences between estimated and actual expenses are reasonable
 - b. if different estimation methods could result in more accurate estimates of net cost in the future
29. A difference between an accounting estimate and actual result does not necessarily represent a misstatement of the financial statements. Rather, differences could be an outcome of inherent estimation uncertainty. However, it could result in a misstatement if, as described in SFFAS 21, Reporting Corrections of Errors and Changes in Accounting Principles, the difference arises from mathematical mistakes, mistakes in the application of accounting principles, or oversight or misuse of facts that existed at the time the financial statements were prepared. Differences between estimates and actual should be taken into consideration in developing the subsequent period's estimate.¹¹

¹⁰ Data refers to information provided by grantees regarding their actual expenses or expenditures. Sources of data may include, but are not limited to, grantee reports to agencies and audited amounts from Single Audit Act audits.

¹¹ See SFFAS 21, paragraph 10.

-
30. An illustrative decision tree diagram of the validation process is displayed in Figure 2 of *Appendix B: Illustrative Decision Tree Diagrams for Developing and Validating Grant Accruals*.
-

Training and Monitoring of Grantees

31. Since preparation of accrual estimates is dependent upon relevant and reliable data, accurate and timely reporting by grant recipients serves as the basis for historical data used in preparing future estimates and provides reliable actual data to which accrual estimates can be compared. Agencies should consider whether grant recipients need training on completing required financial reports. If needed, training may be delivered via agency sponsored conferences, workshops and/or seminars, customer service centers and help desks, or computer based sources such as webcasts or other training options available through the agency's website.
32. Reports submitted by grantees should be reviewed to ensure their reasonableness. Agencies should have policies and procedures in place to review and verify the grantee expenditures (or expenses) reported.¹²
33. When agencies engage in on-site financial monitoring of grantees, protocols should include comparing grant expenses or expenditures reported with actual expenses or expenditures and to supporting documentation. Techniques for monitoring of grantee reporting of expenditures may also include stratified sampling.
34. Timely follow up of incorrect reporting should be performed to ensure a higher degree of compliance with reporting requirements. For example, inaccurate grant expenditures (or expenses) reported could be conveyed to grantees by an official letter requesting a corrective action plan. During on-site financial reviews, technical assistance could be provided when grant expenditures reported are inaccurate.

~~The provisions of this Technical Release need not be applied to immaterial items.~~

¹² At the time of this writing, grant recipients predominantly report expenditures. However, expenses may be reported in some cases and in the future.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Committee members in reaching the conclusions in this Technical Release. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others.

Project History

- A1. A series of roundtables in April 2009 indicated that guidance for determining whether estimates of advances and payables for grant programs are reasonable would be helpful for agencies. Specifically, agencies indicated a need for guidance supporting cost-effective development of reasonable estimates.
- A2. A Task Force consisting of representatives from federal agencies and independent accounting and consulting firms assisted FASAB staff in identifying areas where guidance would be helpful. Specifically, members indicated a need for guidance regarding:
 - a. appropriate reliance on the best available data in light of the often limited access grantee data
 - b. situations where no historical data is available such as new or modified grant programs
 - c. assessment about materiality and whether it is appropriate to focus on the statement of net cost when making such assessments
 - d. cost-effective means of validating previous estimates
- A3. Proposed draft guidance was submitted to the FASAB's Accounting and Auditing Policy Committee (AAPC) for consideration at the January 2010 AAPC meeting. The AAPC agreed to accept the project.

Summary of Outreach Efforts

- A4. The exposure draft (ED), *Accrual Estimates for Grants*, was issued March 22, 2010, with comments requested by April 22, 2010. Upon release of the exposure draft, notices and press releases were provided to:

- a. the Federal Register
- b. FASAB News
- c. the Journal of Accountancy, AGA Today, the CPA Journal, Government Executive, the CPA Letter, and Government Accounting and Auditing Update
- d. the CFO Council, the Presidents Council on Integrity and Efficiency, and the Financial Statement Audit Network
- e. committees of professional associations generally commenting on exposure drafts in the past
- f. members of the Grants Accounting Task Force that helped develop the ED

A5. To encourage responses, a reminder notice was provided on April 22, 2010 to the FASAB Listserv.

Comments Received

A6. We received 24 responses from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others	0	3
Auditors	4	2
Preparers and financial managers	15	0
Total	19	5

A7. The majority of responses concurred with all aspects of the proposed guidance. Revisions were made for the following reasons:

- a. corrections (such as removing references to year-end, since the guidance can be applied to any reporting period)
- b. revisions to language that was more prescriptive than the AAPC intended (by adding phrases such as “typical support may include” rather than a list that might be interpreted as being a required checklist)

-
- c. improvements for clarity and to improve the logical flow of the guidance

Netting of Grant-Related Advances and Accounts Payable

- A8. The ED included the following proposed guidance on netting grant-related advances and accounts payable on the face of the balance sheet with a requirement to report grant-related advances and accounts payable in a note to the financial statements:

Display

[26] When grant accrual estimates are prepared on an aggregate level, agencies may display a net amount on the balance sheet and report estimated disaggregated advances and liabilities in a note. (An illustrative example is displayed in Appendix C, *Illustrative Example of Note on Netting Grant Advances and Accrued Liabilities*.)

- A9. Although a majority of respondents concurred with the proposed guidance, a significant minority found the language confusing. In addition, the language appeared to allow netting in certain circumstances and to prohibit it in other circumstances, which was not the intent of the proposed TR. The AAPC believes that significant revisions to the guidance would be needed to clarify it. Generally, significant revisions are adopted only after providing an opportunity for public comment. Given the time involved in issuing a revised ED for comment, the AAPC decided to delete the proposed guidance on netting from this TR. The AAPC expressed willingness to address the issue of netting in the future if needed.

Effective Date

- A10. The ED included a provision that the guidance was effective immediately. Two respondents indicated that the effective date should be postponed to a future fiscal year, with earlier implementation encouraged. Although TRs do not establish new reporting requirements, the AAPC has no objection to postponing the effective date to FY 2011 with earlier implementation encouraged.

Appendix B: Illustrative Decision Tree Diagrams for Developing and Validating Grant Accruals

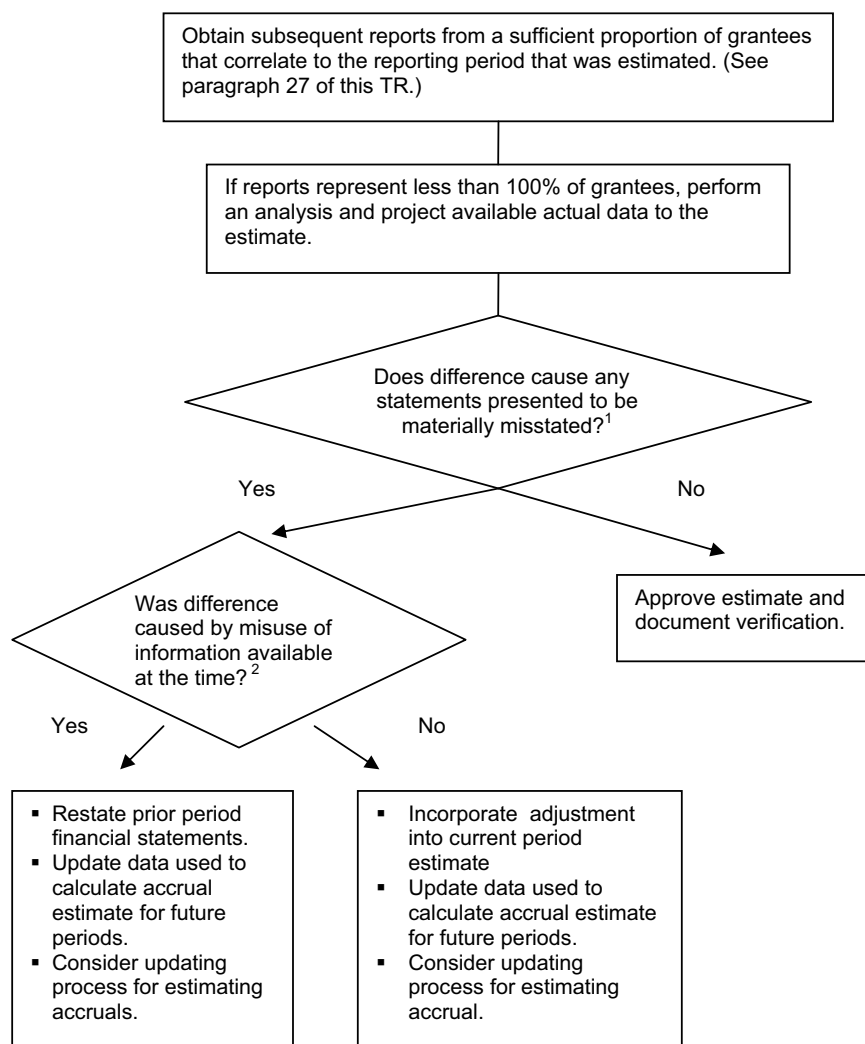

The example decision tree diagram in Figure 1 below illustrates processes that agencies might use in the grant accrual process described in paragraphs 11– 19. This example is illustrative only and is not authoritative guidance.

Figure 1: Illustrative Example of Grant Accrual Process

This example decision tree diagram in Figure 2 below illustrates processes that agencies might use in validating grant accrual estimates in paragraphs 26 - 29. This example is illustrative only and is not authoritative guidance.

Figure 2: Illustrative Example of Validation/Verification Process

². See SFFAS 21, paragraph 10.

Appendix C: Relevant Citations of Existing Guidance

Five elements of accrual-based federal financial statements – assets, liabilities, net position, revenues and expenses) are defined in Statement of Federal Financial Accounting Concepts 5, *Definitions of Elements and Basic Recognition Criteria for Accrual-Basis Financial Statements*.

An asset is a resource that embodies economic benefits or services that the federal government controls.¹³

A liability is a present obligation of the federal government to provide assets or services to another entity at a determinable date, when a specified event occurs, or on demand.¹⁴

Statement of Federal Financial Accounting Standards (SFFAS) 1, *Accounting for Selected Assets and Liabilities*, defines advances as cash outlays made by a federal entity to its employees, contractors, grantees, or other to cover a part or all of the recipients' anticipated expenses or as advance payments for the cost of goods and services the entity acquires. Examples include travel advances disbursed to employees prior to business trips, and cash or other assets disbursed under a contract, grant, or cooperative agreement before services or goods are provided by the contractor or grantee.¹⁵

SFFAS 5, *Accounting for Liabilities of the Federal Government*, states that:

[24.] A nonexchange transaction arises when one party to a transaction receives value without directly giving or promising value in return. There is a one-way flow of resources or promises. For federal nonexchange transactions, a liability should be recognized for any unpaid amounts due as of the reporting date. This includes amounts due from the federal entity to pay for benefits, goods, or services¹⁶ provided under the terms of the program, as of the federal entity's reporting date, whether or not such amounts have been reported to the federal entity (for example, estimated Medicaid payments due to health providers for service that has been rendered and that will be financed by the federal entity but have not yet been reported to the federal entity).

¹³ SFFAC 5, par. 18.

¹⁴ SFFAC 5, par. 39.

¹⁵ SFFAS 1, par. 57.

¹⁶ SFFAS 5, Footnote [12] Goods or services may be provided under the terms of the program in the form of, for example, contractors providing a service for the government on the behalf of the disaster relief beneficiaries.

[25] Many grant and certain entitlement programs are nonexchange transactions. When the federal government creates an entitlement program or gives a grant to state or local governments, the provision of the payments is determined by federal law rather than through an exchange transaction.

SFFAS 5 requires that for grant programs, the liability that should be reported includes the amount of allowable expense that the grantees have incurred as of the end of the period, but have not collected from the agency. Complying with SFFAS 5 requires that the agency estimate the amounts not reported by the grantee but due to the grantee as of the reporting date. When the grantee has submitted subsequent reports providing the grantee's actual costs, the federal agency will be able to assess the grantee reports for accuracy and/or analyze the agency's previous estimate for accuracy.

SFFAS 3, *Accounting for Inventory and Related Property*, "Materiality" section, states that:

[7.] The Board intends that the standards' application be limited to items that are material. "Materiality" has not been strictly defined in the accounting community; rather, it has been a matter of judgment on the part of preparers of financial statements and the auditors who attest to them. The Board proposes relying on the Financial Accounting Standards Board's (FASB) concept as modified by certain concepts expressed in governmental auditing standards. Presented below is the Board's position on the issue of materiality at this time.

[8.] The accounting and reporting provisions of the Board's accounting standards need not be applied to immaterial items. The determination of whether an item is immaterial requires the exercise of considerable judgment, based on consideration of specific facts and circumstances.

[9.] FASB's Statement of Accounting Concepts No. 2, "Qualitative Characteristics of Accounting Information," discusses the concept of materiality. According to this statement, the determination of whether an item is material depends on the degree to which omitting or misstating information about this item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement. This concept includes both qualitative and quantitative considerations. An item that is not considered material from a quantitative standpoint may be considered qualitatively material if it would influence or change the judgment of the financial statement user.

[10.] The Board believes that FASB's definition of materiality is generally appropriate for use in applying the accounting and reporting provisions of the Board's accounting standards. In the federal government environment, however, the definition is extended to apply to all financial information included in the annual financial report and, therefore, is not limited to the principal schedules and related notes.

[11.] In applying the concept of materiality, the needs of the users of the annual financial report should also be considered. In the federal government environment, such needs generally differ from those of users of commercial entity financial statements. For example, federal government financial statement user needs extend to having the ability to assess the efficiency and the effectiveness of the entity's programs. Further, compliance with budget and other finance-related laws, rules, and regulations is also a significant consideration of such users.

[12.] This is expressed well in the Government Auditing Standards (the "Yellow Book"):

"In government audits the materiality level and/or threshold of acceptable risk may be lower than in similar-type audits in the private-sector because of the public accountability of the entity, the various legal and regulatory requirements, and the visibility and sensitivity of government programs, activities, and functions." (Ch. 3, par. 33.)

[13.] While this standard applies to an auditor's evaluation of materiality rather than a preparer's, it does provide insight into the factors affecting materiality in the federal government.

[14.] Therefore, the accounting and reporting provisions of the Board's recommended standards should be applied to all items that would influence or change the users' judgments of the entity's efficiency and the effectiveness and its compliance with laws and regulations in a material manner.

[15.] In order to emphasize that materiality should be considered in applying all accounting standards, the Board has decided to place a notice at the end of each recommended accounting standard. The notice will read as follows:

Technical Release 13: Implementation Guide for Estimating the Historical Cost of General Property, Plant, and Equipment

Status

Issued	June 1, 2011
Effective Date	Upon issuance
Affects	None.
Affected by	Technical Release 17.

Summary

This technical release addresses the historical cost estimating of G-PP&E. The guide provides direction on types of estimating methodologies and the documentation to support the valuation estimates of G-PP&E. This guidance provides a foundation for preparers to exercise judgment in formulating those estimates. The examples outlined illustrate the use of various estimating methodologies to derive the historical cost of G-PP&E in accordance with existing guidance permitting use of estimates.

Table of Contents

	Page
Summary	1
Technical Guidance	3
Appendix A: Basis for Conclusions	16
Appendix B: Abbreviations	18

Technical Guidance

Paragraphs 1 through 10 were rescinded by Technical Release 17.¹

Scope

- 10A. Readers of this Technical Release (TR) should first refer to the hierarchy of accounting standards in Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This TR supplements the relevant accounting standards but is not a substitute for and does not take precedence over the standards.
- 10B. SFFAS 6, *Accounting for Property, Plant, and Equipment*, (as amended) provides that reasonable estimates may be used to establish historical cost of general property, plant, and equipment (PP&E) in accordance with the asset recognition and measurement provisions within SFFAS 6. This is also applicable to internal use software when the software meets the criteria for general PP&E in accordance with SFFAS 10, *Accounting for Internal Use Software*.
- 10C. SFFAS 50, *Establishing Opening Balances for General Property, Plant, and Equipment: Amending Statement of Federal Financial Accounting Standards (SFFAS) 6, SFFAS 10, SFFAS 23, and Rescinding SFFAS 35*, amended SFFAS 6 to allow a reporting entity, under specific conditions, to apply alternative valuation methods in establishing opening balances for general PP&E.

Effective Date

- 10D. This TR is effective upon issuance.

Examples of Practice

11. The examples outlined in this guide illustrate the use of various estimating methodologies to derive the historical cost of general PP&E in accordance with SFFAS 6, as amended.

¹ Footnote 1 was rescinded by Technical Release 17.

Although the measurement basis for valuing general PP&E remains historical cost, reasonable estimates may be used to establish the historical cost of general PP&E in accordance with the asset recognition and measurement provisions of SFFAS 6, as amended.^{1A}

12. Reasonable estimates may be based on

- a. cost of similar assets at the time of acquisition;
- b. current cost of similar assets discounted for inflation since the time of acquisition (that is, deflating current costs to costs at the time of acquisition by general price index); or
- c. other reasonable methods, including latest acquisition cost and estimation methods based on information such as, but not limited to, budget, appropriations, engineering documents, contracts, or other reports reflecting amounts to be expended.^{2,3,4}

12A. In some cases, the in-service date must be estimated. In estimating the year that the base unit was placed in service, if only a range of years can be identified, then the midpoint of the range is an acceptable estimate of the in-service date.

13. Agency management is responsible for establishing accounting policies, including the methodologies and bases for estimating historical cost. Management is also responsible for maintaining adequate documentation of the sources of data and the application of methodologies used when estimating historical cost. Management should expect to support estimates with verifiable documented information. Adequate documentation of the source of the data and the application of the methodology used will help support management's assertion that the results are in compliance with accounting standards in all material respects.

14. The specific examples in this guidance are how agencies derived estimated historical costs using the following methods:

- a. Deflation of current replacement costs,

^{1A} SFFAS 50, *Establishing Opening Balances for General Property, Plant, and Equipment: Amending Statement of Federal Financial Accounting Standards (SFFAS) 6, SFFAS 10, SFFAS 23, and Rescinding SFFAS 35*, provides for deemed cost to be used for opening balances in some cases. Estimating historical cost is one of several deemed cost valuation methods. This TR addresses the estimation of historical cost and does not address other acceptable deemed cost methods.

² Footnote 2 was rescinded by Technical Release 17.

³ Footnote 3 was rescinded by Technical Release 17.

⁴ Footnote 4 was rescinded by Technical Release 17.

-
- b. Appraisals (with deflation to the year of purchase),
 - c. Expenditures,
 - d. Budgets and appropriations, and
 - e. G-PP&E in possession of Contractors.

Estimates may be based on information such as, but not limited to, budget, appropriations, engineering documents, contracts, or other reports reflecting amounts to be expended.

15. The following examples provide methods used to estimate G-PP&E historical costs. However, the examples are for illustrative purposes only. The examples are not all-encompassing and agencies may identify other more useful and relevant estimating methodologies. The examples are not meant to be step-by-step instructions on how to develop estimating methodologies. Users of this guidance should use the information provided in these examples to develop their own reasonable estimating methodologies. Federal entities implementing this guidance are also encouraged to discuss any new estimation methodologies with their auditors prior to implementation.

EXAMPLE 1 – Deflation of Current Replacement⁵

16. The following example describes an estimation methodology used by Agency A to establish an estimate of the original cost of a building constructed in 1984. Agency A uses the estimated construction cost of the building in present day dollars and then discounts that value back to the year in which the asset was constructed. Agency A takes the current replacement costs of similar items and deflates those costs, through the Consumer Price Index (CPI). Note that other indices from the Department of Labor's Bureau of Labor Statistics also may be appropriate but were not selected for use in this example.

Population of Data

17. The agency determined the cost of replacing the building in its same physical form (with substantially the same materials and design); then the agency used a pricing index to discount the current asset cost to its estimated cost at the time of acquisition or construction.

⁵ Some of the information used in this example was obtained from the Public Sector Accounting Standards Board (PSAB) of the Canadian Institute of Chartered Accountants /Asset Management Newsletter No. 16 (prepared by KPMG).

Assumptions Used

18. The following assumptions were used to estimate the cost of the building and land.
 - a. Land was purchased in 1983 and is appraised at \$1.5 million in 2008.
 - b. A 50,000 square feet building was constructed in 1984, is well maintained and has not received any major betterments except for a 5,000 square foot addition in June 1999.
 - c. 2008 replacement cost of the building was estimated at \$8.5 million (including \$500,000 replacement cost for the addition).
 - d. Expected useful life of the building is 40 years and depreciation would be calculated at year 24 of a 40 year asset.
 - e. CPI is used for deflating cost.⁶

Calculation of Estimate

19. To estimate the original cost of the building in 1984, Agency A multiplied the current replacement cost of the building (\$8.0 million - excluding an addition constructed in 1999) by the CPI (0.4505). Based on this calculation, the deflated cost of the building was approximately \$3.604 million in 1984 dollars. Similar calculations using CPI for the addition and land yielded the estimated historical cost of these components of the property. The calculations are presented below.

Table 1:

	2008 Reproduction Cost	Cost Index 19XX/2008	Estimate of Original Cost
Building	\$8,000,000	.4505	\$3,604,000
Addition	\$500,000	.6960	\$348,000
Total Building	\$8,500,000		\$3,952,000
Land	\$1,500,000	.4100	\$615,000
Total	\$10,000,000		\$4,567,000

⁶ For simplicity the example uses the Consumer Price Index to discount current replacement costs to the year of original purchase or construction. In some cases, the Consumer Price Index may be the only option. However, for some assets a more precise pricing index might be available. For example, the Department of Labor's Bureau of Labor Statistics has an extensive table of indices.

Analysis of Data

20. Once the estimated historical cost of the building was established, the cost was amortized to the 2008 opening balance sheet date using appropriate depreciation rates in order to establish the opening net book value.

Table 2:

At October 1, 2008	Age/Useful Life Years	Estimated Historical Cost	Accumulated Depreciation	Net Book Value
Building	24/40	\$3,604,000	\$2,162,400	\$1,441,600
Addition	9/15	348,000	208,800	139,200
Total Building		3,952,000	2,371,200	1,580,800
Land		615,000	0	615,000
Total		\$4,567,000	\$2,371,200	\$2,195,800

EXAMPLE 2 – Use of Appraisal Information

21. The following example describes an estimation methodology used by Agency B to establish the estimated cost of two vessel classes by the use of third-party appraisals to support asset record adjustments. The example uses estimates obtained from appraisals to validate the value of the vessels and to determine necessary adjustments to Agency B's core accounting system.

Population of Data

22. In order to populate the data for estimation, Agency B performed several of the following procedures.
- a. Agency B conducted a physical inventory to ensure that assets identified for appraisal could still be physically located and were still in service. Physical inventories were conducted using:
 - i. on-site vouching,
 - ii. digital photos with newspaper showing the date and location, or

-
- iii. authorized maintenance or operations applications to confirm existence.
 - b. Agency B reviewed and, if needed, updated date-in-service (DIS) from historical information.
 - c. Agency B determined that records in the accounting system were consistent with the inventory and DIS.
 - d. Agency B ensured that assets within a class were similar in configuration.
 - e. The Agency B program offices were used to gather “technical engineering” information (e.g. type of engines, technical updates).

Assumptions Used

23. The following assumptions were used to estimate the cost of the sea vessels.
- a. Agency B did not provide cost, accumulated depreciation and net book value to appraisers to avoid the possibility that these values might influence the third-party appraisers output. Values are appraised using a deflation factor to year of purchase.
 - b. If there was no DIS for a vessel, an average DIS was determined by using the DIS from the first and last vessels placed in service. The asset’s acquisition cost was then “indexed” by using an appropriate Bureau of Labor Statistics pricing index.
 - c. Appraisal specialist determined appraisal value using a desktop appraisal approach.⁷

Analysis of Data

24. An appraisal report containing an individual valuation (estimated acquisition cost) for each asset as of the identified date of the report or appraised value as of original date in service (contract specific) was provided to Agency B. The agency performed many of the following analytical processes.
- a. An Agency B subject matter expert reviewed and approved appraisal report.

⁷ A “desktop” appraisal is when an appraiser estimates the value of a property without a physical inspection, but uses property records. The desktop approach was used by Agency B for appraisals and cost estimates due to the cost benefits; it is less costly to an agency than a physical inspection appraisal.

- b. If there was no DIS for a vessel, an average DIS was determined by using the DIS from the first and last vessels placed in service. The asset's acquisition cost was then "indexed" by using an appropriate Bureau of Labor Statistics pricing index.
- c. The appraisal/calculated cost was compared to official fixed assets record cost to determine asset cost difference.
- d. Agency B prepared a detailed summary of differences by asset (and class) to compare cost and accumulated depreciation.
- e. The data was reviewed and approved by appropriate Agency B personnel.
- f. Documentation was prepared containing support of the fixed asset adjustments needed.

Calculation of Estimate

25. Agency B then analyzed the financial statement impact of the appraisal process to determine needed adjustments.

Table 3:

ASSET CLASS (#)	Delivery Start Delivery End	System Acquisition Cost per Fixed Asset Records	Appraisal Value less Fixed Asset Records Acquisition Cost	Appraisal Value less Fixed Asset Records Depreciation Expense	Net Change
Vessel Class I (16 VSLS)	FY96 FY04	\$607.9M	\$(60.1)M	\$3.0M	\$(57.1)M
Vessel Class II (65 VSLS)	FY 98 FY06	287.4M	7.6M	(5.7)M	1.9M
Totals		\$895.3M	\$(52.5)M	\$(2.7)M	\$(55.2)M

Once the appraised values were accepted, necessary adjustments were made to the system (asset by asset/lump sum) to determine the estimated historical cost of the vessel classes.

EXAMPLE 3 – Use of Expenditure Information

26. Agency C used the following procedures to estimate its real property values by the use of expenditures. Expenditures were available on a project basis but each project produced multiple assets. The objective was to assign reliable project cost to individual assets based on estimates.

Population of Data

27. Agency C real property personnel first examined their records to determine whether a complete and current inventory of real property by individual project was available. If the specific inventory of a complete project did not exist an inventory would be obtained from project personnel on-site.
28. An Agency C real property work group then obtained a summary of actual capitalized project costs by real property class (i.e., Land, Dams, Levees, Buildings, Grounds, etc.).

Analysis of Data & Calculation of Estimate

29. Once the work group had both a project specific inventory of all real property assets and a breakout of the actual capitalized costs by project and class, they began the process of assigning a value to each asset within a project not to exceed the total project cost. Utilizing all available real estate records, project records, assistance from cost estimating personnel, comparative data at other projects, real estate financial information, operations data, engineer estimates, plus video tapes, photographs, narrative descriptions of the structure and professional judgment the work group either used actual cost or estimated the cost of each asset ensuring the total dollars assigned agreed with the total cost for each project as recorded in Agency C's financial subsystem.

EXAMPLE 4 – Use of Budget and Appropriation Information

30. The following example outlines steps for estimating the historical cost of existing assets using budget and appropriation information.

Assumptions Used

- a. Congress appropriated funds to Agency D in FY 2007 to acquire 9 aircraft.
- b. As of the estimation date, 7 of the 9 aircraft have been delivered.

Analysis of Data & Calculation of Estimate

31. The steps of this process include:
 - a. Verification of existence of the asset acquired.
 - b. Estimation of total historical cost for the asset group

c. Documentation

32. Verification of existence

- a. Prior to delivery, all costs associated with the items were reported in an appropriate asset account. When the asset was delivered it was recorded in an accountability system of record (ASR) and the completed asset was subject to inventory/existence verification.
- b. The asset management system was updated when data on the receipt of the aircraft was sent from the reporting entity's property accountability system of record. The acknowledgment of delivery serves as proof that the aircraft assets were received. Continued existence of the asset was verified through periodic inventories.

33. Estimation of total historical cost for the asset group

- a. The recorded cost of the assets should represent the "historical cost", including costs associated with getting the asset to a form and location suitable for its intended use.
- b. The asset valuation is based on the Budget of the U.S. Government (commonly referred to as the President's Budget request). The Budget and related budget justification materials provided detailed supporting information that facilitated congressional review of budget requests. As the entity is reviewing the budget information for inclusion in the estimate, the entity should also review related information, such as planning documents, to identify other material costs associated with getting the asset to a form and location suitable for its intended use. If material, such costs should be estimated. For simplification of this example, the other associated costs are not shown in the below example.

Table 4 below shows the FY 2007- Funded aircraft cost based on amounts included in the Budget.

Table 4 - Calculations to Determine the Cost of FY 2007-Funded Aircraft (\$ in Millions)	
Procurement cost for 9 aircraft based on budget estimates	\$722.6
Less support equipment*	(81.1)
Total cost for the 9 aircraft	\$641.5
Average cost (\$641.5M ÷ 9)	\$ 71.3 ⁸

*The supporting equipment is subtracted from the aircraft procurement cost in order to capitalize this equipment separate from the cost of the aircraft.

- c. The Agency D Appropriation Act and/or the conference report accompanying it is used to identify the amount of program funding provided by Congress to address requirements identified in the Budget. Amounts appropriated may frequently differ from amounts requested in the Budget. The related congressional committee or conference report on the appropriation may explain the rationale for the change from the amount requested in the Budget.

Table 5 below shows the amount of the congressional appropriation for the aircraft less the value of excluded amounts. Excluded amounts were based on detail included in the Budget.

Table 5 - Appropriation Amount Less Excluded Items for Aircraft (\$ in Millions)	
Provided in FY 2007 Appropriations Act	\$725.0
Less support equipment (Based on budget detail)*	(81.1)
Adjusted appropriated amount for the 9 aircraft	\$643.9
Average cost (\$643.9M ÷ 9)	\$ 71.5

*The funding for support equipment was not separately identified in the appropriation. For cost purposes, the amount included in the Budget estimate (\$81.1M) was used.

- d. Adjustments to funds available to a program may frequently occur over the life of the appropriation. These adjustments, which can increase or decrease available funds,

⁸Valuations based on budget information may need to be revised to address material revisions that occur subsequent to budget submission during the appropriation and funds allocation processes.

result from actions including congressional rescissions and Departmental reprogrammings.

Table 6 below shows the aircraft cost as adjusted to account for a subsequent year Congressional rescission.

Table 6 - Appropriation Amount Less Excluded Items for Aircraft* (\$ in Millions)	
Adjusted appropriated amount for the 9 aircraft	\$643.9
Less Congressional rescission for the aircraft	(9.9)
Total appropriated amount for the 9 aircraft	\$634.0
Average cost (\$634.0M ÷ 9)	\$ 70.4

*The capitalized cost may not exceed the appropriated amount as adjusted by Departmental reprogramming and congressional rescissions, (i.e., the amount shown in Table 6).

34. Documentation

- a. Agency D maintains sufficient and appropriate documentation relating to: (1) existence; (2) cost analysis techniques; (3) data source; and (4) reasonableness of the estimation methodology.

EXAMPLE 5 – G-PP&E in the Possession of Contractors

35. The following example summarizes the procedures used at Agency E for estimating the cost of G-PP&E in the possession of its contractors. This estimate may be used when the agency lacks internal documentation and/or when the cost of reconstructing records using internal documentation is cost prohibitive.
36. Contractors generally follow a process similar to the one described below, when estimating the value of G-PP&E manufactured or acquired for federal agencies, referred to in this example as contractor-held G-PP&E. These acquisitions may be held for use by the contractor, held for use by other contractors, or transferred to a federal entity for its direct use. The values are typically estimated by the contractor first obtaining a Bill of Material (BOM) for every part required to complete the G-PP&E asset being constructed. The BOM can have cost, quantity, part description, raw materials used, etc. Also, Contractors typically add estimated labor cost. This labor value is then added to the BOM cost to derive a total estimated direct cost for the G-PP&E asset. Further, Contractors apply overhead and, when applicable, other indirect markups. The sum total for the asset is the basis used to support GPP&E recorded by Agency E.

-
37. Agency E has procedures in place to provide reasonable assurance that the contractor-provided estimates of the value of manufactured items are reasonable. The processes described below are intended to provide Agency E with relevant, sufficient and reliable information on which to base its estimate of contractor-held G-PP&E.

Population of Data

38. Agency E contractors are required to report information related to acquisitions, fabrications and/or disposals of individual G-PP&E items to Agency E on a regular basis. To facilitate reporting, Agency E utilizes an automated reporting tool, when appropriate, to receive this information from its contractors and maintains control over this information prior to it being entered into the property accounting system.

Analysis of Data

39. Agency E employs a series of controls over the preparation of contractor accounting estimates and supporting data, including assessments and validation procedures that are applied through independent external parties and/or internal agency resources.

External Third Party Procedures

40. When practical and cost effective, Agency E leverages to the extent possible independent assessments performed by external parties. The objective of these assessments is to provide Agency E with reasonable assurance that contractor property, logistics and cost accounting systems comply with federal requirements designed to provide a reasonable estimate of the G-PP&E data.
41. An Agreed upon Procedures (AUP) review of Agency E's major contracts is one example of an independent assessment. The contracts subject to the AUP reviews are selected using a risk-based approach. The AUPs include a review of the contractor's policies, procedures and internal controls relevant to the contractor's cost accounting, logistics and production systems. The intention of the assessments is to validate the accuracy, reliability, existence, and completeness of contractor reported G-PP&E data through an analysis of transaction samples.

Internal Third Party Procedures

42. Agency E's procurement, logistics, project management, and finance personnel also performed oversight and validation activities over contractor estimate submissions on an on-going basis.

-
43. Agency E procurement personnel, for example, oversee the execution of contractor work as required by the contracts in accordance with the FAR. This step is to provide reasonable assurance that the work for which costs are being estimated is being performed as contracted. Agency E contracting officers have a key role in the systems of controls and validation procedures by ensuring that specific clauses are included in the contracts and that contract terms and conditions are adhered to by the contractor.
 44. Agency E logistics personnel, acting as Government Property Administrators, conduct reviews to assess the effectiveness of the contractor's government property management systems.
 45. Program and Project managers review the information provided by contractors against established plans and approve or disapprove contractor reported incurred costs, as appropriate. This critical information supports the reasonableness of contractor provided information.

Calculation of Estimate

46. Agency finance personnel perform reviews of the information reported by contractors prior to recording G-PP&E estimates. Periodic validation procedures may include performing analytical procedures over the account balances to explain period-to-period fluctuations, reconciling the data reported by the contractor to the agency's financial system, tracing activity to supporting documentation, and validating ownership of property.

<p>The provisions of this Technical Release need not be applied to immaterial items.</p>
--

Appendix A: Basis for Conclusions

- A1. In January 2008, the Accounting and Audit Policy Committee established the General Property, Plant, & Equipment (G-PP&E) task force to assist in developing implementation guidance for federal G-PP&E as it relates to SFFAS 6, *Accounting for PP&E*, SFFAS 23, *Eliminating the Category National Defense Property Plant, & Equipment*, and other related G-PP&E Guidance developed by the FASAB. The task force included federal agency representatives who were experiencing G-PP&E implementation issues and those who have G-PP&E implementation best practices to share with the federal community.
- A2. The G-PP&E task force was divided into four subgroups that addressed a set of related issues. The subgroups met separately on a regular basis to discuss their set of issues and reported back to the full task force on its progress towards the development of implementation guidance. The four sub-groups were:
- G-PP&E Acquisition
 - G-PP&E Use
 - G-PP&E Disposal
 - G-PP&E Records Retention
- A3. This guidance was developed by the Acquisition subgroup. The subgroup included members from the following federal agencies:
- Department of Defense
 - Department of Energy
 - Department of the Interior
 - Government Accountability Office
 - General Services Administration
 - National Aeronautics and Space Administration
- A4. The purpose of this implementation guidance is to provide support and direction relative to the types of estimating methodologies and the documentation that could be used to support the valuation estimates as outlined in SFFAS 6, 23, and 35. It does not address the need to validate existence and completeness. This guidance provides a foundation for preparers to exercise judgment in formulating those estimates.
- A5. This implementation guide provides examples that federal entities can use as guidelines when developing G-PP&E estimates of original transactional data historical costs in accordance with the standards.

A6. The AAPC released the exposure draft (ED), *Implementation Guidance for Estimating the Historical Cost of General Property, Plant, and Equipment* on December 10, 2010. Upon release of the ED, notices and/or press releases were provided to: The Federal Register, the *FASAB News*, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, and committees of professional associations commenting on past exposure drafts.

A7. Fifteen letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		2
Auditors	3	
Preparers and financial managers	10	

A8. Respondents were primarily supportive of the examples provided. Some respondents provided editorial suggestions and many were adopted.

Records Retention Requirements Presented in the Exposure Draft

A9. The Committee asked readers of the exposure draft to comment on the proposed recommendations of the AAPC G-PP&E task force -- Records Retention sub-group. No changes were suggested by respondents and these recommendations have now been forwarded to the National Archives and Records Administration (NARA) for consideration. Through its General Records Schedule (GRS) NARA specifies the minimum period for retaining paper and electronic financial records documenting the acquisition of PP&E. The Federal Acquisition Regulation (FAR) also provides guidance for retaining historical cost data. The subgroup was tasked with developing recommendations for the consistent records retention policies specifically for G-PP&E.

A10. The objective of the Records Retention subgroup was to look into the issue of records retention timeframes and methods (hardcopy vs. electronic) for records that support G-PP&E reported in agencies' general purpose financial statements and make cost-beneficial recommendations. The subgroup found that policies varying regarding retention timeframes and the types of records to support assertions related to G-PP&E. The subgroup's research and recommendations were limited to records retention guidance and practices for the G-PP&E category.

Technical Release 14: Implementation Guidance on the Accounting for the Disposal of General Property, Plant, and Equipment

Status

Issued	October 6, 2011
Effective Date	Upon issuance
Affects	None.
Affected by	Technical Release 21.

Summary

This technical release addresses implementation guidance that further clarifies applicable GAAP requirements for the disposal, retirement, or removal from service of general property, plant, and equipment as well as related cleanup costs. This includes but not limited to SFFAS 5, 6, 40, 42 and 44; Interpretation 9; Technical Bulletin 2006-1, 2017-2; and applicable TRs. The implementation guidance should help differentiate between permanent and other than permanent removal from service of G-PP&E assets. The implementation guidance also recognizes the many complexities involved in the disposal of G-PP&E, as well as delineates events that trigger discontinuation of depreciation and removal of G-PP&E from accounting records.

Readers should incorporate both deferred maintenance and repairs (DM&R) guidance and asset impairment (AI) guidance. Specifically, SFFAS 40 and SFFAS 42 will assist entities in defining, measuring, and reporting estimated DM&R costs when G-PP&E assets are disposed, retired, or removed from service. SFFAS 44 will assist entities in determining the existence of any potential asset impairment indicators for any G-PP&E assets remaining in service.

Table of Contents

	Page
Summary	1
Introduction	3
Effective Date	3
Technical Guidance	3
Appendix A: Basis for Conclusions	9
Appendix B: Illustrations	13
Appendix C: Abbreviations	21
Appendix D: Glossary	22

1.-4. Paragraphs 1 through 4 were rescinded by Technical Release 21.

Technical Guidance

Scope

- 4A. Readers of this Technical Release (TR) should first refer to the hierarchy of accounting standards in Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This TR supplements the relevant accounting standards but is not a substitute for and does not take precedence over the standards.

SFFAS 6: Disposal of G-PP&E

5. In accordance with SFFAS 6 paragraph 38, "in the period of disposal, retirement, or removal from service, general PP&E^A shall be removed from the asset accounts along with associated accumulated depreciation/amortization." When G-PP&E assets are disposed of, retired, or removed from service, deferred maintenance and repair (DM&R) estimates as defined and required by SFFAS 40 and SFFAS 42, respectively, should be re-estimated to the extent such estimated costs are related to the G-PP&E assets disposed of, retired, or removed from service.^B Additionally, to the extent any portion of a G-PP&E asset is not disposed of, retired, or otherwise continues to remain in service, SFFAS 44 should be consulted to ascertain whether partial impairments should be accounted for and reported, including additional DM&R information when necessary, such as changes in DM&R exclusions.

Further, paragraph 39 (**bold added**)¹ states that:

^A Technical Bulletin 2017-2, *Assigning Assets to Component Reporting Entities*, provides that assets may be assigned by a reporting entity to its component reporting entities on a rational and consistent basis.

^B For example, in situations where DM&R costs are estimated for an asset group and a component (or components) of that group is disposed of, retired, or removed from service, the DM&R re-estimate should be performed only for the assets remaining in the group.

¹ Terms defined in the Glossary are shown in bold-face type the first time they appear.

General PP&E shall be removed from general PP&E accounts along with associated accumulated depreciation/amortization, if prior to disposal, retirement or removal from service, it no longer provides service in the operations of the entity. This either could be because it has suffered damage, becomes **obsolete** in advance of expectations, or is identified as **excess**. It shall be recorded in an appropriate asset account at its expected **net realizable value**. Any difference in the book value of the PP&E and its expected net realizable value shall be recognized as a gain or a loss in the period of adjustment. The expected net realizable value shall be adjusted at the end of each accounting period and any further adjustments in value recognized as a gain or a loss. However, no additional depreciation/amortization shall be taken once such assets are removed from general PP&E in anticipation of disposal, retirement, or removal from service.

SFFAS 6: Recognition of Cleanup Costs Associated with Disposal of G-PP&E

6. Additionally, SFFAS 6 provides requirements for recognition and measurement of disposal related cleanup costs.^{1A}

A portion of estimated total cleanup costs shall be recognized as expense during each period that general PP&E is in operation. This shall be accomplished in a systematic and rational manner based on use of the physical capacity of the associated PP&E (e.g., expected usable landfill area) whenever possible. If physical capacity is not applicable or estimable, the estimated useful life of the associated PP&E may serve as the basis for systematic and rational recognition of expense and accumulation of the liability.

Recognition of the expense and accumulation of the liability shall begin on the date that the PP&E is placed into service, continue in each period that operation continues, and be completed when the PP&E ceases operation.

^{1A} Interpretation 9, *Cleanup Cost Liabilities Involving Multiple Component Reporting Entities: An Interpretation of SFFAS 5 & SFFAS 6*, provides clarification and guidance regarding cleanup cost liabilities for component reporting entities when the component reporting entity responsible for reporting on an asset during its useful life is different from the component reporting entity that will eventually be responsible for settling the liability for the cleanup cost of that asset.

Other than Permanent vs. Permanent Removal from Service

7. The following section provides further clarification and guidance to the requirements stated in SFFAS 6, paragraphs 38, 39, 97, and 98 as those paragraphs relate to “removal from service.” The terms “disposal” and “retirement” are used in the above referenced SFFAS 6 paragraphs and are intended to describe G-PP&E disposals that are permanent in nature. However, “removal from service” may or may not be permanent. The paragraph below defines the term “removal from service”, as referenced in SFFAS 6, and further discusses the differences between other than permanent and permanent removal from service. SFFAS 44, *Accounting For Impairment Of General Property, Plant, And Equipment Remaining In Use*, provides guidance on potential impairment for G-PP&E that (1) is other than permanently removed from service or (2) remains in service but with a decline in service utility that is expected to be permanent.
8. “Removal from service”² is defined as an event that terminates the use of a G-PP&E asset (e.g., shut down of a facility). Removal from service may occur because of a change in the manner or duration of use, change in technology or obsolescence, damage by natural disaster, or identified as excess to entity’s mission needs. The removal from service should be considered other than permanent, unless there is evidence of management’s documented decision to permanently remove the asset from service and the asset’s use is terminated.³ Permanent removal from service is evident from management’s documented decision to dispose of an asset by selling, scrapping, recycling, donating or demolishing the asset. An entity’s policies and procedures should require that documentation exists of management’s decision to permanently remove an asset from service.
9. Management’s decision to remove from service is evidenced by the actions taken to commence the retirement and/or disposal process in accordance with the entity’s policies and procedures. Other than permanent removal from service is evidenced by activities such as continuing low-level maintenance to sustain the asset in a recoverable status or until reutilization efforts are exhausted. For example, processing an aircraft or idling a facility in such a way as to retain the potential for its future operability would be persuasive evidence of intent to preserve an option to return the asset to service if warranted by evolving mission requirements.

² The term “removal from service” does not include the “out grant” of an asset. “Out grant” is defined as interest or right granted to another entity to use government property by a lease, easement, license, or permit. Therefore, “removal from service” as defined in this document does not apply to out granted assets, because the government retains its ownership in the property and only the use of the property is given to the entity using the out granted asset.

³ The agency’s management may elect to identify and/or classify the operational status of assets to include those other than permanently removed from service in the property accountability system.

10. Two business events are necessary for the permanent removal from service:

1. Asset's use is terminated, and
2. There is documented evidence of management's decision to permanently remove the asset from service.

If only one of the two business events has occurred, permanent removal from service has not occurred (i.e., considered other than permanent removal). However, in accordance with SFFAS 44, *Accounting For Impairment Of General Property, Plant, And Equipment Remaining In Use*, there could be a change in the G-PP&E reported value for other than permanently removed G-PP&E if an impairment indicator exists, such as changes in the manner or duration of use of G-PP&E or G-PP&E idled or unserviceable for excessively long periods. Depreciation continues on such G-PP&E to the extent not impaired.

Likewise, in the case of G-PP&E cleanup costs, if only one of the two business events has occurred, permanent removal from service has not occurred (i.e., considered other than permanent removal) and, any cleanup costs associated with disposal, closure, and/or shutdown should continue to accumulate as a liability in accordance with relevant GAAP.

Financial Accounting Transactions

11. The following section describes the financial accounting transactions that result from permanent removal, retirement, and/or disposal of G-PP&E. No disposal related entries are recognized prior to permanent removal from service.
12. G-PP&E Acquisition Cost & Depreciation at Permanent Removal - When the entity's management decides to permanently remove, retire, and/or dispose of an asset from service and the asset's use is terminated, the asset's acquisition cost and associated accumulated depreciation are removed from the G-PP&E account and the asset is recorded at its net realizable value with an offsetting entry to gain or loss.⁴ Upon completion of the disposal of the asset, the entity should write off the asset from its financial records. Any difference between the expected net realizable value of the G-PP&E previously recorded and the actual disposition amount should be recognized as a gain or loss.
13. Spare Parts and Subcomponents - If during the permanent removal process, the asset is disassembled and spare parts or sub-components are salvaged to be used for other purposes, the spare parts or sub-components should be recorded as new and separate assets in accordance with SFFAS 6 or SFFAS 3, *Accounting for Inventory and Related Property*.

⁴ Refer to Appendix B: Table 1: Scenarios I & II, Step 2 for account transactions.

-
14. G-PP&E Acquisition Cost & Depreciation at Other than Permanent Removal - If the asset's normal use is terminated but management has not decided to permanently remove the asset from service, the asset's removal is considered other than permanent. In this case, there is no change in the G-PP&E reported value and depreciation continues.⁵ Likewise, if the asset is still in use even though management has decided to permanently remove, retire and/or dispose of the asset, the permanent removal from service has not occurred. There is also no change in the G-PP&E reported value and depreciation continues.⁶
 15. G-PP&E Cleanup Costs⁷ - For assets permanently removed from service, the cleanup cost liability associated with the disposal, closure, and/or shutdown of the G-PP&E should be recognized in full. If removal from service is considered other than permanent, the liability and associated clean up cost expense shall continue to accumulate.⁸
 16. G-PP&E Disposal When Group or Composite Depreciation is Used - G-PP&E subject to a group or composite method of depreciation should only apply the accounting transactions outlined in paragraph 12 when the entire group has been permanently removed from service (e.g., as if the entire group were one asset). Under the group or composite depreciation methods, no gain or loss is recognized on the sale of an asset within the group prior to removal of all assets in the group. The pro rata share of the total original group cost may be used to determine the cost of an asset within the group.
 17. Table 1 in Appendix B illustrates two different scenarios, associated business events, and derived financial transactions to assist in interpretation and application of the guidance described in paragraphs - 11-15.
 18. The appendices (that include non-authoritative illustrations and examples) of TR 14 are not updated for amendments.^{8A} Therefore, readers are cautioned to refer to the paragraphs

⁵ Refer to Appendix B: Table 1, Scenario I, Step 1.

⁶Refer to Appendix B: Table 1, Scenario II, Step 1.

⁷ SFFAS 6, paragraph 85: Cleanup costs are the costs of removing, containing, and/or disposing of (1) hazardous waste from property, or (2) material and/or property that consists of hazardous waste at permanent or temporary closure or shutdown of associated PP&E.

⁸Regardless of when cleanup is executed, at temporary or permanent shut down, as cleanup costs are paid, payments shall be recognized as a reduction in the liability for cleanup costs. (SFFAS 6, paragraph 100)

^{8A} The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent pronouncements that amend a pronouncement. For example, within the text of a Technical Release, the guidance sections are updated for changes. However, appendices are not updated to reflect subsequent changes. The reader can review the basis for conclusions of the amending pronouncements for the rationale for each amendment.

above for guidance that could impact the accompanying non-authoritative illustrations and examples.

19. This TR is effective upon issuance.

The provisions of this Technical Release need not be applied to immaterial items.

Appendix A: Basis for Conclusions

- A1. In January 2008, the Accounting and Audit Policy Committee established the General Property, Plant, & Equipment (G-PP&E) task force to assist in developing implementation guidance for federal G-PP&E as it relates to SFFAS 6, *Accounting for Property, Plant, and Equipment*, SFFAS 23, *Eliminating the Category National Defense Property Plant, & Equipment*, and other related G-PP&E Guidance developed by the FASAB. The task force included federal agency representatives who were experiencing G-PP&E implementation issues and those who have G-PP&E implementation best practices to share with the federal community.
- A2. The G-PP&E task force was divided into four subgroups that addressed a set of related issues. The subgroups met separately on a regular basis to discuss their set of issues and reported back to the full task force on its progress towards the development of implementation guidance. The four original subgroups were:
- G-PP&E Acquisition
 - G-PP&E Use
 - G-PP&E Disposal
 - G-PP&E Records Retention

A fifth subgroup (G-PP&E Cost Accounting Issues) was added recently to address the complexities of allocating programmatic, managerial, and administrative costs to G-PP&E.

- A3. This guidance was developed by the Disposal subgroup. The subgroup included members from the following federal agencies:
- Department of Defense
 - Department of Energy
 - Department of the Interior
 - Government Accountability Office
 - General Services Administration
 - National Aeronautics and Space Administration

The subgroup included accountants, program managers, and functional PP&E experts. The program managers gave the subgroup the perspective of how the standards come into play on a day-to-day basis.

- A4. The scope of the implementation guidance is to address G-PP&E disposal as it applies to SFFAS 6. The guide focuses on when G-PP&E is disposed, retired, or removed from service.

-
- A5. This implementation guide provides steps that can be followed to help federal entities consistently apply existing standards in providing consistent and comparable information.
- A6. In reaching its conclusions, the subgroup deemed significant the unanimous agreement of its members that SFFAS 6 as currently written applies only to permanent removal from service of G-PP&E assets. Because some G-PP&E is removed from service in other than a permanent manner there are inconsistencies in interpretation and implementation of the guidance. The subgroup members presented numerous compelling examples of misinterpretation, confusion, and inefficient implementation. The subgroup was convinced that guidance is needed to clarify when G-PP&E has been removed from service as envisioned in SFFAS 6.
- A7. Additionally, subgroup members universally felt strongly that the implementation guidance should consider the cost vs. benefits of the many complexities involved in G-PP&E disposal, retirement, or removal from service and recognize the potential for reversing disposal decisions as mission requirements change. Therefore, the subgroup members decided to focus on permanent removal from service and ultimately continuing to depreciate and report assets as GPP&E that are other than permanently removed from service. The following reasons were discussed:
- a. Depreciation is a method of allocating the cost of the asset to those periods expected to benefit from use of the asset. When assets are other than permanently removed from service, there is a great possibility of returning the assets to service; therefore management continues to maintain the assets in a mission ready status and the assets are available for use. Given this, the entity should continue depreciating its assets.
 - b. The subgroup members determined that the complexity and cost of continually suspending and reinstating depreciation for assets other than permanently removed from service outweighs the benefits. Further, SFFAS 6 does not provide guidance for the recognition of assets returned to service following other than permanent removal.
 - c. Current guidance requires depreciation to be captured until the asset is either fully depreciated or permanently removed from service. In the cases where an entity depreciates its G-PP&E based on actual usage or production, the depreciation expense for the entity would stop when the asset is not in use. For example, an agency can decide to use a depreciation method, such as flying hours, that would account for an asset's 'lack of activity.'
 - d. Changes in value or useful lives of assets remaining in service regardless of the reason (e.g. impairment) are outside of the scope of this document.

- A8. The benefits of this guidance are: (1) it facilitates comparable implementation of federal accounting standards; and (2) it supports federal financial reporting objectives including the assessment of the performance of agencies in managing the cost and disposition of federal assets.
- A9. As part of the implementation of this guide, the federal agencies may incur additional costs to: (1) review and adjust the expected net realizable value at the end of each accounting period and any further adjustments in value recognized as a gain or a loss; (2) periodically review the status of those assets in the other than permanently removed from service group, but not all PP&E, to determine if any changes in status or actions would trigger a change in G-PP&E recognition; and (3) demonstrate and support management's intent to retain an asset for future use or permanently dispose of the asset and any associated financial transactions, when applicable.
- A10. The guidance defines "removal from service" as an event that terminates the use of a G-PP&E asset (e.g., shut down of a facility). Management's decision to remove from service is evidenced by the actions taken in accordance with the entity's policies and procedures to commence the retirement and/or disposal process. Permanent removal from service is evident from management's documented decision to dispose of an asset by selling (including selling the asset to another entity for use as its original intended purpose), scrapping, recycling, donating or demolishing the asset. Removal from service may occur because of a change in the manner or duration of use, change in technology or obsolescence, damage by natural disaster, or identified as excess to entity's mission needs.
- A11. The exposure draft, *Implementation Guidance on the Accounting for the Disposal of General Property, Plant, & Equipment*, was issued December 10, 2010, with comments requested by February 11, 2011. Upon release of the exposure draft, notices and press releases were provided to The Federal Register, *FASAB News*, *The Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, *the CPA Letter*, and *Government Accounting and Auditing Update*, The CFO Council, the Council of Inspectors General on Integrity and Efficiency, and the Financial Statement Audit Network, and, committees of professional associations generally commenting on exposure drafts in the past.
- A12. Eighteen letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		3
Auditors	3	2
Preparers and financial managers	10	

-
- A13. Respondents were predominantly supportive of the implementation guidance. Some respondents provided editorial suggestions and many were adopted. One respondent expressed the view that introduction of two key terms – temporary and permanent removal from service – which bifurcate the principles established in SFFAS 6 is inappropriate in a technical release. The AAPC believes SFFAS 6 addresses only permanent removal from service. To avoid introducing the new phrase “temporary removal from service” the guidance proposed in the exposure draft was revised to “other than permanently removed from service.”
- A14. The Technical Release was approved by the AAPC for release to the FASAB for issuance. The Board has reviewed this Technical Release and a majority of its members do not object to its issuance.

Appendix B: Illustrations

Table 1: Disposal, Retirement, Removal Business Events & Financial Accounting Transactions

Table 1 below illustrates two different scenarios, associated business events, and derived financial accounting transactions to assist in interpretation and application of the guidance described in paragraphs 11-15. Further, it demonstrates that both business events (steps 1 and 2) must be in place to trigger a disposal financial transaction in accordance with SFFAS 6. These illustrative financial transactions are considered non-authoritative guidance and are presented to show how the standards may be applied but are not standards themselves. These illustrations are general in nature and may not apply to specific cases that appear similar but have unique circumstances.

Scenarios for SFFAS 6	Business Event	Financial Event	Proprietary Disposal Financial Accounting Transaction For Illustrative Purposes Only ⁹
SCENERIO I: Step 1. Asset's use is FIRST terminated.	Step 1: Asset's use is terminated and removed from service (e.g., asset is vacated, abandoned, or deactivated). At this point the removal from service (<i>termination of use</i>) is deemed other than permanent until management documents that it has decided to permanently retire/dispose of the asset (shown in step 2).	Step 1: No change in the financial status. Continue to carry book value in G-PP&E account and depreciate	None

Scenarios for SFFAS 6	Business Event	Financial Event	Proprietary Disposal Financial Accounting Transaction For Illustrative Purposes Only ⁹
Step 2. LATER management decides to permanently retire and/or dispose of the asset.	Step 2: Management decides to permanently retire and/or dispose of the asset and documents its decision.	Step 2: Reclassify and remove G- PP&E and associated accumulated depreciation from the G-PP&E account. Record asset at the net realizable value. Any difference between the book value of the G-PP&E and the expected net realizable value should be recognized as a gain or a loss. Recognize any unallocated/unamortized portion of the total estimated cleanup costs.	Debit GPP&E Permanently Removed but not yet Disposed Debit Accumulated Depreciation on Improvements to Land Debit Accumulated Depreciation on Buildings, Improvements, and Renovations Debit Accumulated Depreciation on Other Structures and Facilities Debit Accumulated Depreciation on Equipment Debit Accumulated Depreciation on Assets Under Capital Lease Debit Accumulated Amortization on Leasehold Improvements Debit Losses Credit Gains Credit Land and Land Rights Credit Improvements to Land Credit Buildings, Improvements, and Renovations Credit Other Structures and Facilities Credit Equipment Credit Assets Under Capital Lease

Debit Fund Balance With Treasury Debit Accounts Receivable Debit Losses on Disposition of Assets Credit GPP&E Permanently Removed but not yet Disposed Credit Gains on Disposition of Assets

⁹Any combination of these accounts could be recorded depending on the specifics of the individual transactions. For further guidance on account transactions, numbers and definitions, please refer to USSGL Treasury Financial Manual (TFM) at http://www.fms.treas.gov/ussgl/tfm_releases/09-02/2010/part2_current.html.

Example of Practice

- B1. The example of practice shown in the following table is for illustrative purposes only. The explanations and illustrations are presented to show how the standards may be applied but are not standards themselves. These illustrations are general in nature and may not apply to specific cases that appear similar but have unique circumstances.
- B2. The table illustrates a federal entity's various actions that may be considered as evidence of its management's decision to either permanently remove, retire, and/or dispose of the asset or to retain the asset for future use (i.e., other than permanent removal from service).
- B3. A federal entity would normally categorize assets that have been removed from service (i.e., use has been terminated) into one of the following three categories:

-
- retain asset for future use,
 - set aside for future disposal, or
 - imminent planned disposal.

B4. A federal entity would normally account for its G-PP&E in accordance with SFFAS 6 as well as the requirements for each category as established by the entity's policies and procedures. The following table outlines the processes the entity may undertake when preparing its G-PP&E for assignment to each of the categories. The actions outlined for categories 2 and 3 may be used as evidence of management's decision to permanently remove the asset from service, terminate its use and dispose of the asset. Once management's decision is identified, using scenarios in Table 1, the relevant financial accounting transactions can be determined and recorded.

Table 2: Illustrations of Management's Actions Demonstrating Decision for Other than Permanent or Permanent Removal/Retirement/Disposal When the G-PP&E is Not in Use

Actions Demonstrating Management's Decision	Category 1	Category 2	Category 3
	Other than Permanent	Permanent	
	Retain for Future Use G-PP&E is not in use	Set Aside for Future Disposal G-PP&E is not in use	Imminent Planned Disposal G-PP&E is not in use
Management			
Declare and report as "Vacant"	X	X	X
Declare and report as "Excess"		X	X
Expend maintenance, sustainment, and repair funds as needed to maintain a watertight asset	X	X	X
Conduct assessment to identify environmental issues		X	X
Complete required disposal documentation		X	X
Maintenance			
Maintain utilities in acceptable condition (i.e., fully functioning)	X		
Winterize plumbing (if required by local weather conditions)	X		
Conduct sufficient grounds maintenance to preclude unsightliness	X	X	X
Maintain security to prevent vandalism and unauthorized use	X	X	X
Retain equipment and spare parts ¹⁰ on asset	X		
Install equipment and conduct maintenance procedures required to preserve interior space	X		

¹⁰Examples of spare parts may include mechanical & electrical repair parts, electronic spares, maintenance assistance modules, and ready service spares.

Decommissioning			
Clean	X	X	
Dispose of excess personal property	X	X	X
Actions Demonstrating Management's Decision	Category 1	Category 2	Category 3
	Other than Permanent	Permanent	
	Retain for Future Use	Set Aside for Future Disposal	Imminent Planned Disposal
	G-PP&E is not in use	G-PP&E is not in use	G-PP&E is not in use
Turn off air conditioning		X	X
Maintain heat to prevent frozen pipes	X		
Disconnect utilities but maintain supply		X	X
Drain water		X	X
Disconnect utilities and remove supply		X	X
Remove air conditioning/heating units/plumbing fixtures for future use or disposal		X	X
Strip asset of attached equipment and spare parts for use on other assets		X	X
Remove all other fixtures and sell if salvageable		X	X
Dismantle asset		X	X
Remove contaminants if identified by environmental assessment.		X	X

Technical Release 15: Implementation Guidance for General Property, Plant, and Equipment Cost Accumulation, Assignment and Allocation

Status

Issued	September 26, 2013
Effective Date	Effective upon issuance
Affects	None.
Affected by	Technical Release 17.

Summary

The implementation guidance promotes an understanding of organizational considerations that affect the application of the standards for general property, plant, and equipment (G-PP&E) except for internal use software. The implementation guidance relates to:

- a) Recognition requirements for programmatic, managerial, administrative, and other elements of program costs incurred during the G-PP&E lifecycle, decisions regarding the granularity of cost information, and acceptable methods for recognizing those costs (i.e., capital costs captured on the Balance Sheet or period expense costs captured on the Statement of Net Costs [SNC]),
- b) The concept of a cost accumulation and allocation decision framework (i.e., acceptable methods of accumulating, assigning, and reporting cost data), and
- c) Management's role in applying the cost accumulation, assignment, and allocation decision framework.

One of the objectives of this Technical Release is to enable federal reporting entities to use a consistent framework to apply existing guidance. The guidance also supports the objectives of ensuring that transactions involving G-PP&E are recorded in accordance with federal accounting standards, and the cost of producing federal financial information, as it relates to establishing the cost of G-PP&E, does not outweigh the benefits derived by the users of the financial information. Lastly, it provides a decision framework flowchart to assist entity management in applying the principles described throughout the Technical Release.

Introduction

Purpose

1. Statement of Federal Financial Accounting Standards 6 (SFFAS 6), *Accounting for Property, Plant, and Equipment*, (as amended) outlines the recognition requirements for general property, plant, and equipment (G-PP&E) except for internal use software. Paragraph 26 states that,

"All general PP&E shall be recorded at cost. Although the measurement basis for valuing general PP&E remains historical cost, reasonable estimates may be used to establish the historical cost of general PP&E, in accordance with the asset recognition and measurement provisions herein. Cost shall include all costs incurred to bring the PP&E to a form and location suitable for its intended use."

The AAPC G-PP&E Cost Accounting Issues Subgroup was developed to address a request for implementation guidance for these requirements.

2. The implementation guidance promotes an understanding of organizational considerations that affect the application of the standards for general property, plant, and equipment (G-PP&E) except for internal use software. The implementation guidance relates to:
 - a. Recognition requirements for programmatic, managerial, administrative, and other elements of program costs¹ incurred during the G-PP&E lifecycle, decisions regarding the granularity of cost information, and acceptable methods for recognizing those costs (i.e., capital costs captured on the Balance Sheet or period expense costs captured on the Statement of Net Costs [SNC]),
 - b. The concept of a cost accumulation and allocation decision framework (i.e., acceptable methods of accumulating, assigning, and reporting cost data), and
 - c. Management's role in applying the cost accumulation, assignment, and allocation decision framework.

In promoting an understanding of the standards it is important to reiterate management's responsibility to consider the six² qualitative characteristics of financial reporting established in Statement of Federal Financial Accounting Concepts (SFFAC) 1. More specifically,

¹In this document, all subsequent references to these costs are collectively referred to as "program costs."

²Understandability, Reliability, Relevance, Timeliness, Consistency, and Comparability (SFFAC 1 paragraph 156)

management should be mindful of comparability when establishing policies and procedures. This framework should aid management in selecting policies which are comparable because they are derived from underlying transactions or organizational characteristics rather than being attributable to preferences.

3. The accounting standards and related basis for conclusions consistently recognize management's role in interpreting and applying generally accepted accounting principles (GAAP) (i.e., management's decision framework) to its respective entity's operational environment. The standards are meant to provide wide-ranging, reasonable, and consistent principles for reporting entities to operate within and to apply, respectively. For example, paragraph 3 of SFFAS 4, *Managerial Cost Accounting Standards and Concepts*, states, "These standards are based on sound cost accounting concepts and are broad enough to allow maximum flexibility for agency managers to develop costing methods that are best suited to their operational environment."
4. Consistent with "management's decision framework" (see Decision Framework Flowchart at **Appendix C**), this Technical Release is intended to reemphasize the "framework" aspect of the managerial cost accounting concepts and standards as they relate to G-PP&E cost accounting and reporting as outlined in SFFAS 6 and SFFAS 4.

Background

5. The Accounting and Auditing Policy Committee (AAPC) G-PP&E Cost Accounting Issue (CAI) subgroup was tasked with identifying and presenting recommendations to the AAPC to address the complexities of allocating program costs to G-PP&E consistent with the role of management's decision framework. This Technical Release (TR) addresses the following three central components of G-PP&E cost accounting and reporting:
 - a. Recognition requirements for programmatic, managerial, administrative, and other elements of program costs incurred during the G-PP&E lifecycle, decisions regarding the granularity of cost information,, and acceptable methods for recognizing those costs (i.e., capital costs captured on the Balance Sheet or period expense costs captured on the Statement of Net Costs [SNC]),
 - b. The concept of a cost accumulation and allocation decision framework (i.e., acceptable methods of accumulating, assigning, and reporting cost data), and
 - c. Management's role in applying the cost accumulation and allocation decision framework.

6. The decision framework is intended to be used as a tool for management to leverage and guide professional judgment in the development and application of policies and practices to account for the cost incurred for G-PP&E in accordance with GAAP. Every entity has unique requirements and needs for financial management information to enable the successful execution of its mission and associated programs. Further, each entity needs varying levels of precision and granularity when allocating costs to end outputs or objectives. Therefore, each entity must assess and establish the appropriate cost benefit threshold for allocating program costs to G-PP&E in accordance with GAAP based on its mission requirements, operating environment, and stakeholder needs. The purpose of the decision framework is to provide guidelines and considerations, founded on a G-PP&E acquisition lifecycle approach, to guide management through the application of the G-PP&E accounting standards within their unique business environment. The decision framework incorporates the inherent application flexibility built into the accounting standards to assist management to reasonably apply the standards in order to appropriately recognize the cost of G-PP&E within their unique operating environment.
7. The decision framework discussed in this Technical Release recognizes that the financial management information needs of stakeholders, both internal and external, vary by entity depending on the entity's characteristics. An entity's revenue source (e.g., appropriated funds, revolving fund, user fee, etc.) significantly impacts the types of and level of cost detail required to be allocated to end assets. For example, entities operating under a fee -for-service or working capital fund structure may have a business need to accumulate and allocate relevant costs at a more granular level to ensure that their pricing models, rates and schedules facilitate the full recovery of costs under a non-appropriated, user-fee model.
8. The following three principles may be used by management to determine their stakeholder's financial management information needs:
 - a. Relevance/usefulness of information (both to internal and external stakeholders);
 - b. Level of precision (e.g., materiality) needed to properly manage and report costs; and
 - c. Cost-benefit of establishing and executing cost assignment processes, methods and tools.³

When applying the principles listed above, management should develop formalized policies and procedures documenting its decisions. Such decisions should be based on an understanding of the entity's mission and operating model and how the entity's stakeholders use the information.

³A [costing] method is economically feasible if the benefits resulting from implementing the method outweigh its costs. It is not advantageous to use a costing method if it requires a large amount of resources and yet produces information of little value to users. (SFFAS 4 paragraph 142)

-
9. The decision framework described in the remainder of this Technical Release provides users with an organized approach for applying the principles described above to support their process for developing entity specific policies and procedures for accumulating, allocating, and reporting the cost of G-PP&E in compliance with relevant accounting standards.
 10. Paragraph 10 was rescinded by Technical Release 17.

Materiality

11. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Scope

12. Readers of this Technical Release should first refer to the hierarchy of accounting standards in SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This Technical Release supplements the relevant accounting standards, but is not a substitute for and does not take precedence over the standards. This Technical Release clarifies but does not change guidance provided in SFFAS 4 or SFFAS 6 (as amended).
13. This Technical Release does not address Internal Use Software. (See instead SFFAS 10, *Accounting for Internal Use Software*.)

Summary of Existing Standards

14. SFFAS 6 Paragraph 26 states:

All general PP&E shall be recorded at cost. Although the measurement basis for valuing general PP&E remains historical cost, reasonable estimates may be used to establish the historical cost of general PP&E, in accordance with the asset recognition and measurement provisions herein. Cost shall include all costs incurred to bring the PP&E to a form and location suitable for its intended use. For example, the cost of acquiring property, plant, and equipment may include:

-
- amounts paid to vendors;
 - transportation charges to the point of initial use;
 - handling and storage costs;
 - labor and other direct or indirect production costs (for assets produced or constructed);
 - engineering, architectural, and other outside services for designs, plans, specifications, and surveys;
 - acquisition and preparation costs of buildings and other facilities;
 - an appropriate share of the cost of the equipment and facilities used in construction work;
 - fixed equipment and related installation costs required for activities in a building or facility;
 - direct costs of inspection, supervision, and administration of construction contracts and construction work;
 - legal and recording fees and damage claims;
 - fair value of facilities and equipment donated to the government; and
 - material amounts of interest costs paid [FN 16: "Interest costs" refers to any interest paid by the reporting entity directly to providers of goods or services related to the acquisition or construction of PP&E.]
15. The types of costs assigned to G-PP&E may vary depending on if the asset is purchased as a completed item, is contractor constructed, or is self-constructed. SFFAS 6 specifically states that the costs recorded in G-PP&E should include only those costs that "bring the (G-) PP&E to a form and location suitable for its intended use." These costs may include both direct and indirect costs. However, indirect production costs only occur when G-PP&E are produced or constructed.
16. According to SFFAS 4, paragraph 90, "direct costs are costs that can be specifically identified with an output." [For purposes of this guidance "output" is an item or items of G-PP&E.] A few examples of direct costs noted in SFFAS 6, paragraph 26, are amounts paid to vendors, labor and other direct production costs, an appropriate share of the cost of the equipment and facilities used in the construction work, and direct costs of inspection, supervision, and administration of construction contracts and construction work. The direct costs accumulated and identified as costs incurred to "bring the G-PP&E to a form and location suitable for its intended use" should be assigned to the cost of the G-PP&E item(s). If the direct costs are not identified as costs incurred to "bring the G-PP&E to a form and location suitable for its intended use", then the costs should be expensed or capitalized in accordance with other standards. The item(s) of G-PP&E must meet or will meet the entity's capitalization threshold or other capitalization recognition criteria.
17. Indirect costs are costs that cannot be identified specifically with or traced to a given cost object in an economically feasible way [SFFAS 6, Glossary]. [For purposes of this guidance

"cost object" is an item or items of G-PP&E.] The example of indirect costs noted in SFFAS 6, paragraph 26, is indirect production costs (for assets produced or constructed). The indirect costs identified as costs incurred to "bring the G-PP&E to a form and location suitable for its intended use" should be accumulated, assigned or allocated to the cost of the G-PP&E item(s). If the accumulated indirect costs are not identified as costs incurred to "bring the G-PP&E to a form and location suitable for its intended use" (for example, administrative overheads that do not contribute to bringing the G-PP&E item to a form and location suitable for its intended use), then the costs should be expensed. Note also that if the item(s) of G-PP&E do not (or will not) meet the entity's capitalization criteria (e.g., capitalization threshold) then indirect costs are not a consideration.

18. A fundamental concept presented in this Technical Release is that it is reasonable to expect a difference in the level of granularity that federal entities use to allocate program costs to G-PP&E. Some entities have an inherent business/operational need to assign or allocate costs at a more granular level while others do not. This Technical Release emphasizes the concept that an entity management's role of establishing GAAP compliant policies and processes includes a critical element of flexibility. The flexibility allows management to create and execute policies and procedures that fit within the GAAP framework and align with the respective entity's business/operating model.
19. The below guidance is presented as responses to the three issues, previously identified in this Technical Release, posed as questions. Refer to Appendix D, *Accounting Literature* for a more extensive presentation of accounting literature relevant to this discussion.

Questions & Answers

20. Q1. SFFAS 6, paragraph 26, requires G- PP&E to be recorded at the costs incurred to bring the G-PP&E to a form and location suitable for its intended use. Examples of costs of acquiring G-PP&E are provided. Does management have discretion in applying the cost assignment methods identified in SFFAS 4, paragraph 124, to accumulate acquisition costs?
21. A1. Yes. SFFAS 4 establishes a principle for management to apply. Of particular importance is the emphasis on economic feasibility with regard to direct tracing of costs to outputs. SFFAS 4, paragraph 124, provides that "[in] principle, costs should be assigned to outputs in one of the methods listed below in the order of preference:
 - a. Directly tracing costs wherever economically feasible;
 - b. Assigning costs on a cause-and-effect basis; and
 - c. Allocating costs on a reasonable and consistent basis."

22. Each reporting entity should determine the appropriate detail for the cost accounting processes and procedures used to identify costs incurred to bring the G-PP&E to a form and condition suitable for its intended use per SFFAS 6, paragraph 26. The reporting entity should make this determination based on several factors, to include (SFFAS 4, paragraph 72):

- a. nature of the entity's operations;
- b. precision needed in cost information to meet managerial needs, including cost-recovery decisions;
- c. practicality of data collection and processing;
- d. availability of electronic data handling facilities;
- e. cost of installing, operating, and maintaining the cost accounting processes; and
- f. any specific information needs of management.

23. Q2. How should general management and administrative support be applied in considering the acquisition cost of G-PP&E?

24. A2. Management should consider general management and administrative support costs when identifying the costs to bring the G-PP&E to a form and location suitable for its intended use. Entities may incur indirect costs⁴ that cannot be reasonably allocated to programs, segments, or outputs including G-PP&E acquisition. Because reporting entities have different organizational structures and missions, there will be differences in the level of allocation of such costs across all outputs including item(s) of G-PP&E. SFFAS 4, paragraph 92, explains that:

A reporting entity and its responsibility segments may incur general management and administrative support costs that cannot be traced, assigned, or allocated to segments and their outputs. These unassigned costs are part of the organization costs, and they should be reported on the entity's financial statements (such as the Statement of Net Costs) as costs not assigned to programs.

25. Q3. How does the principle of "non-production costs" apply in considering the acquisition cost of G-PP&E?

26. A3. SFFAS 4, paragraph 104, explains that:

A responsibility segment may incur and recognize costs that are linked to events other than the production of goods and services. Two examples of these non-production costs were discussed earlier: (1) Other Post-Employment Benefits

⁴Indirect production costs only occur when G-PP&E are produced or constructed.

(OPEB) costs that are recognized as expenses when an OPEB event occurs, and (2) certain property acquisition costs that are recognized as expenses at the time of acquisition. Other non-production costs include reorganization costs, and nonrecurring cleanup costs resulting from facility abandonments that are not accrued. Since these costs are recognized for a period in which a particular event occurs, assigning these costs to goods and service produced in that period would distort the production costs. In special purpose cost studies, management may have reasons to determine historical output costs by distributing some of these costs to outputs over a number of past periods. Such distribution may be appropriate when: (a) experience shows that the costs are recurring in a regular pattern, and (b) a nexus can be established between the costs and the production of outputs that may have benefited from those costs.

Non-production costs should not be assigned as G-PP&E acquisition costs, for instance, losses that arise from a natural disaster should not be attributed to G-PP&E acquisition costs even if the assets damaged are those being used to construct the G-PP&E. For example, if cranes used in constructing a building are completely destroyed in a hurricane, the cost of such damage should be treated as non-production costs and not as costs incurred to bring the building to a form and location suitable for use.

Summary of Illustrations

27. The decision framework supports development of accounting policies and practices appropriate to each organization's characteristics in accordance with GAAP. The framework is meant to provide parameters or principles for reporting entities to consider in developing organizational accounting policies and practices that will best support their operating models, provide the financial information necessary to manage programs, and report in accordance with GAAP. Reporting entities should report the full costs of outputs in the general purpose financial reports. Full costs may be expensed or capitalized in accordance with GAAP and based on each entity's accounting policies and practices.
28. This Technical Release provides examples of three different agencies applying the framework (**see Appendix B** for examples), which demonstrate GAAP compliant G-PP&E cost accumulation and allocation methodologies appropriate for unique organizational characteristics including operating models.

Effective Date

29. This Technical Release is effective upon issuance.

The provisions of this Technical Release need not be applied to immaterial items.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by AAPC members in reaching the conclusions in this Technical Release. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The guidance enunciated in this Technical Release—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

Project History

- A1. In January 2008, the Accounting and Audit Policy Committee established the General Property, Plant, & Equipment (G-PP&E) task force to assist in developing implementation guidance for federal G-PP&E as it relates to SFFAS 6, *Accounting for Property, Plant, & Equipment*, SFFAS 23, *Eliminating the Category National Defense Property Plant, & Equipment*, and other related G-PP&E guidance developed by the FASAB. The task force includes federal agency representatives who are experiencing G-PP&E implementation issues and those who have G-PP&E implementation best practices to share with the federal community.
- A2. The G-PP&E task force was divided into four subgroups to address a set of related issues. The subgroups have met separately to discuss their set of issues and report back to the full task force on its progress towards the development of implementation guidance. The four sub-groups are
- G-PP&E Acquisition
 - G-PP&E Use
 - G-PP&E Disposal
 - G-PP&E Records Retention
- A3. A fifth subgroup, the G-PP&E Cost Accounting Issues (CAI), was later added to address the complexities of allocating programmatic, managerial, and administrative costs to G-PP&E. The subgroup's primary objective was to reinforce the FASAB's provisions for Federal reporting entities to apply a reasonable level of management interpretation and flexibility, within the standards, to their G-PP&E financial recording and reporting processes. The subgroup's objectives did not include prescribing specific types of costs that should be included in the capitalized cost of an asset.
- A4. This proposed guidance was developed by the CAI subgroup. The subgroup included industry representatives from several public accounting and consulting firms as well as representatives from the following federal agencies

-
- Department of Defense (DoD) (including the individual military departments)
 - Department of Homeland Security (DHS)
 - Federal Aviation Administration (FAA)
 - General Services Administration (GSA)
 - National Aeronautics and Space Administration (NASA)
 - National Reconnaissance Office (NRO)
 - Office of the Director of National Intelligence (ODNI)
 - United States Bureau of Reclamation (USBR)
- A5. The subgroup developed the Asset Acquisition Lifecycle Phases (AALP) data call for the task force member agencies' representatives to complete and submit to the subgroup for consolidation and discussion. The data call was designed to highlight the commonalities across the federal G-PP&E acquisition process and to use those commonalities to outline a general acquisition decision framework to assist agencies with accounting for G-PP&E costs in accordance with GAAP.
- A6. The data call also focused on identifying the cost activities that occur in each AALP, the accounting treatments assigned to those activities, and the rationale for management's accounting policy that drives those cost accumulation and allocation determinations. Management's ability to document and implement a reasonable and consistent approach is a critical component of supporting management's application of GAAP.
- A7. In reaching its conclusions, the subgroup recognized the need to develop implementation guidance to address the complexities of allocating programmatic, managerial, and administrative costs to G-PP&E. The subgroup felt that clarification of this issue is especially critical given the ongoing and significant efforts and resources that many federal entities such as the DOD, DHS, and IC are expending to obtain and maintain unqualified audit opinions. There are a number of cost beneficial and reasonable changes (e.g., policies, systems, and processes) that federal entities can and should make in order to facilitate better financial management and reporting. However, entity management must be allowed to navigate within the parameters of GAAP to determine the point at which the costs of improving or providing financial information outweigh the derived benefits.
- A8. The decision framework discussed in this Technical Release recognizes that the financial management information needs of stakeholders, both internal and external, vary by entity. The agency-specific examples (detailed in Appendix B) demonstrate how G-PP&E cost accumulation methodologies may be tailored to different operating models and still be in accordance with GAAP. The implementation guidance does not provide a one-sized fits all solution, instead it is designed to give management a framework on which to base their stakeholder financial management information needs. The framework comprises the following three principles:

- a. Relevance/usefulness of information (both to internal and external stakeholders);
- b. Level of precision (e.g., materiality) needed to properly manage and report costs; and
- c. Cost-benefit of establishing and executing cost assignment processes, methods and tools.

A9. One of the objectives of this Technical Release is to enable federal reporting entities to use a consistent framework to interpret existing guidance given the flexibility it provides. The proposal also supports the objectives of ensuring that (1) transactions involving G-PP&E are recorded in accordance with federal accounting standards, and (2) the cost of producing federal financial information, as it relates to establishing the cost of G-PP&E, does not outweigh the benefits derived by the users of the financial information. Lastly, it provides a decision framework flowchart to assist entity management in applying the principles described throughout the Technical Release.

Responses to the Proposal

A10. The AAPC received 15 response to the exposure draft from the following sources:

Table 1.0 - - Types of Respondents

	Federal (Internal)	Non-federal (External)
Users, academics, others		2
Auditors	0	2
Preparers and financial managers	11	

A11. The AAPC considered responses to the exposure draft at its July 11, 2013, public meeting. The AAPC did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The AAPC considered the arguments in each response and weighed the merits of the points raised.

A12. Of the 15 responses, 14 supported the proposal. Of the remaining 1, offered comments.

AAPC & Board Approval

A13. The Technical Release was approved by the AAPC for release to the FASAB for issuance. The Board has reviewed this Technical Release and a majority of its members do not object to its issuance. Written ballots are available for public inspection at the FASAB's offices.

Appendix B: Illustrations

The examples in this Appendix are illustrative only; they do not represent authoritative guidance. These illustrations only depict a portion of the entities' operations and the inclusion of an illustration in this Technical Release does not mean the acceptance of the entities' policies by the FASAB or the AAPC.

Illustrations - Asset Acquisition Lifecycle Phases (AALP)

B1. The subgroup defined the AALPs to highlight the commonalities across the federal PP&E acquisition process and to use those commonalities to outline a general acquisition decision framework to assist agencies to account for G-PP&E costs in accordance with GAAP. Note that the AALP and illustrations reflect practices as of the Technical Release date and are not updated for changes that may have occurred since. The five generic AALPs are as follows: 1) Preliminary Research and Development (R&D) - Concept Exploration, 2) Intermediate R&D -Concept Development, 3) Advanced R&D - Concept Design and Development, 4) Production - Asset Development and "In-service" Placement, and 5) Operations and Maintenance. Table 1 (below) lists the five generic AALPs, for several task force member agencies' corresponding phases, the subgroup's AALP descriptions, examples of activities that may indicate transition from one AALP to another [phase indicators (examples)] and general accounting treatments that apply to activities in each AALP.

Table 1: Agency Summary Examples: Asset Acquisition Lifecycle Phases

Generic Subgroup AAPL Titles	Task Force Member Agency	Task Force Member Agency Phase Titles Used	Generic Subgroup AAPL Descriptions
Phase 1: Preliminary R&D - Concept Exploration	DoD	Material Solution Analysis	Decision R&D activities directed at an identifiable current or emerging resource requirement(s).
	FAA	Mission Analysis Phase	
	GSA	Identification Phase	
	NASA	Pre-Formulation (Concept Studies)	
	NRO	Concept Studies	
Phase 1 Indicators (Examples): Concept, feasibility, and trade studies.			
Phase 1 General Accounting Treatment: Expensed in the period incurred.			

Generic Subgroup AAPL Titles	Task Force Member Agency	Task Force Member Agency Phase Titles Used	Generic Subgroup AAPL Descriptions
Phase 2: Intermediate R&D -Concept Development	DoD	Technology Development	Targeted R&D activities that build upon the prior phase's Decision R&D activities and are directed at an identifiable current or emerging resource requirement(s).
	FAA	Investment Analysis Phase	
	GSA	Pre-Award Phase	
	NASA	Formulation (Preliminary Design and Technical Completion)	
	NRO	Concept Development	
Phase 2 Indicators (Examples): Investment analysis and review of alternatives. Phase 2 General Accounting Treatment: Expensed in the period incurred.			
Phase 3: Advanced R&D - Concept Design and Development	DoD	Engineering and Manufacturing Development	R&D closeout and the genesis of asset development activities.
	FAA	Solution Development	
	GSA	Award	
	NASA	Formulation (Preliminary Design and Technical Completion)	
	NRO	Preliminary Design	
Phase 3 Indicators (Examples): Source selection decision and approval for final investment analysis Phase 3 General Accounting Treatment: Mixture of costs that are expensed in the period incurred and those that are capitalized and depreciated or amortized over the useful life of the asset.			
Phase 4: Production - Asset Development and "In-service" Placement	DoD	Production & Deployment (P&D)	Fully-engaged asset development activities.
	FAA	Solution Implementation	
	GSA	Post-Award	
	NASA	Implementation (Final Design, Fabrication, Assembly, Integration & Test, Launch)	
	NRO	Build	
Phase 4 Indicators (Examples): Initiate asset development or acquisition. Phase 4 General Accounting Treatment: Capitalized and depreciated or amortized over the useful life of the asset.			
Phase 5: Operations and Maintenance	DoD	Operations & Support	Activities aimed at maintaining the operability of the entity's assets.
	FAA	In-Service Management	
	GSA	Operation and Maintenance	
	NASA	Implementation (Operation and Sustainment)	
	NRO	Operations	
Phase 5 Indicators (Examples): Asset is placed in service. Phase 5 General Accounting Treatment: Expensed in the period incurred (excluding costs incurred to extend the useful life, enhance existing capabilities, or add new capabilities to the asset).			

Agency Specific Examples: Asset Acquisition Lifecycle Phases

- B2. A given entity may consider certain costs, such as the agency head's office, to be period costs because the activities contribute to the entity's strategic objectives and mission rather than the acquisition of a particular asset. In contrast, another entity may have an operational or business need to allocate the same type of costs to individual assets because such costs are incurred in support of acquiring those assets. Examples from the FAA, GSA, and the NRO are included in this Technical Release to demonstrate how an entity's operating model may affect how management identifies and records certain program costs.⁵ The GSA's operating model requires more granular cost accumulation policies that allocate costs across the many individual assets it is responsible for acquiring. As shown in the following tables, this business need does not exist for the FAA or the NRO, where the mission is not primarily asset acquisition.
- B3. The FAA's mission includes the modernization and improvement of the National Airspace System (NAS) and Research, Engineering & Development (RE&D) activities to improve the safety and effectiveness of the air traffic control system. To support its mission the FAA incurs direct (burden base) and indirect (burden pool) costs. The FAA has developed a burdening process by which management allocates indirect costs to various projects. For example, the FAA "pools" indirect technical support services contract (TSSC) and systems engineering and technical assistance (SETA) costs and uses its burdening process to allocate those costs to capital projects.
- B4. A significant part of the GSA's mission is to serve as a supplier of goods and services to Federal agencies on a reimbursable basis. In this role, the GSA has a business need to capture costs (including overhead and indirect costs) at a very granular level. This permits the GSA to establish rates and develop pricing models that will recoup the full cost of operating under a non-appropriated, user-fee model. The difference in operational requirements results in GSA's personal property capitalization threshold of \$10,000, which is lower than FAA and the NRO thresholds of \$100,000. The GSA's personal property capitalization threshold is reflective of the types and quantities of property acquired by the GSA. This is an example of management's role in establishing internal policies and procedures that fit within the parameters outlined in GAAP and align to the entity's operating model.
- B5. The NRO's G-PP&E cost accumulation and allocation policies and procedures allow the agency to meet the intelligence needs of the Intelligence Community (IC), Department of

⁵SFFAC 1 paragraph 164 states, comparability implies that differences among financial reports should be caused by substantive differences in the underlying transactions or organizations rather than by the mere selection of different alternatives in accounting procedures or practices.

Defense, Department of Homeland Security, and users of intelligence products. Unlike the GSA, the NRO does not operate on a fee-for-service or reimbursable basis. The NRO utilizes cost-plus contractual agreements, which allows them to procure large scale satellite assets, as well as a wide range of professional and technical services that cross multiple PP&E assets and lifecycle phases. This acquisition and funding model contributes to an operating environment which results in a different decision point at which the benefits of achieving more precise cost allocation information are outweighed by the cost to obtain that information.

- B6. The GSA has a business need to accumulate and allocate detailed cost information to ensure that their pricing models, rates and schedules facilitate the full recovery of costs under a non-appropriated, user-fee model. For GSA's real property construction and alteration projects, the cost object is a G-PP&E asset. In contrast, for the FAA and the NRO, the end program objective is enhanced information to meet a mission need. Each of these agencies utilizes their respective operating model as a component in the development and execution of their accounting policies and procedures. The G-PP&E cost accumulation policies and procedures of the FAA and the NRO are primarily related to their respective aerospace services and satellite-driven intelligence missions. The operating environments of these agencies are supported by low volume and high dollar value G-PP&E acquisitions. Consequently, these agencies have differing precision points at which accumulating and assigning costs to G-PP&E assets at a more granular level is ineffective and inefficient.
- B7. The following examples describe the primary differences between these three agencies:
- i. When a project meeting the capitalization threshold is deemed probable and feasible, the GSA will classify certain feasibility costs as eligible for capitalization. At the same time, the FAA and the NRO consider these costs to be period expenses.
 - ii. The GSA capitalizes direct labor cost and various types of allocable indirect labor costs associated with its capital projects. The FAA "pools" indirect TSSC and SETA costs and uses its burdening process to allocate those costs to capital projects.
 - iii. The NRO applies an allocation methodology to costs that are determined to be acquisition management costs (AMCs). AMCs include comingled government program management costs; costs associated with integration and support services provided on SETA, Federally Funded Research and Development Centers (FFRDC) and Contractor Assistance and Advisory Service (CAAS) contracts; directorate-level office support costs; and agency-level general and administrative costs. NRO's cost accounting system and processes do not facilitate direct tracing of AMCs and there is no inherent business or mission need to implement a system or reengineer processes that would do so. The NRO's allocation methodology capitalizes a portion of these AMCs to individual G-PP&E assets.

B8. Tables 2-4 provide a summary-level view of the GSA's, the FAA's, and the NRO's PP&E acquisition lifecycle cost accounting policies and procedures.

Table 2: General Services Administration

Phase	Activity	Recognition	Recognition Basis per Entity Internal Accounting Policies
1	Administrative Costs (Direct) of Developing & Fielding a System	Capitalize	Pre-acquisition Costs. Costs incurred prior to the formal project phase such as costs of feasibility studies, environmental studies, zoning and traffic studies, appraisals, surveys, and various planning and design costs may be capitalized if acquisition or approval of the project is probable and the costs can be directly identified to the project. If at a later date the project is canceled, then the previously capitalized costs are expensed.
2	Design Reviews (e.g., Formal Qualification Reviews, Preliminary And Critical Design Reviews): a. Before Technical Feasibility Has Been Determined. b. After Technical Feasibility Has Been Determined	a. Expense b. Capitalize	
3	Labor Costs During Construction (This includes the GSA's personnel and contract Direct Labor costs as well as Indirect costs allocated to capital projects.)	Capitalize	Capitalized Projects. GSA's real property policy capitalizes projects that acquire land and/or construct new buildings and structures; improve land; or extend the useful life of buildings and their systems; or replace, enhance or upgrade a substantial portion of an asset with additional functionality or capacity. For a project to be capitalized, it must: (1) have a cost of \$50,000 or greater; (2) have a useful life of 2 years or more.
4	Project Management Costs - Baseline and Contractor Administration	Capitalize	
5	General Maintenance	Expense	The GSA considers the costs incurred in this phase inherently an expense.

Table 3: Federal Aviation Administration

Phase	Example Cost Activities	Recognition	Recognition Basis per Entity Internal Accounting Policies
1	Research & Development costs: • Mission Analysis • Identify Projected Demand for Services • Identify Technological Opportunities • Mission Needs Analysis and Assessment • Initial Requirements Definition	Expense	The FAA believes that the costs incurred in this phase are inherently expense.

Phase	Example Cost Activities	Recognition	Recognition Basis per Entity Internal Accounting Policies
2	Research & Development costs: • Investment Analysis • Initial Investment Decision • Final Investment Decision	Expense	The FAA expenses all prototype costs incurred before technological feasibility has been established except for operational feasibility prototypes that will be used in operations if successful..
3	• Solution Development • Program Management • System Engineering • Hardware/Software Design • Physical Airspace (PHYS/AIRSP) Infrastructure • Test and Evaluation • Data/Documentation	Comingled (i.e., Expense and Capitalize)	At the completion of a final investment decision the FAA makes the decision to acquire (develop or purchase) a G-PP&E asset. Based on guidance from the FAA financial manual certain costs will be capitalized and certain costs will be expensed. All qualifying costs necessary to acquire a capital asset, or improve on an existing capital asset, are classified as capital costs. The purchase price and costs incurred to bring an asset to a form and location suitable for its intended use are examples of capital costs. Costs that do not meet these criteria are expensed. The FAA expenses all costs incurred on a first prototype before technological feasibility has been established. After technological feasibility has been established, the subsequent costs of constructing and installing a first prototype are eligible for capitalization.
4	• Implementation • Program Management • Engineering • Environmental/OSHA • Site Selection • Construction • Install and Checkout • Commissioning/Close • Telecommunication • Training	Comingled (i.e., Expense and Capitalize)	See above (Phase 3).
5	• In-Service Management • Program Support • Second Level Engineering	Expense	At the completion of a joint acceptance inspection the asset is in a form and location suitable for its intended use. The FAA believes that the costs incurred in this phase are inherently expense.

Table 4: National Reconnaissance Office

Phase	Activity	Recognition	Recognition Basis per Entity Internal Accounting Policies
1	• Directorate Level Research and Development leading to the initial decision point (i.e., Key Decision Point A ⁶)	Expense	Basic, applied, and advanced R&D costs incurred prior to the secondary decision point (i.e., Key Decision Point B) are expensed.
2	• Costs related to the proposal review and contract award processes	Expense	Basic, applied, and advanced R&D costs incurred prior to Key Decision Point B are expensed.
3	<ul style="list-style-type: none"> • At Key Decision Point B the Director of the NRO signs a Decision Memorandum • Requirement and specification development • Labor costs during construction 	Capitalize	Key Decision Point B triggers the capitalization of costs for development.
	<ul style="list-style-type: none"> • AMCs related to the program acquisition strategy management processes. These costs include: <ul style="list-style-type: none"> 1. Government program management costs, 2. Integration and support contracts for SETA, FFRDC, and CAAS, 3. Directorate level office support, Agency General and administrative costs 	Comingled (Expense and Capitalize)	The NRO uses an allocation methodology by which Acquisition Management Costs (AMC) incurred throughout the entire acquisition lifecycle (excluding the Operations and Maintenance phase) are "bucketed" and allocated to capital and expense accounts based on the proportional percentage of actual, non-AMC capital and expense expenditures incurred throughout the year.
4	<ul style="list-style-type: none"> • Costs related to final design, build, test, and delivery activities 	Capitalize	Development costs continue to be capitalized in this phase.
	<ul style="list-style-type: none"> • Project Management Costs - Baseline and Contractor Administration • AMCs related to the government program management processes 	Comingled (Expense and Capitalize)	See AMC explanation in above Phase 3.
5	• Operations and Maintenance (O&M)	Expense	Initial operating capability (IOC) triggers the expense of costs for operations and maintenance.

⁶ Key Decision Points (KDP) are defined significant milestones in the National Security Space program of the Department of Defense acquisition lifecycle. For example, KDP B is the official program initiation of a National Security Space program of the Department of Defense, which triggers a formal review to determine maturity of technology and the program's readiness to begin the preliminary system design.

Appendix C: Decision Framework Flowchart

- C1. As stated throughout this Technical Release, management should base their financial management information needs on the following three principles:
- a. Relevance/usefulness of information (both to internal and external stakeholders);
 - b. Level of precision (e.g., materiality) needed to properly manage and report costs; and
 - c. Cost benefit of establishing and executing cost assignment processes, methods and tools.
- C2. The decision framework flowchart provides users with an organized approach for applying the principles described above to support their process of developing entity specific policies and practices for accumulating, allocating, and reporting the cost of G-PP&E in compliance with relevant accounting standards.

¹ Refer to *SFFAS 6 paragraphs 17 and 23* for the definition of PP&E and specific characteristics of G-PP&E, respectively.

² The cost of resources directly consumed by an activity. Direct costs are assigned to activities by direct tracing of units of resources consumed by individual activities. A cost that is specifically identified with a single cost object. *FASAB Handbook, Appendix E: Consolidated Glossary.*

³ A cost that cannot be identified specifically with or traced to a given cost object in an economically feasible way. *FASAB Handbook, Appendix E: Consolidated Glossary.*

⁴ Refer to *SFFAS 6 paragraph 6* for a list of **examples** (i.e., not all inclusive) of costs that **may** (i.e., not prescriptive) be included in the full cost of G-PP&E.

⁵ Consider:

- The relevance/usefulness of information to internal and external stakeholders,
- The level of precision needed to properly manage and report costs, and
- The cost-benefit of establishing and executing the alternative cost assignment processes, methods, and tools.

Appendix D: Accounting Literature

Recognition

D1. SFFAS 6 *Accounting for Property, Plant, and Equipment*, paragraph 26 provides the examples below as cost activities that reporting entities may incur in order to bring PP&E to a form and location suitable for its intended use. "For example, the cost of acquiring property, plant, and equipment may include:

- amounts paid to vendors;
- transportation charges to the point of initial use;
- handling and storage costs;
- labor and other direct or indirect production costs (for assets produced or constructed);
- engineering, architectural, and other outside services for designs, plans, specifications, and surveys;
- acquisition and preparation costs of buildings and other facilities;
- an appropriate share of the cost of the equipment and facilities used in construction work;
- fixed equipment and related installation costs required for activities in a building or facility;
- direct costs of inspection, supervision, and administration of construction contracts and construction work;
- legal and recording fees and damage claims;
- fair value of facilities and equipment donated to the government; and
- material amounts of interest costs paid."

The Cost Assignment and Allocation Decision Framework

D2. Office of Management and Budget (OMB) Circular A-136, *Financial Reporting Requirements*: Statement of Net Cost (SNC) introduces the following components of the cost accumulation and allocation decision framework:

- a. **Costs that cannot be assigned to specific programs or outputs** - Section II.4.4, "Statement of Net Cost", The "Components of Net Cost" subparagraph states that: "The statement should include a presentation of the following: (1) Program costs, (2) related exchange revenues, (3) the excess of costs over exchange revenues (net program costs), (4) gain/loss on pension, ORB, or OPEB assumption changes, (5) the

-
- costs that cannot be assigned to specific programs or outputs, and (6) the exchange revenues that cannot be attributed to specific programs and outputs.
- b. **Program level versus output level cost allocation** - Section II.4.4.3 "Gross Program Costs" states that: The reporting entity should report the full cost of each program's output, which consists of (a) both direct and indirect costs of the output, and (b) the costs of identifiable supporting services provided by other segments within the reporting entity and by other reporting entities. The reporting entity should accumulate and assign costs in accordance with the costing methodology in SFFAS No.4. Program costs should also include any non-production costs that can be assigned to the program but not to its outputs.
 - c. **Costs not assigned to programs** - Section II.4.4.7 "Costs Not Assigned to Programs" states that: A reporting entity and its sub-organizations may incur: (a) high-level general management and administrative support costs that cannot be directly traced, assigned on a cause-and-effect basis, or reasonably allocated to segments and their outputs and (b) non-production costs that cannot be assigned to a particular program. These costs are part of the entity and sub-organization costs and should be reported on the SNC as "costs not assigned to programs."

Management's Role in Applying the Cost Accumulation, Assignment, and Allocation Decision Framework

D3. SFFAS 4 *Managerial Cost Accounting Standards and Concepts*⁷ introduces the following components of the cost allocation decision framework:

- a. **Appropriate and consistent cost accumulation, assignment, and allocation** - Costs of resources consumed by responsibility segments should be accumulated by type of resource. Outputs produced by responsibility segments should be accumulated and, if practicable, measured in units. The full costs of resources that directly or indirectly contribute to the production of outputs should be assigned to outputs through costing methodologies or cost finding techniques that are most appropriate to the segment's operating environment and should be followed consistently.

The cost assignments should be performed using the following methods listed in the order of preference: (a) directly tracing costs wherever feasible and economically practicable, (b) assigning costs on a cause-and effect basis, or (c) allocating costs on a reasonable and consistent basis.

⁷SFFAS 4 Text box above paragraph 116.

-
- b. **Factors for management's consideration** - Each reporting entity should determine the appropriate detail for its cost accounting processes and procedures based on several factors. These include the:
- nature of the entity's operations;
 - precision desired and needed in cost information;
 - practicality of data collection and processing;
 - availability of electronic data handling facilities;
 - cost of installing, operating, and maintaining the cost accounting processes; and
 - any specific information needs of management.

Summary

This Technical Release (TR) assists reporting entities in implementing Statement of Federal Financial Accounting Standards (*SFFAS*) 10, *Accounting for Internal Use Software*. Since FASAB issued SFFAS 10 in 1998, software development practices have changed dramatically and reporting entities have experienced challenges applying the standards given the new terminology and techniques that have evolved. The TR provides implementation guidance regarding:

- a. The definition of IUS, component/module based IUS assets, software development practices including approaches that involve phases, and clarifying IUS recognition, measurement, and disclosure items (such as capitalized cost, capitalization cut off, capitalization threshold, enhancement, impairment, and related matters);
- b. New IUS challenges brought by changes in IUS development practices since the issuance of SFFAS 10; and
- c. Management's role in applying SFFAS 10.

This objective of this guidance is to explain how to apply existing standards to the fast changing Internal Use Software (IUS) environment and help ensure that:

- a. Transactions involving IUS are recorded in accordance with federal accounting standards.
- b. The cost of producing federal financial information, as it relates to capitalization or expense of IUS cost, does not outweigh the benefits derived by the users of the financial information.

Introduction

Purpose

1. This Technical Release (TR) assists agencies in applying SFFAS 10, *Accounting for Internal Use Software*, to the new software development practices that have evolved since FASAB issued the standard in October 1998. The TR considers the software development terms and practices that reporting entities utilize currently and helps clarify the standards in light of those terms and practices. Specifically, the TR provides guidance regarding:
 - a. The definition of internal use software (IUS), component/module based IUS assets, software development practices including approaches that involve phases, and clarifying IUS recognition, measurement, and disclosure items (such as capitalized cost, capitalization cut off, capitalization threshold, enhancement, impairment, and related matters);
 - b. New IUS challenges brought by changes in IUS development practices since the issuance of SFFAS 10; and
 - c. Management's role in applying SFFAS 10.
2. This TR introduces new terms used in current development practices and defines them in light of the application of this guidance. It provides a discussion of issues and examples to assist entity management in applying the principles described throughout the TR. The examples were selected because they were derived from underlying transactions or organizational characteristics rather than being attributable to preferences.
3. The accounting standards and related basis for conclusions consistently recognize management's role in interpreting and applying generally accepted accounting principles (GAAP) within its operational environment. This TR recognizes that management is responsible for establishing IUS accounting policies, methodologies, and for maintaining adequate documentation on the sources of data. It also recognizes that the cost of producing federal financial information, as it relates to capitalization or expense of IUS cost, should not outweigh the benefits derived by the users of the financial information.

Background

4. The software development life cycle has dramatically changed since the issuance of SFFAS 10 in 1998. At that time the linear/waterfall¹ software development practices were prevalent

¹ The waterfall model is a sequential design process, used in software development processes, in which progress is seen as flowing steadily downwards (like a waterfall) through the software development phases.

and characterized by three distinct life-cycle phases and long development cycles. Given the changes in development practices, technological advances, and significant new development techniques and architectures,² guidance for implementation and sustainment of SFFAS 10 became critical.

5. This TR introduces new IUS development terms and defines them to aid in applying existing standards. The definitions provided are not all encompassing but are included to promote greater understanding, and more consistent application and implementation of the standards. The same principles used to develop the guidance on the current IUS development practices could be used for future IUS development practices. The business events and deliverables table and agency practice examples are provided in Appendix B. These examples are intended to illustrate use of professional judgment in the development and application of policy and practices to account for IUS in accordance with GAAP. The examples are not all encompassing and reporting entities may identify other more useful and relevant methodologies. Users of this guidance should use these examples to develop their own reasonable business processes.
6. This TR was developed to aid in meeting the operating performance reporting objective identified in Statement of Federal Financial Accounting Concepts (SFFAC) 1, *Objectives of Federal Financial Reporting*, paragraph 14³ : Federal financial reporting should assist report users in evaluating the service efforts, costs, and accomplishments of the reporting entity; the manner in which these efforts and accomplishments have been financed; and the management of the entity's assets and liabilities. Federal financial reporting should provide information that helps the reader to determine:
 - a. The costs of providing specific programs and activities and the compositions of, and changes in, these costs;
 - b. The efforts and accomplishments associated with Federal programs and the changes over time and in relation to costs; and
 - c. The efficiency and effectiveness of the Government's management of its assets and liabilities.
7. [Paragraph 7 was rescinded by Technical Release 17.]

² Such as cloud service, shared service, agile development, and spiral development with a focus on module based development and shorter development cycles.

³ This principle was also relied upon in Office of Management and Budget (OMB) Circular A-11 *Preparation, Submission, and Execution of the Budget*; Supplement to Circular A-11, *Capital Programming Guide* (July 2014), Page 61.

Technical Guidance

Scope

8. Readers of this Technical Release (TR) should first refer to the hierarchy of accounting standards in Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This TR supplements the relevant accounting standards, but it is not a substitute for and does not take precedence over the standards. This TR clarifies but does not change guidance in SFFAS 4, 6 (as amended), and 10.
9. This TR rescinds TR5 *Implementation Guidance on Statement of Federal Financial Accounting Standards 10: Accounting for Internal Use Software*.
10. This TR applies to all internal use software that meet the definition of IUS as described in SFFAS 10 including the following:
 - a. Software to be used in research and development where the software will have an alternate future use
 - b. Software developed separately and installed on a number of different general property, plant, and equipment (PP&E) assets at different times⁴

Applying Existing Standards to Current Development Models

11. **IUS Definition:** SFFAS 10, paragraphs 8 - 9, defines "internal use software" as software that is "purchased from commercial vendors off-the-shelf (COTS), internally developed, or contractor-developed solely to meet the entity's internal or operational needs." The IUS development or modification can be performed by employees of the entity or contractors that the entity is paying to design, program, install, and implement. Software assets need to be evaluated for ownership to determine which entity is ultimately responsible for reporting the asset.

⁴ SFFAS 10, paragraph 22, provides that computer software that is integrated into and necessary to operate general PP&E, rather than perform an application, should be considered part of the PP&E of which it is an integral part and capitalized and depreciated accordingly. However, computer software could be developed separately and installed on several general PP&E assets at different times. For example, anti-ballistic missile software installed on multiple radar systems at different times can be treated as a separate IUS asset if the software meets the capitalization threshold.

12. **Development Phases:** SFFAS 10 presents three phases of software development that follow a linear approach to an IUS project: the preliminary design phase, the software development phase, and the post-implementation/operational phase. It states that costs incurred during the development phase should be capitalized, while the costs incurred in other phases should be expensed. However, software may not always be developed under this linear approach and capitalization decisions absent distinct phases are more difficult. Regardless of timing, the cost incurred for development phase activities should be capitalized or expensed based on provisions of SFFAS 10 and considering the substance of the activity.
13. **Capitalized Cost:** The full cost (direct and indirect cost as stated in SFFAS 4, paragraph 89, 90, and 91) incurred during the software development phases should be capitalized (SFFAS 10, paragraph 16 thru 18). Considering economic feasibility, a cost estimation technique could be developed to trace the costs to outputs based on the SFFAS 4, paragraph 124, provision that "[in] principle, costs should be assigned to outputs in one of the methods listed below in the order of preference:
 - a. Directly tracing costs wherever economically feasible;
 - b. Assigning costs on a cause-and-effect basis; and
 - c. Allocating costs on a reasonable and consistent basis."
14. A specific software development project may include expenditures for improvements and maintenance that cannot be easily separated but may be reasonably and consistently allocated. One approach that can be used is a ratio based on the projected work hours for development phase activities relative to other types of work. Such a ratio can be applied to determine the expenditures that should be capitalized. The basis for allocating costs should be consistent with applicable standards and defensible.
15. **Capitalization Cut Off:** SFFAS 10, paragraph 20, states, "Costs incurred after final acceptance testing has been successfully completed should be expensed. Where the software is to be installed at multiple sites, capitalization should cease at each site after testing is complete at that site." In some development practices, each iteration⁵ within an IUS development has its own acceptance testing before moving forward to the next iteration and final acceptance testing may not always be performed. The entity should identify a pre-determined agency milestone such as the go-live or in-service date which is equivalent to a final acceptance test for capitalization cut off purposes.

⁵ Iteration is the act of repeating a process with the aim of approaching a desired goal, target or result. Each repetition of the process is also called an "iteration," and the results of one iteration are used as the starting point for the next iteration.

16. **Integrated Software:** SFFAS 10, paragraph 22, states, "Computer software that is integrated into and necessary to operate general PP&E, rather than perform an application, should be considered part of the PP&E of which it is an integral part and capitalized and depreciated accordingly (e.g., airport radar and computer-operated lathes). The aggregate cost of the hardware and software should be used to determine whether to capitalize or expense the costs." In situations where software and the hardware on which it runs have independent service lives, the determination of the useful life of the software should be viewed independently of the useful life of the hardware. This determination should be made on a case by case basis for each entity and is at the discretion of management of the entity. The rationale for this determination should be documented.
17. **Component Based IUS Asset:** SFFAS 10, paragraph 33, states, "For each module or component of a software project, amortization should begin when that module or component has been successfully tested. If the use of a module is dependent on completion of another module(s), the amortization of that module should begin when both that module and the other module(s) have successfully completed testing." For example, an entity may develop an accounting software system containing three modules: a general ledger, an accounts payable sub-ledger, and an accounts receivable sub-ledger. In this example, each module could be analyzed to determine whether it could be treated as a separate asset. Specifically, if the module provides economic benefit through distinct, substantive functionality; and meets the tests for capitalization threshold, ownership, and eligibility for capital treatment, then the module could be treated as a separate IUS asset for the purposes of recognition, measurement including amortization, and disclosure in accordance with SFFAS 10.
18. **Capitalization Threshold:** SFFAS 10, paragraph 24, states, "Each federal entity should establish its own threshold as well as guidance on applying the threshold to bulk purchases of software programs (e.g., spreadsheets, word-processing programs, etc.) and to modules or components of a total software system." When establishing the capitalization threshold for IUS, the federal entity should include both qualitative and quantitative considerations as stated in SFFAC 2 paragraph 46. Qualitative considerations could be applied to IUS assets that require special management attention because of their importance to the agency mission; high development, operating, or maintenance costs; high risk; high return; or their significant role in the administration of agency programs, finances, property, or other resources.⁶
19. When establishing a capitalization threshold for bulk software purchases, the threshold should not be based on unit price. The organization should consider the bulk value and

⁶ OMB Circular A-11 *Preparation, Submission, and Execution of the Budget; Supplement to Circular A-11, Capital Programming Guide, Threshold for Capital Programming*, page 2, July 2014.

useful life established by the organization to avoid materially distorting period costs and understating asset values.

20. OMB notes that a stratified capital programming process involving more or less detail and review based on the size or strategic importance of proposed investments may be appropriate, particularly in large agencies.⁷ Similarly, more than one capitalization threshold could be established for different components of a large agency. Agencies should have well documented thresholds clearly disseminated and implemented across the organization.
21. **Enhancement:** SFFAS 10, paragraph 25, states, "The acquisition cost of enhancements to existing internal use software (and modules thereof) should be capitalized when it is more likely than not that they will result in significant additional capabilities." Significant additional capabilities are modifications to existing IUS that result in additional functionality—that is, modifications to enable the software to perform tasks that it was previously incapable of performing. As stated in SFFAS 10 paragraph 26, capitalizable enhancements normally require new software specifications and may also require a change to all or part of the existing software specifications. Examples of enhancements could include augmenting existing business functions with new features and functions, developing additional new business functions, and/or adding new functionality and capability.
22. If one module is dependent upon another to function, then those modules should be evaluated together as one enhancement. All costs of an enhancement, including any costs carried over or allocated from the original software, should be amortized over the enhancement's estimated useful life.
23. **Impairment:** SFFAS 10, paragraphs 28-30, addresses how to determine if software is impaired during the post-implementation operational phases and the measurement of the impairment for the impaired software remaining in use or to be removed. Significant events or changes in operating circumstances warrant a review to determine whether the carrying value of an existing software asset is not recoverable and should be impaired. An assessment should be performed to determine the remaining useful life of the impaired software for amortization purposes.
24. When it is more likely than not that a developmental software project will not be completed, no further costs should be capitalized and any costs that have been capitalized should be written off in accordance with SFFAS 10, paragraph 31. Indications that the software may no longer be completed include:
 - a. The expenditures are neither budgeted nor incurred to fund further development;

⁷ See note 6.

-
- b. The discontinuance of the business segment the software was designed for;
 - c. The inability to resolve programming difficulties timely; or
 - d. A decision to obtain COTS instead and abandon the current software development
25. When a developmental software project is suspended pending management's evaluation as to whether to resume or terminate the project, the software development cost may remain capitalized as long as it is more likely than not⁸ that the developmental software project will eventually be completed and the cost incurred or expected to be incurred meets the capitalization threshold. The status of the project should be reevaluated periodically and the capitalized cost should be written off if management concludes that it is more likely than not that the software will not be placed into service in the future.
26. [Rescinded by TR 20.]⁹
- 26A. **Perpetual Software License:** If a software license is perpetual with an upfront cost^{9A} to use the software for its entire lifetime, then the entity is purchasing IUS and should apply its existing policy for capitalization thresholds to determine if the license should be capitalized or expensed.
27. [Rescinded by TR 20.]¹⁰
- 27A. A license agreement may include costs for maintenance and technical support. Agency judgment should apply in determining what portions of license fees are attributable to software capitalizable costs versus maintenance or technical support costs.

Guidance on Applying SFFAS 10 to Certain New IUS Developments

Cloud Computing

28. A cloud computing service is a resource provided over the Internet that has the following essential characteristics: on-demand self-service, broad network access, resource pooling, rapid elasticity, and measured service. The most common cloud service resources are: software as a service, platform as a service, and infrastructure as a service.¹¹

⁸ SFFAS 10, paragraph 31, provides for write off if it is more likely than not that the project will not be completed and placed in service.

⁹ [Footnote 9 was rescinded by TR 20.]

^{9A} The cost could be charged as a one-time payment or financed over a set period of time.

¹⁰ [Footnote 10 was rescinded by TR 20.]

¹¹ The full definition is available at The National Institute of Standards and Technology: *The NIST Definition of Cloud Computing*, Special Publication 800-145, September 2011.

29. If a cloud computing arrangement includes a perpetual software license, the customer should account for the software license element of the arrangement consistent with the acquisition of other software licenses as discussed in paragraph 26A of this TR. SFFAS 10 is not applicable to a cloud computing arrangement that does not convey a contractual right to the IUS or to ones that do not include an IUS license. The entity that develops and owns the software, platform, or infrastructure that is used in the cloud computing arrangement would account for the software development in accordance with SFFAS 10. If the funding to develop cloud computing is shared among entities without clear ownership, the service provider entity that receives funding and is responsible for maintaining the software, platform, or infrastructure should account for the software in accordance with SFFAS 10 and the full cost/inter-entity cost requirements of SFFAS 4.

Shared Services

30. Shared Service means a mission or support function provided by one business unit to other business units within or between organizations. The funding and resourcing of the service is shared and the providing entity effectively becomes an internal/external service provider. There are three types of shared service structures in the federal government: intra-agency, interagency and commercial. Intra-agency shared services include those provided within the boundaries of a specific organization such as a federal department or agency, to that organization's internal units. Interagency shared services are those provided by one federal provider's organizational boundaries. Commercial shared services are those provided by private vendors.¹²
31. For intra-agency shared services, a cost allocation methodology could be developed in accordance with SFFAS 4, paragraphs 120-125. For interagency shared services and commercial shared services, the service provider entity that owns (receives funding/responsible for maintaining) the software should account for the software in accordance with SFFAS 10. In the event that the entity receiving the service (the customer) has the contractual right to take possession of the software at any time during the hosting period without significant penalty, and it is feasible for the customer to either run the software on its own hardware or contract with another party unrelated to the vendor to host the software, then the customer should account for the software in accordance with SFFAS 10.
32. If the shared service arrangement includes a perpetual software license, the customer should account for the software license element of the arrangement consistent with the acquisition of their other software licenses, as discussed in paragraph 26A of this TR. SFFAS 10 is not applicable to a shared service arrangement that does not convey a contractual right to the IUS or to ones that do not include an IUS license.

¹² Chief Information Office Council: *Federal Shared Service Implementation Guide*, April 2013, and OMB M-13-08: *Improving Financial Systems Through Shared Services*, March 25, 2013.

Agile Software Development Method

33. Agile software development method is a group of software development methods in which requirements and solutions evolve through collaboration between self-organizing, cross-functional teams. In an agile project, working software is deployed in iterations of typically one to eight weeks in duration, each of which provides a segment of functionality.¹³ Initial planning regarding cost, scope, and timing is usually conducted at a high level, and the project status is primarily evaluated based on software demonstrations.
34. The IUS development phases listed in SFFAS 10, paragraphs 10-14, and within this TR could be applied to agile development projects on an iteration basis. If an iteration developed meets the module or component asset definition in accordance with SFFAS 10, paragraph 33, and as discussed in paragraph 15 of this TR, then it could be treated as an individual IUS project and would be accounted for in accordance with SFFAS 10. If the numbers of iterations are dependent on the outcomes of multiple processes for a complete function, the cost incurred in these iterations should be grouped together based on the nature of the activities (capital or expense) and treated as one project for the purposes of recognition, measurement, and disclosure in accordance with SFFAS 10. Any future incremental releases that result in additional functionality can be treated as an enhancement of the original IUS project and accounted for in accordance with SFFAS 10.

Spiral Software Development Method

35. Spiral software development method combines the features of the waterfall and prototyping¹⁴ incremental models, but with more emphasis placed on risk analysis and management. The spiral methodology projects are typically separated into phases like the waterfall method: planning, risk analysis, engineering, and evaluation. However, they are broken up into incremental releases of the product, or incremental refinement through each time around the spiral and through continuously analyzing the requirements and improving the definition and implementation. At each iteration around the cycle, the project is improved and extended. The release could be to an external or internal client, or to a partner.
36. The IUS development phases listed in SFFAS 10, paragraphs 10-14, and within this TR could be applied to a spiral development project on a process iteration basis. If an iteration

¹³ Government Accountability Office: *Software Development Effective Practices and Federal Challenges in Applying Agile Methods*, July 2012.

¹⁴ The Prototyping Model is a system development method in which a prototype (an early approximation of a final system or product) is built, tested, and then reworked as necessary until an acceptable prototype is finally achieved from which the complete system or product can now be developed. This model works best in scenarios where not all of the project requirements are known in detail ahead of time. It is an iterative, trial-and-error process that takes place between the developers and the users.

developed meets the module or component asset definition in accordance with SFFAS 10 and as discussed in paragraph 15 of this TR, then it could be treated as an individual IUS project and would be accounted for in accordance with SFFAS 10. If the number of iterations are dependent on the outcomes of multiple spiral processes for a complete function, the cost incurred in these iterations should be grouped together based on the nature of the activities (capital or expense) and treated as one project for the purposes of recognition, measurement, and disclosure in accordance with SFFAS 10. Any future incremental releases that result in additional functionality can be treated as an enhancement of the original IUS project and accounted for in accordance with SFFAS 10.

Summary of Illustrations

37. The Business Events & Deliverables for Software Development Phases and the Common Agency Practice tables listed in Appendix B support development of accounting policies and practices appropriate to each organization's characteristics in accordance with GAAP. The tables are meant to provide examples for reporting entities to consider in developing organizational accounting policies and practices that will best support their operating models, provide the financial information necessary to manage programs, and report in accordance with GAAP. Reporting entities should report the IUS in the general purpose financial reports. Full costs of IUS development should be expensed or capitalized in accordance with GAAP and each entity's accounting policies and practices should support cost beneficial implementation.

Effective Date

38. This Technical Release is effective upon issuance.

The provisions of this Technical Release need not be applied to immaterial items.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by AAPC members in reaching the conclusions in this Technical Release. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The guidance enunciated in this Technical Release-not the material in this appendix-should govern the accounting for specific transactions, events, or conditions.

Project History

- A1. In June 2013, FASAB's AAPC established the IUS Task Force to assist in developing implementation guidance for IUS as it relates to SFFAS 10, Accounting for Internal Use Software and other related IUS guidance developed by the FASAB. The task force includes federal agency representatives who are experiencing issues with implementing SFFAS 10 and those who have implemented workable common practices to share with the federal community as well as industry representatives from several public accounting and consulting firms.
- A2. During the initial phase of the project, the IUS task force divided into three subgroups to conduct research and explore the best approach for addressing current IUS issues within the federal community, including whether a TR should be developed, or revisions should be made to SFFAS 10. The subgroups met separately to discuss their assigned issues and report their research findings. The three subgroups were:
 - a. IUS Mapping Team
 - b. IUS Benchmarking Team
 - c. Standards Team
- A3. After presenting the results of their research to the FASAB and AAPC, the task force concluded that implementation guidance would address the current IUS issues within the federal community. As a result, the AAPC endorsed the approach. The group held a re-entrance meeting on February 27, 2015 to re-engage agencies in drafting implementation guidance. This guidance focused on highlighting the common issues identified across the federal government IUS process, clarifying terminology, introducing new terms from the recent software development methodologies in light of application of SFFAS 10, and providing sample IUS practices adopted by the agencies. Based on the research, a TR would equip federal agencies with the knowledge and information needed to identify effective IUS practices that would in turn strengthen financial reporting in IUS area. It consists of two major topic areas:

- a. Standards Clarification
 - b. Practical Examples of Implementation
- A4. The IUS FASAB Task Force, which included industry representatives from several public accounting and consulting firms, as well as representatives from the following federal agencies, developed this proposed guidance:
- a. Department of Commerce (DOC)
 - b. Department of Defense (DOD) (including the individual military departments)
 - c. Department of Health and Human Services (HHS)
 - d. Department of Homeland Security (DHS)
 - e. Department of Labor (DOL)
 - f. Department of Transportation (DOT)
 - g. Department of Treasury (Treasury)
 - h. Environmental Protection Agency (EPA)
 - i. Office of the Director of National Intelligence (ODNI)
 - j. United States Securities and Exchange Commission (SEC)
- A5. Two subgroups were formed for standards clarification and best practices. The subgroups developed two data calls to highlight the commonalities across the federal IUS process. The first data call aided federal agencies in clarifying terminology and identified popular new IUS development items. The second data call highlighted IUS current practices adopted by the agencies and identified IUS development phase activities across the IUS development phases. The second data call also collected detail business events and typical deliverables during IUS development phases. Both data calls equip federal agencies with the knowledge and information needed to strengthen financial reporting.
- A6. In reaching conclusions, the subgroups recognized the need to develop implementation guidance to promote an understanding of rapid changes related to software development practices that have evolved since the inception of SFFAS 10. The IUS task force views clarification of implementation and sustainment issues as critical given the new IUS challenges related to environmental changes and technological advances. There are several cost-beneficial and reasonable changes (for example, policies, systems, and processes) that federal entities can make to facilitate better financial management and reporting of IUS. However, entity management must be allowed to navigate within the parameters of GAAP to determine the point at which the costs of improving or providing financial information outweigh the derived benefits.
- A7. This TR recognizes that the financial management information needs of stakeholders, both internal and external, vary by entity. The agency-specific examples (detailed in Appendix B) demonstrate how tracking costs to specific invoices may be tailored to different operating models and comply with GAAP. The implementation guidance does not provide a 'one-size-

fits-all' solution; instead, it is designed to give management a tool on which to base stakeholder financial management information needs.

- A8. When applying the principles listed in SFFAS 10, management should develop formalized policies and procedures documenting their decisions. Management is responsible for maintaining adequate documentation on the sources of data and the application of methodologies used when estimating cost.
- A9. Implementation of SFFAS 10 and this guidance is a joint effort of an entity's Chief Finance Office and Chief Information Office. It is management's responsibility to provide for smooth communication between these two offices to foster an efficient and effective IUS implementation process.

Responses to the Proposal

A10. The AAPC received 12 responses to the exposure draft from the following sources:

Table 1.0 - Types of Respondents

	Federal (Internal)	Non-federal (External)
Users, academics, others		1
Auditors		1
Preparers and financial managers	10	
Total	10	2

- A11. The AAPC considered responses to the exposure draft at its November 19, 2015, public meeting. The AAPC did not rely on the number in favor of or opposed to a given position. Information about the respondents majority view is provided only as a means of summarizing the comments. The AAPC considered the arguments in each response and weighed the merits of the points raised.
- A12. Of the 12 responses, nine supported the proposal. The remaining three offered comments. The AAPC made editorial changes suggested by the respondents.

AAPC & Board Approval

A13. The Technical Release was approved by the AAPC for release to the FASAB for issuance. The Board has reviewed this Technical Release and a majority of its members do not object to its issuance. Written ballots are available for public inspection at the FASAB's offices.

Appendix B: Illustrations

The examples in this Appendix are for illustration only; they do not represent authoritative guidance. These illustrations depict only a portion of the reporting entities' operations and their inclusion in this TR does not equate to policy acceptance, in whole or part, by the FASAB or the AAPC.

Illustrations B-1: Business Events and Deliverables for Software Development Phases

The table below provides examples of business events and deliverables which agencies may see within a typical software development life-cycle. The table is structured to follow the three software development phases as defined in SFFAS 10, paragraphs 11-14. When applying examples in this table to software development phases, the decision to capitalize or expense an item should be determined based on the nature of the cost activity when it is incurred, in accordance with SFFAS 10 paragraph 16 and as discussed in paragraph 12 of this TR: "It states that costs incurred during the development phase should be capitalized, while the costs incurred in other phases should be expensed. However, software may not always be developed under this linear approach and capitalization decisions absent distinct phases are more difficult. Regardless of timing, the cost incurred for development phase activities should be capitalized or expensed based on provisions of SFFAS 10 and considering their substance rather than their phase."

The table may be used as a sample guide for categorizing business events and deliverables during IUS phases, but it is not intended to be comprehensive. Each agency is responsible for developing policies and procedures that are appropriate for its specific environment and needs and may differ in content and order from the table below.

Business Event	Typical Deliverables
Preliminary Design Phase	
<i>Formulation of Alternatives¹⁵</i> ¹⁵ OMB Circular A-11 provides more information for alignment of agency IT investments with agency strategic plans.	
<ul style="list-style-type: none"> -Justification of investment need -Conceptual formulation of alternatives -Evaluation and testing of alternatives -Determination of existence of needed technology -Final selection of alternatives 	Major Information Technology (IT) Business Cases, Capital Investment Decision Paper, Information Resources Management Strategic Plan, Enterprise Architecture Roadmap, IT Capital Asset Summary, Agency IT Portfolio Summary Submissions, Alternative of Analysis Report
Establish Project Governance	
<ul style="list-style-type: none"> -Identify and incorporate vision, roles, responsibilities, governance, organizations, and authorizations in project charter -Identify and document risks specific to project, including security risks -Establish and document quality control practices -Develop high-level estimates and schedule -Update discoveries and additional information 	Project Charter, Project Action/Risk Register, Quality Management Plan, Project Schedule, Project Plan, Work Breakdown Structure
Determine Requirements	
<ul style="list-style-type: none"> -Develop high level list of functional and non-functional requirements -Obtain, review and document detailed business specifications for business requirements -Determine and document general data flows and interactions with other systems -Determine detailed business/system specifications to support requirements 	Vision documents, Requirement Specification Document, Requirement Traceability Matrix, Process Flow Diagrams, Supplementary Specifications, Use Cases, User Workflow
Develop Software Development Plan

Development Phase	
Software Development Initiation	
<ul style="list-style-type: none"> -Refine and execute practices for artifacts & configuration -Review work performed in prior iterative period, prioritize and assign work to be done in next iterative period -Coordinate updates to system inter-dependencies -Develop operations plan -Define and document architecture specifications -Develop and validate high value/high risk requirements of architecture components 	Software Architecture Description Document, Software Development Plan, Iteration Plan, Operational Plan, Software Design Description
Rapid Development Risk Evaluation	
<ul style="list-style-type: none"> -Studies and analysis are performed during development environment to identify potential risks based on requirements & developed iteration 	Risk identification and Mitigation Plan, Contingency Plan
Coding and System Design	
<ul style="list-style-type: none"> - Execute practices for version control of all software development artifacts - Create, design and modify system and associated hardware; coding and continuous refining. -Update project plan & business case -Add software development issues to the Issue Log to be prioritized and addressed -Conduct critical design review -Establish and document quality control practices 	Software Architecture Document, Development Plan, Updated Project Management Documents, Issue Log, Critical Design Review Memorandum, Quality Management Plan

Business Event	Typical Deliverables
<i>Testing</i>	
<ul style="list-style-type: none"> -Identify tests and write test cases or scripts -Install hardware. Conduct unit and integration testing -Create operations manual and requirement documents for users -Document strategy and approach for system implementation (what will be deployed, where, and when) - Prepare turnover package to migration turnover and test readiness review and issue memo -Prepare detailed notes that describe the specific contents of a release for customer or outside testing party -Develop security test report and issue security certification and accreditation -Conduct user acceptance testing 	Test Plan, Test Cases Scripts, Test Results, Operations Manual, Implementation Plan, Test Readiness Memorandum, Release Notes, Turnover Package, Transition Plan, Security Test Report, Security Certification and Accreditation, Security Test & Evaluation Plan, Software Architecture Document, Acceptance Test Plan, Acceptance Test Script
<i>Readiness Review and Release</i>	
<ul style="list-style-type: none"> -Conduct production readiness review and issue memo -Audit and project completion reports finalized -Issue operational readiness memo, certification of production, and final user acceptance testing memorandum 	Production Readiness Review Memo, Transition Plan, Operational Readiness Memorandum, Audit and Project Completion Reports, Certification of Production, Final User Acceptance Testing Memorandum, User Manual, Operational Support Plan, Installation Plan
<i>Post-implementation/ Operational Phase</i>	
<i>Deployment</i>	
<ul style="list-style-type: none"> -Determine criteria for exiting transition phase controls have been identified and met -Stakeholder provides written approval that product meets documented business requirements -Revise and finalize detail Deployment/implementation plan 	Update Project Management Documents, Scope Verification, Deployment/implementation plan
<i>Training</i>	
<ul style="list-style-type: none"> -Develop training delivery method, schedule, and plan -Develop training materials -Deliver training, record, and deliver webinars and communicate on-demand training 	Training Plan, Training Materials, Training Delivery

Business Event	Typical Deliverables
<i>Data Conversion</i>	
<ul style="list-style-type: none"> -Development of software to facilitate data transfer or conversion -Develop data cleansing and transfer plan, including protocols for archiving legacy data -Perform activities to cleanse data and format for transfer -Perform mock migrations of data and analyze results -Perform final data migration and validation 	Data Transfer Software, Data Transfer Plan, Formatted Data, Mock Migration Results and Analysis Report, Data Migration Validation Report
<i>Operation and Maintenance Activities</i>	
<ul style="list-style-type: none"> -Subsequent security accreditations (not included in user acceptance testing) -Software diagnostics -Repair processing and/or performance failures -Update documentation -Minor software updates -Minor corrections to design flaws 	Accreditation Certification, Diagnostic Reports, Software and Process Documentation
<i>Retirement of Software</i>	
<ul style="list-style-type: none"> -Information preservation -Configuration management and control -Media sanitization -Hardware and software disposal 	Disposal Certification

Illustrations B-2: Common Agency Practice

The common agency practice table highlights IUS practices adopted by the agencies in the areas identified by the IUS working group as common challenges. It intends to equip federal agencies with the knowledge and information needed to identify effective IUS practices and does not provide a 'one-size-fits-all' solution; instead, it is designed to give management some practical examples. Users of this TR should use the information provided in these examples to develop their own reasonable business processes. This table covers four areas of IUS development: 1) Identifying Cost, 2) Software Amortization, 3) Enhancement to IUS, and 4) Impairment to IUS.

Illustration Sample #1: Identifying Cost

Challenge Statement: Trace Development Cost to Specific Invoice		
Challenge Contributing Factors	Task Force Member Agency	Agency Practice
Cyclical development methodologies make differentiating between development and maintenance costs within an invoice difficult	A	Direct tracing or allocating the invoiced cost with the basis of estimate documented. Use status report or program/project documentation to evaluate activities and identify those that are development activities.
	B	Contractual requirement for vendor to provide a data item description deliverable with the estimate of costs between development and non-development activities along with each monthly invoice submitted.
	C	IUS cost primarily attributable to government labor hours. Quarterly report from the program offices detailing the employee or contract hours for each IUS project phase (preliminary design, development, or operational).
	D	Separate accounting lines used on purchase request and obligation document for development and non-development activity cost by coding every software project on a requisition. The capitalizable requisition must be coded with general ledger account IUS-In Development in the accounting string which drives the purchase order and vouchers, thereby requiring the vendor to invoice in accordance with the activity breakouts.

Illustration Sample #2: Software Amortization

Challenge Statement: Timing of Commencement of Depreciation/Amortization		
Challenge Contributing Factors	Task Force Member Agency	Agency Practice
Obtaining evidence to support the determination of commencement of amortization	A	Open inter departmental communication facilitates decision to begin depreciation of software.
	B	A sign off document confirming key development milestones such as acceptance test are met.
	C	A certificate of production is issued communicating the software is in production and being utilized.

Illustration Sample #3: Enhancement to IUS

Challenge Statement: Define Enhancement to Internal Use Software		
Challenge Contributing Factors	Task Force Member Agency	
Determination of the significance of an enhancement to the IUS, incremental enhancement of capability, and the enhancement associated with new IUS development model	A	Defines enhancement to be the replacement, upgrade, modification, or addition of new features or capabilities to an existing system, product, tool, service, or infrastructure to improve its functionality. It involves a change in the capabilities, requirements, design, and/or architecture.
	B	Add additional capabilities and the enhancement costs are above agency's capitalization threshold. Repair a design flaw or perform minor upgrades that extend the useful life without adding capabilities, the costs are expensed and the useful life of the original asset is adjusted, as necessary.
	C	Enhancement cost exceed capitalization threshold, and when it is more likely than not that such enhancements will result in a significant increase in functionality that is apparent to the user. The cost of routine or minor changes or modernizations that do not significantly add functionality should be expensed in the period incurred. Examples of minor enhancement include updating data tables, web-enabling, customizing reports, or changing graphic user interfaces. Enhancements that may extend the useful life of the software without adding significant capabilities are to be considered minor and expensed.
	D	In Agile development model, enhancement follows the same capitalization criteria threshold for each release separately and tracks each version individually.

Illustration Sample #4: Impairment to IUS

Challenge Statement: Determination of Impairment for Internal Use Software		
Challenge Contributing Factors	Task Force Member Agency	Agency Practice
Determination of when the impairment is incurred without sufficient knowledge on the IUS operating status	A	Scenario-based impairment checklist reviewed on a quarterly basis to monitor impairment. The checklist examines the following scenarios: cessation of demand for the IUS asset, changes with an adverse effect on the IUS asset have occurred within the policy, legal or technological environment, plans to discontinue or restructure the IUS asset, the IUS asset is not performing as intended, and elements of the IUS asset functionality are not used as intended.

Technical Release 17: Conforming Amendments to Technical Releases for SFFAS 50, Establishing Opening Balances for General Property, Plant, and Equipment

Status

Issued	April 10, 2017
Effective Date	Effective upon issuance
Affects	Technical Releases 13, 15 and 16 are amended.
Affected by	None.

Summary

Statement of Federal Financial Accounting Standards (SFFAS) 50, *Establishing Opening Balances for General Property, Plant, and Equipment*, amended SFFAS 6, *Accounting for Property, Plant, and Equipment*, and SFFAS 10, *Accounting for Internal Use Software*, and rescinded SFFAS 35, *Estimating the Historical Cost of General Property, Plant, and Equipment: Amending Statements of Federal Financial Accounting Standards 6 and 23*.

This Technical Release (TR) provides amendments to previously issued TRs to acknowledge the rescission of SFFAS 35. It also clarifies that all standards-level implementation guidance for general property, plant, and equipment (with the exception of certain provisions applicable to internal use software) now resides in SFFAS 6, as amended.

Specifically, this TR provides conforming amendments to the following documents:

- Technical Release 13, *Implementation Guide for Estimating the Historical Cost of General Property, Plant, and Equipment*
- Technical Release 15, *Implementation Guidance for General Property, Plant, and Equipment Cost Accumulation, Assignment and Allocation*
- Technical Release 16, *Implementation Guidance For Internal Use Software*

This TR does not provide a complete update of the above TRs; the amendments conform the TR documents to the provisions of SFFAS 50. A separate TR will be issued that addresses SFFAS 50-specific implementation issues associated with the alternative methods of arriving at deemed cost.

The provisions of this TR need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Technical Guidance

Scope

1. Readers of this Technical Release (TR) should first refer to the hierarchy of accounting standards in Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This TR supplements the relevant accounting standards but is not a substitute for and does not take precedence over the standards.
2. The amendments addressed in this TR conform the following documents to certain provisions established by SFFAS 50, *Establishing Opening Balances for General Property, Plant, and Equipment: Amending Statement of Federal Financial Accounting Standards (SFFAS) 6, SFFAS 10, SFFAS 23, and Rescinding SFFAS 35*:
 - Technical Release 13, *Implementation Guide for Estimating the Historical Cost of General Property, Plant, and Equipment*
 - Technical Release 15, *Implementation Guidance for General Property, Plant, and Equipment Cost Accumulation, Assignment and Allocation*
 - Technical Release 16, *Implementation Guidance For Internal Use Software*

Amendments to Existing Technical Releases

Technical Release 13, *Implementation Guide for Estimating the Historical Cost of General Property, Plant, and Equipment*

3. This paragraph rescinds paragraphs 1-10 (including all section titles, subsection titles, and the accompanying footnote 1 to par. 3 contained within the introduction and background sections) of TR 13, *Implementation Guide for Estimating the Historical Cost of General Property, Plant, and Equipment*. This will eliminate potentially confusing references to the rescinded SFFAS 35, *Estimating the Historical Cost of General Property, Plant, and Equipment: Amending Statements of Federal Financial Accounting Standards 6 and 23*, and amended portions of other Statements.
4. This paragraph amends the technical guidance section of TR 13 by inserting the subheading "scope" with paragraphs 10a-10c directly under "technical guidance" as follows:

Technical Guidance

Scope

- 10A. Readers of this Technical Release (TR) should first refer to the hierarchy of accounting standards in Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This TR supplements the relevant accounting standards but is not a substitute for and does not take precedence over the standards.
- 10B. SFFAS 6, *Accounting for Property, Plant, and Equipment*, (as amended) provides that reasonable estimates may be used to establish historical cost of general property, plant, and equipment (PP&E) in accordance with the asset recognition and measurement provisions within SFFAS 6. This is also applicable to internal use software when the software meets the criteria for general PP&E in accordance with SFFAS 10, *Accounting for Internal Use Software*.
- 10C. SFFAS 50, *Establishing Opening Balances for General Property, Plant, and Equipment: Amending Statement of Federal Financial Accounting Standards* (SFFAS) 6, SFFAS 10, SFFAS 23, and Rescinding SFFAS 35, amended SFFAS 6 to allow a reporting entity, under specific conditions, to apply alternative valuation methods in establishing opening balances for general PP&E.
5. This paragraph further amends the technical guidance in TR 13 by inserting the subheading "effective date" with the following paragraph directly under the scope section added in paragraph 4 above as follows:

Effective Date

- 10D. This TR is effective upon issuance.
6. This paragraph amends the examples of practice provided in TR 13 by rescinding footnotes 2-4 of paragraph 12 and replacing paragraphs 11 and 12 as follows:
11. The examples outlined in this guide illustrate the use of various estimating methodologies to derive the historical cost of general PP&E in accordance with SFFAS 6, as amended. Although the measurement basis for valuing general PP&E remains historical cost, reasonable estimates may be used to establish the historical cost of general PP&E in accordance with the asset recognition and measurement provisions of SFFAS 6, as amended.^{1A}

^{1A}SFFAS 50, *Establishing Opening Balances for General Property, Plant, and Equipment: Amending Statement of Federal Financial Accounting Standards* (SFFAS) 6, SFFAS 10, SFFAS 23, and Rescinding SFFAS 35, provides for deemed cost to be used for opening balances in some cases. Estimating historical cost is one of several deemed cost valuation methods. This TR addresses the estimation of historical cost and does not address other acceptable deemed cost methods.

12. Reasonable estimates may be based on

- a. cost of similar assets at the time of acquisition;
- b. current cost of similar assets discounted for inflation since the time of acquisition (that is, deflating current costs to costs at the time of acquisition by general price index); or
- c. other reasonable methods, including latest acquisition cost and estimation methods based on information such as, but not limited to, budget, appropriations, engineering documents, contracts, or other reports reflecting amounts to be expended.

12a. In some cases, the in-service date must be estimated. In estimating the year that the base unit was placed in service, if only a range of years can be identified, then the midpoint of the range is an acceptable estimate of the in-service date.

Technical Release 15, *Implementation Guidance for General Property, Plant, and Equipment Cost Accumulation, Assignment and Allocation*

7. This paragraph amends TR 15, *Implementation Guidance for General Property, Plant, and Equipment Cost Accumulation, Assignment and Allocation*, by revising the last sentence of paragraph 12 as follows: "This Technical Release clarifies but does not change guidance provided in SFFAS 4, or SFFAS 6 (as amended), ~~SFFAS 23, or SFFAS 35.~~

The revised paragraph 12 of TR 15 is as follows:

Readers of this Technical Release should first refer to the hierarchy of accounting standards in SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This Technical Release supplements the relevant accounting standards, but is not a substitute for and does not take precedence over the standards. This Technical Release clarifies but does not change guidance provided in SFFAS 4 or SFFAS 6 (as amended).

8. This paragraph amends TR 15, paragraphs 1 and 14, by updating it for the amended SFFAS 6, paragraph 26, language and adding "as amended" after SFFAS 6. The following language was added as the second sentence of SFFAS 6, paragraph 26: "Although the measurement basis for valuing general PP&E remains historical cost, reasonable estimates may be used to establish the historical cost of general PP&E, in accordance with the asset recognition and measurement provisions herein."

The revised paragraph 1 of TR 15 is as follows:

1. Statement of Federal Financial Accounting Standards 6 (SFFAS 6), *Accounting for Property, Plant, and Equipment*, (as amended) outlines the recognition requirements for

general property, plant, and equipment (G-PP&E) except for internal use software. Paragraph 26 states that,

"All general PP&E shall be recorded at cost. Although the measurement basis for valuing general PP&E remains historical cost, reasonable estimates may be used to establish the historical cost of general PP&E, in accordance with the asset recognition and measurement provisions herein. Cost shall include all costs incurred to bring the PP&E to a form and location suitable for its intended use."

The AAPC G-PP&E cost accounting issues subgroup was developed to address a request for implementation guidance for these requirements.

The revised paragraph 14 of TR 15 is as follows:

14. SFFAS 6 (as amended), paragraph 26, states:

All general PP&E shall be recorded at cost. Although the measurement basis for valuing general PP&E remains historical cost, reasonable estimates may be used to establish the historical cost of general PP&E, in accordance with the asset recognition and measurement provisions herein. Cost shall include all costs incurred to bring the PP&E to a form and location suitable for its intended use. For example, the cost of acquiring property, plant, and equipment may include:

- amounts paid to vendors;
- transportation charges to the point of initial use;
- handling and storage costs;
- labor and other direct or indirect production costs (for assets produced or constructed);
- engineering, architectural, and other outside services for designs, plans, specifications, and surveys;
- acquisition and preparation costs of buildings and other facilities;
- an appropriate share of the cost of the equipment and facilities used in construction work;
- fixed equipment and related installation costs required for activities in a building or facility;
- direct costs of inspection, supervision, and administration of construction contracts and construction work;
- legal and recording fees and damage claims;
- fair value of facilities and equipment donated to the government; and
- material amounts of interest costs paid [FN30: "Interest costs" refers to any interest paid by the reporting entity directly to providers of goods or services related to the acquisition or construction of PP&E.].

-
9. This paragraph rescinds paragraph 10 (and the preceding title "Related Accounting Literature") of TR 15.

Technical Release 16, *Implementation Guidance for Internal Use Software*

10. This paragraph rescinds paragraph 7 (and the preceding title "Related Accounting Literature") of TR 16, *Implementation Guidance for Internal Use Software*.
11. This paragraph amends TR 16, paragraph 8, by revising the last sentence as follows: "This TR clarifies but does not change guidance provided in SFFAS 4, 5, 6 (as amended), or 10.; and ~~35~~."

The revised paragraph 8 of TR 16 is as follows:

Readers of this Technical Release (TR) should first refer to the hierarchy of accounting standards in Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This TR supplements the relevant accounting standards but is not a substitute for and does not take precedence over the standards. This TR clarifies but does not change guidance provided in SFFAS 4, 5, 6 (as amended), or 10.

Effective Date

12. This TR is effective upon issuance.

The provisions of this Technical Release need not be applied to immaterial items.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Committee members in reaching the conclusions in this Technical Release. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The guidance enunciated in this Technical Release—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Technical Release may be affected by later Statements or other pronouncements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent pronouncements that amend this Technical Release. Within the text of the Technical Release, the guidance sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statements or other pronouncements for the rationale for each amendment.

PROJECT HISTORY

- A1. On August 4, 2016, the Federal Accounting Standards Advisory Board (FASAB or "the Board") issued SFFAS 50, *Establishing Opening Balances for General Property, Plant, and Equipment: Amending Statement of Federal Financial Accounting Standards (SFFAS) 6, SFFAS 10, SFFAS 23, and Rescinding SFFAS 35*. SFFAS 50 amended several Statements and rescinded SFFAS 35, *Estimating the Historical Cost of General Property, Plant, and Equipment: Amending Statements of Federal Financial Accounting Standards 6 and 23*.
- A2. As a result of these amendments and this rescission, all standards-level implementation guidance for general PP&E, with the exception of specific provisions applicable to internal use software, now resides in SFFAS 6, *Accounting for Property, Plant, and Equipment* (as amended). The Board concluded that providing implementation guidance for general PP&E other than internal use software in SFFAS 6 provides a comprehensive guide for users in a single Statement.
- A3. During the due process of SFFAS 50, exposure draft (ED) respondents expressed concern about the rescission of SFFAS 35. These respondents relied on the guidance it provided and worried about audit issues that might result upon its rescission. TR 13, *Implementation Guide for Estimating the Historical Cost of General Property, Plant, and Equipment*, remains in effect regardless of these amendments and this rescission.
- A4. Comments received during due process of SFFAS 50 made it apparent that users rely on the technical guidance provided in TR 13 when developing reasonable estimates. Further, TR 15, *Implementation Guidance for General Property, Plant, and Equipment Cost*

Accumulation, Assignment and Allocation, provides illustrations and implementation guidance related to recognition requirements for programmatic, managerial, administrative, and other elements of program costs incurred during the general PP&E lifecycle. TR 15 also provides illustrations and implementation guidance related to recognition requirements for decisions regarding the granularity of cost information and acceptable methods for recognizing those costs. Therefore, it was appropriate to ensure each significant provision of SFFAS 35 was incorporated in the amendments of TR 13, 15, and 16—including the ability to use estimates in the future.

AMENDMENTS TO EXISTING TECHNICAL RELEASES

- A5. It was appropriate to update previously issued TRs to acknowledge the rescission of SFFAS 35 and that all standards-level implementation guidance for general PP&E (with the exception of certain provisions applicable to internal use software) resides in SFFAS 6 (as amended).
- A6. The conforming amendments apply to the following documents:
- Technical Release 13, *Implementation Guide for Estimating the Historical Cost of General Property, Plant, and Equipment*
 - Technical Release 15, *Implementation Guidance for General Property, Plant, and Equipment Cost Accumulation, Assignment and Allocation*
 - Technical Release 16, *Implementation Guidance For Internal Use Software*
- A7. The Accounting and Auditing Policy Committee (AAPC or "the Committee") concluded that it was appropriate to amend relevant sections of the TRs that discussed SFFAS 35 and other sections that referenced implementation guidance for general PP&E. The Committee removed certain language (from areas such as the introduction and background sections) because of the lengthy discussion and reference to the rescinded SFFAS 35 and portions of amended Statements. The Committee concluded that allowing the paragraphs to remain would be inconsistent with current references for generally accepted accounting principles and would lead to potential misapplication of the technical guidance.
- A8. SFFAS 50 allows a reporting entity, under specific conditions, to apply alternative valuation methods in establishing opening balances for general PP&E. A separate TR will be issued that addresses SFFAS 50 implementation issues associated with the alternative methods of arriving at deemed cost.

Summary of Outreach Efforts and Responses

- A9. The ED titled *Conforming Amendments to Technical Releases for SFFAS 50, Establishing Opening Balances for General Property, Plant, and Equipment* was issued November 22, 2016, with comments requested by January 9, 2017.
- A10. Upon release of the ED, FASAB provided notices and press releases to the FASAB subscription email list, the Federal Register, *FASAB News*, *the Journal of Accountancy*, Association of Government Accountants Topics, the *CPA Journal*, *Government Executive*, the *CPA Letter*, the Chief Financial Officers Council, the Council of the Inspectors General on Integrity and Efficiency, and committees of professional associations generally commenting on EDs in the past (for example, the Greater Washington Society of CPAs and the Association of Government Accountants Financial Management Standards Board).
- A11. The AAPC received seven responses from preparers, auditors, users of federal financial information, and professional associations. The majority of respondents agreed with the proposals in the TR.
- A12. The AAPC considered responses to the ED at its February 9, 2017, public meeting. The AAPC did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The AAPC considered the arguments in each response and weighed the merits of the points raised.
- A13. Of the seven responses, six supported the proposal to acknowledge the rescission of SFFAS 35 and that all standards-level implementation guidance for general property, plant, and equipment (with the exception of certain provisions applicable to internal use software) now resides in SFFAS 6. One respondent neither agreed nor disagreed with the proposal. Further, of the seven responses, six did not believe there were additional amendments or issues that the AAPC should consider in this TR.

AAPC & Board Approval

- A14. The TR was approved by the AAPC for release to the FASAB for issuance. The Board has reviewed this TR and a majority of its members do not object to its issuance. Written ballots are available for public inspection at the FASAB office.

Technical Release 18: Implementation Guidance for Establishing Opening Balances

Status

Issued	October 2, 2017
Effective Date	Effective upon issuance
Affects	None.
Affected by	None.

Summary

Statement of Federal Financial Accounting Standards (SFFAS) 50, *Establishing Opening Balances for General Property, Plant, and Equipment*, permits a reporting entity, under specific conditions, to apply alternative methods in establishing opening balances for general property, plant, and equipment (PP&E).

This Technical Release (TR) provides additional guidance to those reporting entities in applying the alternative methods. This TR explains the alternative valuation methods in greater detail and describes examples of the acceptable types of documentation that may support the valuation as outlined in SFFAS 6, *Accounting for Property, Plant, and Equipment*, as amended. This TR does not provide guidance on the validation of the existence and completeness of general PP&E.

The alternative methods provided in SFFAS 50 are meant to be less costly options to implement generally accepted accounting principles when establishing opening balances for general PP&E. This TR acknowledges that the reporting entity may select any of the alternative methods and that there is no preferred method. Management is not required to select the most precise or best method.

While this TR is specific to reporting entities that apply SFFAS 50 or the alternative methods, there are additional TRs the reporting entity may find helpful and still apply. For example, TR 13, *Implementation Guide for Estimating the Historical Cost of General Property, Plant, and Equipment*, addresses the estimation of historical cost, one of the deemed cost methods.

Materiality

The provisions of this TR need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Table of Contents

	Page
Summary	1
Technical Guidance	3
Scope	3
Alternative methods	3
Effective Date	24
Appendix A: Basis for Conclusions	25

Technical Guidance

Scope

1. Readers of this Technical Release (TR) should first refer to the hierarchy of accounting standards in Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This TR supplements the relevant accounting standards but is not a substitute for and does not take precedence over the standards.
2. SFFAS 50, *Establishing Opening Balances for General Property, Plant, and Equipment*, permits a reporting entity, under specific conditions, to apply alternative methods in establishing opening balances for general property, plant, and equipment (PP&E). This TR provides additional guidance to those reporting entities in applying the alternative methods.

Alternative Methods

3. This implementation guidance provides assistance in applying the alternative methods for opening balances. It explains the alternative valuation methods¹ in greater detail and describes documentation that may support the valuation, as outlined in SFFAS 6, *Accounting for Property, Plant, and Equipment*, as amended. This TR does not provide guidance on validation of the existence and completeness of general PP&E.
4. In Statement of Federal Financial Accounting Concepts (SFFAC) 1, *Objectives of Federal Financial Reporting*, the Federal Accounting Standards Advisory Board (FASAB or "the Board") acknowledges that accounting standards sometimes necessitate judgments about the cost and benefits of producing information or of reporting it differently. The standards-setter must, to some extent, be aware of these potential effects when considering the cost

¹The Accounting and Auditing Policy Committee developed this guidance to explain the alternative valuation methods and describe the documentation that may support the valuation as outlined in SFFAS 6, as amended. Deemed cost (one of the alternative valuation methods) is also an acceptable valuation method for opening balances of inventory, operating materials, and supplies, and stockpile materials. SFFAS 48, *Opening Balances for Inventory, Operating Materials and Supplies, and Stockpile Materials*, amended SFFAS 3, *Accounting for Inventory and Related Property*, to permit alternative valuation methods in establishing opening balances. Reporting entities may reference relevant portions of this guide when establishing opening balances in accordance with SFFAS 3, par. 20, 22-26, 42, 44, and 53, as amended.

and benefits of any given accounting alternative. The benefits of the standards should exceed the cost of applying them.

5. A premise for issuing SFFAS 50 was to consider the cost and benefit associated with establishing general PP&E opening balance information. As explained in the basis for conclusions of SFFAS 50, the Board made the following conclusions:

A6. The Board noted that while DoD has had numerous years to meet the standards and become GAAP compliant, they have not. Conditions remain that existed when FASAB issued many of these standards, and the cost to implement all the standards concurrently is greater than would have been incurred if standards were implemented in a timely manner. The goal of this Statement is to avoid requiring the expenditure of taxpayer dollars in recreating information that would have been of greater benefit in the past (for example, to evaluate major acquisition/construction programs as they were executed), but for which the current use is limited to accountability and assessing the cost of current services. The Board proposed less costly alternatives that will support this objective.

A7. The Board believes assisting DoD with establishing a baseline benefits all parties. Providing a starting point will enable DoD to focus on needed improvements to systems and controls to process transactions going forward and thereby establish and maintain reliable financial information regarding future PP&E acquisitions. Establishing a sound financial management system is of primary importance.

6. The alternative methods provided in SFFAS 6, as amended by SFFAS 50, are meant to be less costly options to implement generally accepted accounting principles (GAAP) for general PP&E; this allows reporting entities to focus on needed improvements to systems and controls to process transactions going forward. By establishing and maintaining reliable financial information, such reporting entities will be more informed about costs of future general PP&E acquisitions.
7. The alternative methods provide the needed flexibility for establishing opening balances. At times, it is not practical or cost effective to determine the historical cost of general PP&E because of inadequate systems and/or insufficient documentation.
8. The alternative methods include (1) using deemed cost as an alternative valuation method for opening balances of general PP&E, (2) selecting between deemed cost and prospective capitalization of internal use software, and (3) allowing an exclusion of land and land rights from opening balances with disclosure of acreage information and expensing of future acquisitions.

Management Responsibility and Documentation

9. Management is responsible for establishing accounting policies, including the determination of which method to use. Any of the methods provided by SFFAS 6, as amended, are acceptable. It appears management would apply cost-benefit considerations and other

practical concerns under different alternatives. It is important to be mindful that the alternative methods for establishing opening balances are based on the concept of reasonable estimates and therefore do not seek precision.² Also, assessments of materiality and cost versus benefit should be guiding factors because cost-beneficial options are a major goal of SFFAS 50.

10. The reporting entity may select any of the alternative methods when establishing opening balances; there is no preferred method among those permitted. Therefore, making comparisons among the methods or attempting to identify the best method is inappropriate. Management should expect to provide adequate documentation that is consistent with the method used and supports the overall reasonableness of the valuation. However, management is not required to select the most precise or best method.
11. Management is also responsible for maintaining adequate documentation of data sources and the application of methodologies. It is reasonable to expect that sufficient, relevant and reliable historical cost information may not be available for general PP&E when applying the alternatives provided by SFFAS 50. In the absence of sufficient, relevant and reliable historical cost information on which to base the valuation, reporting entities should maintain supporting documentation for the alternative method and data used to establish opening balances. Management should expect to support alternative methods with auditable documented information. Adequate documentation of the source of the data and the application of the methodology used will help support management's assertion that the valuations are in compliance with accounting standards in all material respects.
12. The documentation should describe the methodology (alternative method used and description) and the reporting entity's review process to determine that the valuations are reasonable. While the documentation may differ from what is expected to support historical cost, it "should be complete and stand on its own." That is, a knowledgeable, independent person could perform the same procedures in the methodology and replicate the results. This should be maintained in a manner to facilitate the auditor's testing of the alternative methods. If the documentation were from a source that would normally be destroyed, then copies should be maintained for the purpose of reconstructing the amounts.
13. Additional information, including specific examples of documentation that may be acceptable, is included under each alternative method.

²As used in this document, "precision" refers to an exact amount that represents the one correct amount. This is in contrast to a reasonable estimate, which refers to an amount that is within a reasonable range of possible amounts, based on what is being measured.

Deemed Cost

14. The primary focus of this guidance is on the application of deemed cost. Deemed cost is a surrogate for initial amounts and an acceptable valuation method for opening balances for general PP&E. Use of deemed cost is intended to provide a cost-effective approach to the adoption of SFFAS 6, as amended, where historical cost information and systems do not support such balances.
15. Deemed cost may include several valuation methods because the reporting entity may have multiple component or subcomponent reporting entities³ (1) using different methods simultaneously and/or (2) adopting a method permitted under SFFAS 6, as amended, at different times prior to establishing opening balances. Large and complex reporting entities, such as the Department of Defense (DoD), may have used a variety of valuation methods.
16. It is acceptable for the reporting entity to have multiple component or subcomponent reporting entities that use various valuation methods simultaneously. Deemed cost should be based on one, or a combination, of the following three valuation methods permitted by SFFAS 6, as amended: (1) replacement cost, (2) estimated historical cost, or (3) fair value. While no disclosure of the distinction or breakout of the amount of deemed cost of general PP&E included in the opening balance is required, documentation should clearly indicate the valuation method applied to each asset or class of assets.
17. While flexibility is offered, some options require additional disclosures,⁴ such as when component or subcomponent reporting entities elect to apply alternative methods⁵ besides deemed cost. SFFAS 6, as amended, provides that in the event a different alternative method is applied by a subcomponent reporting entity consolidated into a larger reporting entity, the alternative adopted by each significant subcomponent should be disclosed.

³SFFAS 47, *Reporting Entity*, provides that "component reporting entity" is used broadly to refer to a reporting entity within a larger reporting entity. Examples of component reporting entities include organizations such as executive departments and agencies. Component reporting entities would also include subcomponents that may themselves prepare general purpose federal financial reports (GPFFRs). One example is a bureau that is within a larger department that prepares its own standalone GPFFR.

⁴See SFFAS 6, as amended, par. 40.h-i and SFFAS 10, par. 36.f-g for information about disclosures.

⁵As explained in par. 8, the alternative methods used to establish opening balances of general PP&E include (1) using deemed cost as an alternative valuation method for opening balances of general PP&E, (2) selecting between deemed cost and prospective capitalization of internal use software, and (3) allowing an exclusion of land and land rights from opening balances with disclosure of acreage information and expensing of future acquisitions.

-
18. Adoption of deemed cost includes various valuation methods that may require the use of assumptions to develop an approximate initial amount when there is no precise means of measurement.
 19. There may be high uncertainty in the underlying assumptions used to establish opening balances under deemed cost methods. This guidance postulates that deemed cost will be subject to an inherent lack of precision because of the limitations regarding information available to the reporting entity. In using deemed cost, the reporting entity should consider the reasonableness of the assumptions selected, the relationship of the assumptions to the available documentation that is consistent with the methodology, and the overall reasonableness of the valuation.
 20. This guidance provides a foundation for preparers to exercise judgment in developing surrogates for use as deemed cost. Unlike some judgments that management makes, deemed cost will not be "trued up" to reflect the actual value in the future. As addressed by SFFAS 50, deemed cost is a surrogate for the actual or historic cost associated with general PP&E, and there is no expectation the deemed cost will be updated or changed for the passage of time, except for error corrections. Said differently, when a reporting entity elects to adopt deemed cost to establish opening balances, the reporting entity establishes opening balances that are considered consistent with GAAP. The established opening balances are not expected to be updated at a later point in time (except for the recognition of the associated depreciation) or to be evaluated retrospectively.
 21. The methods are described more fully below and not listed in order of preference.

Replacement Cost

22. Replacement cost is the amount required for an entity to replace the remaining service potential of an existing asset in a current transaction at the reporting date, including the amount that the entity would receive from disposing of the asset at the end of its useful life.⁶ The use of replacement cost would be applied for valuing opening balances and not maintained through revaluation in the future.
23. SFFAC 7, *Measurement of the Elements of Accrual-Basis Financial Statements in Periods After Initial Recording*, explains replacement cost and that there may be several ways of arriving at an approximation of it:

⁶SFFAC 7, *Measurement of the Elements of Accrual-Basis Financial Statements in Periods After Initial Recording*, par. 46.

47. Replacement cost is a remeasured amount, an entry value that is often advocated for assets used in providing services, such as capital assets and inventory not held for sale. Replacing the remaining service potential of an existing asset is not the same as acquiring an identical asset. However, in practice, it may be difficult to measure remaining service potential directly. There may be several ways of arriving at an approximation. For example, one way would be to measure the current cost of a similar asset, reduced by an appropriate amount to allow for the lower service potential of the existing asset due to its age and condition. Thus, the replacement cost of an asset is not the same as the fair value of either an equivalent new asset or the existing asset at the reporting date. For example, to arrive at the replacement cost of a fifty-year-old office building at the mid-point of its expected life, the fair value of an equivalent, newly constructed office building would have to be adjusted for the value of the difference in age or service potential. In addition, the fair value of the existing building may be higher than the replacement cost because the building can be put to alternative uses that produce greater benefits to the owner.

48. The relevance of replacement cost is high, especially for assessments of financial position and future resource needs. The level of understandability, reliability, and comparability across entities of reported replacement cost amounts may vary according to the data used and the complexity of the calculation.

49. Reporting the replacement cost of capital assets used in providing services and related service costs can facilitate comparisons between program and activity costs and accomplishments related to the same period. An objection sometimes raised is that replacement cost is not an attribute of the asset that is actually owned. However, the asset being measured is not the physical asset but the services it can provide.

24. Generally, replacement cost is the amount that a reporting entity would pay to replace the service potential of an existing asset at current transaction prices with a similar asset. Replacement cost is different than reproduction cost. Reproduction cost is the cost to construct an exact duplicate of the structure at today's cost. Reproduction cost would result in reconstructing the item as is, using manufacturing/construction techniques and standards applicable at the time the asset (and any modifications) entered service. Replacement cost using today's materials and standards is typically lower than reproduction cost, as reproduction of older methods today is less efficient and more expensive.
25. As explained in SFFAC 7, a reporting entity must consider the remaining service potential or age of the general PP&E to arrive at replacement cost. For example, the cost of a new item of PP&E could be adjusted by the equivalent of accumulated depreciation based on the remaining useful life compared to the original useful life to arrive at replacement cost.
26. Under deemed cost, an effective managerial costing system that employs replacement cost information may be an acceptable source for replacement cost data.

Plant Replacement Value⁷ One Acceptable Replacement Cost Method for Real Property)

27. Plant replacement value (PRV) represents the cost to design and construct a notional facility to current standards or to replace an existing facility at the same location. PRV was developed to support large-scale, program-level estimates for planning purposes and is used in the Federal Real Property Profile (FRPP).⁸ While not previously used for financial reporting purposes, PRV is used for decision making and management purposes. PRV may be an appropriate starting point in establishing replacement cost for real property.

Figure 1: Plant Replacement Value Factors⁹

$$\text{PRV} = \text{Facility Quantity} \times \text{Replacement Unit Cost} \times \text{Area Cost Factor} \times \text{Historical Records Adjustment} \times \text{Planning and Design Factor} \times \text{Supervision Inspection and Overhead Factor} \times \text{Contingency Factor}$$

Source: GAO.

28. PRV is based on the factors identified in figure 1 above. The processes and methodology supporting the PRV model should be documented and maintained. To perform the calculation, the facility quantity (size or unit of measure, such as square footage) needs to be obtained for the real property asset. The replacement unit cost factors are derived from multiple sources, such as government-contract awards and commercial-estimating applications. Area cost factors are developed based on local conditions affecting construction costs. Actual contract award data may span multiple years due to the frequency of relevant awards. In collecting data for use in establishing area cost factors, timing issues will arise and some assets may take more than one year (often several) to plan, contract, and construct. Therefore, averaging the data represents a trade-off, but is acceptable. While more precision could be available, it might require a broader search for relevant cost data that may or may not enhance the resulting valuation.
29. PRV also includes historical records adjustment; planning and design cost factors; supervision, inspection, and overhead cost factors; and contingency cost factors. Because PRV will lead to a replacement cost value, the asset characteristics and factors included in

⁷Plant Replacement Value (PRV) may also serve as a basis to establish estimated historical cost. If so, adjustments for inflation/deflation may be appropriate.

⁸The FRPP is a "database of all real property under the custody and control of all executive branch agencies, except when otherwise required for reasons of national security." Federal Real Property Profile Management System. Accessed May 15, 2017. https://www.realpropertyprofile.gov/FRPPMS/FRPP_Login.

⁹PRV is not limited to the factors included in this figure and described in the following paragraphs. This is an example of one agency's model and factors. Other agencies may have different factors.

the model do not contain all possible attributes and factors associated with the actual asset. As noted in SFFAC 7 (par. 49), replacement cost is not an attribute of the actual asset; instead, it is the theoretical cost to replace the service potential embodied in the asset. Close alignment of the physical characteristics of the actual asset and the theoretical replacement asset is therefore not critical to arrive at a reasonable value.

30. Because of these inherent limitations, the PRV associated with a particular real property asset may not be indicative of all of the specific features of that asset. In fact, the specific features of the asset may not be consistent with current building codes, materials, or methods. Further, the specific characteristics of the asset may not be catalogued in sufficient detail to establish highly granular cost factors.
31. Potentially acceptable forms of supporting documentation¹⁰ for PRV¹¹ or data elements include some or all of the following:
 - a. A process to establish and verify the facility quantity
 - b. Geospatial data and space management systems
 - c. Maps with addresses or utilities
 - d. Plot plans, as built blueprints, plats, and other schematics serving as facilities management documentation for the asset(s) in question
 - e. State, city, and other municipality tax assessment documentation
 - f. Designation letter
32. PRV is inclusive of capital improvements. For example, the primary sources of replacement unit costs are contract data and commercial estimating applications. Some of these factors are not explicitly addressed in PRV but are still embedded in the process. Further, the replacement-unit costs are intended to establish a notional amount for a large number of assets, rather than a specific asset. This representative amount is then applied to individual assets.
33. If PRV is used in establishing the opening balance for real property, then an adjustment for the difference in age between the existing asset and a replacement asset is required to

¹⁰The forms of documentation are not listed in any order of preference. They are examples and there may be others not included in this list. The list is not exhaustive. Certain documentation would be more significant based on the PRV formula or other factors, but such assessments require judgment.

¹¹PRV does not represent actual cost and is based on several factors that may be made up of different supporting documents, elements, and formulas.

arrive at replacement cost, per SFFAC 7, paragraph 47. This could be accomplished by recognizing accumulated depreciation based on the remaining useful life of the real property. Alternatively, other methods could be used to adjust the PRV for the difference between the remaining service potential of the asset and that of a new replacement asset. Statistical methods of approximating the remaining service potential may provide a cost-beneficial option for making such adjustments. This adjustment is unrelated to inflation or deflation since the acquisition of the existing asset.

Other Acceptable Replacement Cost Methods for General Property Plant & Equipment (PP&E)

34. There are several sources for current replacement-cost amounts for general PP&E. Potentially acceptable forms of supporting documentation¹² for this method include the information obtained from the following sources, guides, or lists:
 - a. Published price list-the basic price of an item as published in a catalog, list price, or advertisement before any discounts are taken. If the price is reasonably current,¹³ it may be used to establish replacement cost. Sources of price lists may include the following:
 - i. The original equipment manufacturer
 - ii. A vendor involved in the manufacture of the same or a similar asset
 - iii. Federal Logistics Data (FED LOG) published by the Defense Logistics Agency (FED LOG prices may also serve as a basis to establish estimated historical cost.)¹⁴

¹²The forms of documentation are not listed in any order of preference. They are examples and there may be others not included on this list.

¹³Reasonably current means that no material adjustments are required for changes in the general price level or for changes in specific prices.

¹⁴ FED LOG may be a potentially acceptable form of supporting documentation unless unit pricing updates based on recent acquisitions and/or cost of living inflation factors are lacking. Assets listed in FED LOG will have a National Stock Number (NSN) or National Item Identification Number. FED LOG prices may also serve as a basis to establish estimated historical cost. Therefore, FED LOG is identified as a potentially acceptable form of supporting documentation under that discussion. In some situations, inactive acquisitions and older data may be indexed to derive estimated historical cost. In others, historical-cost information for certain types of assets (low-velocity items or major end items such as weapons systems or tanks) are likely to cover only the base asset value and not include later capital improvements or modifications. For example, when a major modification is made to a weapons system, typically a new NSN is created to differentiate the new capability from the older item. For example, FED LOG most likely will have an NSN for an Abrams M1A1 and a separate NSN for an Abrams variant M1A2. Therefore, flexibility must be allowed in determining if FED LOG can be used as replacement cost or estimating a reasonable historical cost.

-
- iv. General Services Administration schedule
 - b. Published industry price guide-examples of such price guides include the Kelley Blue Book, Aircraft Blue Book, National Automotive Dealers Association guides, and Edmunds.com, which provide prices for the same or similar assets.
 - c. Values based on sales by the reporting entity of the same or similar assets to outside parties
-

Estimated Historical Cost (Initial Amount)

- 35. A reasonable estimate of historical cost may be based on one or more, or a combination, of the following methods:
 - a. Cost of the same or similar assets at the time of acquisition
 - b. Current cost of the same or similar assets discounted for inflation since the time of acquisition (that is, deflating current costs to costs at the time of acquisition by general price index)
 - c. Other reasonable estimation methods, including latest acquisition cost and estimation methods based on information such as, but not limited to, budget, appropriations, engineering documents, contracts, or other reports reflecting amounts to be expended
- 36. This list of reasonable estimates is not intended to establish any hierarchy of methodologies. As noted, reasonable estimates of historical cost do not require a precise measure of cost. Materiality and cost should be considered when weighing the benefits of greater precision.
- 37. Management is responsible for estimates included in the financial statements. Estimates are based on both subjective and objective factors and, as a result, judgment is required to estimate opening balances. Although reasonable estimates are applicable to any general PP&E, certain special considerations would be applied when establishing opening balances. The following is additional guidance that may assist in establishing opening balances based on a reasonable estimate of historical cost.
- 38. As noted, cost-beneficial options are a major goal of SFFAS 50. Estimating historical cost of an asset is not the same as recreating the accounting records that would have been created had the reporting entity undertaken a GAAP-accounting approach at the time the asset was acquired. SFFAS 50 is intended to avoid the expenditure of taxpayer dollars in recreating information that would have been of greater benefit in the past (for example, to evaluate

major acquisition/construction programs as they were executed), but for which the information's current use is limited to accountability and assessing the cost of current services.

39. Reporting entities must provide adequate supporting documentation appropriate for the deemed cost methodology selected to establish opening balances. SFFAS 50 and guidance clarified in this TR allows reporting entities flexibilities that should be considered when developing assumptions (see the next section) and documenting reasonable estimates of historical cost methodology.

Assumptions

40. Assumptions are basic beliefs about the future operating and functional characteristics.¹⁵ For purposes of establishing opening balances of general PP&E, reasonable assumptions may be needed to make up for a lack of actual data. When reasonable assumptions are made, they should be documented and based on a consistent approach. Reporting entities should ensure that the assumptions are reasonable in the context of the asset, and that the overall valuation is reasonable.
41. Estimated historical cost is an estimate of the costs incurred to bring the PP&E to a form and location suitable for its intended use. SFFAS 6, as amended, paragraph 26, provides examples of the costs that may be included. When management opts to use "other reasonable estimation methods" (par. 35.c. above) such as budget records to estimate historical cost, this list is relevant.¹⁶
42. Many of the examples (such as direct costs of inspection, supervision, and administration of construction contracts and construction work) would require managerial cost accounting systems to calculate an appropriate capitalizable amount during the process of acquiring an asset. Including such costs in estimated historical cost would be especially challenging. The reporting entity may find that critical data elements are missing. For example, a reporting entity may utilize a contract for valuation of modifications even though the contract is missing one or more critical elements to allow for proper cost allocation.
43. The reporting entity should consider whether including all such costs is necessary or cost beneficial to arrive at a reasonable estimate. In doing so, the reporting entity may consider

¹⁵FASAB Handbook, Version 15 (06/16).

¹⁶Note that deemed cost methods other than estimated historical cost inherently include costs such as the costs identified in this list. Therefore, this list would not be relevant when management elects to apply methods identified at paragraphs 35.a. and 35.b.

whether comparable costs today are material. If material, management may elect to use current cost-accounting information to estimate historical costs of a similar nature. For example, if inspection and supervision costs are approximately six percent of contract costs today, then that may be a reasonable and cost-beneficial assumption about past costs.

44. Determination of whether to capitalize a particular cost as a cost of general PP&E should be based on general guidance in SFFAS 4, *Managerial Cost Accounting Standards and Concepts*, and SFFAS 6, as amended. While these standards are imperative for the go-forward approaches implemented, it is difficult to apply these approaches in establishing opening balances under the alternative methods.
45. For example, SFFAS 4 provides that each reporting entity should accumulate and report the cost of its activities on a regular basis for management-information purposes and that costs should be assigned to outputs in one of the methods listed below in the order of preference:
 - a. Directly tracing costs wherever feasible and economically practicable
 - b. Assigning costs on a cause-and-effect basis
 - c. Allocating costs on a reasonable and consistent basis
46. A reporting entity eligible to apply the provisions of SFFAS 50 has not been in compliance with SFFAS 4 or SFFAS 6 in the past. There may be little benefit in retrospectively establishing cost-assignment processes to capture indirect costs for the purpose of establishing opening balances. In addition, given that many assets may be near fully depreciated, there may be an argument to expense indirect costs based on materiality. These factors should be considered in developing the reasonable estimate.
47. The discussion below provides *examples* (that are not required or expected) of considerations that may be appropriate for a reasonable estimate of historical cost in establishing opening balances. The list below is not exhaustive and additional considerations (even if not specifically identified in the list below) may be necessary.
48. Considerations that may be appropriate for a reasonable estimate of historical cost in establishing opening balances include the following:
 - a. It is a reasonable estimate; it does not seek precision.
 - b. Materiality is a guiding factor in arriving at assumptions and the cost of more precise assumptions should be considered in relation to the materiality of their effect.

-
- c. Multiple assumptions may be used to develop the reasonable estimate. This may include rates developed by other program offices, such as depot labor rates, maintenance, or other unique program rates that would be used for labor.
 - d. While conflicting documentation may exist regarding a particular item of general PP&E, the reasonableness of the estimate should be based primarily on the method selected. For example, deflating the current cost of a similar asset may result in an estimate that differs from a reasonable estimate based on budget records. Both estimates may be reasonable despite arriving at different amounts. The reporting entity is responsible for establishing a reasonable estimate, and it is not necessary to validate the estimate against alternative ways of arriving at it. The reporting entity should ensure its method is documented.
 - e. The deemed cost approach does not anticipate that the full series of entries related to general PP&E be recreated.
 - i. For example, it would not be cost effective or beneficial to expect reporting entities to apply the full cost standards as they would have been applied¹⁷ in establishing opening balances for general PP&E.
 - 1. Reporting entities may develop reasonable assumptions to determine the capitalizable portion of contract costs or pooled costs. An analysis of current contract costs, looking at the amount of capitalizable and non-capitalizable costs, may provide a reasonable proxy for historical experience. An analysis may provide for a certain percentage or to capitalize all costs of certain programs.
 - 2. Reporting entities may develop reasonable assumptions or methodologies to determine the capitalizable indirect costs for programs. An analysis of a few select programs may support that applying a set indirect rate to all remaining programs is reasonable.

¹⁷Conditions remain that existed when FASAB issued many of these standards, and the cost to implement all the standards concurrently is greater than would have been incurred if standards were implemented in a timely manner. The goal of SFFAS 50 was to avoid requiring the expenditure of taxpayer dollars in recreating information that would have been of greater benefit in the past (for example, to evaluate major acquisition/construction programs as they were executed), but for which the current use is limited to accountability and assessing the cost of current services. The Board proposed less costly alternatives that will support this objective. (SFFAS 50, par. A6.)

Documentation

49. Traditional supporting documentation often was not available for legacy weapon programs. The reporting entity may have relied on other supporting documentation that may have been subsequently removed from the acquisition and/or asset management processes.
50. For example, third-party documentation¹⁸ (such as congressional reports, cost documents, websites devoted to military weapon systems, historical newspaper articles referencing government sources, and other information obtained on the internet) and indexed appraisals may be considered acceptable. However, it is important that reporting entities document and maintain support for the data and assumptions used to develop reasonable estimates.
51. Examples of potentially acceptable documentation are included under each reasonable estimate method.

Estimates-Budget Based

52. The Budget of the U.S. Government (commonly referred to as the President's Budget) and related supporting documentation for a program or asset may have adequate detail to support a reasonable estimate. Specifically, the budget detail provides visibility of the various cost estimates for the program or asset by year. To ensure the full program and funding amounts have been reviewed, the amounts should be reconciled and documented at the appropriation level with Public Laws and allocated to individual programs based on information provided in pertinent budgetary documents. Examples of such budgetary documents may include the following:¹⁹
 - a. Executive agency budget submission/request information
 - b. Congressional conference committee reports
 - c. House and Senate committee reports
 - d. Congressional budget requests

¹⁸The forms of documentation are not listed in any order of preference. They are examples and there may be others not included on this list.

¹⁹The examples of budgetary documents are not listed in any order of preference. They are examples and there may be others not included on this list.

-
- e. Apportionment and Re-apportionment Schedule (SF-132) forms and Report on Budget Execution and Budgetary Resources (SF-133) forms
 - f. Other relevant documentation such as Department of the Treasury warrants, material supplemental appropriations, reprogramming, rescissions, transfers, or other budgetary documents that lead to a change in amount.
53. Although this method is relatively straightforward for individual assets or those recently acquired, it is much more complex when considering program or weapon systems that include a variety of assets and spare parts, logistics, and support equipment. The process is compounded when the information relates to assets, systems, and programs that date over 20 years or more.
54. Therefore, certain flexibilities should be afforded because reporting formats and information needs change over time. Examples may include the following:
- a. Budget-based estimates may need to be reconciled to the documents listed in paragraph 52.a. - f., if available, or to alternative documents. Older assets (such as assets acquired in 1990 or before) and legacy systems may have different supporting documentation available.²⁰
 - b. Budget documents in a summary format do not preclude a budget-based estimate; estimates may be made at the summary level when adequately explained.
55. Potentially acceptable forms of documentation for this method include the following:²¹
- a. Budget justification materials and items discussed in paragraph 52.a. - f.
 - b. Appropriation data
 - c. Selected acquisition reports
 - d. P-1 documents and R-1 documents

²⁰Reporting entities may use a Selected Acquisition Report, a congressionally mandated report for major weapon programs outlining budget projections. They may also use a P-1 document, which provides a breakout of all procurement appropriations by line item and an R-1 document, which provides a breakout of all research, development, test, and evaluation appropriations by program element.

²¹The forms of documentation are not listed in any order of preference. They are examples and there may be others not included on this list.

-
- e. Program office analysis
 - f. Allocated per unit cost report
 - g. Technical specifications and estimates
 - h. Industry estimates reports of amounts to be expended
 - i. FED LOG²²

Estimates-Contract Based

- 56. The best case scenario is a "conformed contract" providing all the information available that needs to be allocated to a particular asset, including all the modifications and delivery orders associated with the contract. However, this is not normally the case because costs to be capitalized are included in multiple contract line items and multiple contracts. This methodology involves valuing assets using the pricing data included in contracts. Although challenging, reasonable estimates based on contracts are still permitted.
- 57. Contracts contain specific contract line item numbers, which delineate specific production and non-production activities (for example, materials, installation, proposal prep, spare parts). As noted above, the determination of whether to capitalize a particular cost as a cost of general PP&E should be based on general guidance in SFFAS 4, and SFFAS 6, as amended. While these standards are imperative for the go-forward approaches implemented, it is difficult to apply these approaches in establishing opening balances under the alternative methods.
- 58. Potentially acceptable forms of documentation for this method include the following:²³
 - a. Acquisition contracts
 - b. Time Compliance and Technical Orders (TCTOs)
 - c. Comprehensive Cost and Requirement System Reports
 - d. Program office delivery schedule

²²See the FED LOG discussion on p. 10.

²³The forms of documentation are not listed in any order of preference. They are examples and there may be others not included on this list.

-
- e. Maintenance delivery schedule
 - f. DD Form-250, *Material Inspection and Receiving Report*, and other receiving reports
 - g. Invoices
 - h. Program office analysis
 - i. FED LOG²⁴

Estimates-Engineering Document Based

- 59. Detailed technical and engineering documents lay out the assumptions, materials, and estimated cost to produce an asset. In these instances, the engineering documents can provide a sufficient basis for estimating deemed cost for opening balances.
- 60. Potentially acceptable forms of documentation for this method include the following:²⁵
 - a. Technical specifications and estimates
 - b. Maintenance delivery schedule
 - c. Bill of material
 - d. Invoices
 - e. Vendor quotes on material costs/sale rates
 - f. TCTOs
 - g. Industry estimates
 - h. FED LOG²⁶

²⁴See the FED LOG discussion on p. 10.

²⁵The forms of documentation are not listed in any order of preference. They are examples and there may be others not included on this list.

²⁶See the FED LOG discussion on p. 10.

Estimate-Deflation of Current Cost

61. SFFAS 6, as amended, provides that general PP&E may be estimated based on current cost of the same or similar assets discounted for inflation since the time of acquisition (that is, deflating current costs to costs at the time of acquisition by general price index). This method is appropriate when a series of similar items are being acquired over time and there is a reliable value for a base asset.
62. Considerable flexibility is permitted within the framework as long as the method is properly indexed. For example, estimation may extend beyond current costs, provided it is properly indexed. It may be possible that the cost of a similar asset listed in a price guide two years before or after acquisition, properly indexed, is a reasonable estimate and likely more accurate than an indexed cost taken from a current price guide.
63. Potentially acceptable forms of documentation for this method include the following:²⁷
 - a. Current cost of a similar asset
 - b. Appropriate pricing index to discount the current asset cost to its estimated cost at the time of acquisition
 - i. Consumer Price Index
 - ii. Other indices from the Department of Labor's Bureau of Labor Statistics
 - c. FED LOG²⁸

Cost Estimators²⁹

64. In certain instances, an informed opinion of an expert cost estimator may be used to support reasonable estimates consistent with the provisions of SFFAS 50 and this TR. Informed opinion refers to the judgment of others who make estimates based on their programmatic knowledge and/or experience without using a fully satisfactory information store and, in some cases, without using an econometric or other statistical model. If an expert cost estimator is used, the expert's credentials or qualifications should be articulated and

²⁷The forms of documentation are not listed in any order of preference. They are examples and there may be others not included on this list.

²⁸See the FED LOG discussion on p. 10.

²⁹Cost estimators may also serve as a basis to establish fair value. Therefore, cost estimators are identified as a potentially acceptable documentation under that discussion.

documented in sufficient detail to allow review and validation by independent sources, including independent auditors. For example, reports and studies on relevant issues and other relevant communications describing the basis for any assumptions or changes in assumptions should be maintained in support of the expert's opinion.

65. Potentially acceptable forms of documentation for this method include the following:³⁰

- a. Reports and studies
- b. Memos with outside experts and minutes from internal meetings describing the basis for any assumptions or changes in assumptions
- c. Previous studies conducted by the expert, including industry studies, journal articles, and third-party studies

Fair Value

66. Fair value is the amount at which an asset or liability could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale.³¹ When determining the value of opening property balances, fair value is an acceptable valuation method to use in absence of actual cost data and associated supporting documents.

67. FASAB has not developed detailed guidance regarding the approaches to use in establishing fair value. Other standards-setters have provided guidance. For example, the Governmental Accounting Standards Board (GASB) issued Statement No. 72, *Fair Value Measurement and Application*, which is summarized as follows:

Fair value is described as an exit price. Fair value measurements assume a transaction takes place in a government's principal market, or a government's most advantageous market in the absence of a principal market. The fair value also should be measured assuming that general market participants would act in their economic best interest. Fair value should not be adjusted for transaction costs.

To determine a fair value measurement, a government should consider the unit of account of the asset or liability. The unit of account refers to the level at which an asset or a liability is aggregated or disaggregated for measurement, recognition, or disclosure purposes as provided by the accounting standards. For example, the unit of account for investments held in a brokerage account is each individual security, whereas the unit of account for an investment in a mutual fund is each share in the mutual fund held by a government.

³⁰The forms of documentation are not listed in any order of preference. They are examples and there may be others not included on this list.

³¹SFFAC 7, par. 38.

This Statement requires a government to use valuation techniques that are appropriate under the circumstances and for which sufficient data are available to measure fair value. The techniques should be consistent with one or more of the following approaches: the market approach, the cost approach, or the income approach. The market approach uses prices and other relevant information generated by market transactions involving identical or comparable assets, liabilities, or a group of assets and liabilities. The cost approach reflects the amount that would be required to replace the present service capacity of an asset. The income approach converts future amounts (such as cash flows or income and expenses) to a single current (discounted) amount. Valuation techniques should be applied consistently,³² though a change may be appropriate in certain circumstances. Valuation techniques maximize the use of relevant observable inputs and minimize the use of unobservable inputs.

68. SFFAS 6, as amended by SFFAS 50, permits use of fair value as one option for valuing opening balances and does not require that fair value be maintained through revaluation in the future. Generally, where fair value is applied in other circumstances it is maintained as a current value and updated each reporting period. Because SFFAS 50 seeks cost-effective approaches to a one-time valuation, the reporting entity should use fair value approaches that are cost effective. The data available should be appropriate to the circumstances of establishing a cost-effective opening balance for unique assets.
69. In such cases, the markets may be inherently limited given the unique nature of government assets, such as defense assets. In fact, many assets may be highly specialized, making fair value difficult to determine. For example, there may be few observable transactions and transactions may not be indicative of an active market between willing buyers and sellers.
70. 70. For these reasons, and to afford use of fair value in a cost-effective manner, opening balances at fair value may be determined based upon generally accepted approaches established by the GASB as well as
 - a. market approaches where both the market and data are limited (hereafter "limited market approaches");
 - b. cost estimators; and/or
 - c. desktop appraisals.

³²Cost-beneficial options are a major goal of SFFAS 50. The reporting entity may select any method; there is no preferred method among the methods permitted. The reporting entity should consider the reasonableness of the methodology selected and its relation to the available documentation. However, making comparisons among the methods or attempting to identify the most cost-beneficial method would be inappropriate. Management is not required to select the most precise or the best method.

-
71. Limited market approaches may include transactions under the foreign military sales program, prices charged for sales between federal government agencies, and other transfer programs for which reimbursement occurs.
 72. Fair value can be established through an appraisal performed by an independent, qualified professional. The appraisal must be performed in accordance with the Uniform Standards of Professional Appraisal Practice to be considered compliant.
 73. Although appraisals require the expenditure of resources, they may be justified for significant assets or when multiple, or groups of, assets can be appraised at the same time.
 74. For the purpose of establishing deemed cost, desktop appraisals that do not require physical inspection of the assets are acceptable. Mass appraisals, which leverage systematic procedures and statistical testing techniques to value multiple assets concurrently, are also acceptable for establishing deemed cost.
 75. Potentially acceptable forms of documentation for this method include the following:³³
 - a. Appraisal documents from qualified professionals
 - b. Methodology describing the fair value process
 - c. Documentation showing a recent sales transaction and amount for a similar asset in similar condition
 - d. Documentation showing a third-party sales price for a similar asset in similar condition
 - e. Documentation to support the cost estimator

Land Rights

76. One alternative method permitted under SFFAS 50 is an exclusion of land and land rights from opening balances with disclosure of acreage information and expensing of future acquisitions.
77. Reporting entities may elect to exclude land and land rights in establishing opening balances of general PP&E (consistent with the alternative method established in SFFAS 6,

³³The forms of documentation are not listed in any order of preference. They are examples and there may be others not included on this list.

as amended, par. 40.f.i). It is important to consider what information should be disclosed regarding land rights.

78. SFFAS 6, as amended, states that a component reporting entity electing to exclude land and land rights from its general PP&E opening balances

must disclose, with a reference on the balance sheet to the related disclosure, the number of acres held at the beginning of each reporting period, the number of acres added during the period, the number of acres disposed of during the period, and the number of acres held at the end of each reporting period. A reporting entity electing to exclude land and land rights from its general PP&E opening balance should continue to exclude future land and land rights acquisition amounts and provide the disclosures. (SFFAS 6, as amended, par. 40.h.ii)

However, SFFAS 6, as amended, and the basis for conclusions for SFFAS 50, acknowledge the diverse nature of land rights. SFFAS 6 acknowledges that some land rights may be depreciable or amortizable while others are not. For example, land rights for a limited period of time are depreciated or amortized, whereas land rights that are permanent, such as with a deeded easement or right of way, are not.

79. The reporting entity should consider quantitative and qualitative criteria in determining if land rights disclosures of acreage are appropriate. A reporting entity electing to exclude land rights from the opening balances and to expense subsequent acquisitions of land rights would disclose acreage when a land right provides control of acreage. Generally, when a land right does not provide acreage to the entity (that is, by allowing the entity to control specific acreage), there would be no acreage to disclose. Therefore, there may not be land rights disclosures required by SFFAS 6, as amended, by SFFAS 50.
80. In addition, materiality is an overarching consideration in financial reporting.

Effective Date

81. This TR is effective upon issuance.

The provisions of this Technical Release need not be applied to immaterial items.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Committee members in reaching the conclusions in this Technical Release. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The guidance enunciated in this Technical Release—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Technical Release may be affected by later Statements or other pronouncements. The Handbook is updated annually and includes a status section directing the reader to any pronouncement that changed this Technical Release. Within the text of the Technical Release, the guidance sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statements or other pronouncements for the rationale for each amendment.

Project History and Guidance

- A1. FASAB issued SFFAS 50, *Establishing Opening Balances for General Property, Plant, and Equipment*, on August 4, 2016, in response to DoD's request for guidance on establishing opening balances for general PP&E.
- A2. The alternative methods provided in SFFAS 50 are meant to be less costly options to implement GAAP when establishing opening balances for general PP&E.
- A3. In August 2016, the Accounting and Auditing Policy Committee (AAPC or "the Committee") approved two projects related to SFFAS 50. This guidance is a result of the AAPC's second project to develop timely implementation guidance to assist with issues related to SFFAS 50.³⁴ The AAPC established a task force to assist in developing the guidance. The task force comprised subject matter experts from outside the federal government (such as independent public accounting firms and consulting firms) and inside the federal government (such as chief financial officer staff and program office staff) to ensure diverse perspectives were represented.
- A4. The AAPC task force was divided into sub-groups (general PP&E, land rights, and broad issues) to assist FASAB staff and expedite the identification of issues. The task force

³⁴The first project resulted in conforming amendments to existing TRs. FASAB issued TR 17, *Conforming Amendments to Technical Releases for SFFAS 50, Establishing Opening Balances for General Property, Plant, and Equipment*, in April 2017.

considered draft documents prepared by FASAB staff. As a result of the task force input, FASAB staff developed the implementation guidance presented in this TR.

- A5. This guidance applies to reporting entities electing to apply SFFAS 50. This TR provides additional guidance to those reporting entities strictly in applying the alternative methods in establishing opening balances.
- A6. This implementation guidance assists in applying the alternative methods for opening balances and provides clarification on how the foundation and flexibility of SFFAS 50 encourage reporting entities to consider cost-benefit based on the availability of information or other practical considerations. It confirms that reporting entities may select any of the SFFAS 50 methods and there is no preferred method. Management is not required to select the most precise or best method.
- A7. This guidance explains the alternative valuation methods and describes the documentation that may be used to support the valuation as outlined in SFFAS 6, as amended. This TR does not provide guidance on the validation of existence and completeness of general PP&E.

Summary of Outreach Efforts and Responses

- A8. The exposure draft (ED), *Implementation Guidance for Establishing Opening Balances*, was issued June 21, 2017, with comments requested by July 21, 2017.
- A9. Upon release of the ED, FASAB provided notices and press releases to the FASAB subscription email list, the Federal Register, *FASAB News*, the *Journal of Accountancy*, Association of Government Accountants Topics, the *CPA Journal*, *Government Executive*, the *CPA Letter*, the Chief Financial Officers Council, the Council of the Inspectors General on Integrity and Efficiency, and committees of professional associations generally commenting on EDs in the past (for example, the Greater Washington Society of CPAs and the Association of Government Accountants Financial Management Standards Board).
- A10. The AAPC received six responses from preparers and users of federal financial information. The majority of respondents agreed with the proposals provided in the TR.
- A11. The AAPC considered responses to the ED at its August 17, 2017, public meeting. The AAPC did not rely on the number in favor of or opposed to a given position. Information about the respondents majority view is provided only as a means of summarizing the comments. The AAPC considered the arguments in each response and weighed the merits of the points raised.

A12. Of the six responses, four agreed with the proposals. Specifically, the respondents agreed that the TR provides clear technical guidance, clarifies the flexibility intended in selecting among methods by SFFAS 50, and explains that management is not required to select the most precise or best method. Two respondents neither agreed nor disagreed with the proposal. One respondent provided a letter indicating they had no comments. The other respondent provided editorial comments.

A13. Certain respondents provided suggestions and editorial comments. The respondents' comments were carefully considered by the Committee and several were adopted.

AAPC & Board Approval

A14. The TR was approved by the AAPC for release to FASAB for issuance. The Board has reviewed this TR and a majority of its members do not object to its issuance. Written ballots are available for public inspection at the FASAB office.

Technical Release 19: Rescission of Technical Release 8

Status

Issued	January 15, 2019
Effective Date	Effective upon issuance.
Affects	TR 8 is rescinded.
Affected by	None.

Summary

Statement of Federal Financial Accounting Standards (SFFAS) 55, *Amending Inter-entity Cost Provisions, amended SFFAS 4, Managerial Cost Accounting Standards and Concepts*, and rescinded SFFAS 30, *Inter-Entity Cost Implementation: Amending SFFAS 4, Managerial Cost Accounting Standards and Concepts*, and Interpretation 6, *Accounting for Imputed Intra-departmental Costs: An Interpretation of SFFAS No. 4*.

As a result, Technical Release (TR) 8, *Clarification of Standards Relating to Inter-Entity Costs*, is no longer consistent with SFFAS 4, as amended, because the requirement to recognize inter-entity costs was revised significantly.

This TR rescinds TR 8 because it is no longer consistent with SFFAS 4, as amended.

The provisions of this TR need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Technical Guidance

Scope

1. Readers of this Technical Release (TR) should first refer to the hierarchy of accounting standards in Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This TR supplements the relevant accounting standards but is not a substitute for and does not take precedence over the standards.

Rescission of Technical Release 8, *Clarification of Standards Relating to Inter-entity Costs*

2. This paragraph rescinds TR 8, *Clarification of Standards Relating to Inter-Entity Costs*, in its entirety because it is no longer consistent with SFFAS 4, *Managerial Cost Accounting Standards and Concepts*, as amended.

Effective Date

3. This TR is effective upon issuance.

The provisions of this Technical Release need not be applied to immaterial items.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Committee members in reaching the conclusions in this Technical Release. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The guidance enunciated in this Technical Release—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Technical Release may be affected by later Statements or other pronouncements. The Handbook is updated annually and includes a status section directing the reader to any pronouncement that changed this Technical Release. Within the text of the Technical Release, the guidance sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statements or other pronouncements for the rationale for each amendment.

Project History

- A1. SFFAS 4 (including Interpretation 6, *Accounting for Imputed Intra-departmental Costs: An Interpretation of SFFAS No. 4*), required reporting entities to recognize the full costs of services received from other federal reporting entities even if there was no requirement to reimburse the providing reporting entity for the full cost of such services.
- A2. The Federal Accounting Standards Advisory Board (FASAB) issued SFFAS 55, *Amending Inter-entity Cost Provisions*, on May 31, 2018. This Statement amended SFFAS 4 and rescinded SFFAS 30, *Inter-Entity Cost Implementation: Amending SFFAS 4, Managerial Cost Accounting Standards and Concepts, and Interpretation 6*.
- A3. With the rescission of SFFAS 30, paragraphs 110 and 111 of SFFAS 4, as amended, were restored to their original language prior to the issuance of SFFAS 30. SFFAS 55 revised SFFAS 4 to provide for the continued recognition of significant inter-entity costs by business-type activities. Inter-entity costs continue to be imputed for those reporting entities conducting business-type activities¹ because the information is directly tied to rates.
- A4. Per SFFAS 4, as amended, recognition of inter-entity costs by activities that are not business-type activities is not required with the exception of inter-entity costs for personnel

¹Business-type activity is defined as a significantly self-sustaining activity that finances its continuing cycle of operations through collection of exchange revenue as defined in SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*.

benefits and the Treasury Judgment Fund settlements unless otherwise directed by the Office of Management and Budget (OMB). Notwithstanding the absence of a requirement, non-business-type activities may elect to recognize imputed cost and corresponding imputed financing for other types of inter-entity costs.

Rescission of TR 8, *Clarification of Standards Relating to Inter-Entity Costs*

- A5. This TR rescinds TR 8 because it is no longer consistent with SFFAS 4, as amended.
- A6. Rescinding TR 8 rescinds guidance that is not in accordance with generally accepted accounting principles (GAAP) due to SFFAS 55 amendments. For example, TR 8 does not reflect that recognition of inter-entity costs by activities that are not business-type activities is not required with the exception of inter-entity costs for personnel benefits and the Treasury Judgment Fund settlements unless otherwise directed by OMB. However, non-business-type activities may elect to recognize imputed cost and corresponding imputed financing for other types of inter-entity costs.
- A7. This TR also eliminates potentially confusing references to the rescinded SFFAS 30. The Accounting and Auditing Policy Committee (AAPC or "the Committee") believes it appropriate to rescind TR 8 because allowing it to remain is inconsistent with current GAAP and may lead to potential misapplication of the technical guidance. For example, paragraph 7 (the first paragraph under the "Technical Guidance" section) of TR 8 states: "This guidance is presented in response to three implementation issues identified by FASAB based on comments SFFAS 30 received from respondents." With SFFAS 30 being rescinded, allowing TR 8 to remain in effect could bring questions as to its applicability.
- A8. Considering the changes that have occurred in the accounting for inter-entity costs, the Committee's goal was to update TR 8 to ensure clear guidance going forward. The Committee carefully considered if any guidance should be maintained and if any additional guidance was necessary. Paragraph 111 of SFFAS 4, as amended, states:

Recognition of all significant inter-entity costs is important when those costs constitute inputs to government goods or services provided for a fee or user charge. Generally, the fees and user charges should recover the full costs of those goods and services. ^[Footnote 33 omitted] Thus, the cost of inter-entity goods or services needs to be recognized by the receiving entity in order to determine fees or user charges for goods and services sold by the federal government. Recognition of inter-entity costs supporting business-type activities ^[Footnote 33A omitted] and recognition of inter-entity costs for non-business type activities that elect to do so should be made in accordance with implementation guidance provided by

FASAB through one or more Technical Releases.^{33B} Activities that are not business-type activities are not required to recognize inter-entity costs other than inter-entity costs for personnel benefits and the Treasury Judgment Fund settlements unless otherwise directed by OMB. Notwithstanding the absence of a requirement, non-business-type activities may elect to recognize imputed cost and corresponding imputed financing for other types of inter-entity costs.

^{33B}Technical Release (TR) 8, *Clarification of Standards Relating to Inter-Entity Costs* provides implementation guidance. Additional TRs may be provided by FASAB if needed.

- A9. The Committee believes that much of the guidance that was previously included in TR 8 is no longer necessary or relevant based on the amended standards. The purpose of TR 8 was to provide guidance in response to concerns raised during due process of SFFAS 30. TR 8 addresses three aspects of full costing specified in SFFAS 4: (1) guidance on costs that should be considered broad and general for all entities, (2) guidance on the directness of the relationship to the entity's operations as used in determining if a transaction should be considered material to the receiving entity, and (3) guidance on identifiability as used in determining if a transaction should be considered material to the receiving entity.
- A10. The Committee determined that the list of broad and general support goods and services that was provided in table 1 of TR 8 is not necessary to maintain. While the list was helpful to the community when TR 8 was issued in 2008, the Committee believes the conclusions presented in the list are now well established and do not need to be included in any form of updated guidance. Table 1 provided the following examples, which appear to be widely understood in the community today as broad and general support goods and services:
- a. Department of the Treasury services, such as disbursing electronic funds transfer and check payments, government-wide accounting and reporting policy and guidance, collection services, and trust fund maintenance
 - b. Department of Justice services, such as debt collection activities and non-reimbursed services for criminal and civil litigation
 - c. General Services Administration services, such as real and personal property disposal and central management functions
 - d. Department of Labor services, such as administration of unemployment compensation and non-reimbursable administration and support services for the Federal Employees Compensation Account
 - e. Office of Personnel Management services, such as administration of the Federal Employees Benefit Program (including pensions and post-retirement benefits)

-
- f. Executive Office of the President, including all support functions performed
 - g. Government Accountability Office, such as accounting and auditing policy and guidance

A11. When considering the need for guidance on the directness of a relationship to an entity's operations, TR 8 included specific excerpts from respondents to SFFAS 30, which has now been rescinded. In addition, the guidance included excerpts from SFFAS 4 as well as paraphrases from the "Managerial Cost Accounting Concepts" and "Basis for Conclusions" sections that reiterated key points. While important, the Committee determined the following TR 8 topics discussed key points that reside in SFFAS 4, as amended, and do not need to be included in any form of updated guidance:

- a. The directness of the relationship to entity operations is generally determined by matching goods or services received to the output of the entity.
- b. Managerial cost accounting should be performed to measure and report the costs of each responsibility segment level's output.
- c. The needs of the users of cost information must be taken into account.

A12. The Committee found that the majority of the explanations on identifiability included direct excerpts and paraphrases from the "Managerial Cost Accounting Concepts" and "Basis for Conclusions" sections from SFFAS 4. The guidance in TR 8 related to the requirement for the provider to supply the receiving entity with information on the full cost of non-reimbursed or under-reimbursed inter-entity goods and services. The Committee believes this requirement and the requirements when information is not provided are well understood by the community. Therefore, this does not need to be included in any form of updated guidance.

A13. In summary, the Committee believes that, while the guidance was useful during initial implementation of SFFAS 30, it is no longer necessary. Much of the guidance provided in TR 8 is now understood by the community. Further, portions of TR 8 reiterated key points from SFFAS 4 and quoted it directly. Other portions of TR 8 contained paraphrases from the "Managerial Cost Accounting Concepts" and "Basis for Conclusions" sections of SFFAS 4 that are still included within SFFAS 4. For example, including excerpts from SFFAS 4 (issued in 1995) is not practical or useful considering SFFAS 4 is available for reference. The Committee believes all necessary guidance resides in SFFAS 4, as amended.

Summary of Outreach Efforts and Responses

A14. The exposure draft (ED), *Rescission of Technical Release 8*, was issued August 21, 2018, with comments requested by October 5, 2018.

A15. Upon release of the ED, FASAB provided notices and press releases to the FASAB subscription email list, the Federal Register, *FASAB News*, the *Journal of Accountancy*, Association of Government Accountants Topics, the *CPA Journal*, *Government Executive*, the *CPA Letter*, the Chief Financial Officers Council, the Council of the Inspectors General on Integrity and Efficiency, and committees of professional associations generally commenting on EDs in the past (for example, the Greater Washington Society of CPAs and the Association of Government Accountants Financial Management Standards Board).

A16. The AAPC received nine responses from preparers, users of federal financial information, and professional associations.

A17. The AAPC considered responses to the ED at its November 27, 2018, public meeting. The AAPC did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The AAPC considered the arguments in each response and weighed the merits of the points raised.

A18. All respondents supported the proposal to rescind TR 8, *Clarification of Standards Relating to Inter-Entity Costs*, because it is no longer consistent with SFFAS 4, as amended.

AAPC & Board Approval

A19. The TR was approved by the AAPC for release to FASAB for issuance. The Board has reviewed this TR and a majority of its members do not object to its issuance. Written ballots are available for public inspection at the FASAB office.

Technical Release 20: Implementation Guidance for Leases

Status

Issued	November 4, 2021
Effective Date	For periods beginning after September 30, 2023.
Affects	<ul style="list-style-type: none">• Rescinds TR 16, par. 26-27• TR 16, par. 29
Affected by	<ul style="list-style-type: none">• TR 21 amends par. 17 and supersedes par. 100• TR 22 inserts par. 8A-8B, 11A, 24A, 32A, 52A, and 75A; and amends par. 25, 78, and 91• TR 23 superseded par. 101-102

Summary

This Federal Financial Accounting Technical Release (TR) is intended to assist reporting entities in implementing Statement of Federal Financial Accounting Standards (SFFAS) 54, *Leases*.

This TR includes questions and answers-organized by topic areas-to address issues raised by stakeholders through:

- technical inquiries posed to FASAB, the AAPC, and FASAB staff during and prior to the inception of the implementation guidance project;
- analogous implementation guidance promulgated by the Governmental Accounting Standards Board (GASB);
- comments submitted in response to FASAB due process documents; and
- an AAPC-established task force on leases implementation.

Other topic areas address issues identified by FASAB and its staff in anticipation of questions that could arise during implementation of SFFAS 54.

This TR also includes conforming amendments to existing TRs related to leases.

Materiality

The provisions of this Technical Release need not be applied to information if the effect of applying the provision(s) is immaterial.^{1A} A misstatement, including omission of information, is material if, in light of surrounding facts and circumstances, it could reasonably be expected that the judgment of a reasonable user relying on the information would change or be influenced by the correction or inclusion of the information. Materiality should be evaluated in the context of the

specific reporting entity. Determining materiality requires appropriate and reasonable judgment in considering the specific facts, circumstances, size, and nature of the misstatement. Consequently, after quantitative and qualitative factors are considered, materiality may vary by financial statement, line item, or group of line items within an entity.

^{1A} Refer to *Statement of Federal Financial Accounting Concepts 1, Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Introduction

Purpose

1. Statement of Federal Financial Accounting Standards (SFFAS) 54, *Leases*, provides a comprehensive set of lease accounting standards to recognize federal lease activities in the reporting entity's general purpose federal financial reports and includes appropriate disclosures.
2. Questions and answers in this Federal Financial Accounting Technical Release (TR) are intended to provide guidance for applying the accounting and financial reporting requirements for leases in accordance with SFFAS 54. When reading the questions and answers, readers should note the related headings or sub-headings under which the related questions and answers fall.

Technical Guidance

Scope of Technical Guidance

3. Readers of this TR should first refer to SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This TR supplements SFFAS 54 and other relevant accounting standards but does not substitute for or take precedence over the standards. This TR clarifies but does not change guidance provided in SFFAS 54.

Scope and Definitions

4. **A reporting entity enters into a 5-year agreement for the right to use a facility with no termination options. This entity has exclusive use of the facility 4 months per year. Other parties use the facility for the other 8 months. To meet the definition of a lease, is the entity required to have uninterrupted control of the right to use the facility?**

No, uninterrupted control is not required to meet the definition of a lease. In determining whether a contract conveys control of the right to use an underlying asset, the reporting entity should assess whether it has both (a) the right to obtain economic benefits or services from use of the underlying asset as specified in the contract or agreement; and (b) the right to control access to the economic benefits or services of the underlying asset *as specified in the contract or agreement* (emphasis added) in accordance with paragraph 3 of SFFAS 54. If the contract specifies that the government has control of those rights during 4 months of each year, the control criterion is met. The provision in the lease definition that the contract be for a period of time does not require uninterrupted control of the right to use the facility. In this example, the lease term would be five years.

5. **Do easements, water and water power rights, diversion rights, submersion rights, rights-of-way, and other like interests in land meet the definition of a lease?**

Each of these can meet the definition of a lease.

Paragraph 2 of SFFAS 54 states that, among other things, a lease is defined as a contract or agreement whereby the *"right to control the use of property, plant, and equipment (underlying asset) is conveyed to another entity for a period of time as specified in the contract or agreement in exchange for consideration."* Temporary land rights, easements, rights-of-way, and other like interests in land can qualify as a lease under paragraph 2 of

SFFAS 54, with land being the underlying asset (see SFFAS 6, *Accounting for Property, Plant and Equipment*, par. 17-18, and footnote 18).

Permanent easements, rights-of-way, and land rights, which last indefinitely without cancellation options, would not meet the "period of time" criterion and, therefore, would not meet the definition of a lease.

In addition, easements, rights-of-way, and land rights obtained without consideration do not meet the "in exchange for consideration" criterion.

Paragraph 3 of SFFAS 54 provides other criteria that may be relevant in determining whether an interest in land meets the definition of a lease. For example, the entity granting the interest may retain certain rights that may limit the rights of the lessee to control economic benefits or services derived from using the underlying asset. The entity granting the interest may also retain the right to control access to the economic benefits or services of the underlying asset.

6. **A reporting entity signs a revocable agreement that formalizes the terms of temporary occupancy of property without creating the right to occupy the property for an explicitly-specified time in exchange for consideration. The agreement, however, specifies that the occupant shall give advance notice of intent to discontinue use, and that the party granting occupancy shall give advance notice to vacate. Does such an arrangement meet the definition of a lease?**

Yes; arrangements, as described in this question, would typically meet the definition of a short-term lease and be subject to the requirements of SFFAS 54, paragraphs 23-24. If such agreements are intragovernmental leases, they would be subject to the requirements of SFFAS 54, paragraphs 26-38.

Although the agreement does not convey the right to control the use of the property for an explicitly-specified period of time, it specifies that the occupant shall give advance notice of intent to discontinue use, and that the party granting occupancy shall give advance notice to vacate. Therefore, in substance, this arrangement provides for a short, noncancelable period for use. The noncancelable period would be equal to the shorter of the required notice period for discontinuing use or notice period for vacating. The noncancelable period should be included in the lease term in accordance with SFFAS 54, paragraph 14.

The additional period(s) subject to the requirements of SFFAS 54, paragraphs 15-18, for potential inclusion in the lease term, would be any period of time that the lease can be extended beyond the noncancelable period and prior to the cancelable period.

Cancelable periods are defined as periods when both the lessee and the lessor have an option to terminate. In this case, the cancelable period(s) is the period beyond both the notice period for discontinuing use and the notice period for vacating. Cancelable periods should not be included in the lease term in accordance with paragraph 19.a of SFFAS 54.

In summary, the total lease term for these types of agreements will usually, if not always, be 24 months or less. As such, these agreements typically meet the definition of short-term leases.

7. **A reporting entity enters into separate and distinct agreements, each with a private party, for the right to use public lands, each for a period of 10 years, in exchange for consideration. Do each of these respective agreements meet the definition of a lease?**

- a. **Agreement #1: A right-of-way for an underground pipeline to transmit and distribute electricity for commercial purposes. The agreement does not convey the right to control access to the economic benefits derived from agricultural or other uses of that land derived by other parties.**

Yes, the agreement conveys the right to control the use of the underlying asset as provided for in paragraph 3 of SFFAS 54. The agreement gives the lessee both of the following: (a) the right to obtain economic benefits or services from use of the right-of-way (the underlying asset) as specified in the contract or agreement; and (b) the right to control access to the economic benefits or services derived from the underlying asset as specified in the contract or agreement. Although other economic benefits or services are derived from use of the public land, such rights are not relevant in establishing the right to control the use of this particular underlying asset specified in the agreement: the underground right-of-way for transport and distribution of electricity.

- b. **Agreement #2: Public lands for livestock grazing. These lands must by law be managed for multiple uses, including public access and enjoyment, wildlife habitat conservation, wilderness, watershed protection, and other uses under various federal statutes. The terms and conditions, such as stipulations on forage use and seasons of use, for grazing on the lands are set forth in permits.**

Yes. Although other economic benefits or services may be derived by other parties from use of the public land, such rights are not relevant in establishing the right that was specified in the contract to control the use of this particular economic benefit (grazing rights) derived from the underlying asset.

8. **A reporting entity enters into a contract with a private party wherein the private party will design and build a solar farm based on the reporting entity's specifications. The**

solar farm will be located on the reporting entity's property, but per the agreement the private party will not pay for the use of the land. During this time, the title to the solar equipment will be retained by the private party. The contract allows the reporting entity to purchase power generated from the solar farm and make payments at prevailing market rates based solely on the amount of power generated. The private party is not precluded from selling any power generated to other private parties. The contract also requires the private party to dismantle and remove the solar farm at the end of the contract. Does this contract result in a lease?

No, it does not. To meet the definition of a lease, a contract is required to convey control of the right to use the underlying asset. Paragraph 3 of SFFAS 54 provides two criteria that should be present for a contract to convey control. In this example, the reporting entity does not have the right to control access to the economic benefits derived from the power generated. Therefore, the component of the contract that provides the reporting entity with the right to the power generated by the solar farm does not convey control and does not meet the definition of a lease. Furthermore, the component of the contract that allows the private party to use the reporting entity's property is not a lease because there is no exchange for consideration for use of that land as required by paragraph 2 of SFFAS 54 to meet the definition of a lease.

- 8A. A reporting entity enters into a 15-year contract with a utility company for the right to use a fiber optic cable network in exchange for consideration. The contract does not provide the reporting entity with specific, physically distinct dark fibers; nor does it provide the ability to deny and regulate the access of others to the fiber optic cable network. Rather, the utility company makes decisions about the transmission of data. For example, the utility company lights the fibers with its electronic equipment. Does this contract convey control and meet the definition of a lease?**

No, this contract does not convey control or meet the definition of a lease. Paragraph 2 of SFFAS 54 provides that the underlying asset should be identified either through explicit specification in the contract or implicit specification at the time the underlying asset is made available for use. The contract in this scenario does not specify, either explicitly or implicitly, the underlying asset. Relatedly, unlike the scenario under paragraph 8B below, the contract under this scenario does not meet the control criterion under paragraph 3.b of SFFAS 54 (criterion 2 of 2). The reporting entity cannot deny or regulate the access of other parties to the economic benefits or services of the underlying asset, as the contract does not convey control of specific, physically distinct dark fibers. The utility company makes decisions about the transmission of data. In this case, the utility company lights the fibers with electronic equipment under its control and makes decisions about which fibers are used to transmit data. In this scenario, the data transmission is effectively a service, consistent with paragraph 4 of SFFAS 54.

-
- 8B. A reporting entity enters into a 15-year contract with a utility company for the right to use specific, physically distinct dark fibers within a larger fiber optic cable connecting two operational sites (over a specifically identified route) in exchange for consideration. The reporting entity makes the decisions about the use of the fibers by connecting each end to its electronic equipment. For example, the customer lights the fibers and makes decisions about data transmission. Does this contract convey control and meet the definition of a lease?**

Yes, this contract conveys control and meets the definition of a lease. Paragraph 3 of SFFAS 54 provides that the reporting entity should assess whether the contract gives the lessee both of the following when determining whether a contract or agreement conveys the right to control the use of the underlying asset:

- a. The right to obtain economic benefits or services from the use of the underlying asset as specified in the contract
- b. The right to control access to the economic benefits or services of the underlying asset as specified in the contract

The reporting entity has the right to obtain economic benefits or services of the underlying asset (criterion 1 of 2). Through a lease contract the government may control access to the economic benefits or services embodied in an underlying asset it does not own. In this scenario, the contract allows the reporting entity to deny or regulate the access of other entities to the economic benefits or services of the dark fibers, and the customer has the right to direct the use of the fibers. For example, the customer lights the fibers and makes decisions about data transmission (criterion 2 of 2). Therefore, the control criterion is met. Relatedly, in accordance with paragraph 2, the contract in this scenario specifies, either explicitly or implicitly (in this case, explicitly) the underlying asset.

9. Are cell phone tower or antenna placement agreements leases?

It depends; these agreements typically meet the definition of a lease. If the agreements meet the definition in paragraphs 2-4 of SFFAS 54, including the control criterion, then such agreements are leases. The control criterion generally is met if a cell phone tower or antenna placement agreement conveys control of the right to use the land on which the tower is placed or a connection point to which the antenna is affixed (see also TR par. 11).

- 10. A contract allows the vendor to replace the underlying asset with an essentially identical asset. Does that substantive right of substitution affect the evaluation of whether the contract conveys control of the right to use the asset?**

No, it does not affect the evaluation. A lease conveys control of the right to use another entity's asset. That right is distinct from the underlying asset. That is, the right-to-use relates to both the right to obtain and control access to economic benefits or services from use of an underlying asset, rather than conveying control of the underlying asset itself. Substitution with an essentially identical asset allows the lessee to maintain control of the economic benefits or services from use of another entity's underlying asset and is consistent with the definition of a lease in paragraphs 2-4 of SFFAS 54.

If a lease modification results in a substitution with an associated increase/decrease in price, then a lease modification would have occurred and the lease liability would have been remeasured in accordance with paragraph 44 as a result of the price change.

11. **A reporting entity enters into a contract with a telecommunications company that allows the telecommunications company to install an antenna on the reporting entity's property for a period of time in exchange for consideration. The reporting entity will determine the location of the antenna on the pole and retains the right to move the antenna to another location on the pole. Does this contract convey control of the right to use the underlying asset?**

Yes, this is a lease. In this example, the reporting entity (lessor) conveys the right to use a connection point on the pole. A right of substitution (changing the location on a pole) does not affect the determination of whether a contract conveys control of the right to use an underlying asset. Even though the reporting entity can change the specific connection point, the telecommunications company maintains the substantive right to obtain economic benefits and services from use of a connection point (see also TR par. 9).

- 11A. **A reporting entity (lessor) enters into an agreement that allows a private party (lessee) to use one floor of the reporting entity's building at a market rate. The contract states that the space is to be used only for a restaurant. Does the contract convey the right to control the use of the underlying asset?**

Yes. In accordance with paragraph 3 of SFFAS 54, the reporting entity should assess whether the contract gives the lessee both the right to obtain economic benefits or services from the use of the underlying asset *as specified in the contract* (emphasis added) and the right to control access to the economic benefits or services of the underlying asset *as specified in the contract* (emphasis added). In this example, the paragraph 3 control criterion is met notwithstanding the parameters of the contract regarding the nature and manner of use (see also TR par. 7.b).

12. **Should reporting entities apply the requirements in SFFAS 54 to leases with the public that are less than market rent and intragovernmental leases that are less than full cost?**

Yes, reporting entities should apply SFFAS 54 requirements to such transactions. The definition of a lease in paragraph 2 of SFFAS 54 provides that a lease is a contract or agreement whereby one entity (lessor) conveys the right to control the use of property, plant, and equipment (PP&E) (the underlying asset) to another entity (lessee) for a period of time as specified in the contract or agreement in exchange for consideration. The right to use underlying assets in exchange for consideration, albeit under prevailing market rates, meets the description of consideration. Each party does not need to receive or give up equal value, thus the transaction should be recorded based on the terms of the lease agreement.

For inter-entity transactions (that is, intragovernmental leases), to the extent that the consideration provided is less than the full cost incurred by the lessor, the receiving entity (lessee) should determine whether to recognize the difference in its accounting records as a financing source based on SFFAS 4, *Managerial Cost Accounting Standards and Concepts* (as amended by SFFAS 55, *Amending Inter-entity Cost Provisions*), paragraphs 8-9 and 108-113A. This difference would be based on the full cost to the lessor (for example, depreciation) rather than the market rent.

13. **A reporting entity (lessee) enters into a lease agreement with a private company which will commence on October 1, 20X5, for a 5-year lease term. The underlying asset is under construction and scheduled to be completed on the date of lease commencement. The reporting entity is required to make payments to the lessor on October 1, 20X3 and October 1, 20X4 during the construction period in contemplation of the future receipt of the right-to-use asset. How should the reporting entity (lessee) account for these payments?**

The reporting entity (lessee) would account for payments during the construction of the underlying asset as advances paid in contemplation of the future receipt of the lease asset. These advances would be accounted for in a manner consistent with SFFAS 1, *Accounting for Selected Assets and Liabilities*, paragraphs 57-61, prior to the lease commencement date. Such advances and prepayments would be considered assets of the lessee. At lease commencement, the advance would be reclassified and included as part of determining the value of the lease asset in accordance with SFFAS 54, paragraph 49.b (see also TR par. 54).

14. **A reporting entity (lessee) enters into an agreement to use an underlying asset. No payments are required for this use, nor does the lessee provide any in-kind services in the agreement. Does this agreement meet the definition of a lease in SFFAS 54?**

No, this agreement does not meet the definition of a lease because there is no consideration.

15. The term "consideration" is used throughout this Statement. Does "consideration" only refer to monetary consideration?

No, consideration can be monetary or non-monetary. For example, in-kind services can also be consideration.

16. The term "probable" is used throughout this Statement. How is "probable" defined?

"Probable" is defined elsewhere in FASAB literature as that which can reasonably be expected or is believed to be more likely than not (greater than 50% probability) on the basis of available evidence or logic. See SFFAS 5, *Accounting for Liabilities of the Federal Government*, paragraph 33. Reporting entities should continue to consistently apply the FASAB definition here.¹

17. Paragraphs 37.b and 54.e of SFFAS 54 require disclosures of "annual lease expense." Since this term is not defined elsewhere, what types of lease expenses are included in these disclosures?

For intragovernmental leases, disclosures of annual lease expenses by lessees (par. 37.b) include amounts incurred during the fiscal year as expenses in accordance with paragraphs 27, 31, and 36.

For right-to-use lease assets, disclosures of annual lease expenses by lessees (par. 54.e) include amounts incurred during the fiscal year for the amortization of the lease assets, as initially capitalized in accordance with paragraph 49, and interest expense.

18. What is the difference between a right-to-use lease asset and the underlying asset?

The underlying asset is the PP&E being leased. Lease arrangements unbundle the economic benefits and services embodied in leased property and give lessees the intangible right to derive economic services and benefits from tangible assets underlying the lease, which is represented by the recognition of the right-to-use lease asset over the lease term. Lessors have the right to rentals and any residual value of the leased property and, therefore, do not derecognize the PP&E asset underlying the lease, in accordance with paragraph 66 of SFFAS 54.

¹In light of the discussion in SFFAS 54 basis for conclusions par. A35—although not authoritative in and of itself—this paragraph reflects the basis for the use of the term "probable" and the intended definition to be applied when implementing the Statement.

-
19. **If the underlying asset of a lease is a heritage asset or stewardship land as defined by SFFAS 29, *Heritage Assets and Stewardship Land*, do the disclosure requirements of SFFAS 29 apply?**

If the agreement meets the definition of a lease in paragraphs 2-4 of SFFAS 54, then the SFFAS 29 disclosure requirements would not apply to lessees.

In accordance with paragraph 66 of SFFAS 54, lessors should not derecognize heritage assets underlying their leases. They would continue to apply other applicable guidance, including SFFAS 29 disclosure requirements.

Lease Term

20. **A developer builds and leases a building to a reporting entity (lessee). The reporting entity is required to make payments during the 3-year construction period. The reporting entity does not have access to the building until right to occupancy is established at the end of the construction period. When does the lease term begin?**

The lease term begins when occupancy rights are established because that is when the reporting entity has the right to control the use of the underlying asset. Paragraph 3 of SFFAS 54 explains that control of the right to use the underlying asset is the right to both (a) obtain the economic benefits or services from its use as specified in the contract or agreement and (b) control access to the economic benefits or services as specified in the contract or agreement. Thus, the lease term commences when the lessee's right to occupancy is established and access to use the building is attained (see also: TR par. 54 and 95).

21. **A lease contract has a noncancelable period of 5 years and specifies that at the end of the 5 years, both the lessor and lessee have the right to cancel the lease or may continue the lease, using the same terms on a month-to-month basis. Is the month-to-month period included in the initial assessment of the lease term?**

No, the month-to-month periods following the 5-year noncancelable period are excluded from the lease term under paragraph 19.a of SFFAS 54 in this scenario because both parties have the right to cancel. The lessee has not contracted for a noncancelable right to use the underlying asset beyond the 5 years, and the lessor is not required to continue providing the asset.

22. **A lease contract has a noncancelable period of 5 years and specifies that at the end of the 5 years, both parties have a right to cancel or continue the lease. Periods beyond year 5 were not included in the original lease term by the lessee. At the end of**

the fifth year on May 31, 20X1, the lessee has not returned or vacated the underlying asset. Instead the lessee continues to occupy the premises while a new lease is negotiated with the lessor. One year later on June 1, 20X2, the lessee and lessor negotiate final terms of the lease with an effective date of June 1, 20X1, and ending May 31, 20X7. In this example, at May 31, 20X1, the lessee has no knowledge of the expected duration of the holdover period. How should the lessee account for these lease changes after May 31, 20X1?

At the end of the original 5-year lease, the lessee would remove the right-to-use lease asset and accumulated amortization from its books. From June 1, 20X1, through May 31, 20X2, each period would be treated as a short-term lease. Once terms have been finalized on June 1, 20X2, the lessee should not measure the lease retroactively, as in substance, the long-term lease was not executed until June 1, 20X2, regardless that the lease documentation reflects an effective date of June 1, 20X1.

On June 1, 20X2 the lessee should record a lease liability and lease asset at the net present value of payments due on June 1, 20X2 (a 5-year lease term) and thereafter, with the start date for amortization based on the signature date of the lease, in this particular case, rather than the effective date.

23. **How does a bargain renewal option, such as a 20-year lease at a market rate with a lessee option to renew the lease for an additional 5 years at a 30 percent discount, affect the lessee's initial assessment of the lease term?**

Paragraph 20 of SFFAS 54 requires that, at the commencement of the lease term, a reporting entity assess all factors relevant to the likelihood that the lessee or the lessor will exercise lease extension or termination options identified in paragraphs 15-19. Relevant factors include significant economic incentives and disincentives, such as the cost of exercising the renewal option. In this example, if the reporting entity (lessee) determines that it is probable that the option will be exercised, the lease term would be 25 years.

24. **A lease contract allows either party to unilaterally terminate the lease at any time but also provides for cancellation penalties. The cancellation penalties are so great that there is significant evidence that neither party will terminate the lease. Should the cancelable periods be included in the lease term?**

No, these cancelable periods are excluded from the lease term. Paragraph 19.a of SFFAS 54 states that periods for which *both* the lessee and the lessor have an option to terminate the lease without permission from the other party are excluded from the lease term as cancelable periods.

- 24A. A lease contract states that it will remain in effect for three years unless terminated before then. The contract allows the lessee to terminate the lease for any reason with 60 days' notice. The contract allows the lessor to terminate the lease with 60 days' notice only if the lessee defaults on payments. It is probable, based on all relevant factors, that the lessee will not exercise its termination option at any time during the three year contract. Is this a short-term lease?**

No. Although the lessee has an unconditional right to terminate, the lessor does not have an unconditional right to terminate because the lessor is only allowed to terminate on the condition that the lessee defaults on payments (see par. 19.b of SFFAS 54). Accordingly, there are no periods for which both the lessee and lessor have an option to terminate without permission, and paragraph 19.a criteria for excluding cancelable periods from the lease term are not triggered.

- 25. A lease contract allows only the lessee (reporting entity) to unilaterally terminate the lease at any time but also provides for cancellation penalties. The cancellation penalties are so great that it is probable the lessee will not terminate the lease. Should the periods covered by the lessee's option to terminate be included in the lease term by the lessee?**

Yes, these periods should be included in the lease term in this particular case. Paragraph 15.b of SFFAS 54 requires lessees to include periods in the lease term covered by their options to terminate if it is probable, based on all relevant factors, that they will not exercise those options. In determining whether it is probable that it will not exercise the option to terminate the lease, the lessee should assess all factors relevant to the likelihood that it will not exercise the option. Those factors include significant economic disincentives, such as cancellation penalties, as discussed in paragraph 20 (see also: TR par. 26-27).

- 26. When a reporting entity is assessing the lease term and evaluating option periods in accordance with paragraph 20 of SFFAS 54, is it reasonable that entity management may consider one of the four examples provided to be a predominant factor that is most relied upon when making probability assessments? For instance, if one factor is particularly indicative that options will be exercised, such as historical information (par. 20.c), would the entity need to consider other elements that would only further justify deeming an option as probable of being exercised?**

Yes, it is reasonable for a reporting entity to use a predominant factor in evaluating option periods. Particularly for reporting entities with large volumes of leasing activity that have reliable evidence (such as historical information) that is strongly predictive as to the probability of exercising options, management may place greater weight on such evidence in assessing elements of paragraph 20. In the example of an entity having historical trend evidence showing it to be very likely that options will (or will not) be exercised, management

may make general assumptions when entering into new leases that the likelihood would continue to apply, limiting the need for further assessment of other factors. However, management must be cognizant of and consider known information that makes the historical trends less applicable for a particular lease. For instance, management may know that it has definitive plans to cease use of an asset in a particular timeframe that makes exercising renewal options highly unlikely and outweighs historical information. In such a case, management would consider all relevant factors of a particular lease in making the probability assessment.

27. **A lease contract has a 20-year noncancelable period and a 5-year renewal option, exercisable only by the lessee, with below-market rates. How does the lessee determine if the renewal option should be included in the lease term?**

The lessee must assess whether the renewal option is probable of being exercised in accordance with paragraph 15.a of SFFAS 54. In this example, the renewal option offers below-market rates, which would make it more likely of being exercised by the lessee. However, the lessee must assess all relevant factors identified in paragraph 20 of SFFAS 54. Factors may include, but are not limited to, longevity of the operational need for the asset, level of dependency, ease of replacing the asset (for example, availability of other options), replacement costs, and possible operational disruptions associated with such transitioning.

28. **A lease contract has a 20-year noncancelable period and a 5-year renewal option, exercisable only by the lessor, with below-market rates. How does the lessee determine if the renewal option should be included in the lease term?**

The lessee would need to determine if there is significant evidence that the renewal option will be exercised in accordance with paragraph 15.c of SFFAS 54. Determining whether or not significant evidence exists is a matter of professional judgment. In this example, the renewal option offers below-market rates, which may make it less likely to be exercised by the lessor. Without knowing the additional relevant factors of the lessor (for example, lessor dependency on revenue stream from this asset, ease of replacing tenant, cost of replacing tenant, past experience with lessor for similar types of leases), it may be challenging to gain the significant evidence needed to include this option in the lease term. However, counterevidence that the lessor will exercise the renewal option should also be considered. For example, perhaps the economic benefits derived from the underlying asset are of limited value to other parties and uniquely suited to the lessee.

29. **A reporting entity (lessee) enters into a 10-year lease with a 5-year renewal option, exercisable by the lessee. At the beginning of the lease term, it is determined that it is not probable that the lessee will exercise the renewal option. Therefore, the lease term is determined to be 10 years. In year 8 of the lease, the lessee decides that it will**

exercise the renewal option; however, this intent is not communicated to the lessor nor is the renewal option exercised until year 9. At what point should the lease term be reassessed by the lessee and lessor?

In accordance with paragraph 21.a of SFFAS 54, the lease term should be reassessed when the lessee elects to exercise an option that was previously presumed would not be exercised under the likelihood criteria in paragraphs 15 and 17. In this example, the lessee would reassess the lease term in year 9 when the renewal option election is made. The renewal option election is not made until the lessee communicates its intention to exercise the option. This approach imposes less of a burden on preparers because there will be little or no judgment involved and no requirement for ongoing reassessments.

30. **One year into a lease with an original lease term of 2 years, a lessee elects to exercise a one-year renewal option that was previously assessed as not probable of being exercised. What is the new lease term?**

The lease should be reassessed in accordance with paragraph 21.a of SFFAS 54. At the time of reassessment, the lease term would be 3 years. This would require a change from short-term lease treatment to lease liability/lease asset treatment for the lessee. The calculation of the lease liability should be based on the remaining lease payments in accordance with paragraphs 40-41. In this example, although the new lease term is 3 years the lease liability would be calculated for the remaining 2 years of lease payments.

31. **Do lease term reassessments consider periods prior to the reassessment date, or do they only consider periods following that date?**

Lease term reassessments must consider the entire lease term. The lease term is the noncancelable period plus certain periods subject to options to extend or terminate the lease under paragraphs 14-20 of SFFAS 54. These periods include any applicable periods prior to the reassessment date, except as provided for when applying prospective implementation requirements under paragraph 97.b. Accordingly, lease term reassessments would not consider periods that precede the implementation effective date of SFFAS 54.

Short-term Leases

32. **A reporting entity (lessee) enters into a 24-month noncancelable lease in which the lessee has options to renew for 12 months at a time, up to 3 times. Is this agreement a short-term lease under SFFAS 54?**

It depends. According to paragraph 22 of SFFAS 54, a short-term lease is required to be 24 months or less, including any options to extend if those options are probable to be exercised

(par. 14-16, 19-21). If the probability of the lessee exercising the first renewal option were assessed as probable, then the lease term would be greater than 24 months and this would not be a short-term lease. However, if it is not probable that the first renewal option will be exercised by the lessee, then the lease term would be 24 months and this would be considered a short-term lease under paragraph 22.

- 32A. For the past 20 years, every two years a reporting entity (lessee) has consistently entered into new 24-month noncancelable lease contract with a lessor for the use of building space. The lease contract for the building space does not contain options to extend beyond the 24-month noncancelable lease term. The reporting entity expects to continue this practice. Is this a short-term lease?**

Yes. According to paragraph 14 of SFFAS 54, the lease term is the noncancelable period plus certain periods subject to options to extend or terminate the lease. In this scenario, the noncancelable period is 24 months and there are no subsequent periods subject to options to extend or terminate the lease and, therefore, this is a short-term lease. Although historical behaviors and expectations may be relevant factors in assessing the *likelihood of exercising options* (see par. 20 of SFFAS 54) when determining the lease term, such factors are only applicable to *assessing options*.

- 33. A reporting entity (lessee) enters into a lease with a lessor for 36 months. The reporting entity can cancel the lease at any time after 6 months. The lessor does not have the option to cancel the lease. Would this be considered a short-term lease?**

It depends. According to paragraph 22 of SFFAS 54, a short-term lease is defined as a lease with a term of 24 months or less. The lease term must be determined in accordance with paragraphs 14-16 and 19-21, which includes consideration of the period beyond a lessee's option to terminate the lease.

If the likelihood of the lessee exercising the option to terminate the lease were assessed as probable, then the period following that option would be excluded from the lease term. If the remaining lease term is estimated to be 24 of months or less, this would be considered a short-term lease.

- 34. A reporting entity (lessee) signs a contract for a lease beginning January 1, 20X2, and ending December 31, 20X3. During the negotiations of that contract, a second contract with the same lessor for a lease of the same underlying asset was also being negotiated. Near the same time that the first contract was signed, the reporting entity signs the second contract with a term beginning January 1, 20X4, and ending December 31, 20X4. The amount of consideration in each contract is independent of the other contract. Can the reporting entity account for both contracts as short-term leases?**

Although each contract individually would meet the definition of a short-term lease, the reporting entity should consider whether either of the criteria for contract combinations in paragraph 78 are met. If so, these contracts would be considered part of the same lease contract and result in a 3-year lease term; it would not be a short-term lease.

35. **A reporting entity enters into a lease with a noncancelable term of 24 months and a 12-month option to extend. At the commencement of the lease term, it is determined that the reporting entity will not exercise the option. However, 6 months into the lease the reporting entity elects to exercise the option. Is this a short-term lease?**

From the commencement of the lease term until the time that the election is made to exercise the option, this was a short-term lease because the lease term, at that time, was determined to be 24 months or less.

Six months into the lease, when the reporting entity elects to exercise the option, the lease term should be reassessed (par. 21 of SFFAS 54). The noncancelable term is 24 months and the exercised option period is 12 months. Therefore, the reassessed lease term is 36 months. For reporting periods beginning after the election is made, the lease should no longer be considered a short-term lease and the lease liability should be calculated for the remaining lease payments.

36. **A reporting entity (lessee) signs a 24-month lease with \$60,000 in reduced rent to be given over the first 3 months of the lease (\$20,000 each month). How should the lessee account for the lease concession?**

In accordance with paragraph 23 of SFFAS 54, the lessee should recognize the reduction in rental expense in each of the first 3 months of the short-term lease by recording \$20,000 less than the normal monthly amount of lease rental expense during those months.

Contracts or Agreements That Transfer Ownership

37. **A vendor installs equipment in a reporting entity's building to increase energy efficiency. The reporting entity will own the equipment at the end of the agreement, and the contract does not contain a termination option. For financial reporting purposes, should this transaction be reported as a lease or a purchase?**

This transaction should be reported as a purchase by the reporting entity. If title to the equipment will transfer to the lessee at the end of the contract, the transaction is not accounted for as a lease for financial reporting purposes. Rather, the transaction is a purchase, as discussed in paragraph 25 of SFFAS 54.

-
38. **A reporting entity (lessee) leases medical equipment from a manufacturer (lessor) and distributes it to private hospitals for use. At the end of the reporting entity's lease term, the private hospitals are given the option to purchase the medical equipment from the reporting entity. Regardless of whether or not the private hospitals purchase the equipment, the reporting entity is required to purchase the equipment from the lessor. The private hospitals do not have a termination option. Should this arrangement be reported as a lease or a purchase of the medical equipment by the reporting entity?**

The reporting entity should report the arrangement with the manufacturer as a purchase. Paragraph 25 of SFFAS 54 states that one criterion of a purchase is that the contract transfers ownership of the underlying asset to the lessee by the end of the contract. In this example the lessee is the reporting entity, not the hospitals. The contract transfers ownership of the medical equipment because the purchase by the reporting entity is required. The subsequent sale of the equipment to the hospitals is a separate transaction.

39. **A reporting entity (lessee) leases PP&E from a non-federal entity. At the end of the agreement the reporting entity will own the PP&E unless it exercises its option to terminate the lease, which it may do at any time. For financial reporting purposes, should this transaction be reported as a lease or as a contract or agreement that transfers ownership?**

This transaction should be reported as a lease by the lessee. Paragraph 25 of SFFAS 54 does not provide for a contract that contains termination options to be reported as a purchase of the asset (although they may contain availability of funding or cancellation clauses that are not probable of being exercised). In substance, this contract includes a purchase option rather than an ownership transfer.

40. **A reporting entity (lessee) has a lease with a purchase option that is probable of being exercised. Is this a contract or agreement that transfers ownership?**

No, a purchase option that is probable of being exercised is not a transfer of ownership as specified in paragraph 25 of SFFAS 54. Rather, the purchase option should be included in the lease liability calculation in accordance with paragraph 40.e.

Intragovernmental Leases

Disclosures for Intragovernmental Leases

41. **A reporting entity (lessee) has 120 lease agreements with a federal lessor. The majority of the leases are for office space with a typical term of 10 years. What information is required to be disclosed in the reporting entity's financial reports?**

The reporting entity should disclose a general description of significant intragovernmental leasing arrangements and the annual lease expense in total and by major underlying asset category in accordance with paragraph 37 of SFFAS 54. In this example, that would include language in the financial disclosures stating that the reporting entity has 120 leases with a federal lessor and that most are for office space (or buildings) with a typical term of 10 years. The annual lease expense for the year being reported should be disclosed as well.

42. **A reporting entity (lessor) has several intragovernmental lease agreements with federal lessees. What information is required to be disclosed in the reporting entity's financial reports?**

The reporting entity should disclose a general description of significant intragovernmental leases in accordance with paragraph 38 of SFFAS 54. The contents of the general description are left to the discretion of the reporting entity. For example, the lessor may elect to summarize and describe the nature and general purpose of its intragovernmental leases. The reporting entity should also disclose the future intragovernmental lease payments that are to be received to the end of the lease term for each of the 5 subsequent fiscal years and in 5-year increments thereafter.

43. **A reporting entity leases space from a non-federal lessor and then subleases the space to a federal entity. Both leases are for a term of 10 years. How should the reporting entity disclose this arrangement?**

The reporting entity should disclose such agreements separately in accordance with paragraphs 87-88 of SFFAS 54. Therefore, the original lease agreement should be disclosed per the lessee requirements in paragraph 54, and the sub-lease agreement should be disclosed per the intragovernmental lessor requirements in paragraph 38.

Lessee Recognition, Measurement, and Disclosures for Leases Other Than Short-term Leases, Contracts Or Agreements That Transfer Ownership, and Intragovernmental Leases

Lease Liability

44. **A reporting entity (lessee) enters into a lease with a non-federal entity that includes an optional extension period of 3 years, exercisable only by the lessee. The payment amounts for the optional period will be negotiated at the time the option is exercised. The lessee has an ongoing relationship with the lessor, and it is probable that it will exercise its option to extend. Therefore, the optional renewal period is included in the lease term in accordance with paragraph 15.a of SFFAS 54. How should the lessee measure the lease liability if the payment amount for the optional period is not specified in the contract?**

Paragraph 15.a of SFFAS 54 requires that periods covered by a lessee option to extend the lease be included in the lease term if it is probable, based on all relevant factors, that the lessee will exercise that option. Payments for that optional period should be included in the lease liability, even if the amount is estimated. In many cases, a reporting entity will not find a renewal to be probable without having a reasonable estimate of the payment amount or range of amounts. In this example, the payments may be estimated based on the ongoing relationship with the lessor and professional judgment, maximizing the use of observable information. For example, if appropriate, the estimate may be based on the last known payment amount.

45. **A lease contract for copy machines requires that a minimum amount be paid for toner and paper regardless of whether these supplies are obtained. Should some portion of the minimum amount to be paid for supplies be included in the measurement of the lease liability?**

Typically this component of the contract would be excluded from measurement. As discussed in paragraphs 75-76 of SFFAS 54, if the price allocation for the supplies component of the contract does not appear to be unreasonable, regardless of whether supplies are obtained, the reporting entity should account for the supplies component separately from the lease and therefore not include that amount in the measurement of the lease liability. If the price allocated to the supplies component of the contract appears to be unreasonable, professional judgment may be needed to determine whether some or all of the minimum amount is, in substance, a fixed lease payment that should be included in the amounts allocated to the lease component and included in the lease liability under paragraph 40.c of SFFAS 54.

46. **Lease payments for a 5-year lease are indexed to the Consumer Price Index (CPI). The lease payments for the first year are \$50,000 per month, which is the market rate based on the current CPI, and payments for subsequent years will increase or decrease based on the change in the CPI during the preceding year. The CPI at the commencement of the lease is 251. How should the initial lease liability be calculated?**

Paragraph 40.b of SFFAS 54 requires that variable payments that depend on an index or a rate initially be measured using the index or rate as of the commencement of the lease term. If lease payments are indexed to the CPI, the payments to be included in the initial measurement of the lease liability should be based on the CPI at the commencement of the lease. If the CPI is 251 at the commencement of the lease, a reporting entity would assume it will stay at 251 throughout the lease, which would result in consistent lease payments for initial measurement of the lease liability. Therefore, the lease liability should be measured at the present value of \$50,000 per month for 60 months. Any variation from \$50,000 paid in future periods due to changes in CPI will be recognized as expenses or reductions of expenses of those periods.

47. **A reporting entity (lessee) enters into two leases. The first lease requires monthly lease payments based on a fixed percentage of sales or \$10,000, whichever is more. The second lease includes a choice to pay either (a) a fixed monthly payment of \$30,000 or (b) \$100 per hour of equipment use with a monthly minimum payment of \$10,000. The choice is made by the lessee at the beginning of each month. Which payment amounts from the two leases should be included in the lease liability?**

The minimum payment of \$10,000 per month should be included in the lease liability calculations for both leases. Paragraph 40.c and 41 of SFFAS 54 require that the lease liability include "variable payments that are fixed in-substance" and exclude "variable payments based on future performance of the lessee or usage of the underlying asset." For both leases, the minimum amount that is required to be paid (\$10,000 per month) is fixed in-substance and therefore should be included in the lease liability.

48. **A reporting entity (lessee) leases cars for 3 years and is required to make variable payments based on the number of miles driven. There is no minimum payment requirement stated in the lease agreement. The reporting entity can establish a probable minimum number of miles that will be driven based on historical usage. Paragraph 40.h of SFFAS 54 requires that a lease liability include "any other payments to the lessor that are probable of being required based on an assessment of all relevant factors." Should the lease liability include the probable variable lease payments?**

No, paragraph 41 of SFFAS 54 requires that variable payments based on future performance of the lessee or usage of the underlying asset not be included in the measurement of the lease liability. Because such payments are covered by paragraph 41 they should not be included in the measurement of the lease liability in accordance with paragraph 40.h, even if it is probable that they will be required and they are estimable. Rather, those variable payments should be recognized as an expense in the reporting period incurred (see also: TR par. 61).

49. **Paragraph 40.f of SFFAS 54 states that measurement of the lease liability should include "payments for penalties for terminating the lease, if the lease term reflects the lessee exercising (1) an option to terminate the lease or (2) an availability of funds or cancellation clause." Does "term" in that sentence refer to a provision of the contract or does it refer to the lease term as defined in paragraphs 14-21 of SFFAS 54?**

In paragraph 40.f of SFFAS 54, *term* refers to the lease term as defined in paragraphs 14-21. If the lease term was calculated to reflect the lessee terminating the lease, whether through a termination option or an availability of funds or cancellation clause, the measurement of the lease liability should include all penalties that are expected to be incurred.

50. **A reporting entity (lessee) installs physical assets on leased land and is required by the lease contract to remove those assets and restore the land to pre-lease condition at the end of the lease. Should the lessee include projected payments to remove the physical assets in the lease liability or should the lessee report a separate liability?**

It depends. Paragraph 40.h of SFFAS 54 requires that the lease liability include any other payments to the lessor that are probable of being required based on an assessment of all relevant factors. However, SFFAS 54 does not permit the inclusion of payments that are probable of being required from the lessee *to parties other than the lessor* in the lease liability, nor does it include payments that are not in exchange for the right to use the underlying asset. Such liabilities would be reported separately in accordance with other existing Statements, such as SFFAS 5 standards on liability recognition and measurement and SFFAS 6 standards on cleanup costs. If, however, these payments are deemed probable of being required and would be made to the lessor, inclusion of these payments would be appropriate.

51. **A reporting entity (lessee) enters a lease agreement for 10 years with a 5-year renewal option. At lease commencement, the reporting entity determines that it is not probable that the renewal option will be exercised, and the lease term is determined to be 10 years. However, at the end of year 8 the reporting entity elects to exercise the renewal option. Should the lease liability be remeasured at that time?**

Yes, in accordance with paragraph 21.a of SFFAS 54, the lease term should be reassessed when the reporting entity elects to exercise the renewal option at the end of year 8. Paragraph 44.a would require the reporting entity to also remeasure the lease liability as a result of the change in the lease term at that time.

52. Should operating costs, such as utilities and janitorial services, included in a lease agreement, be excluded from the lease liability calculation?

Yes, they should be excluded. Paragraph 73 of SFFAS 54 requires reporting entities with agreements that contain a lease and nonlease component to account for the lease and nonlease components as separate contracts or agreements, unless the contract or agreement meets the exception in paragraph 76.

52A. A reporting entity (lessee) leases a building. The lease term is 10 years. At the commencement of the lease, the reporting entity provides payment for the first three years and recognizes a liability for the present value of the payments for the remaining seven years, which will be paid starting in the fourth year of the lease. Should the reporting entity recognize interest expense during each of the first three years of the lease?

Yes. In accordance with paragraph 43 of SFFAS 54, interest expense represents the amortization of the discount on the lease liability. That discount should be amortized over the entire lease term-including each of the first three years during which the reporting entity is not making payments-using the interest method.

Lease Asset

53. Can reporting entities apply the same capitalization thresholds used for PP&E to lease assets?

Generally it is not appropriate to apply PP&E capitalization thresholds to lease assets without considering the unique qualitative and quantitative characteristics of lease assets, and the lease liabilities to which they correspond, and their individual and collective significance in relation to the financial statements. Lease assets and liabilities that are significant, either individually or in the aggregate, should be recognized. Authoritative pronouncements do not provide specific guidance related to a determination of capitalization threshold amounts. However, reporting entities often establish capitalization thresholds. When applying a capitalization threshold to leases, lessees should consider the quantitative and qualitative significance of the lease assets, *in addition to* the quantitative and qualitative significance of the corresponding lease liabilities, both individually and in the aggregate. Capitalization thresholds should be established in a manner that provides due consideration to the materiality fundamentals discussed in Statement of Federal Financial

Accounting Concepts 1, *Objectives of Federal Financial Reporting*, paragraphs 164.a-164.g.²

54. **A reporting entity (lessee) makes prepayments for rent during a construction period before gaining access to the building. Can rental prepayments made during the construction period be reported as a lease asset at the time they are paid?**

No, rental payments made before commencement of the lease term should be reported as prepayments (assets) rather than as lease assets. At the commencement of the lease term the right to occupancy is established. The right to use makes the underlying asset a resource to the lessee and provides the lessee with access to the underlying asset's present service capacity. Therefore, at the commencement of the lease term, the rental prepayments should be reclassified as part of the initial measurement of the lease asset, as provided in paragraph 49.b of SFFAS 54 (see also: TR par. 20 and 95).

55. **Can composite or group methods be used to amortize lease assets?**

Yes, composite or group methods can be used to amortize lease assets. If a reporting entity has many similar leases, it may choose to amortize the lease assets as a group rather than individually. Similarly, if a collection of dissimilar leases comprises, for example, a network subsystem, composite amortization may be applied to the lease assets of the subsystem. However, assets should not be grouped in a way that would prevent the reporting entity from meeting the disclosure requirements of paragraph 54 of SFFAS 54.

56. **A reporting entity leases an underlying asset that is nondepreciable and amortizes the lease asset because it is not probable that it will purchase the underlying asset. If the reporting entity subsequently determines that it is probable that it will purchase the underlying asset, should the lease asset be remeasured to the amount of the initial measurement before the lease asset was amortized (as though it had been a nondepreciable PP&E asset)?**

No. If a lease contract includes a purchase option and the lessee determines that it is probable of being exercised, paragraph 51 of SFFAS 54 requires that the lease asset be amortized over the useful life of the underlying asset, unless the underlying asset will be (a) *capitalizable and nondepreciable* in the reporting period the option is expected to be exercised or (b) *non-capitalizable* in the reporting period the option is expected to be exercised.

²Fundamentals are the underlying concepts of financial accounting that guide the selection of transactions, events, and circumstances to be accounted for; their recognition and measurement; and the means of summarizing and communicating them to interested parties. See Preamble to Statements of Federal Financial Accounting Concepts

If the underlying asset will be *capitalizable and nondepreciable* in the reporting period the option is expected to be exercised, the reporting entity should cease amortizing the lease asset as of the date the reporting entity determines that it is probable that it will purchase the underlying asset. The reporting entity should not reclassify the lease asset as PP&E until the purchase occurs. However, the lessee should determine whether exercising the purchase option is expected to significantly affect the amount of the lease liability. A lease asset generally should be adjusted by the same amount as the corresponding lease liability when that liability is remeasured based on paragraphs 44-48 of SFFAS 54. Paragraph 44.c requires the lessee to remeasure the lease liability when an assessment of all relevant factors indicates that the likelihood of a purchase option being exercised has changed from probable to not probable, or vice versa.

If the underlying asset will be *non-capitalizable* in the reporting period the purchase option is expected to be exercised, the reporting entity should continue to amortize the lease asset over the remaining lease term (see also: SFFAS 54, par. 51 footnote 8A).

57. **A reporting entity leases equipment. If the reporting entity subsequently determines that it is probable that it will purchase the equipment, should the lease asset be remeasured to the amount of the initial measurement before the lease asset was amortized?**

No. The reporting entity should continue to amortize its lease asset once it is determined to be probable that it will purchase a depreciable underlying asset. However, the reporting entity should prospectively amortize the lease asset over the remaining useful life of the underlying asset, if different from the lease term. Additionally, the lease asset carrying value that is amortized may change if the lease liability is adjusted for the change in likelihood of the purchase option being exercised (see also: TR par. 56).

58. **At the end of year 4 of a 5-year building lease, a pipe bursts and damages the leased building. Before the flood, the lessee reported a lease asset, net of amortization, of \$50,000, and a lease liability of \$60,000. Because of the damage, the lessor reduces the lessee's payments for 2 months by \$3,000 per month. The damage is repaired, and the lessee is able to continue using the building for the remainder of the lease term. Would the lessee report this as impairment?**

No, this would not be a reportable impairment. Paragraph 19 of SFFAS 44, *Accounting for Impairment of General Property, Plant, and Equipment Remaining in Use*, describes impairment as (1) a significant decline in service utility and (2) expected to be permanent. In this case, the loss in service utility was not permanent. Moreover, the PP&E subject to impairment is on the books of the lessor in accordance with paragraph 66 of SFFAS 54; not the lessee. Therefore, this is not impairment for the lessee. However, since future lease

payments will be reduced, the lessee should remeasure the lease liability in accordance with paragraph 44.d and adjust the lease asset as required by paragraph 52.

Component Reporting Entity Disclosure Requirements for Lessees

59. **Are SFFAS 6, paragraph 45 disclosure requirements applicable to lease assets?**

No, SFFAS 6 disclosure requirements are only applicable to PP&E. Lease assets are not PP&E for lessees; lease assets are a right to use and access economic benefits derived from underlying PP&E assets. Lessees should provide disclosures on lease assets required by paragraph 54 of SFFAS 54; they should not apply PP&E disclosure requirements to their lease assets. Accounting and reporting requirements for PP&E rest with lessors (see also: par. 66 of SFFAS 54 and TR par. 18). However, leasehold improvements paid for (financed) by the lessee represent lessee PP&E and, accordingly, such leasehold improvements are subject to SFFAS 6, paragraph 45 disclosure requirements.

60. **Does a lessee's ability to group lease activities for the purpose of disclosure also apply to disclosures in other paragraphs, such as disclosures of sublease transactions required by paragraph 88 of SFFAS 54?**

Yes, the grouping provisions in paragraph 54 of SFFAS 54 apply to disclosures in which a grouping option is not specifically addressed in other disclosure requirements.

61. **A reporting entity makes lease payments based solely on the usage of leased equipment. Future payments are variable based on usage of the underlying asset; therefore, the reporting entity does not record a lease asset or a lease liability. Is the reporting entity required to disclose the lease?**

Yes, the lessee should apply the disclosure requirements of SFFAS 54, paragraph 54 to leases other than short-term leases, contracts or agreements that transfer ownership, and intragovernmental leases (see also: TR par. 48).

62. **A reporting entity purchases an underlying asset from the lessor and, as a result, terminates a lease. The reporting entity reclassifies the right-to-use lease asset balances to the appropriate PP&E asset class. How should this reclassification be disclosed in the notes to the financial statements?**

Paragraph 54.b of SFFAS 54 requires that lease assets, and the related accumulated amortization, be disclosed separately from PP&E assets. Upon termination of the lease and purchase of the underlying asset, the lease disclosures will reflect the reclassification (removal of) the lease asset in the ending balances of the related totals. The disclosures need not specifically identify amounts reclassified. The reclassification would also be

reflected elsewhere in the notes to the financial statements to the extent that other disclosure requirements, such as SFFAS 6, paragraph 45, apply to the asset class.

63. **A reporting entity (lessee) has a portfolio of leases, many of which include potential residual value guarantee payments. How would these potential payments be reported in the financial statements?**

Paragraph 40.d of SFFAS 54 provides that amounts that are probable of being required to be paid by the lessee under residual value guarantees be included in the measurement of the lease liability.

Under SFFAS 5, paragraphs 40-42, contingent liabilities may be subject to disclosure requirements if the conditions for liability recognition are not met (that is, the residual value guarantee payments are not probable and/or reasonably measurable) and there is at least a reasonable possibility that a loss may have been incurred. Disclosure should include the nature of the residual value guarantee payment and an estimate of the possible liability, an estimate of the range of the possible liability, or a statement that such an estimate cannot be made. In some cases, residual value guarantee payments may be identified but the likelihood that such a payment will occur is assessed as remote and, therefore, no reporting is necessary under paragraph 42 of SFFAS 5.

Lessor Recognition, Measurement, and Disclosures for Leases Other Than Short-term Leases, Contracts or Agreements That Transfer Ownership, and Intragovernmental Leases

64. **Paragraph 55 of SFFAS 54 requires that initial direct lease costs incurred by the lessor be reported as an expense of the period. What are initial direct lease costs?**

Initial direct lease costs are defined in paragraph 13 of SFFAS 54. Examples of potential initial direct lease costs are: (a) costs to originate a lease incurred in transactions with independent third parties that (1) result directly from and are essential to acquiring that lease, and (2) would not have been incurred had that leasing transaction not occurred; and (b) certain costs directly related to specified activities performed by the lessor for that lease. Those activities include evaluating the prospective lessee's financial condition; evaluating and recording guarantees, collateral, and other security arrangements; negotiating lease terms; preparing and processing lease documents; and closing the transaction (see also: TR par. 76).

Lease Receivable

65. **A reporting entity leases retail space to a vendor for 3 years. The payment in the first year is \$100,000; this amount is also considered the "minimum annual guarantee." The payment in the second year depends on sales in the first year. If the lessee's first year's sales exceed \$1,000,000, the minimum annual guarantee for the second year is \$110,000, but if the first year's sales are less than \$1,000,000, the minimum annual guarantee for the second year is \$100,000. The minimum annual guarantee for the third year is \$90,000 regardless of sales. What amounts should be included in the lessor's lease receivable at the commencement of the lease?**

The individual payments (undiscounted) to be included in the present value calculation of the lease receivable total \$290,000 (first year—\$100,000, second year—\$100,000, and third year—\$90,000). The lease receivable should include only the variable payments that are fixed in-substance and not dependent upon the future performance of the lessee, as described in paragraph 57 of SFFAS 54. In this example, the payments that will be made if the lessee has \$0 in sales each year should be included in the lease receivable at the commencement of the lease because that is the amount that is fixed in-substance.

66. **In addition to fixed payments, a lease contract includes provisions for variable payments based on future performance and for a residual value guarantee that did not initially meet the criteria for inclusion in the initial lease receivable at lease inception. If those variable payments and the residual value guarantee subsequently meet the criteria for recognition, should the amounts be added to the existing lease receivable or be considered separate receivables?**

When the variable payments and residual value guarantee meet the criteria for recognition, the amounts should be considered separate receivables, and revenue should be recognized in the period to which those payments relate. Paragraphs 57-58 of SFFAS 54 state that variable payments based on future performance and residual value guarantees that are not fixed in-substance should not be included in the initial measurement of the lease receivable. Remeasurement of the lease receivable, as discussed in paragraph 61, is not required when those payments meet the criteria for recognition. Rather, the reporting entity would recognize a separate receivable and revenue when (a) a guarantee payment is required (as agreed to by the lessee and lessor) and (b) the amount can be reasonably estimated.

67. **Can methodologies other than the interest method, such as straight-line amortization, be used to amortize the discount on lease receivables?**

Lease receivables should be amortized using the interest method. Paragraph 60 of SFFAS 54 states that lessors should calculate the amortization of the discount on the receivable

and report that amount as interest revenue for the period. Any payments received should be allocated first to the accrued interest receivable and then to the lease receivable.

68. **If the discount rate is updated based on the provisions in paragraph 63 of SFFAS 54, should the lease receivable be remeasured using the revised discount rate?**

Yes, if the criteria to update the discount rate are met in paragraph 63 of SFFAS 54, the lessor should remeasure the lease receivable using the revised discount rate.

Unearned Revenue

69. **Paragraph 50 of SFFAS 54 requires lessees to amortize their lease asset over the shorter of the lease term or the useful life of the underlying asset. Can the lessor recognize the unearned lease revenue over the useful life of the underlying asset if it differs from the lease term?**

No, the lessor should recognize revenue, including interest revenue, over the lease term, which may be different than the useful life of the underlying asset. The requirements for leases are based on the premise that leases are financings, whereby lessees agree to make payments over time for the right to use an underlying asset.

70. **Halfway through a 10-year lease, a lessor remeasures the lease receivable from \$5,000,000 to \$100,000, due to a reduction in the lease term. The related unearned revenue balance at that date is \$4,800,000. How does the remeasurement of the lease receivable affect the measurement of the remaining unearned revenue?**

The lessor should reduce the lease receivable by \$4,900,000 and the unearned revenue by \$4,800,000 and recognize a loss of \$100,000. According to paragraph 65 of SFFAS 54, the unearned lease revenue generally should be adjusted by the same amount as the corresponding lease receivable when the receivable is remeasured. However, if that change reduces the carrying value of the unearned revenue to zero, any remaining amount should be reported as a loss.

Underlying Asset

71. **A reporting entity (lessor) leases a building to a non-federal lessee. The lease includes an option for the lessee to purchase the building for a set price that reflects the estimated fair market value of the building at the end of the lease term. Should the reporting entity derecognize the building if it determines it is reasonably certain that the lessee will exercise the purchase option?**

No, the reporting entity (lessor) should continue to report the building as PP&E until the purchase option is exercised by the lessee, consistent with paragraph 66 of SFFAS 54. Paragraph 58 of SFFAS 54 states that amounts to be received for the exercise price of a purchase option should be recognized as a receivable and revenue when that option is exercised.

72. How should the lessor assess impairment of an underlying asset when the rights to that asset are controlled by the lessee and the lessor does not have physical access to the underlying asset?

Absent any indication of impairment from the lessee, or other impairment information known to the lessor, the lessor should not recognize any impairment of the underlying asset, in accordance with the provisions of SFFAS 44. Paragraph 13 of SFFAS 44 states that annual or periodic surveys to identify potential impairments are not required. Rather, significant events or changes in circumstances affecting the PP&E that may indicate impairment are conspicuous or known to the entity's management or oversight entities and are generally expected to have prompted consideration by management, oversight entities, or others. However, existing asset management processes and lease agreements may include such surveys by the lessor. If potential impairments are identified by the lessor through such processes, they would test for impairment in accordance with SFFAS 44.

Component Reporting Entity Disclosure Requirements For Lessors

73. Does a lessor's ability to group lease activities for the purpose of disclosure also apply to disclosures in other paragraphs, such as disclosures of sublease transactions required by paragraph 88 of SFFAS 54?

Yes, the grouping provisions in paragraph 67 of SFFAS 54 apply to disclosures in which a grouping option is not specifically addressed in other disclosure requirements.

Lease Incentives and Lease Concessions

74. Lease incentive payments provided by a lessor before the commencement of a lease term are included in the initial measurement of the lease asset. How are such payments reported by the lessee until the lease asset is recognized at the time the lease term commences?

Lease incentives received by a lessee before the commencement of the lease term would be recognized as advances received (liability), since they were received prior to the lease term.³ Upon commencement, paragraph 49.b of SFFAS 54 provides that lease incentives

received at or before the commencement of the lease term should reduce the lessee's initial measurement of the lease asset. In this case, the advances received liability would then be reclassified as a reduction to the lease asset.⁴

75. A reporting entity (lessor) makes incentive payments to a lessee for moving costs. The payments are made prior to the commencement of the lease term. How are such payments reported by the reporting entity (lessor)?

The reporting entity (lessor) should recognize an advance (asset) at the time the payments are made, since they were made prior to the commencement of the lease term.⁵ Upon commencement, paragraph 64.b of SFFAS 54 provides that lease incentives paid at or before the commencement of the lease term should reduce the lessor's initial measurement of the unearned revenue. In this case, the advance asset previously recognized would then be reclassified as a reduction in unearned revenue upon commencement of the lease term.

75A. A lease with a lease term of 10 years requires fixed payments of \$17 million to be made for each of the first 9 years. There is a rent holiday (during which the lessee is not required to pay any rent) for year 10. The useful life of the underlying asset is 15 years. How should the reporting entity (lessee) account for the rent holiday?

A rent holiday is a type of lease concession, as described in paragraph 70 of SFFAS 54. In this example, the rent holiday is at the end of the lease term and affects the expected fixed payments to be made during the lease term (see par. 40 and 40.g of SFFAS 54). Therefore, the lease liability would be the present value of \$17 million per year for 9 years, and the discount (the difference between the undiscounted cumulative \$153 million in payments and the present value) would be amortized over 9 years. At the end of year 9, the lease liability would be zero. The *lease asset*, however, would be amortized in a systematic and rational manner over the entire 10-year lease term, in accordance with paragraph 50 of SFFAS 54 (as the lease term is shorter than the useful life of the underlying asset).

³Par. 60 of SFFAS 1 provides that advances received (liabilities) should not be netted against advances paid out (assets) in financial reports of the entity

⁴This guidance applies to leases other than short-term leases, contracts or agreements that transfer ownership, and intragovernmental leases.

⁵See par. 60 of SFFAS 1.

Contracts or Agreements with Multiple Components

76. **A reporting entity (lessee) leases equipment that will be installed by the lessor, prior to the commencement of the lease term, for an additional \$100,000. The lease contract requires that the reporting entity pay the lessor for installation of the equipment in the subsequent reporting period. Should the reporting entity (lessee) record the installation costs as part of the lease liability or as a separate liability?**

Initial direct costs are not included in the measurement of the lease liability. Installation costs generally are considered a nonlease component because the payments are for installation costs and not for the right to use the equipment. Accordingly, the payments are not considered lease payments under paragraph 40 of SFFAS 54 and should be accounted for as a separate liability. However, installation costs are often ancillary charges necessary to place the lease asset into service and, therefore, should be included in the initial measurement of the *lease asset* in accordance with paragraph 49.c.

77. **A reporting entity (lessee) leases two floors of an eight-floor building. A part of the lease payments covers the reporting entity's share of utilities and janitorial costs for maintaining a lobby that all tenants share. Should the utilities and janitorial costs for the lobby be included in the reporting entity's lease liability?**

Based on paragraph 73 of SFFAS 54, if it is practicable for the reporting entity to separate and estimate the costs for those services, the costs should not be included in the reporting entity's lease liability. For example, if the lease contract itself does not specify the amount (in dollars or percentage), the reporting entity could request that information from the lessor. Additionally, average charges per square foot may be used for estimation. However, if it is not practicable for the reporting entity to separate the costs and estimate them, based on the provisions in paragraph 76 of SFFAS 54, the janitorial services and utility costs for the lobby should be included in the reporting entity's lease liability.

78. **A contract conveys the right to use a building for 30 years and the attached parking garage for 15 years. There is no stated interest rate included in the lease agreement. Should the discount rate be separately assessed for each component?**

Yes. Paragraph 74 of SFFAS 54 requires that lease contracts involving multiple underlying assets be accounted for as separate lease components if the underlying assets have different lease terms. The interest rate in this scenario would likely differ between the two components because of the considerable difference in lease terms. When the interest rates for each component are not stated in the lease agreement, the interest rate for each component should be based on the interest rate on marketable Treasury securities at the commencement of the lease term with a similar maturity to the term of the lease used, in accordance with paragraphs 42-42C (for lessees) and 59-59C (for lessors).

-
79. **If a lease contract with multiple components meets the exception in paragraph 76 of SFFAS 54 to be accounted for as a single lease unit, paragraph 77 of that Statement requires that "the accounting for that unit should be based on the primary lease component within that unit." What factors may be useful in determining the primary lease component?**

The determination of which component is the primary lease component in a contract with multiple components requires professional judgment, maximizing the use of observable information. The following characteristics, among others, may be indicative of a primary component:

- a. The component performs a function that is the reporting entity's primary objective in entering into the contract.
 - b. The component's fair value is substantial relative to the fair values of the other components.
 - c. The lease term of the component is longer than the lease terms of the other components.
 - d. The component's benefit to the reporting entity is substantial relative to the benefits of the other components.
80. **A reporting entity (lessee) leases office space, lab space, and a parking garage as part of one lease agreement. The prices for the individual components are not broken out in the lease and are not easily determinable by the lessee. Instead, the total price per square foot is included in the lease agreement. How should a reporting entity account for those lease components?**

In this case, the contract with multiple components would meet the exception in paragraph 76 of SFFAS 54 because the individual component prices are not easily determinable. If it is not practicable to determine a best estimate for price allocation for some or all components in a contract or agreement, a reporting entity should account for those components as a single lease unit in accordance with paragraph 77.

81. **A reporting entity (lessee) leases office space and has a flat-rate monthly fee included in the contract for print services. In this agreement, the lessor provides the printer/copier equipment, and the lessee pays a set monthly fee to use the equipment as part of the lease agreement. The payment amount does not change based on usage of the equipment, but rather it is fixed in nature. How should a reporting entity account for those lease components?**

The lessee should account for each underlying asset as a separate lease component in accordance with paragraphs 74-75 of SFFAS 54. Lessees should first use any prices for individual components that are included in the contract or agreement, as long as the price

allocation does not appear to be unreasonable based on the terms of the contract or agreement and use professional judgment when necessary, maximizing the use of observable information, in accordance with paragraph 76.

Contract or Agreement Combinations

82. **A reporting entity solicits bids for a fleet of vehicles and leases the assets from the lowest qualified bidder. A separate lease agreement is used for each vehicle. The leases are entered into over the course of several months as the reporting entity reviews the specifications of each agreement. The lease contracts do not provide information about the reporting entity's objective(s). Can the reporting entity's procurement processes be used to determine whether there is a single objective?**

Yes. Paragraph 78 of SFFAS 54 requires that contracts that are entered into at or near the same time with the same counterparty be considered part of the same contract if negotiated as a package with a single objective. In this situation, in the absence of explicit information in the contracts about the reporting entity's objective(s), the reporting entity's procurement processes provide sufficient information to determine the reporting entity's objective(s) for entering into the lease agreements.

83. **A reporting entity enters into a master vendor agreement that specifies models, prices, and contract terms for computers. Services and departments within the reporting entity subsequently contact the vendor for individual orders to lease the computers as needed. Should all the computers leased under a master vendor agreement be considered one contract for the purpose of applying the requirements in paragraph 78 of SFFAS 54?**

The use of a master vendor agreement does not require that the underlying individual orders (which are all with the same counterparty) be accounted for as part of the same contract unless the orders are entered into at or near the same time and at least one of the criteria in paragraphs 78 of SFFAS 54 is met.

Lease Terminations and Modifications

84. **While a lease contract is in effect, the provisions of the contract are amended to change the number of vehicles included in the contract. Are additions and subtractions of underlying assets in a lease accounted for as a lease modification or a lease termination?**

A lease amendment that adds an underlying asset to the contract is a lease modification (for example, increasing the lease from 15 vehicles to 20). A lease modification should be accounted for as either a separate lease (if it meets the criteria in par. 84 of SFFAS 54) or a remeasurement of the existing lease. Alternatively, a lease amendment that removes an underlying asset from the contract (for example, decreasing the lease from 20 vehicles to 15) should be accounted for as a partial lease termination (see par. 81-83 of SFFAS 54).

85. **A 10-year lease contract includes an option to extend the lease for 5 years if both the lessor and lessee agree. The lease term was originally assessed as 10 years. Because both parties have to agree to extend, paragraph 19.a of SFFAS 54 refers to this as a cancelable period and, therefore, it has been excluded from the lease term. If, during the lease term, the lessor and the lessee agree to extend the contract for 5 years, should this be accounted for as a lease modification or as a new lease?**

Because both parties have to agree to the optional 5-year period, it is considered cancelable and, therefore, not subject to the lease term reassessment guidance in paragraph 21 of SFFAS 54 prior to the lease modification. However, once the lessor and the lessee agree to exercise the option to extend, the 5-year period becomes noncancelable and should be accounted for as a lease modification, thereby subjecting the lease to reassessment criteria under paragraph 21.d. Paragraph 80 of SFFAS 54 states that lengthening a lease term while the contract is in effect is an amendment that should be considered a lease modification.

86. **Two years into a lease with an original lease term of 10 years, the remaining lease term is reassessed as a result of an amendment and reduced from 8 years to 5 years. At the time of the amendment, the carrying value of the lease liability is \$80,000, and the carrying value of the lease asset is \$76,000. How should the lessee account for the partial termination of the lease?**

In accordance with paragraph 82 of SFFAS 54, the lessee should account for the partial termination by reducing the carrying values of the lease liability and the lease asset and recognizing a gain or loss for the difference, if applicable. For example, if, in accordance with paragraph 44 of SFFAS 54, the lessee determines that the remeasured liability is \$50,000, the lease liability and the lease asset each should be reduced by \$30,000. Since both the liability and asset can be reduced by the same amount in this example, there would be no gain or loss to record.

87. **Two years into a 10-year lease, the remaining lease agreement is canceled. The carrying value of the lease receivable is \$80,000, and the related unearned revenue is \$76,000. How should the lessor account for the full termination of the lease?**

In accordance with paragraph 83 of SFFAS 54, once the lease is terminated, the carrying value of the lease receivable and the related unearned revenue should be eliminated. A loss of \$4,000 (the difference) would also be recognized.

88. **Three years into a 4-year lease, a reporting entity (lessee) modifies its lease from 200 vehicles to 230 vehicles which, if remeasured, would change the remaining lease liability from \$200,000 to \$202,500. The reporting entity has determined that the increase in the lease payments appears to be unreasonable (as discussed in par. 84.b of SFFAS 54) because it is very low when compared to the value of the additional underlying assets. How should the reporting entity account for the amendment to the lease?**

Because the reporting entity has determined that the increase in the lease payments appears to be unreasonable, the reporting entity should account for this as a lease modification, but not as a separate lease, because the condition in paragraph 84.b of SFFAS 54 is not present. Paragraph 85 of SFFAS 54 states that unless a modification is reported as a separate lease as provided by paragraph 84, a lessee should account for a lease modification by remeasuring the lease liability. The lease asset should be adjusted by the difference between the remeasured liability and the liability immediately before the lease modification. Thus, the lease asset should be increased by \$2,500, which represents the difference between the remeasured liability and the liability immediately before the lease modification.

89. **A reporting entity (lessor) leases one floor of an office building to a private party for several years. In the middle of the lease, a significant downturn in the local real estate market occurs. The reporting entity and the lessee renegotiate the rental payments for the remainder of the lease. The lease receivable before the amendment was \$500,000 and after it was \$270,000. How should the reporting entity account for the lease modification?**

Paragraph 86 of SFFAS 54 states that unless a modification is reported as a separate lease as provided in paragraph 84, a lessor should account for a lease modification by remeasuring the lease receivable. Thus, the lease receivable should decrease by \$230,000, which represents the difference between the receivable before the lease modification and the remeasured receivable. Additionally, the unearned revenue should decrease by \$230,000. However, to the extent that the change in the lease receivable relates to payments for the current period, the change should be recognized as a decrease in revenue.

Subleases

90. **Paragraphs 87-88 of SFFAS 54 require subleases to be accounted for as separate transactions and disclosed separately. Do these requirements apply to short-term and intragovernmental leases?**

Yes, the requirements in paragraphs 87-88 of SFFAS 54 apply to short-term and intragovernmental leases that are part of sublease transactions.

91. **Reporting entity Agency ABC enters into a lease agreement on behalf of the U.S. government for the right to use a residential property on international soil. The economic benefits and services of the underlying assets are expected to be derived by Agency XYZ. How should such a lease be reported, either by Agency ABC or Agency XYZ?**

It depends on whether Agency ABC is acting in the capacity of an agent or a principal.

If Agency ABC is acting in an agent capacity (i.e., similar to a broker), Agency ABC is providing a service to Agency XYZ. Under this agreement, Agency ABC does not provide rent consideration to the lessor or receive rent consideration from Agency XYZ. Therefore, Agency ABC would not account for the lease. Rather, the lease payments are made to the non-federal lessor directly from Agency XYZ's budgetary resources. Accordingly, if Agency ABC is acting in an agent capacity, Agency XYZ would account for the lease (as lessee) and record any lease liability with the non-federal lessor, along with the corresponding lease asset, unless Agency XYZ's lease term is 24 months or less.

If Agency ABC is acting in a principal capacity, Agency ABC is generally responsible for an original lease with the non-federal lessor and a sublease with Agency XYZ. In such circumstances, Agency ABC would provide rent consideration to the original lessor and receive rent consideration from Agency XYZ relating to a sublease agreement. Accordingly, if Agency ABC is acting in a principal capacity, Agency ABC would record any lease liability with the non-federal lessor (unless ABC's lease term is 24 months or less), and account for an intragovernmental sublease with Agency XYZ in accordance with paragraphs 87-88 of SFFAS 54.

Sale-leaseback Transactions

92. **The difference between the carrying value of PP&E that was sold and the net proceeds of the sale in a sale-leaseback transaction is reported by the seller-lessee as unearned lease revenue or deferred expense and subsequently recognized in the**

statement of net cost. Should the amount of revenue or expense recognized in subsequent years be considered part of the sale transaction or the lease transaction?

The recognition of the unearned revenue or deferred expense should be considered a component of the sale transaction because this amount represents the overall gain or loss on the sale of the PP&E.

93. **A reporting entity sells a building to a third party and leases a different but equivalent building from the same party. Is this a sale-leaseback transaction?**

No. A sale-leaseback transaction involves the sale and leaseback of the same underlying asset. Because the sale and the lease relate to two different underlying assets, the sale and the lease should be recorded as two separate transactions.

Lease-leaseback Transactions

94. **A reporting entity leases an office building to a non-federal party and determines that, as a lessor, its initial lease receivable and related unearned revenue are \$3,000,000. The reporting entity leases back one floor of the building to house its finance department and determines that, as a lessee, its initial lease liability and related lease asset are \$700,000. How should the lease-leaseback transaction be reported?**

Paragraph 93 of SFFAS 54 requires that lease-leaseback amounts be disclosed separately but then displayed in the financial statements as net transactions. In a lease-leaseback transaction, each party is both a lessor and a lessee. Because each portion of the transaction is with the same counterparty, a right of offset exists. The lease liability and the lease receivable should be offset and reported as either a net lease liability or a net lease receivable. Similarly, the lease asset and the unearned lease revenue should be offset. In this example, the reporting entity should report a lease receivable (net of the leaseback) and an unearned revenue (net of the leaseback) of \$2,300,000 on the statement of financial position.

The reporting entity should disclose the amounts of the lease and leaseback separately. In this example, the reporting entity would include the \$3,000,000 in lease receivable and unearned revenue and \$700,000 in lease liability and lease asset in its lease-leaseback disclosures in accordance with paragraph 93.

95. **A reporting entity leases land to a contractor on which the contractor will build a new building and lease both the land and the building back to the reporting entity. The reporting entity makes advance lease payments to the contractor during**

construction. How should the reporting entity report the lease during the construction period?

Prior to the new building being made available to the reporting entity, the lease of the land to the contractor should be reported as a standalone lease. Any lease payments made to the contractor prior to the new building being made available should be reported as an advance. Once the new building is made available to the reporting entity, the lease and the prepayment should be accounted for as a lease-leaseback transaction (see also: TR par. 20 and 54).

96. Do the disclosures for lease-leaseback transactions apply to short-term and intragovernmental leases?

Yes, the disclosure requirements of paragraph 93 of SFFAS 54 apply to short-term and intragovernmental leases that are part of lease-leaseback transactions.

Transition Guidance for Implementation**97. For leases that were reported as operating leases prior to the implementation of SFFAS 54, should a reporting entity determine what the lease asset would have been at the commencement of the lease if it initially had been recognized and amortized in prior periods under the provisions of SFFAS 54?**

No. Paragraph 96 of SFFAS 54 states that leases should be recognized and measured using the facts and circumstances that exist at the beginning of the reporting period for implementation. The reporting entity should not estimate what the lease asset would have been if it initially had been recognized and amortized in prior periods as a lease under the provisions of SFFAS 54. The lease liability should be initially measured using the remaining lease term, associated lease payments, and discount rate as of the beginning of the period of implementation. The right-to-use lease asset should be measured based on the lease liability at that date.

In accordance with paragraph 13 of SFFAS 21, *Reporting Corrections of Errors and Changes in Accounting Principles*, the cumulative effect of the change in prior periods should be reported as a "change in accounting principle" adjustment to the beginning balance of cumulative results of operations in the statement of changes in net position for the period the change is made. Prior period financials presented for comparative purposes should be presented as previously reported. The nature of the change in accounting principle and its effect on relevant balances should be disclosed in the period of implementation.

-
98. **For leases that were reported as operating leases prior to the implementation of SFFAS 54, how should unamortized balances for previously-reported lease incentives/concessions be reported at implementation of SFFAS 54?**

Upon implementation of SFFAS 54, any unamortized balances for previously-reported lease incentives/concessions should be reduced to zero. Leases should then be evaluated in accordance with paragraphs 96-97 of SFFAS 54 at implementation. Any lease incentives and concessions affecting future lease payments would be included in the lease liability and lease asset measurement. For short-term and intragovernmental leases, lease incentives and lease concessions will be accounted for in accordance with paragraphs 23-24 and 31 of SFFAS 54, respectively.

In accordance with paragraph 13 of SFFAS 21, the cumulative effect of the change in prior periods should be reported as a "change in accounting principle" adjustment to the beginning balance of cumulative results of operations in the statement of changes in net position for the period the change is made (see also TR par. 97).

99. **Should leases that were reported as capital leases prior to the implementation of SFFAS 54, but have 24 months or less remaining at implementation be removed from the balance sheet? If so, should the difference between the carrying value of the asset and the remaining lease liability be recognized as a change in accounting principle?**

If there was a transfer of ownership at the end of the lease term, then paragraph 25 of SFFAS 54 would apply. If there was not a transfer of ownership, then the remaining lease term of 24 months or less would make this a short-term lease (par. 22 of SFFAS 54) in accordance with paragraph 97.b. The adjustment for the difference in the carrying value of the asset and remaining capital lease liability, which were previously on the books and then removed, should be made to the beginning balance of cumulative results of operations in the statement of changes in net position for the period in which the change is made as a "change in accounting principle."

Conforming Amendments to Existing Technical Releases

Amendments to Technical Release 10

100. The TR 20 amendment to footnote 4, paragraph 3 of TR 10, *Implementation Guidance for Asbestos Cleanup Costs Associated with Facilities and Installed Equipment*, was superseded by a subsequent amendment (TR 21, par. 3).

Amendments to Technical Release 16

101. [Paragraph 5 of TR 23, *Omnibus Technical Release Amendments 2024: Conforming Amendments to Technical Releases 10, 16, 20, and 21*, superseded the *TR 20 rescission of paragraphs 26-27 of TR 16, Implementation Guidance for Internal Use Software*.]
102. [Paragraph 6 of TR 23 superseded the TR 20 amendment to paragraph 29 of TR 16.]

Effective Date

103. This Technical Release is effective for reporting periods beginning after September 30, 2023.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts</p>

Appendix A: Basis for Conclusions

This appendix discusses factors considered significant by Committee members in reaching the conclusions in this guidance. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The guidance enunciated in this Technical Release-not the material in this appendix-should govern the accounting for specific transactions, events, or conditions.

This Technical Release may be affected by later Technical Releases. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent Technical Releases that amend this Technical Release. The authoritative sections of the Technical Releases are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Technical Release for the rationale for each amendment.

Project History

- A1. Statement of Federal Financial Accounting Standards (SFFAS) 54, *Leases*, was issued in April 2018 with an effective date for reporting periods beginning after September 30, 2020. The effective date was later amended by SFFAS 58, *Deferral of the Effective Date of SFFAS 54, Leases*, to reporting periods beginning after September 30, 2023.
- A2. In August 2019, the Federal Accounting Standards Advisory Board (FASAB or "the Board") and the Accounting and Auditing Policy Committee (AAPC or "the Committee") commenced projects on their technical agendas to identify implementation challenges and develop guidance related to SFFAS 54.
- A3. Previously, in February 2019, the Committee exposed conforming changes to Technical Release (TR) 10, *Implementation Guidance on Asbestos Cleanup Costs Associated with Facilities and Installed Equipment*, and TR 16, *Implementation Guidance for Internal Use Software*, as a result of the effects that SFFAS 54 had on such guidance.
- A4. The AAPC assembled a large group of task force members-over 100 stakeholders-as a means of crowdsourcing the identification and analysis of a wide breadth of potential SFFAS 54 implementation topics. The task force provided input to project staff by:

-
- a. Reviewing project staff's content analysis of questions and answers contained in Governmental Accounting Standards Board (GASB) *Implementation Guide 2019-3, Leases*, and determining the extent to which each question and answer contained therein was applicable in the federal context.⁶
 - b. Suggesting implementation topics not addressed in GASB 2019-3.
 - c. Identifying and discussing potential omnibus SFFAS amendment candidates that may need to be issued in tandem with the implementation guidance for purposes of providing clarification or closing loopholes. Such candidates were then relayed to FASAB for its consideration.
 - d. Providing editorial and technical comments and illustrative examples on draft versions of implementation guidance questions and answers developed by staff. The working drafts were developed and reviewed, by topic area, over the course of several task force meetings organized by project staff.
- A5. As a result of the prior collaboration between FASAB and the GASB on SFFAS 54 and *Statement No. 87, Leases*, respectively, staff met with GASB staff during the development of the proposed guidance to discuss implementation issues and approaches for developing consistent guidance in areas where the related standards and implementation issues align. As a result of this collaboration, similar wording appears in some sections of this guidance and analogous GASB implementation guidance.
- A6. Due to the high volume of implementation guidance, project staff provided drafts of proposed questions and answers to the AAPC piecemeal for its review and input prior to its respective actions to release the exposure draft (ED) for public comment.
- A7. The AAPC discussed working drafts of the guidance at length following each piecemeal review. A majority of implementation issues identified by or communicated to the Committee are addressed in the proposed questions and answers. Implementation issues that could not be addressed in the TR are primarily excluded for reasons set forth in FASAB's Rules of Procedure, which sets forth limitations regarding the purpose and scope of TRs. Such issues were referred to the Board and the AAPC chair as deemed appropriate for their consideration for purposes of (a) developing omnibus amendment proposals related to leases, and/or (b) considering additional projects on leases-related topics.

⁶The GASB material is copyrighted by the Financial Accounting Foundation (FAF), 401 Merritt 7, P.O. Box 5116, Norwalk, CT 06856-5116, and was used with permission. Complete copies of the documents are available from the FAF.

Summary of Outreach and Responses

- A8. The AAPC released an ED proposal on November 2, 2020, for public comment, with comments requested by February 5, 2021. The proposal was released as a joint ED in tandem with an ED for a proposed Statement on omnibus amendments to leases-related topics. Upon release of the ED, FASAB notified constituents through the FASAB website and listserv, the Federal Register, and FASAB newsletter. FASAB also provided news releases to its press contacts, including various news organizations and committees of professional associations generally commenting on EDs in the past. To encourage responses, a reminder notice was provided to FASAB's listserv near the comment deadline.
- A9. Twenty-five comment letters were received in response to the joint ED. Respondents were generally supportive of the proposed TR. In response to comment letters, several questions and answers were improved and clarified. In addition, comments to the proposed omnibus amendments to leases-related topics Statement were coordinated between the AAPC and the Board where appropriate to ensure consistency.
- A10. The AAPC also resumed its analysis of comment letters related to the previously-exposed conforming amendment proposals for TR 10 and TR 16. FASAB staff elevated the issues raised by certain respondents of the ED to the Board. The Board expressed an intent to begin considering projects to comprehensively address intangible assets and service-based information technology arrangements. In light of the Board's decision, coupled with due process limitations surrounding the purposes and uses of TRs, the Committee agreed to conform TR 16 by rescinding certain guidance that requires Board action. The Committee also agreed to further conform TR 10 to omnibus proposals more recently agreed to by the Board.

AAPC and Board Approval

- A11. The TR was approved by the AAPC for release to FASAB for issuance. The Board has reviewed this TR and a majority of its members do not object to its issuance. Written ballots are available for public inspection at the FASAB office.

Appendix B: Abbreviations

AAPC	Accounting and Auditing Policy Committee

SFFAS	Statement of Federal Financial Accounting Standards
TR	Federal Financial Accounting Technical Release

Technical Release 21: Omnibus Technical Release Amendments 2022: Conforming Amendments

Status

Issued	September 6, 2022
Effective Date	Effective upon issuance.
Affects	Technical Releases 10, 11, 14, and 20 are amended.
Affected by	TR 23.

Summary

Listed below are FASAB pronouncements that require updates to Technical Releases (TRs):

- SFFAS 40, *Deferred Maintenance and Repairs: Definitional Changes*
- SFFAS 42, *Deferred Maintenance and Repairs: Amending Statements of Federal Financial Accounting Standards 6, 14, 29, and 32*
- SFFAS 44, *Accounting for Impairment of General Property, Plant, and Equipment Remaining in Use*
- SFFAS 54, *Leases*
- SFFAS 60, *Omnibus Amendments 2021: Leases-Related Topics*
- Interpretation 9, *Cleanup Cost Liabilities Involving Multiple Component Reporting Entities: An Interpretation of SFFAS 5 & 6*
- Technical Bulletin 2017-2, *Assigning Assets to Component Reporting Entities*

This TR provides conforming amendments to previously issued TRs to ensure the TRs are consistent with the aforementioned pronouncements.

Specifically, this TR provides conforming amendments to the following:

- TR 10, *Implementation Guidance on Asbestos Cleanup Costs Associated with Facilities and Installed Equipment*
- TR 11, *Implementation Guidance on Cleanup Costs Associated with Equipment*

-
- TR 14, *Implementation Guidance on the Accounting for the Disposal of General Property, Plant & Equipment*
 - TR 20, *Implementation Guidance for Leases*
-

Materiality

The provisions of this Technical Release need not be applied to information if the effect of applying the provision(s) is immaterial.¹ A misstatement, including omission of information, is material if, in light of surrounding facts and circumstances, it could reasonably be expected that the judgment of a reasonable user relying on the information would change or be influenced by the correction or inclusion of the information. Materiality should be evaluated in the context of the specific reporting entity. Determining materiality requires appropriate and reasonable judgment in considering the specific facts, circumstances, size, and nature of the misstatement. Consequently, after quantitative and qualitative factors are considered, materiality may vary by financial statement, line item, or group of line items within an entity.

¹Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

Technical Guidance

Scope

1. Readers of this Technical Release (TR) should first refer to the hierarchy of accounting standards in Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This TR supplements the relevant accounting standards but is not a substitute for and does not take precedence over the standards.
2. FASAB has issued the following pronouncements that require updates to TRs:
 - SFFAS 40, *Deferred Maintenance and Repairs: Definitional Changes*
 - SFFAS 42, *Deferred Maintenance and Repairs: Amending Statements of Federal Financial Accounting Standards 6, 14, 29, and 32*
 - SFFAS 44, *Accounting for Impairment of General Property, Plant, and Equipment Remaining in Use*
 - SFFAS 54, *Leases*
 - SFFAS 60, *Omnibus Amendments 2021: Leases-Related Topics*
 - Interpretation 9, *Cleanup Cost Liabilities Involving Multiple Component Reporting Entities: An Interpretation of SFFAS 5 & 6*
 - Technical Bulletin 2017-2, *Assigning Assets to Component Reporting Entities*

This TR provides conforming amendments to the following TRs:

- TR 10, *Implementation Guidance on Asbestos Cleanup Costs Associated with Facilities and Installed Equipment*
- TR 11, *Implementation Guidance on Cleanup Costs Associated with Equipment*
- TR 14, *Implementation Guidance on the Accounting for the Disposal of General Property, Plant & Equipment*

-
- TR 20, *Implementation Guidance for Leases*

Amendments to Existing Technical Releases

Technical Release 10, Implementation Guidance on Asbestos Cleanup Costs Associated With Facilities And Installed Equipment

3. This paragraph rescinds paragraphs 1-8 (including all section titles, subsection titles, and the accompanying footnotes 1 through 5 contained within these sections) of TR 10, *Implementation Guidance on Asbestos Cleanup Costs Associated with Facilities and Installed Equipment*. This will ensure outdated references are removed and sections are properly located in the authoritative section. Pertinent text will be updated and placed in the Summary of the TR.
4. This paragraph amends the technical guidance section of TR 10 by inserting the subheading "scope" with paragraphs 8A-8B and footnote 5A directly under "technical guidance."

Technical Guidance

Scope

8A. Readers of this Technical Release (TR) should first refer to the hierarchy of accounting standards in *Statement of Federal Financial Accounting Standards (SFFAS) 34, The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This TR supplements the relevant accounting standards but is not a substitute for and does not take precedence over the standards.

8B. This guidance is limited to federal real property^{5A} that contains any form of asbestos. It provides additional clarification of federal GAAP for identification and recognition of asbestos-related cleanup costs and a methodology for identifying and recognizing asbestos liabilities associated with federal properties.

^{5A} [Paragraph 3 of TR 23, *Omnibus Technical Release Amendments 2024: Conforming Amendments to Technical Releases 10, 16, 20, and 21*, amended footnote 5A of TR 10.]

5. This paragraph amends the first sentence of paragraph 10 of TR 10 by inserting a new footnote 5B after the word "property" to reference recent pronouncements that should be considered:

10. The following steps may be taken to identify real property^{5B} that may contain asbestos.

^{5B} Interpretation 9, *Cleanup Cost Liabilities Involving Multiple Component Reporting Entities: An Interpretation of SFFAS 5 & SFFAS 6*, provides clarification and guidance regarding cleanup cost liabilities for component reporting entities when the component reporting entity responsible for reporting on an asset during its useful life is different from the component reporting entity that will eventually be responsible for settling the liability for the cleanup cost of that asset. Technical Bulletin 2017-2, *Assigning Assets to Component Reporting Entities*, provides that assets may be assigned by a reporting entity to its component reporting entities on a rational and consistent basis.

6. This paragraph amends paragraph 13, including footnote 11, of TR 10 to refer to all relevant GAAP related to cleanup recognition:

Once the estimated asbestos cleanup cost associated with the removal, containment or disposal of the real property has been determined, the cost recognized and reported should be in accordance with ~~SFFAS 6~~ relevant GAAP.¹¹

¹¹ See paragraphs 98 and 101, and Technical Bulletin 2006-1, paragraph 37. Relevant GAAP includes but is not limited to SFFAS 5, 6, 40, and 42; Interpretation 9; TB 2006-1, TB 2017-2; and related TRs.

7. This paragraph amends TR 10 by inserting a new paragraph 16 to include pronouncements that should be referenced to incorporate (1) the potential impacts to deferred maintenance and repairs (DM&R) estimates and loss of asset service utility or function and (2) applicable DM&R guidance and asset impairment (AI) guidance:

16. The guidance in SFFAS 40, *Deferred Maintenance and Repairs: Definitional Changes*, SFFAS 42, *Deferred Maintenance and Repairs: Amending Statements of Federal Financial Accounting Standards 6, 14, 29, and 32*, and SFFAS 44, *Accounting for Impairment of General Property, Plant, and Equipment Remaining in Use*, may also be relevant when considering the impact of asbestos cleanup on financial reporting.

8. This paragraph amends Diagram 1² of TR 10 by providing corresponding and consistent changes as noted in the paragraphs above:

² Diagram 1 of TR 10 is part of the technical guidance and accordingly should be updated.

-
- Box 13 - "Estimate cost of removal, containment or disposal and recognize in accordance with relevant GAAP^{SFFAS 6¹}"
 - Footnote 1 - Replace with the following: "Relevant GAAP includes but is not limited to SFFAS 5, 6, 40, and 42; Interpretation 9; Technical Bulletin 2006-1, 2017-2; and related TRs."
 - Box 14 - Add footnote 3 at the end of the sentence as follows: Estimate and recognize any identifiable costs (e.g. survey cost).³
 - Insert footnote 3 immediately after footnote 2 to read as follows: "In estimating and recognizing identifiable costs, see SFFAS 44, *Accounting for Impairment of General Property, Plant, and Equipment Remaining in Use*, to determine if indicators of potential impairment exist."
9. This paragraph amends TR 10 by inserting a new paragraph 17 and footnote 12A to remind users that the non-authoritative sections are not updated:
17. The appendices (that include non-authoritative illustrations and examples) of TR 10 are not updated for amendments.^{12A} Therefore, readers are cautioned to refer to the paragraphs above for guidance that could impact the accompanying non-authoritative illustrations and examples.
- ^{12A} The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent pronouncements that amend a pronouncement. For example, within the text of a Technical Release, the guidance sections are updated for changes. However, appendices are not updated to reflect subsequent changes. The reader can review the basis for conclusions of the amending pronouncements for the rationale for each amendment.
10. This paragraph further amends the technical guidance in TR 10 by inserting the subheading "effective date" with the following paragraph 18:

Effective Date

18. This TR is effective upon issuance.

Technical Release 11, Implementation Guidance on Cleanup Costs Associated With Equipment

11. This paragraph rescinds paragraphs 1-7 (including all section titles, subsection titles, and the accompanying footnotes 1 through 5 contained within these sections) of TR 11, *Implementation Guidance on Cleanup Costs Associated with Equipment*. This will ensure outdated references are removed and sections are properly located in the authoritative section. Pertinent text will be updated and placed in the Summary of the TR.
12. This paragraph amends the technical guidance section of TR 11 by inserting the subheading "scope" with the following paragraph 7A directly under "technical guidance."

Technical Guidance

Scope

7A. Readers of this Technical Release (TR) should first refer to the hierarchy of accounting standards in Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This TR supplements the relevant accounting standards but is not a substitute for and does not take precedence over the standards.

13. This paragraph amends the subsection title "Cleanup Costs Associated with Equipment at Disposal" that precedes paragraph 8 by inserting footnote 5A, which replaces a footnote that was rescinded. The revised subsection title is as follows:

Cleanup Costs Associated with Equipment^{5A} at Disposal

^{5A}Equipment is defined in Appendix D.

14. This paragraph amends paragraph 8 of TR 11 by inserting a sentence at the beginning of paragraph 8 to ensure it refers to all relevant GAAP related to cleanup costs:

"Cleanup costs should be recognized in accordance with all relevant GAAP."

15. This paragraph further amends paragraph 8 of TR 11 by inserting two new sentences at the end of the paragraph (but before the example of practice) to reference recent pronouncements that should be considered:

"Further, Interpretation 9, *Cleanup Cost Liabilities Involving Multiple Component Reporting Entities: An Interpretation of SFFAS 5 & SFFAS 6*, provides clarification and guidance regarding cleanup cost liabilities for component reporting entities when the component reporting entity responsible for reporting on an asset during its useful life is different from the component reporting entity that will eventually be responsible for settling the liability for the cleanup cost of that asset. Technical Bulletin 2017-2, *Assigning Assets to Component Reporting Entities*, provides that assets may be assigned by a reporting entity to its component reporting entities on a rational and consistent basis."

16. This paragraph replaces paragraph 13 (including footnote 13) of TR 11 to clarify the guidance.

In accordance with SFFAS 6, paragraph 93,¹³ if such cleanup is an ongoing part of operations, the costs are to be accounted for in accordance with SFFAS 5, *Accounting for Liabilities of the Federal Government*, and are not subject to the recognition guidance provided in SFFAS 6, chapter 4 (par. 97 and 98). SFFAS 5 applies to all environmental liabilities not specifically covered in SFFAS 6, including cleanup resulting from accidents or when cleanup is an ongoing part of operations. Any accrued liability/payable and associated operating expense should be recognized in the period the cleanup occurs as part of ongoing operations.

¹³ SFFAS 6, paragraph 93: Other cleanup costs, such as those resulting from accidents or where cleanup is an ongoing part of operations, are to be accounted for in accordance with liability standards and are not subject to the recognition guidance provided in this standard. This guidance does not apply to these other types of cleanup since the cleanup effort is not deferred until operation of associated PP&E ceases either permanently or temporarily.

17. This paragraph amends the last sentence of paragraph 14 of TR 11 by inserting footnote 13A after the words "routine hazardous waste disposal," replacing a footnote that was rescinded. The revised last sentence of paragraph 14 is as follows:

Example of Practice -- Cleanup Costs Associated with Equipment during Ongoing Operations: Determination of hazardous waste cleanup during ongoing operations of the equipment (routine hazardous waste disposal)^{13A} at the time the equipment is being placed in service.

^{13A} Routine hazardous waste disposal is defined in Appendix D.

18. This paragraph amends TR 11 by inserting paragraph 18 to include pronouncements that should be referenced to incorporate (1) the potential impacts to DM&R estimates and loss of asset service utility or function and (2) applicable DM&R guidance and asset impairment (AI) guidance:

18. The guidance in SFFAS 40, *Deferred Maintenance and Repairs: Definitional Changes*, SFFAS 42, *Deferred Maintenance and Repairs: Amending Statements of Federal Financial Accounting Standards 6, 14, 29, and 32*, and SFFAS 44, *Accounting for Impairment of General Property, Plant, and Equipment Remaining in Use*, may also be relevant

- when defining, measuring, and reporting estimated cleanup costs that are considered deferred and
- when considering the existence of any potential asset impairment indicators.

19. This paragraph amends Diagram 1³ of TR 11 by providing corresponding and consistent changes as noted in the paragraphs above:

- Amend the title of Diagram 1 as follows: Recognizing Environmental Liabilities for Equipment Disposal in Compliance with relevant GAAP ~~Technical Release 2 and SFFAS 1, 5 and 6~~
- Amend language in the box for recognizing the liability: "Recognize estimate for environmental liability on financial statements in accordance with SFFAS 6 relevant GAAP, including but not limited to SFFAS 5, 6, 40, 42, and 44; Interpretation 9; Technical Bulletin 2006-1, 2017-2; and applicable TRs."

20. This paragraph amends TR 11 by inserting paragraph 19 and footnote 14A to remind users that the non-authoritative sections are not updated:

19. The appendices (that include non-authoritative illustrations and examples) of TR 11 are not updated for amendments.^{14A} Therefore, readers are cautioned to refer to the paragraphs above for guidance that could impact the accompanying non-authoritative illustrations and examples.

^{14A}The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent pronouncements that amend a pronouncement. For example, within the text of a Technical Release, the guidance sections are updated for changes. However, appendices are not updated to reflect subsequent changes. The reader can review the basis for conclusions of the amending pronouncements for the rationale for each amendment.

21. This paragraph further amends the technical guidance in TR 11 by inserting the subheading "effective date" with the following paragraph 20:

³Diagram 1 of TR 11 is part of the technical guidance and accordingly should be updated.

Effective Date

20. This TR is effective upon issuance.

Technical Release 14, Implementation Guidance On The Accounting for the Disposal of General Property, Plant & Equipment

22. This paragraph rescinds paragraphs 1-4 (including all section titles and subsection titles) of Technical Release 14, *Implementation Guidance on the Accounting for the Disposal of General, Property, and Equipment*. This will ensure outdated references are removed and sections are properly located in the authoritative section. Pertinent text will be updated and placed in the Summary of the TR.
23. This paragraph amends the technical guidance section of TR 14 by inserting the subheading "scope" with the following paragraph 4A directly under "technical guidance."

Technical Guidance

Scope

4A. Readers of this Technical Release (TR) should first refer to the hierarchy of accounting standards in Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles*, Including the *Application of Standards Issued by the Financial Accounting Standards Board*. This TR supplements the relevant accounting standards but is not a substitute for and does not take precedence over the standards.

24. This paragraph amends paragraph 5 of TR 14 by inserting (1) footnote A after "general PP&E" to reference Technical Bulletin 2017-2, *Assigning Assets to Component Reporting Entities*, and (2) two sentences (including footnote B) after the first sentence to reference requirements contained at SFFAS 40, *Deferred Maintenance and Repairs: Definitional Changes*; SFFAS 42, *Deferred Maintenance and Repairs: Amending Statements of Federal Financial Accounting Standards* 6, 14, 29, and 32; and SFFAS 44, *Accounting for Impairment of General Property, Plant, and Equipment Remaining in Use*.

5. In accordance with SFFAS 6 paragraph 38, "in the period of disposal, retirement, or removal from service, general PP&E^A shall be removed from the asset accounts along with associated accumulated depreciation/amortization." When G-PP&E assets are disposed of, retired, or removed from service, deferred maintenance and repair (DM&R) estimates as defined and required by SFFAS 40 and SFFAS 42, respectively, should be re-estimated to the extent such estimated costs are related to the G-PP&E assets disposed of, retired, or

removed from service.^B Additionally, to the extent any portion of a G-PP&E asset is not disposed of, retired, or otherwise continues to remain in service, SFFAS 44 should be consulted to ascertain whether partial impairments should be accounted for and reported, including additional DM&R information when necessary, such as changes in DM&R exclusions.

^ATechnical Bulletin 2017-2, Assigning Assets to Component Reporting Entities, provides that assets may be assigned by a reporting entity to its component reporting entities on a rational and consistent basis."

^BFor example, in situations where DM&R costs are estimated for an asset group and a component (or components) of that group is disposed of, retired, or removed from service, the DM&R re-estimate should be performed only for the assets remaining in the group.

25. This paragraph amends the first sentence of paragraph 6 of TR 14 by inserting footnote 1A after "cleanup costs" to reference Interpretation 9, *Cleanup Cost Liabilities Involving Multiple Component Reporting Entities: An Interpretation of SFFAS 5 & SFFAS 6*:

6. Additionally, SFFAS 6 provides requirements for recognition and measurement of disposal related cleanup costs.^{1A}

^{1A}Interpretation 9, *Cleanup Cost Liabilities Involving Multiple Component Reporting Entities: An Interpretation of SFFAS 5 & SFFAS 6*, provides clarification and guidance regarding cleanup cost liabilities for component reporting entities when the component reporting entity responsible for reporting on an asset during its useful life is different from the component reporting entity that will eventually be responsible for settling the liability for the cleanup cost of that asset.

26. This paragraph amends paragraph 7 of TR 14 by inserting a sentence at the end of the paragraph referring to SFFAS 44, *Accounting For Impairment Of General Property, Plant, And Equipment Remaining In Use*:

The following section provides further clarification and guidance to the requirements stated in SFFAS 6, paragraphs 38, 39, 97, and 98 as those paragraphs relate to "removal from service." The terms "disposal" and "retirement" are used in the above referenced SFFAS 6 paragraphs and are intended to describe G-PP&E disposals that are permanent in nature. However, "removal from service" may or may not be permanent. The paragraph below defines the term "removal from service", as referenced in SFFAS 6, and further discusses the differences between other than permanent and permanent removal from service. SFFAS 44, *Accounting For Impairment Of General Property, Plant, And Equipment Remaining In Use*, provides guidance on potential impairment for G-PP&E that (1) is other

than permanently removed from service or (2) remains in service but with a decline in service utility that is expected to be permanent.

27. This paragraph amends the last sentence of paragraph 10 of TR 14 by revising to ensure it refers to all relevant GAAP:

Likewise, in the case of G-PP&E cleanup costs, if only one of the two business events has occurred, permanent removal from service has not occurred (i.e., considered other than permanent removal) and, any cleanup costs associated with disposal, closure, and/or shutdown should continue to accumulate as a liability in accordance with ~~SFFAS 6, paragraphs 97 and 98~~ relevant GAAP.

28. This paragraph amends paragraph 10 of TR 14 by (1) deleting the statement that no change in G-PP&E reported value is in order and (2) referencing SFFAS 44 for potential impairment for G-PP&E not permanently removed from service that could result in a change to G-PP&E reported value:

10. Two business events are necessary for the permanent removal from service:

1. Asset's use is terminated, and
2. There is documented evidence of management's decision to permanently remove the asset from service.

If only one of the two business events has occurred, permanent removal from service has not occurred (i.e., considered other than permanent removal). However, in accordance with SFFAS 44, Accounting For Impairment Of General Property, Plant, And Equipment Remaining In Use, and there is no there could be a change in the G-PP&E reported value for other than permanently removed G-PP&E if an impairment indicator exists, such as changes in the manner or duration of use of G-PP&E or G-PP&E idled or unserviceable for excessively long periods and depreciation continues. Depreciation continues on such G-PP&E to the extent not impaired.

Likewise, in the case of G-PP&E cleanup costs, if only one of the two business events has occurred, permanent removal from service has not occurred (i.e., considered other than permanent removal) and, any cleanup costs associated with disposal, closure, and/or shutdown should continue to accumulate as a liability in accordance with ~~SFFAS 6, paragraphs 97 and 98~~relevant GAAP.

29. This paragraph amends TR 14 by adding paragraph 18 and footnote 8A to remind users that the non-authoritative sections are not updated:

18. The appendices (that include non-authoritative illustrations and examples) of TR 14 are not updated for amendments.^{8A} Therefore, readers are cautioned to refer to the paragraphs above for guidance that could impact the accompanying non-authoritative illustrations and examples.

^{8A}The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent pronouncements that amend a pronouncement. For example, within the text of a Technical Release, the guidance sections are updated for changes. However, appendices are not updated to reflect subsequent changes. The reader can review the basis for conclusions of the amending pronouncements for the rationale for each amendment.

30. This paragraph further amends the technical guidance in TR 14 by inserting the subheading "effective date" with the following paragraph 19.

Effective Date

19. This TR is effective upon issuance.

Technical Release 20, Implementation Guidance for Leases

31. This paragraph amends paragraph 17 of TR 20 by revising the paragraph numbers referenced to conform to SFFAS 54, as amended by SFFAS 60:

17. Paragraphs 37.b and 54.e of SFFAS 54 require disclosures of "annual lease expense." Since the term is not defined elsewhere, what types of lease expenses are included in these disclosures?

For intragovernmental leases, disclosures of annual lease expenses by lessees (par. 37.b) include amounts incurred during the fiscal year as expenses in accordance with paragraphs 27, ~~and 31,~~ and -36.

For right-to-use lease assets, disclosures of annual lease expenses by lessees (par. 54.e) include amounts incurred during the fiscal year for the amortization of the lease assets, as initially capitalized in accordance with paragraph 49, and interest expense.

EFFECTIVE DATE

32. This TR is effective upon issuance..

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Committee members in reaching the conclusions in this Technical Release. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The guidance enunciated in this Technical Release—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Technical Release may be affected by later Statements or other pronouncements. The Handbook is updated annually and includes a status section directing the reader to any pronouncement that changed this Technical Release. Within the text of the Technical Release, the guidance sections are updated for changes. However, this appendix will not be updated to reflect subsequent changes. The reader can review the basis for conclusions of the amending Statements or other pronouncements for the rationale for each amendment.

Project History

A1. FASAB issued the below pronouncements that require assessing and updating TRs:

- SFFAS 40, *Deferred Maintenance and Repairs: Definitional Changes*
- SFFAS 42, *Deferred Maintenance and Repairs: Amending Statements of Federal Financial Accounting Standards 6, 14, 29, and 32*
- SFFAS 44, *Accounting for Impairment of General Property, Plant, and Equipment Remaining in Use*
- Interpretation 9, *Cleanup Cost Liabilities Involving Multiple Component Reporting Entities: An Interpretation of SFFAS 5 & 6*
- Technical Bulletin 2017-2, *Assigning Assets to Component Reporting Entities*

A2. It is important to make conforming amendments to ensure TRs are consistent with other pronouncements. The Committee also recognizes that conforming amendments are important to incorporate because users rely on the technical guidance to assist with implementation efforts.

Amendments to Existing Technical Releases

- A3. This TR provides conforming amendments to previously issued TRs to ensure TR guidance is consistent with other pronouncements. The amendments conform the TRs to ensure users are reminded of provisions of the aforementioned pronouncements and that they should be applied when appropriate.
- A4. This TR provides conforming amendments to the following documents:
- TR 10, *Implementation Guidance on Asbestos Cleanup Costs Associated with Facilities and Installed Equipment*
 - TR 11, *Implementation Guidance on Cleanup Costs Associated with Equipment*
 - TR 14, *Implementation Guidance on the Accounting for the Disposal of General Property, Plant & Equipment*
 - TR 20, *Implementation Guidance for Leases*
- A5. The Committee believes that the amendments bring the technical guidance up to date to reflect the current pronouncements. For example, the amendment to paragraph 17 of TR 20 conforms paragraph references to SFFAS 54, as amended by SFFAS 60.
- A6. The Committee concluded that it is important to remind users (as detailed in the preamble to the Appendix) that non-authoritative sections would not be updated. To help ensure this is clear, language was added to the amended TRs explaining appendices (that include non-authoritative illustrations and examples) are not updated for amendments and readers should refer to the paragraphs in the amended guidance that could impact the accompanying non-authoritative illustrations and examples.

Summary of Outreach Efforts and Responses

- A7. The Accounting and Auditing Policy Committee (AAPC) issued the exposure draft (ED), *Omnibus Technical Release Amendments 2022: Conforming Amendments*, on March 30, 2022, with comments requested by May 31, 2022.
- A8. Upon release of the ED, FASAB notified constituents through the FASAB website and listserv, the Federal Register, and FASAB newsletter. FASAB also provided news releases to its press contacts, including various news organizations and committees of professional

associations generally commenting on EDs in the past. To encourage responses, a reminder notice was provided to FASAB's listserv near the comment deadline.

- A9. The AAPC received twelve comment letters from preparers, users of federal financial information, and professional associations. The AAPC considered responses to the ED at its meeting on June 28, 2022. The AAPC did not rely on the number in favor of or opposed to a given position. The AAPC considered each response and weighed the merits of the points raised.
- A10. The majority of respondents generally agreed with the Technical Release. Specifically, the respondents agreed with the amendments and that the TR clarifies the technical guidance. Certain respondents provided minor edits or clarifications that were carefully considered by the Committee and incorporated as appropriate.

AAPC & BOARD APPROVAL

- A11. The TR was approved by the AAPC for release to FASAB for issuance. The Board has reviewed this TR and a majority of its members do not object to its issuance. Written ballots are available for public inspection at the FASAB office.

Technical Release 22: Leases Implementation Guidance Updates

Status

Issued	October 12, 2023
Effective Date	For periods beginning after September 30, 2023.
Affects	• TR 20, par. 8A-8B, 11A, 24A, 25, 32A, 52A, 75A, 78, and 91.
Affected by	None.

Summary

This Federal Financial Accounting Technical Release (TR) amends TR 20, *Implementation Guidance for Leases*, by incorporating minor conforming amendments related to Statement of Federal Financial Accounting Standards (SFFAS) 61, *Omnibus Amendments 2023*, inserting additional leases implementation guidance questions and answers within the related topic areas, and providing clarifying amendments / technical corrections on certain existing questions and answers under TR 20.

Materiality

The provisions of this Technical Release need not to be applied to information if the effect of applying the provision(s) is immaterial.¹ A misstatement, including omission of information, is material if, in light of surrounding facts and circumstances, it could reasonably be expected that the judgment of a reasonable user relying on the information would change or be influenced by the correction or inclusion of the information. Materiality should be evaluated in the context of the specific reporting entity. Determining materiality requires appropriate and reasonable judgment in considering the specific facts, circumstances, size, and nature of the misstatement. Consequently, after quantitative and qualitative factors are considered, materiality may vary by financial statement, line item, or group of line items within an entity.

¹Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts..

Technical Guidance

Scope of Technical Guidance

1. Readers of this Federal Financial Accounting Technical Release (TR) should first refer to the hierarchy of accounting standards in Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This TR supplements the relevant accounting standards but does not substitute for or take precedence over the standards. This TR clarifies but does not change guidance provided in SFFAS 54, *Leases*.
2. SFFAS 54 provides a comprehensive set of lease accounting standards to recognize federal lease activities in the reporting entity's general purpose federal financial reports and includes appropriate disclosures.
3. Questions and answers in TR 20, *Implementation Guidance for Leases*, provide guidance for applying the accounting and financial reporting requirements for leases in accordance with SFFAS 54.
4. This TR updates TR 20 with one conforming amendment, seven updates (that is, additional questions and answers), and two clarifying amendments / technical corrections.

Conforming Amendments to TR 20

5. Paragraph 78 of TR 20 is amended as follows:
 78. **A contract conveys the right to use a building for 30 years and the attached parking garage for 15 years. There is no stated interest rate included in the lease agreement. Should the discount rate be separately assessed for each component?**

Yes. Paragraph 74 of SFFAS 54 requires that lease contracts involving multiple underlying assets be accounted for as separate lease components if the underlying assets have different lease terms. The interest ~~estimated incremental borrowing~~ rate in this scenario would likely differ between the two components because of the considerable difference in lease terms. When the interest rates for each component are not stated in the lease agreement, the interest ~~estimated incremental borrowing~~

rate for each component should be based on the interest rate on marketable Treasury securities at the commencement of the lease term with a similar maturity to the term of the lease used, in accordance with paragraphs 42-42C (for lessees) and 59-59C (for lessors).

Updates to TR 20

6. Paragraphs 8A, 8B, and 11A are added to TR 20 (under the topic area for scope and definitions) as follows:

8A. A reporting entity enters into a 15-year contract with a utility company for the right to use a fiber optic cable network in exchange for consideration. The contract does not provide the reporting entity with specific, physically distinct dark fibers; nor does it provide the ability to deny and regulate the access of others to the fiber optic cable network. Rather, the utility company makes decisions about the transmission of data. For example, the utility company lights the fibers with its electronic equipment. Does this contract convey control and meet the definition of a lease?

No, this contract does not convey control or meet the definition of a lease. Paragraph 2 of SFFAS 54 provides that the underlying asset should be identified either through explicit specification in the contract or implicit specification at the time the underlying asset is made available for use. The contract in this scenario does not specify, either explicitly or implicitly, the underlying asset. Relatedly, unlike the scenario under paragraph 8B below, the contract under this scenario does not meet the control criterion under paragraph 3.b of SFFAS 54 (criterion 2 of 2). The reporting entity cannot deny or regulate the access of other parties to the economic benefits or services of the underlying asset, as the contract does not convey control of specific, physically distinct dark fibers. The utility company makes decisions about the transmission of data. In this case, the utility company lights the fibers with electronic equipment under its control and makes decisions about which fibers are used to transmit data. In this scenario, the data transmission is effectively a service, consistent with paragraph 4 of SFFAS 54.

8B. A reporting entity enters into a 15-year contract with a utility company for the right to use specific, physically distinct dark fibers within a larger fiber optic cable connecting two operational sites (over a specifically identified route) in exchange for consideration. The reporting entity makes the decisions about the use of the fibers by connecting each end to its electronic equipment. For example, the customer lights the fibers and makes decisions about data transmission. Does this contract convey control and meet the definition of a lease?

Yes, this contract conveys control and meets the definition of a lease. Paragraph 3 of SFFAS 54 provides that the reporting entity should assess whether the contract gives the lessee both of the following when determining whether a contract or agreement conveys the right to control the use of the underlying asset:

- a The right to obtain economic benefits or services from the use of the underlying asset as specified in the contract
- b The right to control access to the economic benefits or services of the underlying asset as specified in the contract

The reporting entity has the right to obtain economic benefits or services of the underlying asset (criterion 1 of 2). Through a lease contract the government may control access to the economic benefits or services embodied in an underlying asset it does not own. In this scenario, the contract allows the reporting entity to deny or regulate the access of other entities to the economic benefits or services of the dark fibers, and the customer has the right to direct the use of the fibers. For example, the customer lights the fibers and makes decisions about data transmission (criterion 2 of 2). Therefore, the control criterion is met. Relatedly, in accordance with paragraph 2, the contract in this scenario specifies, either explicitly or implicitly (in this case, explicitly) the underlying asset.

11A. A reporting entity (lessor) enters into an agreement that allows a private party (lessee) to use one floor of the reporting entity's building at a market rate. The contract states that the space is to be used only for a restaurant. Does the contract convey the right to control the use of the underlying asset?

Yes. In accordance with paragraph 3 of SFFAS 54, the reporting entity should assess whether the contract gives the lessee both the right to obtain economic benefits or services from the use of the underlying asset *as specified in the contract* (emphasis added) and the right to control access to the economic benefits or services of the underlying asset *as specified in the contract* (emphasis added). In this example, the paragraph 3 control criterion is met notwithstanding the parameters of the contract regarding the nature and manner of use (see also TR par. 7.b).

7. Paragraph 24A is added to TR 20 (under the topic area for lease term) as follows:

24A. A lease contract states that it will remain in effect for three years unless terminated before then. The contract allows the lessee to terminate the lease for any reason with 60 days' notice. The contract allows the lessor to terminate the lease with 60 days' notice only if the lessee defaults on payments. It is probable,

based on all relevant factors, that the lessee will not exercise its termination option at any time during the three year contract. Is this a short-term lease?

No. Although the lessee has an unconditional right to terminate, the lessor does not have an unconditional right to terminate because the lessor is only allowed to terminate on the condition that the lessee defaults on payments (see par. 19.b of SFFAS 54). Accordingly, there are no periods for which both the lessee and lessor have an option to terminate without permission, and paragraph 19.a criteria for excluding cancelable periods from the lease term are not triggered.

8. Paragraph 32A is added to TR 20 (under the topic area for short-term leases) as follows:

32A. For the past 20 years, every two years a reporting entity (lessee) has consistently entered into new 24-month noncancelable lease contract with a lessor for the use of building space. The lease contract for the building space does not contain options to extend beyond the 24-month noncancelable lease term. The reporting entity expects to continue this practice. Is this a short-term lease?

Yes. According to paragraph 14 of SFFAS 54, the lease term is the noncancelable period plus certain periods subject to options to extend or terminate the lease. In this scenario, the noncancelable period is 24 months and there are no subsequent periods subject to options to extend or terminate the lease and, therefore, this is a short-term lease. Although historical behaviors and expectations may be relevant factors in assessing the likelihood of exercising options (see par. 20 of SFFAS 54) when determining the lease term, such factors are only applicable to assessing options.

9. Paragraph 52A is added to TR 20 (under the topic area for lessee recognition, measurement, and disclosures for leases other than short-term leases, contracts or agreements that transfer ownership, and intragovernmental leases) as follows:

52A. A reporting entity (lessee) leases a building. The lease term is 10 years. At the commencement of the lease, the reporting entity provides payment for the first three years and recognizes a liability for the present value of the payments for the remaining seven years, which will be paid starting in the fourth year of the lease. Should the reporting entity recognize interest expense during each of the first three years of the lease?

Yes. In accordance with paragraph 43 of SFFAS 54, interest expense represents the amortization of the discount on the lease liability. That discount should be amortized over the entire lease term-including each of the first three years during which the reporting entity is not making payments-using the interest method.

-
10. Paragraph 75A is added to TR 20 (under the topic area for lease incentives and lease concessions) as follows:

75A. A lease with a lease term of 10 years requires fixed payments of \$17 million to be made for each of the first 9 years. There is a rent holiday (during which the lessee is not required to pay any rent) for year 10. The useful life of the underlying asset is 15 years. How should the reporting entity (lessee) account for the rent holiday?

A rent holiday is a type of lease concession, as described in paragraph 70 of SFFAS 54. In this example, the rent holiday is at the end of the lease term and affects the expected fixed payments to be made during the lease term (see par. 40 and 40.g of SFFAS 54). Therefore, the lease liability would be the present value of \$17 million per year for 9 years, and the discount (the difference between the undiscounted cumulative \$153 million in payments and the present value) would be amortized over 9 years. At the end of year 9, the lease liability would be zero. The lease asset, however, would be amortized in a systematic and rational manner over the entire 10-year lease term, in accordance with paragraph 50 of SFFAS 54 (as the lease term is shorter than the useful life of the underlying asset).

Clarifying Amendments and Technical Corrections to TR 20

11. Paragraph 25 of TR 20 is amended as follows:

25. A lease contract allows only the lessee (reporting entity) to unilaterally terminate the lease at any time but also provides for cancellation penalties. The cancellation penalties are so great that it is probable the lessee will not terminate the lease. Should the cancelable periods covered by the lessee's option to terminate be included in the lease term by the lessee?

Yes, these ~~cancelable~~ periods should be included in the lease term in this particular case. Paragraph 15.b of SFFAS 54 requires lessees to include periods in the lease term covered by their options to terminate if it is probable, based on all relevant factors, that they will not exercise those options. In determining whether it is probable that it will not exercise the option to terminate the lease, the lessee should assess all factors relevant to the likelihood that it will not exercise the option. Those factors include significant economic disincentives, such as cancellation penalties, as discussed in paragraph 20 (see also: TR par. 26-27).

12. Paragraph 91 of TR 20 is rescinded and replaced as follows:

-
91. **Reporting entity Agency ABC enters into a lease agreement on behalf of the U.S. government for the right to use a residential property on international soil. The economic benefits and services of the underlying assets are expected to be derived by Agency XYZ. How should such a lease be reported, either by Agency ABC or Agency XYZ?**

It depends on whether Agency ABC is acting in the capacity of an agent or a principal.

If Agency ABC is acting in an agent capacity (i.e., similar to a broker), Agency ABC is providing a service to Agency XYZ. Under this agreement, Agency ABC does not provide rent consideration to the lessor or receive rent consideration from Agency XYZ. Therefore, Agency ABC would not account for the lease. Rather, the lease payments are made to the non-federal lessor directly from Agency XYZ's budgetary resources. Accordingly, if Agency ABC is acting in an agent capacity, Agency XYZ would account for the lease (as lessee) and record any lease liability with the non-federal lessor, along with the corresponding lease asset, unless Agency XYZ's lease term is 24 months or less.

If Agency ABC is acting in a principal capacity, Agency ABC is generally responsible for an original lease with the non-federal lessor and a sublease with Agency XYZ. In such circumstances, Agency ABC would provide rent consideration to the original lessor and receive rent consideration from Agency XYZ relating to a sublease agreement. Accordingly, if Agency ABC is acting in a principal capacity, Agency ABC would record any lease liability with the non-federal lessor (unless ABC's lease term is 24 months or less), and account for an intragovernmental sublease with Agency XYZ in accordance with paragraphs 87-88 of SFFAS 54.

EFFECTIVE DATE

13. This Technical Release is effective for reporting periods beginning after September 30, 2023.

<p>The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, <i>Objectives of Federal Financial Reporting</i>, chapter 7, titled <i>Materiality</i>, for a detailed discussion of the materiality concepts</p>

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Committee members in reaching the conclusions in this Technical Release. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The guidance enunciated in this Technical Release—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Technical Release may be affected by later Statements or pronouncements. The FASAB Handbook is updated annually and includes a status section directing the reader to any pronouncement that affects this Technical Release. Within the text of the Technical Releases, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect subsequent changes. The reader can review the basis for conclusions of amending Statements or other pronouncements for the rationale for each amendment.

Project History

- A1. Statement of Federal Financial Accounting Standards (SFFAS) 54, *Leases*, was issued in April 2018. SFFAS 54, as amended, is effective for reporting periods beginning after September 30, 2023.
- A2. Federal Financial Accounting Technical Release (TR) 20, *Implementation Guidance for Leases*, was issued in November 2021. Questions and answers in the TR are intended to provide guidance for applying the accounting and financial reporting requirements for leases in accordance with SFFAS 54..
- A3. After the issuance of TR 20:
 - a Technical Bulletin 2023-1, *Intragovernmental Leasehold Reimbursable Work Agreements*, which addresses accounting issues related to intragovernmental reimbursable agreements that were not directly covered under SFFAS 54, was issued in March 2023.
 - b SFFAS 61, *Omnibus Amendments 2023*, which provided targeted technical clarifications to further facilitate implementation, was issued in April 2023.
 - c TR 21, *Omnibus Technical Release Amendments 2022*, which made a technical correction to paragraph 17 of SFFAS 54, was issued in September 2022.

-
- A4. These pronouncements resulted in the need for the Accounting and Auditing Policy Committee (AAPC) to implement a few minor conforming amendments to TR 20 (specifically, par. 59 and 78). These amendments do not substantively change the original TR 20 guidance. The paragraph 59 amendment provides helpful reference to Technical Bulletin 2023-1 for users of the guidance, while the paragraph 78 amendment aligns terminology and citations with corresponding SFFAS 61 amendments to SFFAS 54 guidance.
- A5. As was done when developing TR 20, the AAPC and technical staff continued to coordinate with Governmental Accounting Standards Advisory Board (GASB) technical staff on leases-related implementation guidance. When developing updates to TR 20, the Committee also considered leases implementation guidance issued by the GASB since the issuance of GASB Implementation Guide 2019-3, *Leases*, including:
- a *GASB Implementation Guide 2020-1, Implementation Guidance Update-2020;*
 - b *GASB Implementation Guide 2021-1, Implementation Guidance Update-2021;*
and
 - c *GASB Implementation Guide 2023-1, Implementation Guidance Update-2023.*
- A6. FASAB project staff analyzed TR 20, SFFAS 61, Technical Bulletin 2023-1, practitioner requests and technical inquiries, and the aforementioned GASB implementation guidance updates to identify candidates for conforming amendments and additional questions and answers.² Staff performed a content analysis in collaboration with independent coders from the leases task force to reach agreement on candidates. The Committee reviewed the results of the content analysis and generally agreed with the results, which are reflected in the proposed candidates.
- A7. Based on consultations with practitioners, technical inquiries, and feedback from AAPC members, staff identified implementation guidance candidates related to the definition of a lease and the control criterion under paragraphs 2-3 of SFFAS 54 (see proposal to add paragraphs 8A-8B to SFFAS 54 under paragraph 6). In developing this guidance, staff analyzed Financial Accounting Standards Board (FASB) implementation guidance related to fiber optic cable utility contracts and dark fiber leases. Staff implemented analogous guidance. While similar to the FASB guidance, staff aligned the proposals with SFFAS 54 and addressed certain technical differences.³

² The GASB and FASB material is copyrighted by the Financial Accounting Foundation (FAF), 801 Main Ave., Norwalk, CT 06851, and was used with permission.

³ Ibid.

A8. Although SFFAS 54 and GASB 87, *Leases*, are similar in many ways, certain aspects of the implementation guidance differ from analogous GASB implementation guidance due to technical differences between the standards. Examples include:

- a Differences in the definition of a lease (see par. 6, which adds par. 8A-8B and 11A to TR 20).
- b Differences in the definition of a short-term lease (see par. 7, which adds par. 24A to TR 20).

A9. The AAPC also agreed to revise paragraph 91 of TR 20 after receiving additional information regarding international residential leases. Specifically, the AAPC learned that the Department of State oftentimes acts in the capacity of an agent with international residential leases. Specifically, the Department provides leasing services to other federal reporting entity customers, with rental consideration for these leases paid directly to the lessor by the reporting entity customer that leases the residential unit. Upon further consideration of this additional information, the AAPC agreed that paragraph 91 guidance should be modified.

Summary of Outreach and Responses

A10. The AAPC released an exposure draft (ED) proposal on May 30, 2023, for public comment, with comments requested by June 30, 2023. Upon release of the ED, FASAB notified constituents through the FASAB website and listserv, the Federal Register, and FASAB newsletter. FASAB also provided news releases to its press contacts, including various news organizations and committees of professional associations generally commenting on EDs in the past. To encourage responses, a reminder notice was provided to FASAB's listserv near the comment deadline.

A11. Nineteen comment letters were received in response to the ED. Respondents were generally supportive of the proposed updates to TR 20. In response to the comment letters, several questions and answers were improved or clarified, including paragraph 8A, 52A, and 91 amendments to TR 20. Paragraphs 32A and 75A of TR 20 were also further revised based on feedback from respondents to enhance their consistency with SFFAS 54.

A12. The AAPC also considered comments provided on proposals to further explain what types of expenses are included in "annual lease expense" disclosures required by paragraphs 37.b and 54.e of SFFAS 54. The AAPC discussed respondent feedback on the ED proposal to further amend paragraph 17 of TR 20, which provides guidance on this topic. Some respondents requested additional guidance on how to account for certain types of expenses mentioned under paragraph 27 of SFFAS 54, some of which are related to nonlease

components of the contract or agreement under paragraph 73 of SFFAS 54. The AAPC agreed to continue to monitor implementation issues in this area and provide additional guidance or updates to paragraph 17 of TR 20 at a later time if necessary. FASAB staff will refer the topic to the Board for further consideration and potential action.

AAPC and Board Approval

A13. The TR was approved by the AAPC for release to FASAB for issuance. The Board reviewed this TR and a majority of its members do not object to its issuance. Written ballots are available for public inspection at the FASAB office.

Technical Release 23: Omnibus Technical Release Amendments 2024: Conforming Amendments to Technical Releases 10, 16, 20, and 21

Status

Issued	July 22, 2024
Effective Date	For periods beginning after September 30, 2023.
Affects	<ul style="list-style-type: none">• TR 10, par. 8B, footnote 5A• TR 16, par. 8, 26A-27A, 29, and 32• TR 20, par. 101-102• TR 21, par. 4
Affected by	None.

Summary

This Technical Release (TR) amends TR 10, *Implementation Guidance on Asbestos Cleanup Costs Associated with Facilities and Installed Equipment*; TR 16, *Implementation Guidance for Internal Use Software*; TR 20, *Implementation Guidance for Leases*; and TR 21, *Omnibus Technical Release Amendments 2022*.

The amendment to footnote 5A in TR 10 aligns the footnote with the guidance provided under paragraph 18 of Statement of Federal Financial Accounting Standards (SFFAS) 6, *Accounting for Property, Plant, and Equipment*. This amendment also supersedes and replaces relevant portions of a previous amendment to this footnote under TR 21.

The amendments to TR 16 restore portions of prior guidance for perpetual software licenses based on Board requirements under SFFAS 10, *Accounting for Internal Use Software*. These amendments also supersede previous amendments in TR 20 that rescinded portions of this guidance.

Materiality

The provisions of this Technical Release need not to be applied to information if the effect of applying the provision(s) is immaterial.¹ A misstatement, including omission of information, is material if, in light of surrounding facts and circumstances, it could reasonably be expected that the judgment of a reasonable user relying on the information would change or be influenced by the correction or inclusion of the information. Materiality should be evaluated in the context of the

¹ Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts.

specific reporting entity. Determining materiality requires appropriate and reasonable judgment in considering the specific facts, circumstances, size, and nature of the misstatement. Consequently, after quantitative and qualitative factors are considered, materiality may vary by financial statement, line item, or group of line items within an entity.

Technical Guidance

Scope of Technical Guidance

1. Readers of this Technical Release (TR) should first refer to the hierarchy of accounting standards in Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This TR supplements the relevant accounting standards but does not substitute for or take precedence over the standards.
2. This TR updates TR 10, *Implementation Guidance on Asbestos Cleanup Costs Associated with Facilities and Installed Equipment*; TR 16, *Implementation Guidance for Internal Use Software*; TR 20, *Implementation Guidance for Leases*; and TR 21, *Omnibus Technical Release Amendments 2022*.

Amendments to TR 10 and TR 21

3. Paragraph 8B, footnote 5A, of TR 10 is amended as follows (TR 21, par. 4, amendments to this footnote are superseded and replaced):

^{5A} For the purpose of this document, real property is defined as federal facilities and installed equipment within general PP&E, heritage, and stewardship categories. It includes 1) ~~real property acquired through leases, including leasehold improvements, and~~ 2) real property owned by the reporting entity in the hands of or leased to others (for example, state and local governments, colleges and universities, or federal contractors), and 3) real property acquired through contracts or agreements that transfer ownership (see SFFAS 6, par. 18). Installed equipment "fixture" is defined in GAO-08-978SP, Volume III, Third Edition of the Principles of Appropriation Law (13-199) as those equipment items that are (1) permanently attached to the realty, or (2) if not permanently attached, (a) it is necessary and indispensable to the completion and operation of the building, or (b) the structure was designed and built for the purpose of housing the equipment.

Amendments to TR 16 and TR 20

4. Paragraph 8 of TR 16 is amended as follows:
 8. Readers of this Technical Release (TR) should first refer to the hierarchy of accounting standards in Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of*

Standards Issued by the Financial Accounting Standards Board. This TR supplements the relevant accounting standards, but it is not a substitute for and does not take precedence over the standards. This TR clarifies but does not change guidance in SFFAS 4, ~~5~~, 6 (as amended), and 10.

5. Paragraphs 26A and 27A are added to TR 16 as follows (TR 20, par. 101, is superseded):

26A. Perpetual Software License: If a software license is perpetual with an upfront cost^{9A} to use the software for its entire lifetime, then the entity is purchasing IUS and should apply its existing policy for capitalization thresholds to determine if the license should be capitalized or expensed.

^{9A}The cost could be charged as a one-time payment or financed over a set period of time.

27A. A license agreement may include costs for maintenance and technical support. Agency judgment should apply in determining what portions of license fees are attributable to software capitalizable costs versus maintenance or technical support costs.

6. Paragraph 29 of TR 16 is amended as follows (TR 20, par. 102, is superseded):

29. If a cloud computing arrangement includes a perpetual software license, the customer should account for the software license element of the arrangement consistent with the acquisition of other software licenses as discussed in paragraph 26A of this TR. SFFAS 10 is not applicable to a cloud computing arrangement that does not convey a contractual right to the IUS or to ones that do not include an IUS license. The entity that develops and owns the software, platform, or infrastructure that is used in the cloud computing arrangement would account for the software development in accordance with SFFAS 10. If the funding to develop cloud computing is shared among entities without clear ownership, the service provider entity that receives funding and is responsible for maintaining the software, platform, or infrastructure should account for the software in accordance with SFFAS 10 and the full cost/inter-entity cost requirements of SFFAS 4.

7. Paragraph 32 of TR 16 is amended as follows:

32. If the shared service arrangement includes a perpetual software license, the customer should account for the software license element of the arrangement consistent with the acquisition of their other software licenses, as discussed in paragraph ~~26A~~ 24 of this TR. SFFAS 10 is not applicable to a shared service arrangement that does not convey a contractual right to the IUS or to ones that do not include an IUS license.

Effective Date

8. This TR is effective for reporting periods beginning after September 30, 2023.

The provisions of this Statement need not be applied to information if the effect of applying the provision(s) is immaterial. Refer to Statement of Federal Financial Accounting Concepts 1, *Objectives of Federal Financial Reporting*, chapter 7, titled *Materiality*, for a detailed discussion of the materiality concepts

Appendix A: Basis for Conclusions

This appendix discusses factors considered significant by Committee members in reaching the conclusions in this Technical Release. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The guidance enunciated in this Technical Release—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

This Technical Release may be affected by later Statements or pronouncements. The FASAB Handbook is updated annually and includes a status section directing the reader to any pronouncement that affects this Technical Release. Within the text of the Technical Releases, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect subsequent changes. The reader can review the basis for conclusions of amending Statements or other pronouncements for the rationale for each amendment.

Project History

- A1. The Accounting and Auditing Policy Committee (AAPC or "the Committee") identified conforming amendments to footnote 5A of TR 10, *Implementation Guidance on Asbestos Cleanup Costs Associated with Facilities and Installed Equipment*. These amendments conform the footnote with relevant portions of SFFAS 6, *Accounting for Property, Plant, and Equipment*, paragraph 18, as amended by SFFAS 60, *Omnibus Amendments 2021: Leases-Related Topics*, paragraph 35. SFFAS 60 amendments to SFFAS 6 are effective for reporting periods beginning after September 30, 2023.
- A2. The AAPC agreed to amend TR 16, *Implementation Guidance for Internal Use Software*, to remove reference to SFFAS 5, *Accounting for Liabilities of the Federal Government*, when describing the scope of TR 16. After TR 20, *Implementation Guidance for Leases*, removed all software license guidance that relied on capital lease guidance, TR 16 no longer clarifies SFFAS 5 guidance.
- A3. Due to the issuance of SFFAS 54, *Leases*, TR 20 amended TR 16 to remove software license guidance that applied to the now rescinded capital lease guidance in SFFAS 5 and SFFAS 6, creating a gap in software license guidance. However, TR 20 also removed guidance for perpetual software licenses that was based on SFFAS 10, *Accounting for Internal Use Software*. The AAPC agreed that this aspect of the rescinded guidance did not rely on the rescinded capital leases guidance.
- A4. The AAPC agreed to amend TR 16 to restore prior guidance on perpetual software licenses, including perpetual software licenses that are part of cloud-computing arrangements and

shared services, that TR 20 rescinded. These amendments do not update or add any new guidance for software licenses beyond what previously existed in TR 16.

- A5. The AAPC expressed its awareness of and reminded exposure draft (ED) respondents that the Board has an ongoing project that may affect guidance on information technology topics including, but not necessarily limited to, software licenses, cloud computing, and shared services. The Committee concluded it would be prudent to restore prior perpetual software license guidance in TR 16 in the meantime so that the gap in software license guidance is not greater than it needs to be.
- A6. The AAPC agreed that these amendments should be effective for reporting periods beginning after September 30, 2023, to allow the effective date to coincide with the effective reporting period of SFFAS 54.

Summary of Outreach and Responses

- A7. The AAPC released an ED proposal on February 15, 2024, with public comments requested by April 15, 2024. Upon release of the ED, the Federal Accounting Standards Advisory Board (FASAB or "the Board") notified constituents through the FASAB website and listserv, the Federal Register, and FASAB newsletter. FASAB also provided news releases to its press contacts, including various news organizations and committees of professional associations generally commenting on EDs in the past. To encourage responses, a reminder notice was provided to FASAB's listserv near the comment deadline.
- A8. The AAPC received 17 comment letters in response to the ED. Respondents were generally supportive of the proposed amendments to TR 10 and TR 16 (and the corresponding changes to TR 21 and TR 20, respectively).
- A9. Some respondents questioned the reference to leasehold improvements in the conforming amendment to footnote 5A of TR 10. The conforming amendment does not create a new requirement, nor does it require federal lessees to recognize a liability for asbestos cleanup in non-applicable circumstances. Leasehold improvements are alterations to a leased property that are paid for (financed) by the lessee (par. 11 of SFFAS 54). Accordingly, TR 10 could apply to lessees that have implemented leasehold improvements that contained asbestos. In response to the AAPC's request for comment, one respondent cited a known example, and another indicated that asbestos-related cleanup cost liabilities on leasehold improvements could occur in rare situations. Accordingly, the AAPC concluded that the conforming amendment should include reference to leasehold improvements, as proposed in the ED.

-
- A10. Some respondents requested additional guidance in TR 16 to define various software license terms, address development costs, and provide clarity around maintenance and technical support costs associated with software licenses. This TR only restores portions of prior TR 16 guidance for perpetual software licenses based on Board requirements under SFFAS 10. The Board will consider these and other issues as part of the software technology project.
- A11. A few respondents requested additional guidance in TR 16 addressing how to account for term-based software licenses. Due to the issuance of SFFAS 54, the capital lease guidance from SFFAS 5 and 6 no longer exists and, therefore, is not applicable to term-based software licenses that TR 16 previously referenced. Furthermore, SFFAS 54 scopes out software licenses. Therefore, level-A lease guidance no longer provides for accounting for term-based software licenses. Accordingly, the AAPC is unable to provide guidance on term-based software licenses at this time. The Board will consider these and other issues as part of the software technology project.

AAPC and Board Approval

- A12. The TR was approved by the AAPC for release to FASAB for issuance. The Board reviewed this TR and a majority of its members do not object to its issuance.

Staff Implementation Guidance 23.1: Guidance for Implementation of SFFAS 23, Eliminating the Category National Defense Property, Plant, and Equipment: Classification of Items Formerly Considered National Defense PP&E

Status

Issued	January 31, 2005
Effective Date	Effective upon issuance.
Affects	SFFAS 23
Affected by	None.

Summary

The implementation guidance resolves an inconsistency between the implementation guidance provided in SFFAS 23 and definitions in existing standards.

Table Of Contents

	Page
Summary	1
Background	3
Effective Date	4

Background

1. Statement of Federal Financial Accounting Standards (SFFAS) 23, *Eliminating the Category National Defense Property, Plant, and Equipment*, rescinded SFFAS 11, *Amendments to Accounting for Property, Plant, and Equipment - Definitional Changes* in its entirety. SFFAS 11 established the definition of National Defense Property, Plant, and Equipment (ND PP&E). Its rescission eliminated the category ND PP&E along with the definition for that term. Implementing guidance contained in SFFAS 23 provides that:

10. The initial capitalization amount for assets previously considered ND PP&E should be based on historical cost in accordance with the asset recognition provisions of SFFAS No. 6 [Accounting for Property, Plant, and Equipment], as amended, and should be the initial historical cost for the items, including any major improvements or modifications. (Emphasis added.)
2. The above text suggests that all items formerly considered ND PP&E should be classified as PP&E. In addition, par. II of SFFAS 23 provides that “all items previously considered ND PP&E are classified as general PP&E.” Par. 6b of SFFAS 23 also refers to classification as general PP&E.

Staff Implementation Guidance

3. **Q: Should par. 10 of SFFAS 23 limit the classification of items previously considered ND PP&E to general PP&E?**
4. A: No. A reasonable approach would be to subordinate SFFAS 23’s general implementation guidance to the definitions in accounting standards. That is, assets being recognized due to the implementation of SFFAS 23 should be categorized in accordance with asset definitions in SFFAS 6 and other accounting standards.
5. **Q: SFFAS 23 implementation guidance describes acceptable approaches to valuing those items of ND PP&E to be classified as general PP&E. How should items of ND PP&E not classified as general PP&E be valued?**
6. A: Any items not properly classified as general PP&E should be valued in a manner consistent with the general principles established in SFFAS 23 implementation guidance and the specific measurement guidance provided in accounting standards for the relevant asset class.

Basis for Conclusions

7. A literal application of SFFAS 23, par. 10 would result in de facto amendments to the PP&E definition contained in SFFAS 6 and any asset definitions promulgated by other standards. That is, all asset definitions other than general PP&E would have to exclude ND PP&E and the general PP&E definition would have to include ND PP&E.
8. Consequences of reading the implementation guidance as amending the definitions remaining in current standards include:
 - a. Inconsistency in classification of assets between the components of the Department of Defense and all other federal entities,
 - b. Possible inconsistent accounting for the items subject to implementation guidance in SFFAS 23 and items acquired in the future by the Department of Defense, and
 - c. Reliance on a definition that has been purged from authoritative publications such as the Original Pronouncements volume.
9. Staff implementation guidance resolves the inconsistency between the definitions and the implementation guidance by subordinating par. 10 of SFFAS 23 to asset definitions in accounting standards.

Effective Date

10. This guidance is effective upon issuance.

<p>The provisions of this Staff Implementation Guidance need not be applied to immaterial items.</p>
--

Staff Implementation Guidance 31.1: Guidance for Implementation of SFFAS 31, *Accounting for Fiduciary Activities*

Status

Issued	March 19, 2009
Effective Date	Effective upon issuance.
Affects	SFFAS 31
Affected by	None.

Summary

This implementation guidance addresses questions on implementation of SFFAS 31, *Accounting for Fiduciary Activities* that were raised by federal preparers.

Table of Contents

Summary	1
Background	3
Staff Implementation Guidance	3
Effective Date	12
Basis for Conclusions	12

Background

1. After the issuance of Statement of Federal Financial Accounting Standards (SFFAS) 31, federal preparers had questions about its implementation. The below Staff Implementation Guidance (SIG) Q&As address questions that were raised by federal preparers.
2. SIG does not establish new requirements. Rather, SIG is intended to assist preparers in the application of FASAB literature.

Staff Implementation Guidance

3. **Q 1: Do the requirements of Statement of Federal Financial Accounting Standards (SFFAS) 31 extend to all reports required by law or administrative action?**

4. No. SFFAS 31 explains the scope of the standards as follows:

SFFAS 31

[8] This statement provides financial reporting standards for fiduciary activities in the general purpose financial statements for Federal entities. The standard does not affect reporting in the Budget of the United States or special-purpose reports.

5. Accordingly, SFFAS 31 does not apply to (a) reports such as stand-alone audited financial statements that are prepared under an "other comprehensive basis of accounting" (which may be considered "special purpose reports") or (b) individual statements provided to beneficiaries.
6. With respect to individual statements to beneficiaries, some have suggested that the SFFAS 31 disclosures should be based on information prepared at the beneficiary ownership level and aggregated for the component entity. Component entities using this approach would develop and report accrual basis information for the individual beneficiary. The Board does not intend that this approach be required. Rather, the Board intends the accrual of fiduciary activities to be implemented in a cost-effective manner. Therefore, a single aggregate accrual that supports information presented in the schedule of net assets and fiduciary activity in a note to the financial statements should be considered. This approach would support the disclosures required by SFFAS 31 in a cost-effective manner.

7. **Q 2: May component entities aggregate fiduciary activities for disclosure purposes?**

8. Yes. Further, discretion is permitted in selecting activities to be presented individually.
9. SFFAS 31 provides:

SFFAS 31

[20] For component entities with several distinct fiduciary activities, summary financial information required in paragraph 18 should be provided for each fiduciary activity presented individually. Information for fiduciary activities not presented individually (see paragraph 21) may be aggregated.

[21] Selecting fiduciary activities to be presented individually requires judgment. The preparer should consider both quantitative and qualitative criteria. Acceptable criteria include but are not limited to: quantitative factors such as the percentage of the reporting entity's fiduciary net assets or inflows; and qualitative factors such as whether a fiduciary activity is of immediate concern to beneficiaries, whether it is politically sensitive or controversial, whether it is accumulating large balances, or whether the information provided in the fiduciary note disclosure would be the primary source of financial information for the public.

10. Paragraph 20 of SFFAS 31 identifies the summary financial information that should be provided for each fiduciary activity presented individually and explains that this financial information should be presented as aggregated for all activities not presented individually. Paragraph 21 of SFFAS 31 recognizes that judgment should be exercised in deciding if any fiduciary activities should be presented individually. For example, subject to the considerations in paragraphs 20 and 21, an entity might present summary financial information for:
 - a. all fiduciary activities in aggregate,
 - b. fiduciary activities aggregated by type of activity such as leasing or investing activity,
 - c. classes¹ of beneficiaries separately as individual fiduciary activities, or

¹Beneficiaries may belong to a class if they are (1) served by the same system or program office, (2) share certain traits or characteristics (e.g., local governments), or (3) both.

-
- d. fiduciary activities conducted by individual program offices.
11. The entity may present simply "total fiduciary funds" as a single column. Alternatively, the entity may present the information by program office to facilitate performance measurement. Yet another option is to present information by class of beneficiary.
 12. **Q 3: In some cases several bureaus within an agency or department perform activities that result in fiduciary balances that are distributed by another bureau of the agency. Should each bureau include fiduciary activities disclosures in its stand alone audited financial statements?**
 13. If the activity meets the definition of fiduciary activity it should be disclosed as such in each bureau's stand alone audited financial statements. (See paragraph 5 of this document for clarification regarding special purpose reports.)
 14. Per SFFAS 31, par. 10, in a fiduciary activity a Federal entity collects or receives and subsequently manages, protects, accounts for, invests, and/or disposes of cash or other assets in which non-Federal individuals or entities (or "non-Federal parties") have an ownership interest² that the Federal Government must uphold.
 15. For an activity to meet the definition of a fiduciary activity, the Federal entity has to:
 - a. collect and receive fiduciary cash or other assets and subsequently
 - b. perform one or more of the other activities identified in the definition (manage, protect, account for, invest, and/or dispose of the fiduciary cash or other assets).
 16. **Q 4: In some cases, beneficiaries may direct third parties to make payments to a federal agency for credit to the beneficiaries' account. For example, the beneficiary may hold assets outside the trust and elect to liquidate the assets and have the proceeds deposited in the trust. At what point does this activity result in an asset that qualifies for disclosure as fiduciary activity?**
 17. The role of the federal entity must be understood in order to determine the extent of the fiduciary disclosure requirement in SFFAS 31. In some cases, there is no fiduciary or trust asset until an actual deposit is received. If, for example, the federal component entity has no collection responsibilities but merely receives funds directed to the entity by the

²The ownership interest must be enforceable against the Federal Government. Judicial remedies must be available for the breach of the fiduciary obligation. (SFFAS 31, par. 10)

beneficiary, there is no account receivable. Instead, the entity would become responsible for disclosing cash only after a deposit is made.

18. Q 5: Is there any requirement to report fiduciary assets, liabilities or flows when the Federal entity does not perform any of the fiduciary activities listed in the definition, but does provide other services, such as advisory services that may lead to a contract being executed outside of the Federal government, with no further Federal role?

19. No. Certain activities that support beneficiaries may not lead to the creation of fiduciary or trust assets.

20. Per SFFAS 31, par. 10, in a fiduciary activity a Federal entity collects or receives and subsequently manages, protects, accounts for, invests, and/or disposes of cash or other assets in which non-Federal individuals or entities (or "non-Federal parties") have an ownership interest that the Federal Government must uphold.

21. For an activity to meet the definition of a fiduciary activity, the Federal entity has to:

- a. collect and receive fiduciary cash or other assets and
- b. subsequently perform one or more of the other activities identified in the definition (manage, protect, account for, invest, and/or dispose of the fiduciary cash or other assets).

22. Q 6: In some cases, courts may direct third parties to make payments to an escrow account in a commercial bank to be distributed to harmed parties. The escrow accounts are not the property of the Federal government, and the interest income is subject to taxes. In some of these cases, a Federal agency may have some control over disbursements (e.g., by approving or disapproving a third-party distribution plan). Does this situation meet the definition of fiduciary activity in SFFAS 31?

23. No. In this example, the Federal agency has not received or collected the cash or other assets.

24. The definition of fiduciary activities is stated in SFFAS 31, par. 10:

In a fiduciary activity a Federal entity collects or receives and subsequently manages, protects, accounts for, invests, and/or disposes of cash or other assets in which non-Federal individuals or entities (or "non-Federal parties") have an ownership interest that the Federal Government must uphold. Non-Federal parties must have an ownership interest in cash or other assets held by the Federal entity under provision of law, regulation, or other fiduciary

arrangement. The ownership interest must be enforceable against the Federal Government. Judicial remedies must be available for the breach of the fiduciary obligation.

25. Q 7: Does SFFAS 31 require reporting the monetary value of fiduciary land held in trust?

26. The reporting requirements for non-valued fiduciary assets are found in paragraph 18(d) of SFFAS 31: (bold added)

SFFAS 31

[18(d)] Component entities also may have non-valued fiduciary assets. Non-valued fiduciary assets are fiduciary assets for which required disclosure does not include dollar values. **Non-valued fiduciary assets may include land held in trust.** Component entities holding non-valued fiduciary assets should disclose them in a Schedule of Changes in Non-Valued Fiduciary Assets, which should include a description of non-valued fiduciary assets, beginning quantity, quantity received, quantity disposed of, net increase/decrease in non-valued fiduciary assets, and ending total quantity.

27. Under federal accounting standards, the vast majority of land will be classified as a non-valued asset.

28. Q: 8: How should the concept of materiality be applied to disclosures about fiduciary activities?

-
29. The Board's position on materiality is published in the Foreword to Original Pronouncements, Volume 1, available on the FASAB website at:
<https://fasab.gov/accounting-standards/document-by-chapter/>

[Foreword, FASAB Original Pronouncements]

Materiality

The Board intends that all standards' application be limited to items that are material. "Materiality" has not been strictly defined in the accounting community; rather, it has been a matter of judgment on the part of preparers of financial statements and the auditors who attest to them. Presented below is the Board's position on the issue of materiality at this time.

The accounting and reporting provisions of the Board's accounting standards need not be applied to immaterial items. The determination of whether an item is immaterial requires the exercise of considerable judgment, based on consideration of specific facts and circumstances.

30. Additional guidance on materiality is provided in SFFAC 2, SFFAS 1, SFFAS 3, and the American Institute of Certified Public Accountants (AICPA) Code of Professional Conduct.

SFFAC 2

[78] Some of a reporting entity's components are likely to be required by law or policy to prepare and issue financial statements in accordance with accounting standards other than those recommended by FASAB and issued by OMB and GAO³, e.g., accounting standards issued by the Financial Accounting Standards Board or accounting standards established by a regulatory agency. Those components should continue to issue the required reports. The reporting entities of which the components are a part can issue consolidated, consolidating, or combining statements that include the components' financial information prepared in accordance with the other accounting standards. They need to be sensitive, however, to differences resulting from applying different accounting standards that could be material to the users of the reporting entity's financial statements. If these differences are material, the standards recommended by FASAB and issued by OMB and GAO should be applied. The components would need to provide any additional disclosures recommended by FASAB and included in the OMB-issued standards that would not be required by the other standards.

³ Note: After October 1999, FASAB issues standards absent an objection from the Office of Management and Budget (OMB) or the Government Accountability Office (GAO).

SFFAS 1

- [12] Except as otherwise noted, the accounting and reporting provisions of the accounting standards recommended in this Statement need not be applied to items that are qualitatively and quantitatively immaterial.
- [13] The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

SFFAS 3

- [8] The accounting and reporting provisions of the Board's accounting standards need not be applied to immaterial items. The determination of whether an item is immaterial requires the exercise of considerable judgment, based on consideration of specific facts and circumstances.
- [9] FASB's Statement of Accounting Concepts No. 2, "Qualitative Characteristics of Accounting Information," discusses the concept of materiality. According to this statement, the determination of whether an item is material depends on the degree to which omitting or misstating information about this item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement. This concept includes both qualitative and quantitative considerations. An item that is not considered material from a quantitative standpoint may be considered material if it would influence or change the judgment of the financial statement user.

31. In addition, the AICPA Code of Professional Conduct, Rule 203 states (**bold added**):

AICPA Rule 203

Accounting Principles

A member shall not (1) express an opinion or state affirmatively that the financial statements or other financial data of any entity are presented in conformity with generally accepted accounting principles or (2) state that he or she is not aware of any material modifications that should be made to such statements or data in order for them to be in conformity with generally accepted accounting principles, if such statements or data contain any departure from an accounting principle promulgated by bodies designated by Council to establish such principles **that has a material effect on the statements or data taken as a whole**. If, however, the statements or data contain such a departure and the member can demonstrate that due to unusual circumstances the financial statements or data would otherwise have been misleading, the member can comply with the rule by describing the departure, its approximate effects, if practicable, and the reasons why compliance with the principle would result in a misleading statement.

Materiality with respect to fiduciary disclosures should be based on professional judgment considering relevant qualitative and quantitative factors. Examples of quantitative factors include but are not limited to the relationship of fiduciary amounts to other appropriate information in the entity's principal financial statements including disclosures. For example, the quantitative materiality determination for each fiduciary item could be made based on the significance of those amounts to amounts recognized on the principal financial statements of the reporting entity, and/or on the significance of an individual item within the fiduciary amounts to all fiduciary amounts presented by the reporting entity.

In all cases, qualitative materiality aspects should be appropriately considered.

32. Q 9: May estimating techniques be used when reporting fiduciary disclosures?

-
33. Yes, estimating techniques may be used when reporting fiduciary disclosures. For example, accrual estimates may be developed and reported on a summary level.
34. When estimates are used for summary information for fiduciary activities, the fiduciary note may include disclosure of the use of estimates and explain that the actual results may vary from the estimates reported.

Effective Date

35. This guidance is effective upon issuance.

The provisions of this Staff Implementation Guidance need not be applied to immaterial items.

Basis for Conclusions

- A1. After the issuance of SFFAS 31, several federal agencies had questions about its implementation. Staff drafted an initial draft SIG based upon questions from agencies and hosted a public meeting to discuss the draft.
- A2. Revised draft SIG was posted for public comment for the required two-week comment period. Seven comment letters were received. Six comment letters were from federal preparers and one was from a non-federal professional organization. Based upon comments received, staff drafted revised SIG and forwarded it to the Board on March 3, 2009 for a 15-day review period. The final SIG was issued on March 19, 2009.

Staff Implementation Guidance 6.1: *Clarification of Paragraphs 40-41 of SFFAS 6, Accounting for Property, Plant, and Equipment*, as amended

Status

Issued	July 17, 2018
Effective Date	Effective upon issuance.
Affects	SFFAS 6, par. 40-41
Affected by	None.

Summary

This guidance addresses implementation guidance provided in Statement of Federal Financial Accounting Standards (SFFAS) 6, *Accounting for Property, Plant, and Equipment*, as amended. Specifically, it responds to a question raised since the issuance of SFFAS 50, *Establishing Opening Balances for General Property, Plant, and Equipment: Amending Statement of Federal Financial Accounting Standards (SFFAS) 6, SFFAS 10, SFFAS 23, and Rescinding SFFAS 35*.

Table of Contents

Summary	1
Introduction	3
Technical Guidance	3
Effective Date	4
Basis for Conclusions	5

Introduction

1. After the issuance of Statement of Federal Financial Accounting Standards (SFFAS) 50, *Establishing Opening Balances for General Property, Plant, and Equipment: Amending Statement of Federal Financial Accounting Standards (SFFAS) 6, SFFAS 10, SFFAS 23, and Rescinding SFFAS 35*, Federal Accounting Standards Advisory Board (FASAB or "the Board") staff identified certain necessary clarifications¹ regarding whether both of the alternative methods for establishing opening balances and the alternative for estimated net remaining cost per the second sentence in paragraph 41 of SFFAS 6, as amended, could be applied.
2. The below Staff Implementation Guidance (SIG) Q&A addresses the question raised by the Department of Defense (DoD). SIG does not establish new requirements. Rather, SIG is intended to assist preparers in the application of FASAB literature.

Technical Guidance

3. **Q1: Can both of the alternative methods for establishing opening balances provided by paragraph 40 of SFFAS 6, as amended, and the alternative to record property, plant, and equipment (PP&E) at its estimated net remaining cost provided by paragraph 41 of SFFAS 6, as amended, be applied?**
4. Yes. Paragraph 40 of SFFAS 6, as amended, provides alternative methods for establishing opening balances for reporting entities that meet the specified conditions and elect to apply any of the alternative methods available.
5. For those reporting entities, the implementation guidance provided in paragraph 41 of SFFAS 6, as amended, may also be applied. Paragraph 41 states:

Accumulated depreciation/amortization shall be recorded based on the estimated cost and the number of years the PP&E has been in use relative to its estimated useful life. Alternatively, the PP&E may be recorded at its estimated net remaining cost⁴⁵ and depreciation/amortization charged over the remaining life based on that net remaining cost.

⁴⁵*Net remaining cost* is the original cost of the asset less any accumulated depreciation/amortization to date.

¹These clarifications were outside the scope of the implementation guidance that FASAB provided in Technical Release (TR) 18, *Implementation Guidance for Establishing Opening Balances*.

-
6. This alternative allows for PP&E to be recorded at its estimated net remaining cost (often called net book value), which is the original cost of the asset less any accumulated depreciation/amortization to date.² This alternative was provided as a cost-beneficial option for the year of implementation.
 7. An important premise for all the opening balance alternatives is that management should expect to provide adequate documentation that is consistent with the method used and supports the overall reasonableness of the valuation.³ Further, management is also responsible for maintaining adequate documentation of data sources and the application of methodologies.⁴ Applying the provisions of paragraph 41 does not alter the requirement to ensure adequate support for any values established for opening balances using the alternatives methods (such as deemed cost), including accumulated depreciation and in-service dates.

Effective Date

8. This guidance is effective upon issuance.

The provisions of this Staff Implementation Guidance need not be applied to immaterial items.

²Therefore, in the year of implementation the opening balance of accumulated depreciation would be zero and the depreciation/amortization expense would be charged based on the net remaining cost and the remaining life. This alternative also is applicable to required disclosures articulated in par. 45 of SFFAS 6, as amended.

³TR 18, par. 10.

⁴TR 18, par. 11.

Basis for Conclusions

FASAB has authorized its staff to prepare SIG to provide timely guidance on certain financial accounting and reporting problems, in accordance with the Board's rules of procedure, as amended and restated through October 2010. The provisions of SIG need not be applied to immaterial items.

This appendix discusses some factors considered significant by staff in reaching the conclusions in this SIG. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the technical guidance section-not the material in this appendix-should govern the accounting for specific transactions, events, or conditions.

This guidance may be affected by later Statements or other pronouncements. The FASAB Handbook is updated annually and includes a status section directing the reader to any subsequent pronouncements that amend this SIG. Within the text of the documents, the authoritative sections are updated for changes. However, this appendix will not be updated to reflect future changes. The reader can review the basis for conclusions of the amending Statement or other pronouncement for the rationale for each amendment.

- A1. After the issuance of SFFAS 50, *Establishing Opening Balances for General Property, Plant, and Equipment: Amending Statement of Federal Financial Accounting Standards (SFFAS) 6, SFFAS 10, SFFAS 23, and Rescinding SFFAS 35*, DoD inquired whether the alternative methods for establishing opening balances could be applied in concert with the second sentence in paragraph 41 of SFFAS 6, as amended. Because "deemed cost" (as defined in the amendments to SFFAS 6) was not incorporated in paragraph 41, it may be unclear whether recording PP&E at "net remaining cost" is appropriate when deemed cost is used to establish initial amounts.
- A2. FASAB staff drafted a response based upon the question received from DoD. Because deemed cost is a surrogate for initial costs, staff concluded the alternative to record PP&E at estimated net remaining cost is appropriate even when the surrogate or deemed cost is used. Staff hosted a public meeting with the preparer and auditor community to discuss the draft response.
- A3. The participants discussed several issues regarding documentation and support for opening balances, including the underlying in-service dates, useful lives, and capital improvements. The participants noted concerns with these areas but understood that those particular issues went beyond the scope of the proposed SIG. Participants acknowledged that the proposed guidance related to a very narrow scope.

-
- A4. The scope of this guidance is strictly to answer the question put forth in paragraph 3; it does not provide guidance on useful lives, estimating remaining useful lives, or the treatment of capital improvements.
- A5. The proposed SIG 6.1: Clarification of Paragraphs 40-41 of SFFAS 6, *Accounting for Property, Plant, and Equipment*, as amended, was available for public comment for the required 15-day period. FASAB staff received four comment letters from federal preparers. No disagreements or suggestions were provided.
- A6. The Board has reviewed this SIG and a majority of members do not object to its issuance.

Appendix A: Topical Index

This index provides references to the topics in this Volume. References to the pronouncements are organized as follows: The first character indicates that it is a Concepts Statement (C), a Standards Statement (S), an Interpretation (I), a Technical Release (T), a Technical Bulletin (B) or Staff Implementation Guidance (G). This letter is followed by a number to indicate which pronouncement it refers to. The number is followed by a "P" for paragraph which is followed by the paragraph number(s). This index does not encompass all topics addressed in FASAB pronouncements, may not include all references for each topic, and should not be considered authoritative.

In addition to accounting topics, the index lists certain agencies or programs that have been used in illustrations or that have unique provisions within the standards.

Appendix C: Memorandum of Understanding Among The Government Accountability Office, The Department of The Treasury, and The Office of Management and Budget on Federal Government Accounting Standards and A Federal Accounting Standards Advisory Board

This Memorandum of Understanding reflects the agreement of the Government Accountability Office ("GAO"), the Department of the Treasury ("Treasury"), and the Office of Management and Budget ("OMB") on the procedures to be followed in setting federal government accounting standards and the composition and operation of the Federal Accounting Standards Advisory Board.

Whereas GAO, Treasury, and OMB conduct a continuous program for improving accounting and financial reporting in the federal government; and

Whereas the Comptroller General, the Secretary of the Treasury, and the Director of the Office of Management and Budget established an advisory board under the Federal Advisory Committee Act, as amended (5 U.S.C. App.), to consider and recommend accounting concepts and standards for the federal government;

The Comptroller General, the Secretary of the Treasury, and the Director of the Office of Management and Budget (the Sponsors) each hereby agree to continue and serve as sponsors of the Federal Accounting Standards Advisory Board ("Board"). The Board will work under the general oversight of its Sponsors. In addition, the Sponsors each hereby agree to take related actions regarding federal government accounting standards. The Board shall be established as follows:

Section 1. Establishment.

A. Composition. The Board shall have the following nine members:

- one GAO member,
- one OMB member,
- one Treasury member, and
- six non-federal members selected from the general financial community, the accounting and auditing community, and academia.

B. Selections and Appointments. The GAO, OMB, and Treasury members will be selected by their respective agencies. The six non-federal members will be selected by the Sponsors. In selecting the non-federal members, the Sponsors shall:

- (1) seek nominations from a wide variety of sources;
- (2) consider, among other criteria, an individual's

(A) broad professional background, and

(B) expertise in federal government accounting, financial reporting, and financial management; and

(3) consider the recommendations of a panel convened by the chairperson.

The Sponsors will select a chairperson, who will be a non-federal member.

- C. Tenure. The GAO, OMB, and Treasury members shall serve at the discretion of their respective agency heads. The six non-federal members will serve initial terms of up to five years with a possible reappointment for one additional term of up to five years.
- D. Duties. The Board will consider accounting concepts and standards. The Board will not set or propose budget concepts, standards, and principles. In considering accounting concepts and standards, consideration will be given to the budgetary information needs of executive agencies and the needs of users of Federal financial information. Board recommendations on accounting concepts or standards will be submitted to the Comptroller General, the Secretary of the Treasury, the Director of the Office of Management and Budget, and the Director of the Congressional Budget Office.
- E. Meetings and Agendas. The Board will meet whenever necessary or at the request of the Comptroller General, the Secretary of the Treasury, or the Director of OMB, and will establish detailed working procedures. Board members will be expected to attend all meetings.
- F. Funding. The Sponsors shall share in funding the Board on an equitable basis.

Section 2. Support Staff and Other Groups.

- A. Staff. A core group of qualified technical staff will support the Board in carrying out its duties and functions. The staff will spend its time working on Board matters and, from time to time, may be augmented with staff assigned from government departments or agencies or other organizations.
- B. Task Forces. The Board may appoint task forces as necessary to advise it on a variety of accounting matters. Task forces will play an important role in the accounting standard-setting process. They will provide expert views and recommend solutions to issues or problems.

Section 3. Accounting Concept and Standard-Setting Process. The Board will follow a six-step process for considering accounting concepts and standards. The steps in the process are:

- (1) Identification of accounting issues and agenda decisions,

-
- (2) Preliminary deliberations,
 - (3) Preparation of initial documents (issues papers and/or discussion memorandums),
 - (4) Release of documents to the public, public hearings, and considerations of comments,
 - (5) Further deliberations, exposure draft, and consideration of comments, and
 - (6) At least a two-thirds majority vote reached among Board members in favor of proposed concepts and standards submitted to the Comptroller General, the Secretary of the Treasury, and the Director of OMB.

The Board will determine the detailed procedures necessary to implement these steps.

Section 4. Concepts and Standards. Concepts and standards provide a frame of reference for resolving accounting issues.

When the Board has developed a proposed concept or standard, the Board shall submit it to the Comptroller General, the Director of OMB, and the Secretary of the Treasury for their review. If, within 90 days after its submission, the Comptroller General or the Director of OMB, (or both) objects (object) to the concept or standard, then it shall not be issued and will be returned to the Board for further consideration; provided however, that the Comptroller General or the Director of OMB, may, in the event that unanticipated circumstances make it difficult for the Comptroller General or the Director of OMB to complete the 90 day review timely, extend the review time for one additional 90 day period. If the Comptroller General or the Director of OMB implements such an extension, he or she will notify the FASAB Chair. If neither the Comptroller General nor the Director of OMB objects to the concept or standard during the review time provided in this paragraph, including any extension of the review time, then it shall be issued and become a final concept or standard of the Board. Concepts and standards will be announced in the *Federal Register*.

A proposed Interpretation or Technical Release shall be submitted to the members of the Board representing the three Sponsors for their review. If, within 45 days after its submission, any one of the members representing a Sponsor objects to the proposed Interpretation or Technical Release, then it shall be returned to the Board for further consideration. If, within 45 days after its submission, none of these officials objects to the Interpretation or Technical Release, then it shall become final. Final Interpretations and Technical Releases will be announced in the *Federal Register*.

The Sponsors agree that standards set and promulgated following the Board's Rules of Procedure are recognized to have substantial authoritative support, and those accounting

Section 6. Effective Date. This memorandum of understanding is effective when executed by the Sponsors.

<u>/s/</u>

Acting Comptroller General of the United States	

Appendix D: Other Federal Accounting and Auditing Resources

For other helpful resources, see <http://www.fasab.gov/resources/>.

Appendix E: Consolidated Glossary

This glossary is a compilation of all terms presented in Statements of Federal Financial Accounting Standards. Some terms are designated as “Special Term from SFFAS #” and are terms defined specifically for the standard indicated. These terms are not intended for general application to other federal financial transactions.

Abandoned Property

Property of any type over which the rightful owner has relinquished possession and any claim of an ownership interest, without assertion of an adverse right to possession and control by the federal government. This would include property left at a government facility and unclaimed by the rightful owner following notice of intent to dispose. This property is a type of seized property.

Abatement

A reduction or cancellation of an assessed tax.

Accountability Reports

These reports are broader in scope than traditional general purpose financial reports. As explained by OMB: “Six pilot agencies volunteered to produce an ‘Accountability Report’ for FY 1995 to provide more useful information to decision makers by linking together information required by several management statutes. . . . Accountability Reports integrate the following information: the FMFIA report, the CFOs Act Annual Report (including audited financial statements); management’s Report on Final Action as required by the IG Act; Civil Monetary Penalty and Prompt Payment Act reports; and available information on agency performance compared with its stated goals and objectives, in preparation for implementation of GPRA.” *Federal Financial Management Status Report and Five Year Plan*, June 1996, pages 33-34. Twelve agencies produced accountability reports for FY 1997; eighteen plan to do so for FY 1998; the number will increase to 23 for FY 2000. (The requirement to include Civil Monetary Penalty and Prompt Payment Act reports has been deleted.)

Accrual Accounting

Records the effects on a reporting entity of transactions and other events and circumstances in the periods in which those transactions, events, and circumstances occur rather than only in the periods in which cash is received or paid by the entity. Accrual accounting is concerned with an entity’s acquiring of goods and services and using them to produce and distribute other goods

and services. It recognizes that the buying, producing, selling, distributing, and other operations of an entity during a period, as well as other events that affect entity performance, often do not coincide with the cash receipts and payments of the period. Compare with cash accounting. [See Financial Accounting Standards Board Statement of Financial Accounting Concepts (SFAC) No. 4, Objectives of Financial Reporting by Nonbusiness Organizations, paragraph 50, SFAC No. 6, Elements of Financial Statements, pars. 139-141, 144-5; and Congressional Budget Office, Glossary of Budgetary and Economic Terms, "Accrual Accounting."] (SFFAS 24)

Acres of Land Held for Disposal or Exchange

Land for which the entity has satisfied the statutory disposal authority requirements specific to the land in question. Disposal includes conveyances of federal land to non-federal entities not limited to sale, transfer, exchange, lease, public-private partnership, and donation or any combination thereof.

Activity

The actual work task or step performed in producing and delivering products and services. An aggregation of actions performed within an organization that is useful for purposes of activity-based costing.

Activity Analysis

The identification and description of activities in an organization. Activity analysis involves determining what activities are done within a department, how many people perform the activities, how much time they spend performing the activities, what resources are required to perform the activities, what operational data best reflect the performance of the activities, and what customer value the activity has for the organization. Activity analysis is accomplished with interviews, questionnaires, observation, and review of physical records of work. It is the foundation for agency process value analysis, which is key to overall review of program delivery.

Activity-based Costing

A cost accounting method that measures the cost and performance of process related activities and cost objects. It assigns cost to cost objects, such as products or customers, based on their use of activities. It recognizes the causal relationship of cost drivers to activities.

Actual Cost

An amount determined on the basis of cost incurred including standard cost properly adjusted for applicable variance.

Actual Custody

Physical possession and control of property by government personnel.

Actuarial Balance

The difference between the summarized cost rate and the summarized income rate over a given valuation period.

Actuarial Cost Methods

A recognized actuarial technique used for establishing the amount and the incidence of employer contributions or accounting charges for pension costs under a pension plan.

Actuarial Gains and Losses

A change in the value of an estimated liability (or the benefit plan's assets) resulting from experience different from that assumed or from a change in an actuarial assumption. Past experience is reflected in current costs through actuarial gains and losses.

Actuarial Liability

A liability based on statistical calculations and actuarial assumptions (actuarial assumptions are conditions used to resolve uncertainties in the absence of information concerning future events affecting insurance, pension expenses, etc.).

Actuarial Present Value

The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of actuarial assumptions. (Actuarial Standards of Practice No. 4)

Actuarial Status

The status of a program based on statistical calculations and actuarial assumptions about future economic, demographic, and other conditions and events.

Adverse Event

May be a single-occurring event or a series of events that cause losses to the beneficiary or beneficiaries as identified in the insurance arrangement.

Aggregate Entry Age Normal

A system of applying the entry age normal actuarial cost methodology using aggregate population models or groups instead of applying it individual by individual.

Allocations

As used in the context of the federal budget, the amount of obligational authority transferred from one agency, bureau, or account that is set aside in a transfer appropriation account to carry out the purpose of the parent appropriation or fund. (JFMIP, *Project on Standardization of Basic Financial Information Requirements of Central Agencies*, dated October 1991, hereafter cited as JFMIP Standardization Project)

Allotment

A distribution made within an entity of amounts available for obligation. [See OMB Bulletin A-34, *Instructions on Budget Execution*, Section 11, Terms and Concepts, "Allotment."]

Ammunition

A generic term that includes a great variety of devices designed and constructed to inflict damage upon enemy personnel or material by action of an explosive, pyrotechnic, or chemical agent.

Amortization

The gradual extinguishment of any amount over a period of time through a systematic allocation of the amount over a number of consecutive accounting periods such as the retirement of a debt by serial payments to a sinking fund.

Annual Cost Increment

The annual cost increment component of expense is the actuarial present value of the future cash outflows for which a reporting entity becomes obligated during the reporting period. See **Normal Cost** below for pensions, ORB, and OPEB.

Anticipated

The word “anticipated” is used in a broad, generic sense in this document. In this context the term may encompass both “probable” losses arising from events that have occurred, which should be recognized on the face of the basic or “principal” financial statements, as well as “reasonably possible” losses arising from events that have occurred, which should be disclosed in notes to those statements. “Anticipated” may include the effects of future events that are deemed probable, for which a financial forecast would be appropriate. The term may also encompass hypothetical future trends or events that are not necessarily deemed probable, for which financial projections may be appropriate. (See below for definitions of “*forecast*” and “*projection*.”)

Applied Research

Systematic study to gain knowledge or understanding necessary for determining the means by which a recognized and specific need may be met.

Apportionment

A distribution made by OMB of amounts available for obligation in an appropriation or fund account into amounts available for specified time periods, programs, activities, projects, objects, or combinations thereof. The apportioned amount limits the obligations that may be incurred. (OMB *Circular A-34*)

Appropriation

In most cases, appropriations are a form of budget authority provided by law that permits federal agencies to incur obligations and make payments out of the Treasury for specified purposes. An appropriation usually follows enactment of authorizing legislation. An appropriation act is the most common means of providing budget authority, but in some cases the authorizing legislation itself provides the budget authority.

Arrangement Period

Is the period over which adverse events that occur are covered.

Assessments

Enforceable claims for nonexchange revenue for which specific amounts due have been determined and the person from whom the tax or duty is due has been identified. They include both self-assessments made by persons filing tax returns and assessments made by the collecting entities as a result of audits, investigations, and litigation. Although the term is normally used in connection with taxes, as used in this Statement (SFFAS 7) assessments also include determinations of amounts due for any other kind of nonexchange revenue. Specifically excluded from the definition of assessments, as used in this Statement, are compliance assessments. Compliance assessments, as defined by IRS and Customs, do not represent financial receivables.

Assets

A resource that embodies economic benefits or services that the federal government controls.

Attribution

The process of assigning pension benefits or costs to periods of employee service. [Financial Accounting Standard Board, Statement of Financial Accounting Standard No. 87, *Employers' Accounting for Pensions*]

Assumptions

Basic beliefs about the future operating and functional characteristics. Types of assumptions include:

Actuarial: Assumptions as to the occurrence of future events affecting projected costs, such as mortality, withdrawal, disability, and future interest rates.

Cash flow assumptions - all known and/or forecasted information about the characteristics and performance of a cash flow, e.g., a loan or group of loans or loan guarantees. Examples of assumptions pertaining to loans and loan guarantees include estimates of maturity, borrower interest rate, default/delinquency rate, timing of defaults, overall impact of changes in economic factors, etc.

Hospital assumptions: Assumptions related to medical treatment including differentials between hospital labor and nonlabor indices compared to general economy labor and nonlabor indices; rates of hospital admission; the trend toward treating less complicated cases in outpatient settings; and continued improvement in the classification of patients according to type of treatment, age, diagnosis, etc.

Key assumptions - Assumptions that have been established, through sensitivity analysis or other means, to be the elements that have a large impact on estimates, and thus are the most important factors in determining the cost of a loan or group of loans or loan guarantees.

Model assumptions - determinations of how cash flow assumptions are applied through the life of the cohort. For example, determining whether the entire assumed amount of defaults should be applied in 1 year or whether a constant or variable proportion of the assumption value should be allocated to each year. The allocation of cash flows over time is the selected model form and is just as influential as the cash flow assumption.

Social Security: Values relating to future trends in certain key factors. Demographic assumptions include fertility, mortality, net immigration, marriage, divorce, retirement patterns, disability incidence and termination rates, and changes in the labor force. Economic assumptions include unemployment, average earnings, inflation, interest rates, and productivity. Projections

are normally provided based on the following three sets of economic assumptions • the “low cost” set (Alternative I) that assumes relatively rapid economic growth, low inflation, and demographic conditions favorable to the plan;

- the “intermediate cost” set (Alternative II) that represents the trustees’ “best estimate” of future trends; and
- the “high cost” set (Alternative III) that assumes slow economic growth, more rapid inflation, and demographic conditions unfavorable to the plan.

Authority To Borrow

Authority to borrow is a subset of budget authority. (See *budget authority*.)

Avoidable Cost

A cost associated with an activity that would not be incurred if the activity were not performed.

Baseline provisions

Baseline provisions are the starting points used to measure the impact of tax expenditures on tax revenues as compared to revenues that would be collected otherwise, absent the special exclusion, exemption, deduction, credit, preferential rate, or deferral. Certain practical aspects of the code are incorporated into the baseline—such as progressive tax rates, personal exemptions, standard deductions, deductions of expenses incurred in order to earn income, and deferrals of unrealized income.

Basic Financial Statements

As used in SFFAS 7, the basic financial statements are those on which an auditor would normally be engaged to express an opinion. The term “basic” does not necessarily mean that other financial information not covered by the auditor’s opinion is less important to users than that contained in the basic statements; it merely connotes the expected nature of the auditor’s review of, and association with, the information. The basic financial statements in financial reports prepared pursuant to the Chief Financial Officers Act, as amended, are called the “principal financial statements.” The Form and Content of these statements are determined by OMB. (see also Principal Financial Statements)

Basic Information

Information that is essential for financial statements and notes to be presented in conformity with generally accepted accounting principles (GAAP).

Basic Research

Systematic study to gain knowledge or understanding of the fundamental aspects of phenomena and of observable facts without specific applications toward processes or products in mind.

Beneficiary

An individual or other entity legally entitled to enforce an obligation against the United States such as specified benefits from a fiduciary trust or agent.

Betterment

An expenditure having the effect of extending the useful life of an existing asset, increasing its normal rate of output, lowering its operating cost, increasing rather than merely maintaining its efficiency or otherwise adding to the worth of benefits it can yield. A betterment is distinguished from repair or maintenance in that the latter have the effect of merely keeping the asset in its customary state of operating efficiency without the expectation of added future benefits.

Black Lung Benefits Program

The Black Lung program consists of two parts: Part B and Part C. Recipients who filed claims from 1970 to mid-1973 are covered by Part B; all other recipients are covered by Part C.

- Part B is currently administered by the Social Security Administration (SSA). Former coal miners and their dependents are eligible for monthly cash benefits if the miner is totally disabled or died due to black lung disease. Benefits under Part B are reduced if the beneficiary receives state workers' compensation, unemployment compensation, or state disability compensation. Certain pension benefits are subject to an excess-earnings test. The program is wholly funded by annual appropriations from the general fund.
- Part C is administered by the U.S. Labor Department, although some services are provided by SSA on a reimbursable basis. The program serves a declining population.

Increased mechanization of coal mining operations and the industry's improved health and safety regulations have resulted in very few new entrants into the program. Most current beneficiaries entered the program in the 1970s. Former coal miners who have black lung disease are eligible for Part C benefits if a responsible mine owner cannot be determined. Two-thirds of Part C benefits are funded by earmarked excise taxes on coal and one-third by general fund revenues. The latter takes the form of "repayable advances" rather than appropriations.

Book Value

The net amount at which an asset or liability is carried on the books of account (also referred to as carrying value or amount). It equals the gross or nominal amount of any asset or liability minus any allowance or valuation amount.

Budget

The Budget of the United States Government setting forth the President's comprehensive financial plan for allocating resources. The Government uses the budget system to allocate resources among its major functions and individual programs. The budget process has three main phases: formulation, congressional action on the budget, and execution. Some presentations in the budget distinguish between "on-budget" and "off-budget" totals. "On-budget" totals reflect the transactions of all Government entities except those excluded from the unified budget totals by law. Likewise, "off-budget" totals reflect the transactions of Government entities that are excluded from the unified budget totals by law. Currently excluded are the social security trust funds and the Postal Service Fund. The on- and off-budget totals are combined to derive unified or consolidated totals for Federal activity. The budget amounts and references in this exposure draft refer to the unified budget. [See FY 2003 *Budget of the United States Government: Analytical Perspectives*, "Budget System and Concepts and Glossary."]

Budget Authority

The authority provided by Federal law to incur financial obligations that will result in immediate or future outlays. Specific forms of budget authority include:

- Appropriations -- which may be provided in appropriations acts or other laws and which permit obligations to be incurred and payments to be made;
- Borrowing authority -- which permits obligations to be incurred but requires funds to be borrowed to liquidate the obligation;

-
- Contract authority -- which permits obligations to be incurred but requires a subsequent appropriation or offsetting collections to liquidate the obligations; and
 - Spending authority from offsetting collections -- which permits offsetting collections to be credited to an expenditure account and permits obligations and payments to be made using the offsetting collections (the offsetting collections credited to an account are deducted from gross budget authority of the account.)

Budget authority may be classified by period of availability (one year, multiple-year, or no year), by nature of the authority (current or permanent), by the manner of determining the amount available (definite or indefinite), or as gross (without reduction of offsetting collections) and net (with reductions of offsetting collections). (OMB *Circular A-11, Preparation and Submission of Budget Estimates*, Executive Office of the President, Office of Management and Budget, hereafter cited as OMB *Circular A-11*; OMB, *The Budget System and Concepts*; and GAO, *A Glossary of Terms Used in the Federal Budget Process*, Exposure Draft, January 1993; hereafter referred to as GAO *Budget Glossary*.)

Budget Obligation

See Obligation below.

Budget Outlay

See Outlay below.

Budget Receipt

See Receipt below.

Budget Surplus Or Deficit, Unified

The unified budget surplus is the excess of budget receipts over budget outlays during a fiscal year and a deficit is the excess of budget outlays over budget receipts during a fiscal year. [See *FY 2003 Budget of the United States Government: Analytical Perspectives*, "Budget System and Concepts and Glossary."] (SFFAS 24)

Budget, Unified

The budget presents combined on- and off-budget totals to derive totals for Federal activity, which is sometimes called the unified budget. The off-budget receipts and outlays of the Social Security trust funds and the Postal Service Fund are added to the on-budget receipts and outlays to calculate the unified budget totals.

Budgetary Accounting

Budgetary accounting is the system that measures and controls the use of resources according to the purposes for which budget authority was enacted; and that records receipts and other collections by source. It tracks the use of each appropriation for specified purposes in separate budget accounts through the various stages of budget execution from appropriation to apportionment and allotment to obligation and eventual outlay. This system is used by the Congress and the Executive Branch to set priorities, to allocate resources among alternative uses, to finance these resources, and to assess the economic implications of federal financial activity at an aggregate level. Budgetary accounting is used to comply with the Constitutional requirement that "No Money shall be drawn from the Treasury, but in Consequence of Appropriations Made by Law; and a regular Statement and Account of the Receipts and Expenditures of all public money shall be published from time to time." (See Statement of Federal Financial Accounting Concepts No. 1, *Objectives of Federal Financial Reporting*, September 1993, Paragraphs 45-46, 112-114, and 186-191.)

Budgetary Resources

The forms of authority given to an agency allowing it to incur obligations. Budgetary resources include the following: new budget authority, unobligated balances, direct spending authority, and obligation limitations. (GAO *Budget Glossary*)

Business Type Activity

Significantly self-sustaining activity which finances its continuing cycle of operations through collection of exchange revenue.

Capitalize

To record and carry forward into one or more future periods any expenditure the benefits or process from which will then be realized.

Cash Accounting

A system of accounting in which revenues are recorded when received in cash and expenses or expenditures are recorded when cash is disbursed. [See Financial Accounting Standards Board Statement of Financial Accounting Concepts No. 4, *Objectives of Financial Reporting by Nonbusiness Organizations*, paragraph 50; and Congressional Budget Office, *Glossary of Budgetary and Economic Terms*, "Cash Accounting."] (SFFAS 24)

Cash Flow Stream

The agency's projection of the dollar amount for the scheduled cash flows and deviations from scheduled cash flow items for each year, e.g., over the life of a cohort of loans.

Cash Flows

Estimates or payments to or from the Government. For example, for direct loans, these may include: loan disbursements, repayments of principle, payments of interest, and any other payments such as defaults, prepayments, fees, penalties, and other recoveries. For loan guarantees, these may include: payments by the government to cover defaults and delinquencies, interest subsidies, payments to the government, such as origination and other fees, penalties and recoveries, and any other payments.

Cash Surrender Value

Is the sum of money an insurance company will return to the policyholder if the policy is canceled before its maturity or the insured event (death) occurs.

Category I nonfriable asbestos-containing material (ACM)

Refers to asbestos-containing packings, gaskets, resilient floor covering, and asphalt roofing products containing more than 1 percent asbestos as determined using the method specified in appendix E, subpart E, 40 CFR part 763, section 1, Polarized Light Microscopy. (40 CFR § 61.141)

Category II nonfriable ACM

Refers to any material, excluding Category I nonfriable ACM, containing more than 1 percent asbestos as determined using the methods specified in appendix E, subpart E, 40 CFR part 763, section 1, Polarized Light Microscopy that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure. (40 CFR § 61.141)

Central bank digital currency

Central bank digital currencies are a type of digital asset that are a form of digital money or monetary value, denominated in the national unit of account that is a direct liability of the central bank.

Central Fund

A federal entity established to finance the costs of seizure, management and disposition of property seized for forfeiture, and to receive any proceeds from the sale or other disposition of that property.

Changes In Accounting Principles

A change in accounting principle is a change from one generally accepted accounting principle to another one that can be justified as preferable. For the purposes of SFFAS 21, changes in accounting principles also include those occasioned by the adoption of new federal financial accounting standards. (SFFAS 21)

Claim Adjustment Expenses (CAE)

Are incremental costs directly attributable to investigating, settling, and/or adjusting claims. An incremental cost is one that can result only when claims have been incurred. CAE include but are not limited to legal and adjuster's fees. CAE may be incurred through work performed by federal employees and/or contractors.

Classified National Security Information

also known as "classified information," is any information that has been determined pursuant to Executive Order (E.O.) 13526, as amended; or any successor orders, to require protection against unauthorized disclosure and is marked to indicate its classified status. Information may be classified at one of the following three levels:

TOP SECRET, which is applied to information, the unauthorized disclosure of which reasonably could be expected to cause exceptionally grave damage to the national security that the original classification authority is able to identify or describe;

SECRET, which is applied to information, the unauthorized disclosure of which reasonably could be expected to cause serious damage to the national security that the original classification authority is able to identify or describe; and

CONFIDENTIAL, which is applied to information, the unauthorized disclosure of which reasonably could be expected to cause damage to the national security that the original classification authority is able to identify or describe.

Cleanup Costs

The costs of removing, containing, and/or disposing of (1) hazardous waste from property, or (2) material and/or property that consists of hazardous waste at permanent or temporary closure or shutdown of associated PP&E.

Closed Group

See "*Closed group (to new entrants).*"

Closed Group (To New Entrants)

Those persons who, as of a valuation date, are participants in a social insurance program as beneficiaries, covered workers, or payers of earmarked taxes or premiums.

Cohort

Those direct loans obligated or loan guarantees committed by a program in the same year even if disbursements occur in subsequent years. Post-1991 direct loans or loan guarantees will remain with their original cohort throughout the life of the loan, even if the loan is modified. Pre-1992 loans and loan guarantees that are modified shall each, respectively, constitute a single cohort. (OMB *Circular A-11*)

Collateral

Real or personal property pledged as part or full security on a debt.

Collections

Amounts received by the federal government during the fiscal year. Collections are classified as follows:-- Budget receipts or off-budget receipts are collections from the public based on the government's exercise of its sovereign powers, including collections from participants in compulsory social insurance programs. -- Offsetting collections are collections from government accounts (intragovernmental transactions) or from the public that are offset against budget authority and outlays rather than reflected as receipts in computing the budget and off-budget totals. They are classified as (a) offsetting receipts (i.e., amounts deposited to receipt accounts), and (b) collections credited to appropriation or fund accounts. The distinction between these two major categories is that collections credited to appropriation or fund accounts are offset within the account that contains the associated disbursements (outlays), whereas offsetting receipts are in accounts separate from the associated disbursements. Offsetting collections are deducted from gross disbursements in calculating net outlays. (Based on *A Glossary Of Terms Used in the Federal Budget Process; and Related Accounting, Economic, and Tax Terms*, Third Edition, General Accounting Office, March 1981.)

Commercial Use Land

Land or permanent land rights that are predominantly used to generate inflows of resources from non-federal third parties, usually through special use permits, right-of-way grants, and leases. Such inflows may arise from exchange or non-exchange activities and may or may not be considered dedicated collections. [See SFFAS 6 paragraph 20B. for example commercial use land sources from which revenue or inflows are derived.]

Common Cost

The cost of resources employed jointly in the production of two or more outputs and the cost cannot be directly traced to any one of those outputs.

Common Data Source

All of the financial and programmatic information available for the budgetary, cost, and financial accounting processes. It includes all financial and much non-financial data, such as environmental data, that are necessary for budgeting and financial reporting as well as evaluation and decision information developed as a result of prior reporting and feedback.

Component Entities

The term “component entity” is used to distinguish between the U.S. Federal Government and its components. The U.S. Federal Government as a whole is composed of organizations that manage resources and are responsible for operations, i.e., delivering services. These include major departments and independent agencies, which are generally divided into suborganizations, i.e., smaller organizational units with a wide variety of titles, including bureaus, administrations, agencies, and corporations. (SFFAC No. 2, *Entity and Display*, pars. 11-12). Use of “component entity” in this standard is only intended to distinguish between the U.S. Federal Government’s consolidated financial statements and financial statements of its components.

Component Reporting Entity

“Component reporting entity” is used broadly to refer to a reporting entity within a larger reporting entity. Examples of component reporting entities include organizations such as executive departments, independent agencies, government corporations, legislative agencies, and federal courts. Component reporting entities would also include sub-components (those components included in the GPFFR of a larger reporting entity) that may themselves prepare GPFFRs. [FN: The larger reporting entity could be the government-wide reporting entity or another component reporting entity.] One example is a bureau that is within a larger department that prepares its own standalone GPFFR.

Composite Depreciation Methodology

The composite methodology is a method of calculating depreciation that applies a single average rate to a number of heterogeneous assets that have dissimilar characteristics and service lives.

Condition

The physical state of an asset. The condition of an asset is based on an evaluation of the physical status/state of an asset, its ability to perform as planned, and its continued usefulness. Evaluating an asset’s condition requires knowledge of the asset, its performance capacity and its actual ability to perform, and expectations for its continued performance. The condition of a long-lived asset is affected by its durability, the quality of its design and construction, its use, the adequacy of maintenance that has been performed, and many other factors, including: accidents (an unforeseen and unplanned or unexpected event or circumstance), catastrophes (a tragic event), disasters (a sudden calamitous event bringing great damage, loss, or destruction), and obsolescence.

Condition Assessment Surveys

Periodic inspections of PP&E to determine their current condition and estimated cost to correct any deficiencies.

Conservation and Preservation land

Land or permanent land rights that are predominantly used for conservation or preservation purposes. Conservation and preservation, although closely linked, are distinct terms. Each term involves a certain type or degree of protection. Specifically, conservation is generally associated with the protection and proper use of natural resources, whereas preservation is associated with the protection of buildings, objects, and landscapes from use. [See SFFAS 6 paragraph 20C. for examples of land conserved or preserved for significant natural, historic, scenic, cultural, and recreational resources.]

Conservatorship

A conservatorship is the legal process in which a person or entity is appointed to establish control and oversight of a company to put it in a sound and solvent condition. In a conservatorship, the powers of the company's directors, officers, and shareholders are transferred to the designated conservator. [FN: Federal Housing Finance Agency Fact Sheet, Questions and Answers on Conservatorship.]

Constant Dollar

A dollar value adjusted for changes in the average price level. A constant dollar is derived by dividing a current dollar amount by a price index. The resulting constant dollar value is that which would exist if prices had remained at the same average level as in the base period. Any changes in such constant dollar values would therefore reflect only changes in the real volume of goods and services, not changes in the price level. Constant dollar figures are commonly used to compute the real value of the gross domestic product and its components and to estimate the real level of Federal receipts and outlays. (GAO *Budget Glossary*)

Constructive Custody

Legal possession of property by federal government personnel through a non-federal agent, such as a commercial contractor or state or local official, under a legal agreement or court order that the agent maintains physical possession and control of the property on behalf of, and subject to the orders of, the Federal government personnel.

Consumption Method

A method of accounting for goods, such as materials and supplies, where the goods are recognized as assets upon acquisition and are expensed as they are consumed.

Contingency

An existing condition, situation, or set of circumstances involving uncertainty as to possible gain or loss to an entity that will ultimately be resolved when one or more future events occur or fail to occur.

Contra Account

One of two or more accounts which partially or wholly offset another or other accounts; on financial statements, they may be either merged or appear together.

Contract Authority

Contract authority is a subset of budget authority. (See *budget authority*.)

Contributions

Also referred to as “taxes,” “payroll taxes,” or “premiums,” these terms refer to amounts paid into social insurance programs. The payments can be paid by (1) employers and employees based on wages from employment covered under a program; (2) the self-employed based on net earnings from selfemployment; (3) governments based on wages of state and local government employees; and (4) policyholders based on coverage under certain programs.

Control with risk of loss or expectation of benefit

Control with risk of loss or expectation of benefit is the power to impose will on and/or govern the financial and/or operating policies of another organization with the potential to be obligated to provide financial support or assume financial obligations or obtain financial resources or non-financial benefits. [FN: For example, a non-financial benefit would be one where the federal government benefits from a service being provided to it or on its behalf.]

Controllable Cost

A cost that can be influenced by the action of the responsible manager. The term always refers to a specified manager since all costs are controllable by someone.

Cost

Defined in SFFAC No. 1, *Objectives of Federal Financial Reporting* as the monetary value of resources used (para. 195). Defined more specifically in SFFAS No. 4, *Managerial Cost Accounting Concepts and Standards for the Federal Government*, as the monetary value of resources used or sacrificed or liabilities incurred to achieve an objective, such as to acquire or produce a good or to perform an activity or service (page 105). Depending on the nature of the transaction, cost may be charged to operations immediately, i.e., recognized as an expense of the period, or to an asset account for recognition as an expense of subsequent periods. In most contexts within *Accounting for Revenue and Other Financing Sources*, “cost” is used synonymously with expense. See also “*Full Cost*.”

Cost Allocation

A method of assigning costs to activities, outputs, or other cost objects. The allocation base used to assign a cost to objects is not necessarily the cause of the cost. For example, assigning the cost of power to machine activities by machine hours is an allocation because machine hours are an indirect measure of power consumption.

Cost Assignment

A process that identifies costs with activities, outputs, or other cost objects. In a broad sense, costs can be assigned to processes, activities, organizational divisions, products, and services. There are three methods of cost assignment: (a) directly tracing costs wherever economically feasible, (b) cause-and-effect, and (c) allocating costs on a reasonable and consistent basis.

Cost-benefit Analysis

The weighing of benefits against costs usually expressed as a ratio of dollar benefits to dollar costs for each of a variety of alternatives to provide a comparable basis of choice among them.

Cost Driver

Any factor that causes a change in the cost of an activity or output. For example, the quality of parts received by an activity, or the degree of complexity of tax returns to be reviewed by the IRS.

Cost Finding

Cost finding techniques produce cost data by analytical or sampling methods. Cost finding techniques are appropriate for certain kinds of costs, such as indirect costs, items with costs below set thresholds within programs, or for some programs in their entirety. Cost finding techniques support the overall managerial cost accounting process and can represent non-recurring analysis of specific costs.

Cost Object (Also Referred To As Cost Objective)

An activity, output, or item whose cost is to be measured. In a broad sense, a cost object can be an organizational division, a function, task, product, service, or a customer.

Cost Rate

The ratio of expenditures for the program to the taxable payroll for the year.

Covered Employment

All employment and self-employment creditable for purposes of the social insurance program. For Social Security, almost every kind of employment and self-employment is covered. In a few employment situations, coverage must be elected by the employer. Covered employment for HI includes all federal employees, whereas covered employment for OASDI includes some, but not all, federal employees.

Covered Worker

A person having earnings creditable for a social insurance program. For Social Security, "creditable earnings" are based on earnings taxable under the program. The number of HI

covered workers is slightly larger than the number of OASDI covered workers because of different coverage status for federal employment.

Credit Program

For the purpose of this Statement (SFFAS 19), a federal program that makes loans and/or loan guarantees to nonfederal borrowers.

Crypto asset

Crypto assets are a common subset of digital assets that use cryptographic techniques and distributed ledger technology, such as blockchain.

Cryptocurrency

Cryptocurrency is a crypto asset that is promoted to be an alternative payment instrument.

Current Discount Rate

With respect to the modification of direct loans or loan guarantees, it is the discount rate used to measure the cost of a modification. It is the interest rate applicable at the time of modification on marketable Treasury securities with a similar maturity to the remaining maturity of the direct or guaranteed loans, under either pre-modification terms, or post-modification terms, whichever is appropriate. [*Special Term from SFFAS 2*]

Current Liabilities

Amounts owed by a federal entity for which the financial statements are prepared, and which need to be paid within the fiscal year following the reporting date.

Current Services Assessment

Projections of future receipts and outlays from future activities based on the programs established by current law. The CSA focuses on the totality of Government operations rather

than on individual programs, and shows the short- and long-term direction of current programs.

Current Policy Without Change

In federal financial reporting, "current policy without change" refers to the continuation of policies in place as of the valuation date (in other words, no policy change).

Custodial Agency

The federal agency that has actual possession of seized or forfeited property, or constructive possession of property through a non-federal agent. The custodial agency would be responsible for reporting material quantities of non-valued items.

Customer-lessee

The reporting entity paying for the acquisition of, or improvements and/or alterations to, the underlying asset provided by the provider-lessor on a reimbursable basis. (Technical Bulletin 2023-1).

Debt-to-GDP Ratio

The debt-to-GDP ratio, for the purposes of federal financial reporting, is the amount of federal (Treasury) debt held by the public divided by gross domestic product. [An alternative ratio would be the amount of total public debt (federal, state, and local) divided by GDP.]

Dedicated Collections

Dedicated collections are specifically identified revenues, provided to the government by non-federal sources, often supplemented by other financing sources, which remain available over time. These specifically identified revenues and other financing sources are required by statute to be used for designated activities, benefits or purposes, and must be accounted for separately from the government's general revenues. The three required criteria for funds from dedicated collections are:

-
1. A statute committing the federal government to use specifically identified revenues and or other financing sources that are originally provided to the federal government by a non-federal source* only for designated activities, benefits or purposes;
 2. Explicit authority for the fund to retain revenues and other financing sources not used in the current period for future use to finance the designated activities, benefits, or purposes; and
 3. A requirement to account for and report on the receipt, use, and retention of the revenues and other financing sources that distinguishes the fund from the government's general revenues.

*In some cases, specifically identified revenues or other financing sources are collected from a non-federal source by one agency and transferred or appropriated to another. For example, Social Security taxes are collected from non-federal entities (employees and employers) by the Internal Revenue Service. Those amounts are subsequently appropriated and transferred to the Social Security Administration. This internal process does not change the nature of the revenue or other financing source (i.e., specifically identified revenues or other financing sources originally collected from a non-federal source).

Default

The failure to meet any obligation or term of a credit agreement, grant, or contract. Often used to refer to accounts more than 90 days delinquent. (*Treasury Financial Manual Supplement*)

Deemed Cost

Amount used as a surrogate for initial amounts that otherwise would be required to establish opening balances.

Deferred Maintenance and Repairs

Maintenance and repairs that were not performed when they should have been or were scheduled to be and which, therefore, are put off or delayed for a future period.

Deferred Maintenance and Repairs

Maintenance and repairs that were not performed when they should have been or were scheduled to be and which, therefore, are put off or delayed for a future period.

Deferred Maintenance and Repairs

Maintenance and repairs that were not performed when they should have been or were scheduled to be and which, therefore, are put off or delayed for a future period.

Demographic Assumptions

Demographic assumptions address projected population trends (for example, birth rates, mortality rates, and net immigration).

Deposit Fund

Treasury Financial Management Service establishes deposit fund accounts to record monies that do not belong to the Federal government. A description of deposit fund criteria may be found in the Treasury Financial Manual, Section 1535, "Deposit Fund Accounts."

Depreciation Accounting

The systematic and rational allocation of the acquisition cost of an asset, less its estimated salvage or residual value, over its estimated useful life.

Derivative Classification

Is incorporating, paraphrasing, restating, or generating in new form information that is already classified, and marking the newly developed material consistent with the classification markings of the source of the information. Derivative classification includes the classification of information based on classification guidance. The duplication or reproduction of existing classified information is not derivative classification.

Development

Systematic use of the knowledge and understanding gained from research for the production of useful materials, devices, systems, or methods, including the design and development of prototypes and processes.

Digital Asset

Digital assets are electronic representations of value and operate as part of a complex and interconnected digital ecosystem.

Direct Cost

The cost of resources directly consumed by an activity. Direct costs are assigned to activities by direct tracing of units of resources consumed by individual activities. A cost that is specifically identified with a single cost object.

Direct Loan

A disbursement of funds by the government to a nonfederal borrower under a contract that requires the repayment of such funds within a certain time with or without interest. The term includes the purchase of, or participation in, a loan made by another lender. (Adapted from OMB *Circular A-11*)

Directed Flows Of Resources

Expenses to nonfederal entities imposed by federal laws or regulations without providing federal financing. In the case of state and local governments, directed flows are known as “unfunded mandates.” The costs and financing of federal regulations do not flow through the Government, but their effects are similar to direct federal expenditures and revenue.

Disclosure

Reporting information in notes or narrative regarded as an integral part of the basic financial statement.

Discount

The difference between the estimated worth of a future benefit and its present value; a compensation for waiting or an allowance for returns from using the present value of these returns in other ways.

Discount Rate

An interest rate that is used in present value calculations to equate amounts that will be received or paid in the future to their present value.

Discretionary Spending

In the federal budget process, "discretionary spending" refers to outlays from budget authority that is controlled by annual appropriation acts. Annual appropriation acts are required to fund the continuing operation of all federal programs that are not "mandatory." For additional information, see *A Glossary of Terms Used in the Federal Budget Process*, [GAO-05-734SP](#).

Dividend Fund Interest Rate

The interest rate determined at policy issuance used to determine the amount of the dividend fund. It is the rate used to credit interest to the dividend fund, and against which experience is measured to determine the amount of the interest portion of dividends paid to individual policyholders. (AICPA Statement of Position 95-1, Glossary, p. 33]

Donated Capital

The amount of nonreciprocal transfers of assets or services from State, local, and foreign governments; individuals; or others not considered parties related to the Government. (JFMIP Standardization Project)

Drawbacks

Refunds of all or part of duties on imported goods that are subsequently exported or destroyed. Typically these arise when imported materials are used to manufacture a product that is later

exported. In such cases, most of the duties originally paid are refundable when the finished product is exported.

Econometric Model

An equation or a set of related equations used to analyze economic data through mathematical and statistical techniques. Such models may be devised in order to depict the essential quantitative impact of alternative assumptions or government policies. (*Dictionary of Banking and Finance*, Jerry M. Rosenberg, Ph.D., Wiley & Sons, New York, 1982, hereafter cited as Rosenberg's Dictionary.)

Economic Assumptions

Economic assumptions address the economic factors that are not under the direct legislative control of the federal government (for example, inflation and growth in GDP).

Economic Life

The period during which a fixed asset is capable of yielding services of value to its owner. (See "*useful life*".)

End User

Any component of a reporting entity that obtains goods for direct use in its normal operations. The component may also be a contractor.

Entitlement Period

The period (such as, monthly) for which benefits become due.

Entitlement Program

A program in which the federal government becomes automatically obligated to provide benefits to members of a specific group who meet the requirements established by law.

Entity

A unit within the federal government, such as a department, agency, bureau, or program, for which a set of financial statements would be prepared. Entity also encompasses a group of related or unrelated commercial functions, revolving funds, trust funds, and/or other accounts for which financial statements will be prepared in accordance with OMB annual guidance on Form and Content of Financial Statements.

Entry Age Normal Actuarial Method

A method under which the actuarial present value of projected benefits of each employee is allocated on a level basis over the earnings or the service of the employee between entry age and assumed exit age. The portion of this actuarial present value allocated to a valuation year is called the normal cost. The portion of this present value not provided for at a valuation date by the present value of future normal cost is called the actuarial accrued liability. The assumption is made under this method that every employee entered the plan (entry age) at the time of initial employment or at the earliest eligibility date, if the plan had been in existence, and that contributions have been made from the entry age to the date of the actuarial valuation. The term "aggregate entry age normal" refers to an approach whereby costs are determined for the group as a whole rather than for each individual participant separately.

Errors

Errors in financial statements result from mathematical mistakes, mistakes in the application of accounting principles, or oversight or misuse of facts that existed at the time the financial statements were prepared. (SFFAS 21)

Estimated Cost

The process of projecting a future result in terms of cost, based on information available at the time. Estimated costs, rather than actual costs, are sometimes the basis for credits to work-in-process accounts and debits to finished goods inventory.

Event

A happening of consequence to an entity. It may be an internal event that occurs within an entity, such as the transforming of raw materials into a product. Or it may be an external event that involves interaction between an entity and its environment, such as a transaction with another entity, an act of nature, theft, vandalism, a tort caused by negligence, or an accident. (Adapted from Financial Accounting Standards Board, Statement of Financial Accounting Concepts No. 6, *Elements of Financial Statements*)

Exchange Revenue

Inflows of resources to a governmental entity that the entity has earned. They arise from exchange transactions, which occur when each party to the transaction sacrifices value and receives value in return.

Exchange Transaction

A transaction that arises when each party to the transaction sacrifices value and receives value in return.

Exchange Transaction Insurance Programs Other Than Life Insurance

Cover the risk of loss from adverse events, other than death of individuals, involved in exchange transactions as defined in SFFAS 7.

Executory Contract

A contract which has not been performed by all parties to it. (Trascona, Joseph L., *Business Law*, William C. Brown C. Publishers, 1981)

Expected Value

A statistical measurement attribute that is the sum of the products of each potential outcome multiplied by the probability of that potential outcome.

Expended Appropriations

The dollar amount of appropriations used to fund goods and services received or benefits or grants provided.

Expenditure

With respect to provisions of the Antideficiency Act (31 U.S.C. 1513-1514) and the Congressional Budget and Impoundment Control Act of 1974 (2 U.S.C. 622(i)), a term that has the same definition as outlay. (GAO *Budget Glossary*)

Expense

Outflows or other using up of assets or incurrences of liabilities (or a combination of both) during a period from providing goods, rendering services, or carrying out other activities related to an entity's programs and missions, the benefits from which do not extend beyond the present operating period.

Expired Appropriations (Accounts)

Appropriation accounts in which the balances are no longer available for incurring new obligations because the time available for incurring such obligations has expired. (JFMIP Standardization Project)

Fair Value

Fair value is the amount at which an asset or liability could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale.

Federally Funded Research and Development Center

Federally Funded Research and Development Center (FFRDC) is a government-funded entity that has a long-term contractual relationship with one or more federal agencies.[FN: The Office of Federal Procurement Policy (OFPP) and Federal Acquisition Regulation (FAR) policies for FFRDCs apply to executive agencies, which includes "an executive department, a military department, or any independent establishment within the meaning of 5 U.S.C. 101, 102, and 104(1), respectively, and any wholly owned Government corporation within the meaning of 31 U.S.C. § 9101." 48 C.F.R. § 2.101; see also 5 U.S.C. § 403.] FFRDCs can be privately owned or government-owned, and they serve to meet the long-term research and development needs of

federal agencies that could not otherwise be met as effectively in-house or through existing contractors. 49 Fed. Reg. at 14,464; 48 C.F.R. § 35.017(a). FFRDCs are established either specifically in statute or under the statutory authority of agencies to enter into contracts, which can be inherent or specific authority, and are used to perform research and development and related tasks.

Fiat money

Fiat money is currency that is issued and backed by a government entity as legal tender. The value of fiat money is derived from supply and demand as a medium of exchange and the stability of the government backing it. This differs from money that is backed by a tangible commodity, such as gold, which sets the standard of its value.

Fiduciary

(noun) A Federal entity that holds assets in trust for non-Federal parties in which the non-Federal parties have an ownership interest that the Federal Government must uphold.

(adjective) Relating to the process of the collection or receipt, and the management, protection, accounting, investment and disposition by the Federal Government of cash or other assets in which non-Federal individuals or entities have an ownership interest that the Federal Government must uphold.

Fiduciary Activity

An activity that relates to the collection or receipt, management, protection, accounting, investment and disposition by the Federal Government of cash or other assets in which non-Federal individuals or entities have an ownership interest that the Federal Government must uphold.

Fiduciary Asset

Fiduciary assets are assets in which non-Federal parties have an ownership interest and are held by a Federal entity under provision of law, regulation or other fiduciary arrangement.

Fiduciary Collections

Fiduciary collections are an inflow to a Federal entity of cash or other assets in which non-Federal parties have an ownership interest that the Federal Government must uphold.

Fiduciary Fund Balance with Treasury

Cash that is held in the U.S. Treasury and administered by a Federal entity on behalf of fiduciary beneficiaries.

Fiduciary Relationship

A fiduciary relationship exists when an authorized agent or entity of the Government accepts, recognizes, agrees to or consents to undertake fiduciary activity.

Financing Account

A non-budget account associated with each credit program account. The financing account holds fund balances, receives the subsidy cost payment from the credit program account, and includes all other cash flows to and from the government resulting from post-1991 direct loans or loan guarantees. (OMB *Circular A-11*, and OMB *Circular A-34*, Instructions on *Budget Execution*, Credit Apportionment and Budget Execution, hereafter cited as OMB *Circular A-34*.)

First-in, First-out (FIFO)

A cost flow assumption; the first goods purchased or produced are assumed to be the first goods sold.

Fiscal Gap

The fiscal gap is the change in non-interest spending and/or receipts that would be necessary to maintain public debt at or below a target percentage of GDP. The fiscal gap is the net present value of projected non-interest spending minus projected receipts, adjusted by the decrease (or increase) in public debt required to maintain public debt at the target level for the stated projection period. [FN: Since interest is factored into the present value calculation, the fiscal gap

as a share of spending is expressed as a share of spending excluding interest.] The fiscal gap may be expressed as:

- (a) a summary amount in present value dollars,
- (b) a share of the present value of the GDP for the projection period, and/or
- (c) a share of the present value of projected receipts or projected non-interest spending.
[FN: GDP is the total market value of goods and services produced domestically during a given period. The components of GDP are consumption (both household and government), gross investment (both private and government), and net exports.]

Fiscal Sustainability Reporting

In federal financial reporting, "Fiscal Sustainability Reporting" is the short term for the basic financial statement, disclosures and Required Supplementary Information required in the Financial Report of the U.S. Government.

Fixed Cost

A cost that does not vary in the short term with the volume of activity. Fixed cost information is useful for cost savings by adjusting existing capacity, or by eliminating idle facilities. Also called Non-Variable Cost or Constant Cost.

Fixed Value Securities

Securities that have a known maturity or redemption value at the time of issue.

Forecast

The term "forecast" in this document refers to prospective financial information, including but not limited to prospective financial statements, based on management's assumptions about future conditions and actions that are deemed probable during the period covered. Forecasts are distinguished from "projections," which provide prospective financial information based on one or more hypothetical assumptions or sets of assumptions. The hypothetical assumptions used in projections relate to future conditions and actions that may occur, but which are not necessarily deemed probable to occur. Both forecasts and projections may contain a range.

Foreclosure

A method of enforcing payment of a debt secured by a mortgage by seizing the mortgaged property. Foreclosure terminates all rights that the mortgagor has in the mortgaged property upon completion of due process through the courts. (*Treasury Financial Manual Supplement*)

Forfeited Property

Forfeited property is property for which title has passed to the Government. Forfeited property includes (1) monetary instruments, intangible property, real property, and tangible personal property acquired through forfeiture proceedings; (2) property acquired by the government to satisfy a tax liability; and (3) unclaimed and abandoned merchandise.

Friable ACM

Refers to material containing more than 1 percent asbestos as determined using the method specified in appendix E, subpart E, 40 CFR part 763, section 1, Polarized Light Microscopy, that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure. If the asbestos content is less than 10 percent as determined by a method other than point counting by polarized light microscopy (PLM), the asbestos content is verified by point counting using PLM. (40 CFR § 61.141)

Full-absorption Costing

A method of costing that assigns (absorbs) all labor, material, and service/manufacturing facilities and support costs to products or other cost objects. The costs assigned include those that do and do not vary with the level of activity performed.

Full Cost

The total amount of resources used to produce the output. More specifically, the full cost of an output produced by a responsibility segment is the sum of (1) the costs of resources consumed by the responsibility segment that directly or indirectly contribute to the output, and (2) the costs of identifiable supporting services provided by other responsibility segments within the reporting entity and by other reporting entities. (SFFAS No. 4, *Managerial Cost Accounting Concepts and Standards for the Federal Government*, para. 89) All direct and indirect costs to any part of the

Federal Government of providing goods, resources, or services. (OMB *Circular A-25*).

Fulfillment Cost

Fulfillment cost includes all costs that an entity will incur in fulfilling the promises that constitute a liability.

Fund

Fund has more than one meaning. Depending on the context it may mean merely a resource as in funds available to pay an obligation. Or, for budgetary accounting, it may mean Federal funds or "trust funds," the two major groups of funds in the budget. [FN: An explanation of the two major categories of Federal Funds and Trust Funds may be found in Chapter 22, "Trust Funds and Federal Funds," of *Analytical Perspectives, Budget of the U.S. Government, Fiscal Year 2006*.] The Federal funds include all transactions not classified by law as being in trust funds. The main financing component of the Federal funds group is referred to as the General Fund, which is used to carry out the general purposes of Government rather than being restricted by law to a specific program and consists of all collections not earmarked by law to finance other funds.

A fund can also mean a fiscal and accounting entity with a self-balancing set of accounts recording cash and other assets, together with all related liabilities and residual equities or balances, and changes therein, which are segregated for the purpose of carrying on specific activities or attaining certain objectives in accordance with special regulations, restrictions, or limitations.

The term "fund" is used in multiple contexts in this standard. For example, the introductory and background material discusses funds in the context of budget accounting. On the other hand, when the standard refers to a fiduciary fund in the illustrations that follow this Glossary, it is in the context a self-balancing set of accounts.

Fully Insured

"Fully insured" status means that a social insurance participant is eligible for benefits. Social insurance benefits include pensions and health care for retirees and the disabled. For example, Social Security and Medicare participants become permanently fully insured when they attain at least 40 quarters of work in covered employment (QC). Social Security and Medicare participants may be fully insured without being permanently fully insured. This is important with respect to disability benefits, which include subsistence payments and medical care. Disability

benefits may be needed well before the participants attained retirement age. A participant who receives disability benefits for 24 consecutive months is eligible for Medicare and, if he or she continues receiving disability benefits until attaining retirement age, he or she is converted to Social Security retirement benefits. To be fully insured, participants generally need a minimum of 6 QC. Once a worker has accumulated 40 QCs, he or she remains permanently fully insured, that is, no further QCs are required.

Fund Balance with Treasury

A Federal entity's fund balance with the Treasury is the aggregate amount of funds in the entity's accounts with Treasury for which the entity is authorized to make expenditures and pay liabilities. Fund balance with Treasury is an intra-governmental item. From the component entity's perspective, a fund balance with Treasury is an asset because it represents the entity's claim to the Federal Government's resources. However, from the perspective of the Federal Government as a whole, it is not an asset; and while it represents a commitment to make resources available to Federal departments, agencies, programs and other entities, it is not a liability. An entity's fund balance with Treasury is increased by, among other things, amounts collected and credited to a fund that the entity is authorized to spend or use to offset its expenditures. Disbursements made to pay liabilities or to purchase assets, goods, and services, investments in Treasury or other securities, transfers and reimbursements to other entities or to the Treasury, and similar transactions reduce an entity's fund balance with Treasury.

Garnishments

Garnishments are a method of debt collection in which a portion of a person's salary or tax refund is paid to a third party in compliance with a statute or court order.

Non-Federal Parties - See "Non-Federal Individuals and Entities."

General Fund

Accounts for receipts not earmarked by law for a specific purposes, the proceeds of general borrowing, and the expenditure of these moneys. (OMB, *The Budget System and Concepts*)

General PP&E Land

Land and permanent land rights acquired for or in connection with other general PP&E are considered general PP&E but are not to be capitalized on the balance sheet. General PP&E land shall exclude (1) withdrawn public lands or (2) land restricted for conservation, preservation, historical, or other like restrictions.

General Purpose Federal Financial Reports

General purpose federal financial reports (GPFFRs) is a generic term to refer to the report that contains the reporting entity's financial statements that are prepared pursuant to generally accepted accounting principles. In the federal government, the report for the U.S. government-wide reporting entity is known as the consolidated financial report of the U.S. Government (CFR) and for component reporting entities it is usually included in the performance and accountability report, the agency financial report, or the annual management report.

General Purpose Financial Reports

Reports intended to meet the common needs of diverse users who typically do not have the ability to specify the basis, form, and content of the reports they receive.

Good

A tangible product produced to provide to a customer.

Government-acknowledged Events

Events that are not a liability in themselves, but are those events that are "of financial consequence" to the federal government because it chooses to respond to the event.

Governmental Receipts

Collections from the public that result primarily from the exercise of the Government's sovereign or governmental powers. Governmental receipts consist mostly of individual and corporation income taxes and social insurance taxes but also include excise taxes, compulsory user charges,

customs duties, court fines, certain license fees, gifts and donations, and deposits of earnings by the Federal Reserve System. They are compared to outlays in calculating a surplus or deficit. (OMB, *The Budget System and Concepts*)

Government-related Events

Nontransaction-based events that involve interaction between federal entities and their environment.

Government Sponsored Enterprise

Government Sponsored Enterprise (GSE) is created by Congress with its particular attributes defined in its enabling legislation and charter. Despite this diversity, there are at least four readily observable characteristics of GSEs: (1) private sector ownership, (2) limited competition, (3) activities limited by congressional charter, and (4) chartered privileges that create an inferred federal guarantee of obligations. [FN: Congressional Research Service Report for Congress Government-Sponsored Enterprises (GSEs): An Institutional Overview.]

Grants

31 USC Sec. 6304 defines grants as follows: An executive agency shall use a grant agreement as the legal instrument reflecting a relationship between the United States Government and a State, a local government, or other recipient when (1) the principal purpose of the relationship is to transfer a thing of value to the State or local government or other recipient to carry out a public purpose of support or stimulation authorized by a law of the United States instead of acquiring (by purchase, lease, or barter) property or services for the direct benefit or use of the United States Government; and (2) substantial involvement is not expected between the executive agency and the State, local government, or other recipient when carrying out the activity contemplated in the agreement.

Gross Domestic Product

A nation's gross domestic product is one of the ways for measuring the size of its economy. The GDP of a nation is defined as the total market value of all final goods and services produced domestically during a given period of time. The components of GDP are:

GDP = private sector consumption and investment + government consumption and investment + net exports (exports - imports).

Group Depreciation Methodology

The group methodology is a method of calculating depreciation that applies a single, average rate to a number of homogeneous assets having similar characteristics and service lives.

Hazardous Waste

A solid, liquid, or gaseous waste, or combination of these wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may cause or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness or pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, disposed of, or otherwise managed.

Held for Remanufacture

Items in the process of (or awaiting) inspection, disassembly, evaluation, cleaning, rebuilding, refurbishing and/or restoration to serviceable or technologically updated/upgraded condition. Items held for remanufacture may consist of direct materials, (including repairable parts and subassemblies, also referred to as "carcasses" at the Department of Defense) and work-in-process (including labor costs).

Heritage Assets

Property, plant, and equipment that are unique for one or more of the following reasons: historical or natural significance; cultural, educational or artistic (e.g., aesthetic) importance; or, significant architectural characteristics.

Historical Cost

Initially, the amount of cash (or its equivalent) paid to acquire an asset; subsequent to acquisition, the historical amount may be adjusted for amortization.

Human Capital

Expenses incurred for education and training programs financed by the Federal Government for the benefit of the public and designed to increase or maintain national economic productive capacity.

Impacts

In the context of discussing performance measurement, SFFAC 1 defines “impacts” as the difference between what actually occurred and what would have occurred in the absence of a Government program. SFFAC 1, paragraph 206 notes that, to the extent feasible and practical, effectiveness evaluation should focus on program results or effects in the sense of “impacts.” Assessing impacts of Governmental action in this sense typically requires program evaluations or other techniques that transcend annual performance reporting, though these techniques often will avail of information in the annual performance reports. These evaluations often require several years of data, are expensive to conduct, and typically are not performed on an annual basis for a given program.

Impairments

A significant and permanent decline in the service utility of G-PP&E or expected service utility for construction work in progress. [FN: The determination of whether or not an item is significant is a matter of professional judgment. Determining if a decline in service utility is significant is separate and distinct from materiality considerations that include considering the likely influence that such disclosure could have on judgments or decisions of financial statement users.]

Imputed Financing

Financing provided to the reporting entity by another Government entity covering certain costs incurred by the former. For example, part of Federal employee retirement benefits have been paid by the Government’s central personnel office. A reporting entity would recognize the full accruing cost of the benefits as well as the imputed financing so provided. [See SFFAS 7, Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting, paragraph 73.]

Imputed Inter-departmental Costs

The unreimbursed (i.e. non-reimbursed and under-reimbursed) portion of the full costs of goods and services received by the entity from a providing entity that is not part of the same department or larger reporting entity other than the U.S. government as a whole. (Interpretation 6)

Imputed Intra-departmental Costs

The unreimbursed portion of the full costs of goods and services received by the entity from a providing entity that is part of the same department or larger reporting entity (i.e. other bureaus, components or responsibility segments within the department or larger reporting entity). (Interpretation 6)

Income Rate

The ratio of contributions and tax income to taxable payroll for the year.

Incremental Cost

The increase or decrease in total costs that would result from a decision to increase or decrease output level, to add a service or task, or to change any portion of operations. This information helps in making decisions such as to contract work out, undertake a project, or increase, decrease, modify, or eliminate an activity or product.

Incurred But Not Reported (IBNR)

Refers to estimated claims from adverse events that have occurred as of the end of the reporting period, but have not yet been reported to the insurance program for settlement.

Indirect Cost

A cost that cannot be identified specifically with or traced to a given cost object in an economically feasible way.

In-Force

Refers to arrangements that are unexpired as of a given date.

Initial Direct Lease Cost

Initial direct lease costs are costs that are directly attributable to negotiating and arranging a lease or portfolio of leases and would not have been incurred without entering into the lease.

Insurance Arrangement (Arrangement)

Is a general term used for a contract or other agreement between an insurance program and specific parties, such as but not limited to individuals, state, local, or foreign governments, other federal agencies, or businesses. An arrangement may include and/or identify: the term the insurance arrangement is in-force, the insurance program's responsibilities, the risk assumed by the insurance program, such as: all risk for covered losses, partial risk by filling a gap where commercial insurance companies are not able or willing to provide the insurance, a timing risk wherein the insurance program provides compensation for losses in anticipation that future funding sources will be sufficient to cover all or part of past benefits paid or risks shared by a third party; the adverse event, the insured party or parties and their premium requirements, the beneficiary or beneficiaries and their responsibilities for filing claims, and/or the financial compensation.

Insurance Claim

Is a formal request for payment for losses as authorized under the insurance arrangement.

Insurance Portfolios

Is a grouping of insurance programs or arrangements that have some meaningful relationship based on arrangement period/duration, shared risks, management, customers, geographic regions, or other factors.

Insurance Program

Is a general term used to refer to a program that is authorized by law to financially compensate a designated population of beneficiaries by accepting all or part of the risk for losses incurred as a result of an adverse event.

Internal Controls Insurance And Guarantee Programs

Federal government programs that provide protection to individuals or entities against specified risks. Because the federal government frequently commingles aspects of insurance and guarantees within the same program, this Statement (SFFAS 5) treats the terms as a single type of activity. (Also see *separate definition of social insurance*).

Inter-entity

A term meaning between or among different federal reporting entities. It commonly refers to activities or costs between two or more agencies, departments, or bureaus.

Interest

The service charge for the use of money or capital, paid at agreed intervals by the user, commonly expressed as an annual percentage of outstanding principal.

Interest Method

(1) Under the interest method of amortization, an amount of interest equal to the carrying amount of the investment times the effective interest rate is calculated for each accounting period. This calculated interest is the effective interest of the investment (referred to as “effective yield” in some literature). The effective interest is compared with the stated interest of the investment. (The stated interest is the interest that is payable to the investor according to the stated interest rate.) The difference between the effective interest and the stated interest is the amount by which the discount or the premium should be amortized (i.e., reduced) for the accounting period. (2) A method used to amortize the premium or discount of an investment in bonds, or, as used in SFFAS 2, to amortize the subsidy cost allowance of direct loans. Under this method, the amortization amount of the subsidy cost allowance equals the effective interest minus the nominal interest of the direct loans times the effective interest rate (the discount rate). The

nominal interest equals the nominal amount (face amount) of the direct loans times the stated interest rate (the rate stated in the loan agreements). [Special Term from SFFAS 2]

Interest Rate

The price charged per unit of money borrowed per year, or other unit of time, usually expressed as a percentage.

Intergenerational Equity

Intergenerational equity refers to the extent that different age groups are required to assume the financial burdens for services provided to other age groups.

Internal Control

“Internal control” is a process, effected by an agency’s management and other personnel, designed to provide reasonable assurance that the objectives of the agency are being achieved in the following categories:

- Effectiveness and efficiency of operations including the use of the entity’s resources.
- Reliability of financial reporting, including reports on budget execution, financial statements, and other reports for internal and external use.
- Compliance with applicable laws and regulations. Internal controls consist of the control environment, risk assessment, control activities, information and communication, and monitoring. A necessary implication or subset of these objectives is the safeguarding of agency assets against unauthorized acquisition, use, or disposition.

Consequently, the definition of internal control, as it relates to safeguarding assets can be extended to include processes, effected by an agency’s management and other personnel, designed to provide reasonable assurance regarding prevention of or prompt detection of unauthorized acquisition, use, or disposition of the agency’s assets.” (From *Standards for Internal Control in the Federal Government*, Exposure Draft, U.S. GAO, December 1997.)

Intragovernmental Fund

Revolving funds that conduct business-type operations primarily within and between Government agencies.

Intragovernmental Lease

An intragovernmental lease is a contract or agreement occurring within a consolidation entity or between two or more consolidation entities as defined in SFFAS 47, *Reporting Entity* whereby one entity (lessor) conveys the right to control the use of PP&E (the underlying asset) to another entity (lessee) for a period of time as specified in the contract or agreement in exchange for consideration. [FN: SFFAS 47, *Reporting Entity*, outlines the characteristics as a whole that an organization would have to be considered a consolidated entity (SFFAS 47 par. 38–42).]

Intragovernmental Leasehold Reimbursable Work Agreement

An agreement whereby one reporting entity (the provider-lessor) acquires, constructs, and/or alters an underlying asset that is or will be leased to another reporting entity (the customer-lessee), and the customer-lessee agrees to reimburse the provider-lessor for direct and indirect costs for the acquisition, construction, improvement, and/or alteration. The reimbursement of such acquisitions, construction, improvements, and/or alterations are beyond what may be included in the rent or tenant improvement allowances provided for in the lease agreement for the related underlying asset.

Inventory

Inventory is tangible personal property that is (1) held for sale, (2) in the process of production for sale, or (3) to be consumed in the production of goods for sale or in the provision of services for a fee.

Job Order Costing

A method of cost accounting that accumulates costs for individual jobs or lots. A job may be a service or manufactured item, such as the repair of equipment or the treatment of a patient in a hospital.

Land

Land is the solid part of the surface of the earth. Excluded from the definition of land are the natural resources (that is, depletable resources such as mineral deposits and petroleum; renewable resources such as timber, and the outer-continental shelf resources) related to land.

Land Acquired for or in Connection with Other General PP&E

Land acquired with the intent to construct general PP&E and land acquired in combination with general PP&E, including not only land used as the foundation, but also adjacent land considered to be the general PP&E's common grounds.

Land Held for Disposal Acres of or Exchange

Land for which the entity has satisfied the statutory disposal authority requirements specific to the land in question. Disposal includes conveyances of federal land to non-federal entities not limited to sale, transfer, exchange, lease, public-private partnership, and donation or any combination thereof.

Last-in, First-out (LIFO)

A cost flow assumption; the last goods purchased are assumed to be the first goods sold.

Land Rights

Interests and privileges held by the entity in land owned by others, such as leaseholds, easements, water and water power rights, diversion rights, submersion rights, rights-of-way, mineral rights, and other like interests in land. Land rights such as easements or rights-of-way that are for an unspecified period of time or unlimited duration are considered permanent land rights. Temporary land rights are those land rights that are for a specified period of time or limited duration.

Latest Acquisition Cost (LAC) Method

A method that provides that all like units that are held be valued at the invoice price of the most recent like item purchased, less any discounts, plus any additional costs incurred to bring the item to a form and location suitable for its intended use.

Latest Acquisition Cost

Includes all amounts, except interest, paid to a vendor to acquire an item.

Lease

A lease is a contract or agreement whereby one entity (lessor) conveys the right to control the use of property, plant, and equipment (PP&E) (the underlying asset) to another entity (lessee) for a period of time as specified in the contract or agreement in exchange for consideration.

Lease Concessions

Lease concessions are rent discounts made by the lessor to entice the lessee to sign a lease. Lease concessions include rent holidays/free rent periods, reduced rents, or commission credits.

Lease Incentives

Lease incentives include lessor payments made to or on behalf of the lessee to entice the lessee to sign a lease. Lease incentives may include up-front cash payments to the lessee; for example, moving costs, termination fees to lessee's prior lessor, or lessor's assumption of the lessee's lease obligation under a different lease with another lessor.

Leasehold Improvements

Leasehold improvements are additions, alterations, remodeling, renovations or other changes to a leased property that either extend the useful life of the existing property or enlarge or improve its capacity and are paid for (financed) by the lessee.

Legacy Entity

An entity from which a smaller entity or specific function is being transferred. (Technical Bulletin 2003-1)

Lessor Improvements

Lessor improvements are additions, alterations, remodeling, renovations or other changes to a leased property that either extend the useful life of the existing property or enlarge or improve its capacity and are paid for (financed) by the lessor rather than by the lessee.

Level of Utilization

The portion of the usable capacity currently being used.

Liability

For Federal accounting purposes, a probable future outflow or other sacrifice of resources as a result of past transactions or events.

Liability for Losses on Remaining Coverage

Is an accrued obligation to beneficiaries attributable to coverage of insured events anticipated to occur after the end of the reporting period through the open arrangement period.

Life-cycle Costing

An acquisition or procurement technique which considers operating, maintenance, and other costs in addition to the acquisition cost of assets.

Life Insurance Programs

Cover the risk of loss from death of individuals involved in exchange transactions as defined in SFFAS 7.

Liquidating Account

The budget account that includes all cash flows to and from the government resulting from pre-1992 direct loans or loan guarantees (those originally obligated or committed before Oct. 1, 1991), except those pre-1992 direct loans and loan guarantees that have been directly modified and transferred to a financing account. (See OMB *Circular A-11*)

Loan Guarantee

Any guarantee, insurance, or other pledge with respect to the payment of all or part of the principal or interest on any debt obligation of a nonfederal borrower to a nonfederal lender but does not include the insurance of deposits, shares, or other withdrawable accounts in financial institutions. (OMB *Circular A-11*)

Loan Guarantee Commitment

A binding agreement by a federal agency to make a loan guarantee when specified conditions are fulfilled by the borrower, the lender, or any other party to the guarantee agreement. (OMB *Circular A-11*)

Loss

Any expense or irrecoverable cost, often referred to as a form of nonrecurring charge, an expenditure from which no present or future benefit may be expected.

Long-term Assumptions

Assumptions are considered long-term if the underlying event about which the assumption is made will not occur for five years or more. If the event is one of a series of events the entire series should be considered the event and, thus, the payment may commence within one year but would be required to extend at least five years. Otherwise, the asset or liability would be classified as short-term.

Lower Of Cost Or Market

A valuation rule that recognizes impairment of asset values but avoids anticipated gains. The rule is typically applied to individual items or groups of like items, such as inventory or marketable securities. In this rule, "cost" refers to historical cost and "market" refers to the current replacement cost by purchase or production.

Maintenance

The act of keeping fixed assets in usable condition. It includes preventive maintenance, normal repairs, replacement of parts and structural components, and other activities needed to preserve the asset so that it continues to provide acceptable services and achieves its expected life. Maintenance excludes activities aimed at expanding the capacity of an asset or otherwise upgrading it to serve needs different from, or significantly greater than, those originally intended.

Managerial Cost Accounting System

The organization and procedures, whether automated or not, and whether part of the general ledger or stand-alone, that accumulates and reports consistent and reliable cost information and performance data from various agency feeder systems. The accumulated and reported data enable management and other interested parties to measure and make decisions about the agency's/segment's ability to improve operations, safeguard assets, control its resources, and determine if mission objectives are being met.

Mandatory Spending

"Mandatory spending" includes entitlement authority (for example, Social Security and Medicare and payment of interest on the national debt). Congress controls mandatory spending by controlling eligibility and setting benefit and payment rules, rather than by annual appropriation acts. For additional information, see *A Glossary of Terms Used in the Federal Budget Process*, [GAO-05-734SP](#).

Marketable Treasury Securities

Debt securities, including Treasury bills, notes, and bonds, that the U.S. Treasury offers to the public and are traded in the marketplace. Their bid and ask prices are quoted on securities exchange markets.

Market-based Treasury Securities

Treasury securities issued to governmental accounts that are not traded on any securities exchange but mirror the prices of marketable securities with similar terms. (See *Treasury Financial Manual* 2-4100, Federal Agencies' Financial Reports, Exhibit No. 3.)

Market Value

(1) The estimated amount that can be realized by disposing of an item through arm's length transactions in the marketplace; the price (usually representative) at which bona fide sales have been consummated for products of like kind, quality, and quantity in a particular market at any moment of time. (2) For investments in marketable securities, the term refers to the value of such securities determined by prices quoted on securities exchange markets multiplied by the number of bonds or shares held in an investment portfolio.

Measurable

Can be determined with reasonable certainty or is reasonably estimable.

Measurement Approach

The measurement approach is how an asset or liability is measured in periods after initial recording-i.e., at the historical cost or initial transaction amount (with subsequent adjustments for amortization, depreciation, or depletion, if applicable) or at an amount, such as fair value, measured at each financial statement date.

Measurement Attribute

The measurement attribute (or measurement basis) is a measurable characteristic of an asset or liability, such as its fair value or settlement amount.

Medicare

A national, federally administered health insurance program authorized in 1965 to cover the cost of hospitalization, medical care, and some related services for most people over age 65, people receiving Social Security Disability Insurance payments for two years, and people with End-Stage Renal Disease. Medicare consists of two separate but coordinated programs: Part A, Hospital Insurance (HI) and Part B, Supplementary Medical Insurance (SMI). All persons entitled to HI are eligible to enroll in the SMI program on a voluntary basis by paying a monthly premium. Health insurance protection is available to Medicare beneficiaries without regard to income.

Military Missions

Functions performed by the Department of Defense or its component entities to prepare for the effective pursuit of war and military operations short of war; to conduct combat, peacekeeping, and humanitarian military operations; and to support civilian authorities during civil emergencies.

Model

A representation in mathematical symbols (or at least graphically) that depicts a formulated theory about the relationship among measurements of some phenomenon that varies. A model includes both cash flow assumptions and model assumptions.

Modeling

The process of developing and selecting an appropriate set of cash flows and model which generally have two aspects: (1) a choice of a general mathematical function (equation) describing a basic shape or process and (2) a choice of the model parameters that distinguish one specific shape from the general class of functional forms. The mathematical functions may take many forms. Commonly known examples of models are simple regression ($y=ax+b$), multiple regression ($y=ax+by+z$), and time series. Many other simple or more complex model forms related to cash flow modeling reform are possible.

Model Parameters

The values that identify a unique model from the general form. For example, $y=2x+3$ has parameters $a=2$ and $b=3$ for the simple regression model class. Note that “model parameter” is sometimes used in credit reform documents in lieu of the more appropriate term “input variable in the spreadsheet.”

Modification

A federal government action, including new legislation or administrative action, that directly or indirectly alters the estimated subsidy cost and the present value of outstanding direct loans (or direct loan obligations), or the liability of loan guarantees (or loan guarantee commitments). Direct modifications are actions that change the subsidy cost by altering the terms of existing contracts or by selling loan assets. Indirect modifications are actions that change the subsidy

cost by legislation that alters the way in which an outstanding portfolio of direct loans or loan guarantees is administered. The term modification does not include subsidy cost reestimates, the routine administrative workouts of troubled loans, and actions that are permitted within the existing contract terms.

Modification Adjustment Transfer

A non-expenditure transfer from a financing account to the Treasury, or vice versa, to offset the difference between the cost of modification of direct loans (or loan guarantees) and the change in the book value of direct loans (or loan guarantee liabilities). (See also OMB *Circular A-11*)

Moving Average

An inventory costing method used in conjunction with a perpetual inventory system. A weighted average cost per unit is recomputed after every purchase. Goods sold are costed at the most recent moving average cost.

Multi-use Heritage Assets

Heritage assets whose predominant use is general government operations.

Negative Subsidy Account

the budget account for the receipt and/or expenditure of amounts paid from the financing account when there is a negative subsidy for the original estimate or a downward reestimate (not necessarily used for mandatory programs).

Net Cost Of Operations

Total costs incurred by the reporting entity less exchange revenue earned during the period. This is the “bottom line” of the statement of net costs. [See SFFAC 2, Entity and Display, pars. 86-99 and Appendix 1-B; and OMB Bulletin 01-09, Form and Content, Section 4.8, “Net Cost of Operations.”]

Net Level Premium Reserve

The excess, if any, of the present value of future guaranteed death endowment benefits over the present value of future net premiums. The net level premium reserve should be calculated based on the dividend fund interest rate, if determinable, and mortality rates guaranteed in calculating the cash surrender values described in the contracts. (AICPA Statement of Position 95-1)

Net Operating Revenue (Or Cost)

At the CFR level, the difference between the net cost of operations and, essentially, all non-exchange revenue. (SFFAS 24)

Net Realizable Value

The estimated amount that can be recovered from selling, or any other method of disposing of an item less estimated costs of completion, holding and disposal.

Nominal Dollar

The dollar value assigned to a good or service in terms of prices current at the time of the good or service is required. This contrasts with the value assigned to a good or service measured in constant dollars.

Nominal (Or Face Or Par) Value Or Amount

The amount of a bond, note, mortgage, or other security as stated in the instrument itself, exclusive of interest or dividend accumulations. The nominal amount may or may not coincide with the price at which the instrument was first sold, its present market value, or its redemption price. Often referred to as the stated value.

Nonexchange Revenue

Inflows of resources to the Government that the Government demands or that it receives by donations. The inflows that it demands include taxes, duties, fines, and penalties.

Nonexchange Transaction

A transaction that arises when one party to a transaction receives value without giving or promising value in return or one party to a transaction gives or promises value without receiving value in return.

Nonexchange Transaction Insurance Programs

Cover the risk of loss from adverse events through nonexchange transactions as defined in SFFAS 7.

Non-Federal Individuals or Entities

Individuals and entities acting in their private capacities outside of the authority and control of the Federal Government. Federal employees are "non-Federal individuals" when acting in their private capacities, e.g., with respect to their private retirement assets managed by a Federal plan.

Nonfederal Physical Property

Physical properties financed by grants from the Federal Government, but owned by state and local governments.

Nonfriable ACM

refers to any material containing more than 1 percent asbestos as determined using the method specified in appendix E, subpart E, 40 CFR part 763, section 1, Polarized Light Microscopy, that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure. (40 CFR § 61.141)

Non-fungible tokens

Non-fungible tokens (NFTs) are crypto assets that are not interchangeable. Each NFT is unique and often contains a pointer to a digital object, such as an image file.

Nonrecognized events

Subsequent events that provide evidence with respect to conditions that did not exist at the end of the reporting period but arose subsequent to that date.

Non-Valued Fiduciary Assets

Fiduciary assets for which required disclosure does not include dollar values. Non-valued fiduciary assets may include land held in trust. Fiduciary non-valued assets should be disclosed in accordance with generally accepted accounting principles. [FN: In the future, the Board may require dollar values for certain categories. In the event of such a change in accounting principles, the affected categories would no longer be included in non-valued fiduciary assets.]

Normal (or Service) Cost

The normal cost component of expense is the actuarial present value of the future cash outflows for which a reporting entity becomes obligated during the reporting period. For pensions, ORB, and OPEB, it represents that portion of the actuarial present value of benefits and expenses attributed to the valuation year by the benefit plan formula to work in covered employment or other service rendered by the participant in the period. The normal cost is a component of the annual expense and liability of the program and is not affected by the funded status of the plan.

Obligated Balances

The net amount of obligations in a given account for which payment has not yet been made. (JFMIP Standardization Project)

Obligation

Following the enactment of budget authority and the completion of required apportionment action, Government agencies incur obligations to make payments. Obligations are binding agreements that will result in outlays immediately or in the future. Obligations include, for example: current liabilities for salaries, wages, and interest; contracts for the purchase of supplies and equipment, construction, and the acquisition of office space, buildings, and land; and other arrangements requiring the payment of money. [See *FY 2003 Budget of the United States Government: Analytical Perspectives*, "Budget System and Concepts and Glossary" (Obligations Incurred).]

Obligations

Amounts of orders placed, contracts awarded, services received, and other transactions occurring during a given period that would require payments during the same or a future period. (JFMIP Standardization Project)

Offsetting Collections

Collections from the public that result from business-type or market oriented activities and collections from other Government accounts. These collections are deducted from gross disbursements in calculating outlays, rather than counted in governmental receipts. Some offsetting collections are credited directly to appropriation or fund accounts; others, called offsetting receipts, are credited to receipt accounts. The authority to spend offsetting collections is a form of budget authority. (OMB, *The Budget System and Concepts*)

Offsetting Receipts

Offsetting receipts are a subset of offsetting collections. (See *collections*.)

OMB Credit Subsidy Model

Computer software developed by OMB for discounting cash flows in estimating credit subsidies. It uses agency cash flow inputs to compute the net present value at the point of disbursement and the subsidy rate associated with those cash flows.

Open Group Population

Those persons who are participating or who eventually will participate, during a specified period, in a social insurance program as contributors or beneficiaries. They include, for example, current workers, retirees, survivors, disabled persons, and new participants entering the workforce or becoming beneficiaries, including those who will be born or immigrate to the United States in the future.

Opening Balances

Account balances that exist at the beginning of the reporting period. Opening balances are based upon the closing balances of the prior period and reflect the effects of transactions and events of prior periods and accounting policies applied in the prior period. Opening balances also include matters requiring disclosure that existed at the beginning of the period, such as contingencies and commitments. [Adopted from AU-C 510, Opening Balances - Initial Audit Engagements, Including Reaudit Engagements (AICPA Professional Standards)]

Operational land

Land or land rights predominantly used for general or administrative purposes. [See SFFAS 6 paragraph 20D. for the operational land sub-category functions].

Operating Materials and Supplies

Operating Materials and Supplies consist of tangible personal property to be consumed in normal operations. Excluded are: (1) goods that have been acquired for use in constructing real property or in assembling equipment to be used by the entity, (2) stockpile materials, (3) goods held under price stabilization programs, (4) foreclosed property, (5) seized and forfeited property, and (6) inventory.

Opportunity Cost

The value of the alternatives foregone by adopting a particular strategy or employing resources in a specific manner. Also called Alternative Cost or Economic Cost.

Original Classification Authority

Is an individual authorized in writing, either by the President, the Vice President, or by agency heads or other officials designated by the President, to classify information in the first instance.

Original Discount Rate

The discount rate originally used to calculate the present value of direct loans or loan guarantee liabilities, when the direct or guaranteed loans were disbursed. [*Special Term from SFFAS 2*]

Other Accompanying Information

Information that accompanies basic information and required supplementary information, but is not required by a body that establishes GAAP.

Other Financing Sources

Inflows of resources that increase net position of a reporting entity during the reporting period but that are not revenues or gains. They include appropriations used, transfers of assets from other Government entities, and financing imputed with respect to any cost subsidies. Financing outflows may result from transfers of the reporting entity's assets to other Government entities or from exchange revenues earned by the entity but required to be transferred to the General Fund or another Government entity. Unexpended appropriations are recognized separately in determining net position but are not financing sources until used.

Other Postemployment Benefits (OPEB)

Forms of benefits provided to former or inactive employees, their beneficiaries, and covered dependents outside pension or ORB plans.

Other Retirement Benefits (ORB)

Forms of benefits, other than retirement income, provided by an employer to retirees. Those benefits may be defined in terms of specified benefits, such as health care, tuition assistance, or legal services, which are provided to retirees as the need for those benefits arises, such as certain health care benefits. Or they may be defined in terms of monetary amounts that become payable on the occurrence of a specified event, such as life insurance benefits. (Financial Accounting Standards Board, Statement of Financial Accounting Standard No. 106, *Employers' Accounting for Postretirement Benefits Other than Pensions*)

Outcome

Defined in broad terms in SFFAC No. 1 (para. 204-208) as accomplishments or results that occur (at least partially) because of the service efforts of Government entities. Some authorities use terms like “impact,” “effect,” or “results” to distinguish the change in outcomes specifically caused by the Government activity from the total change in conditions that can be caused by many factors.

Outlay

The issuance of checks, disbursement of cash, or electronic transfer of funds made to liquidate a Federal obligation. Outlays also occur when interest on the Treasury debt held by the public accrues and when the Government issues bonds, notes, debentures, monetary credits, or other cash-equivalent instruments in order to liquidate obligations. Also, under credit reform, the credit subsidy cost is recorded as an outlay when a direct or guaranteed loan is disbursed. (GAO *Budget Glossary*)

Output Measure

A tabulation, calculation, or recording of activity or effort that can be expressed in a quantitative or qualitative manner. It shall have two key characteristics: 1) it shall be systematically or periodically captured through accounting or management information system, and 2) there shall be a logical connection between the reported measures and the program’s purpose.

Ownership Interest

The possession of substantially all of the benefits and risks incident to ownership.

Partial impairment

less than full or total impairment.

Payroll withholdings

Amounts that are withheld from payment of wages to an employee and subsequently remitted to other payees, such as Federal, State or local governments; or health or life insurance providers, on behalf of the employee.

Performance Measurement

A means of evaluating efficiency, effectiveness, and results. A balanced performance measurement scorecard includes financial and nonfinancial measures focusing on quality, cycle time, and cost. Performance measurement should include program accomplishments in terms of outputs (quantity of products or services provided, e.g., how many items efficiently produced?) and outcomes (results of providing outputs, e.g., are outputs effectively meeting intended agency mission objectives?). See Statement of Federal Financial Accounting Concepts No. 1, *Objectives of Federal Financial Reporting*, para. 192.

Policy Assumptions

Policy assumptions address the factors under the direct control of the federal government concerning the taxes and other receipts to be received by the federal government and the public services to be provided by the federal government. Policy assumptions address projected spending rules for both mandatory and discretionary spending as well as the framework for assessing taxes and fees.

Post-1991 Direct Loans

Direct loans obligated after September 30, 1991. [*Special Term from SFFAS 2*]

Post-1991 Loan Guarantees

Loan guarantees committed after September 30, 1991. [*Special Term from SFFAS 2*]

Post-modification Liability

The present value of the net cash outflows of the loan guarantees estimated at the time of modification under the post-modification terms, and discounted at the interest rate applicable to the time when the modification occurs on marketable Treasury securities that have a comparable maturity to the remaining maturity of the guaranteed loans under post-modification terms (simply stated, the post-modification terms at the current rate). (*Special Term from SFFAS 19*)

Post-modification Value

The present value of the net cash inflows of direct loans estimated at the time of modification under post-modification terms and discounted at the interest rate applicable to the time when the modification occurs on marketable Treasury securities that have a comparable maturity to the remaining maturity of the direct loans under post-modification terms (simply stated, the post-modification terms at the current rate). (*Special Term from SFFAS 19*)

Predominant Use of Land

The major or primary current use of an asset during the reporting period and does not include incidental or infrequent uses of the asset. An asset's predominant use should be consistent with the entity's authorizing legislation but may not always be consistent with the original intent or reason why the asset was initially acquired.

Premiums

Is a general term used to refer to exchange revenue billed by insurance programs. Programs may refer to their exchange revenue by various terms, including but not limited to premiums, assessments, and/or fees.

Pre-modification Value

The present value of the net cash inflows of direct loans estimated at the time of modification under pre-modification terms and discounted at the interest rate applicable to the time when the modification occurs on marketable Treasury securities that have a comparable maturity to the remaining maturity of the direct loans under pre-modification terms (simply stated, the pre-modification terms at the current rate). (*Special Term from SFFAS 19*)

Pre-modification Liability

The present value of the net cash outflows of loan guarantees estimated at the time of modification under the pre-modification terms and discounted at the interest rate applicable to the time when the modification occurs on marketable Treasury securities that have a comparable maturity to the remaining maturity of the guaranteed loans under pre-modification terms (simply stated, the pre-modification terms at the current rate). (*Special Term from SFFAS 19*)

Pre-1992 Loan Guarantees

Loan guarantees committed before October 1, 1991. [*Special Term from SFFAS 2*]

Pre-1992 Direct Loans

Direct loans obligated before October 1, 1991. [*Special Term from SFFAS 2*]

Premium Deficiency

A condition under which a liability for future policy benefits using current conditions exceeds the liability for future policy benefits using contract conditions. In such cases, the difference should be recognized as a charge to operations in the current period.

Present Value (PV)

The value of future cash flows discounted to the present at a certain interest rate (such as the reporting entity's cost of capital), assuming compound interest. (Adapted from Kieso and Weygandt, *Intermediate Accounting*, 7th ed., page 264.)

Present value represents the amount of money that if invested today would grow to a specified amount in the future. Present value is an adjusted amount that takes the "time value of money" into consideration. The "time value of money" is illustrated by a question such as: "At ten percent interest (compounded annually), how much do I need to put into the bank today in order to have \$110 one year from today?" The amount you would need today would be \$100. Therefore, the present value of \$110 in this example would be \$100.

Principal Financial Statements

See SFFAC 2, paragraph 74, for a listing of the financial statements and other information that a financial report should include. The FASAB considers principal financial statements an essential part of a reporting entity's financial reporting, and therefore recommends authoritative guidelines for the measurement and presentation of the information. [SFFAC 2, *Entity and Display*, paragraph 71, footnote 12.] (See also Basic Financial Statements)

Prior Service Costs

The cost of retroactive benefits granted in a plan amendment or accomplished through administrative change, legislation, or other means. In some cases there will not be a formal "plan" per se to amend, for example, certain postemployment benefits, and a program is amended through other means than a formal "amendment."

Privacy coins

Privacy coins are cryptocurrencies with enhanced features to reduce traceability.

Probable

That which can reasonably be expected or believed to be more likely than not on the basis of available evidence or logic but which is neither certain nor proven.

Process

The organized method of converting inputs (people, equipment, methods, materials, and environment), to outputs (products or services). The natural aggregation of work activities and tasks performed for program delivery.

Process Costing

A method of cost accounting that first collects costs by processes and then allocates the total costs of each process equally to each unit of output flowing through it during an accounting period.

Process Value Analysis

Tools and techniques for studying processes through customer value analysis. Its objective is to identify opportunities for lasting improvement in the performance of an organization. It provides an in-depth review of work activities and tasks, through activity analysis, which aggregate to form processes for agency program delivery. In addition to activity-based costing, quality and cycle time factors are studied for a complete analysis of performance measurement. Each activity within the process is analyzed, including whether or not the activity adds value for the customer.

Product

Any discrete, traceable, or measurable good or service provided to a customer. Often goods are referred to as tangible products, and services are referred to as intangible products. A good or service is the product of a process resulting from the consumption of resources.

Program Account

The budget account into which an appropriation to cover the subsidy cost of a direct loan or loan guarantee program is made and from which such cost is disbursed to the financing account. Usually, a separate amount for administrative expenses is also appropriated to the program account. (OMB *Circular A-11*)

Projected Unit Credit Actuarial Method

A method under which the projected benefits of each individual included in an actuarial present valuation are allocated by a consistent formula to valuation years. The actuarial present value of benefits allocated to the valuation year is called the normal cost. The actuarial present value of benefits allocated to all periods before a valuation year is called actuarial liability. (Actuarial Standard of Practice)

Projection

The term "projection" refers to prospective financial information, including but not limited to prospective financial statements, based on one or more hypothetical assumptions of sets of assumptions. The hypothetical assumptions relate to future conditions and actions that may

occur, but which are not necessarily deemed probable (unlike the case with forecasts). Both forecasts and projections may contain a range.

As used in Statement of Federal Financial Accounting Standards 36, Long-Term Projections for the U.S. Government, a projection is the calculation of future data based upon the application of trends to present data. Projections of deficits, or surpluses, and debt are a central feature of Fiscal Sustainability Reporting. Projections are not forecasts or predictions; they are designed to depict results that may occur under various conditions—for example, what if current policy without change regarding federal government public services and taxation are continued in the future? Projections are useful in order to display alternative future scenarios, but it is important to clearly explain the nature of the information being presented.

Property, Detained

Property taken into custody temporarily for purposes of preserving the status quo (items in or around a crime scene) or to protect the government from liability for loss (luggage of an arrested traveler, vehicle of an arrested drunk driver), or determining Customs admissibility, with the intent to release the property as soon as it is no longer necessary to preserve the status quo or the owner can assume responsible custody. This action is not a seizure under the law and thus detained property is not considered seized property.

Property, Embargoed

Property that may be legal to possess or own in the U.S., but whose import/export is prohibited (e.g., Iranian carpets, Cuban cigars).

Property, Forfeited

Property of any type (currency, monetary interests, realty, intangible property, and tangible personal property) for which title has vested in the Federal government, over any other asserted legal interest in the property, by exercise of a legal forfeiture process.

Property, Plant, And Equipment, General

PP&E used to provide government services or goods. The cost of general PP&E is capitalized, i. e. recorded as assets on the balance sheet. For detailed characteristics of and accounting for general PP&E, see paragraphs 23 through 34, SFFAS No. 6.

Property, Prohibited

Property for which no private right of ownership is recognized under U.S. law, or of which mere private possession is prohibited under U.S. law. Examples include certain controlled substances, counterfeit currency, counterfeit monetary and financial instruments, and certain firearms. This property is a type of seized property.

Property, Seized

Property of any type (currency, monetary interests, realty, intangible property, and tangible personal property) over which the federal government has exercised its power under law to assert possession and control in opposition to any other party asserting a legal interest in the property.

Seized for evidence - Property the federal government has seized for the sole purpose of preserving and protecting the property for possible use in civil or criminal judicial proceeding. The expectation is that the property will be returned to its rightful owners upon conclusion of the judicial proceedings. However, circumstances can allow the status of property seized for evidence to change to property seized for forfeiture.

Seized for forfeiture - Property the federal government has seized for the purpose of transferring title to the federal government through exercise of a legal forfeiture process. This includes property seized for forfeiture that also may be used in an evidentiary proceeding.

Seized for tax purposes - Property the federal government has seized for the purpose of satisfying a tax liability to the federal government through exercise of a legal tax enforcement process. This includes property seized for tax purposes that also may be used in an evidentiary proceeding.

Seized for other purposes - Property the federal government has seized for purposes other than for evidence, for forfeiture, or for tax purposes. Examples of property in this category include seizures for satisfaction of debts owed the government, for protection of public safety or navigation (adrift vessel), and for preservation of environmental conditions (sinking vessel). This includes property seized for these other governmental purposes that also may be used in an evidentiary proceeding.

Proprietary Accounting

Also known as financial accounting, a process that supports accrual accounting and financial reporting that attempts to show actual financial position and results of operations by accounting for assets, liabilities, net position, revenues, and expenses. (See Tierney, Cornelius E., *Handbook of Federal Accounting Practices*, Reading Massachusetts: Addison-Wesley, 1982:122).

Provider-lessor

The reporting entity providing the acquisition/construction of, or improvements and/or alterations to, the underlying asset to the customer-lessee on a reimbursable basis. (Technical Bulletin 2023-1).

Public Domain Land

Land that was originally ceded to the United States by treaty, purchase, or conquest in contrast to acquired lands, which have been purchased by, given to, exchanged with, or transferred through condemnation proceedings to the federal government.

Public-Private Partnerships

Federal public-private partnerships (P3s) are risk-sharing arrangements or transactions with expected lives greater than five years between public and private sector entities. Such arrangements or transactions provide a service or an asset for government and/or general public use where in addition to the sharing of resources, each party shares in the risks and rewards of said arrangements or transactions.

P3 Structural Arrangement

P3s that are external to the government sponsor's or entity's operations and often involve the creation of an SPV, Trust, or Limited Partnership (LP), and other such arrangements. For example, military base housing.

P3 Transactional Arrangement

P3s that are internal to the government sponsor's or entity's operations. For example, work-share programs not involving the creation of a SPV, Trust, or LP, etc.

Public Services

In federal financial reporting, "public services" refers to all goods, benefits and services provided by the government. Federal public services include but are not limited to the provision of goods, cash (such as Social Security benefits) or other financial benefits (such as loan guarantees), as well as national defense, national security, transportation safety and the operation of national parks.

Purchases Method

A method of accounting for goods, such as materials and supplies, in which the acquisition cost is recognized as an expense upon purchase of the goods rather than upon their use.

Railroad Retirement Program

A federal program somewhat similar to Social Security, designed for workers in the railroad industry. The provisions of the Railroad Retirement Act provide for a system of coordination and financial interchange between the Railroad Retirement program and the Social Security program.

Reappropriation

Enacted legislation that continues the availability of unexpended funds that expired or would otherwise expire. (JFMIP Standardization Project)

Reasonably Estimable

The ability to reliably quantify in monetary terms the outflow of resources that will be required. (TR 2)

Receipts

Collections that result from the Government's exercise of its sovereign power to tax or otherwise compel payment, and gifts of money to the Government.

Receivership

Receivership is the legal procedure for winding down the affairs of an insolvent institution.

[Managing the Crisis: The FDIC and RTC Experience, Appendix B - List of Abbreviations and Glossary of Terms; available online at <http://www.fdic.gov/bank/historical/managing/>; last accessed October 11, 2012.]

Receiving Entity

An entity to which functions are transferred. (Technical Bulletin 2003-1)

Recognition (Or Recognize)

The term recognition bears the same meaning as used by the Financial Accounting Standards Board in its conceptual statements. Recognition is the process of formally recording or incorporating an item into the financial statements of an entity as an asset, liability, revenue, expense, or the like. A recognized item is depicted in both words and numbers, with the amount included in the statement totals. Recognition comprehends both initial recognition of an item and recognition of subsequent changes in or removal of a previously recognized item. (Financial Accounting Standards Board, Statement of Financial Accounting Concepts No. 5, *A Replacement of FASB Concepts Statement No. 3*, para. 6.)

Recognize

To determine the amount, timing, classification, and other conditions precedent to the acceptance and entry of a transaction. Hence, to give expression on the books of account; said of transactions.

Recognized events

Subsequent events that provide additional evidence with respect to conditions that existed at the end of the reporting period and affect the estimates inherent in the process of preparing basic information and RSI.

Record

To give expression to a transaction on (or in) the books of account; to enter.

Recourse

The rights of a holder in due course of a financial instrument (such as a loan) to force the endorser on the instrument to meet his or her legal obligations for making good the payment of the instrument if dishonored by the maker or acceptor. The holder in due course must have met the legal requirements of presentation and delivery of the instrument to the maker of a note or acceptor of a draft and must have found that this legal entity has refused to pay for or defaulted in payment of the instrument.

Recoveries

Include monies: returned from another agency through an indemnification agreement, a third party or commercial insurance company to repay all or part of a loss originally paid for by the program, recouped from the sale of salvageable parts through acquisition and disposal or salvage of assets, and/or received from adjustments to previously paid insurance claims.

Reestimate

Refers to estimates of the subsidy costs performed subsequent to their initial estimates made at the time of a loan's disbursement.

Regulated ACM

Refers to (a) Friable ACM, (b) Category I nonfriable ACM that has become friable, (c) Category I nonfriable ACM that will be or has been subjected to sanding, grinding, cutting, or abrading, or

(d) Category II nonfriable ACM that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder by the forces expected to act on the material in the course of demolition or renovation operations regulated by this subpart. (40 CFR § 61.141)

Reimbursements

Sums received as payment or advance payment for goods or services furnished either to the public or to another federal government account. If authorized by law, these sums are credited directly to specific appropriation and fund accounts. These amounts are deducted from the total obligations incurred (and outlays) in determining net obligations (and outlays) for such accounts. (Budget Glossary) Reimbursements are offsetting collections. (See *offsetting collections*.)

Related Parties

Organizations are considered to be related parties in the GPFFR if the existing relationship or one party to the existing relationship has the ability to exercise significant influence over the other party's policy decisions. Relationship, as used in this context, refers to material transactions or events involving both parties.

Repairable

An inventory item that is expected to be repaired when broken or worn out.

Replacement Cost

The cost to reproduce an inventory item by purchase or manufacture. In lower of cost or market computations, the term "market" means replacement cost, subject to ceiling and floor limitations.

Replacement Cost (SFFAC 7)

Replacement cost is the amount required for an entity to replace the remaining service potential of an existing asset in a current transaction at the reporting date, including the amount that the entity would receive from disposing of the asset at the end of its useful life.

Reporting Entity

Reporting entities are organizations that issue a GPFFR because either there is a statutory or administrative requirement to prepare a GPFFR or they choose to prepare one. The term "reporting entity" may refer to either the government-wide reporting entity or a component reporting entity.

Statement of Federal Financial Accounting Concepts (SFFAC) 2 provides criteria for an entity to be a reporting entity. The criteria focus on whether:

- a. An entity's management is responsible for controlling and deploying resources, producing outputs and outcomes, and executing the budget or a portion thereof (assuming that the entity is included in the budget), and is held accountable for the entity's performance.
- b. An entity's financial statements would provide a meaningful representation of operations and financial condition.
- c. An entity's financial information could be used by interested parties to help them make resource allocation and other decisions and hold the entity accountable.

Required Information

Information that consists of basic and required supplementary information.

Required Supplementary Information

Information that a body that establishes GAAP requires to accompany basic information. When an auditor is engaged to audit an entity's financial statements, basic information is subject to testing for fair presentation in conformity with GAAP. However, RSI for federal entities is unaudited but subject to certain procedures specified by Generally Accepted Government Auditing Standards for RSI.

Responsibility Segment

A significant organizational, operational, functional, or process component which has the following characteristics: (a) its manager reports to the entity's top management; (b) it is responsible for carrying out a mission, performing a line of activities or services, or producing one or a group of products; and (c) for financial reporting and cost management purposes, its

resources and results of operations can be clearly distinguished, physically and operationally, from those of other segments of the entity.

Responsibility Center

An organizational unit headed by a manager or a group of managers who are responsible for its activities. Responsibility centers can be measured as revenue centers (accountable for revenue/sales only), cost centers (accountable for costs/expenses only), profit centers (accountable for revenues and costs), or investment centers (accountable for investments, revenues, and costs).

Restatement (Of Direct Loans Or Loan Guarantees)

Refers to establishing a new book value of a direct loan or the liability of a loan guarantee.

Revenue

See "Exchange Revenue" and "Nonexchange Revenue."

Revenue Adjustment

A contra revenue account that is used to report reduction in revenue when realization is not probable (less likely than not). It includes, returns, allowances, and price redeterminations but not credit losses (due to the inability of the debtor to pay the established or negotiated price).

Revolving Fund

A fund consisting of permanent appropriation and expenditures of collections, from both the public and other Governmental agencies and accounts, that are earmarked to finance a continuing cycle of business-type operations. (OMB *Circular A-34*)

Risk Category

Subdivisions of a cohort of direct loans or loan guarantees into groups of loans that are relatively homogeneous in cost, given the facts known at the time of obligation or commitment. Risk categories will group all loans obligated or committed for a program during the fiscal year that share characteristics predictive of defaults and other costs. (OMB *Circular A-11*)

Risk-free Interest Rate

The rate on risk-free monetary assets that have maturity dates or durations that coincide with the period covered by the cash flows. See Time Value of Money below.

Security tokens

Security tokens are digital forms of financial instruments that represent ownership in another asset, such as real estate or equity in a company.

Seized Property

Seized property includes monetary instruments, real property and tangible personal property of others in the actual or constructive possession of the custodial agency.

Seizing Agency

The agency that seizes property as a part of its law enforcement activities.

Selling Expense (Cost)

Expenses incurred in selling or marketing, e.g., salaries, commissions, and promotion expenses.

Sensitive Items

Items that could be a hazard or threat to public safety or the economy in Federal custody that would cause discredit or embarrassment to the Federal government if it lost accountability over those items.

Service

An intangible product or task rendered directly to a customer.

Service Utility

The usable capacity that at acquisition was expected to be used to provide service.

Settlement Amount

Settlement amount is the amount at which an asset can be realized or a liability can be liquidated.

Short Term Lease

A short-term lease is a lease with a lease term of 24 months or less.

Social Security Act

The Social Security Act governs most operations of the Social Security program. The original Social Security Act is Public Law 74-271, enacted August 14, 1935. With subsequent amendments, the Social Security Act consists of 20 titles, of which four have been repealed. The OASDI program is authorized by Title II of the Social Security Act.

Social Insurance Programs

Income transfer programs financed by compulsory earmarked taxes and also, in certain cases, general revenues of the federal government. (Also see *separate definition of insurance and guarantees*).

Special Fund

Federal fund accounts for receipts earmarked for specific purposes and the associated expenditure of those receipts. (OMB, *The Budget System and Concepts*)

Special Purpose Vehicles (SPVs)

also commonly called Special Purpose Entities (SPEs), are entities created for a specific, limited and normally temporary purpose. An SPV can be a corporation, trust, partnership, limited-liability company or some type of Variable Interest Entity (VIE). They are often an integral part of public private partnerships because of their risk-containment nature of isolating participating entities from financial risk.

Specific Identification

An inventory system in which the seller identifies which specific items are sold and which remain in ending inventory.

Spreadsheets

Computer code, often a collection of programs, used to make calculations (e.g., cash flow estimates) according to the proposed models and assumptions. Spreadsheets are not models although the term “spreadsheet model” is sometimes used.

Stablecoins

Stablecoins are crypto assets that are backed by a portfolio of underlying assets and claimed to have a stable exchange value with these assets.

Standard Costing

A costing method that attaches costs to cost objects based on reasonable estimates or cost studies and by means of budgeted rates rather than according to actual costs incurred. The anticipated cost of producing a unit of output. A predetermined cost to be assigned to products produced. Standard cost implies a norm, or what costs should be. Standard costing may be based on either absorption or direct costing principles, and may apply either to all or some cost elements.

Standard Costs

Predetermined expected unit costs, which are acceptable for financial reporting purposes if adjusted periodically to reflect actual results.

State And Local Governments

State and local governments generally include: the 50 States and the District of Columbia; cities, counties, townships, school districts, special districts, public authorities, and other local governmental units as defined by the Bureau of the Census; and Puerto Rico, the Virgin Islands, and other US territories.

Stewardship

The Federal Government's responsibility for the general welfare of the nation in perpetuity.

Stewardship Investments

Items recognized as expense in calculating net cost, but meriting special treatment to highlight the substantial investment and long-term benefit of the expenses. This would include nonfederal physical property, human capital, and research and development.

Stewardship Land

Public domain and acquired land and land rights owned by the federal government intended to be held indefinitely. [See SFFAS 29 paragraph 33. for examples of stewardship land reserved, managed, planned, used, or acquired for.]

Stewardship Responsibilities

The projected financial impact on the Government of sustaining the current services that it provides pursuant to laws already enacted. The commitments and constraints reflected in “current services” are inherent in the tax and spending policies contained in current law.

Subsequent events

Events or transactions that affect the basic information or RSI that occur subsequent to the end of the reporting period but before the financial report is issued.

Subsidy Cost

The cost of a grant of financial aid, usually by a governmental body, to some person or institution for particular purposes. Credit subsidy cost is the estimated long-term cost to the government of direct loans or loan guarantees calculated on a net present value basis, excluding administrative costs. (Adapted from OMB *Circular A-11*) Direct loan subsidy cost is the estimated long-term cost to the government of direct loans calculated on a present value basis, excluding administrative costs. The cost is the present value of estimated net cash outflows at the time the direct loans are disbursed. The discount rate used for the calculation is the average interest rate (yield) on marketable Treasury securities of similar maturity to the loan, applicable to the time when the loans are disbursed. (Adapted from OMB *Circular A-11*) Loan guarantee subsidy cost is the estimated long-term cost to the government of loan guarantees calculated on a present value basis, excluding administrative costs. The cost is the present value of estimated net cash outflows at the time the guaranteed loans are disbursed by the lender. The discount rate used for the calculation is the average interest rate (yield) on marketable Treasury securities of similar maturity to the loan guarantees, applicable to the time when the guaranteed loans are disbursed. (Adapted from OMB *Circular A-11*)

Support Costs

Costs of activities not directly associated with production. Typical examples are the costs of automation support, communications, postage, process engineering, and purchasing.

Tax Expenditures

The Congressional Budget and Impoundment Control Act of 1974 (Public Law 93-344) defines tax expenditures as “revenue losses attributable to provisions of the Federal tax laws which allow a special exclusion, exemption, or deduction from gross income or which provide a special credit, a preferential rate of tax, or a deferral of tax liability.”

While the term “revenue losses” is used in the statutory definition, tax expenditures have traditionally been measured as reductions in federal tax revenues relative to normal baseline provisions of an individual and corporate income tax system, which were properly approved and authorized by the Congress to accomplish identified policy objectives, recognizing that federal tax revenues would be reduced.

Tax Gap

An estimate of taxes (including duties) that are unpaid because of noncompliance with existing laws and regulations.

Taxable Payroll

Taxable wages and taxable self-employment income. When multiplied by the combined employee-employer tax rate, it yields the total amount of taxes incurred by employees, employers, and the self-employed for work during the period.

Terminal Dividends

Dividends to policyholders calculated and paid upon termination of a contract, such as on death, surrender, or maturity. If the payment of terminal dividends is probable and the amount can be reasonably estimated, the liability should be recognized. AICPA Statement of Position 95-1.

Time Value of Money

The time value of money is represented by the rate on risk-free monetary assets that have maturity dates or durations that coincide with the period covered by the cash flows (risk-free interest rate). For present value computations denominated in nominal U.S. dollars, the yield curve for U.S. Treasury securities determines the appropriate risk-free interest rate. U.S. Treasury securities are deemed (default) risk free because they pose neither uncertainty in timing nor risk of default to the holder.

Title

The right to property; the means by which such right is established.

Total Cost Method

An accounting method that includes the actual acquisition cost of each item held plus the costs of any additions, improvements, alterations, rehabilitations, or replacements that extend the useful life of an asset.

Total (full) impairment

G-PP&E is no longer capable of providing service in the operations of the entity prior to the end of its estimated useful life.

Traceability

The ability to assign a cost directly to a specific activity or cost object by identifying or observing specific resources consumed by the activity or cost object.

Transaction

A particular kind of external event involving the transfer of something of value concerning two or more entities. The transfer may be a two way or one way flow of resources or of promises to provide resources. (Adapted from Financial Accounting Standards Board, *Statement of Financial Accounting Concepts No. 6*, Elements of Financial Statements)

Transferred Entity

An entity preparing stand-alone financial statements consolidated with a legacy entity's financial statements prior to transfer and with a receiving entity's financial statements after transfer. (Technical Bulletin 2003-1)

Transfers Between Appropriation/Fund Accounts

Occur when all or part of the budget authority in one account is transferred to another account when such transfers are specifically authorized by law. The nature of the transfer determines whether the transaction is treated as an expenditure transfer or a non-expenditure transfer. (JFMIP Standardization Project)

Treasury Warrant

An official document that the Secretary of the Treasury issues pursuant to law and that establishes the amount of monies authorized to be withdrawn from the central accounts that Treasury maintains. Warrants for currently unavailable special and trust fund receipts are issued when requirements for their availability have been met. (GAO *Budget Glossary*)

Trust Funds

The term "trust funds" is often colloquially used to refer to Trust Fund Accounts (see definition below). Although earmarked monies are predominantly in funds that are designated by law as trust funds, the meaning of the term "trust" in the Federal Government differs significantly from its meaning in the private sector. Whereas earmarked funds in the Federal Government are distinct from fiduciary activities, a trust in the private sector necessarily involves a fiduciary relationship. An earmarked fund should not be characterized as a "trust" in general purpose external financial reports of Federal entities. (The use of the term "trust fund" is acceptable only in the fund's official title.)

Trust Fund Accounts

Accounts that are designated by law as trust funds, for receipts earmarked for specific purposes and the associated expenditure of those receipts. Collections may come from the public (e.g., earmarked taxes or user charges) or from intra-budgetary transfers. More than 150 Federal

Government trust funds exist, of which the largest and best known finance several major benefit programs (including Social Security and Medicare) and certain infrastructure spending (the Highway and the Airport and Airway trust funds).

Trust Revolving Funds

Accounts that record permanent appropriation and expenditure of collections used to carry out a cycle of business type operations in accordance with a statute that designates the fund as a trust fund. (OMB *Circular A-34*)

Trustees, Boards Of, OASDI And Medicare

Boards established by the Social Security Act to oversee the financial operations of the Old-Age, Survivors, and Disability Insurance ("Social Security" or OASDI), the Hospital Insurance (HI), and the Supplementary Medical Insurance (SMI) trust funds. The Boards are composed of six members, four of whom serve automatically by virtue of their positions in the Federal Government: the Secretaries of Treasury (the managing trustee), Labor, and Health and Human Services and the Commissioner of Social Security (since March 1995). The other two members are appointed by the President and confirmed by the Senate to serve as public representatives to serve 4 year terms.

Uncontrollable Cost

The cost over which a responsible manager has no influence.

Unemployment Insurance (UI)

The UI program was created in 1935 to provide income assistance to unemployed workers who have lost their jobs through no fault of their own. The UI program is administered through a unique system of federal-state partnerships, established in federal law but executed by state officials through conforming state laws. The Federal Government provides broad policy guidance and program direction through the oversight of the U.S. Department of Labor. The UI program is financed by federal and state unemployment taxes. Federal unemployment taxes are used to pay for the UI administrative costs, to pay the federal share of extended UI benefits, and to maintain a loan account from which states may borrow to pay UI benefits. State UI taxes are used exclusively for the payment of regular UI benefits and the state's share of extended benefits. In addition to the federal tax, individual states finance their UI programs through state tax

contributions from subject employers on the wages of covered employees. (Three states also collect contributions from employees.) Within federal guidelines, state tax rates are assigned in accordance with an employer's experience with unemployment. Actual tax rates vary greatly among the states.

Unit Cost

The cost of a selected unit of a good or service. Examples include dollar cost per ton, machine hour, labor hour, or department hour.

Unobligated Balances

Balances of budgetary resources that have not yet been obligated. (JFMIP Standardization Project) Unobligated balances expire (cease to be available for obligation) for:—1-year accounts at the end of the fiscal year;—multiple-year accounts at the end of the period specified;—no-year accounts only when they are 1) rescinded by law, 2) purpose is accomplished, or 3) when disbursements against the appropriation have not been made for 2 full consecutive years. (GAO *Budget Glossary*).

Unreserved Assertion

An unconditional statement.

Useful Life

The normal operating life in terms of utility to the owner.

Valuation Account (Allowance Or Reserve)

An account that partly or wholly offsets one or more other accounts; for example, accumulated depreciation is a valuation account related to specific depreciable assets and allowance for bad debts is a valuation account related to accounts receivable. If a valuation account is deducted from the related asset or liability it is sometimes referred to as a contra-asset or contra-liability account.

Valuation (Or Accounting Valuation)

Valuation methods and bases are numerous and varied; and may be expressed quantitatively and in monetary terms. Application may be made to a single asset, a group of assets, or an entire enterprise, as determined by various bases and methods.

Valuation date

A date as close to the end of the fiscal year being reported upon as possible and no more than one year prior to the end of the reporting year.

Value-added Activity

An activity that is judged to contribute to customer value or satisfy an organizational need. The attribute "value-added" reflects a belief that the activity cannot be eliminated without reducing the quantity, responsiveness, or quality of output required by a customer or organization. Value-added activities should physically change the product or service in a manner that meets customer expectations.

Value for Money (VfM)

VfM is defined as the optimum combination of whole-of-life costs and quality (or fitness for purpose) of the good or service to meet the user's requirement. VfM is not the choice of goods and services based on the lowest cost bid. To undertake a well-managed procurement, it is necessary to consider upfront, and at the earliest stage of procurement, what the key drivers of VfM in the procurement process will be. In other words, VfM is a much broader concept than typical cost-benefit analysis because it emphasizes "value" in more of a qualitative than quantitative manner. Quantitatively, some VfM models use a project's Internal Rate of Return (IRR) to help determine project acceptability.

Value in Use

Value in use is the benefit to be obtained by an entity from the continuing use of an asset and from its disposal at the end of its useful life.

Variable Cost

A cost that varies with changes in the level of an activity, when other factors are held constant. The cost of material handling to an activity, for example, varies according to the number of material deliveries and pickups to and from that activity.

Variable Value Securities

Securities that have unknown redemption or maturity values at the time of issue. Values of these securities can vary on the basis of regulation or specific language in the offering.

Variance

(1) The amount, rate, extent, or degree of change, or the divergence from a desired characteristic or state. (2) The difference for a year or less between the elements (direct material, direct labor, factory overhead) of standard cost and actual cost. The term applies to (a) a money difference or (b) changes in the character or purpose of amounts expended.

Weighted-average

A periodic inventory costing method where ending inventory and cost of goods sold are priced at the weighted-average cost of all items available for sale.

Whole Life Policies

Policies that provide insurance over the insured's entire life and the proceeds (face amount) are paid only upon death of the insured.

Write-off

An action to remove an amount from an entity's assets. A write-off of a loan occurs when an agency official determines, after all appropriate collection tools have been used, that a debt is uncollectible. Active collection on an account ceases, and the account is removed from an entity's receivables. (*Treasury Financial Manual Supplement*)
